Do you suppose, I said, that there is anything surprising in this state of mind, and do you not think it pardonable?

In what way, pray? he said.

Their case, said I, resembles that of a supposititious son reared in abundant wealth and a great and numerous family amid many flatterers, who on arriving at manhood should become aware that he is not the child of those who call themselves his parents, and should not be able to find his true father and mother. Can you divine what would be his feelings toward the flatterers and his supposed parents in the time when he did not know the truth about his adoption, and, again, when he knew it? Or would you like to hear my surmise?

I would.

Well, then, my surmise is, I said, that he would be more likely to honor his reputed father and mother and other kin than the flatterers, and that there would be less likelihood of his allowing them to lack for anything, and that he would be less inclined to do or say to them anything unlawful, and less liable to disobey them in great matters than to disobey the flatterers—during the time when he did not know the truth.

It is probable, he said.

But when he found out the truth, I surmise that he would grow more remiss in honor and devotion to them and pay more regard to the flatterers, whom he would heed more than before and would  
c henceforth live by their rule, associating with them openly, while for that former father and his adoptive kin he would not care at all, unless he was naturally of a very good disposition.

All that you say, he replied, would be likely to happen. But what is the pertinency of this comparison to the novices of dialectic?

It is this. We have, I take it, certain convictions from childhood about the just and the honorable, in which, in obedience and honor to them, we have been bred as children under their parents.

Yes, we have.

d And are there not other practices going counter to these, that have pleasures attached to them and that flatter and solicit our souls, but do not win over men of any decency; but they continue to hold in honor the teachings of their fathers and obey them?

It is so.

Well, then, said I, when a man of this kind is met by the question, What is the honorable? and on his giving the answer which he learned from the lawgiver, the argument confutes him, and by many and various refutations upsets his faith and makes him believe that this  
e thing is no more honorable than it is base, and when he has had the same experience about the just and the good and everything that he chiefly held in esteem, how do you suppose that he will conduct himself thereafter in the matter of respect and obedience to this traditional morality?

It is inevitable, he said, that he will not continue to honor and obey as before.

And then, said I, when he ceases to honor these principles and  
539 to think that they are binding on him, and cannot discover the true principles, will he be likely to adopt any other way of life than that which flatters his desires?

He will not, he said.

He will, then, seem to have become a rebel to law and convention instead of the conformer that he was.

Necessarily.

And is not this experience of those who take up dialectic in this fashion to be expected and, as I just now said, deserving of much leniency?

Yes, and of pity too, he said.

Then that we may not have to pity thus your thirty-year-old disciples, must you not take every precaution when you introduce them to the study of dialectic?

Yes, indeed, he said.

b And is it not one chief safeguard not to suffer them to taste of it

while young? For I fancy you have not failed to observe that lads, when they first get a taste of disputation, misuse it as a form of sport, always employing it contentiously, and, imitating confuters, they themselves confute others. They delight like puppies in pulling about and tearing with words all who approach them.

Exceedingly so, he said.

And when they have themselves confuted many and been confuted by many, they quickly fall into a violent distrust of all that they formerly held true, and the outcome is that they themselves and the whole business of philosophy are discredited with other men.

Most true, he said.

But an older man will not share this craze, said I, but will rather choose to imitate the one who consents to examine truth dialectically than the one who makes a jest and a sport of mere contradiction, and so he will himself be more reasonable and moderate, and bring credit rather than discredit upon his pursuit.

Right, he said.

And were not all our preceding statements made with a view to this precaution—our requirement that those permitted to take part in such discussions must have orderly and stable natures, instead of the present practice of admitting to it any chance and unsuitable applicant?

By all means, he said.

Is it enough, then, to devote to the continuous and strenuous study of dialectic undisturbed by anything else, as in the corresponding discipline in bodily exercises, twice as many years as were allotted to that?

Do you mean six or four? he said.

Well, I said, set it down as five. For after that you will have to send them down into the cave again, and compel them to hold commands in war and the other offices suitable to youth, so that they may not fall short of the other type in experience either. And in these offices, too, they are to be tested to see whether they will remain steadfast under diverse solicitations or whether they will flinch and swerve.

How much time do you allow for that? he said.

Fifteen years, said I, and at the age of fifty those who have survived the tests and approved themselves altogether the best in every task and form of knowledge must be brought at last to the goal. We shall require them to turn upward the vision of their souls and fix their gaze on that which sheds light on all, and when they have thus beheld the good itself they shall use it as a pattern for the right ordering of the state and the citizens and themselves throughout the remainder of their lives, each in his turn, devoting the greater part of their time to the study of philosophy, but when the turn comes for each, toiling in the service of the state and holding office for the city's

e

546

L

sake, regarding the task not as a fine thing but a necessity. And so, when each generation has educated others like themselves to take their place as guardians of the state, they shall depart to the Islands of the Blessed and there dwell. And the state shall establish public memorials and sacrifices for them as to divinities if the Pythian oracle approves or, if not, as to divine and godlike men.

A most beautiful finish, Socrates, you have put upon your rulers, as if you were a statuary.

And on the women too, Glaucon, said I, for you must not suppose that my words apply to the men more than to all women who arise among them endowed with the requisite qualities.

That is right, he said, if they are to share equally in all things with the men as we laid it down.

Well, then, said I, do you admit that our notion of the state and its polity is not altogether a daydream, but that though it is difficult, it is in a way possible and in no other way than that described—when genuine philosophers, many or one, becoming masters of the state scorn the present honors, regarding them as illiberal and worthless, but prize the right and the honors that come from that above all things, and regarding justice as the chief and the one indispensable thing, in the service and maintenance of that reorganize and administer their city?

In what way? he said.

All inhabitants above the age of ten, I said, they will send out into the fields, and they will take over the children, remove them from the manners and habits of their parents, and bring them up in their own customs and laws which will be such as we have described. This is the speediest and easiest way in which such a city and constitution as we have portrayed could be established and prosper and bring most benefit to the people among whom it arises.

Much the easiest, he said, and I think you have well explained the manner of its realization if it should ever be realized.

Then, said I, have we not now said enough about this state and the corresponding type of man—for it is evident what our conception of him will be?

It is evident, he said, and, to answer your question, I think we have finished.

## BOOK VIII

543 Very good. We are agreed then, Glaucon, that the state which is to achieve the height of good government must have community of wives and children and all education, and also that the pursuits of men and women must be the same in peace and war, and that the rulers or kings over them are to be those who have approved themselves the best in both war and philosophy.

We are agreed, he said.

And we further granted this, that when the rulers are established b  
in office they shall conduct these soldiers and settle them in habita-  
tions such as we described, that have nothing private for anybody but  
are common for all, and in addition to such habitations we agreed,  
if you remember, what should be the nature of their possessions.

Why, yes, I remember, he said, that we thought it right that none  
of them should have anything that ordinary men now possess, but  
that, being as it were athletes of war and guardians, they should re-  
ceive from the others as pay for their guardianship each year their c  
yearly sustenance, and devote their entire attention to the care of them-  
selves and the state.

That is right, I said. But now that we have finished this topic let  
us recall the point at which we entered on the digression that has  
brought us here, so that we may proceed on our way again by the  
same path.

That is easy, he said, for at that time, almost exactly as now, on  
the supposition that you had finished the description of the city, you  
were going on to say that you assumed such a city as you then de- d  
scribed and the corresponding type of man to be good, and that too  
though, as it appears, you had a still finer city and type of man to tell 544  
of, but at any rate you were saying that the others are aberrations, if  
this city is right. But regarding the other constitutions, my recollection  
is that you said there were four species worth speaking of and ob-  
serving their defects and the corresponding types of men, in order  
that when we had seen them all and come to an agreement about the  
best and the worst man, we might determine whether the best is the  
happiest and the worst most wretched or whether it is otherwise. And  
when I was asking what were the four constitutions you had in mind, b  
Polemarchus and Adimantus thereupon broke in, and that was how  
you took up the discussion again and brought it to this point.

Your memory is most exact, I said.

A second time then, as in a wrestling match, offer me the same  
hold, and when I repeat my question try to tell me what you were  
then about to say.

I will if I can, said I.

And indeed, said he, I am eager myself to hear what four forms c  
of government you meant.

There will be no difficulty about that, said I. For those I mean are  
precisely those that have names in common usage—that which the  
many praise, your Cretan and Spartan constitution, and the second  
in place and in honor, that which is called oligarchy, a constitution  
teeming with many ills, and its sequent counterpart and opponent,  
democracy, and then the noble tyranny surpassing them all, the fourth  
and final malady of a state. Can you mention any other type of gov- d  
ernment, I mean any other that constitutes a distinct species? For, no

doubt, there are hereditary principalities and purchased kingships, and similar intermediate constitutions which one could find in even greater numbers among the barbarians than among the Greeks.

Certainly many strange ones are reported, he said.

Are you aware, then, said I, that there must be as many types of character among men as there are forms of government? Or do you suppose that constitutions spring from the proverbial oak or rock and not from the characters of the citizens, which, as it were, by their  
e momentum and weight in the scales draw other things after them?

They could not possibly come from any other source, he said.

Then if the forms of government are five, the patterns of individual souls must be five also.

Surely.

Now we have already described the man corresponding to aristocracy or the government of the best, whom we aver to be the truly  
545 good and just man.

We have.

Must we not, then, next after this, survey the inferior types, the man who is contentious and covetous of honor, corresponding to the Laconian constitution, and the oligarchic man in turn, and the democratic and the tyrannical, in order that, after observing the most unjust of all, we may oppose him to the most just, and complete our inquiry as to the relation of pure justice and pure injustice in respect of the happiness and unhappiness of the possessor, so that we may  
b either follow the counsel of Thrasymachus and pursue injustice or the present argument and pursue justice?

Assuredly, he said, that is what we have to do.

Shall we, then, as we began by examining moral qualities in states before individuals, as being more manifest there, so now consider first the constitution based on the love of honor? I do not know of any special name for it in use. We must call it either timocracy or timarchy. And then in connection with this we will consider the man  
c of that type, and thereafter oligarchy and the oligarch, and again, fixing our eyes on democracy, we will contemplate the democratic man, and fourthly, after coming to the city ruled by a tyrant and observing it, we will in turn take a look into the tyrannical soul, and so try to make ourselves competent judges of the question before us.

That would be at least a systematic and consistent way of conducting the observation and the decision, he said.

Come, then, said I, let us try to tell in what way a timocracy would arise out of an aristocracy. Or is this the simple and unvarying rule,  
d that in every form of government revolution takes its start from the ruling class itself, when dissension arises in that, but so long as it is at one with itself, however small it be, innovation is impossible?

Yes, that is so.

How, then, Glaucon, I said, will disturbance arise in our city,

and how will our helpers and rulers fall out and be at odds with one another and themselves? Shall we, like Homer, invoke the Muses to tell 'how faction first fell upon them,' and say that these goddesses e playing with us and teasing us as if we were children address us in lofty, mock-serious tragic style?

How?

Somewhat in this fashion. Hard in truth it is for a state thus 546 constituted to be shaken and disturbed, but since for everything that has come into being destruction is appointed, not even such a fabric as this will abide for all time, but it shall surely be dissolved, and this is the manner of its dissolution.) Not only for plants that grow from the earth but also for animals that live upon it there is a cycle of bearing and barrenness for soul and body as often as the revolutions of their orbs come full circle, in brief courses for the short-lived and oppositely for the opposite. But the laws of prosperous birth or infer- b tility for your race, the men you have bred to be your rulers will not for all their wisdom ascertain by reasoning combined with sensation, but they will escape them, and there will be a time when they will beget children out of season. Now for divine begettings there is a period comprehended by a perfect number, and for mortal by the first in which augmentations dominating and dominated when they have attained to three distances and four limits of the assimilating and the dissimilating, the waxing and the waning, render all things conversa- c ble and commensurable with one another, whereof a basal four thirds wedded to the pempad yields two harmonies at the third augmentation, the one the product of equal factors taken one hundred times, the other of equal length one way but oblong—one dimension of a hundred numbers determined by the rational diameters of the pempad lacking one in each case, or of the irrational lacking two; the other dimension of a hundred cubes of the triad. And this entire geometric number is determinative of this thing, of better and inferior d births. And when your guardians, missing this, bring together brides and bridegrooms unseasonably, the offspring will not be wellborn or fortunate. Of such offspring the previous generation will establish the best, to be sure, in office, but still these, being unworthy, and having entered in turn into the powers of their fathers, will first as guardians begin to neglect us, paying too little heed to music and then to gymnastics, so that our young men will deteriorate in their culture, and the rulers selected from them will not approve themselves very e efficient guardians for testing Hesiod's and our races of gold, silver, 547 bronze, and iron. And this intermixture of the iron with the silver and the bronze with the gold will engender unlikeness and an unharmonious unevenness, things that always beget war and enmity wherever they arise. 'Of this lineage, look you,' we must aver the dissension to be, wherever it occurs and always.

'And rightly too,' he said, we shall affirm that the Muses answer.

They must needs, I said, since they are Muses.

b Well, then, said he, what do the Muses say next?

When strife arose, said I, the two groups were pulling against each other, the iron and bronze toward money-making and the acquisition of land and houses and gold and silver, and the other two, the golden and silver, not being poor, but by nature rich in their souls, were trying to draw them back to virtue and their original constitution, and thus, striving and contending against one another, they compromised on the plan of distributing and taking for themselves the land and the houses, enslaving and subjecting as *perioeci* and serfs c their former friends and supporters, of whose freedom they had been the guardians, and occupying themselves with war and keeping watch over these subjects.

I think, he said, that this is the starting point of the transformation.

Would not this polity, then, said I, be in some sort intermediate between aristocracy and oligarchy?

By all means.

d By this change, then, it would arise. But after the change what will be its way of life? Is it not obvious that in some things it will imitate the preceding polity, in some the oligarchy, since it is intermediate, and that it will also have some qualities peculiar to itself?

That is so, he said.

Then in honoring its rulers and in the abstention of its warrior class from farming and handicraft and money-making in general, and in the provision of common public tables and the devotion to physical training and expertness in the game and contest of war—in all these traits it will copy the preceding state?

Yes.

e But in its fear to admit clever men to office, since the men it has of this kind are no longer simple and strenuous but of mixed strain, and in its inclining rather to the more high-spirited and simple-minded 548 type, who are better suited for war than for peace, and in honoring the stratagems and contrivances of war and occupying itself with war most of the time—in these respects for the most part its qualities will be peculiar to itself?

Yes.

Such men, said I, will be avid of wealth, like those in an oligarchy, and will cherish a fierce secret lust for gold and silver, owning storehouses and private treasuries where they may hide them away, b and also the enclosures of their homes, literal private love nests in which they can lavish their wealth on their women and any others they please with great expenditure.

Most true, he said.

And will they not be stingy about money, since they prize it and are not allowed to possess it openly, prodigal of others' wealth be-

cause of their appetites, enjoying their pleasures stealthily, and running away from the law as boys from a father, since they have not been educated by persuasion but by force because of their neglect of the true Muse, the companion of discussion and philosophy, and because of their preference of gymnastics to music?

You perfectly describe, he said, a polity that is a mixture of good and evil.

Why, yes, the elements have been mixed, I said, but the most conspicuous feature in it is one thing only, due to the predominance of the high-spirited element, namely contentiousness and covetousness of honor.

Very much so, said he.

Such, then, would be the origin and nature of this polity if we may merely outline the figure of a constitution in words and not elaborate it precisely, since even the sketch will suffice to show us the most just and the most unjust type of man, and it would be an impracticable task to set forth all forms of government without omitting any, and all customs and qualities of men.

Quite right, he said.

What, then, is the man that corresponds to this constitution? What is his origin and what his nature?

I fancy, Adimantus said, that he comes rather close to Glaucon here in point of contentiousness.

Perhaps, said I, in that, but I do not think their natures are alike in the following respects.

In what?

He will have to be somewhat self-willed and lacking in culture, yet a lover of music and fond of listening to talk and speeches, though by no means himself a rhetorician. And to slaves such a one would be harsh, not scorning them as the really educated do, but he would be gentle with the freeborn and very submissive to officials, a lover of office and of honor, not basing his claim to office on ability to speak or anything of that sort but on his exploits in war or preparation for war, and he would be a devotee of gymnastics and hunting.

Why, yes, he said, that is the spirit of that polity.

And would not such a man be disdainful of wealth too in his youth, but the older he grew the more he would love it because of his participation in the covetous nature and because his virtue is not sincere and pure since it lacks the best guardian?

What guardian? said Adimantus.

Reason, said I, blended with culture, which is the only indwelling preserver of virtue throughout life in the soul that possesses it.

Well said, he replied.

This is the character, I said, of the timocratic youth, resembling the city that bears his name.

By all means.

- c His origin is somewhat on this wise. Sometimes he is the young son of a good father who lives in a badly governed state and avoids honors and office and lawsuits and all such meddlesomeness and is willing to forbear something of his rights in order to escape trouble.

How does he originate? he said.

- d Why, when, to begin with, I said, he hears his mother complaining that her husband is not one of the rulers and for that reason she is slighted among the other women, and when she sees that her husband is not much concerned about money and does not fight and brawl in private lawsuits and in the public assembly, but takes all such matters lightly, and when she observes that he is self-absorbed in his thoughts and neither regards nor disregards her overmuch, and in consequence of all this laments and tells the boy that his father is too  
e slack and no kind of a man, with all the other complaints with which women nag in such cases.

Many indeed, said Adimantus, and after their kind.

- You are aware, then, said I, that the very house slaves of such men, if they are loyal and friendly, privately say the same sort of things to the sons, and if they observe a debtor or any other wrongdoer whom the father does not prosecute, they urge the boy to punish  
550 all such when he grows to manhood and prove himself more of a man than his father, and when the lad goes out he hears and sees the same sort of thing. Men who mind their own affairs in the city are spoken of as simpletons and are held in slight esteem, while meddlers who mind other people's affairs are honored and praised. Then it is that the youth, hearing and seeing such things, and on the other hand listening to the words of his father, and with a near view of his pursuits contrasted with those of other men, is solicited by both, his father watering and fostering the growth of the rational principle in his  
b soul and the others the appetitive and the passionate; and as he is not by nature of a bad disposition but has fallen into evil communications, under these two solicitations he comes to a compromise and turns over the government in his soul to the intermediate principle of ambition and high spirit and becomes a man haughty of soul and covetous of honor.

You have, I think, most exactly described his origin.

- c Then, said I, we have our second polity and second type of man. We have, he said.

Shall we then, as Aeschylus would say, tell of another champion before another gate, or rather, in accordance with our plan, the city first?

That, by all means, he said.

The next polity, I believe, would be oligarchy.

And what kind of a regime, said he, do you understand by oligarchy?

That based on a property qualification, said I, wherein the rich hold office and the poor man is excluded. d

I understand, said he.

Then, is not the first thing to speak of how timocracy passes over into this?

Yes.

And truly, said I, the manner of the change is plain even to the proverbial blind man.

How so?

That treasure house which each possesses filled with gold destroys that polity, for first they invent ways of expenditure for themselves and pervert the laws to this end, and neither they nor their wives obey them. e

That is likely, he said.

And then, I take it, by observing and emulating one another they bring the majority of them to this way of thinking.

That is likely, he said.

And so, as time goes on, and they advance in the pursuit of wealth, the more they hold that in honor the less they honor virtue. May not the opposition of wealth and virtue be conceived as if each lay in the scale of a balance inclining opposite ways?

Yes, indeed, he said.

So, when wealth is honored in a state, and the wealthy, virtue and the good are less honored. 551

Obviously.

And that which men at any time honor they practice, and what is not honored is neglected.

It is so.

Thus, finally, from being lovers of victory and lovers of honor they become lovers of gain getting and of money, and they commend and admire the rich man and put him in office but despise the man who is poor.

Quite so.

And is it not then that they pass a law defining the limits of an oligarchic polity, prescribing a sum of money, a larger sum where it is more of an oligarchy, where it is less a smaller, and proclaiming that no man shall hold office whose property does not come up to the required valuation? And this law they either put through by force of arms, or without resorting to that they establish their government by terrorization. Is not that the way of it?

It is.

The establishment then, one may say, is in this wise.

Yes, he said, but what is the character of this constitution, and what are the defects that we said it had? c

To begin with, said I, consider the nature of its constitutive and

defining principle. Suppose men should appoint the pilots of ships in this way, by property qualification, and not allow a poor man to navigate, even if he were a better pilot.

A sorry voyage they would make of it, he said.

And is not the same true of any other form of rule?

I think so.

Except of a city, said I, or does it hold for a city too?

d Most of all, he said, by as much as that is the greatest and most difficult rule of all.

Here, then, is one very great defect in oligarchy.

So it appears.

Well, and is this a smaller one?

What?

That such a city should of necessity be not one, but two, a city of the rich and a city of the poor, dwelling together, and always plotting against one another.

No, by Zeus, said he, it is not a bit smaller.

Nor, further, can we approve of this—the likelihood that they will not be able to wage war, because of the necessity of either arm-  
e ing and employing the multitude, and fearing them more than the enemy, or else, if they do not make use of them, of finding themselves on the field of battle, oligarchs indeed, and rulers over a few. And to this must be added their reluctance to contribute money, because they are lovers of money.

No, indeed, that is not admirable.

And what of the trait we found fault with long ago—the fact  
552 that in such a state the citizens are busybodies and Jacks-of-all-trades, farmers, financiers, and soldiers all in one? Do you think that is right?

By no manner of means.

Consider now whether this polity is not the first that admits that which is the greatest of all such evils.

What?

The allowing a man to sell all his possessions, which another is permitted to acquire, and after selling them to go on living in the city, but as no part of it, neither a money-maker, nor a craftsman, nor a knight, nor a foot soldier, but classified only as a pauper and a dependent.

b This is the first, he said.

There certainly is no prohibition of that sort of thing in oligarchic states. Otherwise some of their citizens would not be excessively rich, and others out-and-out paupers.

Right.

But observe this. When such a fellow was spending his wealth, was he then of any more use to the state in the matters of which we

were speaking, or did he merely seem to belong to the ruling class, while in reality he was neither ruler nor helper in the state, but only a consumer of goods?

It is so, he said. He only seemed, but was just a spendthrift. c

Shall we, then, say of him that as the drone springs up in the cell, a pest of the hive, so such a man grows up in his home, a pest of the state?

By all means, Socrates, he said.

And has not God, Adimantus, left the drones which have wings and fly stingless one and all, while of the drones here who travel afoot he has made some stingless but has armed others with terrible stings? And from the stingless finally issue beggars in old age, but d from those furnished with stings all that are denominated malefactors?

Most true, he said.

It is plain, then, said I, that wherever you see beggars in a city, there are somewhere in the neighborhood concealed thieves and cut-purses and temple robbers and similar artists in crime.

Clearly, he said.

Well, then, in oligarchic cities do you not see beggars?

Nearly all are such, he said, except the ruling class.

Are we not to suppose, then, that there are also many criminals e in them furnished with stings, whom the rulers by their surveillance forcibly restrain?

We must think so, he said.

And shall we not say that the presence of such citizens is the result of a defective culture and bad breeding and a wrong constitution of the state?

We shall.

Well, at any rate such would be the character of the oligarchic state, and these, or perhaps even more than these, would be the evils that afflict it.

Pretty nearly these, he said.

Then, I said, let us regard as disposed of the constitution called 553 oligarchy, whose rulers are determined by a property qualification. And next we are to consider the man who resembles it—how he arises and what after that his character is.

Quite so, he said.

Is not the transition from that timocratic youth to the oligarchic type mostly on this wise?

How?

When a son born to the timocratic man at first emulates his father, and follows in his footsteps, and then sees him suddenly dashed, as a ship on a reef, against the state, and making complete b wreckage of both his possessions and himself—perhaps he has been

a general, or has held some other important office, and has then been dragged into court by mischievous sycophants and put to death or banished or outlawed and has lost all his property . . .

It is likely, he said.

And the son, my friend, after seeing and suffering these things, and losing his property, grows timid, I fancy, and forthwith thrusts  
c headlong from his bosom's throne that principle of love of honor and that high spirit, and being humbled by poverty turns to the getting of money, and greedily and stingily and little by little by thrift and hard work collects property. Do you not suppose that such a one will then establish on that throne the principle of appetite and avarice, and set it up as the great king in his soul, adorned with tiaras and collars of gold, and girt with the Persian sword?

I do, he said.

And under this domination he will force the rational and high-  
d spirited principles to crouch lowly to right and left as slaves, and will allow the one to calculate and consider nothing but the ways of making more money from a little, and the other to admire and honor nothing but riches and rich men, and to take pride in nothing but the possession of wealth and whatever contributes to that?

There is no other transformation so swift and sure of the ambitious youth into the avaricious type.

e Is this, then, our oligarchic man? said I.

He is developed, at any rate, out of a man resembling the constitution from which the oligarchy sprang.

Let us see, then, whether he will have a like character.

554 Let us see.

Would he not, in the first place, resemble it in prizing wealth above everything?

Inevitably.

And also by being thrifty and laborious, satisfying only his own necessary appetites and desires and not providing for expenditure on other things, but subduing his other appetites as vain and unprofitable?

By all means.

b He would be a squalid fellow, said I, looking for a surplus of profit in everything, and a hoarder, the type the multitude approves. Would not this be the character of the man who corresponds to such a polity?

I certainly think so, he said. Property, at any rate, is the thing most esteemed by that state and that kind of man.

That, I take it, said I, is because he has never turned his thoughts to true culture.

I think not, he said, else he would not have made the blind one leader of his choir and first in honor.

Well said, I replied. But consider this. Shall we not say that owing

to this lack of culture the appetites of the drone spring up in him, some the beggarly, others the rascally, but that they are forcibly restrained by his general self-surveillance and self-control?

We shall indeed, he said.

Do you know, then, said I, to what you must look to discern the rascalities of such men?

To what? he said.

To guardianships of orphans, and any such opportunities of doing injustice with impunity.

True.

And is it not apparent by this that in other dealings, where he enjoys the repute of a seeming just man, he by some better element in himself forcibly keeps down other evil desires dwelling within, not persuading them that it 'is better not' nor taming them by reason, but by compulsion and fear, trembling for his possessions generally.

Quite so, he said.

Yes, by Zeus, said I, my friend. In most of them, when there is occasion to spend the money of others, you will discover the existence of dronelike appetites.

Most emphatically.

Such a man, then, would not be free from internal dissension. He would not be really one, but in some sort a double man. Yet for the most part, his better desires would have the upper hand over the worse.

It is so.

And for this reason, I presume, such a man would be more seemly, more respectable, than many others, but the true virtue of a soul in unison and harmony with itself would escape him and dwell afar.

I think so.

And again, the thrifty stingy man would be a feeble competitor personally in the city for any prize of victory or in any other honorable emulation. He is unwilling to spend money for fame and rivalries of that sort, and, fearing to awaken his prodigal desires and call them into alliance for the winning of the victory, he fights in true oligarchic fashion with a small part of his resources and is defeated for the most part and—finds himself rich!

Yes indeed, he said.

Have we any further doubt, then, I said, as to the correspondence and resemblance between the thrifty and money-making man and the oligarchic state?

None, he said.

We have next to consider, it seems, the origin and nature of democracy, that we may next learn the character of that type of man and range him beside the others for our judgment.

That would at least be a consistent procedure.

Then, said I, is not the transition from oligarchy to democracy effected in some such way as this—by the insatiate greed for that which it set before itself as the good, the attainment of the greatest possible wealth?

In what way?

- c Why, since its rulers owe their offices to their wealth, they are not willing to prohibit by law the prodigals who arise among the youth from spending and wasting their substance. Their object is, by lending money on the property of such men, and buying it in, to come still richer and more esteemed.

By all means.

And is it not at once apparent in a state that this honoring of wealth is incompatible with a sober and temperate citizenship, but that one or the other of these two ideals is inevitably neglected.

- d That is pretty clear, he said.

And such negligence and encouragement of licentiousness in oligarchies not infrequently has reduced to poverty men of no ignoble quality.

It surely has.

And there they sit, I fancy, within the city, furnished with stings, that is, arms, some burdened with debt, others disfranchised, others both, hating and conspiring against the acquirers of their estates and the rest of the citizens, and eager for revolution.

'Tis so.

- e But these money-makers with down-bent heads, pretending not even to see them, but inserting the sting of their money into any of the remainder who do not resist, and harvesting from them in interest  
556 as it were a manifold progeny of the parent sum, foster the drone and pauper element in the state.

They do indeed multiply it, he said.

And they are not willing to quench the evil as it bursts into flame either by way of a law prohibiting a man from doing as he likes with his own, or in this way, by a second law that does away with such abuses.

What law?

- The law that is next best, and compels the citizens to pay heed  
b to virtue. For if a law commanded that most voluntary contracts should be at the contractor's risk, the pursuit of wealth would be less shameless in the state and fewer of the evils of which we spoke just now would grow up there.

Much fewer, he said.

- But as it is, and for all these reasons, this is the plight to which the rulers in the state reduce their subjects, and as for themselves and their offspring, do they not make the young spoiled wantons averse to  
c toil of body and mind, and too soft to stand up against pleasure and pain, and mere idlers?

Surely.

And do they not fasten upon themselves the habit of neglect of everything except the making of money, and as complete an indifference to virtue as the paupers exhibit?

Little they care.

And when, thus conditioned, the rulers and the ruled are brought together on the march, in wayfaring, or in some other common undertaking, either a religious festival, or a campaign, or as shipmates or fellow soldiers or, for that matter, in actual battle, and observe one another, then the poor are not in the least scorned by the rich, but on the contrary, do you not suppose it often happens that when a lean, sinewy, sunburned pauper is stationed in battle beside a rich man bred in the shade, and burdened with superfluous flesh, and sees him panting and helpless—do you not suppose he will think that such fellows keep their wealth by the cowardice of the poor, and that when the latter are together in private, one will pass the word to another, 'our men are good for nothing'?

Nay, I know very well that they do, said he.

And just as an unhealthy body requires but a slight impulse from outside to fall into sickness, and sometimes, even without that, all the man is one internal war, in like manner does not the corresponding type of state need only a slight occasion, the one party bringing in allies from an oligarchic state, or the other from a democratic, to become diseased and wage war with itself, and sometimes even apart from any external impulse faction arises?

557

Most emphatically.

And a democracy, I suppose, comes into being when the poor, winning the victory, put to death some of the other party, drive out others, and grant the rest of the citizens an equal share in both citizenship and offices—and for the most part these offices are assigned by lot.

Why, yes, he said, that is the constitution of democracy alike whether it is established by force of arms or by terrorism resulting in the withdrawal of one of the parties.

What, then, said I, is the manner of their life and what is the quality of such a constitution? For it is plain that the man of this quality will turn out to be a democratic sort of man.

It is plain, he said.

To begin with, are they not free? And is not the city chock-full of liberty and freedom of speech? And has not every man license to do as he likes?

So it is said, he replied.

And where there is such license, it is obvious that everyone would arrange a plan for leading his own life in the way that pleases him. Obvious.

All sorts and conditions of men, then, would arise in this polity more than in any other?

Of course.

Possibly, said I, this is the most beautiful of polities; as a garment of many colors, embroidered with all kinds of hues, so this, decked and diversified with every type of character, would appear the most beautiful. And perhaps many would judge it to be the most beautiful, like boys and women when they see bright-colored things.

Yes indeed, he said.

- a Yes, said I, and it is the fit place, my good friend, in which to look for a constitution.

Why so?

Because, owing to this license, it includes all kinds, and it seems likely that anyone who wishes to organize a state, as we were just now doing, must find his way to a democratic city and select the model that pleases him, as if in a bazaar of constitutions, and after making his choice, establish his own.

- e Perhaps at any rate, he said, he would not be at a loss for patterns.

And the freedom from all compulsion to hold office in such a city, even if you are qualified, or again, to submit to rule, unless you please, or to make war when the rest are at war, or to keep the peace when the others do so, unless you desire peace, and again, the liberty, in defiance of any law that forbids you, to hold office and sit on juries nonetheless, if it occurs to you to do so, is not all that a heavenly and delicious entertainment for the time being?

- 558 Perhaps, he said, for so long.

And is not the placability of some convicted criminals exquisite? Or have you never seen in such a state men condemned to death or exile who nonetheless stay on, and go to and fro among the people, and as if no one saw or heeded him, the man slips in and out like a revenant?

Yes, many, he said.

- b And the tolerance of democracy, its superiority to all our meticulous requirements, its disdain for our solemn pronouncements made when we were founding our city, that except in the case of transcendent natural gifts no one could ever become a good man unless from childhood his play and all his pursuits were concerned with things fair and good—how superbly it tramples underfoot all such ideals, caring nothing from what practices and way of life a man turns to politics, but honoring him if only he says that he loves the people!

- c It is a noble polity, indeed! he said.

These and qualities akin to these democracy would exhibit, and it would, it seems, be a delightful form of government, anarchic and motley, assigning a kind of equality indiscriminately to equals and unequals alike!

Yes, he said, everybody knows that.

Observe, then, the corresponding private character. Or must we first, as in the case of the polity, consider the origin of the type?

Yes, he said.

Is not this, then, the way of it? Our thrifty oligarchic man would have a son bred in his father's ways.

Why not?

And he, too, would control by force all his appetites for pleasure that are wasters and not winners of wealth, those which are denominated unnecessary.

Obviously.

And in order not to argue in the dark, shall we first define our distinction between necessary and unnecessary appetites?

Let us do so.

Well, then, desires that we cannot divert or suppress may be properly called necessary, and likewise those whose satisfaction is beneficial to us, may they not? For our nature compels us to seek their satisfaction. Is not that so?

Most assuredly.

559

Then we shall rightly use the word 'necessary' of them?

Rightly.

And what of the desires from which a man could free himself by discipline from youth up, and whose presence in the soul does no good and in some cases harm? Should we not fairly call all such unnecessary?

Fairly indeed.

Let us select an example of either kind, so that we may apprehend the type.

Let us do so.

Would not the desire of eating to keep in health and condition and the appetite for mere bread and relishes be necessary?

I think so.

b

The appetite for bread is necessary in both respects, in that it is beneficial and in that if it fails we die.

Yes.

And the desire for relishes, so far as it conduces to fitness?

By all means.

And should we not rightly pronounce unnecessary the appetite that exceeds these and seeks other varieties of food, and that by correction and training from youth up can be got rid of in most cases and is harmful to the body and a hindrance to the soul's attainment of intelligence and sobriety?

Nay, most rightly.

And may we not call the one group the spendthrift desires and the other the profitable, because they help production?

Surely.

And we shall say the same of sexual and other appetites?

The same.

And were we not saying that the man whom we nicknamed the

drone is the man who teems with such pleasures and appetites, and who is governed by his unnecessary desires, while the one who is ruled by his necessary appetites is the thrifty oligarchic man?

Why, surely.

To return, then, said I, we have to tell how the democratic man develops from the oligarchic type. I think it is usually in this way.

How?

When a youth, bred in the illiberal and niggardly fashion that we were describing, gets a taste of the honey of the drones and associates with fierce and cunning creatures who know how to purvey pleasures of every kind and variety and condition, there you must doubtless conceive is the beginning of the transformation of the oligarchy in his soul into democracy.

Quite inevitably, he said.

May we not say that just as the revolution in the city was brought about by the aid of an alliance from outside, coming to the support of the similar and corresponding party in the state, so the youth is revolutionized when a like and kindred group of appetites from outside comes to the aid of one of the parties in his soul?

By all means, he said.

And if, I take it, a counteralliance comes to the rescue of the oligarchic part of his soul, either it may be from his father or from his other kin, who admonish and reproach him, then there arise faction and counterfaction and internal strife in the man with himself.

Surely.

And sometimes, I suppose, the democratic element retires before the oligarchic, some of its appetites having been destroyed and others expelled, and a sense of awe and reverence grows up in the young man's soul and order is restored.

That sometimes happens, he said.

And sometimes, again, another brood of desires akin to those expelled are stealthily nurtured to take their place, owing to the father's ignorance of true education, and wax numerous and strong.

Yes, that is wont to be the way of it.

And they tug and pull back to the same associations and in secret intercourse engender a multitude.

Yes indeed.

And in the end, I suppose, they seize the citadel of the young man's soul, finding it empty and unoccupied by studies and honorable pursuits and true discourses, which are the best watchmen and guardians in the minds of men who are dear to the gods.

Much the best, he said.

And then false and braggart words and opinions charge up the height and take their place and occupy that part of such a youth.

They do indeed.

And then he returns, does he not, to those lotus-eaters and with-

out disguise lives openly with them. And if any support comes from his kin to the thrifty element in his soul, those braggart discourses close the gates of the royal fortress within him and refuse admission to the auxiliary force itself, and will not grant audience as to envoys to the words of older friends in private life. And they themselves prevail in the conflict, and naming reverence and awe 'folly' thrust it forth, a dishonored fugitive. And temperance they call 'want of manhood' and banish it with contumely, and they teach that moderation and orderly expenditure are 'rusticity' and 'illiberality,' and they combine with a gang of unprofitable and harmful appetites to drive them over the border.

They do indeed.

And when they have emptied and purged of all these the soul of the youth that they have thus possessed and occupied, and whom they are initiating with these magnificent and costly rites, they proceed to lead home from exile insolence and anarchy and prodigality and shamelessness, resplendent in a great attendant choir and crowned with garlands, and in celebration of their praises they euphemistically denominate insolence 'good breeding,' license 'liberty,' prodigality 'magnificence,' and shamelessness 'manly spirit.' And is it not in some such way as this that in his youth the transformation takes place from the restriction to necessary desires in his education to the liberation and release of his unnecessary and harmful desires?

Yes, your description is most vivid, said he.

Then, in his subsequent life, I take it, such a one expends money and toil and time no more on his necessary than on his unnecessary pleasures. But if it is his good fortune that the period of storm and stress does not last too long, and as he grows older the fiercest tumult within him passes, and he receives back a part of the banished elements and does not abandon himself altogether to the invasion of the others, then he establishes and maintains all his pleasures on a footing of equality, forsooth, and so lives turning over the guardhouse of his soul to each as it happens along until it is sated, as if it had drawn the lot for that office, and then in turn to another, disdaining none but fostering them all equally.

Quite so.

And he does not accept or admit into the guardhouse the words of truth when anyone tells him that some pleasures arise from honorable and good desires, and others from those that are base, and that we ought to practice and esteem the one and control and subdue the others, but he shakes his head at all such admonitions and avers that they are all alike and to be equally esteemed.

Such is indeed his state of mind and his conduct.

And does he not, said I, also live out his life in this fashion, day by day indulging the appetite of the day, now winebibbing and abandoning himself to the lascivious pleasing of the flute and again

drinking only water and dieting, and at one time exercising his body, and sometimes idling and neglecting all things, and at another time seeming to occupy himself with philosophy. And frequently he goes in for politics and bounces up and says and does whatever enters his head. And if military men excite his emulation, thither he rushes, and if moneyed men, to that he turns, and there is no order or compulsion in his existence, but he calls this life of his the life of pleasure and freedom and happiness and cleaves to it to the end.

e That is a perfect description, he said, of a devotee of equality.

I certainly think, said I, that he is a manifold man stuffed with most excellent differences, and that like that city he is the fair and many-colored one whom many a man and woman would count fortunate in his life, as containing within himself the greatest number of patterns of constitutions and qualities.

Yes, that is so, he said.

562 Shall we definitely assert, then, that such a man is to be ranged with democracy and would properly be designated as democratic?

Let that be his place, he said.

And now, said I, the fairest polity and the fairest man remain for us to describe, the tyranny and the tyrant.

Certainly, he said.

Come then, tell me, dear friend, how tyranny arises. That it is an outgrowth of democracy is fairly plain.

Yes, plain.

Is it, then, in a sense, in the same way in which democracy arises out of oligarchy that tyranny arises from democracy?

b How is that?

The good that they proposed to themselves and that was the cause of the establishment of oligarchy—it was wealth, was it not?

Yes.

Well, then, the insatiate lust for wealth and the neglect of everything else for the sake of money-making were the cause of its undoing.

True, he said.

c And is not the avidity of democracy for that which is its definition and criterion of good the thing which dissolves it too?

What do you say its criterion to be?

Liberty, I replied, for you may hear it said that this is best managed in a democratic city, and for this reason that is the only city in which a man of free spirit will care to live.

Why, yes, he replied, you hear that saying everywhere.

Then, as I was about to observe, is it not the excess and greed of this and the neglect of all other things that revolutionizes this constitution too and prepares the way for the necessity of a dictatorship?

How? he said.

d Why, when a democratic city athirst for liberty gets bad cup-bearers for its leaders and is intoxicated by drinking too deep of that

unmixed wine, and then, if its so-called governors are not extremely mild and gentle with it and do not dispense the liberty unstintedly, it chastises them and accuses them of being accursed oligarchs.

Yes, that is what they do, he replied.

But those who obey the rulers, I said, it reviles as willing slaves and men of nought, but it commends and honors in public and private rulers who resemble subjects and subjects who are like rulers. Is it not inevitable that in such a state the spirit of liberty should go to all lengths?

Of course.

And this anarchic temper, said I, my friend, must penetrate into private homes and finally enter into the very animals.

Just what do we mean by that? he said.

Why, I said, the father habitually tries to resemble the child and is afraid of his sons, and the son likens himself to the father and feels no awe or fear of his parents, so that he may be forsooth a free man. And the resident alien feels himself equal to the citizen and the citizen to him, and the foreigner likewise.

563

Yes, these things do happen, he said.

They do, said I, and such other trifles as these. The teacher in such case fears and fawns upon the pupils, and the pupils pay no heed to the teacher or to their overseers either. And in general the young ape their elders and vie with them in speech and action, while the old, accommodating themselves to the young, are full of pleasantry and graciousness, imitating the young for fear they may be thought disagreeable and authoritative.

By all means, he said.

And the climax of popular liberty, my friend, I said, is attained in such a city when the purchased slaves, male and female, are no less free than the owners who paid for them. And I almost forgot to mention the spirit of freedom and equal rights in the relation of men to women and women to men.

Shall we not, then, said he, in Aeschylean phrase, say 'whatever rises to our lips'?

Certainly, I said, so I will. Without experience of it no one would believe how much freer the very beasts subject to men are in such a city than elsewhere. The dogs literally verify the adage and 'like their mistresses become.' And likewise the horses and asses are wont to hold on their way with the utmost freedom and dignity, bumping into everyone who meets them and who does not step aside. And so all things everywhere are just bursting with the spirit of liberty.

d

It is my own dream you are telling me, he said, for it often happens to me when I go to the country.

And do you note that the sum total of all these items when footed up is that they render the souls of the citizens so sensitive that they chafe at the slightest suggestion of servitude and will not endure it?

For you are aware that they finally pay no heed even to the laws written or unwritten, so that forsooth they may have no master anywhere  
e over them.

I know it very well, said he.

This, then, my friend, said I, is the fine and vigorous root from which tyranny grows, in my opinion.

Vigorous indeed, he said, but what next?

The same malady, I said, that, arising in oligarchy, destroyed it, this more widely diffused and more violent as a result of this license, enslaves democracy. And in truth, any excess is wont to bring about  
564 a corresponding reaction to the opposite in the seasons, in plants, in animal bodies, and most especially in political societies.

Probably, he said.

And so the probable outcome of too much freedom is only too much slavery in the individual and the state.

Yes, that is probable.

Probably, then, tyranny develops out of no other constitution than democracy—from the height of liberty, I take it, the fiercest extreme of servitude.

That is reasonable, he said.

b That, however, I believe, was not your question, but what identical malady arising in democracy as well as in oligarchy enslaves it?

You say truly, he replied.

That then, I said, was what I had in mind, the class of idle and spendthrift men, the most enterprising and vigorous portion being leaders and the less manly spirits followers. We were likening them to drones, some equipped with stings and others stingless.

And rightly too, he said.

These two kinds, then, I said, when they arise in any state, create a disturbance like that produced in the body by phlegm and gall. And  
c so a good physician and lawgiver must be on his guard from afar against the two kinds, like a prudent apiarist, first and chiefly to prevent their springing up, but if they do arise to have them as quickly as may be cut out, cells and all.

Yes, by Zeus, he said, by all means.

Then let us take it in this way, I said, so that we may contemplate our purpose more distinctly.

How?

Let us in our theory make a tripartite division of the democratic state, which is in fact its structure. One such class, as we have de-  
d scribed, grows up in it because of the license, no less than in the oligarchic state.

That is so.

But it is far fiercer in this state than in that.

How so?

There, because it is not held in honor, but is kept out of office, it

is not exercised and does not grow vigorous. But in a democracy this is the dominating class, with rare exceptions, and the fiercest part of it makes speeches and transacts business, and the remainder swarms and settles about the speaker's stand and keeps up a buzzing and tolerates no dissent, so that everything with slight exceptions is administered by that class in such a state.

Quite so, he said.

And so from time to time there emerges or is secreted from the multitude another group of this sort.

What sort? he said.

When all are pursuing wealth the most orderly and thrifty natures for the most part become the richest.

It is likely.

Then they are the most abundant supply of honey for the drones, and it is the easiest to extract.

Why, yes, he said, how could one squeeze it out of those who have little?

The capitalistic class is, I take it, the name by which they are designated—the pasture of the drones.

Pretty much so, he said.

565

And the third class, composing the 'people,' would comprise all quiet cultivators of their own farms who possess little property. This is the largest and most potent group in a democracy when it meets in assembly.

Yes, it is, he said, but it will not often do that, unless it gets a share of the honey.

Well, does it not always share, I said, to the extent that the men at the head find it possible, in distributing to the people what they take from the well-to-do, to keep the lion's share for themselves?

Why, yes, he said, it shares in that sense.

b

And so, I suppose, those who are thus plundered are compelled to defend themselves by speeches in the assembly and any action in their power.

Of course.

And thereupon the charge is brought against them by the other party, though they may have no revolutionary designs, that they are plotting against the people, and it is said that they are oligarchs.

Surely.

And then finally, when they see the people, not of its own will but through misapprehension, and being misled by the calumniators, attempting to wrong them, why then, whether they wish it or not, they become in very deed oligarchs, not willingly, but this evil too is engendered by those drones which sting them.

Precisely.

And then there ensue impeachments and judgments and lawsuits on either side.

Yes, indeed.

And is it not always the way of a demos to put forward one man as its special champion and protector and cherish and magnify him?

Yes, it is.

- a This, then, is plain, said I, that when a tyrant arises he sprouts from a protectorate root and from nothing else.

Very plain.

What, then, is the starting point of the transformation of a protector into a tyrant? Is it not obviously when the protector's acts begin to reproduce the legend that is told of the shrine of Lycaean Zeus in Arcadia?

What is that? he said.

- The story goes that he who tastes of the one bit of human entrails minced up with those of other victims is inevitably transformed into a wolf. Have you not heard the tale?

I have.

- And is it not true that in like manner a leader of the people who, getting control of a docile mob, does not withhold his hand from the shedding of tribal blood, but by the customary unjust accusations brings a citizen into court and assassinates him, blotting out a human life, and with unhallowed tongue and lips that have tasted kindred blood, banishes and slays and hints at the abolition of debts and the partition of lands—is it not the inevitable consequence and a decree of fate that such a one be either slain by his enemies or become a tyrant and be transformed from a man into a wolf?

It is quite inevitable, he said.

He it is, I said, who becomes the leader of faction against the possessors of property.

Yes, he.

May it not happen that he is driven into exile and, being restored in defiance of his enemies, returns a finished tyrant?

Obviously.

- And if they are unable to expel him or bring about his death by calumniating him to the people, they plot to assassinate him by stealth.

That is certainly wont to happen, said he.

And thereupon those who have reached this stage devise that famous petition of the tyrant—to ask from the people a bodyguard to make their city safe for the friend of democracy.

They do indeed, he said.

And the people grant it, I suppose, fearing for him but unconcerned for themselves.

- c Yes, indeed.

And when he sees this, the man who has wealth and with his wealth the repute of hostility to democracy, then in the words of the oracle delivered to Croesus, 'By the pebble-strewn strand of the

Hermus, swift is his flight; he stays not nor blushes to show the white feather.'

No, for he would never get a second chance to blush.

And he who is caught, methinks, is delivered to his death.

Inevitably.

And then obviously that protector does not lie prostrate, 'mighty with far-flung limbs,' in Homeric overthrow, but overthrowing many others towers in the car of state transformed from a protector into a perfect and finished tyrant.

What else is likely? he said.

Shall we, then, portray the happiness, said I, of the man and the state in which such a creature arises?

By all means let us describe it, he said.

Then at the start and in the first days does he not smile upon all men and greet everybody he meets and deny that he is a tyrant, and promise many things in private and public, and having freed men from debts, and distributed lands to the people and his own associates, he affects a gracious and gentle manner to all?

Necessarily, he said.

But when, I suppose, he has come to terms with some of his exiled enemies and has got others destroyed and is no longer disturbed by them, in the first place he is always stirring up some war so that the people may be in need of a leader.

That is likely.

And also that being impoverished by war taxes they may have to devote themselves to their daily business and be less likely to plot against him?

Obviously.

And if, I presume, he suspects that there are free spirits who will not suffer his domination, his further object is to find pretexts for destroying them by exposing them to the enemy? From all these motives a tyrant is compelled to be always provoking wars?

Yes, he is compelled to do so.

And by such conduct will he not the more readily incur the hostility of the citizens?

Of course.

And is it not likely that some of those who helped to establish and now share in his power, voicing their disapproval of the course of events, will speak out frankly to him and to one another—such of them as happen to be the bravest?

Yes, it is likely.

Then the tyrant must do away with all such if he is to maintain his rule, until he has left no one of any worth, friend or foe.

Obviously.

He must look sharp to see, then, who is brave, who is great-souled,

- c who is wise, who is rich, and such is his good fortune that, whether he wishes it or not, he must be their enemy and plot against them all until he purge the city.

A fine purgation, he said.

Yes, said I, just the opposite of that which physicians practice on our bodies. For while they remove the worst and leave the best, he does the reverse.

Yes, for apparently he must, he said, if he is to keep his power.

- d Blessed, then, is the necessity that binds him, said I, which bids him dwell for the most part with base companions who hate him, or else forfeit his life.

Such it is, he said.

And would he not, the more he offends the citizens by such conduct, have the greater need of more and more trustworthy bodyguards?

Of course.

Whom, then, may he trust, and whence shall he fetch them?

Unbidden, he said, they will wing their way to him in great numbers if he furnish their wage.

Drones, by the dog, I said, I think you are talking of again, an alien and motley crew.

You think rightly, he said.

But what of the home supply, would he not choose to employ that?

How?

By taking their slaves from the citizens, emancipating them and enlisting them in his bodyguard.

Assuredly, he said, since these are those whom he can most trust.

- 568 Truly, said I, this tyrant business is a blessed thing on your showing, if such are the friends and 'trusties' he must employ after destroying his former associates.

But such are indeed those he does make use of, he said.

And these companions admire him, I said, and these new citizens are his associates, while the better sort hate and avoid him.

Why should they not?

Not for nothing, said I, is tragedy in general esteemed wise, and Euripides beyond other tragedians.

Why, pray?

- b Because among other utterances of pregnant thought he said, 'Tyrants are wise by converse with the wise.' He meant evidently that these associates of the tyrant are the wise.

Yes, he and the other poets, he said, call the tyrant's power 'likest God's' and praise it in many other ways.

Wherefore, said I, being wise as they are, the poets of tragedy will pardon us and those whose politics resemble ours for not admitting them into our polity, since they hymn the praises of tyranny.

I think, he said, that the subtle minds among them will pardon us. c

But going about to other cities, I fancy, collecting crowds and hiring fine, loud, persuasive voices, they draw the politics toward tyrannies or democracies.

Yes, indeed.

And, further, they are paid and honored for this, chiefly, as is to be expected, by tyrants, and secondly by democracy. But the higher they go, breasting constitution hill, the more their honor fails, as it d were from lack of breath unable to proceed.

Quite so.

But this, said I, is a digression. Let us return to that fair, multitudinous, diversified, and ever-changing bodyguard of the tyrant and tell how it will be supported.

Obviously, he said, if there are sacred treasures in the city he will spend these as long as they last and the property of those he has destroyed, thus requiring smaller contributions from the populace.

But what when these resources fail?

Clearly, he said, his father's estate will have to support him and e his wassailers, his fellows and his she-fellows.

I understand, I said, that the people which begot the tyrant will have to feed him and his companions.

It cannot escape from that, he said.

And what have you to say, I said, in case the people protests and says that it is not right that a grown-up son should be supported by his father, but the reverse, and that it did not beget and establish him 569 in order that, when he had grown great, it, in servitude to its own slaves, should feed him and the slaves together with a non-descript rabble of aliens, but in order that, with him for protector, it might be liberated from the rule of the rich and the so-called 'better classes,' and that it now bids him and his crew depart from the city as a father expels from his house a son together with troublesome revellers?

The demos, by Zeus, he said, will then learn to its cost what it b is and what a creature it begot and cherished and bred to greatness, and that in its weakness it tries to expel the stronger.

What do you mean? said I. Will the tyrant dare to use force against his father, and, if he does not yield, to strike him?

Yes, he said, after he has once taken from him his arms.

A very parricide, said I, you make the tyrant out to be, and a cruel nurse of old age, and, as it seems, this is at last tyranny open and avowed, and, as the saying goes, the demos trying to escape the smoke of submission to the free would have plunged into the fire of enslavement to slaves, and in exchange for that excessive and un- c seasonable liberty has clothed itself in the garb of the most cruel and bitter servile servitude.

Yes indeed, he said, that is just what happens.

Well, then, said I, shall we not be fairly justified in saying that we have sufficiently described the transformation of a democracy into a tyranny and the nature of the tyranny itself?

Quite sufficiently, he said.

## BOOK IX

571 There remains for consideration, said I, the tyrannical man himself—the manner of his development out of the democratic type and his character and the quality of his life, whether wretched or happy.

Why, yes, he still remains, he said.

Do you know, then, what it is that I still miss?

What?

In the matter of our desires I do not think we sufficiently distinguished their nature and number. And so long as this is lacking our inquiry will lack clearness.

Well, said he, will our consideration of them not still be opportune?

By all means. And observe what it is about them that I wish to consider. It is this. Of our unnecessary pleasures and appetites there are some lawless ones, I think, which probably are to be found in us all, but which, when controlled by the laws and the better desires in alliance with reason, can in some men be altogether got rid of, or so nearly so that only a few weak ones remain, while in others the remnant is stronger and more numerous.

c What desires do you mean? he said.

Those, said I, that are awakened in sleep when the rest of the soul, the rational, gentle and dominant part, slumbers, but the beastly and savage part, replete with food and wine, gambols and, repelling sleep, endeavors to sally forth and satisfy its own instincts. You are aware that in such case there is nothing it will not venture to undertake as being released from all sense of shame and all reason.

d It does not shrink from attempting to lie with a mother in fancy or with anyone else, man, god, or brute. It is ready for any foul deed of blood; it abstains from no food, and, in a word, falls short of no extreme of folly and shamelessness.

Most true, he said.

But when, I suppose, a man's condition is healthy and sober, and he goes to sleep after arousing his rational part and entertaining it with fair words and thoughts, and attaining to clear self-consciousness, while he has neither starved nor indulged to repletion his ap-

e petitive part, so that it may be lulled to sleep and not disturb the better part by its pleasure or pain, but may suffer that in isolated  
572 purity to examine and reach out toward and apprehend some of the things unknown to it, past, present, or future, and when he has in like manner tamed his passionate part, and does not after a quarrel fall

asleep with anger still awake within him, but if he has thus quieted the two elements in his soul and quickened the third, in which reason resides, and so goes to his rest, you are aware that in such case he is most likely to apprehend truth, and the visions of his dreams are b least likely to be lawless.

I certainly think so, he said.

This description has carried us too far, but the point that we have to notice is this, that in fact there exists in every one of us, even in some reputed most respectable, a terrible, fierce, and lawless brood of desires, which it seems are revealed in our sleep. Consider, then, whether there is anything in what I say, and whether you admit it.

Well, I do.

Now recall our characterization of the democratic man. His development was determined by his education from youth under a thrifty father who approved only the acquisitive appetites and disapproved the unnecessary ones whose object is entertainment and display. Is not that so?

Yes.

And by association with more sophisticated men, teeming with the appetites we have just described, he is impelled toward every form of insolence and outrage, and to the adoption of their way of life by his hatred of his father's niggardliness. But since his nature is better than that of his corrupters, being drawn both ways he settles down d in a compromise between the two tendencies, and indulging and enjoying each in moderation, forsooth, as he supposes, he lives what he deems a life that is neither illiberal nor lawless, now transformed from an oligarch to a democrat.

That was and is our belief about this type.

Assume, then, again, said I, that such a man when he is older has a son bred in turn in his ways of life.

I so assume.

And suppose the experience of his father to be repeated in his case. He is drawn toward utter lawlessness, which is called by his seducers complete freedom. His father and his other kin lend support to these compromise appetites while the others lend theirs to the opposite group. And when these dread magi and kingmakers come to realize that they have no hope of controlling the youth in any other way, e they contrive to engender in his soul a ruling passion to be the protector of his idle and prodigal appetites, a monstrous winged drone. Or do you think the spirit of desire in such men is aught else? 573

Nothing but that, he said.

And when the other appetites, buzzing about it, replete with incense and myrrh and chaplets and wine, and the pleasures that are released in such revelries, magnifying and fostering it to the utmost, b awaken in the drone the sting of unsatisfied yearnings, why then this protector of the soul has madness for his bodyguard and runs amuck,

and if it finds in the man any opinions or appetites accounted worthy and still capable of shame, it slays them and thrusts them forth until it purges him of sobriety and fills and infects him with frenzy brought in from outside.

A perfect description, he said, of the generation of the tyrannical man.

And is not this analogy, said I, the reason why Love has long since been called a tyrant?

That may well be, he said.

And does not a drunken man, my friend, I said, have something of this tyrannical temper?

Yes, he has.

And again the madman, the deranged man, attempts and expects to rule over not only men but gods.

Yes indeed, he does, he said.

Then a man becomes tyrannical in the full sense of the word, my friend, I said, when either by nature or by habits or by both he has become even as the drunken, the erotic, the maniacal.

Assuredly.

Such, it seems, is his origin and character, but what is his manner of life?

As the wits say, you shall tell *me*.

I do, I said, for, I take it, next there are among them feasts and carousals and revelings and courtesans and all the doings of those whose souls are entirely swayed by the indwelling tyrant Eros.

Inevitably, he said.

And do not many and dread appetites shoot up beside this master passion every day and night in need of many things?

Many indeed.

And so any revenues there may be are quickly expended.

Of course.

And after this there are borrowings and levyings upon the estate?

Of course.

And when all these resources fail, must there not come a cry from the frequent and fierce nestlings of desire hatched in his soul, and must not such men, urged, as it were by goads, by the other desires, and especially by the ruling passion itself as captain of their body-guard—to keep up the figure—must they not run wild and look to see who has aught that can be taken from him by deceit or violence?

Most certainly.

And so he is compelled to sweep it in from every source or else be afflicted with great travail and pain.

He is.

And just as the new, upspringing pleasures in him got the better of the original passions of his soul and robbed them, so he himself, though younger, will claim the right to get the better of his father

and mother, and, after spending his own share, to seize and convert to his own use a portion of his father's estate.

Of course, he said, what else?

And if they resist him, would he not at first attempt to rob and steal from his parents and deceive them?

Certainly.

And if he failed in that, would he not next seize it by force?

I think so, he said.

And then, good sir, if the old man and the old woman clung to it and resisted him, would he be careful to refrain from the acts of a tyrant?

I am not without my fears, he said, for the parents of such a one.

Nay, Adimantus, in heaven's name, do you suppose that, for the sake of a newly found *belle amie* bound to him by no necessary tie, such a one would strike the dear mother, his by necessity and from his birth? Or for the sake of a blooming new-found *bel ami*, not necessary to his life, he would rain blows upon the aged father past his prime, closest of his kin and oldest of his friends? And would he subject them to those new favorites if he brought them under the same roof?

Yes, by Zeus, he said.

A most blessed lot it seems to be, said I, to be the parent of a tyrant son.

It does indeed, he said.

And again, when the resources of his father and mother are exhausted and fail such a one, and the swarm of pleasures collected in his soul is grown great, will he not first lay hands on the wall of someone's house or the cloak of someone who walks late at night, and thereafter he will make a clean sweep of some temple, and in all these actions the beliefs which he held from boyhood about the honorable and the base, the opinions accounted just, will be overmastered by the opinions newly emancipated and released, which, serving as bodyguards of the ruling passion, will prevail in alliance with it—I mean the opinions that formerly were freed from restraint in sleep, when, being still under the control of his father and the laws, he maintained the democratic constitution in his soul. But now, when under the tyranny of his ruling passion, he is continuously and in waking hours what he rarely became in sleep, and he will refrain from no atrocity of murder nor from any food or deed, but the passion that dwells in him as a tyrant will live in utmost anarchy and lawlessness, and, since it is itself sole autocrat, will urge the polity, so to speak, of him in whom it dwells to dare anything and everything in order to find support for himself and the hubbub of his henchmen, in part introduced from outside by evil associations, and in part released and liberated within by the same habits of life as his. Is not this the life of such a one?

It is this, he said.

- b And if, I said, there are only a few of this kind in a city, and the others, the multitude as a whole, are sober-minded, the few go forth into exile and serve some tyrant elsewhere as bodyguard or become mercenaries in any war there may be. But if they spring up in time of peace and tranquillity they stay right there in the city and effect many small evils.

What kind of evils do you mean?

Oh, they just steal, break into houses, cut purses, strip men of their garments, plunder temples, and kidnap, and if they are fluent speakers they become sycophants and bear false witness and take bribes.

- c Yes, small evils indeed, he said, if the men of this sort are few.

Why, yes, I said, for small evils are relatively small compared with great, and in respect of the corruption and misery of a state all of them together, as the saying goes, don't come within hail of the mischief done by a tyrant. For when men of this sort and their followers become numerous in a state and realize their numbers, then it is they who, in conjunction with the folly of the people, create a tyrant out of that one of them who has the greatest and mightiest tyrant in his own soul.

- d Naturally, he said, for he would be the most tyrannical.

Then if the people yield willingly—'tis well, but if the city resists him, then, just as in the previous case the man chastised his mother and his father, so now in turn will he chastise his fatherland if he can, bringing in new boon companions beneath whose sway he will hold and keep enslaved his once dear motherland—as the Cretans name her—and fatherland. And this would be the end of such a man's desire.

- e Yes, he said, this, just this.

Then, said I, is not this the character of such men in private life and before they rule the state—to begin with they associate with flatterers, who are ready to do anything to serve them, or, if they themselves want something, they themselves fawn and shrink from no contortion or abasement in protest of their friendship, though, once  
576 the object gained, they sing another tune.

Yes indeed, he said.

Throughout their lives, then, they never know what it is to be the friends of anybody. They are always either masters or slaves, but the tyrannical nature never tastes freedom or true friendship.

Quite so.

May we not rightly call such men faithless?

Of course.

- Yes, and unjust to the last degree, if we were right in our previous  
b agreement about the nature of justice.

But surely, he said, we were right.

Let us sum up, then, said I, the most evil type of man. He is, I presume, the man who, in his waking hours, has the qualities we found in his dream state.

Quite so.

And he is developed from the man who, being by nature most of a tyrant, achieves sole power, and the longer he lives as an actual tyrant the stronger this quality becomes.

Inevitably, said Glaucon, taking up the argument.

And shall we find, said I, that the man who is shown to be the most evil will also be the most miserable, and the man who is most of a tyrant for the longest time is most and longest miserable in sober truth? Yet the many have many opinions.

That much, certainly, he said, must needs be true.

Does not the tyrannical man, said I, correspond to the tyrannical state in similitude, the democratic to the democratic and the others likewise?

Surely.

And may we not infer that the relation of state to state in respect of virtue and happiness is the same as that of the man to the man?

Of course.

What is, then, in respect of virtue, the relation of a city ruled by a tyrant to a royal city as we first described it?

They are direct contraries, he said. The one is the best, the other the worst.

I'll not ask which is which, I said, because that is obvious. But again in respect of happiness and wretchedness, is your estimate the same or different? And let us not be dazzled by fixing our eyes on that one man, the tyrant, or a few of his court, but let us enter into and survey the entire city, as is right, and declare our opinion only after we have so dived to its uttermost recesses and contemplated its life as a whole.

That is a fair challenge, he said, and it is clear to everybody that there is no city more wretched than that in which a tyrant rules, and none more happy than that governed by a true king.

And would it not also be a fair challenge, said I, to ask you to accept as the only proper judge of the two men the one who is able in thought to enter with understanding into the very soul and temper of a man, and who is not like a child viewing him from outside, overawed by the tyrants' great attendance, and the pomp and circumstance which they assume in the eyes of the world, but is able to see through it all? And what if I should assume, then, that the man to whom we ought all to listen is he who has this capacity of judgment and who has lived under the same roof with a tyrant and has witnessed his conduct in his own home and observed in person his dealings with his intimates in each instance where he would best be seen stripped of his vesture of tragedy, and who had likewise observed his

behavior in the hazards of his public life—and if we should ask the man who has seen all this to be the messenger to report on the happiness or misery of the tyrant as compared with other men?

That also would be a most just challenge, he said.

Shall we, then, make believe, said I, that we are of those who are thus able to judge and who have ere now lived with tyrants, so that we may have someone to answer our questions?

By all means.

c Come, then, said I, examine it thus. Recall the general likeness between the city and the man, and then observe in turn what happens to each of them.

What things? he said.

In the first place, said I, will you call the state governed by a tyrant free or enslaved, speaking of it as a state?

Utterly enslaved, he said.

And yet you see in it masters and free men.

I see, he said, a small portion of such, but the entirety, so to speak, and the best part of it, is shamefully and wretchedly enslaved.

d If, then, I said, the man resembles the state, must not the same proportion obtain in him, and his soul teem with boundless servility and illiberality, the best and most reasonable parts of it being enslaved, while a small part, the worst and the most frenzied, plays the despot?

Inevitably, he said.

Then will you say that such a soul is enslaved or free?

Enslaved, I should suppose.

Again, does not the enslaved and tyrannized city least of all do what it really wishes?

Decidedly so.

e Then the tyrannized soul—to speak of the soul as a whole—also will least of all do what it wishes, but being always perforce driven and drawn by the gadfly of desire it will be full of confusion and repentance.

Of course.

And must the tyrannized city be rich or poor?

Poor.

578 Then the tyrant soul also must of necessity always be needy and suffer from unfulfilled desire.

So it is, he said.

And again, must not such a city, as well as such a man, be full of terrors and alarms?

It must indeed.

And do you think you will find more lamentations and groans and wailing and anguish in any other city?

By no means.

And so of man, do you think these things will more abound in

any other than in this tyrant type, that is maddened by its desires and passions?

How could it be so? he said.

In view of all these and other like considerations, then, I take it, b you judged that this city is the most miserable of cities.

And was I not right? he said.

Yes, indeed, said I. But of the tyrant man, what have you to say in view of these same things?

That he is far and away the most miserable of all, he said.

I cannot admit, said I, that you are right in that too.

How so? said he.

This one, said I, I take it, has not yet attained the acme of misery.

Then who has?

Perhaps you will regard the one I am about to name as still more wretched.

What one? c

The one, said I, who, being of tyrannical temper, does not live out his life in private station but is so unfortunate that by some unhappy chance he is enabled to become an actual tyrant.

I infer from what has already been said, he replied, that you speak truly.

Yes, said I, but it is not enough to suppose such things. We must examine them thoroughly by reason and an argument such as this. For our inquiry concerns the greatest of all things, the good life or the bad life.

Quite right, he replied.

Consider, then, if there is anything in what I say. For I think we d must get a notion of the matter from these examples.

From which?

From individual wealthy private citizens in our states who possess many slaves. For these resemble the tyrant in being rulers over many, only the tyrant's numbers are greater.

Yes, they are.

You are aware, then, that they are unafraid and do not fear their slaves?

What should they fear?

Nothing, I said, but do you perceive the reason why?

Yes, because the entire state is ready to defend each citizen.

You are right, I said. But now suppose some god should catch up e a man who has fifty or more slaves and waft him with his wife and children away from the city and set him down with his other possessions and his slaves in a solitude where no free man could come to his rescue. What and how great would be his fear, do you suppose, lest he and his wife and children be destroyed by the slaves?

The greatest in the world, he said, if you ask me.

And would he not forthwith find it necessary to fawn upon some

of the slaves and make them many promises and emancipate them, though nothing would be further from his wish? And so he would turn out to be the flatterer of his own servants.

He would certainly have to, he said, or else perish.

But now suppose, said I, that god established round about him numerous neighbors who would not tolerate the claim of one man to be master of another, but would inflict the utmost penalties on any such person on whom they could lay their hands.

b I think, he said, that his plight would be still more desperate, encompassed by nothing but enemies.

And is not that the sort of prison house in which the tyrant is pent, being of a nature such as we have described and filled with multitudinous and manifold terrors and appetites? Yet greedy and avid of spirit as he is, he only of the citizens may not travel abroad or view any of the sacred festivals that other free men yearn to see, but he c must live for the most part cowering in the recesses of his house like a woman, envying among the other citizens anyone who goes abroad and sees any good thing.

Most certainly, he said.

And does not such a harvest of ills measure the difference between the man who is merely ill governed in his own soul, the man of tyrannical temper, whom you just now judged to be most miserable, and the man who, having this disposition, does not live out his life in private station but is constrained by some ill-hap to become an actual tyrant, and while unable to control himself attempts to rule over others, as if a man with a sick and incontinent body should not live d the private life but should be compelled to pass his days in contention and strife with other persons?

Your analogy is most apt and true, Socrates, he said.

Is not that then, dear Glaucon, said I, a most unhappy experience in every way? And is not the tyrant's life still worse than that which was judged by you to be the worst?

Precisely so, he said.

Then it is the truth, though some may deny it, that the real tyrant is really enslaved to cringings and servitudes beyond compare, a flatterer of the basest men, and that, so far from finding even the least satisfaction for his desires, he is in need of most things, and is a poor man in very truth, as is apparent if one knows how to observe a soul in its entirety. And throughout his life he teems with terrors and is full of convulsions and pains, if in fact he resembles the condition of the city which he rules, and he is like it, is he not?

Yes, indeed, he said.

580 And in addition, shall we not further attribute to him all that we spoke of before, and say that he must needs be, and, by reason of his rule, come to be still more than he was, envious, faithless, unjust, friendless, impious, a vessel and nurse of all iniquity, and so in consequence be himself most unhappy and make all about him so?

No man of sense will gainsay that, he said.

Come then, said I, now at last, even as the judge of last instance pronounces, so do you declare who in your opinion is first in happiness and who second, and similarly judge the others, all five in succession, the royal, the timocratic, the oligarchic, the democratic, and the tyrannical man.

Nay, he said, the decision is easy. For as if they were choruses I judge them in the order of their entrance, and so rank them in respect of virtue and vice, happiness and its contrary.

Shall we hire a herald, then, said I, or shall I myself make proclamation that the son of Ariston pronounced the best man and the most righteous to be the happiest, and that he is the one who is the most kingly and a king over himself, and declared that the most evil and most unjust is the most unhappy, who again is the man who, having the most of the tyrannical temper in himself, becomes most of a tyrant over himself and over the state?

Let it have been so proclaimed by you, he said.

Shall I add the clause 'alike whether their character is known to all men and gods or is not known'?

Add that to the proclamation, he said.

Very good, said I. This, then, would be one of our proofs, but examine this second one and see if there is anything in it.

What is it?

Since, said I, corresponding to the three types in the city, the soul also is tripartite, it will admit, I think, of another demonstration also.

What is that?

The following. The three parts have also, it appears to me, three kinds of pleasure, one peculiar to each, and similarly three appetites and controls.

What do you mean? he said.

One part, we say, is that with which a man learns, one is that with which he feels anger. But the third part, owing to its manifold forms, we could not easily designate by any one distinctive name, but gave it the name of its chief and strongest element, for we called it the appetitive part because of the intensity of its appetites concerned with food and drink and love and their accompaniments, and likewise the money-loving part, because money is the chief instrument for the gratification of such desires.

And rightly, he said.

And if we should also say that its pleasure and its love were for gain or profit, should we not thus best bring it together under one head in our discourse so as to understand each other when we speak of this part of the soul, and justify our calling it the money-loving and gain-loving part?

I, at any rate, think so, he said.

And, again, of the high-spirited element, do we not say that it is wholly set on predominance and victory and good repute?

Yes, indeed.

- b And might we not appropriately designate it as the ambitious part and that which is covetous of honor?

Most appropriately.

But surely it is obvious to everyone that all the endeavor of the part by which we learn is ever toward knowledge of the truth of things, and that it least of the three is concerned for wealth and reputation.

Much the least.

Lover of learning and lover of wisdom would be suitable designations for that.

Quite so, he said.

- c Is it not also true, I said, that the ruling principle of men's souls is in some cases this faculty and in others one of the other two, as it may happen?

That is so, he said.

And that is why we say that the primary classes of men also are three, the philosopher or lover of wisdom, the lover of victory, and the lover of gain.

Precisely so.

And also that there are three forms of pleasure, corresponding respectively to each?

By all means.

- d Are you aware, then, said I, that if you should choose to ask men of these three classes, each in turn, which is the most pleasurable of these lives, each will chiefly commend his own? The financier will affirm that in comparison with profit the pleasures of honor or of learning are of no value except in so far as they produce money.

True, he said.

And what of the lover of honor? said I. Does he not regard the pleasure that comes from money as vulgar and low, and again that of learning, save in so far as the knowledge confers honor, mere fume and moonshine.

It is so, he said.

- e And what, said I, are we to suppose the philosopher thinks of the other pleasures compared with the delight of knowing the truth and the reality, and being always occupied with that while he learns? Will he not think them far removed from true pleasure, and call them literally the pleasures of necessity, since he would have no use for them if necessity were not laid upon him?

We may be sure of that, he said.

- Since, then, there is contention between the several types of pleasure and the lives themselves, not merely as to which is the more  
582 honorable or the more base, or the worse or the better, but which is actually the more pleasurable or free from pain, how could we determine which of them speaks most truly?

In faith, I cannot tell, he said.

Well, consider it thus. By what are things to be judged, if they are

to be judged rightly? Is it not by experience, intelligence, and discussion? Or could anyone name a better criterion than these?

How could he? he said.

Observe, then. Of our three types of men, which has had the most experience of all the pleasures we mentioned? Do you think that the lover of gain by study of the very nature of truth has more experience of the pleasure that knowledge yields than the philosopher has of that which results from gain? b

There is a vast difference, he said, for the one, the philosopher, must needs taste of the other two kinds of pleasure from childhood, but the lover of gain is not only under no necessity of tasting or experiencing the sweetness of the pleasure of learning the true natures of things, but he cannot easily do so even if he desires and is eager for it.

The lover of wisdom, then, said I, far surpasses the lover of gain in experience of both kinds of pleasure.

Yes, far. c

And how does he compare with the lover of honor? Is he more unacquainted with the pleasure of being honored than that other with that which comes from knowledge?

Nay, honor, he said, if they achieve their several objects, attends them all, for the rich man is honored by many and the brave man and the wise, so that all are acquainted with the kind of pleasure that honor brings, but it is impossible for anyone except the lover of wisdom to have savored the delight that the contemplation of true being and reality brings.

Then, said I, so far as experience goes, he is the best judge of the three. d

By far.

And again, he is the only one whose experience will have been accompanied by intelligence.

Surely.

And yet again, that which is the instrument, or *δργانون*, of judgment is the instrument, not of the lover of gain or of the lover of honor, but of the lover of wisdom.

What is that?

It was by means of words and discussion that we said the judgment must be reached, was it not?

Yes.

And they are the instrument mainly of the philosopher.

Of course.

Now if wealth and profit were the best criteria by which things are judged, the things praised and censured by the lover of gain would necessarily be truest and most real. e

Quite necessarily.

And if honor, victory, and courage, would it not be the things praised by the lover of honor and victory?

Obviously.

But since the tests are experience and wisdom and discussion, what follows?

Of necessity, he said, that the things approved by the lover of wisdom and discussion are most valid and true.

There being, then, three kinds of pleasure, the pleasure of that  
 583 part of the soul whereby we learn is the sweetest, and the life of the man in whom that part dominates is the most pleasurable.

How could it be otherwise? he said.

At any rate the man of intelligence speaks with authority when he commends his own life.

And to what life and to what pleasure, I said, does the judge assign the second place?

Obviously to that of the warrior and honor-loving type, for it is nearer to the first than is the life of the money-maker.

And so the last place belongs to the lover of gain, as it seems.

Surely, said he.

That, then, would be two points in succession and two victories  
 b for the just man over the unjust. And now for the third in the Olympian fashion to the savior and to Olympian Zeus—observe that other pleasure than that of the intelligence is not altogether even real or pure, but is a kind of scene painting, as I seem to have heard from some wise man, and yet this would be the greatest and most decisive overthrow.

Much the greatest. But what do you mean?

c I shall discover it, I said, if you will answer my questions while I seek.

Ask, then, he said.

Tell me, then, said I, do we not say that pain is the opposite of pleasure?

We certainly do.

And is there not such a thing as a neutral state?

There is.

Is it not intermediate between them, and in the mean, being a kind of quietude of the soul in these respects? Or is not that your notion of it?

It is that, said he.

Do you not recall the things men say in sickness?

What sort of things?

d Why, that after all there is nothing sweeter than to be well, though they were not aware that it is the highest pleasure before they were ill.

I remember, he said.

And do you not hear men afflicted with severe pain saying that there is no greater pleasure than the cessation of this suffering?

I do.

And you perceive, I presume, many similar conditions in which

men while suffering pain praise freedom from pain and relief from that as the highest pleasure, and not positive delight.

Yes, he said, for this in such cases is perhaps what is felt as pleasurable and acceptable—peace.

And so, I said, when a man's delight comes to an end, the cessation of pleasure will be painful.

It may be so, he said.

What, then, we just now described as the intermediate state between the two—this quietude—will sometimes be both pain and pleasure.

It seems so.

Is it really possible for that which is neither to become both?

I think not.

And further, both pleasure and pain arising in the soul are a kind of motion, are they not?

Yes.

And did we not just now see that to feel neither pain nor pleasure is a quietude of the soul and an intermediate state between the two? 584

Yes, we did.

How, then, can it be right to think the absence of pain pleasure, or the absence of joy painful?

In no way.

This is not a reality, then, but an illusion, said I. In such case the quietude in juxtaposition with the pain appears pleasure, and in juxtaposition with the pleasure pain. And these illusions have no real bearing on the truth of pleasure, but are a kind of jugglery.

So at any rate our argument signifies, he said.

Take a look, then, said I, at pleasures which do not follow on pain, so that you may not haply suppose for the present that it is the nature of pleasure to be a cessation from pain and pain from pleasure. b

Where shall I look, he said, and what pleasures do you mean?

There are many others, I said, and especially, if you please to note them, the pleasures connected with smell. For these with no antecedent pain suddenly attain an indescribable intensity, and their cessation leaves no pain after them.

Most true, he said.

Let us not believe, then, that the riddance of pain is pure pleasure or that of pleasure pain. c

No, we must not.

Yet, surely, said I, the affections that find their way through the body to the soul and are called pleasures are, we may say, the most and the greatest of them, of this type, in some sort releases from pain.

Yes, they are.

And is not this also the character of the anticipatory pleasures and pains that precede them and arise from the expectation of them?

It is.

- d Do you know, then, what their quality is and what they most resemble?

What? he said.

Do you think that there is such a thing in nature as up and down and in the middle?

I do.

Do you suppose, then, that anyone who is transported from below to the center would have any other opinion than that he was moving upward? And if he took his stand at the center and looked in the direction from which he had been transported, do you think he would suppose himself to be anywhere but above, never having seen that which is really above?

No, by Zeus, he said, I do not think that such a person would have any other notion.

- e And if he were borne back, I said, he would both think himself to be moving downward and would think truly.

Of course.

And would not all this happen to him because of his nonacquaintance with the true and real up and down and middle?

Obviously.

- Would it surprise you, then, said I, if similarly men without experience of truth and reality hold unsound opinions about many other matters, and are so disposed toward pleasure and pain and the intermediate neutral condition that, when they are moved in the direction of the painful, they truly think themselves to be, and really are, in a state of pain, but, when they move from pain to the middle and neutral state, they intensely believe that they are approaching fulfillment and pleasure, and just as if, in ignorance of white, they were comparing gray with black, so, being inexperienced in true pleasure, they are deceived by viewing painlessness in its relation to pain?

No, by Zeus, he said, it would not surprise me, but far rather if it were not so.

- In *this* way, then, consider it. Are not hunger and thirst and similar states inanitions or emptinesses of the bodily habit?

Surely.

And is not ignorance and folly in turn a kind of emptiness of the habit of the soul?

It is indeed.

And he who partakes of nourishment and he who gets wisdom fills the void and is filled?

Of course.

And which is the truer filling and fulfillment, that of the less or of the more real being?

Evidently that of the more real.

And which of the two groups or kinds do you think has a greater

part in pure essence, the class of foods, drinks, and relishes and nourishment generally, or the kind of true opinion, knowledge and reason, c and, in sum, all the things that are more excellent? Form your judgment thus. Which do you think more truly is, that which clings to what is ever like itself and immortal and to the truth, and that which is itself of such a nature and is born in a thing of that nature, or that which clings to what is mortal and never the same and is itself such and is born in such a thing?

That which cleaves to what is ever the same far surpasses, he said.

Does the essence of that which never abides the same partake of real essence any more than of knowledge?

By no means.

Or of truth and reality?

Not of that, either.

And if a thing has less of truth has it not also less of real essence or existence?

Necessarily.

And is it not generally true that the kinds concerned with the service of the body partake less of truth and reality than those that serve the soul? d

Much less.

And do you not think that the same holds of the body itself in comparison with the soul?

I do.

Then is not that which is fulfilled of what more truly is, and which itself more truly is, more truly filled and satisfied than that which being itself less real is filled with more unreal things?

Of course.

If, then, to be filled with what befits nature is pleasure, then that which is more really filled with real things would more really and e truly cause us to enjoy a true pleasure, while that which partakes of the less truly existent would be less truly and surely filled and would partake of a less trustworthy and less true pleasure.

Most inevitably, he said.

Then those who have no experience of wisdom and virtue but are 586 ever devoted to feasting and that sort of thing are swept downward, it seems, and back again to the center, and so sway and roam to and fro throughout their lives, but they have never transcended all this and turned their eyes to the true upper region nor been wafted there, nor ever been really filled with real things, nor ever tasted stable and pure pleasure, but with eyes ever bent upon the earth and heads bowed down over their tables they feast like cattle, grazing and copulating, b ever greedy for more of these delights, and in their greed kicking and butting one another with horns and hoofs of iron they slay one another in sateless avidity, because they are vainly striving to satisfy

with things that are not real the unreal and incontinent part of their souls.

You describe in quite oracular style, Socrates, said Glaucon, the life of the multitude.

And are not the pleasures with which they dwell inevitably commingled with pains, phantoms of true pleasure, illusions of scene painting, so colored by contrary juxtaposition as to seem intense in either kind, and to beget mad loves of themselves in senseless souls, and to be fought for, as Stesichorus says the wraith of Helen was fought for at Troy through ignorance of the truth?

It is quite inevitable, he said, that it should be so.

So, again, must not the like hold of the high-spirited element, whenever a man succeeds in satisfying that part of his nature—his covetousness of honor by envy, his love of victory by violence, his ill temper by indulgence in anger, pursuing these ends without regard to consideration and reason?

The same sort of thing, he said, must necessarily happen in this case too.

Then, said I, may we not confidently declare that in both the gain-loving and the contentious part of our nature all the desires that wait upon knowledge and reason, and, pursuing their pleasures in conjunction with them, take only those pleasures which reason approves, will, since they follow truth, enjoy the truest pleasures, so far as that is possible for them, and also the pleasures that are proper to them and their own, if for everything that which is best may be said to be most its 'own'?

But indeed, he said, it is most truly its very own.

Then when the entire soul accepts the guidance of the wisdom-loving part and is not filled with inner dissension, the result for each part is that it in all other respects keeps to its own task and is just, and likewise that each enjoys its own proper pleasures and the best pleasures and, so far as such a thing is possible, the truest.

Precisely so.

And so when one of the other two gets the mastery the result for it is that it does not find its own proper pleasure and constrains the others to pursue an alien pleasure and not the true.

That is so, he said.

And would not that which is furthest removed from philosophy and reason be most likely to produce this effect?

Quite so, he said.

And is not that furthest removed from reason which is furthest from law and order?

Obviously.

And was it not made plain that the furthest removed are the erotic and tyrannical appetites?

Quite so.

And least so the royal and orderly?

Yes.

Then the tyrant's place, I think, will be fixed at the furthest remove from true and proper pleasure, and the king's at the least.

Necessarily.

Then the tyrant's life will be least pleasurable and the king's most.

There is every necessity of that.

Do you know, then, said I, how much less pleasurably the tyrant lives than the king?

I'll know if you tell me, he said.

There being as it appears three pleasures, one genuine and two spurious, the tyrant in his flight from law and reason crosses the border beyond the spurious, cohabits with certain slavish, mercenary pleasures, and the measure of his inferiority is not easy to express except perhaps thus.

How? he said.

The tyrant, I believe, we found at the third remove from the oligarch, for the democrat came between.

Yes.

And would he not also dwell with a phantom of pleasure in respect of reality three stages removed from that other, if all that we have said is true?

That is so.

And the oligarch in turn is at the third remove from the royal man and if we assume the identity of the aristocrat and the king.

Yes, the third.

Three times three, then, by numerical measure is the interval that separates the tyrant from true pleasure.

Apparently.

The phantom of the tyrant's pleasure is then by longitudinal mensuration a plane number.

Quite so.

But by squaring and cubing it is clear what the interval of this separation becomes.

It is clear, he said, to a reckoner.

Then taking it the other way about, if one tries to express the extent of the interval between the king and the tyrant in respect of true pleasure he will find on completion of the multiplication that he lives seven hundred and twenty-nine times as happily and that the tyrant's life is more painful by the same distance.

An overwhelming and baffling calculation, he said, of the difference between the just and the unjust man in respect of pleasure and pain!

And what is more, it is a true number and pertinent to the lives of men if days and nights and months and years pertain to them.

They certainly do, he said.

Then if in point of pleasure the victory of the good and just man over the bad and unjust is so great as this, he will surpass him inconceivably in decency and beauty of life and virtue.

Inconceivably indeed, by Zeus, he said.

- b Very good, said I. And now that we have come to this point in the argument, let us take up again the statement with which we began and that has brought us to this pass. It was, I believe, averred that injustice is profitable to the completely unjust man who is reputed just. Was not that the proposition?

Yes, that.

Let us, then, reason with its proponent now that we have agreed on the essential nature of injustice and just conduct.

How? he said.

By fashioning in our discourse a symbolic image of the soul, that the maintainer of that proposition may see precisely what it is that he was saying.

What sort of an image? he said.

- c One of those natures that the ancient fables tell of, said I, as that of the Chimera or Scylla or Cerberus, and the numerous other examples that are told of many forms grown together in one.

Yes, they do tell of them.

Mold, then, a single shape of a manifold and many-headed beast that has a ring of heads of tame and wild beasts and can change them and cause to spring forth from itself all such growths.

- d It is the task of a cunning artist, he said, but nevertheless, since speech is more plastic than wax and other such media, assume that it has been so fashioned.

Then fashion one other form of a lion and one of a man and let the first be far the largest and the second second in size.

That is easier, he said, and is done.

Join the three in one, then, so as in some sort to grow together.

They are so united, he said.

- e Then mold about them outside the likeness of one, that of the man, so that to anyone who is unable to look within but who can see only the external sheath it appears to be one living creature, the man.

The sheath is made fast about him, he said.

- Let us then say to the speaker who avers that it pays this man to be unjust, and that to do justice is not for his advantage, that he is affirming nothing else than that it profits him to feast and make strong the multifarious beast and the lion and all that pertains to the lion, but to starve the man and so enfeeble him that he can be pulled about whithersoever either of the others drag him, and not to familiarize or reconcile with one another the two creatures but suffer them to bite and fight and devour one another.

Yes, he said, that is precisely what the panegyrist of injustice will be found to say.

And on the other hand, he who says that justice is the more profitable affirms that all our actions and words should tend to give the man within us complete domination over the entire man and make him take charge of the many-headed beast—like a farmer who cherishes and trains the cultivated plants but checks the growth of the wild—and he will make an ally of the lion's nature, and caring for all the beasts alike will first make them friendly to one another and to himself, and so foster their growth.

Yes, that in turn is precisely the meaning of the man who commends justice.

From every point of view, then, the panegyrist of justice speaks truly and the panegyrist of injustice falsely. For whether we consider pleasure, reputation, or profit, he who commends justice speaks the truth, while there is no soundness or real knowledge of what he censures in him who disparages it.

None whatever, I think, said he.

Shall we, then, try to persuade him gently, for he does not willingly err, by questioning him thus. Dear friend, should we not also say that the things which law and custom deem fair or foul have been accounted so for a like reason—the fair and honorable things being those that subject the brutish part of our nature to that which is human in us, or rather, it may be, to that which is divine, while the foul and base are the things that enslave the gentle nature to the wild? Will he assent or not?

He will if he is counseled by me.

Can it profit any man in the light of this thought to accept gold unjustly if the result is to be that by the acceptance he enslaves the best part of himself to the worst? Or is it conceivable that, while, if the taking of the gold enslaved his son or daughter and that too to fierce and evil men, it would not profit him, no matter how large the sum, yet that, if the result is to be the ruthless enslavement of the divinest part of himself to the most despicable and godless part, he is not to be deemed wretched and is not taking the golden bribe much more disastrously than Eriphyle did when she received the necklace as the price of her husband's life?

Far more, said Glaucon, for I will answer you in his behalf.

And do you not think that the reason for the old objection to licentiousness is similarly because that sort of thing emancipates that dread, that huge and manifold beast overmuch?

Obviously, he said.

And do we not censure self-will and irascibility when they foster and intensify disproportionately the element of the lion and the snake in us?

By all means.

And do we not reprobate luxury and effeminacy for their loosening and relaxation of this same element when they engender cowardice in it?

Surely.

And flattery and illiberality when they reduce this same high-spirited element under the rule of the moblike beast and habituate it for the sake of wealth and the unbridled lusts of the beast to endure all manner of contumely from youth up and become an ape instead of a lion?

c Yes, indeed, he said.

And why do you suppose that 'base mechanic' handicraft is a term of reproach? Shall we not say that it is solely when the best part is naturally weak in a man so that it cannot govern and control the brood of beasts within him but can only serve them and can learn nothing but the ways of flattering them?

So it seems, he said.

Then is it not in order that such a one may have a like government with the best man that we say he ought to be the slave of that  
d best man who has within himself the divine governing principle, not because we suppose, as Thrasyarchus did in the case of subjects, that the slave should be governed for his own harm, but on the ground that it is better for everyone to be governed by the divine and the intelligent, preferably indwelling and his own, but in default of that imposed from without, in order that we all so far as possible may be akin and friendly because our governance and guidance are the same?

e Yes, and rightly so, he said.

And it is plain, I said, that this is the purpose of the law, which is the ally of all classes in the state, and this is the aim of our control of children, our not leaving them free before we have established, so to  
591 speak, a constitutional government within them and, by fostering the best element in them with the aid of the like in ourselves, have set up in its place a similar guardian and ruler in the child, and then, and then only, we leave it free.

Yes, that is plain, he said.

In what way, then, Glaucon, and on what principle, shall we say that it profits a man to be unjust or licentious or do any shameful thing that will make him a worse man, but otherwise will bring him more wealth or power?

In no way, he said.

b And how that it pays him to escape detection in wrongdoing and not pay the penalty? Or is it not true that he who evades detection becomes a still worse man, while in the one who is discovered and chastened the brutish part is lulled and tamed and the gentle part liberated, and the entire soul, returning to its nature at the best, attains to a much more precious condition in acquiring sobriety and righteousness together with wisdom, than the body does when it gains strength and beauty conjoined with health, even as the soul is more precious than the body?

Most assuredly, he said.

Then the wise man will bend all his endeavors to this end c throughout his life; he will, to begin with, prize the studies that will give this quality to his soul and disprize the others.

Clearly, he said.

And then, I said, he not only will not abandon the habit and nurture of his body to the brutish and irrational pleasure and live with his face set in that direction, but he will not even make health his chief aim, nor give the first place to the ways of becoming strong or healthy or beautiful unless these things are likely to bring with them soberness of spirit, but he will always be found attuning the harmonies of his body for the sake of the concord in his soul. d

By all means, he replied, if he is to be a true musician.

And will he not deal likewise with the ordering and harmonizing of his possessions? He will not let himself be dazzled by the felicitations of the multitude and pile up the mass of his wealth without measure, involving himself in measureless ills.

No, I think not, he said.

He will rather, I said, keep his eyes fixed on the constitution in e his soul, and taking care and watching lest he disturb anything there either by excess or deficiency of wealth, will so steer his course and add to or detract from his wealth on this principle, so far as may be.

Precisely so, he said.

And in the matter of honors and office too this will be his guiding principle. He will gladly take part in and enjoy those which he thinks 592 will make him a better man, but in public and private life he will shun those that may overthrow the established habit of his soul.

Then, if that is his chief concern, he said, he will not willingly take part in politics.

Yes, by the dog, said I, in his own city he certainly will, yet perhaps not in the city of his birth, except in some providential conjuncture.

I understand, he said. You mean the city whose establishment we have described, the city whose home is in the ideal, for I think that it can be found nowhere on earth. b

Well, said I, perhaps there is a pattern of it laid up in heaven for him who wishes to contemplate it and so beholding to constitute himself its citizen. But it makes no difference whether it exists now or ever will come into being. The politics of this city only will be his and of none other.

That seems probable, he said.

## BOOK X

And truly, I said, many other considerations assure me that we were 595 entirely right in our organization of the state, and especially, I think, in the matter of poetry.

What about it? he said.

In refusing to admit at all so much of it as is imitative, for that it is certainly not to be received is, I think, still more plainly apparent  
 b now that we have distinguished the several parts of the soul.

What do you mean?

Why, between ourselves—for you will not betray me to the tragic poets and all other imitators—that kind of art seems to be a corruption of the mind of all listeners who do not possess as an antidote a knowledge of its real nature.

What is your idea in saying this? he said.

I must speak out, I said, though a certain love and reverence for Homer that has possessed me from a boy would stay me from speak-  
 c ing. For he appears to have been the first teacher and beginner of all these beauties of tragedy. Yet all the same we must not honor a man above truth, but, as I say, speak our minds.

By all means, he said.

Listen, then, or rather, answer my question.

Ask it, he said.

Could you tell me in general what imitation is? For neither do I myself quite apprehend what it would be at.

It is likely, then, he said, that I should apprehend!

596 It would be nothing strange, said I, since it often happens that the dimmer vision sees things in advance of the keener.

That is so, he said, but in your presence I could not even be eager to try to state anything that appears to me, but do you yourself consider it.

Shall we, then, start the inquiry at this point by our customary procedure? We are in the habit, I take it, of positing a single idea or form in the case of the various multiplicities to which we give the same name. Do you not understand?

I do.

In the present case, then, let us take any multiplicity you please;  
 b for example, there are many couches and tables.

Of course.

But these utensils imply, I suppose, only two ideas or forms, one of a couch and one of a table.

Yes.

And are we not also in the habit of saying that the craftsman who produces either of them fixes his eyes on the idea or form, and so makes in the one case the couches and in the other the tables that we use, and similarly of other things? For surely no craftsman makes the idea itself. How could he?

By no means.

c But now consider what name you would give to this craftsman.  
 What one?

Him who makes all the things that all handicraftsmen severally produce.

A truly clever and wondrous man you tell of.

Ah, but wait, and you will say so indeed, for this same handicraftsman is not only able to make all implements, but he produces all plants and animals, including himself, and thereto earth and heaven and the gods and all things in heaven and in Hades under the earth.

A most marvelous Sophist, he said.

d

Are you incredulous? said I. Tell me, do you deny altogether the possibility of such a craftsman, or do you admit that in a sense there could be such a creator of all these things, and in another sense not? Or do you not perceive that you yourself would be able to make all these things in a way?

And in what way, I ask you, he said.

There is no difficulty, said I, but it is something that the craftsman can make everywhere and quickly. You could do it most quickly if you should choose to take a mirror and carry it about everywhere. You will speedily produce the sun and all the things in the sky, and speedily the earth and yourself and the other animals and implements and plants and all the objects of which we just now spoke.

Yes, he said, the appearance of them, but not the reality and the truth.

Excellent, said I, and you come to the aid of the argument opportunely. For I take it that the painter too belongs to this class of producers, does he not?

Of course.

But you will say, I suppose, that his creations are not real and true. And yet, after a fashion, the painter too makes a couch, does he not?

Yes, he said, the appearance of one, he too.

What of the cabinetmaker? Were you not just now saying that he does not make the idea or form which we say is the real couch, the couch in itself, but only some particular couch?

597

Yes, I was.

Then if he does not make that which really is, he could not be said to make real being but something that resembles real being but is not that. But if anyone should say that being in the complete sense belongs to the work of the cabinetmaker or to that of any other handicraftsman, it seems that he would say what is not true.

That would be the view, he said, of those who are versed in this kind of reasoning.

We must not be surprised, then, if this too is only a dim adumbration in comparison with reality.

b

No, we must not.

Shall we, then, use these very examples in our quest for the true nature of this imitator?

If you please, he said.

We get, then, these three couches, one, that in nature, which, I take it, we would say that God produces, or who else?

No one, I think.

And then there was one which the carpenter made.

Yes, he said.

And one which the painter. Is not that so?

So be it.

The painter, then, the cabinetmaker, and God, there are these three presiding over three kinds of couches.

Yes, three.

Now God, whether because he so willed or because some compulsion was laid upon him not to make more than one couch in nature, so wrought and created one only, the couch which really and in itself is. But two or more such were never created by God and never will come into being.

How so? he said.

Because, said I, if he should make only two, there would again appear one of which they both would possess the form or idea, and that would be the couch that really is in and of itself, and not the other two.

Right, he said.

God, then, I take it, knowing this and wishing to be the real author of the couch that has real being and not of some particular couch, nor yet a particular cabinetmaker, produced it in nature unique.

So it seems.

Shall we, then, call him its true and natural begetter, or something of the kind?

That would certainly be right, he said, since it is by and in nature that he has made this and all other things.

And what of the carpenter? Shall we not call him the creator of a couch?

Yes.

Shall we also say that the painter is the creator and maker of that sort of thing?

By no means.

What will you say he is in relation to the couch.

This, said he, seems to me the most reasonable designation for him, that he is the imitator of the thing which those others produce.

Very good, said I. The producer of the product three removes from nature you call the imitator?

By all means, he said.

This, then, will apply to the maker of tragedies also, if he is an

imitator and is in his nature three removes from the king and the truth, as are all other imitators.

It would seem so.

We are in agreement, then, about the imitator. But tell me now this about the painter. Do you think that what he tries to imitate is in each case that thing itself in nature or the works of the craftsmen? 598

The works of the craftsmen, he said.

Is it the reality of them or the appearance? Define that further point.

What do you mean? he said.

This. Does a couch differ from itself according as you view it from the side or the front or in any other way? Or does it differ not at all in fact though it appears different, and so of other things?

That is the way of it, he said. It appears other but differs not at all. b

Consider, then, this very point. To which is painting directed in every case, to the imitation of reality as it is or of appearance as it appears? Is it an imitation of a phantasm or of the truth?

Of a phantasm, he said.

Then the mimetic art is far removed from truth, and this, it seems, is the reason why it can produce everything, because it touches or lays hold of only a small part of the object and that a phantom, as, for example, a painter, we say, will paint us a cobbler, a carpenter, and other craftsmen, though he himself has no expertness in any of these arts, but nevertheless if he were a good painter, by exhibiting at a distance his picture of a carpenter he would deceive children and foolish men, and make them believe it to be a real carpenter. c

Why not?

But for all that, my friend, this, I take it, is what we ought to bear in mind in all such cases. When anyone reports to us of someone, that he has met a man who knows all the crafts and everything else that men severally know, and that there is nothing that he does not know more exactly than anybody else, our tacit rejoinder must be that he is a simple fellow, who apparently has met some magician or sleight-of-hand man and imitator and has been deceived by him into the belief that he is all-wise, because of his own inability to put to the proof and distinguish knowledge, ignorance, and imitation. d

Most true, he said.

Then, said I, have we not next to scrutinize tragedy and its leader Homer, since some people tell us that these poets know all the arts and all things human pertaining to virtue and vice, and all things divine? For the good poet, if he is to poetize things rightly, must, they argue, create with knowledge or else be unable to create. So we must consider whether these critics have not fallen in with such imitators and been deceived by them, so that looking upon their works they 599

cannot perceive that these are three removes from reality, and easy to produce without knowledge of the truth. For it is phantoms, not realities, that they produce. Or is there something in their claim, and do good poets really know the things about which the multitude fancy they speak well?

We certainly must examine the matter, he said.

Do you suppose, then, that if a man were able to produce both the exemplar and the semblance, he would be eager to abandon himself to the fashioning of phantoms and set this in the forefront of his life as the best thing he had?

b I do not.

But, I take it, if he had genuine knowledge of the things he imitates he would far rather devote himself to real things than to the imitation of them, and would endeavor to leave after him many noble deeds and works as memorials of himself, and would be more eager to be the theme of praise than the praiser.

I think so, he said, for there is no parity in the honor and the gain.

Let us not, then, demand a reckoning from Homer or any other of the poets on other matters by asking them, if any one of them was a  
c physician and not merely an imitator of a physician's talk, what men any poet, old or new, is reported to have restored to health as Asclepius did, or what disciples of the medical art he left after him as Asclepius did his descendants, and let us dismiss the other arts and  
d not question them about them. But concerning the greatest and finest things of which Homer undertakes to speak, wars and generalship and the administration of cities and the education of men, it surely is fair to question him and ask, 'Friend Homer, if you are not at the third remove from truth and reality in human excellence, being merely that creator of phantoms whom we defined as the imitator, but if you are even in the second place and were capable of knowing what pursuits make men better or worse in private or public life, tell us what city was better governed owing to you, even as Lacedaemon  
e was because of Lycurgus, and many other cities great and small because of other legislators. But what city credits you with having been a good legislator and having benefited them? Italy and Sicily say this of Charondas and we of Solon. But who says it of you?' Will he be able to name any?

I think not, said Glaucon. At any rate none is mentioned even by the Homeridae themselves.

600 Well, then, is there any tradition of a war in Homer's time that was well conducted by his command or counsel?

None.

Well, then, as might be expected of a man wise in practical affairs, are many and ingenious inventions for the arts and business of life reported of Homer as they are of Thales the Milesian and Anacharsis the Scythian?

Nothing whatever of the sort.

Well, then, if no public service is credited to him, is Homer reported while he lived to have been a guide in education to men who took pleasure in associating with him and transmitted to posterity a certain Homeric way of life just as Pythagoras was himself especially honored for this, and his successors, even to this day, denominating a certain way of life the Pythagorean, are distinguished among their contemporaries?

No, nothing of this sort either is reported, for Creophylus, Socrates, the friend of Homer, would perhaps be even more ridiculous than his name as a representative of Homeric culture and education, if what is said about Homer is true. For the tradition is that Homer was completely neglected in his own lifetime by that friend of the flesh.

Why, yes, that is the tradition, said I, but do you suppose, Glaucon, that, if Homer had really been able to educate men and make them better and had possessed not the art of imitation but real knowledge, he would not have acquired many companions and been honored and loved by them? But are we to believe that while Protagoras of Abdera and Prodicus of Ceos and many others are able by private teaching to impress upon their contemporaries the conviction that they will not be capable of governing their homes or the city unless they put them in charge of their education, and make themselves so beloved for this wisdom that their companions all but carry them about on their shoulders, yet, forsooth, that Homer's contemporaries, if he had been able to help men to achieve excellence, would have suffered him or Hesiod to roam about rhapsodizing and would not have clung to them far rather than to their gold, and constrained them to dwell with them in their homes, or failing to persuade them, would themselves have escorted them wheresoever they went until they should have sufficiently imbibed their culture?

What you say seems to me to be altogether true, Socrates, he said.

Shall we, then, lay it down that all the poetic tribe, beginning with Homer, are imitators of images of excellence and of the other things that they 'create,' and do not lay hold on truth, but, as we were just now saying, the painter will fashion, himself knowing nothing of the cobbler's art, what appears to be a cobbler to him and likewise to those who know nothing but judge only by forms and colors?

Certainly.

And similarly, I suppose, we shall say that the poet himself, knowing nothing but how to imitate, lays on with words and phrases the colors of the several arts in such fashion that others equally ignorant, who see things only through words, will deem his words most excellent, whether he speak in rhythm, meter, and harmony about cobbling or generalship or anything whatever. So mighty is the spell that these adornments naturally exercise, though when they are

stripped bare of their musical coloring and taken by themselves, I think you know what sort of a showing these sayings of the poets make. For you, I believe, have observed them.

I have, he said.

Do they not, said I, resemble the faces of adolescents, young but not really beautiful, when the bloom of youth abandons them?

By all means, he said.

Come, then, said I, consider this point. The creator of the phantom, the imitator, we say, knows nothing of the reality but only the appearance. Is not that so?

Yes.

Let us not, then, leave it half said but consider it fully.

Speak on, he said.

The painter, we say, will paint both reins and a bit.

Yes.

But the maker will be the cobbler and the smith.

Certainly.

Does the painter, then, know the proper quality of reins and bit? Or does not even the maker, the cobbler, and the smith know that, but only the man who understands the use of these things, the horseman?

Most true.

And shall we not say that the same holds true of everything?

d What do you mean?

That there are some three arts concerned with everything, the user's art, the maker's, and the imitator's.

Yes.

Now do not the excellence, the beauty, the rightness of every implement, living thing, and action refer solely to the use for which each is made or by nature adapted?

That is so.

e It quite necessarily follows, then, that the user of anything is the one who knows most of it by experience, and that he reports to the maker the good or bad effects in use of the thing he uses. As, for example, the flute player reports to the flute maker which flutes respond and serve rightly in flute playing, and will order the kind that must be made, and the other will obey and serve him. ♣

Of course.

The one, then, possessing knowledge, reports about the goodness or the badness of the flutes, and the other, believing, will make them.

Yes.

Then in respect of the same implement the maker will have right belief about its excellence and defects from association with the  
602 man who knows and being compelled to listen to him, but the user will have true knowledge.

Certainly.

And will the imitator from experience or use have knowledge

whether the things he portrays are or are not beautiful and right, or will he, from compulsory association with the man who knows and taking orders from him for the right making of them, have right opinion?

Neither.

Then the imitator will neither know nor opine rightly concerning the beauty or the badness of his imitations.

It seems not.

Most charming, then, would be the state of mind of the poetical imitator in respect of true wisdom about his creations.

Not at all.

Yet still he will nonetheless imitate, though in every case he does not know in what way the thing is bad or good. But, as it seems, the thing he will imitate will be the thing that appears beautiful to the ignorant multitude.

Why, what else?

On this, then, as it seems, we are fairly agreed, that the imitator knows nothing worth mentioning of the things he imitates, but that imitation is a form of play, not to be taken seriously, and that those who attempt tragic poetry, whether in iambics or heroic verse, are all altogether imitators.

By all means.

In heaven's name, then, this business of imitation is concerned with the third remove from truth, is it not?

Yes.

And now again, to what element in man is its function and potency related?

Of what are you speaking?

Of this. The same magnitude, I presume, viewed from near and from far does not appear equal.

Why, no.

And the same things appear bent and straight to those who view them in water and out, or concave and convex, owing to similar errors of vision about colors, and there is obviously every confusion of this sort in our souls. And so scene painting in its exploitation of this weakness of our nature falls nothing short of witchcraft, and so do jugglery and many other such contrivances.

True.

And have not measuring and numbering and weighing proved to be most gracious aids to prevent the domination in our soul of the apparently greater or less or more or heavier, and to give the control to that which has reckoned and numbered or even weighed?

Certainly.

But this surely would be the function of the part of the soul that reasons and calculates.

Why, yes, of that.

And often when this has measured and declares that certain things are larger or that some are smaller than the others or equal, there is at the same time an appearance of the contrary.

Yes.

And did we not say that it is impossible for the same thing at one time to hold contradictory opinions about the same thing?

And we were right in affirming that.

603 The part of the soul, then, that opines in contradiction of measurement could not be the same with that which conforms to it.

Why, no.

But, further, that which puts its trust in measurement and reckoning must be the best part of the soul.

Surely.

Then that which opposes it must belong to the inferior elements of the soul.

Necessarily.

This, then, was what I wished to have agreed upon when I said  
b that poetry, and in general the mimetic art, produces a product that is far removed from truth in the accomplishment of its task, and associates with the part in us that is remote from intelligence, and is its companion and friend for no sound and true purpose.

By all means, said he.

Mimetic art, then, is an inferior thing cohabiting with an inferior and engendering inferior offspring.

It seems so.

Does that, said I, hold only for vision or does it apply also to hearing and to what we call poetry?

Presumably, he said, to that also.

Let us not, then, trust solely to the plausible analogy from painting, but let us approach in turn that part of the mind to which  
c mimetic poetry appeals and see whether it is the inferior or the nobly serious part.

So we must.

Let us, then, put the question thus. Mimetic poetry, we say, imitates human beings acting under compulsion or voluntarily, and as a result of their actions supposing themselves to have fared well or ill and in all this feeling either grief or joy. Did we find anything else but this?

Nothing.

Is a man, then, in all this of one mind with himself, or just as in the domain of sight there was faction and strife and he held within  
d himself contrary opinions at the same time about the same things, so also in our actions there is division and strife of the man with himself? But I recall that there is no need now of our seeking agreement on this point, for in our former discussion we were sufficiently agreed

that our soul at any one moment teems with countless such self-contradictions.

Rightly, he said.

Yes, rightly, said I, but what we then omitted must now, I think, be set forth.

What is that? he said.

When a good and reasonable man, said I, experiences such a stroke of fortune as the loss of a son or anything else that he holds most dear, we said, I believe, then too, that he will bear it more easily than the other sort.

Assuredly.

But now let us consider this. Will he feel no pain, or, since that is impossible, shall we say that he will in some sort be moderate in his grief?

That, he said, is rather the truth.

Tell me now this about him. Do you think he will be more likely 604 to resist and fight against his grief when he is observed by his equals or when he is in solitude alone by himself?

He will be much more restrained, he said, when he is on view.

But when left alone, I fancy, he will permit himself many utterances which, if heard by another, would put him to shame, and will do many things which he would not consent to have another see him doing.

So it is, he said.

Now is it not reason and law that exhorts him to resist, while that which urges him to give way to his grief is the bare feeling itself? b

True.

And where there are two opposite impulses in a man at the same time about the same thing we say that there must needs be two things in him.

Of course.

And is not the one prepared to follow the guidance of the law as the law leads and directs?

How so?

The law, I suppose, declares that it is best to keep quiet as far as possible in calamity and not to chafe and repine, because we cannot know what is really good and evil in such things and it advantages us nothing to take them hard, and nothing in mortal life is worthy of c great concern, and our grieving checks the very thing we need to come to our aid as quickly as possible in such case.

What thing, he said, do you mean?

To deliberate, I said, about what has happened to us, and, as it were in the fall of the dice, to determine the movements of our affairs with reference to the numbers that turn up, in the way that reason indicates would be the best, and, instead of stumbling like children,

d clapping one's hands to the stricken spot and wasting the time in wailing, ever to accustom the soul to devote itself at once to the curing of the hurt and the raising up of what has fallen, banishing threnody by therapy.

That certainly, he said, would be the best way to face misfortune and deal with it.

Then, we say, the best part of us is willing to conform to these precepts of reason.

Obviously.

And shall we not say that the part of us that leads us to dwell in memory on our suffering and impels us to lamentation, and cannot get enough of that sort of thing, is the irrational and idle part of us, the associate of cowardice?

Yes, we will say that.

e And does not the fretful part of us present many and varied occasions for imitation, while the intelligent and temperate disposition, always remaining approximately the same, is neither easy to imitate nor to be understood when imitated, especially by a nondescript mob assembled in the theater? For the representation imitates a type that is alien to them.

By all means.

605 And is it not obvious that the nature of the mimetic poet is not related to this better part of the soul and his cunning is not framed to please it, if he is to win favor with the multitude, but is devoted to the fretful and complicated type of character because it is easy to imitate?

It is obvious.

This consideration, then, makes it right for us to proceed to lay hold of him and set him down as the counterpart of the painter, for he resembles him in that his creations are inferior in respect of reality, b and the fact that his appeal is to the inferior part of the soul and not to the best part is another point of resemblance. And so we may at last say that we should be justified in not admitting him into a well-ordered state, because he stimulates and fosters this element in the soul, and by strengthening it tends to destroy the rational part, just as when in a state one puts bad men in power and turns the city over to them and ruins the better sort. Precisely in the same manner we shall say that the mimetic poet sets up in each individual soul a vicious constitution by fashioning phantoms far removed from reality, and by currying favor with the senseless element that cannot distinguish the c greater from the less, but calls the same thing now one, now the other.

By all means.

But we have not yet brought our chief accusation against it. Its power to corrupt, with rare exceptions, even the better sort is surely the chief cause for alarm.

How could it be otherwise, if it really does that?

Listen and reflect. I think you know that the very best of us, when we hear Homer or some other of the makers of tragedy imitating one of the heroes who is in grief, and is delivering a long tirade in his lamentations or chanting and beating his breast, feel pleasure, and abandon ourselves and accompany the representation with sympathy and eagerness, and we praise as an excellent poet the one who most strongly affects us in this way.

I do know it, of course.

But when in our own lives some affliction comes to us, you are also aware that we plume ourselves upon the opposite, on our ability to remain calm and endure, in the belief that this is the conduct of a man, and what we were praising in the theater that of a woman.

I do note that.

Do you think, then, said I, that this praise is rightfully bestowed when, contemplating a character that we would not accept but would be ashamed of in ourselves, we do not abominate it but take pleasure and approve?

No, by Zeus, he said, it does not seem reasonable.

Oh yes, said I, if you would consider it in this way.

606

In what way?

If you would reflect that the part of the soul that in the former case, in our own misfortunes, was forcibly restrained, and that has hungered for tears and a good cry and satisfaction, because it is its nature to desire these things, is the element in us that the poets satisfy and delight, and that the best element in our nature, since it has never been properly educated by reason or even by habit, then relaxes its guard over the plaintive part, inasmuch as this is contemplating the woes of others and it is no shame to it to praise and pity another who, claiming to be a good man, abandons himself to excess in his grief, but it thinks this vicarious pleasure is so much clear gain, and would not consent to forfeit it by disdaining the poem altogether. That is, I think, because few are capable of reflecting that what we enjoy in others will inevitably react upon ourselves. For after feeding fat the emotion of pity there, it is not easy to restrain it in our own sufferings.

Most true, he said.

c

Does not the same principle apply to the laughable, namely, that if in comic representations, or for that matter in private talk, you take intense pleasure in buffooneries that you would blush to practice yourself, and do not detest them as base, you are doing the same thing as in the case of the pathetic? For here again what your reason, for fear of the reputation of buffoonery, restrained in yourself when it fain would play the clown, you release in turn, and so, fostering its youthful impudence, let yourself go so far that often ere you are aware you become yourself a comedian in private.

d Yes, indeed, he said.

And so in regard to the emotions of sex and anger, and all the appetites and pains and pleasures of the soul which we say accompany all our actions, the effect of poetic imitation is the same. For it waters and fosters these feelings when what we ought to do is to dry them up, and it establishes them as our rulers when they ought to be ruled, to the end that we may be better and happier men instead of worse and more miserable.

I cannot deny it, said he.

e Then, Glaucon, said I, when you meet encomiasts of Homer who tell us that this poet has been the educator of Hellas, and that for the conduct and refinement of human life he is worthy of our study and devotion, and that we should order our entire lives by the guidance of  
607 this poet, we must love and salute them as doing the best they can, and concede to them that Homer is the most poetic of poets and the first of tragedians, but we must know the truth, that we can admit no poetry into our city save only hymns to the gods and the praises of good men. For if you grant admission to the honeyed Muse in lyric or epic, pleasure and pain will be lords of your city instead of law and that which shall from time to time have approved itself to the general reason as the best.

Most true, he said.

b Let us, then, conclude our return to the topic of poetry and our apology, and affirm that we really had good grounds then for dismissing her from our city, since such was her character. For reason constrained us. And let us further say to her, lest she condemn us for harshness and rusticity, that there is from of old a quarrel between philosophy and poetry. For such expressions as 'the yelping hound barking at her master and mighty in the idle babble of fools,' and 'the mob that masters those who are too wise for their own good,' and the  
c subtle thinkers who reason that after all they are poor, and countless others are tokens of this ancient enmity. But nevertheless let it be declared that, if the mimetic and dulcet poetry can show any reason for her existence in a well-governed state, we would gladly admit her, since we ourselves are very conscious of her spell. But all the same it would be impious to betray what we believe to be the truth. Is not that so, friend? Do not you yourself feel her magic and especially when  
d Homer is her interpreter?

Greatly.

Then may she not justly return from this exile after she has pleaded her defense, whether in lyric or other measure?

By all means.

And we would allow her advocates who are not poets but lovers of poetry to plead her cause in prose without meter, and show that she is not only delightful but beneficial to orderly government and all the life of man. And we shall listen benevolently, for it will be clear

gain for us if it can be shown that she bestows not only pleasure but e benefit.

How could we help being the gainers? said he.

But if not, my friend, even as men who have fallen in love, if they think that the love is not good for them, hard though it be, nevertheless refrain, so we, owing to the love of this kind of poetry inbred in us by our education in these fine politics of ours, will gladly have the best possible case made out for her goodness and truth, but so long as she 608 is unable to make good her defense we shall chant over to ourselves as we listen the reasons that we have given as a countercharm to her spell, to preserve us from slipping back into the childish loves of the multitude, for we have come to see that we must not take such poetry seriously as a serious thing that lays hold on truth, but that he who lends an ear to it must be on his guard fearing for the polity in his b soul and must believe what we have said about poetry.

By all means, he said, I concur.

Yes, for great is the struggle, I said, dear Glaucon, a far greater contest than we think it, that determines whether a man prove good or bad, so that not the lure of honor or wealth or any office, no, nor of poetry either, should incite us to be careless of righteousness and all excellence.

I agree with you, he replied, in view of what we have set forth, and I think that anyone else would do so too.

And yet, said I, the greatest rewards of virtue and the prizes pro- c posed for her we have not set forth.

You must have in mind an inconceivable magnitude, he replied, if there are other things greater than those of which we have spoken.

What great thing, said I, could there be in a little time? For surely the whole time from the boy to the old man would be small compared with all time.

Nay, it is nothing, he said.

What then? Do you think that an immortal thing ought to be seriously concerned for such a little time, and not rather for all time? d

I think so, he said, but what is this that you have in mind?

Have you never perceived, said I, that our soul is immortal and never perishes?

And he, looking me full in the face in amazement, said, No, by Zeus, not I, but are *you* able to declare this?

I certainly ought to be, said I, and I think you too can, for it is nothing hard.

It is for me, he said, and I would gladly hear from you this thing that is not hard.

Listen, said I.

Just speak on, he replied.

You speak of good and evil, do you not?

I do.

e Is your notion of them the same as mine?

What is it?

That which destroys and corrupts in every case is the evil; that which preserves and benefits is the good.

Yes, I think so, he said.

How about this? Do you say that there is for everything its special  
609 good and evil, as for example for the eyes ophthalmia, for the entire body disease, for grain mildew, rotting for wood, rust for bronze and iron, and, as I say, for practically everything its congenital evil and disease?

I do, he said.

Then when one of these evils comes to anything does it not make the thing to which it attaches itself bad, and finally disintegrate and destroy it?

Of course.

Then the congenital evil of each thing and its own vice destroys it, or if that is not going to destroy it, nothing else remains that could, for  
b obviously the good will never destroy anything, nor yet again will that which is neutral and neither good nor evil.

How could it? he said.

If, then, we discover anything that has an evil which vitiates it, yet is not able to dissolve and destroy it, shall we not thereupon know that of a thing so constituted there can be no destruction?

That seems likely, he said.

Well, then, said I, has not the soul something that makes it evil?

Indeed it has, he said, all the things that we were just now  
c enumerating, injustice and licentiousness and cowardice and ignorance.

Does any one of these things dissolve and destroy it? And reflect, lest we be misled by supposing that when an unjust and foolish man is taken in his injustice he is then destroyed by the injustice, which is the vice of soul. But conceive it thus. Just as the vice of body which is disease wastes and destroys it so that it no longer is a body at all, in like manner in all the examples of which we spoke it is the  
d specific evil which, by attaching itself to the thing and dwelling in it with power to corrupt, reduces it to nonentity. Is not that so?

Yes.

Come, then, and consider the soul in the same way. Do injustice and other wickedness dwelling in it, by their indwelling and attachment to it, corrupt and wither it till they bring it to death and separate it from the body?

They certainly do not do that, he said.

But surely, said I, it is unreasonable to suppose that the vice of something else destroys a thing while its own does not.

Yes, unreasonable.

e For observe, Glaucon, said I, that we do not think it proper to say

of the body either that it is destroyed by the badness of foods themselves, whether it be staleness or rottenness or whatever it is, but when the badness of the foods themselves engenders in the body the defect of body, then we shall say that it is destroyed *owing to* these foods, but *by* its own vice, which is disease. But the body being one thing and the foods something else, we shall never expect the body to be destroyed by their badness, that is by an alien evil that has not produced in it the evil that belongs to it by nature. 610

You are entirely right, he replied.

On the same principle, said I, if the badness of the body does not produce in the soul the soul's badness we shall never expect the soul to be destroyed by an alien evil apart from its own defect—one thing, that is, by the evil of another.

That is reasonable, he said.

Either, then, we must refute this and show that we are mistaken, or, so long as it remains unrefuted, we must never say that by fever or any other disease, or yet by the knife at the throat or the chopping to bits of the entire body, there is any more likelihood of the soul perishing because of these things, until it is proved that owing to these affections of the body the soul itself becomes more unjust and unholy. But when an evil of something else occurs in a different thing and the evil that belongs to the thing is not engendered in it, we must not suffer it to be said that the soul or anything else is in this way destroyed. c

But you may be sure, he said, that nobody will ever prove this, that the souls of the dying are made more unjust by death.

But if anyone, said I, dares to come to grips with the argument and say, in order to avoid being forced to admit the soul's immortality, that a dying man does become more wicked and unjust, we will postulate that, if what he says is true, injustice must be fatal to its possessor as if it were a disease, and that those who catch it die because it kills them by its own inherent nature, those who have most of it quickest, and those who have less more slowly, and not, as now in fact happens, that the unjust die owing to this but by the action of others who inflict the penalty. d

Nay, by Zeus, he said, injustice will not appear a very terrible thing after all if it is going to be fatal to its possessor, for that would be a release from all troubles. But I rather think it will prove to be quite the contrary, something that kills others when it can, but renders its possessor very lively indeed, and not only lively but wakeful, so far, I ween, does it dwell from deadliness. e

You say well, I replied, for when the natural vice and the evil proper to it cannot kill and destroy the soul, still less will the evil appointed for the destruction of another thing destroy the soul or anything else, except that for which it is appointed.

Still less indeed, he said, in all probability.

Then since it is not destroyed by any evil whatever, either its own

611 or alien, it is evident that it must necessarily exist always, and that if it always exists it is immortal.

Necessarily, he said.

Let this, then, I said, be assumed to be so. But if it is so, you will observe that these souls must always be the same. For if none perishes they could not, I suppose, become fewer nor yet more numerous. For if any class of immortal things increased you are aware that its increase would come from the mortal and all things would end by becoming immortal.

You say truly.

But, said I, we must not suppose this, for reason will not suffer  
b it, nor yet must we think that in its truest nature the soul is the kind of thing that teems with infinite diversity and unlikeness and contradiction in and with itself.

How am I to understand that? he said.

It is not easy, said I, for a thing to be immortal that is composed of many elements not put together in the best way, as now appeared to us to be the case with the soul.

It is not likely.

Well, then, that the soul is immortal our recent argument and our other proofs would constrain us to admit. But to know its true nature we must view it not marred by communion with the body and  
c other miseries as we now contemplate it, but consider adequately in the light of reason what it is when it is purified, and then you will find it to be a far more beautiful thing and will more clearly distinguish justice and injustice and all the matters that we have now discussed. But though we have stated the truth of its present appearance, its condition as we have now contemplated it resembles that of the  
d sea god Glaucus whose first nature can hardly be made out by those who catch glimpses of him, because the original members of his body are broken off and mutilated and crushed and in every way marred by the waves, and other parts have attached themselves to him, accretions of shells and seaweed and rocks, so that he is more like any wild creature than what he was by nature—even such, I say, is our vision of the soul marred by countless evils. But we must look elsewhere, Glaucus.

Where? said he.

e To its love of wisdom. And we must note the things of which it has apprehensions, and the associations for which it yearns, as being itself akin to the divine and the immortal and to eternal being, and so consider what it might be if it followed the gleam unreservedly and were raised by this impulse out of the depths of this sea in which it is now sunk, and were cleansed and scraped free of the rocks and barnacles which, because it now feasts on earth, cling to it in wild profusion of earthy and stony accretion by reason of these feastings that  
612 are accounted happy. And then one might see whether in its real na-

ture it is manifold or single in its simplicity, or what is the truth about it and how. But for the present we have, I think, fairly well described its sufferings and the forms it assumes in this human life of ours.

We certainly have, he said.

Then, said I, we have met all the other demands of the argument, and we have not invoked the rewards and reputes of justice as you said Homer and Hesiod do, but we have proved that justice in itself is the best thing for the soul itself, and that the soul ought to do justice whether it possess the ring of Gyges or not, or the helmet of Hades to boot.

Most true, he said.

Then, said I, Glaucon, there can no longer be any objection, can there, to our assigning to justice and virtue generally, in addition, all the various rewards and wages that they bring to the soul from men and gods, both while the man still lives and after his death?

There certainly can be none, he said.

Will you, then, return to me what you borrowed in the argument?

What, pray?

I granted to you that the just man should seem and be thought to be unjust and the unjust just, for you thought that, even if the concealment of these things from gods and men was an impossibility in fact, nevertheless it ought to be conceded for the sake of the argument, in order that the decision might be made between absolute justice and absolute injustice. Or do you not remember?

It would be unjust of me, he said, if I did not.

Well, then, now that they have been compared and judged, I demand back from you in behalf of justice the repute that she in fact enjoys from gods and men, and I ask that we admit that she is thus esteemed in order that she may gather in the prizes which she wins from the seeming and bestows on her possessors, since she has been proved to bestow the blessings that come from the reality and not to deceive those who truly seek and win her.

That is a just demand, he said.

Then, said I, will not the first of these restorations be that the gods certainly are not unaware of the true character of each of the two, the just and the unjust?

We will restore that, he said.

And if they are not concealed, the one will be dear to the gods and the other hateful to them, as we agreed in the beginning.

That is so.

And shall we not agree that all things that come from the gods work together for the best for him that is dear to the gods, apart from the inevitable evil caused by sin in a former life?

By all means.

This, then, must be our conviction about the just man, that whether he fall into poverty or disease or any other supposed evil, for

him all these things will finally prove good, both in life and in death. For by the gods assuredly that man will never be neglected who is willing and eager to be righteous, and by the practice of virtue to be likened unto God so far as that is possible for man.

It is reasonable, he said, that such a one should not be neglected by his like.

And must we not think the opposite of the unjust man?

Most emphatically.

Such then are the prizes of victory which the gods bestow upon the just.

So I think, at any rate, he said.

But what, said I, does he receive from men? Is not this the case, if we are now to present the reality? Do not your smart but wicked men fare as those racers do who run well from the scratch but not back from the turn? They bound nimbly away at the start, but in the end are laughed to scorn and run off the field uncrowned and with their ears on their shoulders. But the true runners when they have come to the goal receive the prizes and bear away the crown. Is not this the usual outcome for the just also, that toward the end of every action and association and of life as a whole they have honor and bear away the prizes from men?

So it is indeed.

Will you, then, bear with me if I say of them all that you said of the unjust? For I am going to say that the just, when they become older, hold the offices in their own city if they choose, marry from what families they will, and give their children in marriage to what families they please, and everything that you said of the one I now repeat of the other, and in turn I will say of the unjust that the most of them, even if they escape detection in youth, at the end of their course are caught and derided, and their old age is made miserable by the contumelies of strangers and townsfolk. They are lashed and suffer all things which you truly said are unfit for ears polite. Suppose yourself to have heard from me a repetition of all that they suffer. But, as I say, consider whether you will bear with me.

Assuredly, he said, for what you say is just.

Such then while he lives are the prizes, the wages, and the gifts that the just man receives from gods and men in addition to those blessings which justice herself bestowed.

And right fair and abiding rewards, he said.

Well, these, I said, are nothing in number and magnitude compared with those that await both after death. And we must listen to the tale of them, said I, in order that each may have received in full what is due to be said of him by our argument.

Tell me, he said, since there are not many things to which I would more gladly listen.

It is not, let me tell you, said I, the tale to Alcinous told that I

shall unfold, but the tale of a warrior bold, Er, the son of Armenius, by race a Pamphylian. He once upon a time was slain in battle, and when the corpses were taken up on the tenth day already decayed, was found intact, and having been brought home, at the moment of his funeral, on the twelfth day as he lay upon the pyre, revived, and after coming to life related what, he said, he had seen in the world beyond. He said that when his soul went forth from his body he journeyed with a great company and that they came to a mysterious c region where there were two openings side by side in the earth, and above and over against them in the heaven two others, and that judges were sitting between these, and that after every judgment they bade the righteous journey to the right and upward through the heaven with tokens attached to them in front of the judgment passed d upon them, and the unjust to take the road to the left and downward, they too wearing behind signs of all that had befallen them, and that when he himself drew near they told him that he must be the messenger to mankind to tell them of that other world, and they charged him to give ear and to observe everything in the place. And so he said that here he saw, by each opening of heaven and earth, the souls departing after judgment had been passed upon them, while, by the other pair of openings, there came up from the one in the earth souls full of squalor and dust, and from the second there came down from heaven a second procession of souls clean and pure, and that those which arrived from time to time appeared to have come as it were e from a long journey and gladly departed to the meadow and encamped there as at a festival, and acquaintances greeted one another, and those which came from the earth questioned the others about conditions up yonder, and those from heaven asked how it fared with those others. And they told their stories to one another, the one lamenting and wailing as they recalled how many and how dreadful 615 things they had suffered and seen in their journey beneath the earth —it lasted a thousand years—while those from heaven related their delights and visions of a beauty beyond words. To tell it all, Glaucon, would take all our time, but the sum, he said, was this. For all the wrongs they had ever done to anyone and all whom they had severally wronged they had paid the penalty in turn tenfold for each, and b the measure of this was by periods of a hundred years each, so that on the assumption that this was the length of human life the punishment might be ten times the crime—as for example that if anyone had been the cause of many deaths or had betrayed cities and armies and reduced them to slavery, or had been participant in any other iniquity, they might receive in requital pains tenfold for each of these wrongs, and again if any had done deeds of kindness and been just and holy men they might receive their due reward in the same measure. And other things not worthy of record he said of those who had just been born and lived but a short time, and he had still greater c

requitals to tell of piety and impiety toward the gods and parents and of self-slaughter. For he said that he stood by when one was questioned by another, 'Where is Ardiaeus the Great?' Now this Ardiaeus had been tyrant in a certain city of Pamphylia just a thousand years before that time and had put to death his old father and his elder  
 d brother, and had done many other unholy deeds, as was the report. So he said that the one questioned replied, 'He has not come,' said he, 'nor will he be likely to come here. For indeed this was one of the dreadful sights we beheld; when we were near the mouth and about to issue forth and all our other sufferings were ended, we suddenly  
 e caught sight of him and of others, the most of them, I may say, tyrants. But there were some of private station, of those who had committed great crimes. And when these supposed that at last they were about to go up and out, the mouth would not receive them, but it bellowed when any one of the incurably wicked or of those who had not completed their punishment tried to come up. And thereupon,' he  
 616 said, 'savage men of fiery aspect who stood by and took note of the voice laid hold on them and bore them away. But Ardiaeus and others they bound hand and foot and head and flung down and flayed them and dragged them by the wayside, carding them on thorns and signifying to those who from time to time passed by for what cause they were borne away, and that they were to be hurled into Tartarus.'

And then, though many and manifold dread things had befallen them, this fear exceeded all—lest each one should hear the voice when he tried to go up, and each went up most gladly when it had kept silence. And the judgments and penalties were somewhat after  
 b this manner, and the blessings were their counterparts.

But when seven days had elapsed for each group in the meadow, they were required to rise up on the eighth and journey on, and they came in four days to a spot whence they discerned, extended from above throughout the heaven and the earth, a straight light like a pillar, most nearly resembling the rainbow, but brighter and purer. To this they came after going forward a day's journey, and they saw there at the middle of the light the extremities of its fastenings  
 c stretched from heaven, for this light was the girdle of the heavens like the undergirders of triremes, holding together in like manner the entire revolving vault. And from the extremities was stretched the spindle of Necessity, through which all the orbits turned. Its staff and its hook were made of adamant, and the whorl of these and other  
 d kinds was commingled. And the nature of the whorl was this. Its shape was that of those in our world, but from his description we must conceive it to be as if in one great whorl, hollow and scooped out, there lay enclosed, right through, another like it but smaller, fitting into it as boxes that fit into one another, and in like manner another, a third, and a fourth, and four others, for there were eight of the whorls in all, lying within one another, showing their rims as

circles from above and forming the continuous back of a single whorl e  
 about the shaft, which was driven home through the middle of the  
 eighth. Now the first and outmost whorl had the broadest circular  
 rim, that of the sixth was second, and third was that of the fourth,  
 and fourth was that of the eighth, fifth that of the seventh, sixth that  
 of the fifth, seventh that of the third, eighth that of the second. And  
 that of the greatest was spangled, that of the seventh brightest, that 617  
 of the eighth took its color from the seventh, which shone upon it. The  
 colors of the second and fifth were like one another and more yellow  
 than the two former. The third had the whitest color, and the fourth  
 was of a slightly ruddy hue; the sixth was second in whiteness. The  
 staff turned as a whole in a circle with the same movement, but  
 within the whole as it revolved the seven inner circles revolved gently  
 in the opposite direction to the whole, and of these seven the eighth  
 moved most swiftly, and next and together with one another the b  
 seventh, sixth, and fifth, and third in swiftness, as it appeared to  
 them, moved the fourth with returns upon itself, and fourth the third  
 and fifth the second. And the spindle turned on the knees of Neces-  
 sity, and up above on each of the rims of the circles a Siren stood,  
 borne around in its revolution and uttering one sound, one note, and  
 from all the eight there was the concord of a single harmony. And  
 there were three others who sat round about at equal intervals, each c  
 one on her throne, the Fates, daughters of Necessity, clad in white  
 vestments with filleted heads, Lachesis, and Clotho, and Atropos,  
 who sang in unison with the music of the Sirens, Lachesis singing the  
 things that were, Clotho the things that are, and Atropos the things  
 that are to be. And Clotho with the touch of her right hand helped to  
 turn the outer circumference of the spindle, pausing from time to  
 time. Atropos with her left hand in like manner helped to turn the  
 inner circles, and Lachesis alternately with either hand lent a hand to d  
 each.

Now when they arrived they were straightway bidden to go before  
 Lachesis, and then a certain prophet first marshaled them in orderly  
 intervals, and thereupon took from the lap of Lachesis lots and pat-  
 terns of lives and went up to a lofty platform and spoke, "This is the  
 word of Lachesis, the maiden daughter of Necessity, "Souls that live  
 for a day, now is the beginning of another cycle of mortal generation  
 where birth is the beacon of death. No divinity shall cast lots for you, e  
 but you shall choose your own deity. Let him to whom falls the first  
 lot first select a life to which he shall cleave of necessity. But virtue  
 has no master over her, and each shall have more or less of her as he  
 honors her or does her despite. The blame is his who chooses. God is  
 blameless." So saying, the prophet flung the lots out among them all,  
 and each took up the lot that fell by his side, except himself; him 618  
 they did not permit. And whoever took up a lot saw plainly what num-  
 ber he had drawn. And after this again the prophet placed the

patterns of lives before them on the ground, far more numerous than the assembly. They were of every variety, for there were lives of all kinds of animals and all sorts of human lives, for there were tyrannies among them, some uninterrupted till the end and others destroyed midway and issuing in penuries and exiles and beggaryes, and there were lives of men of repute for their forms and beauty and bodily  
 b strength otherwise and prowess and the high birth and the virtues of their ancestors, and others of ill repute in the same things, and similarly of women. But there was no determination of the quality of soul, because the choice of a different life inevitably determined a different character. But all other things were commingled with one another and with wealth and poverty and sickness and health and the intermediate conditions.

And there, dear Glaucon, it appears, is the supreme hazard for a  
 c man. And this is the chief reason why it should be our main concern that each of us, neglecting all other studies, should seek after and study this thing—if in any way he may be able to learn of and discover the man who will give him the ability and the knowledge to distinguish the life that is good from that which is bad, and always and everywhere to choose the best that the conditions allow, and, taking into account all the things of which we have spoken and estimating the effect on the goodness of his life of their conjunction or their severance, to know how beauty commingled with poverty or  
 d wealth and combined with what habit of soul operates for good or for evil, and what are the effects of high and low birth and private station and office and strength and weakness and quickness of apprehension and dullness and all similar natural and acquired habits of the soul, when blended and combined with one another, so that with consideration of all these things he will be able to make a reasoned choice between the better and the worse life, with his eyes fixed on the  
 e nature of his soul, naming the worse life that which will tend to make it more unjust and the better that which will make it more just. But all other considerations he will dismiss, for we have seen that this is the best choice, both for life and death. And a man must take with  
 619 him to the house of death an adamant faith in this, that even there he may be undazzled by riches and similar trumpery, and may not precipitate himself into tyrannies and similar doings and so work many evils past cure and suffer still greater himself, but may know how always to choose in such things the life that is seated in the mean and shun the excess in either direction, both in this world so far as  
 b may be and in all the life to come, for this is the greatest happiness for man.

And at that time also the messenger from that other world reported that the prophet spoke thus. Even for him who comes forward last, if he make his choice wisely and live strenuously, there is reserved an acceptable life, no evil one. Let not the foremost in the

choice be heedless nor the last be discouraged.' When the prophet had thus spoken he said that the drawer of the first lot at once sprang to seize the greatest tyranny, and that in his folly and greed he chose it without sufficient examination, and failed to observe that it involved the fate of eating his own children, and other horrors, and that when he inspected it at leisure he beat his breast and bewailed his choice, not abiding by the forewarning of the prophet. For he did not blame himself for his woes, but fortune and the gods and anything except himself. He was one of those who had come down from heaven, a man who had lived in a well-ordered polity in his former existence, participating in virtue by habit and not by philosophy, and one may perhaps say that a majority of those who were thus caught were of the company that had come from heaven, inasmuch as they were unexercised in suffering. But the most of those who came up from the earth, since they had themselves suffered and seen the sufferings of others, did not make their choice precipitately. For which reason also there was an interchange of good and evil for most of the souls, as well as because of the chances of the lot. Yet if at each return to the life of this world a man loved wisdom sanely, and the lot of his choice did not fall out among the last, we may venture to affirm, from what was reported thence, that not only will he be happy here but that the path of his journey thither and the return to this world will not be underground and rough but smooth and through the heavens. For he said that it was a sight worth seeing to observe how the several souls selected their lives. He said it was a strange, pitiful, and ridiculous spectacle, as the choice was determined for the most part by the habits of their former lives. He saw the soul that had been Orpheus', he said, selecting the life of a swan, because from hatred of the tribe of women, owing to his death at their hands, it was unwilling to be conceived and born of a woman. He saw the soul of Thamyras choosing the life of a nightingale, and he saw a swan changing to the choice of the life of man, and similarly other musical animals. The soul that drew the twentieth lot chose the life of a lion; it was the soul of Ajax, the son of Telamon, which, because it remembered the adjudication of the arms of Achilles, was unwilling to become a man. The next, the soul of Agamemnon, likewise from hatred of the human race because of its sufferings, substituted the life of an eagle. Drawing one of the middle lots the soul of Atalanta caught sight of the great honors attached to an athlete's life and could not pass them by but snatched at them. After her, he said, he saw the soul of Epeus, the son of Panopeus, entering into the nature of an arts and crafts woman. Far off in the rear he saw the soul of the buffoon Thersites clothing itself in the body of an ape. And it fell out that the soul of Odysseus drew the last lot of all and came to make its choice, and, from memory of its former toils having flung away ambition, went about for a long time in quest of the life of an ordinary citizen who minded his

own business, and with difficulty found it lying in some corner disregarded by the others, and upon seeing it said that it would have done the same had it drawn the first lot, and chose it gladly. And in like manner, of the other beasts some entered into men and into one another, the unjust into wild creatures, the just transformed to tame, and there was every kind of mixture and combination.

But when, to conclude, all the souls had chosen their lives in the order of their lots, they were marshaled and went before Lachesis. And she sent with each, as the guardian of his life and the fulfiller of his choice, the genius that he had chosen, and this divinity led the soul first to Clotho, under her hand and her turning of the spindle to ratify the destiny of his lot and choice, and after contact with her the genius again led the soul to the spinning of Atropos to make the web of its destiny irreversible, and then without a backward look it passed beneath the throne of Necessity. And after it had passed through that, when the others also had passed, they all journeyed to the Plain of Oblivion, through a terrible and stifling heat, for it was bare of trees and all plants, and there they camped at eventide by the River of Forgetfulness, whose waters no vessel can contain. They were all required to drink a measure of the water, and those who were not saved by their good sense drank more than the measure, and each one as he drank forgot all things. And after they had fallen asleep and it was the middle of the night, there was a sound of thunder and a quaking of the earth, and they were suddenly wafted thence, one this way, one that, upward to their birth like shooting stars. Er himself, he said, was not allowed to drink of the water, yet how and in what way he returned to the body he said he did not know, but suddenly recovering his sight he saw himself at dawn lying on the funeral pyre.

And so, Glaucon, the tale was saved, as the saying is, and was not lost. And it will save us if we believe it, and we shall safely cross the River of Lethe, and keep our soul unspotted from the world. But if we are guided by me we shall believe that the soul is immortal and capable of enduring all extremes of good and evil, and so we shall hold ever to the upward way and pursue righteousness with wisdom always and ever, that we may be dear to ourselves and to the gods both during our sojourn here and when we receive our reward, as the victors in the games go about to gather in theirs. And thus both here and in that journey of a thousand years, whereof I have told you, we shall fare well.

# THEAETETUS

---

*In this dialogue three persons discuss what knowledge is: Socrates, Theodorus, an old man and a distinguished mathematician, and his pupil, the young Theaetetus, who is a charming lad, modest, well-mannered, and quick of apprehension. When Socrates says he suspects him of being very intelligent, he answers that that is by no means true; he only wants to know. "But," Socrates says, "you then are truly philosophical, for philosophy begins in wonder." With that they are launched upon the argument. What is wisdom? What is it to know anything?*

*This search into the nature of knowledge can be seen in its profound seriousness only when the reader keeps before him that to Socrates virtue was knowledge. To be wise was to be good. The text of the dialogue might well be Christ's saying, "He that willet to do the will of God shall know the doctrine." To Plato always Socrates' life and death were the final proof of his truth.*

*In the dialogue, however, no definition of knowledge is reached. We are told only what it is not. It is neither sense perception nor true opinion, nor true opinion with a rational explanation. Even so, a light is thrown upon the question in the digressions from the argument, which are allowed by Socrates because, as he says, they are all three free men and therefore able to take their time and never be in a hurry, and which are warmly welcomed by Theodorus and Theaetetus. "For my part, I rather prefer listening to your digressions," says Theodorus—quite understandably when Socrates is engaged in arguing, "Take things you know. You can suppose them to be other things which you both know and perceive, or to be things you do not know, but do perceive, or you can confuse two things which you both know and perceive."*

*At this Theaetetus gives up in despair: "Now I am more in the dark than ever."*

*But they, and the reader, feel different when Socrates stops arguing and sets the peace of the man of wisdom against the restlessness of the busy man who is always in a hurry because to him life is a race for success. He becomes keen and shrewd, but his soul is small and mean. Fears of risks and dangers have proved too much for his honesty and growth and independence. Yet he is sure that he knows*

*what life is and can deal with it. Beside him the man of wisdom, who really knows, appears often very poor. He is not good even in ordinary talk because he knows no scandals to amuse people—they do not interest him. He cannot help laughing when somebody speaks proudly of a long line of rich and cultivated ancestors. He says to himself, "Doesn't the fellow stop to think that if he goes back far enough, when" —to translate the Greek into familiar English—"Adam delved and Eve span, who was then the gentleman?" But if the roles are changed and the man of wisdom draws the man of business into the upper air to contemplate justice and injustice and what happiness and misery are and the like, then the narrow keen little mind is dismayed and lost. He believes only in what he can hold in his hands; the invisible is nonexistent to him. He does not know what life is, that truly to live is to strive to become like God as far as that is possible. He does not know what the certain penalty is of living as he has done—not prison or death or anything of that sort, but that he will surely grow more and more like himself.*

*In the end Socrates tells Theaetetus that the argument has served them even though they reached no conclusion, because they have learned through it not to think they know when they do not.*

EUCLIDES : Have you only just come to town, Terpsion?

142

TERPSION : No, some time ago. What is more, I was looking for you in the market place and surprised that I could not find you.

EUCLIDES : I was not in the city.

TERPSION : Where were you, then?

EUCLIDES : On my way down to the harbor I met them carrying Theaetetus to Athens from the camp at Corinth.

TERPSION : Alive or dead?

EUCLIDES : Only just alive. He is suffering from severe wounds, b and still more from having caught the sickness that has broken out in the army.

TERPSION : The dysentery?

EUCLIDES : Yes.

TERPSION : How sad that such a man should be so near death!

EUCLIDES : An admirable man, Terpsion, and a brave one. Indeed, only just now I was hearing warm praise of his conduct in the battle.

TERPSION : There is nothing strange in that; it would have been much more surprising if he had behaved otherwise. But why did he c not stay here at Megara?

EUCLIDES : He was eager to get home. I begged him to stay, but he would not listen to my advice. I went some way with him, and then, as I was coming back, I recalled what Socrates had said about him, and was filled with wonder at this signal instance of his prophetic insight. Socrates must have met him shortly before his own death, when Theaetetus was little more than a boy. They had some talk together, and Socrates was delighted with the promise he showed. When I visited Athens he repeated to me their conversation, which d was well worth the hearing, and he added that Theaetetus could not fail to become a remarkable man if he lived.

TERPSION : And apparently he was right. But what was this conversation? Could you repeat it?

EUCLIDES : Certainly not, just from memory. But I made 143 some notes at the time, as soon as I got home, and later on I wrote out what I could recall at my leisure. Then, every time I went to Athens, I questioned Socrates upon any point where my memory had failed and made corrections on my return. In this way I have pretty well the whole conversation written down.

TERPSION : True. I have heard you mention it before, and indeed I have always meant to ask you to show it to me; only I have let

---

From *Plato's Theory of Knowledge: the Theaetetus and the Sophist*, translated with a running commentary by Francis Macdonald Cornford (London, 1935); with an interpolation from the translation by B. Jowett in *The Dialogues of Plato*, 3rd edn. (Oxford, 1892; 1st edn., 1871).

the matter slip till this moment. Why should we not go through it now? In any case I am in need of a rest after my walk to town.

- b EUCLIDES: For that matter, I should be glad of a rest myself, for I went as far as Erineum with Theaetetus. Let us go indoors, and, while we are resting, my servant shall read to us.

TERPSION: Very well.

- c EUCLIDES: This is the book, Terpsion. You see how I wrote the conversation—not in narrative form, as I heard it from Socrates, but as a dialogue between him and the other persons he told me had taken part. These were Theodorus the geometer and Theaetetus. I wanted to avoid in the written account the tiresome effect of bits of narrative interrupting the dialogue, such as ‘and I said’ or ‘and I remarked’ wherever Socrates was speaking of himself, and ‘he assented’ or ‘he did not agree,’ where he reported the answer. So I left out everything of that sort, and wrote it as a direct conversation between the actual speakers.

TERPSION: That was quite a good notion, Euclides.

EUCLIDES: Well, boy, take the book and read.

- d SOCRATES: If I took more interest in the affairs of Cyrene, Theodorus, I should ask you for the news from those parts and whether any of the young men there are devoting themselves to geometry or to any other sort of liberal study. But really I care more for our young men here and I am anxious rather to know which of them are thought likely to distinguish themselves. That is what I am always on the lookout for myself, to the best of my powers, and I make inquiries of anyone whose society I see the young men ready to seek. Now you attract a large following, as you deserve for your skill in  
e geometry, not to mention your other merits. So, if you have met with anyone worthy of mention, I should be glad to hear of it.

- THEODORUS: Yes, Socrates, I have met with a youth of this city who certainly deserves mention, and you will find it worth while to hear me describe him. If he were handsome, I should be afraid to use strong terms, lest I should be suspected of being in love with him. However, he is not handsome, but—forgive my saying so—he resembles you in being snub-nosed and having prominent eyes, though  
144 these features are less marked in him. So I can speak without fear. I assure you that, among all the young men I have met with—and I have had to do with a good many—I have never found such admirable gifts. The combination of a rare quickness of intelligence with exceptional gentleness and of an incomparably virile spirit with both, is a thing that I should hardly have believed could exist, and I have never seen it before. In general, people who have such keen  
b and ready wits and such good memories as he are also quick-tempered and passionate; they dart about like ships without ballast, and their temperament is rather enthusiastic than strong, whereas the steadier sort are somewhat dull when they come to face study, and they for-

get everything. But his approach to learning and inquiry, with the perfect quietness of its smooth and sure progress, is like the noiseless flow of a stream of oil. It is wonderful how he achieves all this at his age.

SOCRATES: That is good news. Who is his father?

THEODORUS: I have heard the name, but I do not remember it. However, there he is, the middle one of those three who are coming toward us. He and these friends of his have been rubbing themselves with oil in the portico outside, and, now they have finished, they seem to be coming this way. See if you recognize him.

SOCRATES: Yes, I do; his father was Euphronius of Sunium, just such another as his son is by your account. He was a man of good standing, and I believe he left a considerable fortune. But I don't know the lad's name.

THEODORUS: His name is Theaetetus, Socrates, but I fancy the property has been squandered by trustees. Nonetheless, liberality with his money is another of his admirable traits.

SOCRATES: You give him a noble character. Please ask him to come and sit down with us.

THEODORUS: I will. Theaetetus, come this way and sit by Socrates.

SOCRATES: Yes, do, Theaetetus, so that I may study the character of my own countenance, for Theodorus tells me it is like yours. Now, suppose we each had a lyre, and Theodorus said they were both tuned to the same pitch, should we take his word at once, or should we try to find out whether he was a musician?

THEAETETUS: We should try to find that out.

SOCRATES: And believe him, if we discovered that he was musical, but not otherwise?

THEAETETUS: True.

SOCRATES: And now, if this alleged likeness of our faces is a matter of any interest to us, we must ask whether it is a skilled draftsman who informs us of it.

THEAETETUS: I agree.

SOCRATES: Well, is Theodorus a painter?

THEAETETUS: Not so far as I know.

SOCRATES: Nor an expert in geometry either?

THEAETETUS: Of course he is, Socrates, very much so.

SOCRATES: And also in astronomy and calculation and music and in all the liberal arts?

THEAETETUS: I am sure he is.

SOCRATES: Then, if, in the way of compliment or otherwise, he tells us of some physical likeness between us, there is no special reason why we should attend to him.

THEAETETUS: Possibly not.

SOCRATES: But suppose he should praise the mind of either of

us for its virtue and intelligence. Would there not be good reason why the one who heard the other praised should be eager to examine him, and he should be equally eager to show his quality?

THEAETETUS: Certainly, Socrates.

SOCRATES: Now is the time, then, my dear Theaetetus, for you to show your qualities and for me to examine them. I can assure you that, often as Theodorus has spoken to me in praise of citizen or stranger, he has never praised anyone as he was praising you just now.

THEAETETUS: That is good hearing, Socrates. But perhaps he was not speaking seriously.

SOCRATES: No, that would not be like Theodorus. Do not try to slip out of your bargain on the pretext that he was not serious. We don't want him to have to give evidence on oath. In any case no one is going to indict him for perjury; so do not be afraid to abide by your agreement.

THEAETETUS: Well, so it shall be, if you wish it.

SOCRATES: Tell me, then, you are learning some geometry from Theodorus?

THEAETETUS: Yes.

SOCRATES: And astronomy and harmonics and arithmetic?

THEAETETUS: I certainly do my best to learn.

SOCRATES: So do I, from him and from anyone else who seems to understand these things. I do moderately well in general, but all the same I am puzzled about one small matter which you and our friends must help me to think out. Tell me, is it not true that learning about something means becoming wiser in that matter?

THEAETETUS: Of course.

SOCRATES: And what makes people wise is wisdom, I suppose.

THEAETETUS: Yes.

SOCRATES: And is that in any way different from knowledge?

THEAETETUS: Is what different?

SOCRATES: Wisdom. Are not people wise in the things of which they have knowledge?

THEAETETUS: Certainly.

SOCRATES: Then knowledge and wisdom are the same thing?

THEAETETUS: Yes.

146 SOCRATES: Well, that is precisely what I am puzzled about. I cannot make out to my own satisfaction what knowledge is. Can we answer that question? What do you all say? Which of us will speak first? Everyone who misses shall 'sit down and be donkey,' as children say when they are playing at ball; anyone who gets through without missing shall be king and have the right to make us answer any question he likes. Why are you all silent? I hope, Theodorus, that my passion for argument is not making me ill-mannered, in my eager-

ness to start a conversation and set us all at ease with one another like friends?

THEODORUS: Not at all, Socrates; there is nothing ill-mannered in that. But please ask one of these young people to answer your questions; I am not at home in an abstract discussion of this sort, nor likely to become so at my age. But it is just the thing for them, and they have a far better prospect of improvement; youth, indeed, is capable of improving at anything. So do not let Theaetetus off; go on putting your questions to him.

SOCRATES: You hear what Theodorus says, Theaetetus. I do not think you will want to disobey him, and it would be wrong for you not to do what an older and wiser man bids you. So tell me, in a generous spirit, what you think knowledge is.

THEAETETUS: Well, Socrates, I cannot refuse, since you and Theodorus ask me. Anyhow, if I do make a mistake, you will set me right.

SOCRATES: By all means, if we can.

THEAETETUS: Then I think the things one can learn from Theodorus are knowledge—geometry and all the sciences you mentioned just now, and then there are the crafts of the cobbler and other workmen. Each and all of these are knowledge and nothing else.

SOCRATES: You are generous indeed, my dear Theaetetus—so openhanded that, when you are asked for one simple thing, you offer a whole variety.

THEAETETUS: What do you mean, Socrates?

SOCRATES: There may be nothing in it, but I will explain what my notion is. When you speak of cobbling, you mean by that word precisely a knowledge of shoemaking?

THEAETETUS: Precisely.

SOCRATES: And when you speak of carpentry, you mean just a knowledge of how to make wooden furniture?

THEAETETUS: Yes.

SOCRATES: In both cases, then, you are defining what the craft is a knowledge of?

THEAETETUS: Yes.

SOCRATES: But the question you were asked, Theaetetus, was not, what are the objects of knowledge, nor yet how many sorts of knowledge there are. We did not want to count them, but to find out what the thing itself—knowledge—is. Is there nothing in that?

THEAETETUS: No, you are quite right.

SOCRATES: Take another example. Suppose we were asked about some obvious common thing, for instance, what clay is; it would be absurd to answer: potter's clay, and ovenmaker's clay, and brickmaker's clay.

THEAETETUS: No doubt.

**SOCRATES:** To begin with, it is absurd to imagine that our answer conveys any meaning to the questioner, when we use the word 'clay,' no matter whose clay we call it—the dollmaker's or any other craftsman's. You do not suppose a man can understand the name of a thing, when he does not know what the thing is?

**THEAETETUS:** Certainly not.

**SOCRATES:** Then, if he has no idea of knowledge, 'knowledge about shoes' conveys nothing to him?

**THEAETETUS:** No.

**SOCRATES:** 'Cobbler,' in fact, or the name of any other art has no meaning for anyone who has no conception of knowledge.

**THEAETETUS:** That is so.

**SOCRATES:** Then, when we are asked what knowledge is, it is absurd to reply by giving the name of some art. The answer is 'knowledge of so-and-so,' but that was not what the question called for.

**THEAETETUS:** So it seems.

**SOCRATES:** And besides, we are going an interminable way round, when our answer might be quite short and simple. In this question about clay, for instance, the simple and ordinary thing to say is that clay is earth mixed with moisture, never mind whose clay it may be.

**THEAETETUS:** It appears easy now, Socrates, when you put it like that. The meaning of your question seems to be the same sort of thing as a point that came up when your namesake, Socrates here, and I were talking not long ago.

**SOCRATES:** What was that, Theaetetus?

**THEAETETUS:** Theodorus here was proving to us something about square roots, namely, that the sides [or roots] of squares representing three square feet and five square feet are not commensurable in length with the line representing one foot, and he went on in this way, taking all the separate cases up to the root of seventeen square feet. There for some reason he stopped. The idea occurred to us, seeing that these square roots were evidently infinite in number, to try to arrive at a single collective term by which we could designate all these roots.

**SOCRATES:** And did you find one?

**THEAETETUS:** I think so, but I should like your opinion.

**SOCRATES:** Go on.

**THEAETETUS:** We divided number in general into two classes. Any number which is the product of a number multiplied by itself we likened to the square figure, and we called such a number 'square' or 'equilateral.'

**SOCRATES:** Well done!

**THEAETETUS:** Any intermediate number, such as three or five or any number that cannot be obtained by multiplying a number by itself, but has one factor either greater or less than the other, so that

the sides containing the corresponding figure are always unequal, we likened to the oblong figure, and we called it an oblong number.

SOCRATES : Excellent. And what next?

THEAETETUS : All the lines which form the four equal sides of the plane figure representing the equilateral number we defined as *length*, while those which form the sides of squares equal in area to the oblongs we called *roots* [surds], as not being commensurable with the others in length, but only in the plane areas to which their squares are equal. And there is another distinction of the same sort in the case of solids.

SOCRATES : Nothing could be better, my young friends; I am sure there will be no prosecuting Theodorus for false witness.

THEAETETUS : But, Socrates, I cannot answer your question about knowledge as we answered the question about the length and the root. And yet you seem to want something of that kind; so, on the contrary, it does appear that Theodorus was not speaking the truth.

SOCRATES : Why, if he had praised your powers of running and declared that he had never met with a young man who was so good a runner, and then you had been beaten in a race by the greatest of runners at the height of his powers, do you think that his praise would have been any the less truthful?

THEAETETUS : No, I don't.

SOCRATES : Well, as I said just now, do you fancy it is a small matter to discover the nature of knowledge? Is it not one of the hardest questions?

THEAETETUS : One of the very hardest, I should say.

SOCRATES : You may be reassured, then, about Theodorus' account of you, and set your mind on finding a definition of knowledge, as of anything else, with all the zeal at your command.

THEAETETUS : If it depends on my zeal, Socrates, the truth will come to light.

SOCRATES : Forward, then, on the way you have just shown so well. Take as a model your answer about the roots. Just as you found a single character to embrace all that multitude, so now try to find a single formula that applies to the many kinds of knowledge.

THEAETETUS : But I assure you, Socrates, I have often set myself to study that problem, when I heard reports of the questions you ask. But I cannot persuade myself that I can give any satisfactory solution or that anyone has ever stated in my hearing the sort of answer you require. And yet I cannot get the question out of my mind.

SOCRATES : My dear Theaetetus, that is because your mind is not empty or barren. You are suffering the pains of travail.

THEAETETUS : I don't know about that, Socrates. I am only telling you how I feel.

SOCRATES : How absurd of you, never to have heard that I am the son of a midwife, a fine buxom woman called Phaenarete!

THEAETETUS: I have heard that.

SOCRATES: Have you also been told that I practice the same art?

THEAETETUS: No, never.

SOCRATES: It is true, though; only don't give away my secret. It is not known that I possess this skill; so the ignorant world describes me in other terms as an eccentric person who reduces people to hopeless perplexity. Have you been told that too?

THEAETETUS: I have.

SOCRATES: Shall I tell you the reason?

THEAETETUS: Please do.

SOCRATES: Consider, then, how it is with all midwives; that will help you to understand what I mean. I dare say you know that they never attend other women in childbirth so long as they themselves can conceive and bear children, but only when they are too old for that.

THEAETETUS: Of course.

SOCRATES: They say that is because Artemis, the patroness of childbirth, is herself childless, and so, while she did not allow barren women to be midwives, because it is beyond the power of human nature to achieve skill without any experience, she assigned the privilege to women who were past childbearing, out of respect to their likeness to herself.

THEAETETUS: That sounds likely.

SOCRATES: And it is more than likely, is it not, that no one can tell so well as a midwife whether women are pregnant or not?

THEAETETUS: Assuredly.

SOCRATES: Moreover, with the drugs and incantations they administer, midwives can either bring on the pains of travail or allay them at their will, make a difficult labor easy, and at an early stage cause a miscarriage if they so decide.

THEAETETUS: True.

SOCRATES: Have you also observed that they are the cleverest matchmakers, having an unerring skill in selecting a pair whose marriage will produce the best children?

THEAETETUS: I was not aware of that.

SOCRATES: Well, you may be sure they pride themselves on that more than on cutting the umbilical cord. Consider the knowledge of the sort of plant or seed that should be sown in any given soil. Does not that go together with skill in tending and harvesting the fruits of the earth? They are not two different arts?

THEAETETUS: No, the same.

SOCRATES: And so with a woman; skill in the sowing is not to be separated from skill in the harvesting?

150 THEAETETUS: Probably not.

SOCRATES: No. Only, because there is that wrong and ignorant

way of bringing together man and woman which they call pandering, midwives, out of self-respect, are shy even of matchmaking, for fear of falling under the accusation of pandering. Yet the genuine midwife is the only successful matchmaker.

THEAETETUS: That is clear.

SOCRATES: All this, then, lies within the midwife's province, but her performance falls short of mine. It is not the way of women sometimes to bring forth real children, sometimes mere phantoms, such that it is hard to tell the one from the other. If it were so, the highest and noblest task of the midwife would be to discern the real from the unreal, would it not?

THEAETETUS: I agree.

SOCRATES: My art of midwifery is in general like theirs; the only difference is that my patients are men, not women, and my concern is not with the body but with the soul that is in travail of birth. And the highest point of my art is the power to prove by every test whether the offspring of a young man's thought is a false phantom or instinct with life and truth. I am so far like the midwife that I cannot myself give birth to wisdom, and the common reproach is true, that, though I question others, I can myself bring nothing to light because there is no wisdom in me. The reason is this. Heaven constrains me to serve as a midwife, but has debarred me from giving birth. So of myself I have no sort of wisdom, nor has any discovery ever been born to me as the child of my soul. Those who frequent my company at first appear, some of them, quite unintelligent, but, as we go further with our discussions, all who are favored by heaven make progress at a rate that seems surprising to others as well as to themselves, although it is clear that they have never learned anything from me. The many admirable truths they bring to birth have been discovered by themselves from within. But the delivery is heaven's work and mine.

The proof of this is that many who have not been conscious of my assistance but have made light of me, thinking it was all their own doing, have left me sooner than they should, whether under others' influence or of their own motion, and thenceforward suffered miscarriage of their thoughts through falling into bad company, and they have lost the children of whom I had delivered them by bringing them up badly, caring more for false phantoms than for the true. And so at last their lack of understanding has become apparent to themselves and to everyone else. Such a one was Aristides, son of Lysimachus, and there have been many more. When they come back and beg for a renewal of our intercourse with extravagant protestations, sometimes the divine warning that comes to me forbids it; with others it is permitted, and these begin again to make progress. In yet another way those who seek my company have the same experience as a woman with child; they suffer the pains of labor and, by night and day, are

full of distress far greater than a woman's, and my art has power to  
 b bring on these pangs or to allay them. So it fares with these, but there  
 are some, Theaetetus, whose minds, as I judge, have never conceived  
 at all. I see that they have no need of me and with all good will I seek  
 a match for them. Without boasting unduly, I can guess pretty well  
 whose society will profit them. I have arranged many of these  
 matches with Prodicus, and with other men of inspired sagacity.

And now for the upshot of this long discourse of mine. I suspect  
 that, as you yourself believe, your mind is in labor with some thought  
 it has conceived. Accept, then, the ministration of a midwife's son  
 c who himself practices his mother's art, and do the best you can to answer  
 the questions I ask. Perhaps when I examine your statements I  
 may judge one or another of them to be an unreal phantom. If I then  
 take the abortion from you and cast it away, do not be savage with me  
 like a woman robbed of her first child. People have often felt like that  
 toward me and been positively ready to bite me for taking away some  
 foolish notion they have conceived. They do not see that I am doing  
 d them a kindness. They have not learned that no divinity is ever ill-  
 disposed toward man, nor is such action on my part due to unkind-  
 ness; it is only that I am not permitted to acquiesce in falsehood and  
 suppress the truth.

So, Theaetetus, start again and try to explain what knowledge is.  
 Never say it is beyond your power; it will not be so, if heaven wills and  
 you take courage.

THEAETETUS: Well, Socrates, with such encouragement from  
 e a person like you, it would be a shame not to do one's best to say what  
 one can. It seems to me that one who knows something is perceiving  
 the thing he knows, and, so far as I can see at present, knowledge is  
 nothing but perception.

SOCRATES: Good. That is the right spirit in which to express  
 one's opinion. But now suppose we examine your offspring together,  
 and see whether it is a mere wind egg or has some life in it. Perception,  
 you say, is knowledge?

THEAETETUS: Yes.

SOCRATES: The account you give of the nature of knowledge is  
 152 not, by any means, to be despised. It is the same that was given by  
 Protagoras, though he stated it in a somewhat different way. He says,  
 you will remember, that 'man is the measure of all things—alike of  
 the being of things that are and of the not-being of things that are  
 not.' No doubt you have read that.

THEAETETUS: Yes, often.

SOCRATES: He puts it in this sort of way, doesn't he, that any  
 given thing 'is to me such as it appears to me, and is to you such as it  
 appears to you,' you and I being men?

THEAETETUS: Yes, that is how he puts it.

b SOCRATES: Well, what a wise man says is not likely to be non-

sense. So let us follow up his meaning. Sometimes, when the same wind is blowing, one of us feels chilly, the other does not, or one may feel slightly chilly, the other quite cold.

THEAETETUS: Certainly.

SOCRATES: Well, in that case are we to say that the wind in itself is cold or not cold? Or shall we agree with Protagoras that it is cold to the one who feels chilly, and not to the other?

THEAETETUS: That seems reasonable.

SOCRATES: And further that it so 'appears' to each of us?

THEAETETUS: Yes.

SOCRATES: And 'appears' means that he 'perceives' it so?

THEAETETUS: True.

SOCRATES: 'Appearing,' then, is the same thing as 'perceiving,' c  
in the case of what is hot or anything of that kind. They *are* to each man such as he *perceives* them.

THEAETETUS: So it seems.

SOCRATES: Perception, then, is always of something that *is*, and, as being knowledge, it is infallible.

THEAETETUS: That is clear.

SOCRATES: Can it be, then, that Protagoras was a very ingenious person who threw out this dark saying for the benefit of the common herd like ourselves, and reserved the truth as a secret doctrine to be revealed to his disciples?

THEAETETUS: What do you mean by that, Socrates? d

SOCRATES: I will tell you, and indeed the doctrine is a remarkable one. It declares that nothing is *one* thing just by itself, nor can you rightly call it by some definite name, nor even say it is of any definite sort. On the contrary, if you call it 'large,' it will be found to be also small, if 'heavy,' to be also light, and so on all through, because nothing is *one* thing or *some* thing or of any definite sort. All the things we are pleased to say 'are,' really are in process of becoming, as a result of movement and change and of blending one with another. We are wrong to speak of them as 'being,' for none of them ever is; they are always becoming. In this matter let us take it that, with the e  
exception of Parmenides, the whole series of philosophers agree—Protagoras, Heraclitus, Empedocles—and among the poets the greatest masters in both kinds, Epicharmus in comedy, Homer in tragedy. When Homer speaks of 'Oceanus, source of the gods, and mother Tethys,' <sup>1</sup> he means that all things are the offspring of a flowing stream of change. Don't you understand him so?

THEAETETUS: Certainly.

SOCRATES: Who, then, could challenge so great an array, with 153  
Homer for its captain, and not make himself a laughingstock?

THEAETETUS: That would be no light undertaking, Socrates.

<sup>1</sup> *Iliad* 14.201, 302.

SOCRATES: It would not, Theaetetus. Their doctrine that 'being,' so called, and 'becoming' are produced by motion, 'not-being' and perishing by rest, is well supported by such proofs as these. The hot or fire, which generates and controls all other things, is itself generated by movement and friction—both forms of change. These are ways of producing fire, aren't they?

b THEAETETUS: Yes.

SOCRATES: And further, all living things are born by the same processes?

THEAETETUS: Assuredly.

SOCRATES: Again, the healthy condition of the body is undermined by inactivity and indolence, and to a great extent preserved by exercise and motion, isn't it?

THEAETETUS: Yes.

SOCRATES: And so with the condition of the soul. The soul acquires knowledge and is kept going and improved by learning and practice, which are of the nature of movements. By inactivity, dullness, and neglect of exercise, it learns nothing and forgets what it has learned.

THEAETETUS: True.

SOCRATES: So, of the two, motion is a good thing for both soul and body, and immobility is bad.

THEAETETUS: So it appears.

SOCRATES: Need I speak further of such things as stagnation in air or water, where stillness causes corruption and decay, when motion would keep things fresh, or, to complete the argument, press into its service that 'golden rope'<sup>2</sup> in Homer, proving that he means by it nothing more nor less than the sun, and signifies that so long as the heavens and the sun continue to move round, all things in heaven and earth are kept going, whereas if they were bound down and brought to a stand, all things would be destroyed and the world, as they say, turned upside down?

THEAETETUS: I agree with your interpretation, Socrates.

SOCRATES: Think of it, then, in this way. First, to take the case of the eyes, you must conceive that what you call white color has no being as a distinct thing outside your eyes nor yet inside them, nor must you assign it any fixed place. Otherwise, of course, it would have its being in an assigned place and abide there, instead of arising in a process of becoming.

THEAETETUS: Well, but how am I to think of it?

SOCRATES: Let us follow out our recent statement and lay it down that there is no single thing that is in and by itself. On that showing we shall see that black or white or any color you choose is a thing that has arisen out of the meeting of our eyes with the appropriate motion. What we say 'is' this or that color will be neither the

<sup>2</sup> *Iliad* 8.18 sq.

eye which encounters the motion nor the motion which is encountered, but something which has arisen between the two and is peculiar to each several percipient. Or would you be prepared to maintain that every color appears to a dog or any other creature just such as it appears to you?

THEAETETUS: Certainly not.

SOCRATES: Or to another man? Does anything you please appear to him such as it appears to you? Are you quite sure of that? Are you not much rather sure that it does not even appear the same to yourself, because you never remain in the same condition?

THEAETETUS: I think that is much nearer the mark.

SOCRATES: So then, if the thing that we measure ourselves b against or the thing we touch really were large or white or hot, it would never become different the moment it encountered a different person, supposing it to undergo no change in itself. And again, if the thing which measures itself against the object or touches it were any one of these things [large, white, etc.], then, when a different thing came into contact with it or were somehow modified, it, on its side, if it were not affected in itself, would not become different. For as things are, we are too easily led into making statements which Protagoras and anyone who maintains the same position would call strange and absurd.

THEAETETUS: How so? What statements do you mean?

SOCRATES: Take a simple example, which will make my mean- c ing quite clear. When you compare six dice with four, we say that the six are more than the four or half as many again, while if you compare them with twelve, the six are fewer—only half as many—and one cannot say anything else. Or do you think one can?

THEAETETUS: Certainly not.

SOCRATES: Well then, suppose Protagoras or somebody else asks you, Can anything become larger or more otherwise than by being increased? What will you answer?

THEAETETUS: I should answer no, if I were to speak my mind with reference to this last question, but having regard to your previous d one, I might reply yes, to guard against contradicting myself.

SOCRATES: An excellent answer; really, you might be inspired. But apparently, if you say yes, it will be like the situation in Euripides; the tongue will be incontrovertible, but not the heart.

THEAETETUS: True.

SOCRATES: Now, if you and I were like those clever persons who have canvassed all the thoughts of the heart, we might allow ourselves the luxury of trying one another's strength in a regular sophistical set-to, with a great clashing of arguments. But being only ordinary e people, we shall prefer first to study the notions we have in our own minds and find out what they are and whether, when we compare them, they agree or are altogether inconsistent.

THEAETETUS: I should certainly prefer that.

SOCRATES: So do I, and, that being so, suppose we look at the question again in a quiet and leisurely spirit, not with any impatience  
 155 but genuinely examining ourselves to see what we can make of these apparitions that present themselves to our minds. Looking at the first of them, I suppose we shall assert that nothing can become greater or less, either in size or in number, so long as it remains equal to itself. Is it not so?

THEAETETUS: Yes.

b SOCRATES: And secondly, that a thing to which nothing is added and from which nothing is taken away is neither increased nor diminished, but always remains the same in amount.

THEAETETUS: Undoubtedly.

SOCRATES: And must we not say, thirdly, that a thing which was not at an earlier moment cannot be at a later moment without becoming and being in process of becoming?

THEAETETUS: It certainly seems so.

SOCRATES: Now these three admissions, I fancy, fight among themselves in our minds when we make those statements about the dice, or when we say that I, being of the height you see, without gaining or losing in size, may within a year be taller, as I am now, than a youth like you, and later on be shorter, not because I have lost anything in bulk, but because you have grown. For apparently I am later  
 c what I was not before, and yet have not become so, for without the process of becoming the result is impossible, and I could not be in process of becoming shorter without losing some of my bulk. I could give you countless other examples, if we are to accept these. For I think you follow me, Theaetetus; I fancy, at any rate, such puzzles are not altogether strange to you.

THEAETETUS: No, indeed it is extraordinary how they set me wondering whatever they can mean. Sometimes I get quite dizzy with thinking of them.

d SOCRATES: That shows that Theodorus was not wrong in his estimate of your nature. This sense of wonder is the mark of the philosopher. Philosophy indeed has no other origin, and he was a good genealogist who made Iris the daughter of Thaumas.

Do you now begin to see the explanation of all this which follows from the theory we are attributing to Protagoras? Or is it not yet clear?

THEAETETUS: I can't say it is yet.

SOCRATES: Then perhaps you will be grateful if I help you to penetrate to the truth concealed in the thoughts of a man—or. I should say, of men—of such distinction.

e THEAETETUS: Of course I shall be very grateful.

SOCRATES: Then just take a look round and make sure that none of the uninitiate overhears us. I mean by the uninitiate the people who believe that nothing is real save what they can grasp with

their hands and do not admit that actions or processes or anything invisible can count as real.

**THEAETETUS:** They sound like a very hard and repellent sort of people.

**SOCRATES:** It is true, they are remarkably crude. The others, <sup>156</sup> into whose secrets I am going to initiate you, are much more refined and subtle. Their first principle, on which all that we said just now depends, is that the universe really is motion and nothing else. And there are two kinds of motion. Of each kind there are any number of instances, but they differ in that the one kind has the power of acting, the other of being acted upon. From the intercourse and friction of these with one another arise offspring, endless in number, but in pairs of twins. One of each pair is something perceived, the other a perception, whose birth always coincides with that of the thing perceived. <sup>b</sup> Now, for the perceptions we have names like 'seeing,' 'hearing,' 'smelling,' 'feeling cold,' 'feeling hot,' and again pleasures and pains and desires and fears, as they are called, and so on. There are any number that are nameless, though names have been found for a whole multitude. On the other side, the brood of things perceived always comes to birth at the same moment with one or another of these—with instances of seeing, colors of corresponding variety, with instances of <sup>c</sup> hearing, sounds in the same way, and with all the other perceptions, the other things perceived that are akin to them. Now, what light does this story throw on what has gone before, Theaetetus? Do you see?

**THEAETETUS:** Not very clearly, Socrates.

**SOCRATES:** Well, consider whether we can round it off. The point is that all these things are, as we were saying, in motion, but there is a quickness or slowness in their motion. The slow sort has its motion without change of place and with respect to what comes within range of it, and that is how it generates offspring, but the offspring <sup>d</sup> generated are quicker, inasmuch as they move from place to place and their motion consists in change of place. As soon, then, as an eye and something else whose structure is adjusted to the eye come within range and give birth to the whiteness together with its cognate perception—things that would never have come into existence if either of the two had approached anything else—then it is that, as the vision from the eyes and the whiteness from the thing that joins in giving birth to the color pass in the space between, the eye becomes filled with vision and now sees, and becomes, not vision, but a seeing eye, while the other parent of the color is saturated with whiteness <sup>e</sup> and becomes, on its side, not whiteness, but a white thing, be it stock or stone or whatever else may chance to be so colored.

And so, too, we must think in the same way of the rest—'hard,' 'hot,' and all of them—that no one of them has any being just by itself, as indeed we said before, but that it is in their intercourse with

one another that all arise in all their variety as a result of their motion, since it is impossible to have any 'firm notion,' as they say, of either what is active or what is passive in them, in any single case, as having  
 157 any being. For there is no such thing as an agent until it meets with a patient, nor any patient until it meets with its agent. Also what meets with something and behaves as agent, if it encounters something different at another time, shows itself as patient.

The conclusion from all this is, as we said at the outset, that nothing is one thing just by itself, but is always in process of becoming for someone, and being is to be ruled out altogether, though, needless  
 b to say, we have been betrayed by habit and inobservance into using the word more than once only just now. But that was wrong, these wise men tell us, and we must not admit the expressions 'something' or 'somebody's' or 'mine' or 'this' or 'that' or any other word that brings things to a standstill, but rather speak, in accordance with nature, of what is 'becoming,' 'being produced,' 'perishing,' 'changing.' For anyone who talks so as to bring things to a standstill is easily refuted. So we must express ourselves in each individual case and in speaking of an assemblage of many—to which assemblage people give the name  
 c of 'man' or 'stone' or of any living creature or kind.

Does all this please you, Theaetetus? Will you accept it as palatable to your taste?

THEAETETUS: Really, I am not sure, Socrates. I cannot even make out about you, whether you are stating this as something you believe or merely putting me to the test.

SOCRATES: You forget, my friend, that I know nothing of such matters and cannot claim to be producing any offspring of my own. I am only trying to deliver yours, and to that end uttering charms over you and tempting your appetite with a variety of delicacies from the table of wisdom, until by my aid your own belief shall be brought to  
 d light. Once that is done, I shall see whether it proves to have some life in it or not. Meanwhile, have courage and patience, and answer my questions bravely in accordance with your convictions.

THEAETETUS: Go on with your questioning.

SOCRATES: Once more, then, tell me whether you like this notion that nothing is, but is always becoming, good or beautiful or any of the other things we mentioned?

THEAETETUS: Well, when I hear you explaining it as you have, it strikes me as extraordinarily reasonable, and to be accepted as you have stated it.

e SOCRATES: Then let us not leave it incomplete. There remains the question of dreams and disorders, especially madness and all the mistakes madness is said to make in seeing or hearing or otherwise misperceiving. You know, of course, that in all these cases the theory  
 158 we have just stated is supposed to be admittedly disproved, on the ground that in these conditions we certainly have false perceptions,

and that so far from its being true that what appears to any man also is, on the contrary none of these appearances is real.

THEAETETUS: That is quite true, Socrates.

SOCRATES: What argument, then, is left for one who maintains that perception is knowledge, and that what appears to each man also 'is' for him to whom it appears?

THEAETETUS: I hesitate to say that I have no reply, Socrates, because just now you rebuked me for saying that. Really, I cannot undertake to deny that madmen and dreamers believe what is false, when madmen imagine they are gods or dreamers think they have wings and are flying in their sleep. b

SOCRATES: Have you not taken note of another doubt that is raised in these cases, especially about sleeping and waking?

THEAETETUS: What is that?

SOCRATES: The question I imagine you have often heard asked—what evidence could be appealed to, supposing we were asked at this very moment whether we are asleep or awake, dreaming all that passes through our minds or talking to one another in the waking state? c

THEAETETUS: Indeed, Socrates, I do not see by what evidence it is to be proved, for the two conditions correspond in every circumstance like exact counterparts. The conversation we have just had might equally well be one that we merely think we are carrying on in our sleep, and when it comes to thinking in a dream that we are telling other dreams, the two states are extraordinarily alike.

SOCRATES: You see, then, that there is plenty of room for doubt, when we even doubt whether we are asleep or awake. And in fact, our time being equally divided between waking and sleeping, in each condition our mind strenuously contends that the convictions of the moment are certainly true, so that for equal times we affirm the reality of the one world and of the other, and are just as confident of both.

THEAETETUS: Certainly.

SOCRATES: And the same holds true of disorders and madness, except that the times are not equal.

THEAETETUS: That is so.

SOCRATES: Well, is the truth to be decided by length or shortness of time?

THEAETETUS: No, that would be absurd in many ways. e

SOCRATES: Have you any other certain test to show which of these beliefs is true?

THEAETETUS: I don't think I have.

SOCRATES: Then let me tell you what sort of account would be given of these cases by those who lay it down that whatever at any time seems to anyone is true to him. I imagine they would ask this question, 'Tell us, Theaetetus, when one thing is entirely different

from another, it cannot be in any respect capable of behaving in the same way as that other, can it? We are not to understand that the thing we speak of is in some respects the same though different in others, but that it is entirely different.'

159 THEAETETUS: If so, it can have nothing in common, either in its capabilities of behavior or in any other respect, when it is altogether different.

SOCRATES: Must we not admit, then, that such a thing is unlike the other?

THEAETETUS: I agree.

SOCRATES: So if it happens that something comes to be like or unlike either itself or something else, we shall say that when it is made like it becomes the *same*, when unlike, *different*.

THEAETETUS: Necessarily.

SOCRATES: And we said earlier that there was no limit to the number of things that are active or of things that are acted upon by them.

THEAETETUS: Yes.

SOCRATES: And further, that when one of these is married to a succession of different partners, the offspring produced will be not the same but different.

b THEAETETUS: Certainly.

SOCRATES: Now let us take you or me or any other instance to which the principle applies—Socrates in health and Socrates ill. Are we to call one of these *like* the other or unlike?

THEAETETUS: You mean, is the ill Socrates taken as a whole like Socrates in health taken as a whole?

SOCRATES: You understand me perfectly; that is just what I mean.

THEAETETUS: Then of course he is unlike.

SOCRATES: And consequently, inasmuch as he is unlike, a different thing?

THEAETETUS: Necessarily.

c SOCRATES: And you would say the same of Socrates asleep or in any other of the conditions we mentioned?

THEAETETUS: Yes.

SOCRATES: Then any one of the objects whose nature it is to act upon something will, according as it finds Socrates well or ill, treat me as a different thing?

THEAETETUS: Of course it will.

SOCRATES: And consequently the pair of us—I who am acted upon and the thing that acts on me—will have different offspring in the two cases?

THEAETETUS: Naturally.

SOCRATES: Now when I am in health and drink wine, it seems pleasant to me and sweet.

THEAETETUS: Yes.

**SOCRATES:** Because, in accordance with the account we accepted earlier, agent and patient give birth to sweetness and a sensation, both movements that pass simultaneously. The sensation, on the patient's side, makes the tongue percipient, while, on the side of the wine, the sweetness, moving in the region of the wine, causes it both to be and to appear sweet to the healthy tongue.

**THEAETETUS:** Certainly that was what we agreed upon.

**SOCRATES:** But when it finds me in ill-health, to begin with, the person it finds is not really the same, for the one it now meets with is unlike the other.

**THEAETETUS:** Yes.

**SOCRATES:** And so this pair—Socrates in this condition and the drinking of the wine—produce a different offspring, in the region of the tongue a sensation of sourness, and in the region of the wine a sourness that arises as a movement there. The wine becomes, not sourness, but sour, while I become, not a sensation, but sentient.

**THEAETETUS:** Undoubtedly.

**SOCRATES:** It follows, then, (a) that, on my side, I shall never become percipient in just this way of any other thing, for to a different object belongs a different perception, and in acting on its percipient it is acting on a person who is in a different condition and so a different person. Also (b) on its side, the thing which acts on me can never meet with someone else and generate the same offspring and come to be of just this quality, for when it brings to birth another thing from another person, it will itself come to be of another quality.

**THEAETETUS:** That is so.

**SOCRATES:** Further, (c) I shall not come to have this sensation *for myself*, nor will the object come to be of such a quality *for itself*.

**THEAETETUS:** No.

**SOCRATES:** Rather, when I become percipient, I must become percipient *of something*, for I cannot have a perception and have it of nothing, and equally the object, when it becomes sweet or sour and so on, must become *so to someone*—it cannot become sweet and yet sweet to nobody.

**THEAETETUS:** Quite so.

**SOCRATES:** Nothing remains, then, I suppose, but that it and I should be or become—whichever expression we are to use—for *each other*. Necessity binds together our existence, but binds neither of us to anything else, nor each of us to himself; so we can only be bound to one another. Accordingly, whether we speak of something 'being' or of its 'becoming,' we must speak of it as being or becoming *for someone*, or *of something*, or *toward something*, but we must not speak, or allow others to speak, of a thing as either being or becoming anything just in and by itself. That is the conclusion to which our argument points.

**THEAETETUS:** Certainly, Socrates.

SOCRATES: And so, since what acts upon me is for me and for no one else, I, and no one else, am actually perceiving it.

THEAETETUS: Of course.

SOCRATES: Then my perception is true for me, for its object at any moment is my reality, and I am, as Protagoras says, a judge of what is for me, that it is, and of what is not, that it is not.

THEAETETUS: So it appears.

d     SOCRATES: If, then, I am infallible and make no mistake in my state of mind about what is or becomes, how can I fail to have knowledge of the things of which I have perception?

THEAETETUS: You cannot possibly fail.

SOCRATES: So you were perfectly right in saying that knowledge is nothing but perception. And it has turned out that these three doctrines coincide—the doctrine of Homer and Heraclitus and all their tribe that all things move like flowing streams, the doctrine of Protagoras, wisest of men, that man is the measure of all things, and  
e     Theaetetus' conclusion that, on these grounds, it results that perception is knowledge.

Is it not so, Theaetetus? May we say that this is your newborn child which I have brought to birth? What do you say?

THEAETETUS: I can only agree, Socrates.

SOCRATES: Here at last, then, after our somewhat painful labor, is the child we have brought to birth, whatever sort of creature it may be. His birth should be followed by the ceremony of carrying him round the hearth; we must look at our offspring from every angle  
161   to make sure we are not taken in by a lifeless phantom not worth the rearing. Or do you think an infant of yours must be reared in any case and not exposed? Will you bear to see him put to the proof, and not be in a passion if your first-born should be taken away?

THEODORUS: Theaetetus will bear it, Socrates; he is thoroughly good-tempered. But do explain what is wrong with the conclusion.

SOCRATES: You have an absolute passion for discussion, Theodorus. I like the way you take me for a sort of bag full of arguments, and imagine I can easily pull out a proof to show that our conclusion is wrong. You don't see what is happening. The arguments  
b     never come out of me; they always come from the person I am talking with. I am only at a slight advantage in having the skill to get some account of the matter from another's wisdom and entertain it with fair treatment. So now, I shall not give any explanation myself, but try to get it out of our friend.

THEODORUS: That is better, Socrates; do as you say.

SOCRATES: Well then, Theodorus, shall I tell you a thing that surprises me in your friend Protagoras?

c     THEODORUS: What is that?

SOCRATES: The opening words of his treatise. In general, I am

delighted with his statement that what seems to anyone also is, but I am surprised that he did not begin his *Truth* with the words, The measure of all things is the pig, or the baboon, or some sentient creature still more uncouth. There would have been something magnificent in so disdainful an opening, telling us that all the time, while we were admiring him for a wisdom more than mortal, he was in fact no wiser than a tadpole, to say nothing of any other human being. What else can we say, Theodorus? If what every man believes as a result of perception is indeed to be true for him; if, just as no one is to be a better judge of what another experiences, so no one is better entitled to consider whether what another thinks is true or false, and, as we have said more than once, every man is to have his own beliefs for himself alone and they are all right and true—then, my friend, where is the wisdom of Protagoras, to justify his setting up to teach others and to be handsomely paid for it, and where is our comparative ignorance or the need for us to go and sit at his feet, when each of us is himself the measure of his own wisdom? Must we not suppose that Protagoras speaks in this way to flatter the ears of the public? I say nothing of my own case or of the ludicrous predicament to which my art of midwifery is brought, and, for that matter, this whole business of philosophical conversation, for to set about overhauling and testing one another's notions and opinions when those of each and every one are right, is a tedious and monstrous display of folly, if the Truth of Protagoras is really truthful and not amusing herself with oracles delivered from the unapproachable shrine of his book. 162

THEODORUS: Protagoras was my friend, Socrates, as you were saying, and I would rather he were not refuted by means of any admissions of mine. On the other hand, I cannot resist you against my convictions; so you had better go back to Theaetetus, whose answers have shown, in any case, how well he can follow your meaning.

SOCRATES: If you went to a wrestling school at Sparta, Theodorus, would you expect to look on at the naked wrestlers, some of them making a poor show, and not strip so as to let them compare your own figure?

THEODORUS: Why not, if they were likely to listen to me and not insist, just as I believe I shall persuade you to let me look on now? The limbs are stiff at my age, and instead of dragging me into your exercises, you will try a fall with a more supple youth.

SOCRATES: Well, Theodorus, as the proverb says, 'What likes you mislikes not me.' So I will have recourse to the wisdom of Theaetetus. c

Tell me, then, first, Theaetetus, about the point we have just made. Are not *you* surprised that you should turn out, all of a sudden, to be every bit as wise as any other man and even as any god? Or would you say that Protagoras' maxim about the measure does not apply to gods just as much as to men?

**THEAETETUS:** Certainly I think it does, and, to answer your question, I am very much surprised. When we were discussing what they mean by saying that what seems to anyone really is to him who  
 d thinks it so, that appeared to me quite satisfactory, but now, all in a moment, it has taken on a very different complexion.

**SOCRATES:** That, my friend, is because you are young; so you lend a ready ear to claptrap and it convinces you. Protagoras or his representative will have an answer to this. He will say, 'You good people sitting there, boys and old men together, this is all claptrap. You drag in the gods, whose existence or nonexistence I expressly refuse  
 e to discuss in my speeches and writings, and you count upon appeals to the vulgar such as this. How strange that any human individual is to be no wiser than the lowest of the brutes! You go entirely by what looks probable, without a word of argument or proof. If a mathematician like Theodorus elected to argue from probability in geometry, he wouldn't be worth an ace. So you and Theodorus might consider whether you are going to allow questions of this importance to be  
 163 settled by plausible appeals to mere likelihood.'

**THEAETETUS:** Well, you would not think that right, Socrates, any more than we should.

**SOCRATES:** It seems, then, we must attack the question in another way. That is what you and Theodorus think?

**THEAETETUS:** Certainly we must.

**SOCRATES:** Let us look at it in this way, then—this question whether knowledge and perception are, after all, the same thing or not. For that, you remember, was the point to which our whole discussion was directed, and it was for its sake that we stirred up all this swarm of queer doctrines, wasn't it?

b **THEAETETUS:** Quite true.

**SOCRATES:** Well, are we going to agree that, whenever we perceive something by sight or hearing, we also at the same time know it? Take the case of a foreign language we have not learned. Are we to say that we do not hear the sounds that foreigners utter, or that we both hear and know what they are saying? Or again, when we don't know our letters, are we to maintain that we don't see them when we look at them, or that, since we see them, we do know them?

**THEAETETUS:** We shall say, Socrates, that we know just so much of them as we do see or hear. The shape and color of the letters  
 c we both see and know; we hear and at the same time know the rising and falling accents of the voice. But we neither perceive by sight and hearing nor yet know what a schoolmaster or an interpreter could tell us about them.

**SOCRATES:** Well done, Theaetetus. I had better not raise objections to that, for fear of checking your growth. But look, here is another objection threatening. How are we going to parry it?

THEAETETUS: What is that?

SOCRATES: It is this. Suppose someone to ask, 'Is it possible d for a man who has once come to know something and still preserves a memory of it, not to know just that thing that he remembers at the moment when he remembers it?' This is, perhaps, rather a long-winded way of putting the question. I mean, can a man who has become acquainted with something and remembers it, not know it?

THEAETETUS: Of course not, Socrates, the supposition is monstrous.

SOCRATES: Perhaps I am talking nonsense, then. But consider, you call seeing 'perceiving,' and sight 'perception,' don't you?

THEAETETUS: I do.

SOCRATES: Then, according to our earlier statement, a man e who sees something acquires from that moment knowledge of the thing he sees?

THEAETETUS: Yes.

SOCRATES: Again, you recognize such a thing as memory?

THEAETETUS: Yes.

SOCRATES: Memory of nothing, or of something?

THEAETETUS: Of something, surely.

SOCRATES: Of what one has become acquainted with and perceived—that sort of thing?

THEAETETUS: Of course.

SOCRATES: So a man sometimes remembers what he has seen?

THEAETETUS: He does.

SOCRATES: Even when he shuts his eyes? Or does he forget when he shuts them?

THEAETETUS: No, Socrates, that would be a monstrous thing 164 to say.

SOCRATES: All the same, we shall have to say it, if we are to save our former statement. Otherwise, it goes by the board.

THEAETETUS: I certainly have a suspicion that you are right, but I don't quite see how. You must tell me.

SOCRATES: In this way. One who sees, we say, acquires knowledge of what he sees, because it is agreed that sight or perception and knowledge are the same thing.

THEAETETUS: Certainly.

SOCRATES: But suppose this man who sees and acquires knowledge of what he has seen, shuts his eyes; then he remembers the thing, but does not see it. Isn't that so?

THEAETETUS: Yes.

SOCRATES: But 'does not see it' means 'does not know it,' since b 'sees' and 'knows' mean the same.

THEAETETUS: True.

with contempt. Your admirable Socrates, he will say, finds a little boy who is scared at being asked whether one and the same person can remember and at the same time not know one and the same thing. When the child is frightened into saying no, because he cannot foresee the consequence, Socrates turns the conversation so as to make a figure of fun of my unfortunate self. You take things much too easily,

- b Socrates. The truth of the matter is this. When you ask someone questions in order to canvass some opinion of mine and he is found tripping, then I am refuted only if his answers are such as I should have given; if they are different, it is he who is refuted, not I. For instance, do you think you will find anyone to admit that one's present memory of a past impression is an impression of the same character as one had during the original experience, which is now over? It is nothing of the sort. Or again, will anyone shrink from admitting that it is possible for the same person to know and not to know the same thing? Or, if he is frightened of saying that, will he ever allow that a person who is changed is the *same* as he was before the change occurred, or rather, that he is *one* person at all, and not several, indeed an infinite succession of persons, provided change goes on happening—if we are
- c really to be on the watch against one another's attempts to catch at words?

- No, he will say, show a more generous spirit by attacking what I actually say, and prove, if you can, that we have not, each one of us, his peculiar perceptions, or that, granting them to be peculiar, it would not follow that what appears to each becomes—or is, if we may use the word 'is'—for him alone to whom it appears. With this talk of pigs and baboons, you are behaving like a pig yourself, and, what is more, you tempt your hearers to treat my writings in the same way,
- d which is not fair. For I do indeed assert that the truth is as I have written. Each one of us is a measure of what is and of what is not, but there is all the difference in the world between one man and another just in the very fact that what is and appears to one is different from what is and appears to the other. And as for wisdom and the wise man, I am very far from saying they do not exist. By a wise man I mean precisely a man who can change any one of us, when what is bad appears and is to him, and make what is good appear and be to him. In this statement, again, don't set off in chase of words, but let
- e me explain still more clearly what I mean. Remember how it was put earlier in the conversation. To the sick man his food appears sour and is so; to the healthy man it is and appears the opposite. Now there is no call to represent either of the two as wiser—that cannot be—nor is
- 167 the sick man to be pronounced unwise because he thinks as he does, or the healthy man wise because he thinks differently. What is wanted is a change to the opposite condition, because the other state is better.

And so too in education a change has to be effected from the

worse condition to the better; only, whereas the physician produces a change by means of drugs, the Sophist does it by discourse. It is not that a man makes someone who previously thought what is false think what is true, for it is not possible either to think the thing that is not or to think anything but what one experiences, and all experiences are true. Rather, I should say, when someone by reason of a depraved condition of mind has thoughts of a like character, one makes him, by reason of a sound condition, think other and sound thoughts, which some people ignorantly call true, whereas I should say that one set of thoughts is better than the other, but not in any way truer. And as for the wise, my dear Socrates, so far from calling them frogs, I call them, when they have to do with the body, physicians, and when they have to do with plants, husbandmen. For I assert that husbandmen too, when plants are sickly and have depraved sensations, substitute for these sensations that are sound and healthy, and moreover that wise and honest public speakers substitute in the community sound for unsound views of what is right. For I hold that whatever practices seem right and laudable to any particular state are so, for that state, so long as it holds by them. Only, when the practices are, in any particular case, unsound for them, the wise man substitutes others that are and appear sound. On the same principle the Sophist, since he can in the same manner guide his pupils in the way they should go, is wise and worth a considerable fee to them when their education is completed. In this way it is true both that some men are wiser than others and that no one thinks falsely, and you, whether you like it or not, must put up with being a measure, since by these considerations my doctrine is saved from shipwreck.

Now if you can dispute this doctrine in principle, do so by argument stating the case on the other side, or by asking questions, if you prefer that method, which has no terrors for a man of sense; on the contrary it ought to be specially agreeable to him. Only there is this rule to be observed. Do not conduct your questioning unfairly. It is very unreasonable that one who professes a concern for virtue should be constantly guilty of unfairness in argument. Unfairness here consists in not observing the distinction between a debate and a conversation. A debate need not be taken seriously and one may trip up an opponent to the best of one's power, but a conversation should be taken in earnest; one should help out the other party and bring home to him only those slips and fallacies that are due to himself or to his earlier instructors. If you follow this rule, your associates will lay the blame for their confusions and perplexities on themselves and not on you; they will like you and court your society, and disgusted with themselves, will turn to philosophy, hoping to escape from their former selves and become different men. But if, like so many, you take the opposite course, you will reach the opposite result; instead of turning your companions to philosophy, you will make them hate

the whole business when they get older. So, if you will take my advice, you will meet us in the candid spirit I spoke of, without hostility or contentiousness, and honestly consider what we mean when we say that all things are in motion and that what seems also is, to any individual or community. The further question whether knowledge is, or is not, the same thing as perception, you will consider as a consequence of these principles, not, as you did just now, basing your argument on the common use of words and phrases, which the vulgar twist into any sense they please and so perplex one another in all sorts of ways.

Such, Theodorus, is my contribution to the defense of your friend—the best I can make from my small means. Were he alive to speak for himself, it would be a much more impressive affair.

THEODORUS: You are not serious, Socrates; your defense was most spirited.

SOCRATES: Thank you, my friend. And now, did you notice how Protagoras was reproaching us for taking a child to argue with and using the boy's timidity to get the better of his own position in what he called a mere play of wit, in contrast to the solemnity of his measure of all things, and how he exhorted us to be serious about his doctrine?

THEODORUS: Of course I did, Socrates.

SOCRATES: What then? Do you think we should do as he says?

THEODORUS: Most certainly.

SOCRATES: Well, the company, as you see, are all children, except yourself. If we are to treat his doctrine seriously, as he enjoins, you and I must question one another. So we shall at any rate escape the charge of making light of it by discussing it with boys.

THEODORUS: Why, surely Theaetetus can follow up such an investigation better than a great many men with long beards.

SOCRATES: But not better than you, Theodorus. So don't imagine that you have no duty to your departed friend, but can leave it to me to make the best defense for him. Please come with us a little of the way at any rate—just until we know whether, in the matter of mathematical demonstrations, you cannot help being a measure, or everybody is just as competent as you in geometry and astronomy and all the other subjects you are supposed to excel in.

THEODORUS: It is no easy matter to escape questioning in your company, Socrates. I was deluded when I said you would leave me in peace and not force me into the ring like the Spartans; you seem to be as unrelenting as Sciron. The Spartans tell you to go away if you will not wrestle, but Antaeus is more in your line; you will let no one who comes near you go until you have stripped him by force for a trial of strength.

SOCRATES: Your comparisons exactly fit what is wrong with me, Theodorus, but my capacity for endurance is even greater. I have

encountered many heroes in debate, and times without number a Hercules or a Theseus has broken my head, but I have so deep a passion for exercise of this sort that I stick to it all the same. So don't deny me the pleasure of a trial, for your own benefit as well as mine.

THEODORUS: I have no more to say; lead me where you will. You are like Fate. No one can elude the toils of argument you spin for him. But I shall not be able to oblige you beyond the point you have proposed.

SOCRATES: Enough, if you will go so far. And please be on the watch for fear we should be betrayed into arguing frivolously and be blamed for that again.

THEODORUS: I will try as well as I can.

SOCRATES: Let us begin, then, by coming to grips with the doctrine at the same point as before. Let us see whether or not our discontent was justified, when we criticized it as making every individual self-sufficient in wisdom. Protagoras then conceded that some people were superior in the matter of what is better or worse, and these, he said, were wise. Didn't he?

THEODORUS: Yes.

SOCRATES: If he were here himself to make that admission, instead of our conceding it for him in our defense, there would be no need to reopen the question and make sure of our ground, but, as things are, we might be said to have no authority to make the admission on his behalf. So it will be more satisfactory to come to a more complete and clear agreement on this particular point, for it makes a considerable difference, whether this is so or not.

THEODORUS: That is true.

SOCRATES: Let us, then, as briefly as possible, obtain his agreement, not through any third person, but from his own statement.

THEODORUS: How?

SOCRATES: In this way. He says, doesn't he, that what seems true to anyone is true for him to whom it seems so?

THEODORUS: He does.

SOCRATES: Well now, Protagoras, we are expressing what seems true to a man, or rather to all men, when we say that everyone without exception holds that in some respects he is wiser than his neighbors and in others they are wiser than he. For instance, in moments of great danger and distress, whether in war or in sickness or at sea, men regard as a god anyone who can take control of the situation and look to him as a savior, when his only point of superiority is his knowledge. Indeed, the world is full of people looking for those who can instruct and govern men and animals and direct their doings, and on the other hand of people who think themselves quite competent to undertake the teaching and governing. In all these cases what can we say, if not that men do hold that wisdom and ignorance exist among them?

THEODORUS: We must say that.

SOCRATES: And they hold that wisdom lies in thinking truly, and ignorance in false belief?

c THEODORUS: Of course.

SOCRATES: In that case, Protagoras, what are we to make of your doctrine? Are we to say that what men think is always true, or that it is sometimes true and sometimes false? From either supposition it results that their thoughts are not always true, but both true and false. For consider, Theodorus. Are you, or is any Protagorean, prepared to maintain that no one regards anyone else as ignorant or as making false judgments?

THEODORUS: That is incredible, Socrates.

d SOCRATES: That, however, is the inevitable consequence of the doctrine which makes man the measure of all things.

THEODORUS: How so?

SOCRATES: When you have formed a judgment on some matter in your own mind and express an opinion about it to me, let us grant that, as Protagoras' theory says, it is true for you, but are we to understand that it is impossible for us, the rest of the company, to pronounce any judgment upon your judgment, or, if we can, that we always pronounce your opinion to be true? Do you not rather find thousands of opponents who set their opinion against yours on every occasion and hold that your judgment and belief are false?

e THEODORUS: I should just think so, Socrates—thousands and tens of thousands, as Homer says, and they give me all the trouble in the world.

SOCRATES: And what then? Would you have us say that in such a case the opinion you hold is true for yourself and false for these tens of thousands?

THEODORUS: The doctrine certainly seems to imply that.

SOCRATES: And what is the consequence for Protagoras himself? Is it not this? Supposing that not even he believed in man being the measure and the world in general did not believe it either—as in  
171 fact it doesn't—then this *Truth* which he wrote would not be true for anyone. If, on the other hand, he did believe it, but the mass of mankind does not agree with him, then, you see, it is more false than true by just so much as the unbelievers outnumber the believers.

THEODORUS: That follows, if its truth or falsity varies with each individual opinion.

SOCRATES: Yes, and besides that it involves a really exquisite conclusion. Protagoras, for his part, admitting as he does that everybody's opinion is true, must acknowledge the truth of his opponents' belief about his own belief, where they think he is wrong.

THEODORUS: Certainly.

b SOCRATES: That is to say, he would acknowledge his own belief to be false, if he admits that the belief of those who think him wrong is true?

THEODORUS: Necessarily.

SOCRATES: But the others, on their side, do not admit to themselves that they are wrong.

THEODORUS: No.

SOCRATES: Whereas Protagoras, once more, according to what he has written, admits that this opinion of theirs is as true as any other.

THEODORUS: Evidently.

SOCRATES: On all hands, then, Protagoras included, his opinion will be disputed, or rather Protagoras will join in the general consent—when he admits to an opponent the truth of his contrary opinion, from that moment Protagoras himself will be admitting that a dog or the man in the street is not a measure of anything whatever that he does not understand. Isn't that so?

THEODORUS: Yes.

SOCRATES: Then, since it is disputed by everyone, the *Truth* of Protagoras is true to nobody—to himself no more than to anyone else.

THEODORUS: We are running my old friend too hard, Socrates.

SOCRATES: But it is not clear that we are outrunning the truth, my friend. Of course it is likely that, as an older man, he was wiser than we are, and if at this moment he could pop his head up through the ground there as far as to the neck, very probably he would expose me thoroughly for talking such nonsense and you for agreeing to it, before he sank out of sight and took to his heels. However, we must do our best with such lights as we have and continue to say what we think. Now, for instance, must we not say that everyone would agree at least to this, that one man can be wiser or more ignorant than another?

THEODORUS: I certainly think so.

SOCRATES: And further, shall we say that the doctrine would find its firmest footing in the position we traced out in our defense of Protagoras, that most things—hot, dry, sweet, everything of that sort—are to each person as they appear to him? Whereas, if there is any case in which the theory would concede that one man is superior to another, it might consent to admit that, in the matter of good or bad health, not any woman or child—or animal, for that matter—knows what is wholesome for it and is capable of curing itself, but that here, if anywhere, one person is superior to another.

THEODORUS: I should certainly say so.

SOCRATES: And again in social matters, the theory will say that, so far as good and bad customs or rights and wrongs or matters of religion are concerned, whatever any state makes up its mind to enact as lawful for itself, really is lawful for it, and in this field no individual or state is wiser than another. But where it is a question of laying down what is for its advantage or disadvantage, once more there, if anywhere, the theory will admit a difference between two advisers or between the decisions of two different states in respect of

- b truth, and would hardly venture to assert that any enactment which a state supposes to be for its advantage will quite certainly be so.

But, in that field I am speaking of—in right and wrong and matters of religion—people are ready to affirm that none of these things is natural, with a reality of its own, but rather that the public decision becomes true at the moment when it is made and remains true so long as the decision stands, and those who do not argue altogether as

- c Protagoras does carry on their philosophy on these lines.

But one theory after another is coming upon us, Theodorus, and the last is more important than the one before.

THEODORUS: Well, Socrates, we have time at our disposal.

SOCRATES: Evidently. And it strikes me now, as often before, how natural it is that men who have spent much time in philosophical studies should look ridiculous when they appear as speakers in a court of law.

THEODORUS: How do you mean?

- SOCRATES: When you compare men who have knocked about from their youth up in law courts and such places with others  
d bred in philosophical pursuits, the one set seem to have been trained as slaves, the others as free men.

THEODORUS: In what way?

- SOCRATES: In the way you spoke of. The free man always has time at his disposal to converse in peace at his leisure. He will pass, as we are doing now, from one argument to another—we have just reached the third. Like us, he will leave the old for a fresh one which takes his fancy more, and he does not care how long or short the discussion may be, if only it attains the truth. The orator is always talking  
e ing against time, hurried on by the clock: there is no space to enlarge upon any subject he chooses, but the adversary stands over him ready to recite a schedule of the points to which he must confine himself. He is a slave disputing about a fellow slave before a master sitting in judgment with some definite plea in his hand, and the issue is never indiffer-  
ent, but his personal concerns are always at stake, sometimes  
173 even his life. Hence he acquires a tense and bitter shrewdness; he knows how to flatter his master and earn his good graces, but his mind is narrow and crooked. An apprenticeship in slavery has dwarfed and twisted his growth and robbed him of his free spirit, driving him into devious ways, threatening him with fears and dangers which the tenderness of youth could not face with truth and honesty; so, turning from the first to lies and the requital of wrong with wrong,  
b warped and stunted, he passes from youth to manhood with no soundness in him and turns out, in the end, a man of formidable intellect—as he imagines.

So much for the orator, Theodorus. Shall I now describe the philosophical choir to which we belong, or would you rather leave that and go back to our discussion? We must not abuse that freedom we claimed of ranging from one subject to another.

**THEODORUS:** No, Socrates, let us have your description first. As you said quite rightly, we are not the servants of the argument, c which must stand and wait for the moment when we choose to pursue this or that topic to a conclusion. We are not in a court under the judge's eye, nor in the theater with an audience to criticize our philosophical evolutions.

**SOCRATES:** Then, if that is your wish, let us speak of the leaders in philosophy, for the weaker members may be neglected. From their youth up they have never known the way to market place or law d court or Council Chamber or any other place of public assembly; they never hear a decree read out or look at the text of a law. To take any interest in the rivalries of political cliques, in meetings, dinners, and merrymakings with flute girls, never occurs to them even in dreams. Whether any fellow citizen is well- or ill-born or has inherited some defect from his ancestors on either side, the philosopher knows no more than how many pints of water there are in the sea. He is not even aware that he knows nothing of all this, for if he holds aloof, it is not for reputation's sake, but because it is really only his body that so e journeys in his city, while his thought, disdaining all such things as worthless, takes wings, as Pindar says, 'beyond the sky, beneath the earth,' searching the heavens and measuring the plains, everywhere seeking the true nature of everything as a whole, never sinking to what 174 lies close at hand.

**THEODORUS:** What do you mean, Socrates?

**SOCRATES:** The same thing as the story about the Thracian maidservant who exercised her wit at the expense of Thales, when he was looking up to study the stars and tumbled down a well. She scoffed at him for being so eager to know what was happening in the sky that he could not see what lay at his feet. Anyone who gives his life to philosophy is open to such mockery. It is true that he is un- b aware what his next-door neighbor is doing, hardly knows, indeed, whether the creature is a man at all; he spends all his pains on the question, what man is, and what powers and properties distinguish such a nature from any other. You see what I mean, Theodorus?

**THEODORUS:** Yes, and it is true.

**SOCRATES:** And so, my friend, as I said at first, on a public occasion or in private company, in a law court or anywhere else, when c he is forced to talk about what lies at his feet or is before his eyes, the whole rabble will join the maidservants in laughing at him, as from inexperience he walks blindly and stumbles into every pitfall. His terrible clumsiness makes him seem so stupid. He cannot engage in an exchange of abuse, for, never having made a study of anyone's peculiar weaknesses, he has no personal scandals to bring up; so in his helplessness he looks a fool. When people vaunt their own or other d men's merits, his unaffected laughter makes him conspicuous and they think he is frivolous. When a despot or king is eulogized, he fancies he is hearing some keeper of swine or sheep or cows being

- congratulated on the quantity of milk he has squeezed out of his flock; only he reflects that the animal that princes tend and milk is more given than sheep or cows to nurse a sullen grievance, and that a herdsman of this sort, penned up in his castle, is doomed by sheer press of work to be as rude and uncultivated as the shepherd in his mountain fold. He hears of the marvelous wealth of some landlord who owns ten thousand acres or more, but that seems a small matter to one accustomed to think of the earth as a whole. When they harp upon birth—some gentleman who can point to seven generations of wealthy ancestors—he thinks that such commendation must come from men of
- 175 purblind vision, too uneducated to keep their eyes fixed on the whole or to reflect that any man has had countless myriads of ancestors and among them any number of rich men and beggars, kings and slaves, Greeks and barbarians. To pride oneself on a catalogue of twenty-five progenitors going back to Heracles, son of Amphitryon, strikes him as showing a strange pettiness of outlook. He laughs at a man who cannot rid his mind of foolish vanity by reckoning that before Amphitryon there was a twenty-fifth ancestor, and before him a fiftieth, whose fortunes were as luck would have it. But in all these matters the world has the laugh of the philosopher, partly because he seems arrogant, partly because of his helpless ignorance in matters of daily life.

THEODORUS: Yes, Socrates, that is exactly what happens.

- SOCRATES: On the other hand, my friend, when the philosopher drags the other upward to a height at which he may consent to drop the question, 'What injustice have I done to you or you to me?' and to think about justice and injustice in themselves, what each is, and how they differ from one another and from anything else, or to stop quoting poetry about the happiness of kings or of men with gold in store and think about the meaning of kingship and the whole question of human happiness and misery, what their nature is, and how
- d humanity can gain the one and escape the other—in all this field, when that small, shrewd, legal mind has to render an account, then the situation is reversed. Now it is he who is dizzy from hanging at such an unaccustomed height and looking down from mid-air. Lost and dismayed and stammering, he will be laughed at, not by maid-servants or the uneducated—they will not see what is happening—but by everyone whose breeding has been the antithesis of a slave's.
- e Such are the two characters, Theodorus. The one is nursed in freedom and leisure, the philosopher, as you call him. He may be excused if he looks foolish or useless when faced with some menial task, if he cannot tie up bedclothes into a neat bundle or flavor a dish with spices and a speech with flattery. The other is smart in the
- 176 patch of all such services, but has not learned to wear his cloak like a gentleman, or caught the accent of discourse that will rightly celebrate the true life of happiness for gods and men.

THEODORUS: If you could convince everyone, Socrates, as you

convince me, there would be more peace and fewer evils in the world.

SOCRATES: Evils, Theodorus, can never be done away with, for the good must always have its contrary; nor have they any place in the divine world, but they must needs haunt this region of our mortal nature. That is why we should make all speed to take flight from this world to the other, and that means becoming like the divine so far as we can, and that again is to become righteous with the help of wisdom. But it is no such easy matter to convince men that the reasons for avoiding wickedness and seeking after goodness are not those which the world gives. The right motive is not that one should seem innocent and good—that is no better, to my thinking, than an old wives' tale—but let us state the truth in this way. In the divine there is no shadow of unrighteousness, only the perfection of righteousness, and nothing is more like the divine than any one of us who becomes as righteous as possible. It is here that a man shows his true spirit and power or lack of spirit and nothingness. For to know this is wisdom and excellence of the genuine sort; not to know it is to be manifestly blind and base. All other forms of seeming power and intelligence in the rulers of society are as mean and vulgar as the mechanic's skill in handicraft. If a man's words and deeds are unrighteous and profane, he had best not persuade himself that he is a great man because he sticks at nothing, glorying in his shame as such men do when they fancy that others say of them. They are no fools, no useless burdens to the earth, but men of the right sort to weather the storms of public life.

Let the truth be told. They are what they fancy they are not, all the more for deceiving themselves, for they are ignorant of the very thing it most concerns them to know—the penalty of injustice. This is not, as they imagine, stripes and death, which do not always fall on the wrongdoer, but a penalty that cannot be escaped.

THEODORUS: What penalty is that?

SOCRATES: There are two patterns, my friend, in the unchangeable nature of things, one of divine happiness, the other of godless misery—a truth to which their folly makes them utterly blind, unaware that in doing injustice they are growing less like one of these patterns and more like the other. The penalty they pay is the life they lead, answering to the pattern they resemble. But if we tell them that, unless they rid themselves of their superior cunning, that other region which is free from all evil will not receive them after death, but here on earth they will dwell for all time in some form of life resembling their own and in the society of things as evil as themselves, all this will sound like foolishness to such strong and unscrupulous minds.

THEODORUS: So it will, Socrates.

SOCRATES: I have good reason to know it, my friend. But there is one thing about them; when you get them alone and make them

explain their objections to philosophy, then, if they are men enough to face a long examination without running away, it is odd how they end by finding their own arguments unsatisfying. Somehow their flow of eloquence runs dry, and they become as speechless as an infant.

All this, however, is a digression. We must stop now, and dam the flood of topics that threatens to break in and drown our original argument. With your leave, let us go back to where we were before.

THEODORUS: For my part, I rather prefer listening to your digressions, Socrates; they are easier to follow at my time of life. However, let us go back, if you like.

SOCRATES: Very well. I think the point we had reached was this. We were saying that the believers in a perpetually changing reality and in the doctrine that what seems to an individual at any time also is for him would, in most matters, strongly insist upon their principle, and not least in the case of what is right they would maintain that any enactments a state may decide on certainly are right for that state so long as they remain in force. But when it comes to what is good, we said that the boldest would not go to the length of contending that whatever a state may believe and declare to be advantageous for itself is in fact advantageous for so long as it is declared to be so—unless he meant that the name 'advantageous' would continue to be so applied, but that would be turning our subject into a joke.

THEODORUS: Certainly.

SOCRATES: We will suppose, then, that he does not mean the name, but has in view the thing that bears it.

THEODORUS: We will.

SOCRATES: Whatever name the state may give it, advantage is surely the aim of its legislation, and all its laws, to the full extent of its belief and power, are laid down as being for its own best profit. Or has it any other object in view when it makes laws?

178 THEODORUS: None.

SOCRATES: Then does it also hit the mark every time? Or does every state often miss its aim completely?

THEODORUS: I should say that mistakes are often made.

SOCRATES: We may have a still better chance of getting everyone to assent to that, if we start from a question covering the whole class of things which includes the advantageous. It is, I suggest, a thing that has to do with future time. When we legislate, we make our laws with the idea that they *will be* advantageous in time to come. We may call this class 'what is going to be.'

b THEODORUS: Certainly.

SOCRATES: Here, then, is a question for Protagoras or anyone else who agrees with him. According to you and your friends, Protagoras, man is the measure of all things—of white and heavy and light and everything of that sort. He possesses in himself the test of

these things, and believing them to be such as he experiences them, he believes what is true and real for him. Is that right?

THEODORUS: Yes.

SOCRATES: Is it also true, Protagoras, we shall continue, that he possesses within himself the test of what is going to be in the future, and that whatever a man believes will be, actually comes to pass for him who believes it? Take heat, for example. When some layman believes that he is going to catch a fever and that this hotness is going to exist, and another, who is a physician, believes the contrary, are we to suppose that the future event will turn out in accordance with one of the two opinions, or in accordance with both opinions, so that to the physician the patient will not be hot or in a fever, while he will be both these things to himself?

THEODORUS: That would be absurd.

SOCRATES: And on the question whether a wine is going to be sweet or dry, I imagine the vinegrower's judgment is authoritative, not a flute player's.

THEODORUS: Of course.

SOCRATES: Or again, on the question whether a piece of music is going to be in tune or not, a gymnastic trainer would not have a better opinion than a musician as to what the trainer himself will later judge to be in good tune.

THEODORUS: By no means.

SOCRATES: And when a feast is being prepared, the guest who is to be invited, supposing him not to be an expert in cookery, will have a less authoritative opinion than the confectioner upon the pleasure that will result. We will not dispute yet about what already is or has been pleasant to any individual, but about what will in the future seem and be to anyone, is every man the best judge for himself, or would you, Protagoras—at least in the matter of the arguments that any one of us would find convincing for a court of law—have a better opinion beforehand than any untrained person?

THEODORUS: Certainly, Socrates, in that matter he did emphatically profess to be superior to everybody.

SOCRATES: Bless your soul, I should think he did. No one would have paid huge sums to talk with him, if he had not convinced the people who came to him that no one whatever, not even a prophet, could judge better than he what was going to be and appear in the future.

THEODORUS: Quite true.

SOCRATES: And legislation, too, and the question of advantageousness are matters concerned with the future, and everyone would agree that a state, when it makes its laws, must often fail to hit upon its own greatest advantage?

THEODORUS: Assuredly.

**SOCRATES:** Then we may quite reasonably put it to your master  
 b that he must admit that one man is wiser than another and that the  
 wiser man is the measure, whereas an ignorant person like myself is  
 not in any way bound to be a measure, as our defense of Protagoras  
 tried to make me, whether I liked it or not.

**THEODORUS:** I think that is the weakest point in the theory,  
 Socrates, though it is also assailable in that it makes other people's  
 opinions valid when, as it turns out, they hold Protagoras' assertions  
 to be quite untrue.

**SOCRATES:** There are many other ways, Theodorus, of assail-  
 ing such a position and proving that not every opinion of every person  
 is true. But with regard to what the individual experiences at the mo-  
 ment—the source of his sensations and the judgments in accordance  
 with them—it is harder to assail the truth of these. Perhaps it is  
 wrong to say 'harder'; maybe they are unassailable, and those who  
 assert that they are transparently clear and are instances of knowl-  
 edge may be in the right, and Theaetetus was not beside the mark  
 d when he said that perception and knowledge were the same thing.

We must, then, look more closely into the matter, as our defense  
 of Protagoras enjoined, and study this moving reality, ringing its  
 metal to hear if it sounds true or cracked. However that may be,  
 there has been no inconsiderable battle over it, and not a few com-  
 batants.

**THEODORUS:** Anything but inconsiderable; in Ionia, indeed, it  
 is actually growing in violence. The followers of Heraclitus lead the  
 choir of this persuasion with the greatest vigor.

**SOCRATES:** All the more reason, my dear Theodorus, to look  
 e into it carefully and to follow their lead by tracing it to its source.

**THEODORUS:** By all means. For there is no discussing these  
 principles of Heraclitus—or, as you say, of Homer or still more an-  
 cient sages—with the Ephesians themselves, who profess to be fa-  
 miliar with them; you might as well talk to a maniac. Faithful to their  
 own treatises they are literally in perpetual motion; their capacity  
 for staying still to attend to an argument or a question or for a quiet  
 180 interchange of question and answer amounts to less than nothing, or  
 rather even a minus quantity is too strong an expression for the ab-  
 sence of the least modicum of repose in these gentry. When you put a  
 question, they pluck from their quiver little oracular aphorisms to let  
 fly at you, and if you try to obtain some account of their meaning, you  
 will be instantly transfixed by another, barbed with some newly forged  
 metaphor. You will never get anywhere with any of them; for that  
 matter they cannot get anywhere with one another, but they take very  
 good care to leave nothing settled either in discourse or in their own  
 b minds. I suppose they think that would be something stationary—a  
 thing they will fight against to the last and do their utmost to banish  
 from the universe.

**SOCRATES:** Perhaps, Theodorus, you have seen these gentlemen in the fray and never met them in their peaceable moments; indeed they are no friends of yours. I dare say they keep such matters to be explained at leisure to their pupils whom they want to make like themselves.

**THEODORUS:** Pupils indeed! My good friend, there is no such thing as a master or pupil among them; they spring up like mushrooms. Each one gets his inspiration wherever he can, and not one of them thinks that another understands anything. So, as I was going to say, you can never bring them to book, either with or without their consent. We must take over the question ourselves and try to solve it like a problem.

**SOCRATES:** That is a reasonable proposal. As to this problem, then, have we not here a tradition from the ancients, who hid their meaning from the common herd in poetical figures, that Oceanus and Tethys, the source of all things, are flowing streams and nothing is at rest? And do not the moderns, in their superior wisdom, declare the same quite openly, in order that the very cobblers may hear and understand their wisdom and, abandoning their simple faith that some things stand still while others move, may reverence those who teach them that everything is in motion?

But I had almost forgotten, Theodorus, another school which teaches just the opposite—that reality 'is one, immovable, being is the name of the all,'<sup>3</sup> and much else that men like Melissus and Parmenides maintain in opposition to all those people, telling us that all things are a unity which stays still within itself, having no room to move in. How are we to deal with all these combatants? For, little by little, our advance has brought us, without our knowing it, between the two lines, and, unless we can somehow fend them off and slip through, we shall suffer for it, as in that game they play in the wrestling schools, where the players are caught by both sides and dragged both ways at once across the line. The best plan, I think, will be to begin by taking a look at the party whom we first approached, the men of flux, and if there seems to be anything in what they say, we will help them to pull us over to their side and try to elude the others. But if we find more truth in the partisans of the immovable whole, we will desert to them from these revolutionaries who leave no landmark unremoved. If both sides turn out to be quite unreasonable, we shall merely look foolish if we suppose that nobodies like ourselves can make any contribution after rejecting such paragons of ancient wisdom. Do you think it worth while to go further in the teeth of such danger, Theodorus?

**THEODORUS:** Certainly, Socrates. I could not bear to stop before we have found out what each of the two parties means.

**SOCRATES:** Well, if you feel so strongly about it, we must look

<sup>3</sup> Parmenides, line 98 (ed. Mullach).

into the matter. I think our study of change should begin with the  
 c question, What after all do they mean when they say all things are in  
 change? What I mean is this. Do they recognize one kind of change  
 or two? I think there are two, but I must not be alone in my opinion;  
 you must take your share in the risk, so that we may meet together  
 whatever fate shall befall us. Tell me, do you call it change when  
 something removes from place to place or revolves in the same place?

THEODORUS: Yes.

SOCRATES: Let that be one kind, then. Now suppose a thing  
 stays in the same place but grows old or turns black instead of white or  
 d hard instead of soft or alters in some other way, isn't it proper to call  
 that a different kind of change?

THEODORUS: Yes, it must be.

SOCRATES: So I should recognize these as two kinds of change  
 —alteration and local movement.

THEODORUS: And you are right.

SOCRATES: Having made that distinction, then, let us now be-  
 gin our talk with these people who say that everything is in change  
 and ask them, Do you say everything is in both sorts of change—both  
 e moving in place and altering—or that part changes in both ways, part  
 in only one of the two?

THEODORUS: I really cannot tell, but I think they would say 'in  
 both ways.'

SOCRATES: Yes, my friend; otherwise they will find things at  
 rest as well as things in change, and it will be no more correct to say  
 that everything is changing than to say that everything is at rest.

THEODORUS: Quite true.

SOCRATES: So, since they are to be in change and unchanging-  
 182 ness must be impossible anywhere, all things are always in every kind  
 of change.

THEODORUS: That follows.

SOCRATES: Now consider this point in their theory. The ac-  
 count they gave of the genesis of hotness or whiteness or whatever it  
 may be, we stated, didn't we, in this sort of way—that any one of these  
 things is something that moves in place, simultaneously with a per-  
 ception, between agent and patient, and that the patient becomes per-  
 ceptive, not a perception, while the agent comes to have a quality,  
 rather than to be a quality? Perhaps this word 'quality' strikes you as  
 queer and uncouth and you don't understand it as a general expres-  
 sion; so let me give particular instances. The agent does not become  
 hotness or whiteness, but hot or white, and so on with all the rest. No  
 doubt you remember how we put this earlier—that nothing has any  
 being as one thing just by itself, no more has the agent or patient, but,  
 as a consequence of their intercourse with one another, in giving birth  
 to the perceptions and the things perceived, the agents come to be of  
 182 such and such a quality, and the patients come to be perceptive.

THEODORUS: I remember, of course.

SOCRATES: Very well, then, we will not inquire into other parts c of their theory, whether they mean this or that, but keep to the point we have in view and ask them this. All things, by your account, are in a perpetual stream of change. Is that so?

THEODORUS: Yes.

SOCRATES: With both the kinds of change we distinguished—both moving in place and altering?

THEODORUS: Certainly, if they are to be completely in change.

SOCRATES: Well now, if they only moved in place without altering in quality, we should be able to say what qualities they have as they move in this stream, shouldn't we?

THEODORUS: Yes.

SOCRATES: Since, however, there is nothing constant here ei- d ther—the flowing thing does not flow white but changes, so that the very whiteness itself flows and shifts into another color, in order that the thing may escape the charge of constancy in that respect—can we ever give it the name of any color and be sure that we are naming it rightly?

THEODORUS: How can that be done, Socrates? Or how can anything else of the kind you mean be called by its right name, if, while we are speaking, it is all the time slipping away from us in this stream?

SOCRATES: And again, what are we to say of a perception of any sort—for instance, the perception of seeing or hearing? Are we to say that it ever abides in its own nature as seeing or hearing? e

THEODORUS: It certainly ought not, if all things are in change.

SOCRATES: Then it has no right to be called seeing, any more than not-seeing, nor is any other perception entitled to be called perception rather than not-perception, if everything is changing in every kind of way.

THEODORUS: No, it hasn't.

SOCRATES: And moreover perception is knowledge, according to Theaetetus and me.

THEODORUS: Yes, you did say so.

SOCRATES: In that case, our answer to the question, what knowledge is, did not mean knowledge any more than not-knowledge.

THEODORUS: So it appears.

SOCRATES: That would be a pretty result of the improvement 183 we made upon that first answer, when we were so eager to prove it right by showing that everything is in change. Now it seems that what has in fact come to light is that, if all things are in change, any answer that can be given to any question is equally right; you may say it is so and it is not so—or 'becomes,' if you prefer to avoid any term that would bring these people to a standstill.

THEODORUS: You are right.

**SOCRATES:** Except, Theodorus, that I used the words 'so' and 'not so,' whereas we have no right to use this word 'so'—what is 'so' b would cease to be in change—nor yet 'not so'; there is no change in that either. Some new dialect will have to be instituted for the exponents of this theory, since, as it is, they have no phrases to fit their fundamental proposition—unless indeed it were 'not even nohow.' That might be an expression indefinite enough to suit them.

**THEODORUS:** A most appropriate idiom.

**SOCRATES:** So, Theodorus, we are quit of your old friend, and not yet ready to concede to him that every man is the measure of all c things, if he is not a wise man. Also, we shall not admit that knowledge is perception, at least on the basis of the theory that all things are in change, unless Theaetetus has some objection.

**THEODORUS:** That is excellent, Socrates. For now these questions are disposed of, it was agreed that I should be quit of answering your questions, as soon as the discussion of Protagoras' theory should come to an end.

**THEAETETUS:** No, Theodorus, you must not be released until you and Socrates, as you proposed just now, have discussed those oth- d ers who assert that the whole of things is at rest.

**THEODORUS:** Would you teach your elders, Theaetetus, to dishonor their agreements? No, for what remains you must prepare yourself to carry on the argument with Socrates.

**THEAETETUS:** Yes, if he wishes, though I would much rather have been a listener while this subject is discussed.

**THEODORUS:** To invite Socrates to an argument is like inviting cavalry to fight on level ground. You will have something to listen to, if you question him.

**SOCRATES:** Well, but, Theodorus, I think I shall not comply e with Theaetetus' request.

**THEODORUS:** Not comply? What do you mean?

**SOCRATES:** A feeling of respect keeps me from treating in an unworthy spirit Melissus and the others who say the universe is one and at rest, but there is one being whom I respect above all. Parmenides himself is in my eyes, as Homer says, a 'reverend and awful' <sup>4</sup> figure. I met him when I was quite young and he quite elderly, and I 184 thought there was a sort of depth in him that was altogether noble. I am afraid we might not understand his words and still less follow the thought they express. Above all, the original purpose of our discussion—the nature of knowledge—might be thrust out of sight, if we attend to these importunate topics that keep breaking in upon us. In particular, this subject we are raising now is of vast extent. It cannot be fairly treated as a side issue, and an adequate handling would take so long that we should lose sight of our question about knowledge.

<sup>4</sup> *Iliad* 3.172; *Odyssey* 8.22; 14.234.

Either course would be wrong. My business is rather to try, by means of my midwife's art, to deliver Theaetetus of his conceptions about knowledge.

THEODORUS: Well, do so, if you think that best.

SOCRATES: Well then, Theaetetus, here is a point for you to consider. The answer you gave was that knowledge is perception, wasn't it?

THEAETETUS: Yes.

SOCRATES: Now suppose you were asked, When a man sees white or black things or hears high or low tones, what does he see or hear with? I suppose you would say with eyes and ears.

THEAETETUS: Yes, I should.

SOCRATES: To use words and phrases in an easygoing way without scrutinizing them too curiously is not, in general, a mark of ill breeding; on the contrary there is something lowbred in being too precise. But sometimes there is no help for it, and this is a case in which I must take exception to the form of your answer. Consider. Is it more correct to say that we see and hear *with* our eyes and ears or *through* them?

THEAETETUS: I should say we always perceive through them, rather than with them.

SOCRATES: Yes, it would surely be strange that there should be a number of senses ensconced inside us, like the warriors in the Trojan horse, and all these things should not converge and meet in some single nature—a mind, or whatever it is to be called—*with* which we perceive all the objects of perception *through* the senses as instruments.

THEAETETUS: Yes, I think that is a better description.

SOCRATES: My object in being so precise is to know whether there is some part of ourselves, the same in all cases, with which we apprehend black or white through the eyes, and objects of other kinds through the other senses. Can you, if the question is put to you, refer all such acts of apprehension to the body? Perhaps, however, it would be better you should speak for yourself in reply to questions, instead of my taking the words out of your mouth. Tell me, all these instruments through which you perceive what is warm or hard or light or sweet are parts of the body, aren't they, not of anything else?

THEAETETUS: Of nothing else.

SOCRATES: Now will you also agree that the objects you perceive through one faculty cannot be perceived through another—objects of hearing, for instance, through sight, or objects of sight through hearing?

THEAETETUS: Of course I will.

SOCRATES: Then, if you have some thought about both objects at once, you cannot be having a perception including both at once through either the one or the other organ.

THEAETETUS: No.

SOCRATES: Now take sound and color. Have you not, to begin with, this thought which includes both at once—that they both *exist*?

THEAETETUS: I have.

SOCRATES: And, further, that each of the two is *different* from the other and the *same* as itself?

b THEAETETUS: Naturally.

SOCRATES: And again, that both together are *two*, and each of them is *one*?

THEAETETUS: Yes.

SOCRATES: And also you can ask yourself whether they are *unlike* each other or *alike*?

THEAETETUS: No doubt.

SOCRATES: Then through what organ do you think all this about them both? What is common to them both cannot be apprehended either through hearing or through sight. Besides, here is further evidence for my point. Suppose it were possible to inquire whether sound and color were both brackish or not; no doubt you c could tell me what faculty you would use—obviously not sight or hearing, but some other.

THEAETETUS: Of course, the faculty that works through the tongue.

SOCRATES: Very good. But now, through what organ does that faculty work, which tells you what is common not only to these objects but to all things—what you mean by the words ‘exists’ and ‘does not exist’ and the other terms applied to them in the questions I put a moment ago? What sort of organs can you mention, corresponding to all these terms, through which the perceiving part of us perceives each one of them?

THEAETETUS: You mean existence and nonexistence, likeness and unlikeness, sameness and difference, and also unity and numbers d in general as applied to them, and clearly your question covers ‘even’ and ‘odd’ and all that kind of notions. You are asking through what part of the body our mind perceives these?

SOCRATES: You follow me most admirably, Theaetetus; that is exactly my question.

THEAETETUS: Really, Socrates, I could not say, except that I think there is no special organ at all for these things, as there is for the e others. It is clear to me that the mind in itself is its own instrument for contemplating the common terms that apply to everything.

SOCRATES: In fact, Theaetetus, you are handsome, not ugly as Theodorus said you were, for in a discussion handsome is that handsome does. And you have treated me more than handsomely in saving me the trouble of a very long argument, if it is clear to you that the ~~mind~~ contemplates some things through its own instrumentality, oth-

ers through the bodily faculties. That was indeed what I thought myself, but I wanted you to agree.

THEAETETUS: Well, it is clear to me.

SOCRATES: Under which head, then, do you place existence? 186  
For that is, above all, a thing that belongs to everything.

THEAETETUS: I should put it among the things that the mind apprehends by itself.

SOCRATES: And also likeness and unlikeness and sameness and difference?

THEAETETUS: Yes.

SOCRATES: And how about 'honorable' and 'dishonorable' and 'good' and 'bad'?

THEAETETUS: Those again seem to me, above all, to be things whose being is considered, one in comparison with another, by the mind, when it reflects within itself upon the past and the present with an eye to the future. b

SOCRATES: Wait a moment. The hardness of something hard and the softness of something soft will be perceived by the mind through touch, will they not?

THEAETETUS: Yes.

SOCRATES: But their existence and the fact that they both exist, and their contrariety to one another and again the existence of this contrariety are things which the mind itself undertakes to judge for us, when it reflects upon them and compares one with another.

THEAETETUS: Certainly.

SOCRATES: Is it not true, then, that whereas all the impressions which penetrate to the mind through the body are things which men and animals alike are naturally constituted to perceive from the moment of birth, reflections about them with respect to their existence and usefulness only come, if they come at all, with difficulty through a long and troublesome process of education? c

THEAETETUS: Assuredly.

SOCRATES: Is it possible, then, to reach truth when one cannot reach existence?

THEAETETUS: It is impossible.

SOCRATES: But if a man cannot reach the truth of a thing, can he possibly know that thing?

THEAETETUS: No, Socrates, how could he? d

SOCRATES: If that is so, knowledge does not reside in the impressions, but in our reflection upon them. It is there, seemingly, and not in the impressions, that it is possible to grasp existence and truth.

THEAETETUS: Evidently.

SOCRATES: Then are you going to give the same name to two things which differ so widely?

THEAETETUS: Surely that would not be right.

SOCRATES: Well then, what name do you give to the first one—to seeing, hearing, smelling, feeling cold and feeling warm?

e THEAETETUS: Perceiving. What other name is there for it?

SOCRATES: Taking it all together, then, you call this perception?

THEAETETUS: Necessarily.

SOCRATES: A thing which, we agree, has no part in apprehending truth, since it has none in apprehending existence.

THEAETETUS: No, it has none.

SOCRATES: Nor, consequently, in knowledge either.

THEAETETUS: No.

SOCRATES: Then, Theaetetus, perception and knowledge cannot possibly be the same thing.

THEAETETUS: Evidently not, Socrates. Indeed, it is now perfectly plain that knowledge is something different from perception.

187 SOCRATES: But when we began our talk it was certainly not our object to find out what knowledge is not, but what it is. Still, we have advanced so far as to see that we must not look for it in sense perception at all, but in what goes on when the mind is occupied with things by itself, whatever name you give to that.

THEAETETUS: Well, Socrates, the name for that, I imagine, is 'making judgments.'

b SOCRATES: You are right, my friend. Now begin all over again. Blot out all we have been saying, and see if you can get a clearer view from the position you have now reached. Tell us once more what knowledge is.

THEAETETUS: I cannot say it is judgment as a whole, because there is false judgment, but perhaps true judgment is knowledge. You may take that as my answer. If, as we go further, it turns out to be less convincing than it seems now, I will try to find another.

c SOCRATES: Good, Theaetetus. This promptness is much better than hanging back as you did at first. If we go on like this, either we shall find what we are after, or we shall be less inclined to imagine we know something of which we know nothing whatever, and that surely is a reward not to be despised. And now, what is this you say—that there are two sorts of judgment, one true, the other false, and you define knowledge as judgment that is true?

THEAETETUS: Yes, that is the view I have come to now.

SOCRATES: Then, had we better go back to a point that came up about judgment?

\* THEAETETUS: What point do you mean?

d SOCRATES: A question that worries me now, as often before, and has much perplexed me in my own mind and also in talking to others. I cannot explain the nature of this experience we have, or how it can arise in our minds.

THEAETETUS: What experience?

SOCRATES: Making a false judgment. At this moment I am still in doubt and wondering whether to let that question alone or to follow it further, not as we did a while ago, but in a new way.

THEAETETUS: Why not, Socrates, if it seems to be in the least necessary? Only just now, when you and Theodorus were speaking of leisure, you said very rightly that there is no pressing hurry in a discussion of this sort.

SOCRATES: A good reminder, for this may be the right moment <sup>e</sup> to go back upon our track. It is better to carry through a small task well than make a bad job of a big one.

THEAETETUS: Certainly it is.

SOCRATES: How shall we set about it, then? What is it that we do mean? Do we assert that there is in every case a false judgment, and that one of us thinks what is false, another what is true, such being the nature of things?

THEAETETUS: Certainly we do.

SOCRATES: And, in each and all cases, it is possible for us ei- 188  
ther to know a thing or not to know it? I leave out of account for the moment becoming acquainted with things and forgetting, considered as falling between the two. Our argument is not concerned with them just now.

THEAETETUS: Well then, Socrates, there is no third alternative left in any case, besides knowing and not-knowing.

SOCRATES: And it follows at once that when one is thinking he must be thinking either of something he knows or of something he does not know?

THEAETETUS: Necessarily.

SOCRATES: And further, if you know a thing, you cannot also <sup>b</sup>  
not know it, and if you do not know it, you cannot also know it?

THEAETETUS: Of course.

SOCRATES: Then is the man who thinks what is false supposing that things he knows are not those things but other things he knows, so that, while he knows both, he fails to recognize either?

THEAETETUS: No, that is impossible, Socrates.

SOCRATES: Well then, is he supposing that things he does *not*  
know are other things he does not know? Is this possible—that a man who knows neither Theaetetus nor Socrates should take it into his head that Socrates is Theaetetus or Theaetetus Socrates?

THEAETETUS: No. How could he? <sup>c</sup>

SOCRATES: But surely a man does not imagine that things he does know are things he does not know, or that things he does not know are things he knows?

THEAETETUS: No, that would be a miracle.

SOCRATES: What other way is there, then, of judging falsely?

There is, presumably, no possibility of judging outside these alternatives, granted that everything is either known by us or not known, and inside them there seems to be no room for a false judgment.

THEAETETUS : Quite true.

SOCRATES : Perhaps, then, we had better approach what we are looking for by way of another alternative. Instead of 'knowing or  
d not-knowing,' let us take 'being or not-being.'

THEAETETUS : How do you mean?

SOCRATES : May it not simply be that one who thinks *what is not* about anything cannot but be thinking what is false, whatever his state of mind may be in other respects?

THEAETETUS : There is some likelihood in that, Socrates.

SOCRATES : Then what shall we say, Theaetetus, if we are asked, 'But is what you describe possible for anyone? Can any man think what is not, either about something that is or absolutely?' I suppose we must answer to that, 'Yes, when he believes something and  
e what he believes is not true.' Or what are we to say?

THEAETETUS : We must say that.

SOCRATES : Then is the same sort of thing possible in any other case?

THEAETETUS : What sort of thing?

SOCRATES : That a man should see something, and yet what he sees should be nothing.

THEAETETUS : No. How could that be?

SOCRATES : Yet surely if what he sees is something, it must be a thing that is. Or do you suppose that 'something' can be reckoned among things that have no being at all?

THEAETETUS : No, I don't.

SOCRATES : Then, if he sees something, he sees a thing that is.

THEAETETUS : Evidently.

189 SOCRATES : And if he hears a thing, he hears something and hears a thing that is.

THEAETETUS : Yes.

SOCRATES : And if he touches a thing, he touches something, and if something, then a thing that is.

THEAETETUS : That also is true.

SOCRATES : And if he thinks, he thinks something, doesn't he?

THEAETETUS : Necessarily.

SOCRATES : And when he thinks something, he thinks a thing that is?

THEAETETUS : I agree.

SOCRATES : So to think what is not is to think nothing.

THEAETETUS : Clearly.

SOCRATES : But surely to think nothing is the same as not to think at all.

THEAETETUS : That seems plain.

SOCRATES: If so, it is impossible to think what is not, either b about anything that is, or absolutely.

THEAETETUS: Evidently.

SOCRATES: Then thinking falsely must be something different from thinking what is not.

THEAETETUS: So it seems.

SOCRATES: False judgment, then, is no more possible for us on these lines than on those we were following just now.

THEAETETUS: No, it certainly is not.

SOCRATES: Well, does the thing we call false judgment arise in this way?

THEAETETUS: How?

SOCRATES: We do recognize the existence of false judgment as a sort of misjudgment that occurs when a person interchanges in his c mind two things, both of which are, and asserts that the one is the other. In this way he is always thinking of something which is, but of one thing in place of another, and since he misses the mark he may fairly be said to be judging falsely.

THEAETETUS: I believe you have got it quite right now. When a person thinks 'ugly' in place of 'beautiful' or 'beautiful' in place of 'ugly,' he is really and truly thinking what is false.

SOCRATES: I can see that you are no longer in awe of me, Theaetetus, but beginning to despise me.

THEAETETUS: Why, precisely?

SOCRATES: I believe you think I shall miss the opening you give me by speaking of '*truly* thinking what is *false*,' and not ask you d whether a thing can be slowly quick or heavily light or whether any contrary can desert its own nature and behave like its opposite. However, I will justify your boldness by letting that pass. So you like this notion that false judgment is mistaking.

THEAETETUS: I do.

SOCRATES: According to you, then, it is possible for the mind to take one thing for another, and not for itself.

THEAETETUS: Yes, it is.

SOCRATES: And when the mind does that, must it not be think- e ing either of both things or of one of the two?

THEAETETUS: Certainly it must, either at the same time or one after the other.

SOCRATES: Excellent. And do you accept my description of the process of thinking?

THEAETETUS: How do you describe it?

SOCRATES: As a discourse that the mind carries on with itself about any subject it is considering. You must take this explanation as coming from an ignoramus, but I have a notion that, when the mind is thinking, it is simply talking to itself, asking questions and answer- 190 ing them, and saying yes or no. When it reaches a decision—which

may come slowly or in a sudden rush—when doubt is over and the two voices affirm the same thing, then we call that its 'judgment.' So I should describe thinking as discourse, and judgment as a statement pronounced, not aloud to someone else, but silently to oneself.

THEAETETUS: I agree.

SOCRATES: It seems, then, that when a person thinks of one thing as another, he is affirming to himself that the one is the other.

b THEAETETUS: Of course.

SOCRATES: Now search your memory and see if you have ever said to yourself, 'Certainly, what is beautiful is ugly,' or 'What is unjust is just.' To put it generally, consider if you have ever set about convincing yourself that any one thing is certainly another thing, or whether, on the contrary, you have never, even in a dream, gone so far as to say to yourself that odd numbers must be even, or anything of that sort.

THEAETETUS: That is true.

c SOCRATES: Do you suppose anyone else, mad or sane, ever goes so far as to talk himself over, in his own mind, into stating seriously that an ox must be a horse or that two must be one?

THEAETETUS: Certainly not.

SOCRATES: So, if making a statement to oneself is the same as judging, then, so long as a man is making a statement or judgment about both things at once and his mind has hold of both, he cannot say or judge that one of them is the other. You, in your turn, must not cavil at my language; I mean it in the sense that no one thinks 'the  
d ugly is beautiful' or anything of that kind.

THEAETETUS: I will not cavil, Socrates. I agree with you.

SOCRATES: So long, then, as a person is thinking of both, he cannot think of the one as the other.

THEAETETUS: So it appears.

SOCRATES: On the other hand, if he is thinking of one only and not of the other at all, he will never think that the one is the other.

THEAETETUS: True, for then he would have to have before his mind the thing he was not thinking of.

e SOCRATES: It follows, then, that 'mistaking' is impossible, whether he thinks of both things or of one only. So there will be no sense in defining false judgment as 'misjudgment.' It does not appear that false judgment exists in us in this form any more than in those we dismissed earlier.

THEAETETUS: So it seems.

SOCRATES: And yet, Theaetetus, if we cannot show that false judgment does exist, we shall be driven into admitting all sorts of absurdities.

THEAETETUS: For instance?

191 SOCRATES: I will not mention them until I have tried to look at the question from every quarter. So long as we cannot see our way, I should feel some shame at our being forced into such admissions.

But if we find the way out, then, as soon as we are clear, it will be time to speak of others as caught in the ludicrous position we shall have ourselves escaped; though, if we are completely baffled, then, I suppose, we must be humble and let the argument do with us what it will, like a sailor trampling over seasick passengers. So let me tell you where I still see an avenue open for us to follow.

THEAETETUS: Do tell me.

SOCRATES: I shall say we were wrong to agree that a man cannot think that things he knows are things he does not know and so be deceived. In a way it is possible. b

THEAETETUS: Do you mean something that crossed my mind at the moment when we said that was impossible? It occurred to me that sometimes I, who am acquainted with Socrates, imagine that a stranger whom I see at a distance is the Socrates whom I know. In a case like that a mistake of the kind you describe does occur.

SOCRATES: And we were shy of saying that, because it would have made us out as both knowing and not knowing what we know?

THEAETETUS: Exactly.

SOCRATES: We must, in fact, put the case in a different way. Perhaps the barrier will yield somewhere, though it may defy our efforts. Anyhow, we are in such straits that we must turn every argument over and put it to the test. Now, is there anything in this? Is it possible to become acquainted with something one did not know before? c

THEAETETUS: Surely.

SOCRATES: And the process can be repeated with one thing after another?

THEAETETUS: Of course.

SOCRATES: Imagine, then, for the sake of argument, that our minds contain a block of wax, which in this or that individual may be larger or smaller, and composed of wax that is comparatively pure or muddy, and harder in some, softer in others, and sometimes of just the right consistency. d

THEAETETUS: Very well.

SOCRATES: Let us call it the gift of the Muses' mother, Memory, and say that whenever we wish to remember something we see or hear or conceive in our own minds, we hold this wax under the perceptions or ideas and imprint them on it as we might stamp the impression of a seal ring. Whatever is so imprinted we remember and know so long as the image remains; whatever is rubbed out or has not succeeded in leaving an impression we have forgotten and do not know.

THEAETETUS: So be it.

SOCRATES: Now take a man who knows things in this way, and is attending to something that he sees or hears. Is there not here a possibility of his making a false judgment?

THEAETETUS: How?

SOCRATES: By thinking that things he knows are other things he knows, or sometimes things he does not know. We were wrong when we agreed earlier that this was impossible.

THEAETETUS: What do you think about it now?

192 SOCRATES: Mistake is impossible in the following cases.

- \* (1) No one can think one thing to be another when he does not perceive either of them, but has the memorial or seal of both of them in his mind; nor can any mistaking of one thing for another occur, when he only knows one, and does not know, and has no impression of the other; nor can he think that one thing which he does not know is another thing which he does not know, or that what he does not know is what he knows; nor (2) that one thing which he perceives is another thing which he perceives, or that something which he perceives is something which he does not perceive; or that something which he does not perceive is something else which he does not perceive; or that something which he does not perceive is something which he perceives; nor again (3) can he think that something which he knows and perceives, and of which he has the impression coinciding with sense, is something else which he knows and perceives, and of which he has the impression coinciding with sense; — this last case, if possible, is still more inconceivable than the others; nor (4) can he think that something which he knows and perceives, and of which he has the memorial coinciding with sense, is something else which he knows; nor so long as these agree, can he think that a thing which he knows and perceives is another thing which he perceives; or that a thing which he does not know and does not perceive, is the same as another thing which he does not know and does not perceive; — nor again, can he suppose that a thing which he does not know and does not perceive is the same as another thing which he does not know; or that a thing which he does not know and does not perceive is another thing which he does not perceive: — All these utterly and absolutely exclude the possibility of false opinion.\*

\* The passage beginning and ending with an asterisk is interpolated from the Jowett translation. In Cornford's translation, the following summary is given at this point:

"(a) If neither object is now perceived, I cannot mistake an acquaintance for another acquaintance, or confuse him with a stranger, or confuse two strangers.

"(b) If perception only is involved, I cannot confuse two things which I see, or an object seen with an object not seen, or two objects neither of which is seen.

"(c) Where both knowledge and perception are involved, I cannot confuse two acquaintances both now seen and recognized, or confuse an acquaintance now seen and recognized with an absent acquaintance or with a stranger who is present. And there can be no confusion of two total strangers, whether I now see one of them or not."

There remain, then, the following cases in which, if anywhere, false judgment can occur.

THEAETETUS: What are they? Perhaps they may help me to understand better. At present I cannot follow.

SOCRATES: Take things you know. You can suppose them to be other things which you both know and perceive, or to be things you do not know, but do perceive, or you can confuse two things which you both know and perceive.

THEAETETUS: Now I am more in the dark than ever.

SOCRATES: Let me start again, then, and put it in this way. I know Theodorus and have a memory in my mind of what he is like, and the same with Theaetetus. At certain moments I see or touch or hear or otherwise perceive them; at other times, though I have no perception of you and Theodorus, I nevertheless remember you both and have you before my mind. Isn't that so?

THEAETETUS: Certainly.

SOCRATES: That, then, is the first point I want to make clear—that it is possible either to perceive or not to perceive something one is acquainted with.

THEAETETUS: True.

SOCRATES: And it is also possible, when one is not acquainted with a thing, sometimes not to perceive it either, sometimes merely to perceive it and nothing more.

THEAETETUS: That is possible too.

SOCRATES: Then see if you can follow me better now. If Socrates knows Theodorus and Theaetetus, but sees neither and has no sort of present perception of them, he can never think in his own mind that Theaetetus is Theodorus. Is that good sense?

THEAETETUS: Yes, that is true.

SOCRATES: Well, that was the first of the cases I mentioned.

THEAETETUS: Yes.

SOCRATES: And the second was this. If I know one of you but not the other and perceive neither, once more I could never think that the one I know is the other whom I do not know.

THEAETETUS: True.

SOCRATES: And thirdly, if I neither know nor perceive either of you, I cannot think that one unknown person is another unknown person. And now take it as if I had gone over the whole list of cases again, in which I shall never judge falsely about you and Theodorus, whether I know both or neither or only one of you. And the same applies to perceiving, if you follow me.

THEAETETUS: I follow now.

SOCRATES: It remains, then, that false judgment should occur in a case like this—when I, who know you and Theodorus and possess imprints of you both like seal impressions in the waxen block, see you both at a distance indistinctly and am in a hurry to assign the proper

imprint of each to the proper visual perception, like fitting a foot into its own footmark to effect a recognition, and then make the mistake of interchanging them, like a man who thrusts his feet into the wrong shoes, and apply the perception of each to the imprint of the other. Or my mistake might be illustrated by the sort of thing that happens  
 d in a mirror when the visual current transposes right to left. In that case mistaking or false judgment does result.

THEAETETUS: I think it does, Socrates. That is an admirable description of what happens to judgment.

SOCRATES: Then there is also the case where I know both and perceive only one, and do not get the knowledge I have of that one to correspond with my perception. That is the expression I used before, which you did not understand.

THEAETETUS: No, I did not.

SOCRATES: Well, that is what I was saying. If you know one of  
 e two people and also perceive him and if you get the knowledge you have to correspond with the perception of him, you will never think he is another person whom you both know and perceive, if your knowledge of him likewise is got to correspond with the perception. That was so, wasn't it?

THEAETETUS: Yes.

SOCRATES: But there was leftover the case I have been describing now, in which we say false judgment does occur—the possibility  
 194 that you may know both and see or otherwise perceive both, but not get the two imprints to correspond each with its proper perception. Like a bad archer, you may shoot to one side and miss the mark—which is indeed another phrase we use for error.

THEAETETUS: With good reason.

SOCRATES: Also, when a perception is present which belongs to one of the imprints, but none which belongs to the other, and the mind fits to the present perception the imprint belonging to the absent one, in all such cases it is in error. To sum up, in the case of objects one does not know and has never perceived, there is, it seems, no  
 b possibility of error or false judgment, if our present account is sound, but it is precisely in the field of objects both known and perceived that judgment turns and twists about and proves false or true—true when it brings impressions straight to their proper imprints, false when it misdirects them crosswise to the wrong imprint.

THEAETETUS: Surely that is a satisfactory account, isn't it, Socrates?

c SOCRATES: You will think still better of it when you hear the rest. To judge truly is a fine thing and there is something discreditable in error.

THEAETETUS: Of course.

SOCRATES: Well, they say the differences arise in this way. When a man has in his mind a good thick slab of wax, smooth and

kneaded to the right consistency, and the impressions that come through the senses are stamped on these tables of the 'heart' <sup>5</sup>—Homer's word hints at the mind's likeness to wax—then the imprints are clear and deep enough to last a long time. Such people are quick <sup>a</sup> to learn and also have good memories, and besides they do not interchange the imprints of their perceptions but think truly. These imprints being distinct and well spaced are quickly assigned to their several stamps—the 'real things' as they are called—and such men are said to be clever. Do you agree?

THEAETETUS: Most emphatically.

SOCRATES: When a person has what the poet's wisdom com- <sup>e</sup> mends as a 'shaggy heart,' or when the block is muddy or made of impure wax, or oversoft or hard, the people with soft wax are quick to learn, but forgetful, those with hard wax the reverse. Where it is shaggy or rough, a gritty kind of stuff containing a lot of earth or dirt, the impressions obtained are indistinct; so are they too when the <sup>195</sup> stuff is hard, for they have no depth. Impressions in soft wax also are indistinct, because they melt together and soon become blurred. And if, besides this, they overlap through being crowded together into some wretched little narrow mind, they are still more indistinct. All these types, then, are likely to judge falsely. When they see or hear or think of something, they cannot quickly assign things to their several imprints. Because they are so slow and sort things into the wrong places, they constantly see and hear and think amiss, and we say they are mistaken about things and stupid.

THEAETETUS: Your description could not be better, Socrates. <sup>b</sup>

SOCRATES: We are to conclude, then, that false judgments do exist in us?

THEAETETUS: Most certainly.

SOCRATES: And true ones also, I suppose?

THEAETETUS: True ones also.

SOCRATES: At last, then, we believe we have reached a satisfactory agreement that both these kinds of judgments certainly exist?

THEAETETUS: Most emphatically.

SOCRATES: It really does seem to be true, Theaetetus, that a garrulous person is a strange and disagreeable creature.

THEAETETUS: Why, what makes you say that?

SOCRATES: Disgust at my own stupidity. I am indeed garrulous <sup>c</sup> —what else can you call a man who goes on bandying arguments to and fro because he is such a dolt that he cannot make up his mind and is loath to surrender any one of them?

THEAETETUS: But why are you disgusted with yourself?

SOCRATES: I am not merely disgusted but anxious about the answer I shall make if someone asks, So, Socrates, you have made a

discovery—that false judgment resides, not in our perceptions among themselves nor yet in our thoughts, but in the fitting together of perception and thought? I suppose I shall say yes, and plume myself on this brilliant discovery of ours.

THEAETETUS: I don't see anything to be ashamed of in what you have just pointed out, Socrates.

SOCRATES: On the other hand, he will continue, you also say that we can never imagine that a man whom we merely think of and do not see is a horse which again we do not see or touch but merely think of without perceiving it in any way? I suppose I shall say yes to that.

THEAETETUS: And rightly.

SOCRATES: On that showing, he will say, a man could never imagine that eleven, which he merely thinks of, is twelve, which again he merely thinks of.

Come, you must find the answer now.

THEAETETUS: Well, I shall answer that, if he saw or handled eleven things, he might suppose they were twelve, but he will never make that judgment about the eleven and the twelve he has in his thoughts.

SOCRATES: Well now, does a man ever consider in his own mind five and seven—I don't mean five men and seven men or anything of that sort, but just five and seven themselves, which we describe as records in that waxen block of ours, among which there can be no false judgment—does anyone ever take these into consideration and ask himself in his inward conversation how much they amount to, and does one man believe and state that they make eleven, another that they make twelve, or does everybody agree they make twelve?

THEAETETUS: Far from it. Many people say eleven, and if larger numbers are involved, the more room there is for mistakes, for you are speaking generally of any numbers, I suppose.

SOCRATES: Yes, that is right. Now consider what happens in this case. Is it not thinking that the twelve itself that is stamped on the waxen block is eleven?

THEAETETUS: It seems so.

SOCRATES: Then haven't we come round again to our first argument? For when this happens to someone, he is thinking that one thing he knows is another thing he knows, and that, we said, was impossible. That was the very ground on which we were led to make out that there could be no such thing as false judgment; it was in order to avoid the conclusion that the same man must at the same time know and not know the same thing.

THEAETETUS: Quite true.

SOCRATES: If so, we must account for false judgment in some other way than as the misfitting of thought to perception. If it were

that, we should never make mistakes among our thoughts themselves. As the case stands now, either there is no such thing as false judgment, or it is possible not to know what one does know. Which alternative do you choose?

THEAETETUS : I see no possible choice, Socrates.

SOCRATES : But the argument is not going to allow both alternatives. However, we must stick at nothing; suppose we try being quite shameless.

THEAETETUS : In what way?

SOCRATES : By making up our minds to describe what knowing is like.

THEAETETUS : How is that shameless?

SOCRATES : You seem to be unaware that our whole conversation from the outset has been an inquiry after the nature of knowledge on the supposition that we did not know what it was.

THEAETETUS : No, I am quite aware of that.

SOCRATES : Then, doesn't it strike you as shameless to explain what knowing is like, when we don't know what knowledge is? The truth is, Theaetetus, that for some time past there has been a vicious taint in our discussion. Times out of number we have said, 'we know,' 'we do not know,' 'we have knowledge,' 'we have no knowledge,' as if we could understand each other while we still know nothing about knowledge. At this very moment, if you please, we have once more used the words 'know nothing' and 'understand,' as if we had a right to use them while we are still destitute of knowledge.

THEAETETUS : Well, but how are you going to carry on a discussion, Socrates, if you keep clear of those words?

SOCRATES : I cannot, being the man I am, though I might if I were an expert in debate. If such a person were here now, he would profess to keep clear of them and rebuke us severely for my use of language. As we are such bunglers, then, shall I be so bold as to describe what knowing is like? I think it might help us.

THEAETETUS : Do so, then, by all means. And if you cannot avoid those words, you shall not be blamed.

SOCRATES : Well, you have heard what 'knowing' is commonly said to be?

THEAETETUS : Possibly, but I don't remember at the moment.

SOCRATES : They say it is 'having knowledge.'

THEAETETUS : True.

SOCRATES : Let us make a slight amendment and say, 'possessing knowledge.'

THEAETETUS : What difference would you say that makes?

SOCRATES : None, perhaps, but let me tell you my idea and you shall help me test it.

THEAETETUS : I will if I can.

SOCRATES : 'Having' seems to me different from 'possessing.' If

a man has bought a coat and owns it, but is not wearing it, we should say he possesses it without having it about him.

THEAETETUS: True.

SOCRATES: Now consider whether knowledge is a thing you can possess in that way without having it about you, like a man who has caught some wild birds—pigeons or what not—and keeps them in an aviary he has made for them at home. In a sense, of course,  
d we might say he 'has' them all the time inasmuch as he possesses them, mightn't we?

THEAETETUS: Yes.

SOCRATES: But in another sense he 'has' none of them, though he has got control of them, now that he has made them captive in an enclosure of his own; he can take and have hold of them whenever he likes by catching any bird he chooses, and let them go again, and it is open to him to do that as often as he pleases.

e THEAETETUS: That is so.

SOCRATES: Once more then, just as a while ago we imagined a sort of waxen block in our minds, so now let us suppose that every mind contains a kind of aviary stocked with birds of every sort, some in flocks apart from the rest, some in small groups, and some solitary, flying in any direction among them all.

THEAETETUS: Be it so. What follows?

SOCRATES: When we are babies we must suppose this receptacle empty, and take the birds to stand for pieces of knowledge. Whenever a person acquires any piece of knowledge and shuts it up in his enclosure, we must say he has learned or discovered the thing of which this is the knowledge, and that is what 'knowing' means.

THEAETETUS: Be it so.

198 SOCRATES: Now think of him hunting once more for any piece of knowledge that he wants, catching and holding it, and letting it go again. In what terms are we to describe that—the same that we used of the original process of acquisition, or different ones? An illustration may help you to see what I mean. There is a science you call 'arithmetic.'

THEAETETUS: Yes.

SOCRATES: Conceive that, then, as a chase after pieces of knowledge about all the numbers, odd or even.

THEAETETUS: I will.

SOCRATES: That, I take it, is the science in virtue of which a  
b man has in his control pieces of knowledge about numbers and can hand them over to someone else.

THEAETETUS: Yes.

SOCRATES: And when he hands them over, we call it 'teaching,' and when the other takes them from him, that is 'learning,' and when he has them in the sense of possessing them in that aviary of his, that is 'knowing.'

THEAETETUS: Certainly.

SOCRATES: Now observe what follows. The finished arithmetician knows all numbers, doesn't he? There is no number the knowledge of which is not in his mind.

THEAETETUS: Naturally.

SOCRATES: And such a person may sometimes count either the numbers themselves in his own head or some set of external things that have a number.

THEAETETUS: Of course.

SOCRATES: And by counting we shall mean simply trying to find out what some particular number amounts to?

THEAETETUS: Yes.

SOCRATES: It appears, then, that the man who, as we admitted, knows every number, is trying to find out what he knows as if he had no knowledge of it. No doubt you sometimes hear puzzles of that sort debated.

THEAETETUS: Indeed I do.

SOCRATES: Well, our illustration from hunting pigeons and getting possession of them will enable us to explain that the hunting occurs in two ways—first, before you possess your pigeon in order to have possession of it; secondly, after getting possession of it, in order to catch and hold in your hand what you have already possessed for some time. In the same way, if you have long possessed pieces of knowledge about things you have learned and know, it is still possible to get to know the same things again, by the process of recovering the knowledge of some particular thing and getting hold of it. It is knowledge you have possessed for some time, but you had not got it handy in your mind.

THEAETETUS: True.

SOCRATES: That, then, was the drift of my question—what terms should be used to describe the arithmetician who sets about counting or the literate person who sets about reading—because it seemed as if, in such a case, the man was setting about learning again from himself what he already knew.

THEAETETUS: That sounds odd, Socrates.

SOCRATES: Well, but can we say he is going to read or count something he does *not* know, when we have already granted that he knows all the letters or all the numbers?

THEAETETUS: No, that is absurd too.

SOCRATES: Shall we say, then, that we care nothing about words, if it amuses anyone to turn and twist the expressions 'knowing' and 'learning'? Having drawn a distinction between possessing knowledge and having it about one, we agree that it is impossible not to possess what one does possess, and so we avoid the result that a man should not know what he does know, but we say that it is possible for him to get hold of a false judgment about it. For he may not have

- b about him the knowledge of that thing, but a different piece of knowledge instead, if it so happens that, in hunting for some particular piece of knowledge, among those that are fluttering about, he misses it and catches hold of a different one. In that case, you see, he mistakes eleven for twelve, because he has caught hold of the knowledge of eleven that is inside him, instead of his knowledge of twelve, as he might catch a dove in place of a pigeon.

THEAETETUS: That seems reasonable.

- SOCRATES: Whereas, when he catches the piece of knowledge he is trying to catch, he is not mistaken but thinks what is true. In  
c this way both true and false judgments can exist, and the obstacles that were troubling us are removed. You will agree to this, perhaps? Or will you not?

THEAETETUS: I will.

SOCRATES: Yes, for now we are rid of the contradiction about people not knowing what they do know. That no longer implies our not possessing what we do possess, whether we are mistaken about something or not. But it strikes me that a still stranger consequence is coming in sight.

THEAETETUS: What is that?

SOCRATES: That the interchange of pieces of knowledge should ever result in a judgment that is false.

THEAETETUS: How do you mean?

- d SOCRATES: In the first place, that a man should have knowledge of something and at the same time fail to recognize that very thing, not for want of knowing it but by reason of his own knowledge, and next that he should judge that thing to be something else and vice versa—isn't that very unreasonable, that when a piece of knowledge presents itself, the mind should fail to recognize anything and know nothing? On this showing, the presence of ignorance might just as well make us know something, or the presence of blindness make us see—if knowledge can ever make us fail to know.

- e THEAETETUS: Perhaps, Socrates, we were wrong in making the birds stand for pieces of knowledge only, and we ought to have imagined pieces of ignorance flying about with them in the mind. Then, in chasing them, our man would lay hold sometimes of a piece of knowledge, sometimes of a piece of ignorance, and the ignorance would make him judge falsely, the knowledge truly, about the same thing.

SOCRATES: It is not easy to disapprove of anything you say,  
200 Theaetetus, but think again about your suggestion. Suppose it is as you say; then the man who lays hold of the piece of ignorance will judge falsely. Is that right?

THEAETETUS: Yes.

SOCRATES: But of course he will not think he is judging falsely.

THEAETETUS: Of course not.

SOCRATES: No, he will think he is judging truly, and his attitude of mind will be the same as if he knew the thing he is mistaken about.

THEAETETUS: Naturally.

SOCRATES: So he will imagine that, as a result of his chase, he has got hold of a piece of knowledge, not a piece of ignorance.

THEAETETUS: Clearly.

SOCRATES: Then we have gone a long way round only to find ourselves confronted once more with our original difficulty. Our destructive critic will laugh at us. You wonderful people, he will say, are we to understand that a man knows both a piece of knowledge and a piece of ignorance, and then supposes that one of these things he knows is the other which he also knows? Or does he know neither, and then judge that one of these unknown things is the other? Or does he know only one, and identify this known thing with the unknown one, or the unknown one with the known? Or are you going to tell me that there are yet further pieces of knowledge *about* your pieces of knowledge and ignorance, and that their owner keeps these shut up in yet another of your ridiculous aviaries or waxen blocks, knowing them so long as he possesses them, although he may not have them at hand in his mind? On that showing you will find yourselves perpetually driven round in a circle and never getting any further.

What are we to reply to that, Theaetetus?

THEAETETUS: Really, Socrates, I don't know what we are to say.

SOCRATES: Maybe, my young friend, we have deserved this rebuke, and the argument shows that we were wrong to leave knowledge on one side and look first for an explanation of false judgment. That cannot be understood until we have a satisfactory account of the nature of knowledge.

THEAETETUS: As things now stand, Socrates, one cannot avoid that conclusion.

SOCRATES: To start all over again, then, what is one to say that knowledge is? For surely we are not going to give up yet.

THEAETETUS: Not unless you do so.

SOCRATES: Then tell me, what definition can we give with the least risk of contradicting ourselves?

THEAETETUS: The one we tried before, Socrates. I have nothing else to suggest.

SOCRATES: What was that?

THEAETETUS: That true belief is knowledge. Surely there can at least be no mistake in believing what is true and the consequences are always satisfactory.

SOCRATES: Try, and you will see, Theaetetus, as the man said when he was asked if the river was too deep to ford. So here, if we go forward on our search, we may stumble upon something that will

reveal the thing we are looking for. We shall make nothing out, if we stay where we are.

THEAETETUS: True. Let us go forward and see.

SOCRATES: Well, we need not go far to see this much. You will find a whole profession to prove that true belief is not knowledge.

THEAETETUS: How so? What profession?

SOCRATES: The profession of those paragons of intellect known as orators and lawyers. There you have men who use their skill to produce conviction, not by instruction, but by making people believe whatever they want them to believe. You can hardly imagine teachers so clever as to be able, in the short time allowed by the clock, to instruct their hearers thoroughly in the true facts of a case of robbery or other violence which those hearers had not witnessed.

THEAETETUS: No, I cannot imagine that, but they can convince them.

SOCRATES: And by convincing you mean making them believe something.

THEAETETUS: Of course.

SOCRATES: And when a jury is rightly convinced of facts which can be known only by an eyewitness, then, judging by hearsay and accepting a true belief, they are judging without knowledge, although, if they find the right verdict, their conviction is correct?

THEAETETUS: Certainly.

SOCRATES: But if true belief and knowledge were the same thing, the best of jurymen could never have a correct belief without knowledge. It now appears that they must be different things.

THEAETETUS: Yes, Socrates, I have heard someone make the distinction. I had forgotten, but now it comes back to me. He said that true belief with the addition of an account (*λόγος*) was knowledge, while belief without an account was outside its range. Where no account could be given of a thing, it was not 'knowable'—that was the word he used—where it could, it was knowable.

SOCRATES: A good suggestion. But tell me how he distinguished these knowable things from the unknowable. It may turn out that what you were told tallies with something I have heard said.

THEAETETUS: I am not sure if I can recall that, but I think I should recognize it if I heard it stated.

SOCRATES: If you have had a dream, let me tell you mine in return. I seem to have heard some people say that what might be called the first elements of which we and all other things consist are such that no account can be given of them. Each of them just by itself can only be named; we cannot attribute to it anything further or say that it exists or does not exist, for we should at once be attaching to it existence or nonexistence, whereas we ought to add nothing if we are to express just it alone. We ought not even to add 'just' or 'it'

or 'each' or 'alone' or 'this,' or any other of a host of such terms. These terms, running loose about the place, are attached to everything, and they are distinct from the things to which they are applied. If it were possible for an element to be expressed in any formula exclusively belonging to it, no other terms ought to enter into that expression. But in fact there is no formula in which any element can be expressed; it can only be named, for a name is all there is that belongs to it. But when we come to things composed of these elements, then, just as these things are complex, so the names are combined to make a description (*λόγος*), a description being precisely a combination of names. Accordingly, elements are inexplicable and unknowable, but they can be perceived, while complexes ('syllables') are knowable and explicable, and you can have a true notion of them. So when a man gets hold of the true notion of something without an account, his mind does think truly of it, but he does not know it, for if one cannot give and receive an account of a thing, one has no knowledge of that thing. But when he has also got hold of an account, all this becomes possible to him and he is fully equipped with knowledge.

Does that version represent the dream as you heard it, or not?

THEAETETUS: Perfectly.

SOCRATES: So this dream finds favor and you hold that a true notion with the addition of an account is knowledge?

THEAETETUS: Precisely.

SOCRATES: Can it be, Theaetetus, that, all in a moment, we have found out today what so many wise men have grown old in seeking and have not found?

THEAETETUS: I, at any rate, am satisfied with our present statement, Socrates.

SOCRATES: Yes, the statement just in itself may well be satisfactory, for how can there ever be knowledge without an account and right belief? But there is one point in the theory as stated that does not find favor with me.

THEAETETUS: What is that?

SOCRATES: What might be considered its most ingenious feature. It says that the elements are unknowable, but whatever is complex ('syllables') can be known.

THEAETETUS: Is not that right?

SOCRATES: We must find out. We hold as a sort of hostage for the theory the illustration in terms of which it was stated.

THEAETETUS: Namely?

SOCRATES: Letters—the elements of writing—and syllables. That and nothing else was the prototype the author of this theory had in mind, don't you think?

THEAETETUS: Yes, it was.

SOCRATES: Let us take up that illustration, then, and put it to

the question, or rather put the question to ourselves. Did we learn our letters on that principle or not? To begin with, is it true that an account can be given of syllables, but not of letters?

THEAETETUS: It may be so.

SOCRATES: I agree, decidedly. Suppose you are asked about the first syllable of 'Socrates.' Explain, Theaetetus, what is SO? How will you answer?

THEAETETUS: S and O.

SOCRATES: And you have there an account of the syllable?

THEAETETUS: Yes.

SOCRATES: Go on, then, give me a similar account of S.

THEAETETUS: But how can one state the elements of an element? The fact is, of course, Socrates, that S is one of the consonants, nothing but a noise, like a hissing of the tongue, while B not only has no articulate sound but is not even a noise, and the same is true of most of the letters. So they may well be said to be inexplicable, when the clearest of them, the seven vowels themselves, have only a sound, and no sort of account can be given of them.

SOCRATES: So far, then, we have reached a right conclusion about knowledge.

THEAETETUS: Apparently.

SOCRATES: But now, have we been right in declaring that the letter cannot be known, though the syllable can?

THEAETETUS: That seems all right.

SOCRATES: Take the syllable then. Do we mean by that both the two letters or, if there are more than two, all the letters? Or do we mean a single entity that comes into existence from the moment when they are put together?

THEAETETUS: I should say we mean all the letters.

SOCRATES: Then take the case of the two letters S and O. The two together are the first syllable of my name. Anyone who knows that syllable knows both the letters, doesn't he?

THEAETETUS: Naturally.

SOCRATES: So he knows the S and the O.

THEAETETUS: Yes.

SOCRATES: But has he, then, no knowledge of *each* letter, so that he knows both without knowing either?

THEAETETUS: That is a monstrous absurdity, Socrates.

SOCRATES: And yet, if it is necessary to know each of two things before one can know both, he simply must know the letters first, if he is ever to know the syllable, and so our fine theory will vanish and leave us in the lurch.

THEAETETUS: With a startling suddenness.

SOCRATES: Yes, because we are not keeping a good watch upon it. Perhaps we ought to have assumed that the syllable was not

the letters but a single entity that arises out of them with a unitary character of its own and different from the letters.

THEAETETUS: By all means. Indeed, it may well be so rather than the other way.

SOCRATES: Let us consider that. We ought not to abandon an imposing theory in this poor-spirited manner.

THEAETETUS: Certainly not.

204

SOCRATES: Suppose, then, it is as we say now. The syllable arises as a single entity from any set of letters which can be combined, and that holds of every complex, not only in the case of letters.

THEAETETUS: By all means.

SOCRATES: In that case, it must have no parts.

THEAETETUS: Why?

SOCRATES: Because, if a thing has parts, the whole thing must be the same as all the parts. Or do you say that a whole likewise is a single entity that arises out of the parts and is different from the aggregate of the parts?

THEAETETUS: Yes, I do.

SOCRATES: Then do you regard the sum ( $\tau\acute{o} \pi\acute{\alpha}\nu$ ) as the same thing as the whole, or are they different?

b

THEAETETUS: I am not at all clear, but you tell me to answer boldly, so I will take the risk of saying they are different.

SOCRATES: Your boldness, Theaetetus, is right; whether your answer is so, we shall have to consider.

THEAETETUS: Yes, certainly.

SOCRATES: Well, then, the whole will be different from the sum, according to our present view.

THEAETETUS: Yes.

SOCRATES: Well but now, is there any difference between the sum and all the things it includes? For instance, when we say, 'one, two, three, four, five, six,' or 'twice three' or 'three times two' or 'four and two' or 'three and two and one,' are we in all these cases expressing the same thing or different things?

THEAETETUS: The same.

SOCRATES: Just six, and nothing else?

THEAETETUS: Yes.

SOCRATES: In fact, in each form of expression we have expressed all the six.

THEAETETUS: Yes.

SOCRATES: But when we express them all, is there no sum that we express?

THEAETETUS: There must be.

SOCRATES: And is that sum anything else than 'six'?

THEAETETUS: No.

SOCRATES: Then, at any rate in the case of things that consist a

of a number, the words 'sum' and 'all the things' denote the same thing.

THEAETETUS: So it seems.

SOCRATES: Let us put our argument, then, in this way. The number of [square feet in] an acre, and the acre are the same thing, aren't they?

THEAETETUS: Yes.

SOCRATES: And so too with the number of [feet in] a mile?

THEAETETUS: Yes.

SOCRATES: And again with the number of [soldiers in] an army and the army, and so on, in all cases. The total number is the same as the total thing in each case.

THEAETETUS: Yes.

e     SOCRATES: But the number of [units in] any collection of things cannot be anything but *parts* of that collection?

THEAETETUS: No.

SOCRATES: Now, anything that has parts consists of parts.

THEAETETUS: Evidently.

SOCRATES: But all the parts, we have agreed, are the same as the sum, if the total number is to be the same as the total thing.

THEAETETUS: Yes.

SOCRATES: The whole, then, does not consist of parts, for if it were all the parts it would be a sum.

THEAETETUS: Apparently not.

SOCRATES: But can a part be a part of anything but its whole?

THEAETETUS: Yes, of the sum.

205     SOCRATES: You make a gallant fight of it, Theaetetus. But does not 'the sum' mean precisely something from which nothing is missing?

THEAETETUS: Necessarily.

SOCRATES: And is not a whole exactly the same thing—that from which nothing whatever is missing? Whereas, when something is removed, the thing becomes neither a whole nor a sum; it changes at the same moment from being both to being neither.

THEAETETUS: I think now that there is no difference between a sum and a whole.

SOCRATES: Well, we were saying, were we not, that when a thing has parts, the whole or sum will be the same thing as all the parts?

THEAETETUS: Certainly.

b     SOCRATES: To go back, then, to the point I was trying to make just now, if the syllable is not the same thing as the letters, does it not follow that it cannot have the letters as parts of itself; otherwise, being the same thing as the letters, it would be neither more nor less knowable than they are?

THEAETETUS: Yes.

SOCRATES: And it was to avoid that consequence that we supposed the syllable to be different from the letters.

THEAETETUS: Yes.

SOCRATES: Well, if the letters are not parts of the syllable, can you name any things, other than its letters, that are parts of a syllable?

THEAETETUS: Certainly not, Socrates. If I admitted that it had any parts, it would surely be absurd to set aside the letters and look for parts of any other kind.

SOCRATES: Then, on the present showing, a syllable will be a thing that is absolutely one and cannot be divided into parts of any sort?

THEAETETUS: Apparently.

SOCRATES: Do you remember then, my dear Theaetetus, our accepting a short while ago a statement that we thought satisfactory—that no account could be given of the primary things of which other things are composed, because each of them, taken just by itself, was incomposite, and that it was not correct to attribute even 'existence' to it, or to call it 'this,' on the ground that these words expressed different things that were extraneous to it, and this was the ground for making the primary thing inexplicable and unknowable?

THEAETETUS: I remember.

SOCRATES: Then is not exactly this, and nothing else, the ground of its being simple in nature and indivisible into parts? I can see no other.

THEAETETUS: Evidently there is no other.

SOCRATES: Then has not the syllable now turned out to be a thing of the same sort, if it has no parts and is a unitary thing?

THEAETETUS: Certainly.

SOCRATES: To conclude, then, if, on the one hand, the syllable is the same thing as a number of letters and is a whole with the letters as its parts, then the letters must be neither more nor less knowable and explicable than syllables, since we made out that all the parts are the same thing as the whole.

THEAETETUS: True.

SOCRATES: But if, on the other hand, the syllable is a unity without parts, syllable and letter likewise are equally incapable of explanation and unknowable. The same reason will make them so.

THEAETETUS: I see no way out of that.

SOCRATES: If so, we must not accept this statement—that the syllable can be known and explained, the letter cannot.

THEAETETUS: No, not if we hold by our argument.

SOCRATES: And again, would not your own experience in learning your letters rather incline you to accept the opposite view? 206

THEAETETUS: What view do you mean?

SOCRATES: This—that all the time you were learning you were

doing nothing else but trying to distinguish by sight or hearing each letter by itself, so as not to be confused by any arrangement of them in spoken or written words.

THEAETETUS: That is quite true.

SOCRATES: And in the music school the height of accomplishment lay precisely in being able to follow each several note and tell  
b which string it belonged to, and notes, as everyone would agree, are the elements of music.

THEAETETUS: Precisely.

SOCRATES: Then, if we are to argue from our own experience of elements and complexes to other cases, we shall conclude that elements in general yield knowledge that is much clearer than knowledge of the complex and more effective for a complete grasp of anything we seek to know. If anyone tells us that the complex is by its nature knowable, while the element is unknowable, we shall suppose that, whether he intends it or not, he is playing with us.

THEAETETUS: Certainly.

c SOCRATES: Indeed we might, I think, find other arguments to prove that point. But we must not allow them to distract our attention from the question before us, namely, what can really be meant by saying that an account added to true belief yields knowledge in its most perfect form.

THEAETETUS: Yes, we must see what that means.

SOCRATES: Well then, what is this term 'account' intended to convey to us? I think it must mean one of three things.

THEAETETUS: What are they?

d SOCRATES: The first will be giving overt expression to one's thought by means of vocal sound with names and verbs, casting an image of one's notion on the stream that flows through the lips, like a reflection in a mirror or in water. Do you agree that expression of that sort is an 'account'?

THEAETETUS: I do. We certainly call that expressing ourselves in speech (λέγειν).

SOCRATES: On the other hand, that is a thing that anyone can do more or less readily. If a man is not born deaf or dumb, he can signify what he thinks on any subject. So in this sense anyone whatever who has a correct notion evidently will have it 'with an account,'

e and there will be no place left anywhere for a correct notion apart from knowledge.

THEAETETUS: True.

SOCRATES: Then we must not be too ready to charge the author of the definition of knowledge now before us with talking nonsense. Perhaps that is not what he meant. He may have meant being able to  
207 reply to the question, what any given thing is, by enumerating its elements.

THEAETETUS: For example, Socrates?

**SOCRATES:** For example, Hesiod says about a wagon, 'In a wagon are a hundred pieces of wood.'<sup>6</sup> I could not name them all; no more, I imagine, could you. If we were asked what a wagon is, we should be content if we could mention wheels, axle, body, rails, yoke.

**THEAETETUS:** Certainly.

**SOCRATES:** But I dare say he would think us just as ridiculous as if we replied to the question about your own name by telling the syllables. We might think and express ourselves correctly, but we should be absurd if we fancied ourselves to be grammarians and able to give such an account of the name Theaetetus as a grammarian would offer. He would say it is impossible to give a scientific account of anything, short of adding to your true notion a complete catalogue of the elements, as, I think, was said earlier.

**THEAETETUS:** Yes, it was.

**SOCRATES:** In the same way, he would say, we may have a correct notion of the wagon, but the man who can give a complete statement of its nature by going through those hundred parts has thereby added an account to his correct notion and, in place of mere belief, has arrived at a technical knowledge of the wagon's nature, by going through all the elements in the whole.

**THEAETETUS:** Don't you approve, Socrates?

**SOCRATES:** Tell me if you approve, my friend, and whether you accept the view that the complete enumeration of elements is an account of any given thing, whereas description in terms of syllables or of any larger unit still leaves it unaccounted for. Then we can look into the matter further.

**THEAETETUS:** Well, I do accept that.

**SOCRATES:** Do you think, then, that anyone has knowledge of whatever it may be, when he thinks that one and the same thing is a part sometimes of one thing, sometimes of a different thing, or again when he believes now one and now another thing to be part of one and the same thing?

**THEAETETUS:** Certainly not.

**SOCRATES:** Have you forgotten, then, that when you first began learning to read and write, that was what you and your school-fellows did?

**THEAETETUS:** Do you mean, when we thought that now one letter and now another was part of the same syllable, and when we put the same letter sometimes into the proper syllable, sometimes into another?

**SOCRATES:** That is what I mean.

**THEAETETUS:** Then I have certainly not forgotten, and I do not think that one has reached knowledge so long as one is in that condition.

<sup>6</sup> *Works and Days* 456 (454).

208 **SOCRATES**: Well then, if at that stage you are writing 'Theaetetus' and you think you ought to write T and H and E and do so, and again when you are trying to write 'Theodorus,' you think you ought to write T and E and do so, can we say that you know the first syllable of your two names?

**THEAETETUS**: No, we have just agreed that one has not knowledge so long as one is in that condition.

**SOCRATES**: And there is no reason why a person should not be in the same condition with respect to the second, third, and fourth syllables as well?

**THEAETETUS**: None whatever.

**SOCRATES**: Can we, then, say that whenever in writing 'Theaetetus' he puts down all the letters in order, then he is in possession of the complete catalogue of elements together with correct belief?

**THEAETETUS**: Obviously.

b **SOCRATES**: Being still, as we agree, without knowledge, though his beliefs are correct?

**THEAETETUS**: Yes.

**SOCRATES**: Although he possesses the 'account' in addition to right belief. For when he wrote he was in possession of the catalogue of the elements, which we agreed was the 'account.'

**THEAETETUS**: True.

**SOCRATES**: So, my friend, there is such a thing as right belief together with an account, which is not yet entitled to be called knowledge.

**THEAETETUS**: I am afraid so.

c **SOCRATES**: Then, apparently, our idea that we had found the perfectly true definition of knowledge was no better than a golden dream. Or shall we not condemn the theory yet? Perhaps the meaning to be given to 'account' is not this, but the remaining one of the three, one of which we said must be intended by anyone who defines knowledge as correct belief together with an account.

**THEAETETUS**: A good reminder. There is still one meaning left. The first was what might be called the image of thought in spoken sound, and the one we have just discussed was going all through the elements to arrive at the whole. What is the third?

**SOCRATES**: The meaning most people would give—being able to name some mark by which the thing one is asked about differs from everything else.

**THEAETETUS**: Could you give me an example of such an account of a thing?

d **SOCRATES**: Take the sun as an example. I dare say you will be satisfied with the account of it as the brightest of the heavenly bodies that go round the earth.

**THEAETETUS**: Certainly.

**SOCRATES**: Let me explain the point of this example. It is to

illustrate what we were just saying—that if you get hold of the difference distinguishing any given thing from all others, then, so some people say, you will have an ‘account’ of it, whereas, so long as you fix upon something common to other things, your account will embrace all the things that share it.

THEAETETUS: I understand. I agree that what you describe may fairly be called an ‘account.’

SOCRATES: And if, besides a right notion about a thing, whatever it may be, you also grasp its difference from all other things, you will have arrived at knowledge of what, till then, you had only a notion of.

THEAETETUS: We do say that, certainly.

SOCRATES: Really, Theaetetus, now I come to look at this statement at close quarters, it is like a scene painting. I cannot make it out at all, though, so long as I kept at a distance, there seemed to be some sense in it.

THEAETETUS: What do you mean? Why so?

SOCRATES: I will explain, if I can. Suppose I have a correct notion about you; if I add to that the account of you, then, we are to understand, I know you. Otherwise I have only a notion. 209

THEAETETUS: Yes.

SOCRATES: And ‘account’ means putting your differentness into words.

THEAETETUS: Yes.

SOCRATES: So, at the time when I had only a notion, my mind did not grasp any of the points in which you differ from others?

THEAETETUS: Apparently not.

SOCRATES: Then I must have had before my mind one of those common things which belong to another person as much as to you. b

THEAETETUS: That follows.

SOCRATES: But look here! If that was so, how could I possibly be having a notion of you rather than of anyone else? Suppose I was thinking, Theaetetus is one who is a man and has a nose and eyes and a mouth and so forth, enumerating every part of the body. Will thinking in that way result in my thinking of Theaetetus rather than of Theodorus or, as they say, of the man in the street?

THEAETETUS: How should it?

SOCRATES: Well, now suppose I think not merely of a man with a nose and eyes, but of one with a snub nose and prominent eyes. Once more shall I be having a notion of you any more than of myself or anyone else of that description?

THEAETETUS: No.

SOCRATES: In fact, there will be no notion of Theaetetus in my mind, I suppose, until this particular snubness has stamped and registered within me a record distinct from all the other cases of snubness that I have seen, and so with every other part of you. Then,

if I meet you tomorrow, that trait will revive my memory and give me a correct notion about you.

THEAETETUS: Quite true.

- d       SOCRATES: If that is so, the correct notion of anything must itself include the differentness of that thing.

THEAETETUS: Evidently.

SOCRATES: Then what meaning is left for getting hold of an 'account' in addition to the correct notion? If, on the one hand, it means adding the notion of how a thing differs from other things, such an injunction is simply absurd.

THEAETETUS: How so?

- SOCRATES: When we have a correct notion of the way in which certain things differ from other things, it tells us to add a correct notion of the way in which they differ from other things. On  
e       this showing, the most vicious of circles would be nothing to this injunction. It might better deserve to be called the sort of direction a blind man might give. To tell us to get hold of something we already have, in order to get to know something we are already thinking of, suggests a state of the most absolute darkness.

THEAETETUS: Whereas, if . . . ? The supposition you made just now implied that you would state some alternative. What was it?

SOCRATES: If the direction to add an 'account' means that we are to get to *know* the differentness, as opposed to merely having a notion of it, this most admirable of all definitions of knowledge will be a pretty business, because 'getting to know' means acquiring knowledge, doesn't it?

- 210      THEAETETUS: Yes.

SOCRATES: So, apparently, to the question, 'What is knowledge?' our definition will reply, 'Correct belief together with knowledge of a differentness,' for, according to it, 'adding an account' will come to that.

THEAETETUS: So it seems.

SOCRATES: Yes, and when we are inquiring after the nature of knowledge, nothing could be sillier than to say that it is correct belief together with a *knowledge* of differentness or of anything whatever.

- b       So, Theaetetus, neither perception, nor true belief, nor the addition of an 'account' to true belief can be knowledge.

THEAETETUS: Apparently not.

SOCRATES: Are we in labor, then, with any further child, my friend, or have we brought to birth all we have to say about knowledge?

THEAETETUS: Indeed we have, and for my part I have already, thanks to you, given utterance to more than I had in me.

SOCRATES: All of which our midwife's skill pronounces to be mere wind eggs and not worth the rearing?

THEAETETUS: Undoubtedly.

SOCRATES: Then supposing you should ever henceforth try to conceive afresh, Theaetetus, if you succeed, your embryo thoughts will be the better as a consequence of today's scrutiny, and if you remain barren, you will be gentler and more agreeable to your companions, having the good sense not to fancy you know what you do not know. For that, and no more, is all that my art can effect; nor have I any of that knowledge possessed by all the great and admirable men of our own day or of the past. But this midwife's art is a gift from heaven; my mother had it for women, and I for young men of a generous spirit and for all in whom beauty dwells. c

Now I must go to the portico of the King-Archon to meet the indictment which Meletus has drawn up against me. But tomorrow morning, Theodorus, let us meet here again. d

# PARMENIDES

---

*The Parmenides presents a great difficulty to the reader. The best Platonists differ about its meaning. The ordinary person will be hard put to it to discover any meaning at all. The argument runs on and on in words that appear to make sense and yet convey nothing to the mind. Examples are on every page, as, for instance, "The one is also younger than itself at the time when, in becoming older, it coincides with the present. But the present is with the one always throughout its existence. Therefore, at all times the one both is and is becoming older and younger than itself."*

*Socrates is represented as a young man awed to be in the presence of Parmenides, one of the greatest thinkers in the generation just before his. In later years he called him "venerable and awful" and said, "I met him when he was old and I a mere youth and he seemed to me to have a glorious depth of mind."*

*In the dialogue he turns that mind on what we call the Platonic Ideas and attacks them, certainly a curious procedure since in the end he apparently neither demolishes them nor establishes them—we are left in doubt. Why Plato did this has been a subject of discussion ever since and seems likely to remain so. To some people, however, it is only what is to be expected from Plato, never out to defend his own views, always with one object alone, to know the truth, and always on his guard against his desires and preconceptions. It would be natural for him to do his best to find out if what he had built up could be torn down.*

*The Parmenides seems to disclaim any achievement at all. Finally, the great man says to his audience, "It seems that, whether there is or is not a one, both that one and the others alike are and are not, and appear and do not appear to be."*

*"Most true," says Socrates, and the dialogue ends. Whether this "truth" is for or against the theory of Ideas is left undecided.*

After leaving our home at Clazomenae we arrived at Athens and met 126  
Adimantus and Glaucon in the market place. Adimantus took my  
hand. Welcome, Cephalus, he said. If there is anything we can do for  
you here, you must let us know.

Well, I replied, I have come for that very purpose. There is some-  
thing you and your brother can do for me.

Please tell us what it is.

What, I asked, was the name of your half brother on the mother's b  
side? I cannot remember. He was only a child, you know, when I was  
here before, and that is a long while ago now. His father's name was  
Pyrilampes, I think.

Yes, and his own is Antiphon. But why do you ask?

My companions here, I answered, are fellow citizens of mine,  
deeply interested in philosophy. They have been told that Antiphon  
has been much in the company of someone called Pythodorus, who  
was a friend of Zeno's, and that Pythodorus has related to him that  
conversation which Socrates once had with Zeno and Parmenides. c  
Antiphon is said to have heard it so often that he can repeat it by  
heart.

That is true.

Well, said I, that is what we want—to hear that conversation.

There is no difficulty about that, he replied. Before he was grown  
up, Antiphon worked hard at getting that conversation by heart,  
though nowadays he takes after his grandfather of the same name  
and devotes most of his time to horses. If you like, let us go and see  
him. He has just gone home from here. His house is close by, in Melite.

So we set out to walk there. We found Antiphon at home, giving 127  
instructions to a smith about making a bit or something of the sort.  
When he had done with the man, and his brothers began to tell him  
what we had come for, he recognized me from his memory of my  
earlier visit and said he was glad to see me. We then asked him to re-  
peat the conversation. At first he was reluctant. It was no easy matter,  
he said. However, he ended by telling us the whole story.

According to Antiphon, then, this was Pythodorus' account.  
Zeno and Parmenides once came to Athens for the Great Pan- b  
athenaea. Parmenides was a man of distinguished appearance. By  
that time he was well advanced in years, with hair almost white; he  
may have been sixty-five. Zeno was nearing forty, a tall and attractive  
figure. It was said that he had been Parmenides' favorite. They were  
staying with Pythodorus outside the walls in the Ceramicus. Socrates c  
and a few others came there, anxious to hear a reading of Zeno's  
treatise, which the two visitors had brought for the first time to

From *Plato and Parmenides: Parmenides' "Way of Truth" and Plato's "Par-  
menides,"* translated with an introduction and a running commentary by  
Francis Macdonald Cornford (London, 1939).

Athens. Socrates was then quite young. Zeno himself read it to them; Parmenides at the moment had gone out. The reading of the arguments was very nearly over when Pythodorus himself came in, accompanied by Parmenides and Aristoteles, the man who was afterward one of the Thirty; so they heard only a small part of the treatise. Pythodorus himself, however, had heard it read by Zeno before.

When Zeno had finished, Socrates asked him to read once more the first hypothesis of the first argument. He did so, and Socrates asked, What does this statement mean, Zeno? 'If things are many,' you say, 'they must be both like and unlike. But that is impossible; unlike things cannot be like, nor like things unlike.' That is what you say, isn't it?

Yes, replied Zeno.

And so, if unlike things cannot be like or like things unlike, it is also impossible that things should be a plurality; if many things did exist, they would have impossible attributes. Is this the precise purpose of your arguments—to maintain, against everything that is commonly said, that things are not a plurality? Do you regard every one of your arguments as evidence of exactly that conclusion, and so hold that, in each argument in your treatise, you are giving just one more proof that a plurality does not exist? Is that what you mean, or am I understanding you wrongly?

128 No, said Zeno, you have quite rightly understood the purpose of the whole treatise.

I see, Parmenides, said Socrates, that Zeno's intention is to associate himself with you by means of his treatise no less intimately than by his personal attachment. In a way, his book states the same position as your own; only by varying the form he tries to delude us into thinking that his thesis is a different one. You assert, in your poem, that the all is one, and for this you advance admirable proofs. Zeno, for his part, asserts that it is not a plurality, and he too has many weighty proofs to bring forward. You assert unity; he asserts no plurality; each expresses himself in such a way that your arguments seem to have nothing in common, though really they come to very much the same thing. That is why your exposition and his seem to be rather over the heads of outsiders like ourselves.

Yes, Socrates, Zeno replied, but you have not quite seen the real character of my book. True, you are as quick as a Spartan hound to pick up the scent and follow the trail of the argument, but there is a point you have missed at the outset. The book makes no pretense of disguising from the public the fact that it was written with the purpose you describe, as if such deception were something to be proud of. What you have pointed out is only incidental; the book is in fact a sort of defense of Parmenides' argument against those who try to make fun of it by showing that his supposition, that there is a one, leads to many absurdities and contradictions. This book, then, is a retort

against those who assert a plurality. It pays them back in the same coin with something to spare, and aims at showing that, on a thorough examination, their own supposition that there is a plurality leads to even more absurd consequences than the hypothesis of the one. It was written in that controversial spirit in my young days, and someone copied it surreptitiously, so that I had not even the chance to consider whether it should see the light or not. That is where you are mistaken, Socrates; you imagine it was inspired, not by a youthful eagerness for controversy, but by the more dispassionate aims of an older man, though, as I said, your description of it was not far wrong.

I accept that, said Socrates, and I have no doubt it is as you say. But tell me this. Do you not recognize that there exists, just by itself, a form of likeness and again another contrary form, unlikeness 129 itself, and that of these two forms you and I and all the things we speak of as 'many' come to partake? Also, that things which come to partake of likeness come to be alike in that respect and just in so far as they do come to partake of it, and those that come to partake of unlikeness come to be unlike, while those which come to partake of both come to be both? Even if all things come to partake of both, contrary as they are, and by having a share in both are at once like and unlike one another, what is there surprising in that? If one could point to b things which are simply 'alike' or 'unlike' proving to be unlike or alike, that no doubt would be a portent, but when things which have a share in both are shown to have both characters, I see nothing strange in that, Zeno, nor yet in a proof that all things are one by having a share in unity and at the same time many by sharing in plurality. c But if anyone can prove that what is simply unity itself is many or that plurality itself is one, then I shall begin to be surprised.

And so in all other cases, if the kinds or forms themselves were shown to have these contrary characters among themselves, there would be good ground for astonishment, but what is there surprising in someone pointing out that I am one thing and also many? When he wants to show that I am many things, he can say that my right side is a different thing from my left, my front from my back, my upper parts from my lower, since no doubt I do partake of plurality. When he wants to prove that I am one thing, he will say that I am one person d among the seven of us, since I partake also of unity. So both statements are true. Accordingly, if anyone sets out to show about things of this kind—sticks and stones, and so on—that the same thing is many and one, we shall say that what he is proving is that *something* is many and one, not that unity is many or that plurality is one; he is not telling us anything wonderful, but only what we should all admit. But, as I said just now, if he begins by distinguishing the forms apart just by themselves—likeness, for instance, and unlikeness, plurality and unity, rest and motion, and all the rest—and then shows that e

these forms among themselves can be combined with, or separated from, one another, then, Zeno, I should be filled with admiration. I am sure you have dealt with this subject very forcibly, but, as I say, my  
 130 admiration would be much greater if anyone could show that these same perplexities are everywhere involved in the forms themselves—among the objects we apprehend in reflection, just as you and Parmenides have shown them to be involved in the things we see.

While Socrates was speaking, Pythodorus said he was expecting every moment that Parmenides and Zeno would be annoyed, but they listened very attentively and kept on exchanging glances and smiles in admiration of Socrates. When he ended, Parmenides expressed this feeling.

b Socrates, he said, your eagerness for discussion is admirable. And now tell me. Have you yourself drawn this distinction you speak of and separated apart on the one side forms themselves and on the other the things that share in them? Do you believe that there is such a thing as likeness itself apart from the likeness that we possess, and so on with unity and plurality and all the terms in Zeno's argument that you have just been listening to?

Certainly I do, said Socrates.

And also in cases like these, asked Parmenides, is there, for example, a form of rightness or of beauty or of goodness, and of all such things?

Yes.

c And again, a form of man, apart from ourselves and all other men like us—a form of man as something by itself? Or a form of fire or of water?

I have often been puzzled about those things, Parmenides, whether one should say that the same thing is true in their case or not.

Are you also puzzled, Socrates, about cases that might be thought absurd, such as hair or mud or dirt or any other trivial and undignified objects? Are you doubtful whether or not to assert that each  
 d of these has a separate form distinct from things like those we handle?

Not at all, said Socrates. In these cases, the things are just the things we see; it would surely be too absurd to suppose that they have a form. All the same, I have sometimes been troubled by a doubt whether what is true in one case may not be true in all. Then, when I have reached that point, I am driven to retreat, for fear of tumbling into a bottomless pit of nonsense. Anyhow, I get back to the things which we were just now speaking of as having forms, and occupy my time with thinking about them.

e That, replied Parmenides, is because you are still young, Socrates, and philosophy has not yet taken hold of you so firmly as I believe it will someday. You will not despise any of these objects then, but at present your youth makes you still pay attention to what the

world will think. However that may be, tell me this. You say you hold that there exist certain forms, of which these other things come to partake and so to be called after their names; by coming to partake of likeness or largeness or beauty or justice, they become like or large or beautiful or just? 131

Certainly, said Socrates.

Then each thing that partakes receives as its share either the form as a whole or a part of it? Or can there be any other way of partaking besides this?

No, how could there be?

Do you hold, then, that the form as a whole, a single thing, is in each of the many, or how?

Why should it not be in each, Parmenides?

If so, a form which is one and the same will be at the same time, b as a whole, in a number of things which are separate, and consequently will be separate from itself.

No, it would not, replied Socrates, if it were like one and the same day, which is in many places at the same time and nevertheless is not separate from itself. Suppose any given form is in them all at the same time as one and the same thing in that way.

I like the way you make out that one and the same thing is in many places at once, Socrates. You might as well spread a sail over a number of people and then say that the one sail as a whole was over them all. Don't you think that is a fair analogy?

Perhaps it is.

Then would the sail as a whole be over each man, or only a part c over one, another part over another?

Only a part.

In that case, Socrates, the forms themselves must be divisible into parts, and the things which have a share in them will have a part for their share. Only a part of any given form, and no longer the whole of it, will be in each thing.

Evidently, on that showing.

Are you, then, prepared to assert that we shall find the single form actually being divided? Will it still be one?

Certainly not.

No, for consider this. Suppose it is largeness itself that you are going to divide into parts, and that each of the many large things is d to be large by virtue of a part of largeness which is smaller than largeness itself. Will not that seem unreasonable?

It will indeed.

And again, if it is equality that a thing receives some small part of, will that part, which is less than equality itself, make its possessor equal to something else?

No, that is impossible.

Well, take smallness. Is one of us to have a portion of smallness,

and is smallness to be larger than that portion, which is a part of it? On this supposition again smallness itself will be larger, and anything  
 e to which the portion taken is added will be smaller, and not larger, than it was before.

That cannot be so.

Well then, Socrates, how are the other things going to partake of your forms, if they can partake of them neither in part nor as wholes?

Really, said Socrates, it seems no easy matter to determine in any way.

Again, there is another question.

What is that?

How do you feel about this? I imagine your ground for believing  
 132 in a single form in each case is this. When it seems to you that a number of things are large, there seems, I suppose, to be a certain single character which is the same when you look at them all; hence you think that largeness is a single thing.

True, he replied.

But now take largeness itself and the other things which are large. Suppose you look at all these in the same way in your mind's eye, will not yet another unity make its appearance—a largeness by virtue of which they all appear large?

So it would seem.

If so, a second form of largeness will present itself, over and above  
 b largeness itself and the things that share in it, and again, covering all these, yet another, which will make all of them large. So each of your forms will no longer be one, but an indefinite number.

But, Parmenides, said Socrates, may it not be that each of these forms is a thought, which cannot properly exist anywhere but in a mind. In that way each of them can be one and the statements that have just been made would no longer be true of it.

Then, is each form one of these thoughts and yet a thought of nothing?

No, that is impossible.

So it is a thought of something?

Yes.

c Of something that is, or of something that is not?

Of something that is.

In fact, of some *one* thing which that thought observes to cover all the cases, as being a certain single character?

Yes.

Then will not this thing that is thought of as being one and always the same in all cases be a form?

That again seems to follow.

And besides, said Parmenides, according to the way in which you assert that the other things have a share in the forms, must you not hold either that each of those things consists of thoughts, so that

all things think, or else that they are thoughts which nevertheless do not think?

That too is unreasonable, replied Socrates. But, Parmenides, the best I can make of the matter is this—that these forms are as it were patterns fixed in the nature of things. The other things are made in their image and are likenesses, and this participation they come to have in the forms is nothing but their being made in their image.

Well, if a thing is made in the image of the form, can that form fail to be like the image of it, in so far as the image was made in its likeness? If a thing is like, must it not be like something that is like it?

It must.

And must not the thing which is like share with the thing that is like it in one and the same thing [character]?

Yes.

And will not that in which the like things share, so as to be alike, be just the form itself that you spoke of?

Certainly.

If so, nothing can be like the form, nor can the form be like anything. Otherwise a second form will always make its appearance over and above the first form, and if that second form is like anything, yet a third. And there will be no end to this emergence of fresh forms, if the form is to be like the thing that partakes of it.

Quite true.

It follows that the other things do not partake of forms by being like them; we must look for some other means by which they partake. So it seems.

You see then, Socrates, said Parmenides, what great difficulties there are in asserting their existence as forms just by themselves?

I do indeed.

I assure you, then, you have as yet hardly a notion of how great they will be, if you are going to set up a single form for every distinction you make among things.

How so?

The worst difficulty will be this, though there are plenty more. Suppose someone should say that the forms, if they are such as we are saying they must be, cannot even be known. One could not convince him that he was mistaken in that objection, unless he chanced to be a man of wide experience and natural ability, and were willing to follow one through a long and remote train of argument. Otherwise there would be no way of convincing a man who maintained that the forms were unknowable.

Why so, Parmenides?

Because, Socrates, I imagine that you or anyone else who asserts that each of them has a real being 'just by itself,' would admit, to begin with, that no such real being exists in our world.

True, for how could it then be just by itself?

Very good, said Parmenides. And further, those forms which are what they are with reference to one another have their being in such references among themselves, not with reference to those likenesses, or whatever we are to call them, in our world, which we possess and so come to be called by their several names. And, on the other hand, these things in our world which bear the same names as the forms are related among themselves, not to the forms, and all the names of that sort that they bear have reference to one another, not to the forms.

How do you mean? asked Socrates.

Suppose, for instance, one of us is master or slave of another; he is not, of course, the slave of master itself, the essential master, nor, if he is a master, is he master of slave itself, the essential slave, but, being a man, is master or slave of another man, whereas mastership itself is what it is [mastership] of slavery itself, and slavery itself is slavery to mastership itself. The significance of things in our world is not with reference to things in that other world, nor have these their significance with reference to us, but, as I say, the things in that world are what they are with reference to one another and toward one another, and so likewise are the things in our world. You see what I mean?

Certainly I do.

And similarly knowledge itself, the essence of knowledge, will be knowledge of that reality itself, the essentially real.

Certainly.

And again, any given branch of knowledge in itself will be knowledge of some department of real things as it is in itself, will it not?

Yes.

Whereas the knowledge in our world will be knowledge of the reality in our world, and it will follow again that each branch of knowledge in our world must be knowledge of some department of things that exist in our world.

Necessarily.

But, as you admit, we do not possess the forms themselves, nor can they exist in our world.

No.

And presumably the forms, just as they are in themselves, are known by the form of knowledge itself?

Yes.

The form which we do not possess.

True.

Then, none of the forms is known by us, since we have no part in knowledge itself.

Apparently not.

So beauty itself or goodness itself and all the things we take as forms in themselves are unknowable to us.

I am afraid that is so.

Then here is a still more formidable consequence for you to consider.

What is that?

You will grant, I suppose, that if there is such a thing as a form, knowledge itself, it is much more perfect than the knowledge in our world, and so with beauty and all the rest.

Yes.

And if anything has part in this knowledge itself, you would agree that a god has a better title than anyone else to possess the most perfect knowledge?

Undoubtedly.

Then will the god, who possesses knowledge itself, be able to know the things in our world?

Why not?

Because we have agreed that those forms have no significance with reference to things in our world, nor have things in our world any significance with reference to them. Each set has it only among themselves.

Yes, we did.

Then if this most perfect mastership and most perfect knowledge are in the god's world, the gods' mastership can never be exercised over us, nor their knowledge know us or anything in our world. Just as we do not rule over them by virtue of rule as it exists in our world and we know nothing that is divine by our knowledge, so they, on the same principle, being gods, are not our masters nor do they know anything of human concerns.

But surely, said Socrates, an argument which would deprive the gods of knowledge would be too strange.

And yet, Socrates, Parmenides went on, these difficulties and 135 many more besides are inevitably involved in the forms, if these characters of things really exist and one is going to distinguish each form as a thing just by itself. The result is that the hearer is perplexed and inclined either to question their existence, or to contend that, if they do exist, they must certainly be unknowable by our human nature. Moreover, there seems to be some weight in these objections, and, as we were saying, it is extraordinarily difficult to convert the objector. Only a man of exceptional gifts will be able to see that a form, or essence just by itself, does exist in each case, and it will require some- b one still more remarkable to discover it and to instruct another who has thoroughly examined all these difficulties.

I admit that, Parmenides. I quite agree with what you are saying.

But on the other hand, Parmenides continued, if, in view of all these difficulties and others like them, a man refuses to admit that forms of things exist or to distinguish a definite form in every case, he c will have nothing on which to fix his thought, so long as he will not

allow that each thing has a character which is always the same, and in so doing he will completely destroy the significance of all discourse. But of that consequence I think you are only too well aware.

True.

What are you going to do about philosophy, then? Where will you turn while the answers to these questions remain unknown?

I can see no way out at the present moment.

That is because you are undertaking to define 'beautiful,' 'just,'  
 d 'good,' and other particular forms, too soon, before you have had a preliminary training. I noticed that the other day when I heard you talking here with Aristoteles. Believe me, there is something noble and inspired in your passion for argument, but you must make an effort and submit yourself, while you are still young, to a severer training in what the world calls idle talk and condemns as useless. Otherwise, the truth will escape you.

What form, then, should this exercise take, Parmenides?

The form that Zeno used in the treatise you have been listening  
 e to. With this exception—there was one thing you said to him which impressed me very much—you would not allow the survey to be confined to visible things or to range only over that field; it was to extend to those objects which are specially apprehended by discourse and can be regarded as forms.

Yes, because in that other field there seems to be no difficulty about showing that things are both like and unlike and have any other character you please.

You are right. But there is one thing more you must do. If you want to be thoroughly exercised, you must not merely make the sup-  
 136 position that such and such a thing *is* and then consider the consequences; you must also take the supposition that that same thing *is not*.

How do you mean?

Take, if you like, the supposition that Zeno made—'*If there is a plurality of things.*' You must consider what consequences must follow both for those many things with reference to one another and to the one, and also for the one with reference to itself and to the many. Then again, on the supposition that *there is not a plurality*, you must consider what will follow both for the one and for the many,  
 b with reference to themselves and to each other. Or, once more, if you suppose that 'likeness exists,' or 'does not exist,' what will follow on either supposition both for the terms supposed and for other things, with reference to themselves and to each other. And so again with unlikeness, motion, and rest, coming-to-be and perishing, and being and not-being themselves. In a word, whenever you suppose that anything whatsoever exists or does not exist or has any other character, you ought to consider the consequences with reference to itself and to any one of the other things that you may select, or several of them, or all of

them together, and again you must study these others with reference both to one another and to any one thing you may select, whether c you have assumed the thing to exist or not to exist, if you are really going to make out the truth after a complete course of discipline.

There would be no end to such an undertaking, Parmenides, and I don't altogether understand. Why not enlighten me by illustrating the method on some supposition of your own choice?

That is a heavy task, Socrates, to lay on a man of my age. d

But you, Zeno, said Socrates, why don't you give us the illustration?

Zeno laughed and replied, Let us beg Parmenides himself to do it, Socrates. What he means is no light matter, I am afraid. You must see what a task you are setting. If we were a larger company, it would not be fair to ask him. Such a discourse would be unsuitable before a large audience, particularly in a man of his age, because most people are unaware that you cannot hit upon truth and gain understanding without ranging in this way over the whole field. So, Parmenides, I join e with Socrates in his request, in the hope of sitting at your feet again myself after all these years.

After these words from Zeno, Pythodorus joined with Aristoteles and the rest in begging Parmenides not to disappoint them, but to demonstrate the method he had in mind.

Parmenides replied, I cannot refuse, although I feel like the old 137 race horse in Ibycus, who trembles at the start of the chariot race, knowing from long experience what is in store for him. The poet compares his own reluctance on finding himself, so late in life, forced into the lists of love, and my memories too make me frightened of setting out, at my age, to traverse so vast and hazardous a sea. However, I b must do as you wish, for after all, as Zeno says, we are all friends here. Where shall we begin, then? What supposition shall we start with? Would you like me, since we are committed to play out this laborious game, to begin with myself and my own original supposition? Shall I take the one itself and consider the consequences of assuming that there is, or is not, a one?

By all means, said Zeno.

Then who will answer the questions I shall put? Shall it be the youngest? He will be likely to give the least trouble and to be the most ready to say what he thinks, and I shall get a moment's rest while he is answering.

The youngest means me, Parmenides, said Aristoteles, and I am c ready. Put your questions and I will answer them.

Well then, said Parmenides, if there is a *one*, of course the one will not be many. Consequently it cannot have any parts or be a whole. For a part is a part of a whole, and a whole means that from which no part is missing; so, whether you speak of it as 'a whole' or as 'having parts,' in either case the one would consist of parts and in that

- d way be many and not one. But it is to be one and not many. Therefore, if the one is to be one, it will not be a whole nor have parts.

And, if it has no parts, it cannot have a beginning or an end or a middle, for such things would be parts of it. Further, the beginning and end of a thing are its limits. Therefore, if the one has neither beginning nor end, it is without limits.

- e Consequently the one has no shape; it is not either round or straight. Round is that whose extremity is everywhere equidistant from its center, and straight is that of which the middle is in front of both extremities. So if the one had either straight or round shape, it  
138 would have parts and so be many. Therefore, since it has no parts, it is neither straight nor round.

Further, being such as we have described, it cannot be anywhere, for it cannot be either (a) in another, or (b) in itself.

(a) If it were in another, it would be encompassed all round by that in which it was contained, and would have many contacts with it at many points, but there cannot be contact at many points all round with a thing which is one and has no parts and is not round.

- (b) On the other hand, if it were in itself, it would have, to encompass it, none other than itself, since it would actually be within  
b itself, and nothing can be within something without being encompassed by that thing. Thus the encompassing thing would be one thing, the encompassed another, for the same thing cannot as a whole both encompass and be encompassed at the same time, and so, in that case, the one would no longer be one, but two.

Therefore, the one is not anywhere, being neither in itself nor in another.

Next consider whether, such being its condition, it can be (a) in motion or (b) at rest.

- (a) If it were in motion, it would have to be either moving in  
c place or undergoing alteration, for there are no other kinds of motion.

Now, if the one alters, so as to become different from itself, it surely cannot still be one. Therefore, it does not move in the sense of suffering alteration.

- Does it, then, move in place? If it does, then it must either turn round in the same place or shift from one place to another. If it turns round, it must rest on a center and have those parts which revolve round the center as different parts of itself. But a thing which  
d cannot have a center or parts cannot possibly be carried round on its center. If it moves at all, then, it must move by changing its place and coming to be in different places at different times. Now we saw that it could not *be* anywhere in anything. It is still more impossible that it should *come to be* in anything. If a thing is coming to be in something, it cannot be in that thing so long as it is still coming to be in it. nor yet can it be altogether outside it, since it is already coming to be  
e ~~in~~ it. Accordingly this can happen only to a thing which has parts,

for part of it will be already in the other thing and part of it outside at the same time, and a thing which has no parts surely cannot possibly *be*, at the same time, neither wholly inside nor wholly outside something. It is still more impossible that a thing which has no parts and is not a whole should *come to be* in anything, since it cannot do so either part by part or as a whole. Hence it does not change its place either by traveling anywhere and coming to be in something, or by re- 139  
volving in the same place, or by changing.

Therefore the one is immovable in respect of every kind of motion.

(*b*) On the other hand, we also assert that it cannot actually *be* in anything. Consequently it can never be in *the same* [place or condition], because then it would *be* in that selfsame [place or condition], and we saw that it could not be either in itself or in anything else. The one, then, is never in the same [place or condition]. But what is never in the same [place or condition] is not at rest or stationary. b

It appears, then, that the one is neither at rest nor in motion.

Further the one cannot be either the same as another or the same as itself, nor yet other than itself or other than another.

(*a*) Were it other than itself, it would be other than one and so would not be one. (*b*) And if it were the same as another, it would be that other and not be itself, so that, in this case again, it would not c  
be just what it is, one, but other than one.

Therefore the one will not be the same as another or other than itself.

(*c*) Nor can it be other than another, so long as it is one. To be other than something properly belongs, not to 'one,' but only to an 'other-than-another.' Consequently it will not be other in virtue of its being one, and so not in virtue of being itself, and so not *as* itself, and if as itself it is not in any sense other, it cannot be other than anything.

(*d*) Nor yet can it be the same as itself. For the character (φύσις) d  
of unity is one thing, the character of sameness another. This is evident because when a thing becomes 'the same' as something, it does not become 'one.' For instance, if it becomes the same as the many, it must become many, not one, whereas if there were no difference whatever between unity and sameness, whenever a thing became 'the same,' it would always become one, and whenever one, the same. So if the one is to be the same as itself, it will not be one with itself, e  
and thus will be one and not one, and that is impossible. Consequently it is equally impossible for the one to be either other than another or the same as itself.

Thus the one cannot be other than, or the same as, either itself or another.

Nor can the one be (*a*) like or (*b*) unlike anything, whether itself or another.

(a) A like thing is a thing which has an identical character. But we have seen that the character 'same' is distinct from the character 'one.' Now if the one has any character distinct from being one, it must have the character of being more things than one, and that is impossible. So it is quite impossible that the one should be a thing 'having the same character' as either another or itself.

Therefore the one cannot be like another or like itself.

(b) But neither is it true of the one that it is different, for, in that case again, it would be true of it that it was more things than one. But if 'like' means that of which the same thing is true, a thing that is unlike itself or another will be that which can be truly said to be different from itself or another. And the one, it appears, cannot be said to be different in any way. Consequently, the one is in no way unlike either itself or anything else.

Therefore the one cannot be like or unlike either another or itself.

Further, the one, being such as we have described, will not be either (a) equal or (b) unequal either to itself or to another.

If it is equal, it will have the same number of measures as anything to which it is equal. If greater or less, it will have more or fewer measures than things, less or greater than itself, which are commensurable with it. Or, if they are incommensurable with it, it will have smaller measures in the one case, greater in the other.

(a) Now a thing which has no sameness cannot have the same number of measures or of anything else. Therefore the one, not having the same number of measures, cannot be equal to itself or to another.

(b) On the other hand, if it had more or fewer measures, it would have as many parts as measures, and thus, once more, it would be no longer one, but as many as its measures. And if it were of one measure, it would be equal to that measure, whereas we saw that it could not be equal to anything.

Therefore, since it has neither one measure, nor many, nor few, and has no sameness at all, it appears that it can never be equal to itself or to another, nor yet greater or less than itself or another.

Again, can it be held that the one can be older or younger than anything or of the same age with anything?

If it is of the same age with itself or another, it will have equality of duration and likeness, and we have said that the one has neither likeness nor equality. We also said that it has no unlikeness or inequality. Such a thing cannot, then, be either older or younger than, or of the same age with, anything.

Therefore the one cannot be younger or older than, or of the same age with, either itself or another.

We may infer that the one, if it is such as we have described, cannot even occupy time at all. Whatever occupies time must always be becoming older than itself, and 'older' always means older than

something younger. Consequently, whatever is becoming older than itself, if it is to have something *than* which it is becoming older, must also be at the same time becoming younger than itself. What I mean is this. If one thing is already different from another, there is no question of its becoming different; either they both are now, or they both have been, or they both will be, different. But if one is in process of becoming different, you cannot say that the other has been, or will be, or as yet is, different; it can only be in process of becoming different. Now the difference signified by 'older' is always a difference from something younger. Consequently, what is becoming older than itself must also at the same time be becoming younger than itself. Now, in the process of becoming it cannot take a longer or shorter time than itself; it must take the same time with itself, whether it is becoming, or is, or has been, or will be. So, it seems, any one of the things that occupy time and have a temporal character must be of the same age as itself and also be becoming at once both older and younger than itself. But we saw that none of these characters can attach to the one.

Therefore the one has nothing to do with time and does not occupy any stretch of time.

Again, the words 'was,' 'has become,' 'was becoming' are understood to mean connection with past time; 'will be,' 'will be becoming,' 'will become,' with future time; 'is' and 'is becoming,' with time now present. Consequently, if the one has nothing to do with any time, it never has become or was becoming or was, nor can you say it has become now or is becoming or is, or that it will be becoming or will become or will be in the future. Now a thing can have being only in one of these ways. There is, accordingly, no way in which the one has being.

Therefore the one in no sense *is*.

It cannot, then, 'be' even to the extent of 'being' one, for then it would be a thing that is and has being. Rather, if we can trust such an argument as this, it appears that the one neither is one nor is at all.

142

And if a thing is not, you cannot say that it '*has*' anything or that there is anything '*of*' it. Consequently, it cannot *have* a name or be spoken of, nor can there be any knowledge or perception or opinion of it. It is not named or spoken of, not an object of opinion or of knowledge, not perceived by any creature.

Now can this possibly be the case with the one?

I do not think so, said Aristoteles.

Shall we, then, go back to our hypothesis and reconsider it from the beginning, in the hope of bringing to light some different result?

'If a one is,' we say, we have to agree what sort of consequences follow concerning it. Start afresh, then, and consider. If a one *is*, it cannot be, and yet not *have* being. So there will also be the being which the one has, and this is not the same thing as the one; otherwise

- c that being would not be *its* being, nor would it, the one, *have* that being, but to say 'a one *is*' would be tantamount to saying 'a one [*is*] *one*.' But in fact the supposition whose consequences we are to consider is not 'if a one [*is*] *one*,' but 'if a one *is*.' This implies that '*is*' and '*one*' stand for different things. Thus the short statement 'a one *is*' simply means that the one has being.

- Let us, then, once more state what will follow, if a one *is*. Consider whether this supposition does not necessarily imply that the  
 d one is such as to have parts. That follows in this way. Since '*is*' is asserted to belong to this *one* which is, and '*one*' is asserted to belong to this *being* which is one, and since '*being*' and '*one*' are not the same thing, but both belong to the same thing, namely that '*one* which *is*' that we are supposing, it follows that it is '*one* being' as a whole, and '*one*' and '*being*' will be its parts. So we must speak of each of these parts, not merely as a part, but as part of a whole.

Therefore, any '*one that is*' is a whole and also has parts.

- e Again, take each of these two parts of the one being—its unity and its being. Unity can never be lacking to the part '*being*,' nor being to the part '*unity*.' Thus each of the two parts, in its turn, will possess both unity and being; any part proves to consist of at least two parts, and so on forever by the same reasoning. Whatever part we arrive at always possesses these two parts, for a '*one*' always has being, and a '*being*' always has unity. Hence any part always proves to be  
 143 two and can never be one.

In this way, then, what is '*one being*' must be unlimited in multitude.

- We may also proceed in another way, as follows. We are saying that the one has being. That is why it *is*, and it was for that reason that a '*one which is*' was seen to be a plurality. Now take just this '*one*' which we are saying has being and conceive it just by itself alone apart from the being which we say it has. Will this '*one*' itself be found to be merely one or also a plurality? Consider. The '*one*' it-  
 b self and its being must be *different* things since the one is not being, but, as one, *has* being. If, then, the one and its being are each different from the other, it is not in virtue of being one that the one is different from the being, nor is it in virtue of being '*being*' that the being is other than the one; they differ from one another in virtue of being *different* or *other*. Thus [the term] '*different*' is not identical with either '*one*' or '*being*.'

- c Now suppose we take a selection of these terms, [say] '*being*' and '*different*,' or '*being*' and '*one*,' or '*one*' and '*different*.' In each case we are selecting a pair which may be spoken of as '*both*.' I mean, we can speak of '*being*,' and again of '*one*.' We have thus named each member of a pair. And when I say '*being* and *one*' or '*being* and *different*,' or '*different* and *one*,' and so on in every possible combination, I am in  
 d each case speaking of '*both*.' And a pair that can properly be called '*both*' must be *two*. And if a pair of things are two, each of them must

be *one*. This applies to our terms. Since each set forms a couple, each term must be *one*. And if so, then, when any one is added to any pair, the sum will be *three*. And three is odd, two even. Now if there are two, there must also be *twice times*, if three, *three times*, since two is *twice times one* and three is *three times one*. And if there are two and *twice times*, three and *three times*, there must be *twice times two* and *three times three*. And, if there are three which occur twice and two which occur three times, there must be *twice times three* and *three times two*. Thus there will be even multiples of even sets, odd multiples of odd sets, odd multiples of even sets, and even multiples of odd sets. That being so, there is no number left, which must not necessarily be.

Therefore, if a one is, there must also be number.

Now, if number is, there must be many things, and indeed an unlimited plurality of things, that *are*, for we must admit that number, unlimited in plurality, also proves to have being. And if all number has being, each part of number must have being also. Thus being is distributed throughout all the members of a plurality of beings, and is lacking to none of these beings from the smallest to the greatest; indeed it is nonsense to suggest that anything that *is* should lack being. Thus being is parceled out among beings of every possible order from smallest to greatest; it is subdivided to the furthest possible point and has an illimitable number of parts. So its parts form the greatest of multitudes.

Again, among all these parts there cannot be any which *is* part of being and yet not a [one] part. If it *is*, then, so long as it *is*, it must always be some *one* part; it cannot be *no* [not one] part. Consequently, unity must belong to every part of being, and be lacking to none, smaller or greater. And unity, being one, cannot be in many places at once as a whole. And if not as a whole, it must be as divided into parts; only so can it be present to all the parts of being at the same time. Further, that which is divided into parts must be as many as its parts. So we were wrong to say just now that being was distributed into the 'greatest' multitude of parts. Its parts are not more numerous than those into which unity is distributed, but equal in number, for nothing that *is* lacks unity, and nothing that *is one* lacks being; the two maintain their equality all through. It appears, then, that unity itself is parceled out by being, and is not only many but indefinitely numerous.

Thus not only *is* a 'one which *is*' a plurality, but unity itself is distributed by being and is necessarily many.

Further, since its parts are parts of a whole, the one, in respect of its wholeness, will be limited. For the parts are contained by the whole, and a container must be a limit.

Therefore, a 'one which *is*' is both one and many, whole and parts, limited as well as indefinitely numerous.

Since it is limited, then, it will have extremities, and if a whole,

it will have beginning, middle, and end. A thing cannot be a whole without all these three; if any one of them is lacking it will no longer  
 b be a whole. Thus the one will have beginning and end and middle. But the middle can only be what is equidistant from the extremities.

So a one, such as we have described, will have some shape, straight or round or a mixture of both.

Then, if it has these properties, it will be both (a) in itself and (b) in another.

(a) Each part is, of course, in the whole; none is outside the  
 c whole. And all the parts are contained by the whole. Now, the one is all its own parts, and neither more nor less than all. And the one is also the whole. Accordingly, since all the parts are in a whole, and the one is both all the parts and the whole, and all the parts are contained in the whole, the one must be contained by the one. In this sense it follows that one must be in itself.

(b) On the other hand, the whole is not in the parts, neither in  
 d all the parts nor in any part.

If it were in all, it would have to be also in one part, for if there were some one in which it was not, it could not be in all. But if this one part is one among all the parts, and the whole is not in this one, we can no longer say it is in all the parts.

But neither is it in *some* of the parts. If the whole were in some of the parts, the greater would be contained in the less, which is impossible.

If, then, the whole is not in several of its parts, nor in one, nor yet in all, it must be either in something else or nowhere at all. But if  
 e nowhere at all, it would be nothing, whereas it is a whole and so, since [as a whole] it is not in itself, it must be in something else.

Thus as a whole the one is in something else; as all the parts it is in itself, and thus the one must be both in itself and in another.

Now, if the one is of this character, it must be both (a) at rest and (b) in motion.

146 (a) It is at rest, since it is in itself. For if it is in one thing, and does not shift out of that thing, it will be in the same [place], namely itself, and that which is always in the same [place] must of course always be at rest.

(b) On the other hand, what is always in another must never be in the same, and therefore never at rest, and not being at rest, it must be in motion.

Therefore the one, being always both in itself and in another, must always be both in motion and at rest.

Further, if the one has the foregoing attributes, it must be (a)  
 b the same with itself and (b) different from itself, and similarly both (c) different from and (d) the same with the others.

(a) Anything is related to anything in one of the following ways. Either it is the same or different, or, if neither the same nor

different, it must stand as part to whole, or as whole to part. Now the one cannot be part of itself, nor can it stand as whole to itself as part. Again the one is not different from one, and so not different c from itself.

Therefore, since it is not different and does not stand to itself either as whole to part or as part to whole, it follows that it must be the same with itself.

(b) Again, if a thing is in a place the same with itself and also in a place other than that self, it must be different from itself; otherwise it could not be in a different place. But we saw that this was true of the one. It was at once in itself and in another.

In this respect, therefore, the one must be different from itself.

(c) Again, if something is different from something else, that something else must be different. Now, all the things which are 'not one' must be different from the one, and the one also must be different from them.

Therefore, the one is different from the others. d

(d) Now consider. Sameness itself and difference are contrary to one another. So sameness will never be in what is different, nor difference in what is the same. And if difference will never be in what is the same, there is nothing that is in which difference is present for any length of time, for if it were in something for any length of time e whatsoever, during that time difference would be in what is the same. And since it is never in what is the same, difference can never be in anything that is, and consequently neither in the 'not-ones' nor in the one. Therefore it is not difference that could make the one different from the 'not-ones,' or the 'not-ones' different from the one. Nor yet will they be different from one another by virtue of being themselves, if they do not possess difference.

147

Therefore, if neither their own character nor difference can make them different, every possibility of their being different escapes us.

Further, things which are 'not one' do not possess unity either; if they did, they would not be 'not one,' but in a sense one. So things which are 'not one' cannot be a number; if they had number, once more they would not be 'not one' in every sense. Again, the things which are 'not one,' cannot be parts of the one, because once more they would then possess unity. Consequently, if the one is one in b every sense, and the things that are 'not one' are not one in every sense, the one cannot stand to the things that are 'not one' either as whole to parts or as part to whole, nor again can the things which are 'not one' be parts of the one or wholes of which the one is part. But we said that things which do not stand to one another either as parts or as wholes, and are not different from one another, must be the same with one another. Therefore, we must say that, since the one stands in this way to the things that are 'not one,' it is the same as they.

It appears, then, that the one is different both from the others and from itself, and also the same both with them and with itself.

The argument certainly seems to lead to that conclusion, said Aristoteles.

c Is the one also both like and unlike itself and the others?

(a) Since, as we have seen, the one is different from the others, the others also of course must be different from it. And it differs from them neither more nor less than they differ from it, but just as they do, and if neither more nor less, then in a like manner. Accordingly, in so far as it has the character of 'being different' from the others, and the others in just the same way have the character of 'being different' from it, in so far the one and the others will have the same character.

d What I mean is this. When you use any word, you use it to stand for something. You can use it once or many times, but in either case you are speaking of the thing whose name it is. However many times you utter the same word, you must always mean the same thing. Now e 'different' is a word that stands for something; so when you utter it, whether once or many times, you are using it to stand for, or naming, just that thing whose name it is. Hence when we say 'the others are different from the one' and 'the one is different from the others,' we use the word 'different' twice, but nevertheless we always use it to stand for just that character whose name it is. Consequently in so far as the one is different from the others and the others are different 148 from the one, just in respect of having the character 'different' the one and the others have precisely the same character, and to have the same character is to be alike.

Thus, in so far as the one has the character of being different from the others, just in that respect it and they must be entirely alike, because they are entirely different.

(b) On the other hand, 'like' and 'unlike' are contraries, and so also are 'different' and 'same.' Now we have also seen that the one is the same as the others. And 'being the same as the others' is the contrary character to 'being different from the others.' And it has been b shown that, in so far as the one is different, it is like them. Consequently, in so far as it is the same, it will be unlike them, in respect of the character contrary to that which made it like them, namely difference. Sameness, then, will make it unlike; otherwise sameness will not be the contrary of difference.

c Therefore the one will be like and unlike the others—like in so far as different, unlike in so far as the same.

Aristoteles interposed, Yes, it seems possible to argue the case in that way.

Yes, and it can also be argued as follows. We may say that in so far as the one has the character of being 'the same' [as the others], it has not a diverse character, and so is not unlike, and so is like. And in

so far as it has the character of being 'other' [than the others], it has a diverse character, and so is unlike.

Therefore, because the one is the same as the others and because it is different, on both grounds together or on either singly it will be both like and unlike the others. d

Similarly, in relation to itself. Since, as we have seen, it is both different from itself and the same with itself, on both grounds together and on either singly it will be both like itself and unlike itself.

Again, there is the question of the one having, or not having, contact with itself and with the others.

We have seen that the one is in itself as a whole. It is also in the others. Accordingly, (a) as being in the others, it will have contact e with the others, and (b) as being in itself, while it will be precluded from contact with the others, it will have contact with itself.

In this way, then, the one will have contact both with itself and with the others.

From another point of view, if anything is to touch something it must be situated next to that thing, occupying the position adjacent to the position of the thing it touches.

(c) Accordingly, if the one is to touch itself, it must be situated next to itself, occupying the place adjacent to the place in which itself is. If the one were two, it might do this and be in two places at once, 149 but not so long as it remains one.

Therefore the same necessity which forbids the one to be two forbids it to touch itself.

(d) On the other hand, the one will not touch the others either for this reason. We are asserting that, in order to have contact, a thing must be distinct from, but next to, the thing it is to touch, and there must be no third thing between them. So, if there is to be contact, there must be at least two things. And if to the two terms a third b be added next to them, the number of terms will be three, the number of contacts two. And so the addition of every fresh term will mean the addition of one fresh contact, with the result that the contacts are always fewer by one than the amount of the numbers. For every subsequent total of terms exceeds the total of contacts by the same amount as the original pair of terms exceeded the contacts, since at c every step one term and one contact are added. Thus, however many things there are, their contacts are always fewer by one. And if there is only a one, not a pair of things, there will be no contact.

Now things that are other than one, we say, are not one and have not unity, since they are other. Consequently they do not possess number, because there is no one among them. Thus they are neither one nor two nor any other number you could name. The one, d then, is the only thing that is one, and there will be no pair, and consequently no contact. Therefore, contact being nonexistent, the one does not touch the others, nor the others the one.

Thus the total result of these considerations is that the one both touches, and does not touch, both itself and the others.

We may next inquire whether the one is both equal and unequal, alike to itself and to the others.

If the one is to be greater or less than the others or they are to be greater or less than it, neither will be greater or less than the other merely in virtue of being what they are—the one being one, and the others being other than the one—but if, besides each being such as it is, they should each possess equality, then they would be equal to one another, or if the others possess greatness, the one smallness, or the one possesses greatness, the others smallness, then whichever possesses greatness will be greater, whichever possesses smallness, less.

This pair of characters, then, greatness and smallness, must exist, for surely, if they did not exist, they could not be contrary to one another and come to be in things.

150 If, then, smallness comes to be in the one, it must be either (a) in the one as a whole or (b) in a part of it.

(a) Suppose it comes to be in the one as a whole. Then it must either stretch throughout the whole extent of the one or contain the one. If it is coextensive with the one, the smallness will be equal to the one; if containing it, greater. But smallness cannot be equal to, or greater than, anything and so discharge, not its own function, but that of greatness or equality. Therefore, smallness cannot be in the one as a whole.

(b) Hence, if it is in the one at all, it must be in a part. But not in all that part; otherwise the effect would be the same as in the case of the whole. It would be either equal to, or larger than, any part in which it might be. Therefore smallness will never be in anything, if it cannot come to be in either a part or the whole, and there will be nothing small except smallness itself.

It follows that greatness will not be in the one either, for then there would be something else, besides greatness itself, that would be 'greater,' namely the thing in which greatness was—and that in spite of the thing's having no smallness, which is required for greatness to surpass, if it is to be great. And there can be no such smallness, since smallness is not in anything anywhere.

Further, the only thing than which greatness itself is greater is smallness itself, and the only thing than which smallness is smaller is greatness itself. Hence, the others, not possessing greatness or smallness, are not greater or smaller than the one; also this pair themselves d [greatness and smallness] possess their power of exceeding or being exceeded only with reference to each other, not with reference to the one, and the one in its turn, not possessing either greatness or smallness, cannot be greater or smaller than they or than the others.

It follows that the one, if it is neither greater nor smaller than the others, cannot either exceed them or be exceeded by them, and that

which neither exceeds nor is exceeded must be of equal extent, and so equal.

Moreover, the one will also stand in this relation to itself. If it has in itself neither largeness nor smallness, it cannot either exceed or be exceeded by itself, but must be coextensive and so equal to itself.

Therefore the one will be equal both to itself and to the others.

(c) Further, if it is in itself, it must also encompass itself on the outside, and as container it will be greater than itself, and as contained, less. In this way the one will be greater and less than itself. 151

(d) Also, there can be nothing besides the one and the others. Further, anything that is must always be somewhere. And that which is in something will be in it as a less in a greater; only so can one thing be in another.

Now, since there is nothing else besides the others and the one, and they must be in something, it follows at once that they must be in each other—the others in the one and the one in the others—or be nowhere at all. Consequently, since the one is in the others, the others, as containing the one, must be greater than it, and the one, as contained by them, less than they. And since the others are in the one, by the same reasoning the one must be greater than the others, and they less than the one.

Therefore, the one is alike equal to, greater than, and less than, both itself and the others.

Further, the one, if greater, less, and equal, must be of equal measures with itself and with the others, and also of more and fewer, and if of measures, then of parts. And, being of equal, more, and fewer measures, it will also be correspondingly fewer than, more than, and equal to, both itself and the others in number. For if it is greater than anything, it will contain a greater number of measures and so of parts; if less, a smaller number; if equal, the same number.

Hence, the one, being greater and less than itself and also equal, will contain more and fewer and the same number of measures, and hence of parts. So, as having the same number of parts, it will be equal to itself in number, and as having more or fewer, more or less than itself in number.

The one will also stand in the same way to the others. Since it is seen to be greater and smaller and of the same magnitude as the others, it must also be more, fewer, and equal to them in number.

Thus, once more, it appears that the one will be alike, equal to, and more and fewer than both itself and the others in number.

Next is the question whether the one exists in time, and, as so existing, both is and becomes younger and older than itself and the others, and also neither is nor becomes younger or older than itself or the others.

Since the one *is* one, of course it has being, and to 'be' means precisely having existence in conjunction with time present, as 'was'

152 or 'will be' means having existence in conjunction with past or future time. So if the one is, it is in time.

(a) Time, moreover, is advancing. Hence since the one moves forward temporally, it is always becoming older than itself. And we remember that what is becoming older becomes older than something that is becoming younger. So, since the one is becoming older than itself, that self must be becoming younger.

b Therefore, in this sense, it is becoming both younger and older than itself.

(b) Also it is older when, in this process of becoming, it is at the present time which lies between 'was' and 'will be,' for of course, as it travels from past to future, it will never overstep the present. So, when it coincides with the present, it stops becoming older; at that time it is not becoming, but already *is*, older. For if it were getting ahead, it could never be caught up by the present, since to get ahead would mean to be in touch with both the present and the future, leaving the present behind and reaching out to the future, and so passing between the two. Whereas, if it is true of anything which is becoming that it can never pass beyond the present, it constantly stops becoming when it is at the present, and it then *is* whatever it may be that it was becoming.

This applies to the one. When, in becoming older, it coincides with the present, it stops becoming and *is* then older. Moreover, it is older than the thing it was becoming older than, namely itself. And older means older than a younger. Hence the one is also younger than itself at the time when, in becoming older, it coincides with the present. But the present is with the one always throughout all its existence, for at whatever time it is existing, it is existing 'now.'

Therefore, at all times the one both is and is becoming older and younger than itself.

(c) Also in thus being or becoming it cannot take a longer time than itself; it must take the same time. But if it is, or is becoming, for the same length of time, it is of the same age, and so neither older nor younger.

Therefore, the one, which is and is becoming for the same length of time as itself, neither is nor becomes older or younger than itself.

Next, is the one similarly related to the others?

153 (a) Things other than the one, being different things and not a different thing, are more than one; a different thing would be one, but different things must be more than one and have plurality. Hence they have a number greater than that of the one. And of a number the lesser part comes, or has come, into being before the greater part, and first of all the least, namely the one. Thus in all things that have number the one comes first, and the others, being others and not an other, are always things that have number. And what comes first comes earlier, while the others, coming later, are younger.

In this way the others will be younger than the one, the one older than the others.

Again, the one can have come to be only in a way consistent with its own nature. Now we saw that the one has parts, and hence a beginning, an end, and a middle. And the beginning of anything, whether it be the one itself or any one of the others, always comes into being first, and after the beginning, all the rest up to the end. Moreover, by 'all the rest' we shall mean parts of the whole or one, and this itself comes to be, as a one or whole, at the same moment as the end. But the end is the last part to come into being, and it is the nature of the one to come into being simultaneously with the last. Hence, if the one must come to be in a way consistent with its nature, we must say it is the nature of the one, as having come into being at the same time with the end, to come later than all the others.

Therefore, the one is younger than the others, the others older than the one.

(b) But again, a beginning or any part whatsoever of the one or of anything else, if it is a part and not parts, must be one. So 'one' must come to be along with the first part that comes to be, and again along with the second part, and cannot be lacking to every subsequent part that is added, until, on reaching the last part, a one whole is formed; it cannot be missing at the formation of any part, first, middle, or last. Therefore the one is of the same age as all the others, so that, if the one is not to contradict its own nature, it will have come to be neither before nor after the others, but at the same time.

Thus, according to this argument, the one will be neither older nor younger than the others, nor they than it, whereas by our former argument it was both older and younger, and so were the others.

So much for what it is and *has* become.

Next there is the question whether the one is becoming both older and younger than the others, and they than it, and also not becoming younger or older. Does the case stand with becoming as with being, or not?

(c) If one thing actually is older than another, it cannot be becoming older still, nor the younger younger still, by any more than their original difference in age, for if equals be added to unequals, the difference that results, in time or any other magnitude, will always be the same as the original difference. Consequently what is older or younger can never be becoming older or younger than what is younger or older, the difference in age being constant at all times. The one is or has become older, the other younger, but neither is becoming so.

Therefore, the one, if it is so, is not becoming, either older or younger than the others which are so.

(d) From another point of view, both are becoming older and

- younger. We have seen that ( $\alpha$ ) the one is older than the others, and ( $\beta$ ) they are older than it. ( $\alpha$ ) When the one is older than the others, it has, of course, been in existence for a longer time than they.
- d Now, if an equal time is added to a greater time and to a less, the greater will exceed the less by a smaller fraction. Hence, the difference in age between the one and the others will not remain into the future what it originally was; the addition of the same time to each will make the difference in age constantly less. And if a thing differs
- e less in age from something than it formerly did, it must be becoming younger than it was relatively to those things in relation to which it was formerly older. And if it is becoming younger, those other things in their turn must be becoming older than they were in relation to it. Hence what has come to be [later and is] younger is becoming older in relation to what has come to be earlier and is older. It never is older than the other, but it is always becoming so, since that other is progressing toward being younger, while it is progressing toward being
- 155 older. And the older thing, in its turn, is becoming younger than the younger in the same way. As the two move in contrary directions, they are becoming each other's contrary—the younger becoming older than the older, the older becoming younger than the younger—but they can never finally become so; if they did, they would no longer be becoming, but would be so. As it is, each is becoming older and younger than the other. The one is becoming younger than the others, because, as we saw, it is older and came into existence earlier; the
- b others are becoming older than the one, because they came into existence later. By the same reasoning, ( $\beta$ ) the others stand in the same way to the one, since, as we saw, they are older and came into existence earlier.

Thus, from the point of view ( $c$ ) in which there is no question of one thing becoming either older or younger than another, since their distance in age remains always the same, the one will not be becoming older or younger than the others, nor they than it. But from another

c point of view ( $d$ ) in which the difference between things which come into existence earlier and later must be a constantly diminishing fraction, the one and the others must be becoming both older and younger than each other.

So the conclusion of all these arguments is that the one both is, and is becoming, older and younger than itself and than the others, and also neither is, nor is becoming, either older or younger than itself or than the others.

Now, since the one is in time and has the property of becoming

d older and younger, it has a past, a future, and a present. Consequently the one was and is and will be, and it was becoming, is becoming, and will become.

Also, it can be said to *have* something, and there can be something of it, alike in past, present, and future. So there can be knowl-

edge and opinion and perception of it; in fact we are now exercising all these activities with respect to it. Further, it will *have* a name and can be spoken of; indeed it actually is being named and spoken of. And all the other characters which belong to any other things of which the above statements are true belong equally to the one.

To take up the argument yet a third time, if there is a one such as we have described—a one which is both one and many and neither one nor many and is in time—it follows that since it *is* one, it has existence at some time, and again since it *is not* one, at some time it has not existence. And since it cannot both have and not have existence at the same time, it can only have existence at one time and not have existence at another. And there must also be a time when it comes to possess existence and a time when it ceases to possess it; it can possess a thing at one time and not at another only if there are times when it acquires that thing and loses it. Now acquiring existence is called 'coming into existence,' and losing existence is called 'ceasing to exist.'

It appears, then, that the one, when it acquires or loses existence, comes into existence and ceases to exist.

Also, since it is one and many and a thing that comes to be and ceases to be, when it comes to be one, its being many ceases to be, and when it comes to be many, its being one ceases to be. And as coming to be one it must be combined, as coming to be many, separated.

Further, when it becomes like or unlike, it is subject to assimilation or dissimilation.

Also, when it becomes greater or less or equal, it must be increased or diminished or equalized.

But when, being in motion, it comes to a stand, or, being at rest, it changes to being in motion, it cannot itself occupy any time at all for this reason. Suppose it is first at rest and later in motion, or first in motion and later at rest; that cannot happen to it without its changing. But there is no time during which a thing can be at once neither in motion nor at rest. On the other hand it does not change without making a transition. When does it make the transition, then? Not while it is at rest or while it is in motion, or while it is occupying time. Consequently, the time at which it will be when it makes the transition must be that queer thing, the instant. The word 'instant' appears to mean something such that *from* it a thing passes to one or other of the two conditions. There is no transition *from* a state of rest so long as the thing is still at rest, nor *from* motion so long as it is still in motion, but this queer thing, the instant, is situated between the motion and the rest; it occupies no time at all, and the transition of the moving thing to the state of rest, or of the stationary thing to being in motion, takes place *to* and *from* the instant. Accordingly, the one, since it both is at rest and is in motion, must pass from the one

- younger. We have seen that ( $\alpha$ ) the one is older than the others, and ( $\beta$ ) they are older than it. ( $\alpha$ ) When the one is older than the others, it has, of course, been in existence for a longer time than they.
- d Now, if an equal time is added to a greater time and to a less, the greater will exceed the less by a smaller fraction. Hence, the difference in age between the one and the others will not remain into the future what it originally was; the addition of the same time to each will make the difference in age constantly less. And if a thing differs
- e less in age from something than it formerly did, it must be becoming younger than it was relatively to those things in relation to which it was formerly older. And if it is becoming younger, those other things in their turn must be becoming older than they were in relation to it. Hence what has come to be [later and is] younger is becoming older in relation to what has come to be earlier and is older. It never is older than the other, but it is always becoming so, since that other is progressing toward being younger, while it is progressing toward being
- 155 older. And the older thing, in its turn, is becoming younger than the younger in the same way. As the two move in contrary directions, they are becoming each other's contrary—the younger becoming older than the older, the older becoming younger than the younger—but they can never finally become so; if they did, they would no longer be becoming, but would be so. As it is, each is becoming older and younger than the other. The one is becoming younger than the others, because, as we saw, it is older and came into existence earlier; the
- b others are becoming older than the one, because they came into existence later. By the same reasoning, ( $\beta$ ) the others stand in the same way to the one, since, as we saw, they are older and came into existence earlier.

Thus, from the point of view ( $c$ ) in which there is no question of one thing becoming either older or younger than another, since their distance in age remains always the same, the one will not be becoming older or younger than the others, nor they than it. But from another

c point of view ( $d$ ) in which the difference between things which come into existence earlier and later must be a constantly diminishing fraction, the one and the others must be becoming both older and younger than each other.

So the conclusion of all these arguments is that the one both is, and is becoming, older and younger than itself and than the others, and also neither is, nor is becoming, either older or younger than itself or than the others.

Now, since the one is in time and has the property of becoming

d older and younger, it has a past, a future, and a present. Consequently the one was and is and will be, and it was becoming, is becoming, and will become.

Also, it can be said to *have* something, and there can be something of it, alike in past, present, and future. So there can be knowl-

edge and opinion and perception of it; in fact we are now exercising all these activities with respect to it. Further, it will *have* a name and can be spoken of; indeed it actually is being named and spoken of. And all the other characters which belong to any other things of which the above statements are true belong equally to the one.

To take up the argument yet a third time, if there is a one such as we have described—a one which is both one and many and neither one nor many and is in time—it follows that since it *is* one, it has existence at some time, and again since it *is not* one, at some time it has not existence. And since it cannot both have and not have existence at the same time, it can only have existence at one time and not have existence at another. And there must also be a time when it comes to possess existence and a time when it ceases to possess it; it can possess a thing at one time and not at another only if there are times when it acquires that thing and loses it. Now acquiring existence is called 'coming into existence,' and losing existence is called 'ceasing to exist.'

It appears, then, that the one, when it acquires or loses existence, comes into existence and ceases to exist.

Also, since it is one and many and a thing that comes to be and ceases to be, when it comes to be one, its being many ceases to be, and when it comes to be many, its being one ceases to be. And as coming to be one it must be combined, as coming to be many, separated.

Further, when it becomes like or unlike, it is subject to assimilation or dissimulation.

Also, when it becomes greater or less or equal, it must be increased or diminished or equalized.

But when, being in motion, it comes to a stand, or, being at rest, it changes to being in motion, it cannot itself occupy any time at all for this reason. Suppose it is first at rest and later in motion, or first in motion and later at rest; that cannot happen to it without its changing. But there is no time during which a thing can be at once neither in motion nor at rest. On the other hand it does not change without making a transition. When does it make the transition, then? Not while it is at rest or while it is in motion, or while it is occupying time. Consequently, the time at which it will be when it makes the transition must be that queer thing, the instant. The word 'instant' appears to mean something such that *from* it a thing passes to one or other of the two conditions. There is no transition *from* a state of rest so long as the thing is still at rest, nor *from* motion so long as it is still in motion, but this queer thing, the instant, is situated between the motion and the rest; it occupies no time at all, and the transition of the moving thing to the state of rest, or of the stationary thing to being in motion, takes place *to* and *from* the instant. Accordingly, the one, since it both is at rest and is in motion, must pass from the one

condition to the other—only so can it do both things—and when it passes, it makes the transition instantaneously; it occupies no time in making it and at that moment it cannot be either in motion or at rest.

- 157 The same holds good of its other transitions. When it passes from being in existence to ceasing to exist or from being nonexistent to coming into existence, it is then between certain motions and states; it is then neither existent nor nonexistent, and it is neither coming into existence nor ceasing to exist. By the same reasoning when it passes from one to many or from many to one, it is not either one or many, and it is not being separated or being combined. Similarly when it passes from like to unlike or from unlike to like, it is neither  
b like nor unlike, and it is neither becoming like nor becoming unlike. And when it passes from small to great or equal or in the opposite direction, it is not small or great or equal, nor is it being increased or being diminished or being equalized.

All these changes, then, may happen to the one, if it exists.

We have next to consider what will be true of the others, if there is a one. Supposing, then, that there is a one, what must be said of the things other than the one?

- Since they are other than the one, they are not the one; if they  
c were, they could not be other than it. Yet the others are not wholly destitute of the one [unity], but partake of it in a way. For things other than the one are others as having parts; if they had no parts they would be absolutely one. And parts, we say, are parts of a whole, while a whole must be a one consisting of many, and the parts will be parts of this one whole.

- For each part must be part, not of a many, but of a whole, for this  
d reason. If a thing were to be part of a many, among which itself were included, then it would be a part of itself—which is absurd—and also a part of every one of the rest, since it is supposed to be a part of them all. For if there is one of them of which it is not a part, it will be a part of the remainder exclusive of that one, and, if we proceed in that way, it will prove not to be a part of each successive one that we take, and so, not being a part of each one, it will not be a part of any one of the many. But if a thing is a part, or whatever else you please, of no one of a number of things, it cannot be a part of all those things, of no one of which it is a part. Therefore a part is part not of many or of all, but of a single entity or 'one' which we call a whole, a complete  
e 'one' composed of all. Hence if the others have parts, they must also possess wholeness and unity.

Therefore, the things other than the one must be one complete whole having parts.

- Further, the same reasoning holds of each part. It is also true of  
158 each part that it must have unity. For if each of them is a part, 'each' means that it is *one* thing, distinct from the rest and having its independent being, if we are to call it 'each.' As having unity, it will plainly

be other than unity; otherwise it would not have unity, but simply be unity itself, whereas nothing but unity itself can be unity. But both the whole and the part must *have* unity, for the whole is *one* whole, of which the parts are parts, while every part that is part of a whole is *one* part of that whole.

Now things that have a share in the one [possess unity] will be different from the one that they share in [the unity they possess]. And things different from the one will naturally be many, for if the things other than the one were neither one nor more than one, they would be nothing.

Moreover, since both things that *have* the unity of a part and things that have the unity of a whole are more than one, it follows that those things which come to *acquire* unity, must, just in themselves, be without limit of multitude. We may see that in this way. Evidently, at the time when they come to acquire unity they are not one and do not possess unity. So they are multitudes which do not contain unity. Now if we choose to take in thought from such multitudes the least portion we can conceive, that portion also, if it does not possess unity, must be not one but a multitude. And if we go on in that way considering, just by itself, the nature other than the form, any portion of it that comes into view will be without limit of multitude.

Further, when each single part becomes a part, they now have a limit in relation both to one another and to the whole, and so has the whole in relation to the parts. Thus the consequence for the things other than the one appears to be that from the combination of unity and themselves there comes to be in them something fresh, which gives them a limit with reference to one another, whereas their own nature gives them, in themselves, unlimitedness.

Thus the things other than the one, both as wholes and part by part, are unlimited and also have limit.

Moreover they are also both like and unlike one another and themselves.

In so far as they are all unlimited in respect of their own nature, they have the same character, and also in so far as they all have limit. But in so far as they have both characters, limited and unlimited, they have characters which are contrary to one another, and contraries are as unlike as possible. Thus in respect of either character singly they are like themselves and one another, but in respect of both characters taken together they are quite contrary and unlike both themselves and one another.

Thus the others will be both like and unlike themselves and one another.

Also, since we have found this to be true of them, there will be no further difficulty in showing that the things other than the one are the same as, and different from, one another, and both in motion and at rest, and have all the contrary characters.

Suppose, then, we pass over those further consequences as obvious and consider once more whether, if there is a one, it will not also be true that things other than the one have none of these characters. Let us start again from the beginning and ask, If there is a one, what must be true of the things other than the one?

The one, then, must be separate from the others and they from it. For there is no further thing distinct from both the one and the others; when we have named the one and the others, we have named  
c all things. So there is no further thing besides them, in which the one and the others alike might be. Hence they are never in the same thing, and therefore must be separate.

Also we cannot admit that what is really and truly one has parts. Therefore the one cannot be in the others as a whole, nor can parts of it be so, if it is separate from the others and also has no parts.

Consequently, the things other than the one, not possessing unity  
d either in part or as a whole, can have no unity in any way. The others, then, are not one in any sense, and there is no 'one thing' to be found among them.

It follows that the others are not many either. For if they were many, each of them would be *one* part of the whole, whereas, in fact, not having unity in any sense, they are neither one nor many, neither a whole nor parts.

Nor yet, consequently, are the others two or three, and no two things or three things can be in them, since they are altogether destitute of unity.

It follows that the others are not like the one, nor yet unlike it; there is no likeness and unlikeness in them. If they were like and unlike or had likeness and unlikeness in them, they would then have in them two characters contrary to one another. But, as we saw, it is impossible for things which do not even possess unity to possess any  
160 two things. Therefore the others are neither like nor unlike nor both at once, for, if like or unlike, they would have *one* of two characters; if both, *two* contrary characters, and that we have seen to be impossible.

Nor yet, accordingly, are they the same, or different, or in motion, or at rest, or coming to be, or ceasing to be, or greater, or less, or equal, nor have they any other characters of that kind. If the others admit any such character, they will also admit of being one, two,  
b three, odd and even, and we have seen that they cannot have those characters, being altogether destitute of unity.

Thus, if there is a one, the one is both all things and nothing whatsoever, alike with reference to itself and to the others.

We have next to consider what follows, if the one is not.

What, then, is the meaning of this supposition, 'if a one [one thing] does not exist'? It differs from the supposition, 'if a not-one  
c [no-thing] does not exist,' and not only differs from it, but is the direct contrary.

Now suppose one says, 'if largeness does not exist,' or 'if smallness does not exist,' or any other statement of that type. Obviously in each case it is a different thing that is spoken of as nonexistent. And so in the present case, if a man says 'if a one [one thing] does not exist,' it is plain that the thing he is saying does not exist is something different from other things, and we know what he is speaking of. So in speaking of a 'one' [one thing] he is speaking, in the first place, of something knowable, and in the second of something different from other things, no matter whether he attributes existence to it or non-existence; even if he says it is nonexistent, we nevertheless know what is said not to exist, and that it is distinguishable from other things. d

Starting afresh, then, from this supposition, 'if a one [one thing] does not exist,' we are to consider what consequences follow.

First, it seems, this must be true of it, that there is knowledge of it; otherwise the very meaning of the supposition that 'a one does not exist' would be unknown.

Also, it must be true that other things are different from it; otherwise it could not be spoken of as different from them. So, besides being knowable, it must have difference in character, for when you speak of the one as different from the others, you are speaking of its difference in character, not of theirs. e

And further this nonexistent one has the characters of being 'that' and 'something,' and of being related 'to this' or 'to these,' and all other such characters. If it were not 'something' and had not all those other characters, we could not have spoken of 'the one' or of things different from the one, or of anything as belonging to it or as being of it, nor could we have spoken of it as 'something.' Thus although the one cannot have existence, if it does not exist, there is nothing against its having many characters; indeed it must, if it is *this* one, and not another that does not exist. If what is not to exist is neither *the one* nor *this* and the statement is about something else, we ought not so much as to open our lips, but granted that we are supposing the non-existence of *this one* and not of something else, it must have the character of being *this* and many other characters as well. 161

It follows that the one possesses unlikeness with respect to the others. For the others, being different, will actually be of different character—that is, of other character—that is, unlike. And if they are unlike the one, unlikes must be unlike an unlike. Therefore the one also will possess unlikeness, with respect to which the others are unlike it. b

Moreover, if it has unlikeness to the others, it must have likeness to itself. For if the one has unlikeness to the one, what we are speaking of will not be such as the one in character, and our supposition will not be about a one, but about something other than a one. But that is inadmissible.

The one, therefore, must have likeness to itself. c

Further, the one is not equal to the others. If it were equal, that would at once imply that it exists and also is like them in respect of

this equality. But both implications are impossible, if a one does not exist. And since it is not equal to the others, the others must be not equal to it. And things that are not equal are unequal, and unequal  
 a things are unequal to an unequal. So the one has inequality, with reference to which the others are unequal to it.

On the other hand, inequality implies greatness and smallness, and accordingly these must belong to such a one as we are describing. Now greatness and smallness are always kept apart from one another. So there is always something between them, and this can only be equality. Accordingly, anything that has greatness and smallness has also equality between the two.

e So a one which does not exist will, it appears, have equality, greatness, and smallness.

Further, it must in some sense even possess being. For it must be in the state we are ascribing to it; otherwise we should not be speaking the truth in saying that the one does not exist. If we are speaking the truth, evidently the things we are speaking of must *be*. So, since we do claim to be speaking the truth, we must also assert that we are  
 162 speaking of things that are. So it appears that the one *is* nonexistent. If it *is not* nonexistent, if it somehow slips away from being so to not being so, it will at once follow that it *is* existent. Accordingly, if it is not to exist, it must have the fact of *being* nonexistent to secure its nonexistence, just as the existent must have the fact of *not being* nonexistent, in order that it may be possible for it completely to exist. The only way to secure that the existent shall exist, and that the nonexistent shall not exist, is this. The existent must have the 'being' implied in 'being existent' and the 'not-being' implied in 'not being nonexistent,' if it is to have complete existence, and the nonexistent, if it is to  
 b have complete nonexistence, must have the 'not-being' implied in 'not being existent' and the 'being' implied in 'being nonexistent.' Thus, since the existent has not-being and the nonexistent has being, the one also, since it does not exist, must have being in order to be nonexistent.

Thus it appears that the one has being, if it *is* nonexistent, and also, since it *is not* existent, has not-being.

Now a thing which is in a certain condition can not-be in that  
 c condition only by passing out of it. So anything that both is, and is not, in such and such a condition implies transition, and transition is motion. Now we have seen that the one is existent and also is nonexistent, and accordingly is, and is not, in a certain condition. Therefore the nonexistent one has been shown to be a thing that moves, since it admits transition from being to not-being.

On the other hand, if the one is not anywhere in the world of existence—and it is not, if it does not exist—it cannot shift from one  
 d place to another. Therefore it cannot move by shifting its position. Nor yet can it revolve in the same [place], since it has no point of

contact with what is the same, for what is the same is existent, and the nonexistent cannot be *in* anything that exists. Therefore the one, if nonexistent, cannot revolve in that in which it is not.

Nor can the one, either when existent or when nonexistent, alter from itself in character; if it did, we should no longer be speaking of the one, but of something other than it.

If, then, it does not alter in character and neither revolves in the same place nor shifts from one place to another, there is no other motion it can have. And the motionless must be at rest, and, if at rest, stationary.

It appears, then, that the nonexistent one is both at rest and in motion.

Further, if it does move, it must become unlike, since in whatever respect a thing moves, to that extent it is no longer in the same condition as before, but in a different condition. So, as moving, the one does become unlike. Also in so far as it is not moving in any respect, it will not be becoming unlike in any way. Consequently, the nonexistent one, in so far as it moves, becomes unlike, and in those respects in which it has no motion, it does not become unlike.

Therefore, the nonexistent one both becomes, and does not become, unlike.

And a thing that becomes unlike must *come to be* different from what it was, and must *cease to be* in its former condition, while what does not become unlike does not come to be or cease to be. And so the nonexistent one, as becoming unlike, comes to be and ceases to be, and as not becoming unlike, it does neither.

Thus the nonexistent one both comes to be and ceases to be, and also does not come to be or cease to be.

Once more, then, let us go back to our starting point to see whether we shall reach results different from these. Our question is, If a one is not, what will follow concerning it?

The words 'is not' mean simply the absence of being from anything that we say is not. We do not mean that the thing in a sense is not, though in another sense it is. The words mean without any qualification that the thing which is not in no sense or manner is, and does not possess being in any way. So what is not cannot exist or have being in any sense or manner.

And 'coming to be' and 'ceasing to be' mean, as we said, nothing else than acquiring being and losing it. But a thing which has nothing at all to do with being cannot acquire or lose it. So the one, since it 'is' in no sense whatever, must not possess being or lose or acquire it in any way. Therefore the one which is not, not possessing being in any sense, neither ceases to be nor comes to be.

Consequently, neither does it change in character in any way, for if it suffered such change it would be coming to be or ceasing to be.

And if it does not change in character, it cannot be in motion. On the other hand, we cannot speak of what is nowhere at all as being at rest either, for what is at rest must always be in something [some place or condition] that is the same. Thus that which is not must not be said ever to be in motion or at rest.

Further, nothing that is can belong to it; to have a character that  
 164 *is* would imply that it had being. Therefore it has not greatness or smallness or equality. Nor can it have likeness to, or difference of character from, either itself or the others.

And if nothing can stand in relation to it, the others cannot be anything to it. They cannot be either like it or unlike, the same or different.

Again, we cannot attribute to 'what is not' anything that is; we cannot say it is 'something' or 'this thing,' or that it is so-and-so 'of this' or 'of another' or 'to another,' or that it is at any time, past, present, or future, or that there is anything 'of it'—any knowledge or opinion, or perception of it—or that it *has* anything, even a name, so as to be the subject of discourse.

Thus a one which is not cannot have any character whatsoever.

Let us go on, then, to the question, If there is no one, what must be true of the others?

Obviously it must be true that they are others; if it were not, we could not be talking about 'the others.' And if we are talking about  
 c the others, things that are others must be different; 'other' and 'different' are two names for the same thing. Moreover, we speak of a thing as different from, or other than, something that is different from, or other than, it. So the others must have something to be 'other than.' What can this something be? Not the one, for there is no one. They must, then, be other than each other; that is the only possibility left, if they are not to be other than nothing.

Accordingly they must differ from each other as multitudes from multitudes; they cannot differ as one thing from another one, since there is no one [one thing]. Rather, it seems, each mass of them must  
 d be without limit of multitude; if you take what seems to be a minimum, suddenly, as might happen in a dream, what you took to be one appears many, and what had seemed to be least appears enormous in comparison with the small change for it. It is, then, as masses of this sort that the others are other than each other, if they are other without there being any one.

And there will be many such masses, each appearing to be one,  
 e but not really being so, if there is to be no one. So they will seem to have number, since each seems to be one, and they are many. And some among them will appear even, some odd, but falsely, if there is to be no one.

Further, they will seem, as we are saying, to have a smallest in  
 165 them, but this smallest appears as a 'many,' which is great in com-

parison with the smallness of each of that many. Also each mass will be imagined equal to the many smalls, for it could not pass in appearance from larger to smaller without seeming to reach the intermediate stage, which will be a semblance of equality.

Also each mass will appear as having a limit in relation to another mass. With respect to itself, it has neither beginning nor end nor middle, since whenever you fix your thought on any part of them and take that as beginning or middle or end, another beginning always appears before the beginning, another end leftover after the end, and within the middle others that are more in the middle and smaller, because you cannot apprehend any of them as a 'one,' since there is no one. So anything there is, upon which you may fix your thought, must be frittered away in subdivision; anything we may take will always be a mass without a one. To a dim and distant view such a thing must appear one, but to closer and keener inspection each must appear without limit of multitude, being destitute of that one which does not exist. b

Thus, if there is no one, but only things other than the one, each of these others must appear both unlimited in multitude and limited, both one and many.

Also, they will appear both like and unlike. As with scene paintings, to the distant spectator all will appear as one thing, and seem to have the same character and so to be alike, but if you approach nearer, they seem many and different and this semblance of difference will make them seem different in character and unlike one another. Thus these masses must appear both like and unlike themselves and each other. d

Moreover, they must appear both the same and different from one another, both in contact and apart from one another, both in every sort of motion and at rest in every respect, both coming to be and ceasing to be and doing neither, and so on with all characters of that sort, which could easily be enumerated. All this follows, if there are many, but no one. e

Now let us go back to the beginning for the last time and ask, If there is no one, but only things other than one, what must follow?

The others will not be one, but neither will they be many. For if they are to be many, there must be a one among them, since, if none of them is one thing (ἓν), they will all be no-thing (οὐδέν), and so not many either. But there is no one among them; so the others are neither one nor many.

Nor do they appear one or many. For the others cannot in any sense or manner have any connection with a nonentity, nor can any element of a nonentity be present to any of them, since a nonentity has no elements. Consequently neither can any appearance or seeming (δόξα) of that which has no being be found in the others, nor can any notion whatsoever of what has no being be entertained as applied

to the others. So if there is no one, none of the others can be so much  
b as imagined to be one, nor yet to be many, for you cannot imagine  
many without a one.

Therefore, if there is no one, the others neither are, nor can be  
imagined to be, one or many.

Nor yet, if there is no one, can the others be or appear like or un-  
like, or the same or different, or in contact or apart, and so on with all  
the other characters which we have just been saying they appear to  
have.

Thus, in sum, we may conclude, If there is no one, there is noth-  
ing at all.

To this we may add the conclusion. It seems that, whether there  
is or is not a one, both that one and the others alike are and are not,  
and appear and do not appear to be. all manner of things in all manner  
of ways, with respect to themselves and to one another.

Most true.

# SOPHIST

---

*The Parmenides, Philebus, Sophist, and Statesman are a group of dialogues which resemble each other and are different from all the rest. They are the last writing Plato did, with the exception of the Laws, which stands in a class by itself. In the Philebus, as has been pointed out, Plato announces that he is entering upon a new path, he is "forging weapons of another make," changing his method of arguing. The dialogues cease to be conversations. They are close arguments rarely relieved by illustration, and only in the Philebus is the chief part given to Socrates. In the Sophist and the Statesman he is present, but takes no share in the discussion. He is not mentioned in the Laws.*

*In the Statesman, which follows the Sophist, there is a striking passage about "an impression of tediousness experienced in the discussion regarding the Sophist and the being of not-being." Plato follows this up with—to paraphrase somewhat—"I know that it was felt to be too long and I reproached myself with this, fearing it was not only tedious, but irrelevant." Here we are introduced to Plato's audience, clearly a critical one. It charged Plato with being dull, the most intolerable of all accusations because the only one nobody can defend himself against. Plato was stung too sharply by it to bear this fact in mind. His attempt at defense is made with calm superiority. "We shall not look for such length in an argument as is 'suitable' for giving pleasure. If either a full-length statement of an argument or an unusually brief one leaves the hearer more able to find real forms, there must be no expression of annoyance at its length or its brevity as the case may be. A man who criticizes the length of an argument must be required to support his grumble with a proof that a briefer statement would have left him more able to demonstrate real truth by reasoned argument. Blame and praise on other grounds we must simply ignore and act as though we had not heard them at all." For a moment Plato stands on the ordinary human level.*

*A very little reading in the Sophist shows how justified the critics were. It abounds in such statements as, "What is different is always so called with reference to another thing. It would not be so, if existence and difference were not very different things. If difference partook of both characters as existence does, there would sometimes be, within the class of different things, something that was different not*

with reference to another thing." Or, "Motion really is a thing that is not and a thing that is. It must, then, be possible for 'that which is not' to be, not only in the case of motion but of all the other kinds. For in the case of them all the nature of difference makes each one of them different from existence, and hence we shall be right to speak of them all as things that 'are not,' and again, because they partake of existence, to say that they 'are.'" To this the young Theaetetus, who has already shown his brilliant mind in the dialogue of that name, answers, "No doubt."

Through this mist of words it finally emerges that Plato is demolishing a widespread notion which was threatening the very basis of reasoning, that a false statement is impossible. "No one," the argument ran, "could either think or say 'what is not,' because what is not never has any sort of being." It seems incredible to us that this sort of verbal trickery could have stood in the way of real thought, but so it was, and this dialogue marked a genuine advance in the use of the tools of the mind when Plato showed that if you say A is not B you do not say that A is not something, i.e., that it is nothing, but merely that it is "other," different from B.

The argument is hung on the figure of the Sophist apparently quite arbitrarily. No real picture is given of the men who were the professional instructors of Greece for many years. All Plato does is to ascribe to them every notion he disapproves. He detested the whole band of Sophists. To him they were shallow-minded, pretentious, superficial, mercenary—they were really doing what Socrates was charged with, corrupting the minds of the young.

---

216 THEODORUS: Here we are, Socrates, faithful to our appointment of yesterday, and, what is more, we have brought a guest with us. Our friend here is a native of Elea; he belongs to the school of Parmenides and Zeno, and is devoted to philosophy.

SOCRATES: Perhaps, Theodorus, it is no ordinary guest but some god that you have brought us unawares. Homer tells us that gods attend upon the goings of men of mercy and justice, and not least among them the god of strangers comes to mark the orderly or lawless doings of mankind. Your companion may be one of those higher powers, who intends to observe and expose our weakness in philosophical discourse, like a very spirit of refutation.

---

From *Plato's Theory of Knowledge: the Theaetetus and the Sophist*, translated with a running commentary by Francis Macdonald Cornford (London, 1935); with a passage from the translation by B. Jowett in *The Dialogues of Plato*, 3rd edn. (Oxford, 1931; first printed, 1892).

THEODORUS: That is not our friend's way, Socrates; he is more reasonable than the devotees of verbal dispute. I should not call him a god by any means, but there is something divine about him. I would say that of any philosopher.

c

SOCRATES: And rightly, my friend, but one might almost say that the type you mention is hardly easier to discern than the god. Such men—the genuine, not the sham philosophers—as they go from city to city surveying from a height the life beneath them, appear, owing to the world's blindness, to wear all sorts of shapes. To some they seem of no account, to others above all worth; now they wear the guise of statesmen, now of Sophists, and sometimes they may give the impression of simply being mad. But if our guest will allow me, I should like to ask him what his countrymen thought and how they used these names.

THEODORUS: What names?

SOCRATES: Sophist, statesman, philosopher.

THEODORUS: What is your question exactly? What sort of difficulty about these names have you in mind?

SOCRATES: This. Did they think of all these as a single type, or as two, or did they distinguish three types and attach one of the three corresponding names to each?

THEODORUS: I imagine you are quite welcome to the information. Is not that so, sir?

STRANGER: Yes, Theodorus, perfectly welcome, and the answer is not difficult. They thought of them as three different types, but it is not so short and easy a task to define each one of them clearly.

b

THEODORUS: As luck would have it, Socrates, you have hit upon a subject closely allied to one on which we were pressing him with questions before we came here. He tried to put us off with the same excuse he has just made to you, though he admits he has been thoroughly instructed and has not forgotten what he heard.

SOCRATES: Do not deny us, then, the first favor we ask. Tell us this much. Which do you commonly prefer—to discourse at length by yourself on any matter you wish to make clear, or to use the method of asking questions, as Parmenides himself did on one occasion in developing some magnificent arguments in my presence, when I was young and he quite an elderly man?

c

STRANGER: When the other party to the conversation is tractable and gives no trouble, to address him is the easier course; otherwise, to speak by oneself.

d

SOCRATES: Then you may choose any of the company you will; they will all follow you and respond amenably. But if you take my advice, you will choose one of the younger men—Theaetetus here or any other you may prefer.

STRANGER: I feel some shyness, Socrates, at the notion that, at my first meeting with you and your friends, instead of exchanging our

ideas in the give-and-take of ordinary conversation, I should spin out  
 e a long discourse by myself or even address it to another, as if I were  
 giving a display of eloquence. For indeed the question you have just  
 raised is not so easy a matter as one might suppose, on hearing it so  
 simply put, but it calls for a very long discussion. On the other hand,  
 to refuse you and your friends a request, especially one put to me in  
 218 such terms as you have used, strikes me as a breach of civility in a  
 guest. That Theaetetus should be the other party to our conversation is  
 a proposal which my earlier talk with him, as well as your recommen-  
 dation, makes exceedingly welcome.

THEAETETUS: Then do as you say, sir; you will, as Socrates  
 said, be conferring a favor on us all.

STRANGER: On that point, Theaetetus, no more need be said;  
 the discussion from now onward must, it seems, be carried on with  
 you. But if the long task should after all weigh heavy on you, your  
 friends here, not I, must bear the blame.

b THEAETETUS: I do not feel at this moment as if I should sink  
 under it, but should something of that sort happen, we will call in Soc-  
 rates' namesake here, who is of my own age and shares my pursuits.  
 He is quite used to working out most questions with me.

STRANGER: A good suggestion. That shall be for you to consider  
 as our conversation goes forward. What now concerns us both is our  
 joint inquiry. We had better, I think, begin by studying the Sophist  
 c and try to bring his nature to light in a clear formula. At present, you  
 see, all that you and I possess in common is the name. The thing to  
 which each of us gives that name we may perhaps have privately be-  
 fore our minds, but it is always desirable to have reached an agree-  
 ment about the thing itself by means of explicit statements, rather  
 than be content to use the same word without formulating what it  
 means. It is not so easy to comprehend this group we intend to exam-  
 ine or to say what it means to be a Sophist. However, when some great  
 d task is to be properly carried through, everyone has long since found  
 it a good rule to take something comparatively small and easy and  
 practice on that, before attempting the big thing itself. That is the  
 course I recommend for us now, Theaetetus. Judging the Sophist to  
 be a very troublesome sort of creature to hunt down, let us first prac-  
 tice the method of tracking him on some easier quarry—unless you  
 have some readier means to suggest?

THEAETETUS: No, I have none.

\* STRANGER: Then suppose that we work out some lesser ex-  
 ample, which will be a pattern of the greater?

\* [The translator here omits the long passage (218d–230e) in which  
 the Stranger illustrates the method to be used in defining the Sophist. The  
 editors prefer to avoid this break in the Platonic text. The translation of  
 this passage is that of B. Jowett.]

THEAETETUS : Good.

STRANGER : What is there which is well known and not great, and is yet as susceptible of definition as any larger thing? Shall I say an angler? He is familiar to all of us, and not a very interesting or important person.

THEAETETUS : He is not.

STRANGER : Yet I suspect that he will furnish us with the sort of definition and line of inquiry which we want.

THEAETETUS : Very good.

STRANGER : Let us begin by asking whether he is a man having art or not having art, but some other power.

THEAETETUS : He is clearly a man of art.

STRANGER : And of arts there are two kinds?

THEAETETUS : What are they?

STRANGER : There is agriculture, and the tending of mortal creatures, and the art of constructing or molding vessels, and there is the art of imitation—all these may be appropriately called by a single name.

THEAETETUS : What do you mean? And what is the name?

STRANGER : He who brings into existence something that did not exist before is said to be a producer, and that which is brought into existence is said to be produced.

THEAETETUS : True.

STRANGER : And all the arts which were just now mentioned are characterized by this power of producing?

THEAETETUS : They are.

STRANGER : Then let us sum them up under the name of productive or creative art.

THEAETETUS : Very good.

STRANGER : Next follows the whole class of learning and cognition; then comes trade, fighting, hunting. And since none of these produces anything, but is only engaged in conquering by word or deed, or in preventing others from conquering, things which exist and have been already produced—in each and all of these branches there appears to be an art which may be called acquisitive.

THEAETETUS : Yes, that is the proper name.

STRANGER : Seeing, then, that all arts are either acquisitive or creative, in which class shall we place the art of the angler?

THEAETETUS : Clearly in the acquisitive class.

STRANGER : And the acquisitive may be subdivided into two parts. There is exchange, which is voluntary and is effected by gifts, hire, purchase, and the other part of acquisitive, which takes by force of word or deed, may be termed conquest?

THEAETETUS : That is implied in what has been said.

STRANGER : And may not conquest be again subdivided?

THEAETETUS : How?

e STRANGER: Open force may be called fighting, and secret force may have the general name of hunting?

THEAETETUS: Yes.

STRANGER: And there is no reason why the art of hunting should not be further divided.

THEAETETUS: How would you make the division?

STRANGER: Into the hunting of living and of lifeless prey.

THEAETETUS: Yes, if both kinds exist.

220 STRANGER: Of course they exist, but the hunting after lifeless things having no special name, except some sorts of diving, and other small matters, may be omitted; the hunting after living things may be called animal hunting.

THEAETETUS: Yes.

STRANGER: And animal hunting may be truly said to have two divisions, land animal hunting, which has many kinds and names, and water animal hunting, or the hunting after animals who swim?

THEAETETUS: True.

b STRANGER: And of swimming animals, one class lives on the wing and the other in the water?

THEAETETUS: Certainly.

STRANGER: Fowling is the general term under which the hunting of all birds is included.

THEAETETUS: True.

STRANGER: The hunting of animals who live in the water has the general name of fishing.

THEAETETUS: Yes.

STRANGER: And this sort of hunting may be further divided also into two principal kinds?

THEAETETUS: What are they?

STRANGER: There is one kind which takes them in nets, another which takes them by a blow.

THEAETETUS: What do you mean, and how do you distinguish them?

c STRANGER: As to the first kind—all that surrounds and encloses anything to prevent egress, may be rightly called an enclosure.

THEAETETUS: Very true.

STRANGER: For which reason twig baskets, casting nets, nooses, creels, and the like may all be termed 'enclosures'?

THEAETETUS: True.

STRANGER: And therefore this first kind of capture may be called by us capture with enclosures, or something of that sort?

THEAETETUS: Yes.

d STRANGER: The other kind, which is practiced by a blow with hooks and three-pronged spears, when summed up under one name, may be called striking, unless you, Theaetetus, can find some better name?

**THEAETETUS** : Never mind the name—what you suggest will do very well.

**STRANGER** : There is one mode of striking, which is done at night, and by the light of a fire, and is by the hunters themselves called firing, or spearing by firelight.

**THEAETETUS** : True.

**STRANGER** : And the fishing by day is called by the general name of barbing, because the spears, too, are barbed at the point.

**THEAETETUS** : Yes, that is the term. e

**STRANGER** : Of this barb fishing, that which strikes the fish who is below from above is called spearing, because this is the way in which the three-pronged spears are mostly used.

**THEAETETUS** : Yes, it is often called so.

**STRANGER** : Then now there is only one kind remaining.

**THEAETETUS** : What is that?

**STRANGER** : When a hook is used, and the fish is not struck in any chance part of his body, as he is with the spear, but only about the head and mouth, and is then drawn out from below upward with reeds and rods—what is the right name of that mode of fishing, The- 221  
aetetus?

**THEAETETUS** : I suspect that we have now discovered the object of our search.

**STRANGER** : Then now you and I have come to an understanding not only about the name of the angler's art, but about the definition of the thing itself. One half of all art was acquisitive—half of the b  
acquisitive art was conquest or taking by force, half of this was hunting, and half of hunting was hunting animals; half of this was hunting water animals; of this again, the under half was fishing; half of fishing was striking; a part of striking was fishing with a barb, and one half of this again, being the kind which strikes with a hook and draws c  
the fish from below upward, is the art which we have been seeking, and which from the nature of the operation is denoted angling or drawing up (ἀσπολιευτική, ἀνασπᾶσθαι).

**THEAETETUS** : The result has been quite satisfactorily brought out.

**STRANGER** : And now, following this pattern, let us endeavor to find out what a Sophist is.

**THEAETETUS** : By all means.

**STRANGER** : The first question about the angler was, whether he was a skilled artist or unskilled?

**THEAETETUS** : True.

**STRANGER** : And shall we call our new friend unskilled, or a d  
thorough master of his craft?

**THEAETETUS** : Certainly not unskilled, for his name, as, indeed, you imply, must surely express his nature.

**STRANGER** : Then he must be supposed to have some art.

THEAETETUS: What art?

STRANGER: By heaven, they are cousins! It never occurred to us.

THEAETETUS: Who are cousins?

STRANGER: The angler and the Sophist.

THEAETETUS: In what way are they related?

STRANGER: They both appear to me to be hunters.

THEAETETUS: How the Sophist? Of the other we have spoken.

STRANGER: You remember our division of hunting, into hunting after swimming animals and land animals?

THEAETETUS: Yes.

STRANGER: And you remember that we subdivided the swimming and left the land animals, saying that there were many kinds of them?

222 THEAETETUS: Certainly.

STRANGER: Thus far, then, the Sophist and the angler, starting from the art of acquiring, take the same road?

THEAETETUS: So it would appear.

STRANGER: Their paths diverge when they reach the art of animal hunting—the one going to the seashore, and to the rivers, and to the lakes, and angling for the animals which are in them.

THEAETETUS: Very true.

STRANGER: While the other goes to land and water of another sort—rivers of wealth and broad meadowlands of generous youth, and he also is intending to take the animals which are in them.

b THEAETETUS: What do you mean?

STRANGER: Of hunting on land there are two principal divisions.

THEAETETUS: What are they?

STRANGER: One is the hunting of tame, and the other of wild animals.

THEAETETUS: But are tame animals ever hunted?

STRANGER: Yes, if you include man under tame animals. But if you like you may say that there are no tame animals, or that, if there are, man is not among them, or you may say that man is a tame animal but is not hunted—you shall decide which of these alternatives you prefer.

c THEAETETUS: I should say, Stranger, that man is a tame animal, and I admit that he is hunted.

STRANGER: Then let us divide the hunting of tame animals into two parts.

THEAETETUS: How shall we make the division?

STRANGER: Let us define piracy, manstealing, tyranny, the whole military art, by one name, as hunting with violence.

THEAETETUS: Very good.

STRANGER: But the art of the lawyer, of the popular orator,

and the art of conversation may be called in one word the art of persuasion.

THEAETETUS : True.

STRANGER : And of persuasion, there may be said to be two kinds?

THEAETETUS : What are they?

STRANGER : One is private, and the other public.

THEAETETUS : Yes, each of them forms a class.

STRANGER : And of private hunting, one sort receives hire, and the other brings gifts.

THEAETETUS : I do not understand you.

STRANGER : You seem never to have observed the manner in which lovers hunt.

THEAETETUS : To what do you refer?

STRANGER : I mean that they lavish gifts on those whom they hunt in addition to other inducements.

THEAETETUS : Most true.

STRANGER : Let us admit this, then, to be the amatory art.

THEAETETUS : Certainly.

STRANGER : But that sort of hireling whose conversation is pleasing and who baits his hook only with pleasure and exacts nothing but his maintenance in return, we should all, if I am not mistaken, describe as possessing flattery or an art of making things pleasant. 223

THEAETETUS : Certainly.

STRANGER : And that sort, which professes to form acquaintances only for the sake of virtue, and demands a reward in the shape of money, may be fairly called by another name?

THEAETETUS : To be sure.

STRANGER : And what is the name? Will you tell me?

THEAETETUS : It is obvious enough, for I believe that we have discovered the Sophist—which is, as I conceive, the proper name for the class described.

STRANGER : Then now, Theaetetus, his art may be traced as a branch of the appropriative, acquisitive family—which hunts animals, living, land, tame animals—which hunts man, privately, for hire, taking money in exchange, having the semblance of education—and this is termed Sophistry, and is a hunt after young men of wealth and rank—such is the conclusion.

THEAETETUS : Just so.

STRANGER : Let us take another branch of his genealogy, for he is a professor of a great and many-sided art. And if we look back at what has preceded we see that he presents another aspect, besides that of which we are speaking.

THEAETETUS : In what respect?

STRANGER : There were two sorts of acquisitive art—the one concerned with hunting, the other with exchange..

THEAETETUS : There were.

STRANGER : And of the art of exchange there are two divisions, the one of giving, and the other of selling.

THEAETETUS : Let us assume that.

STRANGER : Next, we will suppose the art of selling to be divided into two parts.

d THEAETETUS : How?

STRANGER : There is one part which is distinguished as the sale of a man's own productions; another, which is the exchange of the works of others.

THEAETETUS : Certainly.

STRANGER : And is not that part of exchange which takes place in the city, being about half of the whole, termed retailing?

THEAETETUS : Yes.

STRANGER : And that which exchanges the goods of one city for those of another by selling and buying is the exchange of the merchant?

THEAETETUS : To be sure.

e STRANGER : And you are aware that this exchange of the merchant is of two kinds; it is partly concerned with food for the use of the body, and partly with the food of the soul which is bartered and received in exchange for money.

THEAETETUS : What do you mean?

STRANGER : You want to know what is the meaning of food for the soul; the other kind you surely understand.

THEAETETUS : Yes.

224 STRANGER : Take music in general, and painting and mario-  
nette playing, and many other things, which are purchased in one city, and carried away and sold in another—wares of the soul which are hawked about either for the sake of instruction or amusement. May not he who takes them about and sells them be quite as truly called a merchant as he who sells meats and drinks?

THEAETETUS : To be sure he may.

b STRANGER : And would you not call by the same name him who buys up knowledge and goes about from city to city exchanging his wares for money?

THEAETETUS : Certainly I should.

STRANGER : Of this merchandise of the soul, may not one part be fairly termed the art of display? And there is another part which is certainly not less ridiculous, but being a trade in learning must be called by some name germane to the matter?

THEAETETUS : Certainly.

c STRANGER : The latter should have two names—one descriptive of the sale of the knowledge of virtue, and the other of the sale of other kinds of knowledge.

THEAETETUS : Of course.

STRANGER: The name of art seller corresponds well enough to the latter, but you must try and tell me the name of the other.

THEAETETUS: He must be the Sophist, whom we are seeking; no other name can possibly be right.

STRANGER: No other, and so this trader in virtue again turns out to be our friend the Sophist, whose art may now be traced from the art of acquisition through exchange, trade, merchandise, to a merchandise of the soul which is concerned with speech and the knowledge of virtue.

THEAETETUS: Quite true.

STRANGER: And there may be a third reappearance of him—for he may have settled down in a city, and may fabricate as well as buy these same wares, intending to live by selling them, and he would still be called a Sophist?

THEAETETUS: Certainly.

STRANGER: Then that part of acquisitive art which exchanges, and of exchange which either sells a man's own productions or retails those of others, as the case may be, and in either way sells the knowledge of virtue, you would again term Sophistry?

THEAETETUS: I must, if I am to keep pace with the argument.

STRANGER: Let us consider once more whether there may not be yet another aspect of Sophistry.

THEAETETUS: What is it?

STRANGER: In the acquisitive there was a subdivision of the combative or fighting art.

THEAETETUS: There was.

STRANGER: Perhaps we had better divide it.

THEAETETUS: What shall be the divisions?

STRANGER: There shall be one division of the competitive, and another of the pugnacious.

THEAETETUS: Very good.

STRANGER: That part of the pugnacious which is a contest of bodily strength may be properly called by some such name as violent.

THEAETETUS: True.

STRANGER: And when the war is one of words, it may be termed controversy?

THEAETETUS: Yes.

STRANGER: And controversy may be of two kinds?

THEAETETUS: What are they?

STRANGER: When long speeches are answered by long speeches, and there is public discussion about the just and unjust, that is forensic controversy.

THEAETETUS: Yes.

STRANGER: And there is a private sort of controversy, which is cut up into questions and answers, and this is commonly called disputation?

THEAETETUS : Yes, that is the name.

- c STRANGER : And of disputation, that sort which is only a discussion about contracts, and is carried on at random, and without rules of art, is recognized by the reasoning faculty to be a distinct class, but has hitherto had no distinctive name, and does not deserve to receive one from us.

THEAETETUS : No, for the different sorts of it are too minute and heterogeneous.

STRANGER : But that which proceeds by rules of art to dispute about justice and injustice in their own nature, and about things in general, we have been accustomed to call argumentation [eristic]?

THEAETETUS : Certainly.

- d STRANGER : And of argumentation, one sort wastes money, and the other makes money.

THEAETETUS : Very true.

STRANGER : Suppose we try and give to each of these two classes a name.

THEAETETUS : Let us do so.

STRANGER : I should say that the habit which leads a man to neglect his own affairs for the pleasure of conversation, of which the style is far from being agreeable to the majority of his hearers, may be fairly termed loquacity. Such is my opinion.

THEAETETUS : That is the common name for it.

- e STRANGER : But now who the other is, who makes money out of private disputation, it is your turn to say.

THEAETETUS : There is only one true answer. He is the wonderful Sophist, of whom we are in pursuit, and who reappears again for the fourth time.

- 226 STRANGER : Yes, and with a fresh pedigree, for he is the money-making species of the eristic, disputatious, controversial, pugnacious, combative, acquisitive family, the argument has already proved.

THEAETETUS : Certainly.

STRANGER : How true was the observation that he was a many-sided animal, and not to be caught with one hand, as they say!

THEAETETUS : Then you must catch him with two.

- b STRANGER : Yes, we must, if we can. And therefore let us try another track in our pursuit of him. You are aware that there are certain mental occupations which have names among servants?

THEAETETUS : Yes, there are many such. Which of them do you mean?

STRANGER : I mean such as sifting, straining, winnowing, threshing.

THEAETETUS : Certainly.

STRANGER : And besides these there are a great many more, such as carding, spinning, adjusting the warp and the woof, and thousands of similar expressions are used in the arts.

THEAETETUS: Of what are they to be patterns, and what are c  
we going to do with them all?

STRANGER: I think that in all of these there is implied a notion  
of division.

THEAETETUS: Yes.

STRANGER: Then if, as I was saying, there is one art which in-  
cludes all of them, ought not that art to have one name?

THEAETETUS: And what is the name of the art?

STRANGER: The art of discerning or discriminating.

THEAETETUS: Very good.

STRANGER: Think whether you cannot divide this.

THEAETETUS: I should have to think a long while.

STRANGER: In all the previously named processes either like d  
has been separated from like or the better from the worse.

THEAETETUS: I see now what you mean.

STRANGER: There is no name for the first kind of separation;  
of the second, which throws away the worse and preserves the better,  
I do know a name.

THEAETETUS: What is it?

STRANGER: Every discernment or discrimination of that kind,  
as I have observed, is called a purification.

THEAETETUS: Yes, that is the usual expression.

STRANGER: And anyone may see that purification is of two e  
kinds.

THEAETETUS: Perhaps so, if he were allowed time to think,  
but I do not see at this moment.

STRANGER: There are many purifications of bodies which may  
with propriety be comprehended under a single name.

THEAETETUS: What are they, and what is their name?

STRANGER: There is the purification of living bodies in their 227  
inward and in their outward parts, of which the former is duly  
effected by medicine and gymnastics, the latter by the not very digni-  
fied art of the bathman, and there is the purification of inanimate sub-  
stances—to this the arts of fulling and furbishing in general attend  
in a number of minute particulars, having a variety of names which  
are thought ridiculous.

THEAETETUS: Very true.

STRANGER: There can be no doubt that they are thought ridicu-  
lous, Theaetetus, but then the dialectic art never considers whether  
the benefit to be derived from the purge is greater or less than that to  
be derived from the sponge, and has not more interest in the one than b  
in the other. Her endeavor is to know what is and is not kindred in all  
arts, with a view to the acquisition of intelligence, and having this in  
view, she honors them all alike. And when she makes comparisons,  
she counts one of them not a whit more ridiculous than another, nor  
does she esteem him who adduces as his example of hunting, the

general's art, at all more decorous than another who cites that of the vermin destroyer, but only as the greater pretender of the two. And as to your question concerning the name which was to comprehend all these arts of purification, whether of animate or inanimate bodies, c the art of dialectic is in no wise particular about fine words, if she may be only allowed to have a general name for all other purifications, binding them up together and separating them off from the purification of the soul or intellect. For this is the purification at which she wants to arrive, and this we should understand to be her aim.

THEAETETUS: Yes, I understand, and I agree that there are two sorts of purification, and that one of them is concerned with the soul, and that there is another which is concerned with the body.

STRANGER: Excellent, and now listen to what I am going to d say, and try to divide further the first of the two.

THEAETETUS: Whatever line of division you suggest, I will endeavor to assist you.

STRANGER: Do we admit that virtue is distinct from vice in the soul?

THEAETETUS: Certainly.

STRANGER: And purification was to leave the good and to cast out whatever is bad?

THEAETETUS: True.

STRANGER: Then any taking away of evil from the soul may be properly called purification?

THEAETETUS: Yes.

STRANGER: And in the soul there are two kinds of evil.

THEAETETUS: What are they?

228 STRANGER: The one may be compared to disease in the body, the other to deformity.

THEAETETUS: I do not understand.

STRANGER: Perhaps you have never reflected that disease and discord are the same.

THEAETETUS: To this, again, I know not what I should reply.

STRANGER: Do you not conceive discord to be a dissolution of kindred elements, originating in some disagreement?

THEAETETUS: Just that.

STRANGER: And is deformity anything but the want of measure, which is always unsightly?

b THEAETETUS: Exactly.

STRANGER: And do we not see that opinion is opposed to desire, pleasure to anger, reason to pain, and that all these elements are opposed to one another in the souls of bad men?

THEAETETUS: Certainly.

STRANGER: And yet they must all be akin?

THEAETETUS: Of course.

STRANGER: Then we shall be right in calling vice a discord and disease of the soul?

THEAETETUS : Most true.

STRANGER : And when things having motion, and aiming at an appointed mark, continually miss their aim and glance aside, shall we say that this is the effect of symmetry among them, or of the want of symmetry?

THEAETETUS : Clearly of the want of symmetry.

STRANGER : But surely we know that no soul is voluntarily ignorant of anything?

THEAETETUS : Certainly not.

STRANGER : And what is ignorance but the aberration of a mind which is bent on truth, and in which the process of understanding is a perverted?

THEAETETUS : True.

STRANGER : Then we are to regard an unintelligent soul as deformed and devoid of symmetry?

THEAETETUS : Very true.

STRANGER : Then there are these two kinds of evil in the soul—the one which is generally called vice, and is obviously a disease of the soul . . .

THEAETETUS : Yes.

STRANGER : And there is the other, which they call ignorance, and which, because existing only in the soul, they will not allow to be vice.

THEAETETUS : I certainly admit what I at first disputed—that there are two kinds of vice in the soul, and that we ought to consider cowardice, intemperance, and injustice to be all alike forms of disease in the soul, and ignorance, of which there are all sorts of varieties, to be deformity.

STRANGER : And in the case of the body are there not two arts which have to do with the two bodily states?

THEAETETUS : What are they?

STRANGER : There is gymnastics, which has to do with deformity, and medicine, which has to do with disease.

THEAETETUS : True.

STRANGER : And where there are insolence and injustice and cowardice, is not the chastisement the art that is most required?

THEAETETUS : That certainly appears to be the opinion of mankind.

STRANGER : Again, of the various kinds of ignorance, may not instruction be rightly said to be the remedy?

THEAETETUS : True.

STRANGER : And of the art of instruction, shall we say that there is one or many kinds? At any rate there are two principal ones. Think.

THEAETETUS : I will.

STRANGER : I believe that I can see how we shall soonest arrive at the answer to this question.

THEAETETUS: How?

STRANGER: If we can discover a line which divides ignorance into two halves. For a division of ignorance into two parts will certainly imply that the art of instruction is also twofold, answering to the two divisions of ignorance.

THEAETETUS: Well, and do you see what you are looking for?

c STRANGER: I do seem to myself to see one very large and bad sort of ignorance which is quite separate, and may be weighed in the scale against all other sorts of ignorance put together.

THEAETETUS: What is it?

STRANGER: When a person supposes that he knows, and does not know; this appears to be the great source of all the errors of the intellect.

THEAETETUS: True.

STRANGER: And this, if I am not mistaken, is the kind of ignorance which specially earns the title of stupidity.

THEAETETUS: True.

STRANGER: What name, then, shall be given to the sort of instruction which gets rid of this?

d THEAETETUS: The instruction which you mean, Stranger, is, I should imagine, not the teaching of handicraft arts, but what, thanks to us, has been termed education in this part of the world.

STRANGER: Yes, Theaetetus, and by nearly all Hellenes. But we have still to consider whether education admits of any further division deserving a name.

THEAETETUS: We have.

STRANGER: I think that there is a point at which such a division is possible.

THEAETETUS: Where?

e STRANGER: Of education, one method appears to be rougher, and another smoother.

THEAETETUS: How are we to distinguish the two?

STRANGER: There is the time-honored mode which our fathers commonly practiced toward their sons, and which is still adopted by  
230 many—either of roughly reproving their errors, or of gently advising them—which varieties may be correctly included under the general term of admonition.

THEAETETUS: True.

STRANGER: But whereas some appear to have arrived at the conclusion that all ignorance is involuntary, and that no one who thinks himself wise is willing to learn any of those things in which he is conscious of his own cleverness, and that the admonitory sort of education gives much trouble and does little good . . .

THEAETETUS: There they are quite right.

b STRANGER: Accordingly, they set to work to eradicate the spirit of conceit in another way.

THEAETETUS : In what way?

STRANGER : They cross-examine a man's words, when he thinks that he is saying something and is really saying nothing, and easily convict him of inconsistencies in his opinions; these they then collect by the dialectic process, and placing them side by side, show that they contradict one another about the same things, in relation to the same things, and in the same respect. He, seeing this, is angry with himself, and grows gentle toward others, and thus is entirely delivered from great prejudices and harsh notions, in a way which is most amusing to the hearer, and produces the most lasting good effect on the person who is the subject of the operation. For as the physician considers that the body will receive no benefit from taking food until the internal obstacles have been removed, so the purifier of the soul is conscious that his patient will receive no benefit from the application of knowledge until he is refuted, and from refutation learns modesty; he must be purged of his prejudices first and made to think that he knows only what he knows, and no more.

THEAETETUS : That is certainly the best and wisest state of mind.

STRANGER : For all these reasons, Theaetetus, we must admit that refutation is the greatest and chiefest of purifications, and he who has not been refuted, though he be the Great King himself, is in an awful state of impurity; he is uninstructed and deformed in those things in which he who would be truly blessed ought to be fairest and purest.

THEAETETUS : Very true.

\* STRANGER : Well, what name shall we give to the practitioners of this art? For my part I shrink from calling them Sophists. 231

THEAETETUS : Why so?

STRANGER : For fear of ascribing to them too high a function.

THEAETETUS : And yet your description has some resemblance to that type [the Sophist].

STRANGER : So has the dog to the wolf—the fiercest of animals to the tamest. But a cautious man should above all be on his guard against resemblances; they are a very slippery sort of thing. However, be it so [i.e., let them pass for Sophists], for should they ever set up an adequate defense of their confines, the boundary in dispute will be of no small importance.

THEAETETUS : That is likely enough.

STRANGER : Let us take it, then, that under the art of separation there is a method of purification, that we have distinguished that kind of purification which is concerned with the soul, and under that, instruction, and under that again, education. Within the art of education, the examination which confutes the vain conceit of wisdom we

\* [With this speech of the Stranger, the Cornford translation resumes.]

will allow to pass, in the argument which has now come in by a side wind, by no other name than the sophistry that is of noble lineage (ἡ γένοι γενναία σοφιστική).

- c THEAETETUS: Let it pass by that name. But by this time the Sophist has appeared in so many guises that for my part I am puzzled to see what description one is to maintain as truly expressing his real nature.

STRANGER: You may well be puzzled. But we may suppose that by now the Sophist too is very much puzzled to see how he is once more to slip through the meshes of our argument, for it is a true saying that you cannot easily evade all the wrestler's grips. So now is the moment of all others to set upon him.

THEAETETUS: Well and good.

- d STRANGER: First, then, let us stand and take breath, and while we are resting let us reckon up between ourselves in how many guises the Sophist has appeared. First, I think, he was found as the hired hunter of rich young men.

THEAETETUS: Yes.

STRANGER: And secondly as a sort of merchant of learning as nourishment for the soul.

THEAETETUS: Certainly.

STRANGER: Thirdly, he showed himself as a retail dealer in the same wares, did he not?

THEAETETUS: Yes, and fourthly as selling the products of his own manufacture.

- e STRANGER: Your memory serves you well. His fifth appearance I will myself try to recall. He was an athlete in debate, appropriating that subdivision of contention which consists in the art of eristic.

THEAETETUS: He was.

STRANGER: His sixth appearance was open to doubt; however, we conceded his claim to be described as a purifier of the soul from conceits that block the way to understanding.

THEAETETUS: Quite so.

- 232 STRANGER: Now does it strike you that when one who is known by the name of a single art appears to be master of many, there is something wrong with this appearance? If one has that impression of any art, plainly it is because one cannot see clearly that feature of it in which all these forms of skill converge, and so one calls their possessor by many names instead of one.

THEAETETUS: I dare say that is the gist of the situation.

- b STRANGER: If so, we must not be so lazy as to let that happen to us in our inquiry. Let us begin by going back to one among the characteristics we attributed to the Sophist. There was one that struck me particularly as revealing his character.

THEAETETUS: What was that?

STRANGER: We said, I believe, that he was a controversialist.

THEAETETUS: Yes.

STRANGER: And further that he figures as an instructor of others in controversy.

THEAETETUS: Certainly.

STRANGER: Let us consider, then, in what field these people profess to turn out controversialists. Let us go to the root of the matter and set about it in this way. Tell me, does their pupils' competence extend to divine things that are hidden from common eyes? c

THEAETETUS: So it is said of them, at any rate.

STRANGER: And also to all that is visible in sky and earth and everything of that sort.

THEAETETUS: Surely.

STRANGER: And in private circles, whenever any general statement is made about becoming or reality, we are aware how cleverly they can controvert it and make others able to do the same.

THEAETETUS: Certainly.

STRANGER: And then again where laws are in question or any political matter, do they not promise to produce debaters? d

THEAETETUS: If they did not hold out that promise, hardly anyone would take part in their discussions.

STRANGER: And about the crafts in general and each particular craft, the arguments to be used in controversy with any actual craftsman have been published broadcast for all who choose to learn.

THEAETETUS: I take it you mean what Protagoras wrote on wrestling and the other arts. e

STRANGER: Yes, and on many other things. In fact, the pretensions of this art of controversy amount, it seems, to a capacity for disputation on any subject whatsoever.

THEAETETUS: It certainly seems that nothing worth speaking of is beyond its scope.

STRANGER: Do you, then, my young friend, really think that possible? You young people may perhaps see more clearly; my eyes are too dim.

THEAETETUS: Is what possible? What am I meant to see? I don't clearly understand what you are asking me. 233

STRANGER: Whether it is possible for any human being to know everything.

THEAETETUS: Mankind would indeed be happy, if it were so.

STRANGER: Then if a man who has no knowledge controverts one who does know, how can there be any sound sense in what he says?

THEAETETUS: There cannot be.

STRANGER: Then what can be the secret of this magical power of sophistry?

THEAETETUS: In what respect?

STRANGER: I mean, how they can ever create a belief in the b

minds of young men that they are the wisest of men on all subjects? For clearly if they were not in the right in their controversies or did not appear to be so in the young men's eyes, and if that appearance did not enhance the belief that they are wise because they can dispute, then, to quote your own remark, it is hard to see why anyone should want to pay their fees and be taught this art of disputation.

THEAETETUS: Hard indeed.

STRANGER: But in actual fact there is a demand.

THEAETETUS: Quite a brisk one.

c STRANGER: No doubt because the Sophists are believed to possess a knowledge of their own in the subjects they dispute about.

THEAETETUS: No doubt.

STRANGER: And, we say, there is no subject they do not dispute about.

THEAETETUS: Yes.

STRANGER: So they appear to their pupils to be wise on all subjects.

THEAETETUS: Certainly.

STRANGER: Although they are not really wise, for that, we saw, is impossible.

THEAETETUS: It must be impossible.

STRANGER: The upshot is, then, that the Sophist possesses a sort of reputed and apparent knowledge on all subjects, but not the reality.

d THEAETETUS: I quite agree, and perhaps this is the truest thing that has yet been said about them.

STRANGER: Let us, then, take an analogy that will throw more light on their position.

THEAETETUS: What is that?

STRANGER: It is this. Try to give me your closest attention in answering.

THEAETETUS: What is your question?

STRANGER: Suppose a man professed to know, not how to speak or dispute about everything, but how to produce all things in actual fact by a single form of skill.

e THEAETETUS: What do you mean by 'all things'?

STRANGER: My meaning is beyond your comprehension at the very outset. It seems you do not understand what is meant by 'all things.'

THEAETETUS: No.

STRANGER: Well, 'all things' is meant to include you and me and, besides ourselves, all other animals and plants.

THEAETETUS: How do you mean?

STRANGER: Suppose a man should undertake to produce you and me and all creatures.

**THEAETETUS:** What sort of production do you mean? You cannot mean some sort of farmer, for you spoke of him as producing animals as well. 234

**STRANGER:** Yes, and besides that, sea and sky and earth and gods and everything else there is. What is more, after producing any one of them with a turn of the hand he sells them for quite a moderate sum.

**THEAETETUS:** You mean in some kind of play?

**STRANGER:** Well, a man who says he knows everything and could teach it to another for a small fee in a short time can hardly be taken in earnest.

**THEAETETUS:** Assuredly not.

**STRANGER:** And of all forms of play, could you think of any more skillful and amusing than imitation? b

**THEAETETUS:** No. When you take that one form with all that it embraces, it covers a very large variety.

**STRANGER:** Well, we know this about the man who professes to be able, by a single form of skill, to produce all things, that when he creates with his pencil representations bearing the same name as real things, he will be able to deceive the innocent minds of children, if he shows them his drawings at a distance, into thinking that he is capable of creating, in full reality, anything he chooses to make.

**THEAETETUS:** Of course. c

**STRANGER:** Then must we not expect to find a corresponding form of skill in the region of discourse, making it possible to impose upon the young who are still far removed from the reality of things, by means of words that cheat the ear, exhibiting images of all things in a shadow play of discourse, so as to make them believe that they are hearing the truth and that the speaker is in all matters the wisest of men?

**THEAETETUS:** There may well be such an art as you describe. d

**STRANGER:** And is it not inevitable that, after a long enough time, as these young hearers advance in age and, coming into closer touch with realities, are forced by experience to apprehend things clearly as they are, most of them should abandon those former beliefs, so that what seemed important will now appear trifling and what seemed easy, difficult, and all the illusions created in discourse will be completely overturned by the realities which encounter them in the actual conduct of life? e

**THEAETETUS:** Yes, so far as I can judge at my age, but I suppose I am one of those who are still at a distance.

**STRANGER:** That is why all of us here must try, as we are in fact trying, to bring you as close as possible to the realities and spare you the experience.

But about the Sophist, tell me, is it now clear that he is a sort of

235 wizard, an imitator of real things—or are we still uncertain whether he may not possess genuine knowledge of all the things he seems capable of disputing about?

THEAETETUS: He cannot, sir. It is clear enough from what has been said that he is one of those whose province is play.

STRANGER: Then we may class him as a wizard and an imitator of some sort.

THEAETETUS: Certainly.

STRANGER: Come then, it is now for us to see that we do not  
b again relax the pursuit of our quarry. We may say that we have him enveloped in such a net as argument provides for hunting of this sort. He cannot shuffle out of this.

THEAETETUS: Out of what?

STRANGER: Out of being somewhere within the class of illusionists.

THEAETETUS: So far I quite agree with you.

STRANGER: Agreed then that we should at once quarter the ground by dividing the art of image making, and if, as soon as we descend into that enclosure, we meet with the Sophist at bay, we should  
c arrest him on the royal warrant of reason, report the capture, and hand him over to the sovereign. But if he should find some lurking place among the subdivisions of this art of imitation, we must follow hard upon him, constantly dividing the part that gives him shelter, until he is caught. In any event there is no fear that he or any other kind shall ever boast of having eluded a process of investigation so minute and so comprehensive.

THEAETETUS: Good, that is the way to go to work.

STRANGER: Following, then, the same method of division as  
d before, I seem once more to make out two forms of imitation, but as yet I do not feel able to discover in which of the two the type we are seeking is to be found.

THEAETETUS: Make your division first, at any rate, and tell us what two forms you mean.

STRANGER: One art that I see contained in it is the making of likenesses (εἰκαστική). The perfect example of this consists in creating a copy that conforms to the proportions of the original in all three  
e dimensions and giving moreover the proper color to every part.

THEAETETUS: Why, is not that what all imitators try to do?

STRANGER: Not those sculptors or painters whose works are of  
236 colossal size. If they were to reproduce the true proportions of a well-made figure, as you know, the upper parts would look too small, and the lower too large, because we see the one at a distance, the other close at hand.

THEAETETUS: That is true.

STRANGER: So artists, leaving the truth to take care of itself, do

in fact put into the images they make, not the real proportions, but those that will appear beautiful.

THEAETETUS: Quite so.

STRANGER: The first kind of image, then, being like the original, may fairly be called a likeness (εἰκόν).

THEAETETUS: Yes.

STRANGER: And the corresponding subdivision of the art of imitation may be called by the name we used just now—likeness making.

THEAETETUS: It may.

STRANGER: Now, what are we to call the kind which only appears to be a likeness of a well-made figure because it is not seen from a satisfactory point of view, but to a spectator with eyes that could fully take in so large an object would not be even like the original it professes to resemble? Since it seems to be a likeness, but is not really so, may we not call it a semblance (φάντασμα)?

THEAETETUS: By all means.

STRANGER: And this is a very extensive class, in painting and in imitation of all sorts.

THEAETETUS: True.

STRANGER: So the best name for the art which creates, not a likeness, but a semblance will be semblance making (φανταστική).

THEAETETUS: Quite so.

STRANGER: These, then, are the two forms of image making I meant—the making of likenesses and the making of semblances.

THEAETETUS: Good.

STRANGER: Yes, but even now I cannot see clearly how to settle the doubt I then expressed—under which of the two arts [likeness making and semblance making] we must place the Sophist. It is really surprising how hard it is to get a clear view of the man. At this very moment he has, with admirable cleverness, taken refuge in a class which baffles investigation.

THEAETETUS: So it seems.

STRANGER: You assent, but do you recognize the class I mean, or has the current of the argument carried you along to agree so readily from force of habit?

THEAETETUS: How? What are you referring to?

STRANGER: The truth is, my friend, that we are faced with an extremely difficult question. This 'appearing' or 'seeming' without really 'being,' and the saying of something which yet is not true—all these expressions have always been and still are deeply involved in perplexity. It is extremely hard, Theaetetus, to find correct terms in which one may say or think that falsehoods have a real existence, without being caught in a contradiction by the mere utterance of such words.

THEAETETUS: Why?

STRANGER: The audacity of the statement lies in its implication that 'what is not' has being, for in no other way could a falsehood come to have being. But, my young friend, when we were of your age the great Parmenides from beginning to end testified against this, constantly telling us what he also says in his poem, 'Never shall this be proved—that things that are not are, but do thou, in thy inquiry, hold back thy thought from this way.'

b So we have the great man's testimony, and the best way to obtain a confession of the truth may be to put the statement itself to a mild degree of torture. So, if it makes no difference to you, let us begin by studying it on its own merits.

THEAETETUS: I am at your disposal. As for the argument, you must consider the way that will best lead to a conclusion, and take me with you along it.

STRANGER: It shall be done. Now tell me, we do not hesitate to utter the phrase 'that which has no sort of being'?

THEAETETUS: Surely not.

c and playing with words, suppose one of this company were seriously required to concentrate his mind and tell us to what this name can be applied—'that which is not.' Of what thing or of what sort of thing should we expect him to use it himself, and what would he indicate by it to the inquirer?

THEAETETUS: That is a hard question. It is scarcely for a person like me to find an answer at all.

STRANGER: Well, this much is clear at any rate, that the term 'what is not' must not be applied to anything that exists.

THEAETETUS: Certainly not.

STRANGER: And since it cannot be applied to what exists, neither can it properly be applied to 'something.'

THEAETETUS: How so?

d STRANGER: Surely we can see that this expression 'something' is always used of a thing that exists. We cannot use it just by itself in naked isolation from everything that exists, can we?

THEAETETUS: No.

STRANGER: Is your assent due to the reflection that to speak of 'something' is to speak of 'some one thing'?

THEAETETUS: Yes.

STRANGER: Because you will admit that 'something' stands for one thing, as 'some things' stands for two or more.

THEAETETUS: Certainly.

e STRANGER: So it seems to follow necessarily that to speak of what is not 'something' is to speak of no thing at all.

THEAETETUS: Necessarily.

STRANGER: Must we not even refuse to allow that in such a

case a person is *saying* something, though he may be speaking of nothing? Must we not assert that he is not even saying anything when he sets about uttering the sounds 'a thing that is not'?

THEAETETUS: That would certainly end our bewilderment.

STRANGER: 'No time for boasting yet.' There is more to come, 238 in fact the chief of all the difficulties and the first, for it goes to the very root of the matter.

THEAETETUS: How do you mean? Do not hesitate to state it.

STRANGER: When a thing exists, I suppose something else that exists may be attributed to it.

THEAETETUS: Certainly.

STRANGER: But can we say it is possible for something that exists to be attributed to what has no existence?

THEAETETUS: How could it be?

STRANGER: Well, among things that exist we include number in general.

THEAETETUS: Yes, number must exist, if anything does. b

STRANGER: We must not, then, so much as attempt to attach either plurality or unity in number to the nonexistent.

THEAETETUS: That would certainly seem to be wrong, according to our argument.

STRANGER: How then can anyone utter the words 'things which are not,' or 'that which is not,' or even conceive such things in his mind at all, apart from number?

THEAETETUS: How do you mean?

STRANGER: When we speak of '*things* that are not,' are we not undertaking to attribute plurality to them? c

THEAETETUS: Yes.

STRANGER: And unity, when we speak of '*that* which is not'?

THEAETETUS: Clearly.

STRANGER: And yet we admit that it is not justifiable or correct to set about attaching something that exists to the nonexistent.

THEAETETUS: Quite true.

STRANGER: You see the inference then. One cannot legitimately utter the words, or speak or think of that which just simply is not; it is unthinkable, not to be spoken of or uttered or expressed.

THEAETETUS: Quite true.

STRANGER: Perhaps then I was mistaken in saying just now d that I was going to state the greatest difficulty it presents, whereas there is a worse one still that we can formulate.

THEAETETUS: What is that?

STRANGER: I am surprised you do not see from the very phrases I have just used that the nonexistent reduces even one who is refuting its claims to such straits that, as soon as he sets about doing so, he is forced to contradict himself.

THEAETETUS: How? Explain more clearly.

e STRANGER: You must not look to me for illumination. I who laid it down that the nonexistent could have neither unity nor plurality, have not only just now but at this very moment spoken of it as one thing, for I am saying *'the nonexistent.'* You see what I mean?

THEAETETUS: Yes.

STRANGER: And again a little while ago I was speaking of its *being* a thing not to be uttered or spoken of or expressed. Do you follow?

THEAETETUS: Yes, of course.

STRANGER: Well, then, in trying to apply that term *'being'* to it, was I not contradicting what I said before?

239 THEAETETUS: Evidently.

STRANGER: And again in applying the term *'the,'* was I not addressing it as singular?

THEAETETUS: Yes.

STRANGER: And again in speaking of it as *'a thing not to be expressed or spoken of or uttered,'* I was using language as if referring to a single thing.

THEAETETUS: Certainly.

STRANGER: Whereas we are admitting that, if we are to speak strictly, we ought not to specify it as either one thing or many or even to call it *'it'* at all, for even that appellation means ascribing to it the character of singleness.

THEAETETUS: Quite so.

b STRANGER: In that case there is nothing to be said for me. I shall be found to have had the worst of it, now and all along, in my criticism of the nonexistent. Accordingly, as I said, we must not look to anything I have to say for the correct way of describing the nonexistent; we must turn to you for that. Come along now.

THEAETETUS: What do you mean?

STRANGER: Come, you are young; show your spirit and make the best effort you can. Try, without attributing being or unity or plurality to the nonexistent, to find some form of words describing it correctly.

c THEAETETUS: I should need an extraordinary zeal for such an enterprise in face of what has happened to you.

STRANGER: Well, if you agree, we will leave ourselves out of account, and until we meet with someone who can perform this feat, let us say that the Sophist with extreme cunning has found an impenetrable lurking place.

THEAETETUS: It certainly seems so.

d STRANGER: Accordingly, if we are going to say he possesses an art of creating *'semblances,'* he will readily take advantage of our handling our arguments in this way to grapple with us and turn them against ourselves. When we call him a maker of images, he will ask what on earth we mean in speaking of an *'image'* at all. So we must

consider, Theaetetus, how this truculent person's question is to be answered.

THEAETETUS: Clearly we shall say we mean images in water or in mirrors, and again images made by the draftsman or the sculptor, and any other things of that sort.

STRANGER: It is plain, Theaetetus, that you have never seen a e Sophist.

THEAETETUS: Why?

STRANGER: He will make as though his eyes were shut or he had no eyes at all.

THEAETETUS: How so?

STRANGER: When you offer him your answer in such terms, if you speak of something to be found in mirrors or in sculpture, he will 240 laugh at your words, as implying that he can see. He will profess to know nothing about mirrors or water or even eyesight, and will confine his question to what can be gathered from discourse.

THEAETETUS: Namely?

STRANGER: The common character in all these things you mentioned and thought fit to call by a single name when you used the expression 'image' as one term covering them all. State it, then, and hold your ground against the man without yielding an inch.

THEAETETUS: Well, sir, what could we say an image was, if not another thing of the same sort, copied from the real thing?

STRANGER: 'Of the same sort'? Do you mean another real thing, b or what does 'of the same sort' signify?

THEAETETUS: Certainly not real, but like it.

STRANGER: Meaning by 'real' a thing that really exists.

THEAETETUS: Yes.

STRANGER: And by 'not real' the opposite of real?

THEAETETUS: Of course.

STRANGER: Then by what is 'like' you mean what has not real existence, if you are going to call it 'not real.'

THEAETETUS: But it has some sort of existence.

STRANGER: Only not real existence, according to you.

THEAETETUS: No, except that it is really a likeness.

STRANGER: So, not having real existence, it really is what we call a likeness?

THEAETETUS: Real and unreal do seem to be combined in that c perplexing way, and very queer it is.

STRANGER: Queer indeed. You see that now again by dovetailing them together in this way our Hydra-headed Sophist has forced us against our will to admit that 'what is not' has some sort of being.

THEAETETUS: Yes, I do.

STRANGER: And what now? How can we define his art without contradicting ourselves?

THEAETETUS: How do you mean? What sort of contradiction do you fear?

d STRANGER: When we say that he deceives with that semblance we spoke of and that his art is a practice of deception, shall we be saying that, as the effect of his art, our mind thinks what is false, or what shall we mean?

THEAETETUS: Just that. What else could we mean?

STRANGER: And false thinking, again, will be thinking things contrary to the things that are?

THEAETETUS: Yes.

STRANGER: You mean, then, by false thinking, thinking things that are not?

THEAETETUS: Necessarily.

e STRANGER: Does that mean thinking that things that are not, are not, or that things that are not in any way, in some way are?

THEAETETUS: It must at least mean thinking that things that are not, are in some way, if anyone is ever to be in error even to the smallest extent.

STRANGER: And also surely thinking that things which certainly are, are not in any way at all?

THEAETETUS: Yes.

STRANGER: That also is error?

THEAETETUS: Yes, that also.

STRANGER: And a false statement, I suppose, is to be regarded in the same light, as stating that things that are, are not, and that things that are not, are.

THEAETETUS: Yes. How else could it be false?

241 STRANGER: Hardly in any other way. But the Sophist will deny that. How could a sensible man agree, when the admissions we made earlier are set beside this one? We understand, Theaetetus, what he is referring to?

b THEAETETUS: Of course we understand. He will say that we are contradicting what was said just now, when we have the face to say that falsehoods exist in thoughts and in statements, for we are constantly being obliged to attribute what has being to what is not, after agreeing just now that this was altogether impossible.

STRANGER: Your recollection is correct. But you must now consider what we are to do about the Sophist, for if we pursue our search for him by ranking him under the art of the illusionists and creators of error, you see what an easy opening we offer to many perplexities and counterattacks.

THEAETETUS: I do.

c STRANGER: They are almost without number and we have stated only a small fraction of them.

THEAETETUS: If that is so, it looks as if it were impossible to catch the Sophist.

STRANGER: What then? Are we to lose heart and give up now?

THEAETETUS: I don't think we ought to, if we have the least chance of being able to lay hands on him somehow.

STRANGER: Then I may count on your indulgence, and, as you now say, you will be content if we can by some twist free ourselves, even to the least extent, from the grip of so powerful an argument?

THEAETETUS: By all means.

STRANGER: Then I have another still more pressing request. d

THEAETETUS: What is that?

STRANGER: That you will not think I am turning into a sort of parricide.

THEAETETUS: In what way?

STRANGER: We shall find it necessary in self-defense to put to the question that pronouncement of father Parmenides, and establish by main force that what is not, in some respect has being, and conversely that what is, in a way is not.

THEAETETUS: It is plain that the course of the argument requires us to maintain that at all costs.

STRANGER: Plain enough for the blind to see, as they say. Unless these propositions are either refuted or accepted, anyone who talks of false statements or false judgment as being images or likenesses or copies or semblances, or of any of the arts concerned with such things, can hardly escape becoming a laughingstock by being forced to contradict himself. e

THEAETETUS: Quite true.

STRANGER: That is why we must now dare to lay unfilial hands 242 on that pronouncement, or else, if some scruple holds us back, drop the matter entirely.

THEAETETUS: As for that, we must let no scruple hinder us.

STRANGER: In that case, for the third time, I have a small favor to ask.

THEAETETUS: You have only to mention it.

STRANGER: I believe I confessed just now that on this point the task of refutation has always proved too much for my powers, and still does so.

THEAETETUS: You did say that.

STRANGER: Well, that confession, I am afraid, may make you think me scatterbrained when at every turn I shift my position to and fro. It is for your satisfaction that we shall attempt to refute the pronouncement, if we can refute it. b

THEAETETUS: Then you may take it that I shall never think you are overstepping the limits by entering on your refutation and proof. So far as that goes, you may proceed with an easy mind.

STRANGER: Come then, where is one to make a start on so hazardous a theme? I think I see the path we must inevitably follow.

THEAETETUS: And that is?

c STRANGER: To take first things that are now supposed to be quite clear and see whether we are not in some confusion about them and too easily reaching conclusions on the assumption that we understand them well enough.

THEAETETUS: Tell me more plainly what you mean.

STRANGER: It strikes me that Parmenides and everyone else who has set out to determine how many real things there are and what they are like, have discoursed to us in rather an offhand fashion.

THEAETETUS: How so?

STRANGER: They each and all seem to treat us as children to whom they are telling a story. According to one there are three real things, some of which now carry on a sort of warfare with one another, and then make friends and set about marrying and begetting and bringing up their children. Another tells us that there are two—moist and dry, or hot and cold—whom he marries off, and makes them set  
d up house together. In our part of the world the Eleatic set, who hark back to Xenophanes or even earlier, unfold their tale on the assumption that what we call 'all things' are only one thing. Later, certain  
e muses in Ionia and Sicily perceived that safety lay rather in combining both accounts and saying that the real is both many and one and is held together by enmity and friendship. 'In parting asunder it is always being drawn together' say the stricter of these muses. The  
243 milder relax the rule that this should always be so and tell us of alternate states, in which the universe is now one and at peace through the power of love, and now many and at war with itself owing to some sort of strife.

In all this, whether any one of them has told the truth or not is a hard question, and it is in bad taste to find fault so grossly with men of long-established fame. But one observation may be made without offense.

THEAETETUS: And that is?

b STRANGER: That they have shown too little consideration for ordinary people like ourselves in talking over our heads. Each school pursues its own argument to the conclusion without caring whether we follow what they say or get left behind.

THEAETETUS: How do you mean?

STRANGER: When one or another of them in his discourse uses these expressions 'there really are' or 'have come to be' or 'are coming to be' 'many things' or 'one thing' or 'two,' or again another speaks of 'hot being mixed with cold,' assuming 'combinations' and 'separations,' do you, Theaetetus, understand a single word he says? Speaking for myself, when I was younger I thought I understood quite clearly when someone spoke of this thing that is now puzzling us—'the unreal.' But now you see how completely perplexed we are about that.

THEAETETUS: I do.

STRANGER: Possibly, then, our minds are in the same state of confusion about reality. We profess to be quite at our ease about the real and to understand the word when it is spoken, though we may not understand the unreal, when perhaps we are equally in the dark about both.

THEAETETUS: Perhaps.

STRANGER: And we may take it that the same is true of the other expressions I have just mentioned.

THEAETETUS: Certainly.

STRANGER: The general run of these expressions we will consider later, if we so decide. We must begin now with the chief and most important of them all.

THEAETETUS: Which is that? Of course you mean we ought to begin by studying 'reality' and finding out what those who use the word think it stands for.

STRANGER: You have hit my meaning precisely, Theaetetus; I do mean that we must take this line. Imagine them here before us, and let us put this question, 'You who say that hot and cold or some such pair *really* are all things, what exactly does this expression convey that you apply to both when you say that they both are "real" or each of them is "real"? How are we to understand this "reality" you speak of? Are we to suppose it is a third thing alongside the other two and that the all is no longer, as you say, two things, but three? For surely you do not give the name "reality" to one of the two and then say that both alike are real, for then there will be only one thing, whichever of the two it may be, and not two.'

THEAETETUS: True.

STRANGER: 'Well then, do you intend to give the name "reality" to the pair of them?'

THEAETETUS: Perhaps.

STRANGER: 'But that again,' we shall object, 'will clearly be speaking of your two things as one.'

THEAETETUS: You are quite right.

STRANGER: 'We are completely puzzled, then, and you must clear up the question for us, what you do intend to signify when you use the word "real." Obviously you must be quite familiar with what you mean, whereas we, who formerly imagined we knew, are now at a loss. First, then, enlighten us on just this point, so that we may not fancy we understand what you have to tell us, when in fact we are as far as possible from understanding.'

If we put our case in that way to these people and to any others who say that the all is more than one thing, will there be anything unwarrantable in our request?

THEAETETUS: Not at all.

STRANGER: Again, there are those who say that the all is one

thing. Must we not do our best to find out what they mean by 'reality'?

THEAETETUS: Surely.

STRANGER: Let them answer this question, then, 'You say, we understand, that there is only one thing?' 'We do,' they will reply, won't they?

THEAETETUS: Yes.

STRANGER: 'And there is something to which you give the name *real*'?

THEAETETUS: Yes.

STRANGER: 'Is it the same thing as that to which you give the name *one*? Are you applying two names to the same thing, or what do you mean?'

THEAETETUS: What will their next answer be?

STRANGER: Obviously, Theaetetus, it is not so very easy for one who has laid down their fundamental assertion to answer this question or any other.

THEAETETUS: How so?

STRANGER: In the first place, it is surely absurd for him to admit the existence of *two* names, when he has laid down that there is no more than one thing.

THEAETETUS: Of course.

STRANGER: And further, it is equally absurd to allow anyone to assert that a name can have any existence, when that would be inexplicable.

THEAETETUS: How is it inexplicable?

STRANGER: If, on the one hand, he assumes that the name is different from the thing, he is surely speaking of *two* things.

THEAETETUS: Yes.

STRANGER: Whereas, if he assumes that the name is the same as the thing, either he will have to say it is not the name of anything, or if he says it is the name of something, it will follow that the name is merely a name of a name and of nothing else whatsoever.

THEAETETUS: That is so.

STRANGER: . . .\*

THEAETETUS: Necessarily.

STRANGER: And what of 'the whole'? Will they say that this is other than their 'one real thing' or the same?

THEAETETUS: Certainly that it is the same. In fact they do say so.

STRANGER: Then if it is a whole—as indeed Parmenides says. 'Every way like the mass of a well-rounded sphere, evenly balanced

\* [Cornford omitted this speech as corrupt and without point. As translated by Jowett: "And 'the one' can refer only to one thing—that is to say, to a name." (*The Dialogues of Plato*, 4th edn., Oxford, 1953.)]

from the midst in every direction, for there must not be something more nor something less here than there'—if the real is like that, it has a middle and extremities, and consequently it must have parts, must it not?

THEAETETUS: It must.

STRANGER: Well, if a thing is divided into parts, there is nothing against its having the property of unity as applied to the aggregate of all the parts and being in that way one, as being a sum or whole.

THEAETETUS: Of course.

STRANGER: On the other hand, the thing which has these properties cannot be just unity itself, can it?

THEAETETUS: Why not?

STRANGER: Surely unity in the true sense and rightly defined must be altogether without parts.

THEAETETUS: Yes, it must.

STRANGER: Whereas a thing such as we described, consisting of several parts, will not answer to that definition.

THEAETETUS: I see.

STRANGER: Then, (*a*) is the real one and a whole in the sense that it has the property of unity, or (*b*) are we to say that the real is not a whole at all?

THEAETETUS: That is a hard choice.

STRANGER: Quite true. For if (*a*) the real has the property of being in a sense one, it will evidently not be the same thing as unity, and so all things will be more than one.

THEAETETUS: Yes.

STRANGER: And again (*b*) if the real is not a whole by virtue of having this property of unity, while ( $\alpha$ ) at the same time wholeness itself is real, it follows that the real falls short of itself.

THEAETETUS: Certainly.

STRANGER: So, on this line of argument too, the real will be deprived of reality and will not be a thing that is.

THEAETETUS: Yes.

STRANGER: And further, once more all things will be more than one, since reality on the one side and wholeness on the other have now each a distinct nature.

THEAETETUS: Yes.

STRANGER: But if, ( $\beta$ ) on the other hand, there is no such thing as wholeness at all, not only are the same things true of the real, but also that, besides not being a thing that really is, it could never even become such.

THEAETETUS: Why not?

STRANGER: Whenever a thing comes into being, at that moment it has come to be as a whole; accordingly, if you do not reckon unity or wholeness among real things, you have no right to speak of either being or coming-into-being as having any existence.

THEAETETUS: That seems perfectly true.

STRANGER: And further, what is not a whole cannot have any definite number either, for if a thing has a definite number, it must amount to that number, whatever it may be, as a whole.

THEAETETUS: Assuredly.

STRANGER: And countless other difficulties, each involved in e measureless perplexity, will arise, if you say that the real is either two things or only one.

THEAETETUS: That is plain enough from those we have had a glimpse of now. One leads to another, and each carries us further into a wilderness of doubt about every theory as it is mentioned.

STRANGER: So much, then, for those who give an exact account of what is real or unreal. We have not gone through them all, but 246 let this suffice. Now we must turn to look at those who put the matter in a different way, so that, from a complete review of all, we may see that reality is just as hard to define as unreality.

THEAETETUS: We had better go on, then, to their position.

STRANGER: What we shall see is something like a battle of gods and giants going on between them over their quarrel about reality.

THEAETETUS: How so?

STRANGER: One party is trying to drag everything down to earth out of heaven and the unseen, literally grasping rocks and trees in their hands, for they lay hold upon every stock and stone and strenuously affirm that real existence belongs only to that which can be handled and offers resistance to the touch. They define reality as b the same thing as body, and as soon as one of the opposite party asserts that anything without a body is real, they are utterly contemptuous and will not listen to another word.

THEAETETUS: The people you describe are certainly a formidable crew. I have met quite a number of them before now.

STRANGER: Yes, and accordingly their adversaries are very wary in defending their position somewhere in the heights of the unseen, maintaining with all their force that true reality consists in certain intelligible and bodiless forms. In the clash of argument they shatter and pulverize those bodies which their opponents wield, and c what those others allege to be true reality they call, not real being, but a sort of moving process of becoming. On this issue an interminable battle is always going on between the two camps.

THEAETETUS: True.

STRANGER: Suppose, then, we challenge each party in turn to render an account of the reality they assert.

THEAETETUS: How shall we do so?

STRANGER: It will be easier to obtain from those who place reality in forms, because they are more civilized—harder, from those whose violence would drag everything down to the level of body—

perhaps, all but impossible. However, I think I see the right way to deal with them.

THEAETETUS : What is that?

STRANGER : Best of all, if it were anyhow possible, would be to bring about a real change of heart, but if that is beyond our power, to imagine them reformed and assume them willing to moderate their present lawlessness in answering our questions. The better a man's character is, the more force there will be in any agreement you make with him. However, we are not concerned with them so much as with our search for the truth.

THEAETETUS : You are quite right.

STRANGER : Well then, call upon these reformed characters to oblige you with an answer, and you shall act as their spokesman.

THEAETETUS : I will.

STRANGER : Let them tell us, then, whether they admit that there is such a thing as a mortal living creature.

THEAETETUS : Of course they do.

STRANGER : And they will agree that it is a body animated by a soul?

THEAETETUS : Certainly.

STRANGER : Taking a soul to be something real?

THEAETETUS : Yes.

STRANGER : Again, they allow that one soul may be just, another unjust, or one wise, another foolish?

THEAETETUS : Naturally.

STRANGER : And that any soul comes to be just or the reverse by possessing justice or the reverse, which is present in it?

THEAETETUS : Yes, they agree to that too.

STRANGER : But surely they will admit that whatever can come to be present in a thing or absent from it is certainly a real thing.

THEAETETUS : Yes.

STRANGER : Granted, then, that justice or wisdom or any other sort of goodness or badness is real, and moreover that a soul in which they come to exist is real, do they maintain that any one of these things is visible and tangible, or are they all invisible?

THEAETETUS : They can hardly say that any one of them is visible.

STRANGER : And do they really assert that something that is not visible has a body?

THEAETETUS : That question they do not answer as a whole without a distinction. The soul itself, they think, does possess a sort of body, but when it comes to wisdom or any of the other things you asked about, they have not the face either to accept the inference that they have no place among real things or to persist in maintaining that they are all bodies.

STRANGER: That shows, Theaetetus, that they are genuinely reformed characters. The giants among them, of the true earthborn breed, would not stick at any point; they would hold out to the end, that whatever they cannot squeeze between their hands is just nothing at all.

THEAETETUS: I dare say that describes their state of mind.

STRANGER: Let us question them further, then, for it is quite  
d enough for our purpose if they consent to admit that even a small part of reality is bodiless. They must now tell us this. When they say that these bodiless things and the other things which have body are alike 'real,' what common character that emerges as covering both sets of things have they in view? It is possible they may be at a loss for an answer. If that is their state of mind, you must consider whether they would accept at our suggestion a description of the real and agree to it.

THEAETETUS: What description? Perhaps we can tell, if you will state it.

STRANGER: I suggest that anything has real being that is so  
e constituted as to possess any sort of power either to affect anything else or to be affected, in however small a degree, by the most insignificant agent, though it be only once. I am proposing as a mark to distinguish real things that they are nothing but power.

THEAETETUS: Well, they accept that, having for the moment no better suggestion of their own to offer.

STRANGER: That will do, for later on both they and we perhaps  
248 may change our minds. For the present, then, let us take it that this agreement stands between us and the one party.

THEAETETUS: It does.

STRANGER: Let us turn, then, to the opposite party, the friends of forms. Once more you shall act as their spokesman.

THEAETETUS: I will.

STRANGER: We understand that you make a distinction between 'becoming' and 'real being' and speak of them as separate. Is that so?

THEAETETUS: Yes.

STRANGER: And you say that we have intercourse with becoming by means of the body through sense, whereas we have intercourse with real being by means of the soul through reflection. And real being, you say, is always in the same unchanging state, whereas becoming is variable.

b THEAETETUS: We do.

STRANGER: Admirable. But now what are we to take you as meaning by this expression 'intercourse' which you apply to both? Don't you mean what we described a moment ago?

THEAETETUS: What was that?

STRANGER: The experiencing an effect or the production of

one, arising, as the result of some power, from things that encounter one another. Perhaps, Theaetetus, you may not be able to catch their answer to this, but I, who am familiar with them, may be more successful.

THEAETETUS : What have they to say, then?

STRANGER : They do not agree to the proposition we put just now to the earthborn giants about reality.

THEAETETUS : You mean . . . ?

STRANGER : We proposed as a sufficient mark of real things the presence in a thing of the power of being acted upon or of acting in relation to however insignificant a thing.

THEAETETUS : Yes.

STRANGER : Well, to that they reply that a power of acting and being acted upon belongs to becoming, but neither of these powers is compatible with real being.

THEAETETUS : And there is something in that answer?

STRANGER : Something to which we must reply by a request for more enlightenment. Do they acknowledge further that the soul knows and real being is known?

THEAETETUS : Certainly they agree to that.

STRANGER : Well, do you agree that knowing or being known is an action, or is it experiencing an effect, or both? Or is one of them experiencing an effect, the other an action? Or does neither of them come under either of these heads at all?

THEAETETUS : Evidently neither; otherwise our friends would be contradicting what they said earlier.

STRANGER : I see what you mean. They would have to say this. If knowing is to be acting on something, it follows that what is known must be acted upon by it, and so, on this showing, reality when it is being known by the act of knowledge must, in so far as it is known, be changed owing to being so acted upon—and that, we say, cannot happen to the changeless.

THEAETETUS : Exactly.

STRANGER : But tell me, in heaven's name, are we really to be so easily convinced that change, life, soul, understanding have no place in that which is perfectly real—that it has neither life nor thought, but stands immutable in solemn aloofness, devoid of intelligence?

THEAETETUS : That, sir, would be a strange doctrine to accept.

STRANGER : But can we say it has intelligence without having life?

THEAETETUS : Surely not.

STRANGER : But if we say it contains both, can we deny that it has soul in which they reside?

THEAETETUS : How else could it possess them?

STRANGER : But then, if it has intelligence, life, and soul, can

we say that a living thing remains at rest in complete changelessness?

b THEAETETUS: All that seems to me unreasonable.

STRANGER: In that case we must admit that what changes and change itself are real things.

THEAETETUS: Certainly.

STRANGER: From this, however, it follows, Theaetetus, first, that if all things are unchangeable, no intelligence can really exist anywhere in anything with regard to any object.

THEAETETUS: Quite so.

STRANGER: And, on the other hand, if we allow that all things are moving and changing, on that view equally we shall be excluding intelligence from the class of real things.

THEAETETUS: How so?

c STRANGER: Do you think that, without rest, there could ever be anything that abides constant in the same condition and in the same respects?

THEAETETUS: Certainly not.

STRANGER: And without such objects can you make out that intelligence exists or could ever exist anywhere?

THEAETETUS: It would be quite impossible.

STRANGER: Well then, all the force of reasoning must be enlisted to oppose anyone who tries to maintain any assertion about anything at the same time that he suppresses knowledge or understanding or intelligence.

THEAETETUS: Most certainly.

d STRANGER: On these grounds, then, it seems that only one course is open to the philosopher who values knowledge and the rest above all else. He must refuse to accept from the champions either of the one or of the many forms the doctrine that all reality is changeless, and he must turn a deaf ear to the other party who represent reality as everywhere changing. Like a child begging for 'both,' he must declare that reality or the sum of things is both at once—all that is unchangeable and all that is in change.

THEAETETUS: Perfectly true.

STRANGER: Well then, does it not look now as if we had fairly caught reality within the compass of our description?

THEAETETUS: Certainly it does.

STRANGER: And yet—oh dear, Theaetetus, what if I say after all that I think it is just at this point that we shall come to see how baffling this question of reality is?

e THEAETETUS: How so? Why do you say that?

STRANGER: My good friend, don't you see that now we are wholly in the dark about it, though we fancy we are talking good sense?

THEAETETUS: I certainly thought so, and I don't at all understand how we can be deceived about our condition.

STRANGER: Then consider these last conclusions of ours more carefully, and whether, when we agree to them, we might not fairly be posed with the same question we put earlier to those who said that the sum of things 'really is' hot and cold. 250

THEAETETUS: You must remind me what that question was.

STRANGER: By all means, and I will try to do it by questioning you in the same way as I questioned them, so that we may get a little further at the same time.

THEAETETUS: Very good.

STRANGER: Come along then. When you speak of movement and rest, these are things completely opposed to one another, aren't they?

THEAETETUS: Of course.

STRANGER: At the same time you say of both and of each severally, that they are real?

THEAETETUS: I do.

STRANGER: And when you admit that they are real, do you mean that either or both are in movement? b

THEAETETUS: Certainly not.

STRANGER: Then, perhaps, by saying both are real you mean they are both at rest?

THEAETETUS: No, how could I?

STRANGER: So, then, you conceive of reality [realness] as a third thing over and above these two, and when you speak of both as being real, you mean that you are taking both movement and rest together as embraced by reality and fixing your attention on their common association with reality?

THEAETETUS: It does seem as if we discerned reality as a third thing, when we say that movement and rest are real. c

STRANGER: So reality is not motion and rest 'both at once,' but something distinct from them.

THEAETETUS: Apparently.

STRANGER: In virtue of its own nature, then, reality is neither at rest nor in movement.

THEAETETUS: I suppose so.

STRANGER: If so, where is the mind to turn for help if one wants to reach any clear and certain conclusion about reality?

THEAETETUS: Where indeed?

STRANGER: It seems hard to find help in any quarter. If a thing is not in movement, how can it not be at rest? Or how can what is not in any way at rest fail to be in movement? Yet reality is now revealed to us as outside both alternatives. Is that possible? d

THEAETETUS: As impossible as anything could be.

STRANGER: Then there is one thing that ought to be remembered at this point.

THEAETETUS: And that is?

STRANGER: That we were completely puzzled when we were

asked to what the name 'unreal' should be applied. You remember?

THEAETETUS: Of course.

e STRANGER: And now we are in no less perplexity about reality?

THEAETETUS: In even greater, I should say, sir, if that be possible.

STRANGER: Let us take it, then, that our difficulty is now completely stated. But since reality and unreality are equally puzzling, there is henceforward some hope that any light, whether dim or  
251 bright, thrown upon the one will illuminate the other to an equal degree, and if, on the other hand, we cannot get sight of either, at any rate we will make the best we can of it under these conditions and force a passage through the argument with both elbows at once.

THEAETETUS: Very good.

STRANGER: Let us explain, then, how it is that we call the same thing—whatever is in question at the moment—by several names.

THEAETETUS: For instance? Give me an example.

STRANGER: Well, when we speak of a man we give him many additional names—we attribute to him colors and shapes and sizes and defects and good qualities, and in all these and countless other  
b statements we say he is not merely a 'man' but also 'good' and any number of other things. And so with everything else. We take any given thing as one and yet speak of it as many and by many names.

THEAETETUS: True.

STRANGER: And thereby, I fancy, we have provided a magnificent entertainment for the young and for some of their elders who have taken to learning late in life. Anyone can take a hand in the game and at once object that many things cannot be one, nor one thing many; indeed, they delight in forbidding us to speak of a man as 'good'—we must only speak of a good as good, and of the man as man.  
c I imagine, Theaetetus, you often meet with these enthusiasts, sometimes elderly men who, being poorly endowed with intelligence, gape with wonder at these discoveries and fancy they have lighted here on the very treasure of complete wisdom.

THEAETETUS: I have indeed.

STRANGER: Well then, we want our argument to be addressed to all alike who have ever had anything to say about existence; so let us take it that the questions we shall put now are intended not only for these people but for all those others whom we have been conversing with earlier.

THEAETETUS: And what are the questions?

STRANGER: Are we not to attach existence to motion and rest,  
d nor anything else to anything else, but rather to treat them in our discourse as incapable of any blending or participation in one another? Or are we to lump them all together as capable of association with one another? Or shall we say that this is true of some and not of

others? Which of these possibilities shall we say they prefer, Theaetetus?

THEAETETUS: I am not prepared to answer that on their behalf.

STRANGER: Then why not answer the questions one at a time and see what are the consequences in each case?

THEAETETUS: Very good.

STRANGER: And first, if you like, let us suppose them to say that nothing has any capacity for combination with anything else for any purpose. Then movement and rest will have no part in existence. 252

THEAETETUS: No.

STRANGER: Well then, will either of them exist, if it has no association with existence?

THEAETETUS: No, it will not exist.

STRANGER: That admission seems to make short work of all theories; it upsets at one blow those who have a universe in motion, and those who make it a motionless unity, and all who say their realities exist in forms that are always the same in all respects, for they all attribute existence to things, some saying they really *are* in movement, some that they really *are* at rest.

THEAETETUS: Quite so.

STRANGER: And further, those who make all things come together at one time and separate at another, whether they bring innumerable things into a unity and out of a unity, or divide things into and combine them out of a limited set of elements—no matter whether they suppose this to happen in alternation or to be going on all the time—however it may be, all this would be meaningless if there is no blending at all.

THEAETETUS: True.

STRANGER: Moreover, the greatest absurdity of all results from pursuing the theory of those very people who will not allow one thing to share in the quality of another and so be called by its name.

THEAETETUS: How so? c

STRANGER: Why, in referring to anything they cannot help using the words 'being' and 'apart' and 'from the others' and 'by itself' and any number more. They cannot refrain from these expressions or from connecting them in their statements, and so need not wait for others to refute them; the foe is in their own household, as the saying goes, and, like that queer fellow Eurycles, they carry about with them wherever they go a voice in their own bellies to contradict them.

THEAETETUS: True, your comparison is very much to the purpose. d

STRANGER: Well, suppose we allow that all are capable of combining with one another.

THEAETETUS: Even I can dispose of that suggestion.

STRANGER: How?

THEAETETUS: Because then movement itself would come to a complete standstill, and again rest itself would be in movement, if each were to supervene upon the other.

STRANGER: And that is to the last degree impossible—that movement should come to be at rest and rest be in motion?

THEAETETUS: Surely.

STRANGER: Then only the third choice is left.

THEAETETUS: Yes.

STRANGER: And observe that one of these alternatives must be true—either all will blend, or none, or some will and some will not.

THEAETETUS: Certainly.

STRANGER: And two of the three have been found impossible.

THEAETETUS: Yes.

STRANGER: Whoever, then, wishes to give a right answer will assert the remaining one.

THEAETETUS: Quite so.

STRANGER: Then since some will blend, some not, they might be said to be in the same case with the letters of the alphabet. Some of these cannot be conjoined; others will fit together.

THEAETETUS: Of course.

STRANGER: And the vowels are specially good at combination—a sort of bond pervading them all, so that without a vowel the others cannot be fitted together.

THEAETETUS: That is so.

STRANGER: And does everyone know which can combine with which, or does one need an art to do it rightly?

THEAETETUS: It needs art.

STRANGER: And that art is?

THEAETETUS: Grammar.

STRANGER: Again, is it not the same with sounds of high or low pitch? To possess the art of recognizing the sounds that can or cannot be blended is to be a musician; if one doesn't understand that, one is unmusical.

THEAETETUS: True.

STRANGER: And we shall find differences of the same sort between competence and incompetence in any other art.

THEAETETUS: Of course.

STRANGER: Well, now that we have agreed that the kinds stand toward one another in the same way as regards blending, is not some science needed as a guide on the voyage of discourse, if one is to succeed in pointing out which kinds are consonant, and which are incompatible with one another—also, whether there are certain kinds that pervade them all and connect them so that they can blend, and again, where there are divisions [separations], whether there are certain others that traverse wholes and are responsible for the division?

THEAETETUS: Surely some science is needed—perhaps the most important of all.

STRANGER: And what name shall we give to this science? Or—good gracious, Theaetetus, have we stumbled unawares upon the free man's knowledge and, in seeking for the Sophist, chanced to find the philosopher first?

THEAETETUS: How do you mean?

STRANGER: Dividing according to kinds, not taking the same *a* form for a different one or a different one for the same—is not that the business of the science of dialectic?

THEAETETUS: Yes.

STRANGER: And the man who can do that discerns clearly *one* form everywhere extended throughout many, where each one lies apart, and *many* forms, different from one another, embraced from without by one form, and again *one* form connected in a unity through many wholes, and *many* forms, entirely marked off apart. That means knowing how to distinguish, kind by kind, in what ways the several kinds can or cannot combine.

e

THEAETETUS: Most certainly.

STRANGER: And the only person, I imagine, to whom you would allow this mastery of dialectic is the pure and rightful lover of wisdom.

THEAETETUS: To whom else could it be allowed?

STRANGER: It is, then, in some such region as this that we shall find the philosopher now or later, if we should look for him. He too may be difficult to see clearly, but the difficulty in his case is not the same as in the Sophist's.

254

THEAETETUS: What is the difference?

STRANGER: The Sophist takes refuge in the darkness of not-being, where he is at home and has the knack of feeling his way, and it is the darkness of the place that makes him so hard to perceive.

THEAETETUS: That may well be.

STRANGER: Whereas the philosopher, whose thoughts constantly dwell upon the nature of reality, is difficult to see because his region is so bright, for the eye of the vulgar soul cannot endure to *b* keep its gaze fixed on the divine.

THEAETETUS: That may well be no less true.

STRANGER: Then we will look more closely at the philosopher presently, if we are still in the mind to do so; meanwhile clearly we must not loosen our grip on the Sophist until we have studied him thoroughly.

THEAETETUS: I entirely agree.

STRANGER: Now that we are agreed, then, that some of the kinds will combine with one another and some will not, and that some combine to a small extent, others with a large number, while some pervade all and there is nothing against their being combined *c*

with everything, let us next follow up the argument in this way. We will not take all the forms, for fear of getting confused in such a multitude, but choose out some of those that are recognized as most [or very] important, and consider first their several natures and then how they stand in respect of being capable of combination with one another. In this way, though we may not be able to conceive being and not-being with perfect clearness, we may at least give as satisfactory an account of them as we can under the conditions of our present inquiry, and see if there is any opening allowing us to assert  
 a that what is not, *really* is what is not, and to escape unscathed.

THEAETETUS: Yes, we had better do that.

STRANGER: Now, among the kinds, those we were just now discussing—existence itself and rest and motion—are very important.

THEAETETUS: Quite so.

STRANGER: And observe, we say that two of the three will not blend with one another.

THEAETETUS: Certainly.

STRANGER: Whereas existence can be blended with both, for surely they both exist.

THEAETETUS: Of course.

STRANGER: So they make three in all. And each one of them [existence, motion, rest] is *different* from the other two, and the *same* as itself.

e THEAETETUS: That is so.

STRANGER: But what do we mean by these words we have just used—‘same’ and ‘different’? Are they a pair of kinds distinct from those three, though always necessarily blending with them, so that we must consider the forms as five in all, not three? Or, when we say ‘same’ or ‘different,’ are we unconsciously using a name that belongs  
 255 to one or another of those three kinds?

THEAETETUS: Possibly.

STRANGER: Well, motion and rest at any rate cannot be [identical with] difference or sameness.

THEAETETUS: Why not?

STRANGER: Neither motion nor rest can be [identical with] anything that we say of both of them in common.

THEAETETUS: Why?

STRANGER: Because motion would then be at rest, and rest in motion, for whichever of the two [motion or rest] becomes applicable to both [by being identified with either sameness or difference, which are applicable to both] will force the other [rest or motion] to change to the contrary of its own nature, as thus coming to partake of its  
 b contrary.

THEAETETUS: Quite so.

STRANGER: But both do partake of sameness and difference.

THEAETETUS: Yes.

STRANGER: Then we must not say that sameness or difference is [identical with] motion, nor yet with rest.

THEAETETUS: No.

STRANGER: Are we, however, to think of existence and sameness as a single thing?

THEAETETUS: Perhaps.

STRANGER: But if 'existence' and 'sameness' have no difference in meaning, once more, when we say that motion and rest both 'exist,' we shall thereby be speaking of them as being 'the same.'

THEAETETUS: But that is impossible.

STRANGER: Then sameness and existence cannot be one thing.

THEAETETUS: Hardly.

STRANGER: We may, then, set down sameness as a fourth form, additional to our three.

THEAETETUS: Certainly.

STRANGER: And are we to call difference a fifth? Or must we think of difference and existence as two names for a single kind?

THEAETETUS: Perhaps.

STRANGER: But I suppose you admit that, among things that exist, some are always spoken of as being what they are just in themselves, others as being what they are with reference to other things.

THEAETETUS: Of course.

STRANGER: And what is different is always so called with reference to another thing, isn't it?

THEAETETUS: That is so.

STRANGER: It would not be so, if existence and difference were not very different things. If difference partook of both characters as existence does, there would sometimes be, within the class of different things, something that was different not with reference to another thing. But in fact we undoubtedly find that whatever is different, as a necessary consequence, is what it is with reference to another.

THEAETETUS: It is as you say.

STRANGER: Then we must call the nature of difference a fifth among the forms we are singling out.

THEAETETUS: Yes.

STRANGER: And moreover we shall say that this nature pervades all the forms, for each one is different from the rest, not by virtue of its own nature, but because it partakes of the character of difference.

THEAETETUS: Quite so.

STRANGER: Now, then, taking our five kinds one by one, let us make some statements about them.

THEAETETUS: What statements?

STRANGER: First about motion, let us say that motion is altogether different from rest. Or is that not so?

THEAETETUS: It is so.

STRANGER: So motion is not rest.

THEAETETUS: Not in any sense.

STRANGER: But motion *is* [exists], by virtue of partaking of existence.

256 THEAETETUS: Yes.

STRANGER: And once more motion is different from the same [sameness].

THEAETETUS: No doubt.

STRANGER: So motion is not the same [sameness].

THEAETETUS: No.

STRANGER: But on the other hand, motion, we said, is the same as itself, because everything partakes of the same [sameness].

THEAETETUS: Certainly.

STRANGER: Motion, then, is both the same and not the same; we must admit that without boggling at it. For when we say it is 'the same' and 'not the same' we are not using the expression in the same sense; we call it 'the same' on account of its participation in the same with reference to itself, but we call it 'not the same' because of its combination with difference, a combination that separates it off from the same [sameness] and makes it not the same but different, so that we have the right to say this time that it is 'not the same.'

THEAETETUS: Certainly.

STRANGER: So too, supposing motion itself did in any way participate in rest, there would be nothing outrageous in speaking of it as stationary. But it does not in fact participate in rest at all.

THEAETETUS: No, it does not.

c STRANGER: Whereas it does participate both in sameness and in difference, so that it is correct to speak of it as both the same and not the same.

THEAETETUS: Perfectly correct, provided that we are to agree that some of the kinds will blend with one another, some will not.

STRANGER: Well, that is a conclusion we proved at an earlier stage, when we showed that such was indeed their nature.

THEAETETUS: Of course.

STRANGER: To go back to our statements, then, is motion different from different [difference], just as it was other than the same [sameness] and other than rest?

THEAETETUS: Necessarily.

STRANGER: Motion, then, in a sense is not different, and also is different, in accordance with the argument we stated just now.

THEAETETUS: True.

STRANGER: What, then, of the next point? Are we to say that motion is different from three of the four, but not from the fourth,

when we have agreed that there were five kinds in the field we set before us for examination?

THEAETETUS: How can we? We cannot allow that their number is less than it was shown to be.

STRANGER: So we may fearlessly contend that motion is different from existence.

THEAETETUS: Without the smallest fear.

STRANGER: In fact, it is clear that motion really is a thing that is not [existence] and a thing that is, since it partakes of existence.

THEAETETUS: Perfectly clear.

STRANGER: It must, then, be possible for 'that which is not' [i.e., is different from existence] to be [to exist], not only in the case of motion but of all the other kinds. For in the case of them all the nature of difference makes each one of them different from existence and so makes it a thing that 'is not,' and hence we shall be right to speak of them all on the same principle as things that in this sense 'are not,' and again, because they partake of existence, to say that they 'are' [exist] and call them things that have being [existence].

THEAETETUS: No doubt.

STRANGER: So, in the case of every one of the forms there is much that it *is* and an indefinite number of things that it *is not*.

THEAETETUS: So it appears.

257

STRANGER: And, moreover, existence itself must be called different from the rest.

THEAETETUS: Necessarily.

STRANGER: We find, then, that existence likewise 'is not' in as many respects as there are other things, for, not being those others, while it *is* its single self, it *is not* all that indefinite number of other things.

THEAETETUS: That is so.

STRANGER: Then we must not boggle even at that conclusion, granted that kinds are of a nature to admit combination with one another. If anyone denies that, he must win over our earlier arguments to his side before he tries to win over their consequences.

THEAETETUS: That is a fair demand.

STRANGER: Now let us mark this.

THEAETETUS: Yes?

b

STRANGER: When we speak of 'that which is not,' it seems that we do not mean something contrary to what exists but only something that is different.

THEAETETUS: How?

STRANGER: In the same way that when, for example, we speak of something as 'not tall,' we may just as well mean by that phrase 'what is equal' as 'what is short,' mayn't we?

THEAETETUS: Certainly.

STRANGER: So, when it is asserted that a negative signifies a contrary, we shall not agree, but admit no more than this—that the prefix 'not' indicates something different from the words that follow, or rather from the things designated by the words pronounced after the negative.

THEAETETUS: Exactly.

STRANGER: And here, if you agree, is a point for us to consider.

THEAETETUS: Namely?

STRANGER: The nature of the different [difference] appears to be parceled out, in the same way as knowledge.

THEAETETUS: How so?

STRANGER: Knowledge also is surely one, but each part of it that commands a certain field is marked off and given a special name proper to itself. Hence language recognizes many arts and forms of knowledge.

THEAETETUS: Certainly.

STRANGER: And the same thing is true of the parts of the single nature of the different.

THEAETETUS: Perhaps, but shall we explain how?

STRANGER: There exists a part of the different that is set in contrast to the beautiful?

THEAETETUS: Yes.

STRANGER: Are we to say it is nameless, or has it a special name?

THEAETETUS: It has. Whenever we use the expression 'not beautiful,' the thing we mean is precisely that which is different from the nature of the beautiful.

STRANGER: Then tell me this.

THEAETETUS: What?

STRANGER: May we not say that the *existence* of the not-beautiful is constituted by its being marked off from a single definite kind among existing things and again set in contrast with something that exists?

THEAETETUS: Yes.

STRANGER: So it appears that the not-beautiful is an instance of something that exists being set in contrast to something that exists.

THEAETETUS: Perfectly.

STRANGER: What then? On this showing has the not-beautiful any less claim than the beautiful to be a thing that exists?

THEAETETUS: None whatever.

258 STRANGER: And so the not-tall must be said to exist just as much as the tall itself.

THEAETETUS: Just as much.

STRANGER: And we must also put the not-just on the same footing as the just with respect to the fact that the one exists no less than the other.

THEAETETUS: Certainly.

STRANGER: And we shall say the same of all the rest, since we have seen that the nature of the different is to be ranked among things that exist, and, once it exists, its parts also must be considered as existing just as much as anything else.

THEAETETUS: Of course.

STRANGER: So, it seems, when a part of the nature of the different and a part of the nature of the existent [existence] are set in contrast to one another, the contrast is, if it be permissible to say so, as much a reality as existence itself; it does not mean what is contrary to 'existent,' but only what is different from that existent.

THEAETETUS: That is quite clear.

STRANGER: What name are we to give it, then?

THEAETETUS: Obviously this is just that 'what-is-not' which we were seeking for the sake of the Sophist.

STRANGER: Has it then, as you say, an existence inferior to none of the rest in reality? May we now be bold to say that 'that which is not' unquestionably *is* a thing that has a nature of its own—just as the tall was tall and the beautiful was beautiful, so too with the not-tall and the not-beautiful—and in that sense 'that which is not' also, on the same principle, both was and *is* 'what is not,' a single form to be reckoned among the many realities? Or have we any further doubts with regard to it, Theaetetus?

THEAETETUS: None at all.

STRANGER: You see, then, that in our disobedience to Parmenides we have trespassed far beyond the limits of his prohibition.

THEAETETUS: In what way?

STRANGER: In pushing forward on our quest, we have shown him results in a field which he forbade us even to explore.

THEAETETUS: How?

STRANGER: He says, you remember, 'Never shall this be proved, *d* that things that are not, are, but keep back thy thought from this way of inquiry.'<sup>1</sup>

THEAETETUS: Yes, he does say that.

STRANGER: Whereas we have not merely shown that things that are not, are, but we have brought to light the real character of 'not-being.' We have shown that the nature of the different has existence and is parceled out over the whole field of existent things with reference to one another, and of every part of it that is set in contrast to 'that which is' we have dared to say that precisely that is *really* 'that which is not.'

THEAETETUS: Yes, sir, and I think what we have said is perfectly true.

STRANGER: Then let no one say that it is the contrary of the

<sup>1</sup> Parmenides, 52 sq. (ed. Mullach).

existent that we mean by 'what is not,' when we make bold to say that 'what is not' exists. So far as any contrary of the existent is concerned, we have long ago said good-by to the question whether there is such a thing or not and whether any account can be given of it or none whatsoever.

- 259 But with respect to the 'what-is-not' that we have now asserted to exist, an opponent must either convince us that our account is wrong by refuting it, or, so long as he proves unable to do that, he must accept our statements (a) that the kinds blend with one another, (b) that existence and difference pervade them all, and pervade one another, (c) that difference [*or the different*], by partaking of existence, is by virtue of that participation, but on the other hand *is not* that existence of which it partakes, but is different, and since it is different from existence [*or an existent*], quite clearly it must be possible that it should *be* a thing that *is not*, (d) and again, existence, b having a part in difference, will be different from all the rest of the kinds, and, because it is different from them all, it *is not* any one of them nor yet all the others put together, but is only itself, with the consequence, again indisputable, that existence *is not* myriads upon myriads of things, and that all the other kinds in the same way, whether taken severally or all together, in many respects *are* and in many respects *are not*.

THEAETETUS: True.

- STRANGER: And if anyone mistrusts these apparent contradictions, he should study the question and produce some better explanation than we have now given, whereas if he imagines he has c discovered an embarrassing puzzle and takes delight in reducing argument to a tug of war, he is wasting his pains on a triviality, as our present argument declares. There is nothing clever in such a discovery, nor is it hard to make; what is hard and at the same time worth the pains is something different.

THEAETETUS: And that is?

- STRANGER: What I said before—leaving such quibbling alone as leading nowhere, to be able to follow our statements step by step and, in criticizing the assertion that a different thing is the same or the same thing is different in a certain sense, to take account of the d precise sense and the precise respect in which they are said to be one or the other. Merely to show that in some unspecified way the same is different or the different is the same, the tall short, the like unlike, and to take pleasure in perpetually parading such contradictions in argument—that is not genuine criticism, but may be recognized as the callow offspring of a too recent contact with reality.

THEAETETUS: I quite agree.

- STRANGER: Yes, my friend, and the attempt to separate every e thing from every other thing not only strikes a discordant note but amounts to a crude defiance of the philosophical Muse.

THEAETETUS : Why?

STRANGER : This isolation of everything from everything else means a complete abolition of all discourse, for any discourse we can have owes its existence to the weaving together of forms. 280

THEAETETUS : True.

STRANGER : Observe, then, how opportune was our struggle with those separatists, when we forced them to allow one form to blend with another.

THEAETETUS : In what respect?

STRANGER : In respect of securing the position of discourse as one of the kinds of things that exist. To rob us of discourse would be to rob us of philosophy. That would be the most serious consequence, but, besides that, we need at the present moment to come to an agreement about the nature of discourse, and if its very existence had been taken from us, we should naturally not be able to discourse any further. And that would have happened, if we had yielded the point that there is no blending of any one form with another. b

THEAETETUS : That is certainly true. But I do not understand why we need an agreement about discourse at the present moment.

STRANGER : I may be able to suggest a line of thought that will help you to understand.

THEAETETUS : What is that?

STRANGER : We saw that 'not-being' is a single kind among the rest, dispersed over the whole field of realities.

THEAETETUS : Yes.

STRANGER : We have next to consider whether it blends with thinking and discourse.

THEAETETUS : Why that?

STRANGER : If it does not blend with them, everything must be true, but if it does, we shall have false thinking and discourse, for thinking or saying 'what is not' comes, I suppose, to the same thing as falsity in thought and speech. c

THEAETETUS : Yes.

STRANGER : And if falsity exists, deception is possible.

THEAETETUS : Yes.

STRANGER : And once deception exists, images and likenesses and appearance will be everywhere rampant.

THEAETETUS : Of course.

STRANGER : And the Sophist, we said, had taken refuge somewhere in that region, but then he had denied the very existence of falsity; no one could either think or say 'what is not,' because what is not never has any sort of being. d

THEAETETUS : So he said.

STRANGER : But now that 'what is not' has been found to have its share in existence, perhaps he will not fight with us further on that point.

On the other hand, he may perhaps say that some things partake of not-being, some do not, and that speech and thinking are among those that do not, and so once more he might contend that the art of  
 e creating images and semblances, where we say he is to be found, has no existence at all, since thought and speech have no share in not-being, and without that combination there is no such thing as falsity.

That is why we must begin by investigating the nature of discourse and thinking and appearance, in order that we may then make  
 261 out their combination with not-being and so prove that falsity exists, and by that proof pin down the Sophist there, if he is amenable to capture, or else let him go and pursue our search in some other kind.

THEAETETUS: Certainly, sir, what we said at the outset about the Sophist seems true—that he is a hard sort of beast to hunt down. Evidently he possesses a whole armory of problems, and every time that he puts one forward to shield him, we have to fight our way through it before we can get at him. So now, hardly have we got the better of his defense that ‘what is not’ cannot exist, when another ob-  
 b stacle is raised in our path. We must, it seems, prove that falsity exists both in speech and thought, and after that perhaps something else, and so on. It looks as if the end would never be in sight.

STRANGER: A man should be of good courage. Theaetetus, if he can make only a little headway at each step. If he loses heart then, what will he do in another case where he cannot advance at all or even  
 c perhaps loses ground? No city, as they say, will surrender to so faint a summons. And now that we have surmounted the barrier you speak of, we may have already taken the highest wall and the rest may be easier to capture.

THEAETETUS: That is encouraging.

STRANGER: Then, as I said, let us take first statement and judgment, so as to establish clearly whether not-being has any point of contact with them, or both are altogether true and there is never falsity in either.

THEAETETUS: Very good.

d STRANGER: Now, remembering what we said about forms and letters, let us consider words in the same way. The solution of our present problem promises to lie in that quarter.

THEAETETUS: What are you going to ask me about words?

STRANGER: Whether they all fit together, or none of them, or some will and some will not.

THEAETETUS: That is plain enough. Some will, some will not.

STRANGER: You mean perhaps something like this. Words which, when spoken in succession, signify something, do fit together,  
 e while those which mean nothing when they are strung together, do not.

THEAETETUS: What do you mean?

STRANGER: What I supposed you had in your mind when you

gave your assent. The signs we use in speech to signify being are surely of two kinds.

THEAETETUS : How?

STRANGER : One kind called 'names,' the other 'verbs.'

THEAETETUS : Give me a description of each.

STRANGER : By 'verb' we mean an expression which is applied to 262 actions.

THEAETETUS : Yes.

STRANGER : And by a 'name' the spoken sign applied to what performs these actions.

THEAETETUS : Quite so.

STRANGER : Now a statement never consists solely of names spoken in succession, nor yet of verbs apart from names.

THEAETETUS : I don't follow that.

STRANGER : Evidently you had something else in mind when b you agreed with me just now, because what I meant was just this—that these words spoken in a string in this way do not make a statement.

THEAETETUS : In what way?

STRANGER : For example, 'walks runs sleeps,' and so on with all the other verbs signifying actions—you may utter them all one after another, but that does not make a statement.

THEAETETUS : Naturally.

STRANGER : And again, if you say 'lion stag horse' and any other names given to things that perform actions, such a string never makes up a statement. Neither in this example nor in the other c do the sounds uttered signify any action performed or not performed or nature of anything that exists or does not exist, until you combine verbs with names. The moment you do that, they fit together and the simplest combination becomes a statement of what might be called the simplest and briefest kind.

THEAETETUS : Then how do you make a statement of that kind?

STRANGER : When one says, 'A man understands,' do you agree that this is a statement of the simplest and shortest possible kind?

THEAETETUS : Yes.

STRANGER : Because now it gives information about facts or d events in the present or past or future; it does not merely name something but gets you somewhere by weaving together verbs with names. Hence we say it 'states' something, not merely 'names' something, and in fact it is this complex that we mean by the word 'statement.'

THEAETETUS : True.

STRANGER : And so, just as some things fit together, some do not, so with the signs of speech; some do not fit, but those that do fit e make a statement.

THEAETETUS : Quite so.

STRANGER: Now another small point.

THEAETETUS: Yes?

STRANGER: Whenever there is a statement, it must be about something; it cannot be about nothing.

THEAETETUS: That is so.

STRANGER: And must it not have a certain character?

THEAETETUS: Of course.

STRANGER: Now let us fix our attention on ourselves.

THEAETETUS: We will.

STRANGER: I will make a statement to you, then, putting together a thing with an action by means of a name and a verb. You are to tell me what the statement is about.

THEAETETUS: I will do my best.

263 STRANGER: 'Theaetetus sits'—not a lengthy statement, is it?

THEAETETUS: No, of very modest length.

STRANGER: Now it is for you to say what it is about—to whom it belongs.

THEAETETUS: Clearly about me. It belongs to me.

STRANGER: Now take another.

THEAETETUS: Namely?

STRANGER: 'Theaetetus, whom I am talking to at this moment, flies.'

THEAETETUS: That too can only be described as belonging to me and about me.

b STRANGER: And moreover we agree that any statement must have a certain character.

THEAETETUS: Yes.

STRANGER: Then what sort of character can we assign to each of these?

THEAETETUS: One is false, the other true.

STRANGER: And the true one states about you the things that are [or the facts] as they are.

THEAETETUS: Certainly.

STRANGER: Whereas the false statement states about you things *different* from the things that are.

THEAETETUS: Yes.

STRANGER: And accordingly states *things that are not* as being.

THEAETETUS: No doubt.

STRANGER: Yes, but things that *exist*, different from things that *exist* in your case. For we said that in the case of everything there are many things that are and also many that are not.

THEAETETUS: Quite so.

c STRANGER: So the second statement I made about you, in the first place, according to our definition of the nature of a statement, must itself necessarily be one of the shortest possible.

THEAETETUS: So we agreed just now.

STRANGER: And secondly it must be about something.

THEAETETUS : Yes.

STRANGER : And if it is not about you, it is not about anything else.

THEAETETUS : Certainly.

STRANGER : And if it were about nothing, it would not be a statement at all, for we pointed out that there could not be a statement that was a statement about nothing.

THEAETETUS : Quite true.

STRANGER : So what is stated about you, but so that what is different is stated as the same or what is not as what is—a combination of verbs and names answering to that description finally seems to be really and truly a false statement.

THEAETETUS : Perfectly true.

STRANGER : And next, what of thinking and judgment and appearing? Is it not now clear that all these things occur in our minds both as false and as true?

THEAETETUS : How so?

STRANGER : You will see more easily if you begin by letting me give you an account of their nature and how each differs from the others.

THEAETETUS : Let me have it.

STRANGER : Well, thinking and discourse are the same thing, except that what we call thinking is, precisely, the inward dialogue carried on by the mind with itself without spoken sound.

THEAETETUS : Certainly.

STRANGER : Whereas the stream which flows from the mind through the lips with sound is called discourse.

THEAETETUS : True.

STRANGER : And further there is a thing which we know occurs in discourse.

THEAETETUS : Namely?

STRANGER : Assertion and denial.

THEAETETUS : Yes.

STRANGER : Then when this occurs in the mind in the course of silent thinking, can you call it anything but judgment?

THEAETETUS : No.

STRANGER : And suppose judgment occurs, not independently, but by means of perception; the only right name for such a state of mind is 'appearing.'

THEAETETUS : Yes.

STRANGER : Well then, since we have seen that there is true and false statement, and of these mental processes we have found thinking to be a dialogue of the mind with itself, and judgment to be the conclusion of thinking, and what we mean by 'it appears' a blend of perception and judgment, it follows that these also, being of the same nature as statement, must be, some of them and on some occasions, false.

THEAETETUS : Of course.

STRANGER : You see, then, that we have discovered the nature of false judgment and false statement sooner than we expected just now when we feared there would be no end to the task we were setting ourselves in the search for them.

THEAETETUS : I do.

c STRANGER : Then let us not lose courage for what remains to be done. Now that these matters are cleared up, let us recall our earlier divisions by forms.

THEAETETUS : Which do you mean?

STRANGER : We distinguished two forms of image making—the making of likenesses and the making of semblances.

THEAETETUS : Yes.

STRANGER : And we said we were puzzled to tell under which of these two we should place the Sophist.

THEAETETUS : We did.

d STRANGER : And to increase our perplexity we were plunged in a whirl of confusion by the apparition of an argument that called in question all these terms and disputed the very existence of any copy or image or semblance, on the ground that falsity never has any sort of existence anywhere.

THEAETETUS : True.

STRANGER : But now that we have brought to light the existence of false statement and of false judgment, it is possible that there should be imitations of real things and that this condition of mind [false judgment] should account for the existence of an art of deception.

THEAETETUS : Yes, it is.

STRANGER : And we agreed earlier that the Sophist does come under one or other of the two kinds mentioned.

THEAETETUS : Yes.

e STRANGER : Now, then, let us set to work again and, as we divide the kind proposed in two, keep to the right-hand section at each stage. Holding fast to the characters of which the Sophist partakes until we have stripped off all that he has in common with others and left only the nature that is peculiar to him, let us so make that nature  
265 plain, in the first place to ourselves, and secondly to others whose temperament finds a procedure of this sort congenial.

THEAETETUS : Very good.

STRANGER : Well, we began by dividing art into productive and acquisitive.

THEAETETUS : Yes.

STRANGER : And under the head of the acquisitive we had glimpses of the Sophist in the arts of hunting, contention, trafficking, and other kinds of that sort.

THEAETETUS : Certainly.

STRANGER: But now that he has been included under an art of imitation, clearly we must start by dividing into two the productive branch of art. For imitation is surely a kind of production, though it be only a production of images, as we say, not of originals of every sort. b  
Is that not so?

THEAETETUS: Assuredly.

STRANGER: Let us begin, then, by recognizing two kinds of production.

THEAETETUS: What are they?

STRANGER: The one divine, the other human.

THEAETETUS: I don't understand yet.

STRANGER: Production—to recall what we said at the outset—we defined as any power that can bring into existence what did not exist before.

THEAETETUS: I remember.

STRANGER: Now take all mortal animals and also all things c that grow—plants that grow above the earth from seeds and roots, and lifeless bodies compacted beneath the earth, whether fusible or not fusible. Must we not attribute the coming-into-being of these things out of not-being to divine craftsmanship and nothing else? Or are we to fall in with the belief that is commonly expressed?

THEAETETUS: What belief do you mean?

STRANGER: That nature gives birth to them as a result of some spontaneous cause that generates without intelligence. Or shall we say that they come from a cause which, working with reason and art, is divine and proceeds from divinity?

THEAETETUS: Perhaps because I am young, I often shift from d one belief to the other, but at this moment, looking at your face and believing you to hold that these things have a divine origin, I too am convinced.

STRANGER: Well said, Theaetetus. If I thought you were the sort of person that might believe otherwise in the future, I should now try by force of persuasion to make you accept that account. But I can see clearly that, without any arguments of mine, your nature will come of itself to the conclusion which you tell me attracts you at this e moment. So I will let that pass; I should be wasting time. I will only lay it down that the products of nature, as they are called, are works of divine art, as things made out of them by man are works of human art. Accordingly there will be two kinds of production, one human, the other divine.

THEAETETUS: Good.

STRANGER: Once more, then, divide each of these two into two parts.

THEAETETUS: How?

STRANGER: As you have just divided the whole extent of pro- 266  
duction horizontally, now divide it vertically.

THEAETETUS: Be it so.

STRANGER: The result is four parts in all—two on our side, human, two on the side of the gods, divine.

THEAETETUS: Yes.

STRANGER: And taking the divisions made in the first way [horizontally, divine and human], one section of each part will be the production of originals, and the remaining two sections will be best described as production of images. So we have a second division of production on that principle [originals and images].

b THEAETETUS: Explain once more how each of the two parts [divine and human] is divided.

STRANGER: Ourselves, I take it, and all other living creatures and the elements of natural things—fire, water, and their kindred—are all originals, the offspring, as we are well assured, of divine workmanship. Is it not so?

THEAETETUS: Yes.

STRANGER: And every one of these products is attended by images which are not the actual thing, and which also owe their existence to divine contrivance.

THEAETETUS: You mean . . . ?

c STRANGER: Dream images, and in daylight all those naturally produced semblances which we call 'shadow' when dark patches interrupt the light, or a 'reflection' when the light belonging to the eye meets and coalesces with light belonging to something else on a bright and smooth surface and produces a form yielding a perception that is the reverse of the ordinary direct view.

THEAETETUS: There are, indeed, these two products of divine workmanship—the original and the image that in every case accompanies it.

STRANGER: And what of our human art? Must we not say that in building it produces an actual house, and in painting a house of a different sort, as it were a man-made dream for waking eyes?

d THEAETETUS: Certainly.

STRANGER: And so in all cases, we find once more twin products of our own productive activity in pairs—one an actual thing, the other an image.

THEAETETUS: I understand better now, and I recognize two forms of production, each of them twofold—divine and human according to one division, and according to the other a production of actual things and of some sort of likenesses.

STRANGER: Let us remind ourselves, then, that of this production of images there were to be two kinds, one producing likenesses, the other semblances, provided that falsity should be shown to be a thing that really is false and of such a nature as to have a place among existing things.

THEAETETUS: Yes, it was to be so.

**STRANGER:** And that has now been shown; so on that ground shall we now reckon the distinction of these two forms as beyond dispute?

**THEAETETUS:** Yes.

**STRANGER:** Once more, then, let us divide in two the kind that produces semblances. 267

**THEAETETUS:** How?

**STRANGER:** There is the semblance produced by means of tools, and another sort where the producer of the semblance takes his own person as an instrument.

**THEAETETUS:** How do you mean?

**STRANGER:** When someone uses his own person or voice to counterfeit your traits or speech, the proper name for creating such a semblance is, I take it, mimicry.

**THEAETETUS:** Yes.

**STRANGER:** Let us reserve that section, then, under the name of mimicry, and indulge ourselves so far as to leave all the rest for someone else to collect into a unity and give it an appropriate name. b

**THEAETETUS:** So be it.

**STRANGER:** But there is still ground for thinking that mimicry is of two sorts. Let me put it before you.

**THEAETETUS:** Do.

**STRANGER:** Some mimics know the thing they are impersonating; others do not. And could we find a more important distinction than that of knowing from not knowing?

**THEAETETUS:** No.

**STRANGER:** And the mimicry we have just mentioned goes with knowledge, for to impersonate you, one must be acquainted with you and your traits.

**THEAETETUS:** Of course. c

**STRANGER:** And what of the traits of justice and of virtue generally? Are there not many who, having no knowledge of virtue but only some sort of opinion about it, zealously set about making it appear that they embody virtue as they conceive it, mimicking it as effectively as they can in their words and actions?

**THEAETETUS:** Only too many.

**STRANGER:** And are they always unsuccessful in appearing to be virtuous when they are not really virtuous at all? Do they not rather succeed perfectly?

**THEAETETUS:** They do.

**STRANGER:** We must, then, distinguish the ignorant mimic from the other, who has knowledge. d

**THEAETETUS:** Yes.

**STRANGER:** Where, then, must we look for a suitable name for each? No doubt it is hard to find one, because the ancients, it would seem, suffered from a certain laziness and lack of discrimination

with regard to the division of kinds by forms, and not one of them even tried to make such divisions, with the result that there is a serious shortage of names. However, though the expression may seem daring, for purposes of distinction let us call mimicry guided by opinion 'conceit mimicry,' and the sort that is guided by knowledge 'mimicry by acquaintance.'

THEAETETUS: So be it.

STRANGER: It is the former, then, that concerns us, for the Sophist was not among those who have knowledge, but he has a place among mimics.

THEAETETUS: Certainly.

STRANGER: Then let us take this conceit mimic and see if his metal rings sound or there is still a crack in it somewhere.

THEAETETUS: Let us do so.

STRANGER: Well, there is a gaping crack. There is the simple-minded type who imagines that what he believes is knowledge, and an  
268 opposite type who is versed in discussion, so that his attitude betrays no little misgiving and suspicion that the knowledge he has the air of possessing in the eyes of the world is really ignorance.

THEAETETUS: Certainly both the types you describe exist.

STRANGER: We may, then, set down one of these mimics as sincere, the other as insincere.

THEAETETUS: So it appears.

STRANGER: And the insincere—is he of two kinds or only one?

THEAETETUS: That is for you to consider.

b STRANGER: I will, and I can clearly make out a pair of them. I see one who can keep up his dissimulation publicly in long speeches to a large assembly. The other uses short arguments in private and forces others to contradict themselves in conversation.

THEAETETUS: Very true.

STRANGER: And with whom shall we identify the more long-winded type—with the statesman or with the demagogue?

THEAETETUS: The demagogue.

STRANGER: And what shall we call the other—wise man or Sophist?

c THEAETETUS: We cannot surely call him wise, because we set him down as ignorant, but as a mimic of the wise man he will clearly assume a title derived from his, and I now see that here at last is the man who must be truly described as the real and genuine Sophist.

STRANGER: Shall we, then, as before collect all the elements of his description, from the end to the beginning, and draw our threads together in a knot?

THEAETETUS: By all means.

STRANGER: The art of contradiction making, descended from an insincere kind of conceited mimicry, of the semblance-making

breed, derived from image making, distinguished as a portion, not divine but human, of production, that presents a shadow play of words—such are the blood and lineage which can, with perfect truth, be assigned to the authentic Sophist.

THEAETETUS : I entirely agree.

# STATESMAN

*The Statesman is generally ranked among Plato's most important dialogues, but the first part of it presents difficulties to the reader, not because the thought is hard to understand, but because it is often long drawn out. Plato is by now in love with classification, as indeed he is also in the Sophist, but there only briefly. In the Statesman there are pages of division and subdivision in order to reach a definition of what the statesman is. Land dwellers are divided from sea dwellers, the horned from the hornless, the four-legged from the biped, and so on, until we get to man. Government is then divided into that over willing and that over unwilling subjects. But Plato cannot leave it at that. He must also illustrate what government is, first by a mythical story which shows that this world of imperfection has a close relation to the divine, and then by a practical example because, to paraphrase, "there is no outward and visible image of the greatest and noblest things"—the things that are seen are temporal—"and we must learn to give a rational account of them." Such illuminating ideas occur again and again throughout the dialogue.*

*Weaving is chosen to illustrate the statesman's art of rightly dealing with "herds of free bipeds," and many pages are devoted to cutting off the weaver's art from the others and then describing the process of weaving which separates the wool into threads and combines them into cloth, thus exemplifying the many in the one and the one in the many. In the same way the separate activities of men, many as they are, combine under the guidance of the statesman into the firm and enduring union of the good state.*

*Of greater interest is the discussion in the last third of the dialogue about the various forms of government and the part law plays in them. The best government is lawless. It is guided by the true statesman whose rule is flexible and can be adapted to each individual case. The rule of law, on the contrary, is rigid and inflexible. The difference can be illustrated clearly if we imagine the two methods applied to any art, the art of medicine, for instance. If it were ruled by law, a majority in a general assembly would decide what methods should be used in doctoring people and that these should be invariably followed. Whoever was detected inquiring into its methods would be indicted in court on the charge of corrupting the young, persuading*

*them to give medicine in an unlawful manner. If we were to do this in everything, science, art, agriculture, carpentry, and so on, what would be the result? They would all perish and could never spring up again because inquiry would be forbidden. "The result would be that life, which is hard enough as it is, would be quite impossible then and not to be endured."*

*The best government then is independent of law. Statesmanship is an art just as painting is. A good state can no more be produced and maintained by laws than a good picture can be painted by formulas for mixing colors. When the true statesman rules he knows of himself how to deal justly with all, whereas the law can be the cause of great injustice. But the state is not like a beehive; there is no single, visible head. If no true statesman appears, the rule of law is the next best. Experience has played a signal part in drawing up laws. Unadaptable though they are, they are better than the forms of government without them. But only the true statesman can rightly weave the web of the state, bringing the many minds of men into firm and enduring union.*

SOCRATES: Theodorus, I am really very much indebted to you for my 257  
introduction to Theaetetus and to our guest from Elea.

THEODORUS: Good, but you are likely to be three times as much  
in my debt, Socrates, when they have done their task and defined the  
statesman and the philosopher as well as the Sophist for you.

SOCRATES: Three times as much? Really, my dear Theodorus,  
must it go on record that we heard our greatest mathematician and  
geometer say that?

THEODORUS: What do you mean, Socrates?

b

SOCRATES: Are we to say that we heard you reckoning all these  
three as of equal value when their real values differ to an extent that  
defies all your mathematical expressions of proportion?

THEODORUS: By Ammon, god of Libya, well said, Socrates, and  
a fair hit! Your dropping on my blunder in calculation like this  
shows that you have really remembered your mathematics! But I will  
have my revenge for this some other time. Now, sir, we turn to you.

---

From *Plato's Statesman*, translated with introductory essays and footnotes  
by J. B. Skemp (New Haven and London, 1952). Minor corrections have  
been made, as suggested by G. E. L. Owen, in his review in *Mind*, LXII, No.  
246 (April 1953). A few English colloquialisms have been changed to  
standard English.

Pray do not tire of favoring us with your assistance but go on to define the statesman or the philosopher, whichever you prefer to seek.

- c STRANGER: Yes, we must do that, Theodorus. We have set ourselves to the task and now we must not withdraw from it till all our definitions are complete. But we must also consider Theaetetus here—what ought I to do about him?

THEODORUS: In what way?

STRANGER: Shall we give him a rest from philosophical wrestling and take on his fellow gymnast, the young Socrates, in his place—or have you any other suggestion?

THEODORUS: No, take on young Socrates this time, as you suggest. They are both young and will be better able to carry through stiff exercise by being rested in turn.

- d 258 SOCRATES: Furthermore, sir, they might both be said to have some sort of kinship with me. Theaetetus, according to you, is like me in looks and Socrates bears the same name. Sharing a name entails kinship in some sense, and, of course, we ought always to seize opportunities of discovering those who may be our kinsfolk by conversing with them. Yesterday I joined in discussion with Theaetetus; today I have listened to him answering you. I have not heard Socrates speak either in discussion or in reply. He too must be tested. So he shall reply to me another time, but this afternoon let him answer you.

STRANGER: Very good! Socrates, you hear what Socrates says?

YOUNG SOCRATES: Yes.

STRANGER: Do you agree to his proposal?

YOUNG SOCRATES: Yes, certainly.

- b STRANGER: Evidently you are putting no obstacles in the way of our advance, and I think I am still less entitled to do so. Well, then, after finding the Sophist, the task we now have to face together is to search out the statesman, or so it seems to me. Tell me, then, Socrates, whether he too must be classified as one of those who possess some kind of expert knowledge, or must we begin with some other kind of definition?

YOUNG SOCRATES: No, he is to be defined as a kind of expert.

STRANGER: Well then, must we distinguish the forms of knowledge as we did when looking for his predecessor?

YOUNG SOCRATES: It would seem so.

STRANGER: But the line of cleavage required now appears to differ from the previous one, Socrates.

YOUNG SOCRATES: What then?

- c STRANGER: It follows another division.

YOUNG SOCRATES: It may well be so.

STRANGER: Where shall a man find the way of the statesman then? For we must distinguish this path from all the rest by setting upon it the special sign of its distinctive form. All roads divergent

from it we must mark out also as one common class. Thus we must bring our minds to conceive of all forms of knowledge as falling under one or the other of these two classes—statecraft and knowledge other than statecraft.

YOUNG SOCRATES: This must be your task, sir. It is not for me to attempt it.

STRANGER: Yes, but it will be your achievement as well, Socrates, when all becomes clear to us both.

YOUNG SOCRATES: It is kind of you to say so.

STRANGER: Then consider the science of number and certain other sciences closely akin to it. Are they not unconcerned with any form of practical activity, yielding us pure knowledge only?

YOUNG SOCRATES: That is the case.

STRANGER: But it is quite otherwise with carpentry and manufacture in general. These possess science embodied as it were in a practical activity and inseparable from it. Their products do not exist before the arts come into operation and their operation is an integral part of the emergence of the product from its unworked state.

YOUNG SOCRATES: True. What of it?

STRANGER: You must use this distinction to divide the totality of sciences into two classes. Name the one 'applied,' the other 'pure.'

YOUNG SOCRATES: I agree. Let your distinction be drawn, and let all science be divided into these two parts.

STRANGER: Are we then to regard the statesman, the king, the slavemaster, and the master of a household as essentially one though we use all these names for them, or shall we say that four distinct sciences exist, each of them corresponding to one of the four titles? But let me put this in another way easier to follow.

YOUNG SOCRATES: And what is that?

259

STRANGER: I will tell you. Suppose we find a medical man who is not himself practicing as a public medical officer but who nevertheless is competent to advise a doctor actually serving in that capacity? Must not the expert knowledge the adviser possesses be described by the same title as that of the functionary whom he is advising?

YOUNG SOCRATES: Yes.

STRANGER: Well then, consider a man who, though himself a private citizen, is capable of giving expert advice to the ruler of a country. Shall we not say that he possesses the same science as the ruler himself possesses—or, rather ought to have possessed?

YOUNG SOCRATES: We shall indeed say so.

STRANGER: But the science possessed by the true king is the science of kingship?

YOUNG SOCRATES: Yes.

STRANGER: The possessor of this science then, whether he is

in fact in power or has only the status of a private citizen, will properly be called a 'statesman' since his knowledge of the art qualifies him for the title whatever his circumstances.

YOUNG SOCRATES: Yes, he is undoubtedly entitled to that name.

STRANGER: Then consider a further point. The slavemaster and the master of a household are identical.

YOUNG SOCRATES: Yes.

STRANGER: Furthermore, is there much difference between a large household organization and a small-sized city, so far as the exercise of authority over it is concerned?

YOUNG SOCRATES: None.

c STRANGER: Well then, our point is clearly made. One science covers all these several spheres and we will not quarrel with a man who prefers any one of the particular names for it; he can call it royal science, political science, or science of household management.

YOUNG SOCRATES: It makes no difference.

STRANGER: Now comes another point that can hardly be controversial. What a king can do to maintain his rule by using his hands or his bodily faculties as a whole is very slight in comparison with what he can do by mental power and force of personality.

YOUNG SOCRATES: Manifestly.

d STRANGER: So a king's art is closer to theoretical knowledge than to manual work or indeed to practical work in general?

YOUNG SOCRATES: Yes.

STRANGER: You agree then that we may speak either of statesmanship and the statesman or of kingship and the king, these terms being convertible, since they are identical in force?

YOUNG SOCRATES: Certainly.

STRANGER: Let us go on to the next stage and see if we can proceed to a division of the kinds of theoretical knowledge.

YOUNG SOCRATES: Good.

STRANGER: Look attentively then and see if we cannot discover a natural cleavage within such knowledge.

YOUNG SOCRATES: Tell me where it is.

e STRANGER: See, it is here. There exists, we agree, an art of counting.

YOUNG SOCRATES: Yes.

STRANGER: That belongs quite definitely to the class of theoretical sciences, I presume.

YOUNG SOCRATES: Of course.

STRANGER: Now when the art of counting has ascertained a numerical difference we do not assign it any further task save that of pronouncing on what has been ascertained, do we?

YOUNG SOCRATES: No.

STRANGER: Now consider a master builder. No master builder is a manual worker—he directs the work of others.

YOUNG SOCRATES: Yes.

STRANGER: He provides the knowledge but not the manual labor.

YOUNG SOCRATES: True.

STRANGER: So he might fairly be said to possess one of the 260 theoretical forms of science.

YOUNG SOCRATES: He might indeed.

STRANGER: But it is characteristic of him that when he has delivered a verdict on the facts he has not ended his task in the way the calculator has. The master builder must give the appropriate directions to each of the workmen and see that they complete the work assigned.

YOUNG SOCRATES: That is so.

STRANGER: Therefore all this class of sciences are quite as 'theoretical' as calculation and its kindred sciences are, but the two groups differ from one another in that the latter are content to give a verdict, b but the former issue a command for performance of further actions.

YOUNG SOCRATES: This is clearly the difference between them.

STRANGER: Well then, may we claim that it is a sound division to split the whole of theoretical science into two parts and to call one critical and the other directive?

YOUNG SOCRATES: Yes—I would agree to it at any rate.

STRANGER: I hope so, for it is much to be desired that those sharing a task should be of one mind.

YOUNG SOCRATES: Indeed it is.

STRANGER: So long as we ourselves share this happy agreement we can let the judgments of the rest of the world look after themselves.

YOUNG SOCRATES: Yes.

STRANGER: Well then, in which of these groups of sciences do c we find a place for the king? In the critical class—as though he were a mere spectator of truth? Is he not rather in the other, directive class? Does not his position in control of men imply this?

YOUNG SOCRATES: Of course he is in the second group.

STRANGER: Good, but we must now look further at the directive class and see if we find a cleavage in it somewhere. I think I have lighted on one. There is a difference between kings and heralds d analogous to the difference between the art of the producer-salesman and of that of the retailer.

YOUNG SOCRATES: How so?

STRANGER: Retailers take over what someone else has made and then sell a second time what was first sold to them.

YOUNG SOCRATES: Quite so.

STRANGER: Similarly heralds receive commands which have been thought out and issued by someone else; then they issue them at second hand to others.

YOUNG SOCRATES: Very true.

SOCRATES: Well then, are we going to confound the science of e kingship with the science of the interpreter, the coxswain, the prophet, or the herald, or with any of this large group of kindred sciences, simply because all of them are concerned, as admittedly they are, with issuing orders? We thought out an analogy just now. Cannot we think out a name as well, seeing that unfortunately there is no normal description of the general class of 'givers of firsthand orders'? We will make the cleavage at this point and name a 'predirective' class into which we will put the race of kings. The other class, now distinct, we can neglect, leaving it to someone else to invent a further common name for the tribes it covers. It is for the king we are searching—not for his opposite.

YOUNG SOCRATES: Exactly.

261 STRANGER: Well then, his group has been distinguished from the others, the decisive factor being that the kingly group issues its own commands while the other group merely passes commands on. Now we must subdivide the kingly group if we find it susceptible of a division.

YOUNG SOCRATES: We must look for one.

STRANGER: Yes, and I think I have found one. Keep close to me and share the work of dividing.

YOUNG SOCRATES: Where is the division?

b STRANGER: Take any ruler we may observe at his work of issuing orders. Is not the purpose of his action the production of something?

YOUNG SOCRATES: Of course.

STRANGER: Products in general need not detain us; they are easily divided into two classes.

YOUNG SOCRATES: How?

STRANGER: Considering them as a whole we find some lifeless, the rest alive.

YOUNG SOCRATES: Yes.

STRANGER: By this distinction we can divide, if we wish to do so, the directive group of theoretical sciences.

YOUNG SOCRATES: How?

c STRANGER: We assign one section to superintendence of the production of lifeless things, the other to superintendence of the production of living things. This effects an exhaustive division of the group.

YOUNG SOCRATES: Yes, it does.

STRANGER: Let us put aside the one section and, taking the other as our unit, divide it into two.

YOUNG SOCRATES: Which of the two sections do you suggest that we take for subdivision?

STRANGER: Surely the section concerned with the issue of directives about living creatures. It goes without saying that the king is never concerned with directives concerning lifeless things in the way the master builder is. Kingship is a nobler thing; it works among living creatures and its functions have to do with these alone. d

YOUNG SOCRATES: True.

STRANGER: Now the breeding and nurturing of living creatures can be seen to be of two kinds. They may either be reared singly or in flocks collectively.

YOUNG SOCRATES: They may.

STRANGER: But we shall certainly not find the statesman to be a man in charge of one creature like some cowman or groom. He is much more like the man in charge of a whole herd of cows or of a stud of horses.

YOUNG SOCRATES: That is quite clear, once it is put as you have put it now.

STRANGER: How shall we describe the section of the art of rearing living things which has to do with rearing them collectively? Shall we call it 'herd nurture' or 'collective nurture'? e

YOUNG SOCRATES: We can use whichever name better helps our argument.

STRANGER: Excellently said, Socrates. If you hold fast to this principle of avoiding contention over names you will be seen to be rich with an ever greater store of wisdom as you come to old age. We will apply this sound principle to the present case and do as you bid me. Do you see how we can divide the nurture of herds into twin sections, so as to cordon off the object of our search in one of them and leave him an area only half the size of the one he is free to roam in at present? 262

YOUNG SOCRATES: I will try my hardest to cordon him off. I think the division is to be made between nurture of men and nurture of beasts.

STRANGER: You were keenness itself and you fenced the king off like a man, but I think we must not let this happen again if we can help it.

YOUNG SOCRATES: Why, what has happened? What have we done?

STRANGER: We must beware lest we break off one small fragment of a class and then contrast it with all the important sections left behind. We must only divide where there is a real cleavage between specific forms. The section must always possess a specific form. It is splendid if one really can divide off the class sought for immediately from all the rest—that is, if the structure of reality authorizes such immediate division. You had such direct tactics in mind just

now and hastened the argument to its conclusion. You saw that our search led us to men, and so you thought you had found the real division. But, it is dangerous, Socrates, to chop reality up into small portions. It is always safer to go down the middle to make our cuts. The real cleavages among the forms are more likely to be found thus, and  
 c the whole art of these definitions consists in finding these cleavages.

YOUNG SOCRATES : What do you mean, sir?

STRANGER : I will try to be still clearer, Socrates, for you are the kind of person it is a pleasure to teach. A fully satisfactory demonstration is not possible now, circumstances being what they are, but we must try for the sake of clearness to push the explanation a stage further.

YOUNG SOCRATES : Thank you, but what kind of mistake do you say that we made in our division just now?

STRANGER : The kind of mistake a man would make who, seeking to divide the class of human beings into two, divided them into  
 d Greeks and barbarians. This is a division most people in this part of the world make. They separate the Greeks from all other nations making them a class apart; thus they group all other nations together as a class, ignoring the fact that it is an indeterminate class made up of peoples who have no intercourse with each other and speak different languages. Lumping all this non-Greek residue together, they think it must constitute one real class because they have a common name  
 e 'barbarian' to attach to it. Take another example. A man might think that he was dividing number into its true classes if he cut off the number ten thousand from all others and set it apart as one class. He might go on to invent a single name for the whole of the rest of number, and then claim that because it possessed the invented common name it was in fact the other true class of number—'number other than ten thousand.' Surely it would be better and closer to the real structure of the forms to make a central division of number into odd and even or of humankind into male and female. A division setting Lydians or Phrygians or any other peoples in contradistinction to all the rest can only be made when a man fails to arrive at a true division into two groups each of which after separation is not only a portion of the  
 263 whole class to be divided but also a real subdivision of it.

YOUNG SOCRATES : Quite so, sir, but this is just the difficulty. How can one learn to distinguish more clearly between a mere portion and a true subdivision and recognize them as being really different?

STRANGER : My dear Socrates, this is no light order. We have already strayed rather too far from the argument set as our task, and here you are asking that we stray still further! For the moment let us go back to the argument as is only right. We will get on the track of  
 b your problem some other time when we are free to do so and then we will follow it out to the end. But there is one caution I will add here.

Do not suppose that in what I say now I have given you a full explanation of the principle.

YOUNG SOCRATES : What principle do you mean?

STRANGER : The principle that a portion and a subdivision of a class are not identical.

YOUNG SOCRATES : Can you be more explicit?

STRANGER : Where a true subdivision of a wider class is made, this subdivision must necessarily also be a portion of the total class of which it is declared a subdivision. But the converse is not true, since a portion is not necessarily a true subdivision. You can claim my authority, Socrates, for asserting this and for denying the contrary.

YOUNG SOCRATES : This ruling will be followed.

STRANGER : Good! Now help me to settle the next question. c

YOUNG SOCRATES : What is that?

STRANGER : Consider the class which caused us to stray from the argument and brought us to this point. I think that the trouble began at the moment when you were asked how we were to divide the science of tending herds and you answered with alacrity that there are two classes of living creatures, one of them being mankind, and the other the rest of the animals lumped together.

YOUNG SOCRATES : True.

STRANGER : It became clear to me then that you were breaking off a mere portion, and that because you were able to give the common name 'animals' to what was left, namely to all creatures other than man, you thought that these creatures do in actual fact make up one class.

YOUNG SOCRATES : Yes, that was so. d

STRANGER : But, my gallant young friend, pray consider this! This kind of classification might be undertaken by any other creature capable of rational thought—for instance cranes are reputed to be rational in this way and there may be others. They might invest themselves with a unique and proper dignity and classify the race of cranes as being distinct from all other creatures; the rest they might well lump together, men included, giving them the common appellation of 'the beasts.' So let us try to be on the watch against mistakes of that kind. e

YOUNG SOCRATES : How can we avoid them?

STRANGER : By not attempting too general a division of the class of living creatures. We shall be less liable to such errors if we avoid this.

YOUNG SOCRATES : Indeed we must not do it.

STRANGER : No, for it was here our mistake was made just now.

YOUNG SOCRATES : What precisely was it?

STRANGER : The directive section of theoretical science, in so

far as it directs the rearing of living creatures was our concern, but we added 'the rearing of them in *herds*.' That is so, is it not?

YOUNG SOCRATES: Yes.

- 264 STRANGER: This last element of the definition, 'rearing in herds,' implied a prior division of all living creatures according to wildness and tameness. Types amenable to training and control we call tame animals; those resisting control, wild animals.

YOUNG SOCRATES: True.

STRANGER: Now it will be conceded that the science we are hunting down has always been and still is one that works among tame creatures; furthermore, it is to be looked for among tame creatures which are gregarious.

YOUNG SOCRATES: Yes.

- STRANGER: Let us avoid making divisions in the way we did just now, in a desperate hurry and with our attention fixed only on the whole class. Only thus shall we reach the statesman in good time.  
b This statesman's art has already landed us in the situation the proverb warns us against!

YOUNG SOCRATES: Which proverb is this?

STRANGER: 'More haste' in our work of correct division has meant 'less speed' for us.

YOUNG SOCRATES: But it has been a happy mischance, sir.

STRANGER: That may be so, but now let us try again from the beginning to divide the science of collective rearing. It may well be that the argument itself as we proceed with it will show you more clearly the very thing you are in such eagerness to discover. Answer me this.

YOUNG SOCRATES: What?

- STRANGER: I want to know if you happen to have heard people  
c speak of something you can hardly have seen for yourself—herds of tame fishes. I know you have not been to see them in the aquariums in the Nile or in the Great King's ponds. But you might possibly have seen such fishes in ornamental fountains yourself.

YOUNG SOCRATES: Of course I have seen them, and I have heard many people speak of the others.

STRANGER: It is the same with the flocks of tame cranes and tame geese in Thessaly—you have never toured the Thessalian plains but you have at least heard of them and you believe that such flocks exist.

YOUNG SOCRATES: Yes, of course.

- d STRANGER: My reason for asking you all this is to show that creatures reared in herds may be of two kinds. Some live in water; others live on land.

YOUNG SOCRATES: Yes, I agree.

STRANGER: Have I your agreement, then, that we have to divide herd rearing on this principle into two sections? May we assign

one subdivision to each of these subsidiary sciences and call the one 'water herd rearing,' the other 'land herd rearing'?

YOUNG SOCRATES: Again, I agree.

STRANGER: One need hardly ask to which of these sciences the kingly art belongs—the answer is obvious. e

YOUNG SOCRATES: Of course.

STRANGER: The next subdivision of the land herd rearing section of herd rearing can be made by anyone.

YOUNG SOCRATES: How?

STRANGER: By dividing it between walkers and fliers.

YOUNG SOCRATES: Oh yes, of course.

STRANGER: Well then, is not the statesman's art to be sought among the arts dealing with walking herds? Do you not think that practically everyone, even the most witless, would judge this to be so?

YOUNG SOCRATES: Yes, I do.

STRANGER: Then we must effect a subdivision of land herd tendance into two parts, just as we recently divided number into two.

YOUNG SOCRATES: Clearly.

STRANGER: But see what has happened. In the region into 265  
which the argument has moved we see two paths lying before us inviting us to our goal. One path reaches the goal more quickly but divides off a small class from a large one. The other is a longer way round but it observes the principle we enunciated before, that we should always divide down the middle where possible. We can go on by whichever of these paths we prefer.

YOUNG SOCRATES: Is it impossible to take them both?

STRANGER: To take both at once is impossible—that is an amazing suggestion, Socrates! But obviously you can take first one, then the other.

YOUNG SOCRATES: Then I vote for taking first one way, then b  
the other.

STRANGER: That is easy, for there is not much farther to go. At the outset or halfway your command would have been difficult for us to obey, but since we are nearly there and you desire it, let us take the longer path first; we shall get to its end more easily now while we are fresher. See this division then.

YOUNG SOCRATES: Tell me what it is.

STRANGER: We find a division of tame herded walking creatures ready-made in nature.

YOUNG SOCRATES: What is it?

STRANGER: Some have horns; the rest have none.

YOUNG SOCRATES: That is evident. c

STRANGER: Divide then the science of rearing walking herds into two sections, assigning each its sphere, but use a general description in doing so. For if you are anxious about naming each, the business will be complicated needlessly.

YOUNG SOCRATES: How shall we state the matter then?

STRANGER: We will say this. The science of rearing walking herds has been divided into two. The one section of it is assigned to rearing horned herds, and the other to rearing hornless herds.

d YOUNG SOCRATES: The division shall stand in these terms. In any case there can be no further question about it.

STRANGER: See now, our king stands out clearly once more; he is shepherd of a hornless herd.

YOUNG SOCRATES: Unmistakably so!

STRANGER: Let us divide up this herd into its component parts then, and try to assign to the king the place really belonging to him.

YOUNG SOCRATES: By all means.

STRANGER: Where shall we divide it? By distinguishing whole-hoofed and cloven-hoofed, or interbreeding and noninterbreeding? Which do you prefer? You understand what I mean, I suppose?

YOUNG SOCRATES: About what?

e STRANGER: You know that horses and asses are capable of interbreeding?

YOUNG SOCRATES: Yes.

STRANGER: But all other tame hornless herds are incapable of interbreeding.

YOUNG SOCRATES: Of course.

STRANGER: What of the statesman then? Is the herd he has in his charge capable of interbreeding with another or incapable?

YOUNG SOCRATES: Incapable, of course.

STRANGER: This group we must now divide again into two as before, it would seem.

YOUNG SOCRATES: Yes, we must.

266 STRANGER: But the class of tame, gregarious living creatures has already been reduced to its component elements save for the division of two of these from each other. For dogs cannot claim to be counted in the class of gregarious animals.

YOUNG SOCRATES: No they cannot, but by what means are we to separate the remaining pair?

STRANGER: By a method very appropriate for application by Theaetetus and yourself, seeing that both of you are geometers.

YOUNG SOCRATES: What is that?

STRANGER: I would say, 'by the diagonal and secondly by the diagonal of the diagonal.'

YOUNG SOCRATES: What do you mean?

b STRANGER: What say you of our human constitution? How is this human race of ours endowed? So far as its peripatetic potential is concerned, is it not very like the diagonal? Has it not a potency of two feet?

YOUNG SOCRATES: So it has.

STRANGER: Moreover the character of the remaining component of the class is in turn of the potency possessed by the diagonal

of our human diagonal, since its native peripatetic potential is one of two feet twice over.

YOUNG SOCRATES: Of course it is, and I think I see what you are meaning to say.

STRANGER: Good! Now here is another conclusion which we have reached by our divisions which is not without its interest for the comedians. Do we see it, Socrates?

YOUNG SOCRATES: What is it?

STRANGER: For neighbor and competitor in the race this humanity of ours has the most portly and the most easygoing of all the creatures.

YOUNG SOCRATES: Yes, I see. What a funny coincidence!

STRANGER: Still, isn't it reasonable after all? The slowest shuffle in—or snuffle in—last.

YOUNG SOCRATES: Yes, of course you're right.

STRANGER: But there is another thing to notice. What a funny situation the king is in! He has kept pace with his herd and so he has been running a race with the man who is of all men best trained for a living an easy life!

YOUNG SOCRATES: Yes, just so.

STRANGER: This is a still clearer illustration of the principle we laid down in our inquiry concerning the Sophist.

YOUNG SOCRATES: What was that?

STRANGER: That in a philosophical search for a definition, like the present one, the presence or absence of dignity in the object under definition is an irrelevance. Lowly and exalted must receive equal consideration and the argument must proceed by proper stages in its own right to reach the truest conclusion obtainable.

YOUNG SOCRATES: That seems to be right.

STRANGER: Well now, am I to lead you, without waiting for you to ask me, along the shorter of the roads which we discovered as leading to the definition of the king?

YOUNG SOCRATES: Do so, please.

STRANGER: In my opinion then, we must start from the point we reached by separating out herded creatures on land and this time divide these forthwith into two-footed and four-footed. We shall then see the human race sharing the occupation of the two-footed class with the winged tribes and none else; having observed this, we shall divide the two-footed herds into winged and wingless. Then the science of shepherding mankind will have been brought to light. Now we must bring our statesman and king and set him over this class like a charioteer, and hand over to him the reins of government of the state, for they belong to him and his alone is this art of government.

YOUNG SOCRATES: Your debt to me, sir, is nobly discharged by the definition you have made—and you have more than paid the debt, for you have thrown in the digression by way of interest.

STRANGER: Come then, let us gather up the threads of our

argument and work out from start to finish our definition of what is called 'political science.'

YOUNG SOCRATES: Let us do so by all means.

STRANGER: We made a first division of theoretical science by taking the directive part of it. Of this we took the part which we described by analogy with the producer-salesman as 'predirective.' From this predirective science we cut off that which directs the rearing of living things, a very important part of the whole. Animal rearing was divided and we chose out of it rearing in herds, and, next to this, rearing of herds of creatures that live on land. Dividing this again, we chose rearing of hornless herds. We then took a part of this, and if one must employ its name, it will be a name three words long—'non-interbreeding herd tendance.' As for the further divisions, only the class 'man tendance' is left in the two-footed section of the last-named class—and so we reach the object of our search, namely, statesmanship or kingship, which is another name for statesmanship.

YOUNG SOCRATES: Yes, we really have reached our conclusion.

STRANGER: Do you really think so, Socrates? Do you think our task as complete as you make out?

YOUNG SOCRATES: Why do you ask?

STRANGER: Have we dealt fully with the problem we were given to solve? Is there not a fault and a very grave one in our treatment of it, the fault of arriving at a definition of a king but failing to work through to a really complete and adequate definition?

YOUNG SOCRATES: What do you mean?

STRANGER: I will try to make my meaning clearer—to myself as well as to you.

YOUNG SOCRATES: Do so, please.

STRANGER: We found just now many arts of herd tendance of which statesmanship is one particular instance. Statesmanship is in charge of the rearing of a particular kind of herd.

YOUNG SOCRATES: Yes.

STRANGER: Our argument defined it as the science of the collective rearing of men—as distinct from the rearing of horses or other animals.

YOUNG SOCRATES: Quite so.

STRANGER: But we have to notice one respect in which a king differs from all other herdsmen.

YOUNG SOCRATES: What is that?

STRANGER: Do we find any other herdsman challenged by a rival who practices another art and yet claims that he shares with the herdsman the duty of feeding the herd?

YOUNG SOCRATES: How do you mean?

STRANGER: You see how merchants, farmers, and all who prepare the grain for food—yes, and teachers of gymnastics and doctors

as well—would all dispute the title ‘feeders of mankind’ with the herdsman we have called ‘statesman.’ These others would all contend that they are in charge of the feeding of mankind—and of feeding the leaders themselves as well as the mass of the herd. 288

YOUNG SOCRATES: Would they not be quite right?

STRANGER: Maybe. We will examine this point further, but we can say at once with certainty that no one else disputes a cowherd’s position in any of these matters. He feeds his herd himself, and he is also its doctor. He is its matchmaker too, one might say, and none but he understands the midwife’s duties when confinements occur and babies have to be brought into the world. Furthermore, in so far as his charges feel a need for games and music, who so good as he to cheer them, who so gifted to charm and soothe them? For he is master of the music best suited to his herd, be it rendered on the pipes or in song unaccompanied. And so it is in the case of every other herdsman, is it not?

YOUNG SOCRATES: Certainly it is.

STRANGER: How then can the definition of the king reached in our discussion show up as correct and flawless in the light of these new facts? We are claiming that he alone is herdsman and shepherd of the human flock, but we are merely singling him out as such from a host of competitors. c

YOUNG SOCRATES: Certainly this will not do.

STRANGER: Then we were quite right to feel anxious a little while ago when the suspicion came over us that though the figure we described was a kingly one we had not yet achieved a real portrait of the statesman. We might well hesitate, for we cannot reveal him finally in his proper quality till we have removed and put apart from him the throng of rivals that crowds around him and claims to share his herdsmanship.

YOUNG SOCRATES: Yes, we were quite right to hesitate. d

STRANGER: So we must aim at a complete description, Socrates, unless we are to bring disgrace on our argument in the end.

YOUNG SOCRATES: Yes, for we must avoid that at all costs.

STRANGER: Then we must begin all over again from another starting point and travel by another road.

YOUNG SOCRATES: What kind of road must this be?

STRANGER: We have to bring in some pleasant stories to relieve the strain. There is a mass of ancient legend a large part of which we must now use for our purposes; after that we must go on as before, dividing always and choosing one part only, until we arrive at the summit of our climb and the object of our journey. Shall we begin? e

YOUNG SOCRATES: Yes, certainly.

STRANGER: Come then, listen closely to my story as a child would. After all, you are not so very many years too old for stories.

YOUNG SOCRATES: Do continue, please.

**STRANGER:** These old stories have been told before and will be told again. Among them is the one about the portent that settled the famous quarrel between Atreus and Thyestes. I expect you have heard the story and remember the details of it as they are described to us.

**YOUNG SOCRATES:** You refer, I suppose, to the strange sign of the golden lamb.

269 **STRANGER:** Oh no, not to that, but to the alteration in rising and setting of the sun and the other planets. The story tells us that on this famous occasion these all set where they now rise and rose where they now set. Afterward, however, when he had testified by this miracle to the justice of Atreus's claims, Zeus restored all these heavenly bodies to their present system of motion.

**YOUNG SOCRATES:** Yes, that comes into the story too.

**STRANGER:** Then again, we have heard of the reign of Cronus from many storytellers.

b **YOUNG SOCRATES:** From most of them, I should say.

**STRANGER:** Yes, and what else? Are we not told that men of that former age were earthborn and not born of human parents?

**YOUNG SOCRATES:** That is also one of the old stories.

**STRANGER:** All these stories originate from the same event in cosmic history, and so do hosts of others yet more marvelous than these. However, as this great event took place so long ago, some of them have faded from man's memory; others survive but they have become scattered and have come to be told in a way which obscures their real connection with one another. No one has related the great event of history which gives the setting of all of them; it is this event which we must now recount. Once it has been related, its relevance to  
c our present demonstration of the nature of a king will become apparent.

**YOUNG SOCRATES:** Excellent, sir. Please go on, and leave nothing unsaid.

**STRANGER:** Listen then, and you shall hear. There is an era in which God himself assists the universe on its way and guides it by imparting its rotation to it. There is also an era in which he releases his control. He does this when its circuits under his guidance have completed the due limit of the time thereto appointed. Thereafter it begins to revolve in the contrary sense under its own impulse—for it is a living creature and has been endowed with reason by him who framed  
d it in the beginning. Now this capacity for rotation in reverse is of necessity native to it for a reason I must tell.

**YOUNG SOCRATES:** Of what nature is it?

**STRANGER:** Ever to be the same, steadfast and abiding, is the prerogative of the divinest of things only. The nature of the bodily does not entitle it to this rank. Now the heaven, or the universe as we have chosen to call it, has received many blessed gifts from him who brought it into being, but it has also been made to partake of bodily

form. Hence it is impossible that it should abide forever free from e  
change, and yet, as far as may be, its movement is uniform, in-  
variable, and in one place. Thus it is that it has received from God a  
rotation in reverse—the least possible variation of its proper motion.  
To revolve ever in the same sense belongs to none but the lord and  
leader of all things that move, and even he cannot move the universe  
now in the one sense now in the other—for this would flout eternal  
decrees. For all these reasons there are many doctrines we are for-  
bidden to affirm concerning this universe. We must not say that it  
moves itself, perpetually revolving in one and the same sense. We may  
not say that it is God who turns it in its entirety throughout all  
time in two opposed alternating revolutions. We may not say that a  
pair of divinities make it revolve alternately in these opposed senses 270  
because the mind of the one god is contrary to the mind of the other.  
We must therefore affirm the doctrine stated above, which is the one  
remaining possibility. In the one era it is assisted on its way by the  
transcendent divine cause, receiving a renewal of life from its creator,  
an immortality of his contriving. In the other era, when it has been  
released, it moves by its innate force and it has stored up so much  
momentum at the time of its release that it can revolve in the reverse  
sense for thousands of revolutions, because its size is so great, its bal-  
ance so perfect, and the pivot on which it turns so very small.

YOUNG SOCRATES: Your whole account seems to me very b  
consistent and very probable.

STRANGER: Let us think about this together. Let us study this  
great cosmic fact underlying all these miraculous stories in the light  
of what we have just said. It is this great fact that I have been  
speaking about.

YOUNG SOCRATES: What is it?

STRANGER: The fact that the revolution of the heaven is some-  
times in its present sense, sometimes in the reverse sense.

YOUNG SOCRATES: How would you state its significance?

STRANGER: This change of motion we must regard as the most c  
important and the most complete of all 'turnings-back' occurring in  
the celestial orbits.

YOUNG SOCRATES: It would seem so.

STRANGER: We must believe then, that at the time such  
changes take place in the universe we human beings living within that  
universe have to undergo the most drastic changes also.

YOUNG SOCRATES: That is to be expected.

STRANGER: Do we not know from experience that when great  
changes of any kind come upon them at once, all living beings feel the  
strain intensely and can hardly stand it?

YOUNG SOCRATES: We do indeed.

STRANGER: So it must needs be that in the cosmic crisis there is  
widespread destruction of living creatures other than man and

d that only a remnant of the human race survives. Many strange new experiences befall this remnant, but there is one of deeper import than all. It follows on God's first taking over the rewinding of the universe, at the moment when the revolution counter to the one now prevalent begins to operate.

YOUNG SOCRATES: What is it?

STRANGER: First of all, every living creature, whatever the stage of life it had attained, ceased to grow any older. All mortal beings halted on their way to bent and hoary age, and each began to grow  
e backward, as it were, toward youth and ever greater immaturity. The white hairs of the older men began to grow dark again; the cheeks of bearded men grew smooth once more and restored to each the long-lost bloom of his youth. The bodies of the young men lost the signs of manhood and, growing smaller every day and every night, they returned again to the condition of newborn children, being made like to them in mind as well as in body. Next they faded into non-existence and one by one they were gone. Moreover the bodies of those who died by violence in that time of crisis exhibited these same changes—and did so with such rapidity that in their case disappearance took place within a few days.

271 YOUNG SOCRATES: But how did living creatures come into being in that era, sir? How did they produce their offspring?

STRANGER: Clearly, Socrates, it was no part of man's natural endowment in that era to beget children by intercourse. Our legends tell us that once upon a time there was an earthborn race. Now it was this race which at that moment of crisis began to return to life out of the earth. The memory of it has lived on, for it was handed down to us by the earliest of our forebears. These earliest forebears were the children of earthborn parents; they lived in the period directly following  
b the end of the era of the earthborn, at the close of the former period of cosmic rotation and the beginning of the present one. These ancestors of ours passed on to us these stories of the earthborn, and it is an unsound judgment to disbelieve them as so many do nowadays. For I think that we must consider what follows in the cosmic story. It is only to be expected that along with the reversal of the old men's course of life and their return to childhood, a new race of men should arise too—a new race formed from men dead and long laid in earth but now formed in her womb anew and thence returning to life once more. Such resurrection of the dead was in keeping with the cosmic change, all creation being now turned in the reverse direction. This race was, as it needs must be, 'born from the earth'; hence comes  
c the name and hence the legend. Birth out of the ground was the law for all of them, save for some few whom God translated to another destiny.

YOUNG SOCRATES: Yes, this is fully in keeping with what went before, but tell me about the life of man in the reign of Cronus

of which you speak. Did this life obtain in the former world era or in this one? For clearly a change of direction of sun and planets occurs at both points in history at which the universe changes its sense of rotation.

STRANGER: You have followed the story closely. As for your inquiry concerning the age when all good things come without man's labor, the answer is that this also most certainly belongs to the former era, not to the present one. In that era God was supreme governor in charge of the actual rotation of the universe as a whole, but divine also, and in like manner was the government of its several regions, for these were all portioned out to be provinces under the surveillance of tutelary deities. Over every herd of living creatures throughout all their tribes was set a heavenly daemon to be its shepherd. Each of them was all in all to his flock—providing for the needs of all his charges. So it befell that savagery was nowhere to be found nor preying of creature on creature, nor did war rage nor any strife whatsoever. There were numberless consequences of this divine ordering of the world, but we must leave them all aside save those concerning man, for we must go on to explain the origin of our traditions concerning man's life in that paradise. A god was their shepherd and had charge of them and fed them even as men now have charge of the other creatures inferior to them—for men are closer to the divine than they. When God was shepherd there were no political constitutions and no taking of wives and begetting of children. For all men rose up anew into life out of the earth, having no memory of the former things. Instead they had fruits without stint from trees and bushes; these needed no cultivation but sprang up of themselves out of the ground without man's toil. For the most part they disported themselves in the open needing neither clothing nor couch, for the seasons were blended evenly so as to work them no hurt, and the grass which sprang up out of the earth in abundance made a soft bed for them. This is the story, Socrates, of the life of men under the government of Cronus. Our present life—said to be under the government of Zeus—you are alive to experience for yourself. But which of these two makes for greater happiness do you think? Can you give a verdict? And will you do so?

YOUNG SOCRATES: No, I cannot decide.

STRANGER: Do you want me to make a tentative decision for you?

YOUNG SOCRATES: Yes, please do.

STRANGER: The crucial question is—did the nurslings of Cronus make a right use of their time? They had abundance of leisure and were at an advantage in being able to converse with the animals as well as with one another. Did they use all these advantages to promote philosophical inquiry? As they associated with one another and with the animals, did they seek to learn from each several tribe of

creatures whether its special faculties enabled it to apprehend some distinctive truth not available to the rest which it could bring as its contribution to swell the common treasure store of wisdom? If they really did all this, it is easy to decide that the happiness of the men of that era was a thousandfold greater than ours. But if, when they had taken their fill of eating and of drinking, the discussions they had with each other and with the animals were of the kind that the surviving stories make them out to have been, then, according to my judgment at any rate, it is equally clear what our verdict must be. But be that as it may, let us leave this question aside till we find someone who can inform us accurately whether or not their hearts were set on gaining knowledge and on the true commerce of minds. But this much must be stated here, so that we may be free to proceed to the rest of the story, for it was precisely to see the age of Cronus in its true setting that we brought the whole story to life again.

For when this whole order of things had come to its destined end, there must needs be universal change once more. For the earthborn seed had by now become quite exhausted—each soul had run through its appointed number of births and had returned as seed to the earth as many times as had been ordained for it. And now the pilot of the ship of the universe—for so we may speak of it—let go the handle of its rudder and retired to his conning tower in a place apart. Then destiny and its own inborn urge took control of the world again and reversed the revolution of it. Then the gods of the provinces, who had ruled under the greatest god, knew at once what was happening and relinquished the oversight of their regions. A shudder passed through the world at the reversing of its rotation, checked as it was between the old control and the new impulse which had turned end into beginning for it and beginning into end. This shock set up a great quaking which caused—in this crisis of the world just as in the former one—destruction of living creatures of all kinds. Then, after the interval needed for its recovery, it gained relief at last from its clamors and confusion, and attaining quiet after great upheaval it returned to its ordered course and continued in it, having control and government of itself and of all within it and remembering, so far as it was able, the instruction it had received from God, its maker and its father. At first it remembered his instructions more clearly, but as time went on its recollection grew dim. The bodily element in its constitution was responsible for its failure. This bodily factor belonged to it in its most primeval condition, for before it came into its present order as a universe it was an utter chaos of disorder. It is from God's act when he set it in its order that it has received all the virtues it possesses, while it is from its primal chaotic condition that all the wrongs and evils arise in it—evils which it engenders in turn in the living creatures within it. When it is guided by the divine pilot, it produces much good and but little evil in the creatures it raises and sustains. When it

must travel on without God, things go well enough in the years immediately after he abandons control, but as time goes on and forgetfulness of God arises in it, the ancient condition of chaos also begins to assert its sway. At last, as this cosmic era draws to its close, this disorder comes to a head. The few good things it produces it corrupts d with so gross a taint of evil that it hovers on the very brink of destruction, both of itself and of the creatures in it.

The God looks upon it again, he who first set it in order. Beholding it in its troubles, and anxious for it lest it sink racked by storms and confusion, and be dissolved again in the bottomless abyss of unlikeness, he takes control of the helm once more. Its former sickness he heals; what was disrupted in its former revolution under its e own impulse he brings back into the way of regularity, and, so ordering and correcting it, he achieves for it its agelessness and deathlessness.

This is the full tale told, but to meet our need—the delineation of the king—it is enough if we take up the earlier part of our tale. When the most recent cosmic crisis occurred and the cosmic order now existing was established, the course of man's life stood still once more and then began to manifest changes in the opposite sense to the changes accompanying the other cosmic crisis. Creatures which were well nigh disappearance because of their smallness began to grow again; those who were just born from the earth, stalwart in their prime of life, now grew snowy-haired and then died and returned to 274 the earth again. Following the change in the universe, all other things had to change, and, in particular, a new law governing conception, birth, and nurture was made binding on the whole universe—and therefore on all the creatures, for they must needs imitate its ways. For it was no longer possible for creatures to be brought to birth in the earth by the formative action of external agents. It has now been ordained that the universe must take sole responsibility and control of its course. And so by a like ruling, the same impulse bade its constituent elements achieve by their own power, so far as they might, conception, procreation, and rearing of young. We have now come to the point which the whole of this story of ours has been seeking to reach. b It would take long to tell of all the changes that befell the various creatures and show whence these arose and how they were effected, but man's story is shorter and more relevant for us now. Bereft of the guardian care of the daemon who had governed and reared us up, we had become weak and helpless, and we began to be ravaged by wild beasts—for the many evil-natured beasts had by now turned savage. Men lacked all tools and all crafts in the early years. The earth c no longer supplied their food spontaneously and they did not yet know how to win it for themselves; in the absence of necessity they had never been made to learn this. For all these reasons they were in direst straits. It was to meet this need that the gifts of the gods famous in

ancient story were given, along with such teaching and instruction as was indispensable. Fire was the gift of Prometheus, the secrets of the crafts were made known by Hephaestus and his partner in craftsmanship, and seeds and plants were made known by other gods. From these gifts everything has come which has furnished human life since the divine guardianship of men ceased—in the way our story has just described—and men had to manage their lives and fend for themselves in the same way as the whole universe was forced to do. Thus likened to the universe and following its destiny through all time, our life and our begetting are now on this wise now on that.

e Here let our work of storytelling come to its end, but now we must use the story to discern the extent of the mistake we made in our earlier argument in our delineation of the king or statesman.

YOUNG SOCRATES: How did we go wrong then? Do you think that we are seriously off the track?

STRANGER: One mistake was not so serious, but the other was a mistake on the grand scale. It is graver and more far-reaching than I thought it was.

YOUNG SOCRATES: In what way?

275 STRANGER: We were asked to define the king and statesman of this present era, and of humanity as we know it, but in fact we took from the contrary cosmic era the shepherd of the human flock as it then was, and described him as the statesman. He is a god, not a mortal. We went as far astray as that. Furthermore, we showed him as ruler of all the life of the state but did not specify the manner of his rule. Here too, what was said was true, but it cannot be regarded as the whole truth or as a clear and sufficient description. We have gone wrong in this also, though not as badly wrong as on the other issue.

YOUNG SOCRATES: True.

STRANGER: Obviously then we must try to define the way in which the statesman controls the state. We can be reasonably confident that in doing this we shall achieve the complete definition of the statesman.

YOUNG SOCRATES: Very good.

b STRANGER: But our aim when we actually introduced the story was to show two things at once concerning the 'nurture of the herd.' We were anxious to show the host of rivals with whose claims to be 'nurturers of the herd' the statesman whom we now seek has to compete, but we were still more anxious to follow out our analogy and to see the statesman himself in a clearer light as being alone entitled to be called 'shepherd of the people,' feeding humankind in the way shepherds feed their sheep and cowherds their cattle.

YOUNG SOCRATES: True.

c STRANGER: It appears to me now, Socrates, that the divine shepherd is so exalted a figure that no king can be said to attain to his eminence. Those who rule these states of ours in this present era are

like their subjects, far closer to them in training and in nurture than ever shepherd could be to flock.

YOUNG SOCRATES: Yes, that is certainly so.

STRANGER: But whether they are human or superhuman creatures, we are still as committed as we were—neither more so nor less—to the task of seeking to reveal their true nature.

YOUNG SOCRATES: Of course.

STRANGER: We must go back again for reconsideration of one of our divisions. We said that there is a 'predirective' art concerned with living creatures, and with these in herds rather than as individuals. Without further division, we described this as 'the science of the rearing of herds.' You recall this, do you not?

YOUNG SOCRATES: Yes, I do.

STRANGER: It was at a point in our tracking down of this art that we began to lose the scent. We did not catch the statesman at all in this definition or name him properly. He eluded us without our knowing it while we were intent on the process of naming.

YOUNG SOCRATES: How did he do it?

STRANGER: There is no other herdsman who is not charged with the bodily nurture of his herd. This characteristic is absent in the statesman and yet we called him a herdsman. We should have used a wider name, covering all guardians, whether nurturers or not.

YOUNG SOCRATES: You are right if there is in fact such a name.

STRANGER: Surely 'concern' is available as such a class name; it implies no specific limitation to bodily nurture or to any other specific activity. If we had named the art 'concern for herds,' 'attention to herds,' or 'charge of herds'—all of them terms which cover all species—we could have included the statesman with the rest, for the run of the argument was indicating to us that we ought to do this.

YOUNG SOCRATES: True, but how would the subsequent division have proceeded? 276

STRANGER: On the same lines as before. We divided 'nurture of herds' into nurture of land animals, wingless, noninterbreeding, and hornless. We could have divided 'care of herds' in the same way and our definition would then have included both the shepherd king of the reign of Cronus and the ruler of our present era.

YOUNG SOCRATES: That seems clear, but I still want to know what follows.

STRANGER: It is clear that if we had used this correct term 'concern for herds' we should not have had to face the unreasonable objection that some make, that ruling is in *no* sense an art of tendance, as well as the other reasonable objection we met that there is no specific art of nurture of *human beings* and that if there were, there would be many more directly involved in its exercise than any ruler is.

YOUNG SOCRATES: True.

STRANGER: But if it is a question of an art of 'responsible charge' of a whole community, what art has a better or prior claim than statesmanship to fulfill this function? What other art can claim  
c to be the art of bearing sovereign rule, the art which bears sovereign rule over all men?

YOUNG SOCRATES: None can.

STRANGER: Yes, Socrates, but do we realize that we fell into another considerable error at the very end of our definition?

YOUNG SOCRATES: What was that?

STRANGER: However clearly we had determined in our minds that there exists an art of nurture of two-footed herds, we were not entitled without further examination to name this art kingship or statesmanship, thereby implying that a full definition of it had been obtained.

YOUNG SOCRATES: What should we have done then?

STRANGER: First of all, as we have just been saying, the class  
d name has to be modified from 'nurture' to 'concern.' Secondly, this 'concern' must be subdivided, for several further divisions are possible.

YOUNG SOCRATES: Which are they?

STRANGER: By one division we should have set apart the divine shepherd and the human tender of men.

YOUNG SOCRATES: True.

STRANGER: By another division we should have divided into two the art assigned to this human tender of men.

YOUNG SOCRATES: By what division?

STRANGER: By distinguishing enforced tendance from tendance voluntarily accepted.

YOUNG SOCRATES: Surely.

STRANGER: I think we really went wrong at this point in our  
e earlier definitions; we made a confusion—a needlessly stupid one—of the king and the tyrant, and these are entirely different people, differing in the manner of their rule.

YOUNG SOCRATES: Yes, they are.

STRANGER: Then let us be right this time, and, as I said, let us divide the art of concern for men into two—enforced tendance and tendance accepted voluntarily.

YOUNG SOCRATES: Certainly.

STRANGER: Tendance of human herds by violent control is the tyrant's art; tendance freely accepted by herds of free bipeds we call statesmanship. Shall we now declare that he who possesses this latter art and practices this tendance is the true king and the true statesman?

277 YOUNG SOCRATES: Yes, and I should think, sir, that at this point we have really completed our definition of the statesman.

STRANGER: That would be excellent, Socrates, but it is not

enough for you to think so; I must think so too. Now as a matter of fact I think that the likeness of the statesman has not been perfectly drawn yet. Sculptors sometimes rush at their work in ill-timed enthusiasm and then elaborate the details of the work to such an extent that they have to bring in extra material to complete it and this in the end slows down their progress. Something like this happened earlier in our discussion, when we wanted to make it immediately clear <sup>b</sup> where we were mistaken and to give a really impressive demonstration of the point. Supposing that where a king was concerned only large-scale illustrations could be suitable, we reared our massive myth and then had to use more myth material than the occasion warranted; thus our demonstration became too long and we did not give the myth a complete form after all. Our definition, too, seems to me like a portrait which is as yet an outline sketch and does not represent the original clearly because it has still to be painted in colors properly <sup>c</sup> balanced with one another. Remember, however, that a definition couched in words is a better description of a living creature than a drawing or any model of it can be—a better description, I mean, for those capable of following such a definition; for those who cannot do so the model or visible illustration is appropriate enough.

YOUNG SOCRATES: Yes, that is true, but pray make clear where you still find our description of the statesman inadequate.

STRANGER: It is difficult, my dear Socrates, to demonstrate <sup>d</sup> anything of real importance without the use of examples. Every one of us is like a man who sees things in a dream and thinks that he knows them perfectly and then wakes up, as it were, to find that he knows nothing.

YOUNG SOCRATES: What do you mean by this?

STRANGER: I have made a real fool of myself by choosing this moment to discuss our strange human plight where the winning of knowledge is concerned.

YOUNG SOCRATES: What do you mean?

STRANGER: Example, my good friend, has been found to require an example.

YOUNG SOCRATES: What is this? Say on and do not hesitate <sup>e</sup> for my sake.

STRANGER: I will—in fact, I must, since you are so ready to follow. When young children have only just learned their letters . . .

YOUNG SOCRATES: What is this?

STRANGER: We know that they distinguish particular letters only in the shortest and simplest syllables; in these, however, they do <sup>278</sup> distinguish them and can tell you correctly what each of them is.

YOUNG SOCRATES: Yes.

STRANGER: But if they see the same letters combined into other syllables, they fall into doubt once more, and judge them incorrectly by making wrong identifications.

YOUNG SOCRATES: True.

STRANGER: What then is the easiest and best method of leading them to the knowledge they have not yet reached? I think I know it.

YOUNG SOCRATES: What is it?

STRANGER: Take them to the syllables in which they have  
 b identified the letters correctly; then set them in front of the syllables they cannot decipher; then place known syllables and unknown syllables side by side and point out to them the similar nature of the letters occurring in both. In the end, by this method when the rightly identified letters have been shown to them and set alongside all the unknown letters—and by being shown thus the known letters have been used as *examples*—the teacher will achieve his aim, which is to have each letter rightly recognized and named in every syllable, for  
 c then the pupil will have identified each letter with itself and distinguished it from all the others.

YOUNG SOCRATES: Certainly.

STRANGER: Have we not gathered enough information now to show how the method of example proceeds? It operates, does it not when a factor identical with a factor in a less-known object is rightly believed to exist in some other better-known object in quite another sphere of life? This common factor in each object, when it has been made the basis of a parallel examination of them both, makes it possible for us to achieve a single true judgment about each of them as forming one of a pair.

YOUNG SOCRATES: That appears to be how it works.

STRANGER: Would we be surprised, then, to find our own mind  
 d reacting in the same way to the letters with which the universe is spelled out? Truth sometimes guides the mind to a comprehension of every member of some groups of things and yet the same mind a moment later is hopelessly adrift in its attempt to cope with the members that make up another group. Somehow or other it makes a right judgment of a particular combination of elements but when it sees the same elements transferred to the long and very difficult syllables of everyday existence, it fails to recognize again the very elements it discerned a moment before.

YOUNG SOCRATES: One cannot wonder at it.

STRANGER: It is impossible, is it not, to achieve real understanding in an approach to any part of the total area of true reality, however small, if one begins from a false opinion?

YOUNG SOCRATES: I should say that it is quite impossible.

STRANGER: Well then, if this is the true state of the case, you and I could claim to be sound in our former method and in what we plan to do now. We have tried to discover the nature of example in general by studying a small and particular example of example. What we intend now is to discover scientifically by means of the method of

example the nature of 'tendance' as applied to the whole community, and we intend to do it by taking from lesser realms the quality identical with the kingly quality and to use its lesser manifestation there in order to discern its supreme manifestation in him.

YOUNG SOCRATES: We will hope so.

STRANGER: So we must take up once again an earlier stage of 279 our discussion. For seeing that there prove to be any number of competitors to dispute with the kingly class the duties of the tendance of states, we must surely set aside all competitors and leave only the king in possession. It was to help us to this end that we decided that we needed to employ an example.

YOUNG SOCRATES: True.

STRANGER: Well then, what example is there on a really small scale which we can take and set beside kingship, and which, because it comprises an activity common to it and to kingship can be of real help to us in finding what we are looking for? By heaven, Socrates, I believe I know one. Do you agree that, if there is no other example ready to hand, it would be quite in order for us to select the art of weaving for the purpose. Would you be prepared for us to choose out weaving—if there is nothing else obviously suitable? Moreover, if you agree, we will not take the whole of weaving, for I think that a part of it, the art of weaving woollens, will prove adequate for us. I suspect that just this section of the weaver's art, if it were chosen as our example, would give the evidence we require concerning the statesman.

YOUNG SOCRATES: It might well prove to be so.

STRANGER: No dallying, then! Why should we not divide weaving now just as we divided the other classes of things, dividing it into its true parts? We must run through each stage as briefly and quickly as we can so as to come back to what is relevant to our present discussion.

YOUNG SOCRATES: What do you mean?

STRANGER: I can best explain by making the actual division for you.

YOUNG SOCRATES: Excellent!

STRANGER: All we make and all we get has one of two aims—the aim of doing something, or the aim of preventing something being done. Preventives may be divided into (a) charms, divine or human, against evils and (b) protections—protections into (a) warlike armaments or defenseworks and (b) other means of fending off—nonmilitary means of fending off into (a) screens and (b) protections from storm and heat—protections from storm and heat into (a) housing and (b) shields for the person—shields for the person into (a) blankets spread below and (b) garments spread around. Garments that we put around us are of one piece or compounded of several. Those compounded of several are either stitched or combined by

a method other than stitching; of the unstitched some are made of vegetable fibers, others are made of hair; of those made of hair, some are felted by water and earth, others are combined by their inherent substance. To these manufactured means of warding off which are coverings of the person and compacted in their own substance we give the name 'clothes.' The art specifically concerned with producing clothes we will describe from the name of its product as the 'clothes-working' art, just as we called the art of controlling a state statesmanship. We may also say that the art of weaving—or at any rate that very large section of it concerned with the production of clothes—is distinct in nothing but name from this 'art of clothesworking,' just as in the other case we regarded the arts of kingship and statesmanship as synonymous.

YOUNG SOCRATES: Quite right.

STRANGER: Let us observe now that it might be supposed at this point that the definition of the art of weaving clothes, as drawn up in these terms, had been complete and sufficient. But if one supposed this, one would have failed to see that the art has not yet been distinguished from arts exercising a closely similar function to it, and that in spite of this many other arts which are akin to it have been severed from it.

YOUNG SOCRATES: What are these kindred arts of which you are thinking?

STRANGER: Evidently you are not following what has been said. We must go back then, and begin from the other end, for if you really can apprehend affinities between arts you will find that some kindred arts are detached from weaving in our recent division. For instance, in the division of what is put under from what is put around we divided off the art of blanketmaking from the art of clothes-making.

YOUNG SOCRATES: Yes, I see.

STRANGER: Furthermore, we disjoined from weaving all fabrication of flax, of Spanish broom, and of all the natural products we termed vegetable fibers. We also disjoined from it felting and the art of fashioning by piercing and sewing—the art of which the shoemaker is the chief practitioner.

YOUNG SOCRATES: We did.

STRANGER: Then in excluding the art of making garments of one piece we excluded the art of the skinner. Among arts of protective housing we excluded the art of stemming inroads of water along with housebuilding, erection in wood, and similar arts. We also excluded all the arts of fencing off, but these include the arts of providing means of preventing theft and other violence, arts connected with making lids and door fastenings normally assigned as sections of the arts of joinery. We also cut off the whole art of armormaking, which is an extensive and extremely various section of the art of

producing defenses. Finally we separated off, right at the beginning of our definition, the magician's art and that of making spells to ward off evil. The remainder when all these had been excluded was, we might fairly suppose, the art we had been seeking—the art concerned with producing works of woolen protection designed to ward off violences of climate, called by the name 'weaving.'

YOUNG SOCRATES: Yes, that seems to be accurate.

STRANGER: But we have not yet achieved a complete description of the matter under discussion. For it is evident that the man responsible for the first stage in the production of clothes does just the opposite of weaving. 281

YOUNG SOCRATES: How do you mean?

STRANGER: The process of weaving is, I take it, a form of plaiting together?

YOUNG SOCRATES: Yes.

STRANGER: But the art I spoke of is an art of dissociating strands from a mass of material in which they are found close and matted.

YOUNG SOCRATES: What is that?

STRANGER: The work done by the art of carding. Dare we call carding weaving, or speak of the carder as a weaver?

YOUNG SOCRATES: Certainly not.

STRANGER: Now consider the art which produces warp and woof. If one calls that art 'weaving' it sounds odd, but it is more than that—it is false in fact. b

YOUNG SOCRATES: Of course.

STRANGER: Furthermore, consider the art of the fuller in all its forms, and that of darning. Are we going to deny that these are, in a sense, arts of tendance or care of clothes? But if we admit that they are such, does it follow that we shall call them all arts of weaving?

YOUNG SOCRATES: By no means.

STRANGER: And yet, the claim to preside over the care and the production of clothes is a claim which all of these arts dispute with the weavers' mystery. They are ready to concede to weaving a very considerable part of the whole province of clothesworking, but at the same time they demand the assignment of no small part of it to themselves.

YOUNG SOCRATES: That is very true. c

STRANGER: Then in addition to these arts we have to consider the arts which produce the instruments by which the weaving process is carried out. We must suppose that all have their claim to be at least contributory to the making of every piece of fabric actually woven.

YOUNG SOCRATES: That is so.

STRANGER: Do we still suppose that weaving—or rather our selected portion of it—will have been adequately defined if we declare it to be 'the highest and most dignified of all the arts concerned

- d with woollen clothing'? Would not this definition, though true as far as it goes, lack clearness and finality until we have dissociated all these other arts from weaving?

YOUNG SOCRATES: It would.

STRANGER: Then our next duty is to make this separation, so that our definition may proceed by the right stages.

YOUNG SOCRATES: Yes.

STRANGER: To begin with, let us observe that two groups of arts are involved in active operations of all kinds.

YOUNG SOCRATES: What are they?

STRANGER: One class contributory to the production, the other actually producing.

YOUNG SOCRATES: In what way?

- e STRANGER: I mean by 'contributory' arts those which do not fashion the product itself but prepare the tools for the arts which actually produce it—they are arts without whose previous assistance the specific task of the productive arts could never be performed. The arts which fashion the product itself are the 'productive' arts, strictly speaking.

YOUNG SOCRATES: That is at any rate a reasonable distinction.

STRANGER: Then may we take the further step of distinguishing arts which manufacture spindles, shuttles, and all the other instruments of clothes manufacture as 'contributory arts' from the directly 'productive' arts which actually treat and produce the clothes?

YOUNG SOCRATES: We certainly may.

- 282 STRANGER: Among these 'productive' arts those of washing, darning, and general servicing of clothes—the relevant section of the very extensive art of adornment—may fairly be grouped together and we may call the whole group 'the art of the fuller.'

YOUNG SOCRATES: We may.

STRANGER: Carding and spinning and all the other special processes involved in the manufacture of woollen garments together form part of the art of wool manufacture. This time we have an art with a name familiar to everyone.

YOUNG SOCRATES: Of course.

- b STRANGER: Woolworking has two principal sections; each of them is comprised of arts which are parts of a pair of arts.

YOUNG SOCRATES: What do you mean?

STRANGER: Carding, half the operation of the shuttle and all the processes which pull strands of close material apart—let us class these together as one art and this art is manifestly part of woolworking. But we must remember too the pair of arts we found to be of universal scope, the art of combining and that of separating.

YOUNG SOCRATES: Yes.

STRANGER: Well, carding and the other arts just mentioned come under separation. Thus it is *separation* of the raw wool and *c* *separation* of the strands of warp—the former being done by hand, the latter by the shuttle—which have been given their respective names which we used a moment ago.

YOUNG SOCRATES: Very true.

STRANGER: Now let us consider in turn the art of combination and look for the part of it which coincides with part of the art of woolworking. We must now omit all sections of woolworking which come under separation. Then we shall have divided woolworking by distinguishing the part which combines and the part which separates.

YOUNG SOCRATES: Let us assume this division.

STRANGER: Then, Socrates, you will find that we have to subdivide the part of woolworking which combines, if we are to run our *d* quarry to earth by finding the art of weaving which we made our objective.

YOUNG SOCRATES: Then we must divide again.

STRANGER: We must. To name the divisions let us call one section of the art 'twisting' and the other 'plaiting.'

YOUNG SOCRATES: Do I understand you? I take you to mean by 'twisting' the art concerned with producing the threads of warp.

STRANGER: Yes, but not of the warp only—of the woof too. You surely do not imagine that we shall find it produced by some process other than twisting?

YOUNG SOCRATES: No.

STRANGER: Now divide each of these two arts, for you may *e* well find this division significant.

YOUNG SOCRATES: At what point must I divide?

STRANGER: I will tell you. The finished product of the carding processes, when it has achieved certain recognized dimensions, we describe as a 'flock' of wool.

YOUNG SOCRATES: Yes.

STRANGER: The thread twisted out of this by the spindle to form a firm yarn you will, no doubt, describe as 'warp' and the art directing its production as warp spinning.

YOUNG SOCRATES: Yes.

STRANGER: But there are other threads from the flock which are only loosely twisted so as to be soft enough for intertwining with the warp but strong enough to stand up to the dressing process after *283* being intertwined with it. These threads we call 'woof' and the art superintending their manufacture woof spinning.

YOUNG SOCRATES: Quite so.

STRANGER: Well then, the section of the art of weaving which *b* we selected is now clearly defined for all to see. When the section of the art of combination which is also a section of the art of woolwork-

ing produces a fabric by the due intertwining of warp and woof, we call the finished fabric a woolen garment and the art superintending its production the art of weaving.

YOUNG SOCRATES: That is perfectly correct.

STRANGER: Good. But why did we not distinguish weaving straightaway as the art of intertwining warp and woof? Why did we set about it in this roundabout fashion defining so pointlessly a host of arts we met on the way?

YOUNG SOCRATES: Oh no, sir! So far as I can see, there was nothing pointless in the whole course of our argument.

STRANGER: I am not surprised that you think so now, but someday you may think differently. I want to administer a prophylactic against this malady of doubt, should it one day come upon you as indeed from time to time it well may. There would be nothing surprising in its doing so! Listen, then, to a prophylactic argument applicable to all troublesome questions of this kind.

YOUNG SOCRATES: Pray explain it, sir.

STRANGER: First let us examine excess and deficiency in general. In this way we shall obtain a standard of length applicable to what is said on any occasion in this kind of discussion—a standard by which we can accord praise to what is said or censure it, either as excessive or as deficient.

YOUNG SOCRATES: Let us make the examination then.

STRANGER: We can only discuss the matter effectively by considering these qualities in their real nature.

YOUNG SOCRATES: Which qualities?

STRANGER: Length and brevity, and excess and defect in general. We are agreed, I presume, that the art of measurement is involved in all these.

YOUNG SOCRATES: Yes.

STRANGER: Let us divide it into two then. We must do so to get to the conclusion we are eager to reach.

YOUNG SOCRATES: Please tell us where the division comes.

STRANGER: I will. We divide the art of measurement into a section concerned with the relative greatness or smallness of objects and another section concerned with their size in relation to the fixed norm to which they must approximate if they are to exist at all.

YOUNG SOCRATES: What do you mean?

STRANGER: Do you not agree that in the nature of things 'the greater' can be so called only in relation to the less and to nothing else, and, conversely, that 'the less' can only be 'less' than a greater? It cannot be 'less' than anything else.

YOUNG SOCRATES: It cannot. I quite agree.

STRANGER: On the other hand, will we not also be ready to assert that we do in fact hear words spoken and see acts done which at one time exceed the essentially right measure and at another time

fall short of it? Is it not just this matter of attaining the due measure which marks off good men from bad in human society?

YOUNG SOCRATES: It is evident.

STRANGER: Then we must posit two types and two standards of greatness and smallness. We must not assert as we did just now that the only standard possible is that of relative comparison. We have just seen how we must amend the statement. The standard of relative comparison will remain, but we must acknowledge a second standard, which is a standard of comparison with the due measure. Do we want to know why this must be admitted?

YOUNG SOCRATES: Why is it needed?

STRANGER: If a man refuses to admit the possibility of a 284 'greater' except in relation to a 'lesser' he will rule out all possibility of relating it to a due measure, will he not?

YOUNG SOCRATES: He will.

STRANGER: Are we really prepared for the consequences of this refusal? Are we going to abolish the arts and all their products? In particular, shall we deprive statecraft, which we are trying to define, and weaving, which we have just defined, of their very existence? For it seems clear to me that all such arts guard against exceeding the due measure or falling short of it. Certainly they do not treat such excess or defect as meaningless—on the contrary, they shun it as a very real peril. In fact it is precisely by this effort they make to maintain the due measure that they achieve effectiveness b and beauty in all that they produce.

YOUNG SOCRATES: That is very true.

STRANGER: But you must admit that if we dismiss statecraft as unreal, we shall have blocked all means of approach to any subsequent study of the science of kingly rule.

YOUNG SOCRATES: Obviously.

STRANGER: Must we not do now what we had to do when discussing the Sophist? We had to insist then on the admission of an additional postulate, that 'what is "not x" nevertheless exists.' We had to introduce this postulate because the only alternative to asserting it which our argument left us was to allow the Sophist to escape definition altogether. In our present discussion too there is an additional postulate on which we must insist, and it is this. 'Excess and deficiency are measurable not only in relative terms but also in respect of attainment of a norm or due measure.' For if we cannot first gain assent to this postulate, we are bound to fail if we advance the claim that a man possesses statecraft, or indeed that a man possesses c any other of the special forms of knowledge that function in human society.

YOUNG SOCRATES: In that case we must certainly follow the precedent and admit the additional postulate in our present discussion too.

STRANGER: Our present task is greater than the previous one, Socrates, and we can hardly have forgotten what a very long time that took us. However, while discussing these problems, there is one thing to be said at the outset that it is perfectly right and proper to say here.

YOUNG SOCRATES: What is this?

d STRANGER: That when one day we come to give a full exposition of true accuracy in dialectic method, we shall find the need of this postulate concerning the due measure which we have just enunciated. However, the statement in the form that we have made it and with the demonstration—adequate for present purposes—which we have given of it, is a very great help to us, or so it seems to me. For it shows that two propositions stand or fall together. The first is that the arts exist; the second is that excess and deficiency are measurable not only relatively but in terms of the realization of a norm or due measure. Thus if measure in this second sense exists, so do the arts, and, conversely, if there are arts, then there is this second kind of measurement. To deny either is to deny both.

e YOUNG SOCRATES: So much is fully established, but what follows?

STRANGER: Clearly we should divide the art of measurement into two on the principle enunciated by dividing it at this point. One section will comprise all arts of measuring number, length, depth, breadth, or velocity of objects by relative standards. The other section comprises arts concerned with due occasion, due time, due performance, and all such standards as have removed their abode from the extremes and are now settled about the mean.

YOUNG SOCRATES: Each of the subdivisions you have named is very extensive, and the one differs vastly from the other.

STRANGER: Does not the statement we have just made turn out  
285 to be precisely what many of our 'erudite' friends say from time to time—and say with the air of men uttering a profound truth? We are saying like them that measurement is involved in all that is brought into being. For all activities directed by arts involve measurement in some form or other. But our friends, for all their erudition, have not been trained to study things by dividing them into real classes. As a result here we find them confusing these two types of measurement, which are in fact so different, just because they have judged them to be of like nature. There are other classes of things about which they commit the opposite error; they distinguish them but fail to distinguish according to the real distinctions. Now the following  
b would be the right method. Whenever it is the essential *affinity* between a given group of forms which the philosopher perceives on first inspection, he ought not to forsake his task until he sees clearly as many true differences as exist within the whole complex unity—the differences which exist in reality and constitute the several species. Conversely, when he begins by contemplating all the *unlikenesses* of

one kind or another which are to be found in various groups of forms, the true philosopher must not pull a wry face and give up in disgust, until he has gathered together all the forms which are in fact cognate and has penned them safely in their common fold by comprehending them all in their real general group. But let this suffice on these topics and on excess and deficiency in general. Let us, however, be careful to maintain the ground we have won. We have discovered beyond dispute two distinct forms of the art of measurement concerned with excess and deficiency and we must remember what we have declared c them to be.

YOUNG SOCRATES: We shall not forget.

STRANGER: So much for that theme. Now let us prepare to entertain another which has to do not only with our present inquiry but with all discussions of this kind as well.

YOUNG SOCRATES: What is it?

STRANGER: Suppose someone asked us this question about our class of elementary schoolchildren learning to read. 'When a child is asked what letters spell a word—it can be any word you please—are we to regard this exercise as undertaken to discover the correct d spelling of the particular word the teacher set or as designed rather to make the child better able to deal with all words he may be asked to spell?'

YOUNG SOCRATES: Surely we reply that the purpose is to teach him to read them all.

STRANGER: How then does this principle apply to our present search for the statesman? Why did we set ourselves the problem? Is our chief purpose to find the statesman, or have we the larger aim of becoming better philosophers, more able to tackle all questions?

YOUNG SOCRATES: Here, too, the answer is clear; we aim to be able to solve all problems.

STRANGER: Exactly, for I cannot think that any reasonable person would want to trace down the definition of the art of weaving just for its own sake. But there is a paradox here which, it seems to e me, most thinkers have failed to notice. Likenesses which the senses can grasp are available in nature to those real existents which are in themselves easy to understand, so that when someone asks for an account of these existents one has no trouble at all—one can simply indicate the sensible likeness and dispense with any account in words. But to the highest and most important class of existents there are no 286 corresponding visible resemblances, no work of nature clear for all to look upon. In these cases nothing visible can be pointed out to satisfy the inquiring mind; the instructor cannot cause the inquirer to perceive something with one or other of his senses and so make him really satisfied that he understands the thing under discussion. Therefore we must train ourselves to give and to understand a *rational* account of every existent thing. For the existents which have no

visible embodiment, the existents which are of highest value and chief importance, are demonstrable only by reason and are not to be apprehended by any other means. All our present discussions have the aim of training us to apprehend this highest class of existents. For purposes of practice, however, it is easier in every case to work on lesser objects rather than on greater ones.

YOUNG SOCRATES: You are quite right.

STRANGER: Let us then recall what led us to this long digression on these matters.

YOUNG SOCRATES: What was it?

STRANGER: Was it not mainly due to the impatience we felt and expressed at the long-windedness, as we presumed to call it, of our definition of the art of weaving? We felt a like impatience with the long account of reversal of rotation in the universe and with our inquiry into the Sophist when we had to discuss the existence of not-being. We conceived the notion that these discussions had been too lengthy, and we blamed ourselves for this because we feared that they had been irrelevant too. Please realize, therefore, that the principles we have just worked out together apply to all discussions of this kind and not just to this one, and that they are intended to prevent any like apprehensions in future.

YOUNG SOCRATES: It shall be so, sir, but, pray, proceed.

STRANGER: I say then, that it is your duty and mine to observe the principles we have just laid down whenever we have to accord praise or blame to an argument on the score of its length or its brevity. The length of one discourse is not to be compared simply with the length of another. We said just now that we must never forget the second section of the art of measuring, and it is this standard we must always apply in judgments like these—the standard of suitability I mean.

YOUNG SOCRATES: Quite so.

STRANGER: Yes, but even 'suitability' is not in every case an adequate criterion. For instance, we shall not look for such length in an argument as is 'suitable' for giving pleasure, except as a very incidental consideration. Again, ease and speed in reaching the answer to the problem propounded are most commendable, but our principle requires that this be only a secondary, not a primary reason for commending an argument. What we must value first and foremost, above all else, is the philosophical method itself, and this consists in ability to divide according to real forms. If, therefore, either a full-length statement of an argument or an unusually brief one leaves the hearer more able to find real forms, it is this presentation of it which must be diligently carried through; there must be no expression of annoyance at its length or at its brevity as the case may be. Furthermore, if we find a man who criticizes the length of an argu-

ment while a discussion like the present one is in progress and refuses to wait for the proper rounding-off of the process of reasoning, he is not to be permitted to escape thus with a mere grumble that 'these discussions are long drawn out'; he must be required to support his grumble with a proof that a briefer statement of the case would have left him and his fellow disputants better philosophers, more able to demonstrate real truth by reasoned argument. Blame and praise on other grounds, aimed at other merely incidental traits in our discourse, we must simply ignore and act as though we had not heard them at all. Now we may leave this topic, if I carry you with me in this judgment. Let us go back to the statesman, our real subject, and set beside him for comparison the art of weaving as we have just defined it. 287

YOUNG SOCRATES: Excellent. Let us do as you say.

STRANGER: Well then, the kingly art has been set apart from most of those occupying the same region—from all, that is to say, which have to do with control of herds. But in the actual community of citizens there are other arts not yet distinguished from statesmanship. They comprise both contributory and directive productive arts, and these must first be distinguished.

YOUNG SOCRATES: Very well.

STRANGER: Do you realize that in this case they resist division into two? I think that the reason will become evident to us as we go on to enumerate them. c

YOUNG SOCRATES: Let us do so then.

STRANGER: Seeing that we cannot bisect them, let us divide them according to their natural divisions as we would carve a sacrificial victim. For we must in every case divide into the minimum number of divisions that the structure permits.

YOUNG SOCRATES: How shall we do it then, in the present instance?

STRANGER: As we did before. All the arts which provide tools for weaving we distinguished then as 'contributory.'

YOUNG SOCRATES: We did.

STRANGER: We must do the same now as then, but with even greater care. Every art which fashions any object, large or small, which ministers to the needs of an organized human community must be classed as 'contributory.' For without the things provided by these arts there could be no community and so no art of rule, and yet we can hardly regard it as the duty of the kingly art to produce any of these things. d

YOUNG SOCRATES: No.

STRANGER: We are attempting a difficult thing when we try to distinguish this instrumental class of arts from the others. For anything whatever can be shown with some plausibility to be an

- e instrumental means to something or other. However, there is a class of things a community must acquire to which we must proceed to give a different name.

YOUNG SOCRATES: In what way different?

STRANGER: In that its function differs from that of instruments. It is not made, as an instrument is, with a view to the production of something but in order to preserve a thing once it has been produced.

YOUNG SOCRATES: What kind of thing do you mean?

- STRANGER: A class of objects wrought in the greatest variety of shapes and used for holding liquids or solids, some made for standing on the fire, some not able to do so. As a general name we term such an object a 'container.' It is a ubiquitous class of objects, and again, I think, the arts manufacturing it have nothing whatever to do with  
288 the art of the ruler which we are now seeking.

YOUNG SOCRATES: Nothing at all.

STRANGER: We must now recognize a third class of things to be acquired, also a very large one. Some things belonging to it are on land, others on water; some move from place to place, others do not; some are of high honor, others are not so distinguished. All share one name and form a class because each is made to support something or serve as a base for something.

YOUNG SOCRATES: What common name have they?

STRANGER: 'Carriage,' I should say—and the production of such things is the work of the carpenter, the potter, or the chariot builder, not of the statesman.

YOUNG SOCRATES: I understand.

- b STRANGER: What is our fourth class? Must we not distinguish from all these three a further class to which most of the things mentioned in our definition of weaving belong—the whole class of clothing, most armor, all walls, all earth or stonework defenses erected around a city, and many other such things. All exist for defensive protection and so the whole class can best be called 'defenses.' To provide these is in most cases the work of the builder or weaver, and never that of the statesman.

YOUNG SOCRATES: Of course.

- c STRANGER: Might we agree to name a fifth class including all arts concerned in decoration and portraiture and every art which produces artistic representations whether in these visual arts or for the ear in poetry and music? The works all these arts produce are wrought simply to give pleasure, and all may properly be included under one description.

YOUNG SOCRATES: What is that?

STRANGER: We use the expression 'diversion,' do we not?

YOUNG SOCRATES: Yes, what of it?

STRANGER: Then this is the name we can apply to the products

of this whole group of arts. None of them has a serious purpose; all are performed for pure amusement.

YOUNG SOCRATES: I think I understand this too. d

STRANGER: Consider now those arts which provide the stuffs which are wrought by the arts we have been talking about. This is a most various class of arts. Often such an art is itself working on the products of several yet more primitive arts. Shall we not name this the sixth kind?

YOUNG SOCRATES: Of what are you thinking?

STRANGER: Gold and silver and all mined metals, all the pioneer work done by the woodman and the sawmill to provide material for carpentry and wickerwork, the currier's art which removes the skins of animals, the art of stripping bark which has the same function in the plant realm, and all arts kindred to these, the arts of making cork, papyrus, and rope. All these arts produce the main types of raw material for working up into the more complex kinds of objects which we use. Let us call this class of object by the general description, 'basic material at the stage of its first working when it is not yet wrought into particular objects,' and the production of this is obviously no concern of the kingly science. e

YOUNG SOCRATES: True.

STRANGER: We come lastly to the getting of food and of all the substances the parts of which are capable of combining with the parts of the body to promote its health. This we will make a seventh class and call it 'nourishment' unless we can find some better name for it. Provision of it is rightly to be assigned to the arts of farming, hunting, gymnastics, medicine, or butchering rather than to political science. 289

YOUNG SOCRATES: Of course.

STRANGER: I think that possessions of practically every kind that we find belonging to men have been enumerated in these seven classes, with the single exception of tame living creatures. Listen while I run through the list. First place in it should really have been taken by 'basic material at its first working'; after that come instruments, then vessels, carriages, defenses, diversions, and nourishments. We may neglect any class of merely slight importance which may have escaped us, for it can be made to fit in one or other of these main classes. For example, consider the class consisting of coins, seals, and every other kind of engraved dies. These have not, as a class, one of the great classes with which all coincide. Some have to be subsumed under 'diversions,' some under 'instruments'; it is a forced classification, but they can be made to fit into one or other of these classes somehow or other. As for tame animals other than slaves, all these clearly come under the art of nourishing herds which we have previously analyzed. b

YOUNG SOCRATES: Yes, they do. c

**STRANGER:** The class that remains, then, is that of slaves and personal servants of all kinds. It is just here that I strongly suspect that those will be discovered who really dispute the fashioning of the web of state with the king in the way that we found spinners, carders, and the rest disputing the fashioning of clothes with the weavers. All the others, since they pursue what we have described as 'contributory' arts, have been disposed of along with their occupations which we have enumerated just now, and thus they have all been severed  
d from any share in the kingly art of ruling the state.

**YOUNG SOCRATES:** So at any rate it would seem.

**STRANGER:** Come then, let us examine the rest and approach them more closely to scrutinize them more effectively.

**YOUNG SOCRATES:** Let us do so.

**STRANGER:** The most extensive class of servants, as seen from our new vantage point, we find to be engaged in pursuits and sunk in a condition of life quite contrary to those we had suspected we might discover.

**YOUNG SOCRATES:** To whom do you refer?

**STRANGER:** To those who are bought and sold and so become  
e their master's property. No one would think of challenging our description of these as slaves or our contention that they cannot possibly claim any share in the practice of the art of ruling.

**YOUNG SOCRATES:** That goes without saying.

**STRANGER:** But what of servants who are personally free? What of those among them who of their own volition place themselves and their services at the disposal of the various craftsmen we have named and effect a systematic distribution of agricultural and manufactured products maintaining an economic balance between them? Some of these do their work at home in the market square, but others are travelers from city to city, either overland or by sea routes. They exchange money for goods or one currency for another. Our  
290 names for them are money-changers, merchants, venturers, retailers. They cannot be said to dispute the province of the ruler, can they?

**YOUNG SOCRATES:** I wonder if they might—in the realm of commerce, that is to say.

**STRANGER:** Certainly not. You can be sure that such men who can be hired for pay, who work for a daily wage and who are always ready to work for any employer, will never be found daring to claim any share in the art of ruling.

**YOUNG SOCRATES:** No, of course not.

**STRANGER:** But there are those who render other kinds of service.

**YOUNG SOCRATES:** What kinds of service? Whom do you mean?

**STRANGER:** Heralds and clerks, who often develop great facility  
b from long performance of their form of service, and certain other very

able minor civil servants who do all manner of administrative work for the elected officials. What shall we call these?

YOUNG SOCRATES: What you just called them—civil servants, but not rulers exercising an independent authority in the state.

STRANGER: I was not cheated by a mere dream, I think, when I said that it was here that the king's serious challengers in the art of rule would reveal themselves. But how strange to have to look for them in a servant class!

YOUNG SOCRATES: Very strange.

STRANGER: Now let us tackle those we have not yet put under examination. First come the soothsayers, practicing their particular form of expert ministration. For do we not recognize them as serving as interpreters of the gods to men?

YOUNG SOCRATES: Yes.

STRANGER: Next come the priestly tribe. According to the orthodox view they understand how to offer our gifts to the gods in sacrifices in a manner pleasing to them, and they know, too, the right forms of prayer for petitioning the gods to bestow blessings on us. Both of these expert activities are parts of the art of ministration, are they not?

YOUNG SOCRATES: Well, it would seem that they are.

STRANGER: In that case I think that we are coming at last upon the tracks of our quarry, so to speak. For the priest and the diviner have great social standing and a keen sense of their own importance. They win veneration and respect because of the high tasks they undertake. This is shown in the fact that in Egypt none can be king unless he belongs to the priestly caste, and if a man of some other caste succeeds in forcing his way to the throne, he must then be made a priest by special ordination. In many of the Greek cities also one finds that the duty of making the chief sacrifice on the state's behalf is laid upon the chief officers of state. You have a very striking example of it here in Athens, for I am led to understand that the most solemn ancestral sacrifices of this nation are the responsibility of the archon whom the lot designates as King-Archon.

YOUNG SOCRATES: That is so.

STRANGER: Very well, we must study these kings chosen by lot and these priests with their ministerial assistants, very closely. But we must also look at another group—quite a large mob, in fact, which is coming clearly into view now that all these particular groups have been distinguished.

YOUNG SOCRATES: And who are these you speak of?

STRANGER: A very queer crowd.

YOUNG SOCRATES: What do you mean?

STRANGER: A race of many tribes—or so they seem to be at first sight. Some are like lions, some like centaurs, or similar monsters. A great many are satyrs or chameleons, beasts that are masters

of quick change in order to conceal their weakness. Indeed they take each other's shapes and characters with bewildering rapidity. Yes, Socrates, and I think I have now identified these gentlemen.

YOUNG SOCRATES: Tell me about them. You seem to look upon a strange sight.

STRANGER: Yes, strange until recognized! I was actually impressed by them myself at first sight. Coming suddenly on this strange cry of players acting their part in public life I did not know what to make of them.

YOUNG SOCRATES: What players can these be?

STRANGER: The chief wizards among all the Sophists, the chief pundits of the deceiver's art. Such impersonators are hard to distinguish from the real statesmen and kings; yet we must distinguish them and thrust them aside if we are to see clearly the king we are seeking.

YOUNG SOCRATES: Well, we must not abandon the search.

STRANGER: No, I agree. Tell me this now.

YOUNG SOCRATES: Well?

d STRANGER: Is not monarchy one of the possible forms of government as we know it?

YOUNG SOCRATES: Yes.

STRANGER: Next to monarchy one would naturally mention the constitution in which it is the few who wield power.

YOUNG SOCRATES: Yes.

STRANGER: Then the third type must be the rule of the many—democracy as it is called.

YOUNG SOCRATES: Of course.

STRANGER: These are the three main constitutions, but do not the three in a sense become five by evolving two further types out of themselves?

YOUNG SOCRATES: What are these?

e STRANGER: If we consider the violence or consent, the poverty or riches, the law-abidingness or disregard of law which they exhibit we shall find that two of the three forms of government are really twofold and can therefore be divided. Monarchy then yields us two forms, called tyranny and constitutional monarchy, respectively.

YOUNG SOCRATES: Yes.

STRANGER: Constitutions where the few wield power can always be similarly divided; the subdivisions are aristocracy and oligarchy.

YOUNG SOCRATES: Quite so.

292 STRANGER: In the case of democracy we do not usually alter the name. Democracy is always 'democracy' whether the masses control the wealthy by force or by consent and whether or not it abides strictly by the laws.

YOUNG SOCRATES: That is true.

STRANGER: What then? Do we imagine that any of these constitutions can be declared a 'true' constitution so long as the only criteria for judging it are whether one, few, or many rule, whether it be rich or poor, whether it rule by violence or consent, whether it have or lack a code of laws?

YOUNG SOCRATES: But what prevents our judging it to be a true constitution by such criteria?

STRANGER: Try to follow what I am going to say and you will be bound to see more clearly.

YOUNG SOCRATES: What line are you going to take?

STRANGER: Shall we abide by our original argument or are we now going against it?

YOUNG SOCRATES: Which argument do you mean?

STRANGER: We decided, did we not, that the art of rule is one of the sciences?

YOUNG SOCRATES: Yes.

STRANGER: Furthermore we agreed that it is a particular kind of science. Out of the whole class of sciences we selected the judging class and more particularly the directive class.

YOUNG SOCRATES: We did.

STRANGER: We divided the directive into direction of lifeless things and direction of living beings, and by this process of subdivision we arrived by regular stages where we are now, never losing sight of the fact that statesmanship is a form of knowledge but unable as yet to say precisely what form of knowledge it is.

YOUNG SOCRATES: You are quite right.

STRANGER: Do we realize, then, that the real criterion in judging constitutions must not be whether few or many rule, whether rule is by violence or consent, or whether the rulers are poor or rich? If we are going to abide by our previous conclusions, the criterion must be the presence or absence of an art directing the ruling.

YOUNG SOCRATES: Yes, for we simply must abide by those conclusions.

STRANGER: Then we are forced to look at the issue in this light. In which, if any, of these constitutions do we find the art of ruling being practiced in the actual government of men? What art is more difficult to learn? But what art is more important to us? We must see it for what it is so as to be able to decide which are the other public figures we must remove from the true king's company, those personages who claim to be statesmen, who win over the mass of men to believe them to be statesmen, but are in actual fact nothing of the kind.

YOUNG SOCRATES: We must indeed, for this was the task set for our discussion.

STRANGER: Do you think that any considerable number of men in a particular city will be capable of acquiring the art of statesmanship?

YOUNG SOCRATES: That is quite out of the question.

STRANGER: In a city with a population of a thousand, could a hundred, say, acquire it satisfactorily—or could fifty, perhaps?

YOUNG SOCRATES: Statesmanship would be the easiest of the arts if so many could acquire it. We know quite well that there would never be fifty first-class draughts players among a thousand inhabitants—that is, not if they were judged by proper inter-Hellenic standards. How much less can you expect to find fifty kings! For according to our former argument it is only the man possessed of the art of kingship who must be called a king, though he is just as much a king when he is not in power as when he is.

293 STRANGER: You have very rightly recalled that point. I think it follows that if the art of government is to be found in this world at all in its pure form, it will be found in the possession of one or two, or, at most, of a select few.

YOUNG SOCRATES: Yes.

b STRANGER: On this principle it is the men who possess the art of ruling and these only, whom we are to regard as rulers, whatever constitutional form their rule may take. It makes no difference whether their subjects be willing or unwilling; they may rule with or without a code of laws; they may be poor or wealthy. It is the same with doctors. We do not assess the medical qualification of a doctor by the degree of willingness on our part to submit to his knife or cautery or other painful treatment. Doctors are still doctors whether they work according to fixed prescriptions or without them and whether they be poor or wealthy. So long as they control our health on a scientific basis, they may purge and reduce us or they may build us up, but they still remain doctors. The one essential condition is that they act for the good of our bodies to make them better instead of worse, and treat men's ailments in every case as healers acting to preserve life. We must insist that in this disinterested scientific ability we see the distinguishing mark of true authority in medicine—  
c —and of true authority everywhere else as well.

YOUNG SOCRATES: Quite so.

STRANGER: Then the constitution par excellence, the only constitution worthy of the name, must be the one in which the rulers are not men making a show of political cleverness but men really possessed of scientific understanding of the art of government. Then we must not take into consideration on any sound principle of judgment whether their rule be by laws or without them over willing or  
d unwilling subjects or whether they themselves be rich men or poor men.

YOUNG SOCRATES: No.

STRANGER: They may purge the city for its better health by putting some of the citizens to death or banishing others. They may lessen the citizen body by sending off colonies like bees swarming off

from a hive, or they may bring people in from other cities and naturalize them so as to increase the number of citizens. So long as they work on a reasoned scientific principle following essential justice and act to preserve and improve the life of the state so far as may be, we must call them real statesmen according to our standards of judgment and say that the state they rule alone enjoys good government and has a real constitution. We must go on to say that all the other state fabrics called constitutions are not genuine, but counterfeit; they imitate the true constitution. Those which we call law-abiding copy it fairly closely, but the rest are more or less shocking caricatures of it.

YOUNG SOCRATES: All the rest, sir, I believe to have been spoken in due measure—but the saying about ruling without laws is a hard saying for us to hear.

STRANGER: You are a little too quick for me, Socrates! I was just going to cross-examine you to see if you really accepted all I have said or felt some objection. I realize, however, from what you say that the point we are anxious to discuss in detail is this question whether a good governor can govern without laws.

YOUNG SOCRATES: Yes, it is.

STRANGER: In one sense it is evident that the art of kingship does include the art of lawmaking. But the political ideal is not full authority for laws but rather full authority for a man who understands the art of kingship and has kingly ability. Do you understand why?

YOUNG SOCRATES: No, please tell me why.

STRANGER: Law can never issue an injunction binding on all which really embodies what is best for each; it cannot prescribe with perfect accuracy what is good and right for each member of the community at any one time. The differences of human personality, the variety of men's activities, and the inevitable unsettlement attending all human experience make it impossible for any art whatsoever to issue unqualified rules holding good on all questions at all times. I suppose that so far we are agreed.

YOUNG SOCRATES: Most emphatically.

STRANGER: But we find practically always that the law tends to issue just this invariable kind of rule. It is like a self-willed, ignorant man who lets no one do anything but what he has ordered and forbids all subsequent questioning of his orders even if the situation has shown some marked improvement on the one for which he originally legislated.

YOUNG SOCRATES: Yes, that is just how the law treats us all.

STRANGER: It is impossible, then, for something invariable and unqualified to deal satisfactorily with what is never uniform and constant.

YOUNG SOCRATES: I am afraid it is impossible.

STRANGER: But why then must there be a system of laws,

- d seeing that law is not the ideal form of control? We must find out why a legal system is necessary.

YOUNG SOCRATES: We must.

STRANGER: You have courses of training here in Athens, have you not, just as they have in other cities—courses in which pupils are trained in a group to fit themselves for athletic contests in running or in other sports?

YOUNG SOCRATES: Of course. We have quite a number of them.

STRANGER: Let us call to mind the commands which professional trainers give to the athletes under their regimen in these courses.

YOUNG SOCRATES: In what particular?

- STRANGER: The view such trainers take is that they cannot do their work in detail and issue special commands adapted to the condition of each member of the group. When they lay down rules for  
e physical welfare they find it necessary to give bulk instructions having regard to the general benefit of the average pupil.

YOUNG SOCRATES: Quite so.

STRANGER: That is why we find them giving the same exercises to whole groups of pupils, starting or stopping all of them at the same time in their running, wrestling, or whatever it may be.

YOUNG SOCRATES: Yes.

- 295 STRANGER: Similarly we must expect that the legislator who has to give orders to whole communities of human creatures in matters of right and of mutual contractual obligation will never be able in the laws he prescribes for the whole group to give every individual his due with absolute accuracy.

YOUNG SOCRATES: Very probably not.

STRANGER: But we shall find him making the law for the generality of his subjects under average circumstances. Thus he will legislate for all individual citizens, but it will be by what may be called a 'bulk' method rather than an individual treatment, and this method of 'bulk' prescription will be followed by him whether he makes a written code of law or refrains from issuing such a code, preferring to legislate by using unwritten ancestral customs.

YOUNG SOCRATES: Yes, and quite rightly so.

- b STRANGER: Of course he is right, Socrates. How could any law-giver be capable of prescribing every act of a particular individual and sit at his side, so to speak, all through his life and tell him just what to do? And if among the few who have really attained this true statesmanship there arose one who was free to give this detailed guidance to an individual, he would hardly put obstacles in his own way by deliberately framing legal codes of the kind we are criticizing.

YOUNG SOCRATES: That certainly follows, sir, from what has been said.

STRANGER: I would rather say, Socrates, that it follows from what is going to be said.

YOUNG SOCRATES: And what is that?

STRANGER: Let us put this case to ourselves. A doctor or trainer plans to travel abroad and expects to be away from his charges for quite a long time. The doctor might well think that his patients would forget any verbal instructions he gave and the trainer might think likewise. In these circumstances each might want to leave written reminders of his orders—do you not think so yourself, Socrates?

YOUNG SOCRATES: Exactly so, sir.

STRANGER: Well now, suppose our doctor did not stay abroad as long as he had expected and so came back the sooner to his patients. Would he hesitate to substitute different prescriptions for the original ones if his patients' condition happened to be better than anticipated because of a climatic improvement or some other unusual and unexpected development of that kind? Would the doctor feel it his duty to maintain stubbornly that there must be no transgression of the strict letter of those original prescriptions of his? Would he refuse to issue new prescriptions or conditions, or condemn a patient who was venturing to act contrary to the prescriptions he had written out for him? Would the doctor declare all such action must be wrong because those former prescriptions were the true canons of medicine and of health and therefore that all contravention of them must lead to disease and be contrary to medical science? Surely any such claims, in circumstances where a science is involved and a real art is at work, would only make the man who made the claim and his precious prescriptions supremely ridiculous.

YOUNG SOCRATES: Yes, it would indeed.

STRANGER: Imagine then the case of a scientific legislator. Suppose that by a written code or by support given to unwritten customs he has laid down what is just and honorable and what is not, and what benefits society and what hurts it. Suppose him to do this service for the several communities of the human flock who live in their cities as their appointed pasture shepherded by the codes their legislators have provided. If this man, who drew up his code by the art of statesmanship, wishes to amend it, or if another scientific legislator of this kind appears on the scene, will these be forbidden to enact new laws differing from the earlier ones? Surely such a prohibition would appear as ridiculous in the case of the legislator as it was in the case of the doctor, would it not?

YOUNG SOCRATES: Of course.

STRANGER: But are you familiar with the argument one usually hears advanced when an issue like this is raised?

YOUNG SOCRATES: No, I cannot remember it at the moment, at any rate.

STRANGER: It is quite a plausible argument, I grant that. They contend that if a man discovers better laws than those already enacted he is entitled to get them brought into effect, but only if in every instance he has first persuaded his own city to accept them.

YOUNG SOCRATES: But what of this? Surely this is a sound contention.

b STRANGER: It may be, but answer this question. Suppose a man fails to persuade his city and forces his better laws upon it, what name are we to apply to force so used? But no, do not answer me that question yet, for there are others to be answered first.

YOUNG SOCRATES: What can they be?

STRANGER: Consider once more the case of the patient under the doctor's treatment. Suppose that the doctor fails to persuade the patient but has a mastery of medical knowledge, and suppose that he forces a particular course of treatment which goes against written prescription but is actually more salutary on a child patient, maybe, or on a man or a woman. What are we to call force of this kind? Whatever we decide to call it, we shall not call it 'the sin against true medicine' or 'a breach of the laws of health.' Surely the very last  
c thing a patient who is so constrained is entitled to say is that the doctor's act in applying the constraint was contrary to good medicine and an aggravation of his disease.

YOUNG SOCRATES: You are quite right.

STRANGER: By what name, then, do we call the sin against the art of statesmanship? Would it not be called dishonor, vice, injustice?

YOUNG SOCRATES: Assuredly.

STRANGER: What, then, shall we say of citizens of a state who have been forced to do things which are contrary to written laws and ancestral customs but are nevertheless juster, more effective, and more noble than the directions of these traditional authorities? How shall we regard censure by these citizens of the force which has applied in these circumstances? Unless they wish to appear ridiculous in the  
d extreme there is one thing they must refrain from saying. They must not assert in any such instance that in being subjected to compulsion they have suffered disgrace, injustice, or evil at the hands of those who compelled them.

YOUNG SOCRATES: That is quite true.

STRANGER: Can it be the case that acts imposed under compulsion are right if the compeller is rich, but wrong if he is poor? Surely what matters is that with or without persuasion, rich or poor, ac-  
e cording to a code or against it, the ruler does what is really beneficial. These are the real issues and all is well if he passes this test, the only genuine test of good government in a community and the only principle by which the understanding and upright ruler will administer  
297 the affairs of those whom he rules. The ship's captain fixes his attention on the real welfare at any given time of his ship and his crew. He lays down no written enactments but supplies a law in action by

practical application of his knowledge of seamanship to the needs of the voyage. It is in this way that he preserves the lives of all in his ship. Would not a true constitution be just like this and work in the same way if the rulers really understood what government is and employed their art as a stronger power for good than any written laws? By rulers with this sound attitude of mind no wrong can possibly be done so long as they keep firmly to the one great principle, that they must always administer impartial justice to their subjects under the guidance of intelligence and the art of government. Then they will not only preserve the lives of their subjects but reform their characters too, so far as human nature permits of this.

YOUNG SOCRATES: There can be no objection to your last remarks at any rate.

STRANGER: No, nor can there be to my earlier ones either.

YOUNG SOCRATES: To which are you referring?

STRANGER: You remember that we said that in no community whatsoever could it happen that a large number of people received this gift of political wisdom and the power to govern by pure intelligence which would accompany it. Only in the hands of the select few or of the enlightened individual can we look for that right exercise of political power which is itself the one true constitution. For we must call all other constitutions mere imitations of this. Some are more perfect copies of it; others are grosser and less adequate imitations.

YOUNG SOCRATES: What do you really mean by this? For I must admit that I did not really understand what you said before about these 'imitations.'

STRANGER: But I must make you understand. It would be a serious failing to start a discussion of this issue and then simply drop it without exposing the error which is rampant today in all that is said about it.

YOUNG SOCRATES: And what is this error?

STRANGER: That is what we must now seek out, though it involves a search over unfamiliar ground and the error is hard to discover. We may say, then, that there is only one constitution in the true sense—the one we have described. For the rest of them owe their very preservation to their following a code of laws enacted for this true state and to a strict adherence to a rule which we admit to be desirable though it falls short of the ideal.

YOUNG SOCRATES: What rule is this?

STRANGER: The rule that none of the citizens may venture to do any act contrary to the laws, and that if any of them ventures to do such act, the penalty is to be death or the utmost rigor of punishment. This is the justest and most desirable course as a second best when the ideal we have just described has been set aside. We must now go on to say how this state of affairs we have just called second best is achieved in practice, must we not?

YOUNG SOCRATES: Yes, we must.

STRANGER: Let us go back once again to the parallel cases with which we have constantly to compare the ruler who really is a statesman.

YOUNG SOCRATES: Who are they?

STRANGER: Our good friend the ship's captain and the doctor 'worth a dozen other men.' Let us picture to ourselves a situation in which they might find themselves and see how it all works out in their case.

YOUNG SOCRATES: What situation?

298 STRANGER: Suppose we all suddenly decided that we are the victims of the worst possible outrages at their hands. Every doctor, you see, can preserve the life of any he will among us, and can hurt any he will by knife or cautery or by demanding fees which are nothing but imposed taxes—for only the tiniest proportion of them is spent on medicaments for the patient and all the rest goes to keep the doctor and his household. Their final enormity is to accept bribes from  
b the patient's relations or from his enemies and put him to death. Ships' captains are guilty of a different set of crimes, but they are just as heinous. They will enter into a conspiracy to put out to sea with you and then leave you stranded, or else they will scuttle the ship and throw the passengers overboard—and these are not all their misdeeds. Suppose we formed this view of doctors and captains and then held a council at which the following decree was passed.

Neither medicine nor seamanship may be trusted in future with  
c absolute control in its particular sphere, either over slaves or over free citizens. We therefore resolve to gather together an assembly of *all, or of the wealthy among*, the people. It shall be lawful for men of no calling or men of any other calling to advise this assembly on seamanship and medicine—that is to say, on the drugs and surgical instruments appropriate to the treatment of the sick, on ships and their  
d tackle, on the handling of vessels, and on perils of the sea, including risks arising from wind and tide, risks arising from encountering pirates, and risks arising from maneuver of warships against enemy warships in the event of a naval engagement.

So much for the decree on these matters. The executive is to embody this decree of the assembly of the people—based, you remember, on the advice of a few doctors and sailors maybe, but certainly on the advice of many unqualified people too—in laws which they are to inscribe on tablets of wood and of stone, and in the case of some of the rules so resolved upon, they must see that they find their place  
e among the unwritten ancestral customs. Thereafter forever medicine and navigation may only be practiced according to these laws and customs.

YOUNG SOCRATES: A pretty state of affairs this!

STRANGER: But we have not done yet. Suppose that they resolve further to appoint magistrates chosen by lot annually from the

citizen body, whether from the wealthy only or from all citizens. Some of these magistrates, once they are appointed, are to take command of ships and navigate them; others are to cure the sick according to the written code.

YOUNG SOCRATES: This is getting worse!

STRANGER: But we have not done—see what follows. When the year of office of each of these magistrates expires, a court must be established and a jury chosen by lot, perhaps from among wealthier citizens whose names are on a list of previously selected jurors, perhaps from the people as a whole. The magistrates are to be summoned before this court and it is to subject them to audit. It is open to anyone to lay an accusation against them that during their year of office they failed to sail the ships according to the written laws or the ancient custom of our forebears. Similar charges may be brought concerning the healers of the sick. If the verdict goes against any of them, the court must assess the penalty or the fine the convicted parties must pay.

YOUNG SOCRATES: Well then, the man who took office voluntarily in such a society would deserve any punishment and any fine that might be imposed.

STRANGER: Then there can be further misdemeanors, and we must enact a law to provide against them. It will be a law against independent research. If a man be found guilty of inquiry into seamanship or medicine in contravention of this law—of inquiry into nautical practice, for instance, or into climatic influences and bodily temperatures, and especially if he be guilty of airing theories of his own on such things, action must be taken to suppress him. First we must deny him the title of 'doctor' or 'captain.' Instead we must call him a man with his head in the clouds, one of these chattering Sophists. Furthermore it will be lawful for any citizen so desiring to indict him before a court of justice—or what passes for such a court—on the charge of corrupting the younger men and influencing them to go in for seamanship and medicine in an illegal manner by setting up as doctors or captains on their own authority. If he is found guilty of influencing young or old against the laws and written enactments, he shall suffer the utmost penalties. For there can be no claim to possess wisdom greater than the wisdom of the laws. No one need be ignorant of seamanship or medicine, of sailing regulations or health regulations. The laws are there written out for our conning; the ancient customs are firmly established in our midst. Any who really desire to learn may learn.

Suppose, Socrates, that all the arts are treated like this. How do you imagine that generalship and hunting in all its forms would be affected? What would happen to painting and other representational arts, or to building and manufacture of all types of implements under such conditions, and how could farming or any cultivation whatever

be carried on? Imagine the rearing of horses and other animals tied down to legal prescription, or divination and similar ministerial functions so controlled. What would legally governed draughts be like or legal mathematics, whether simple arithmetic, plane geometry, stereometry, or kinematics? What would the world be like if everything worked on this principle, organized throughout according to written laws instead of according to the relevant arts?

**YOUNG SOCRATES:** It is quite clear that the arts as we know them would be annihilated and that they could never be resurrected because of this law which puts an embargo on all research. The result would be that life, which is hard enough as it is, would be quite impossible then and not to be endured.

**STRANGER:** Yes, but there is a further possible degradation to consider. Suppose we compel each of these arts to function according to a legal code and place a magistrate in charge of this code either by election or by the fall of the lot, and make him rule according to it. Suppose then that he has no regard for the code and acts only from motives of ambition and favoritism. He embarks on a course of action contrary to law but does not act on any basis of scientific knowledge. Evil as the former state was, will not this latter one be still worse?

**YOUNG SOCRATES:** It will indeed.

**STRANGER:** The laws which have been laid down represent the fruit of experience—one must admit that. Each of them has been put forward by some advocate who has been fortunate enough to hit on the right method of commending it and who has thus persuaded the public Assembly to enact it. Any man who dares by his action to infringe these laws is guilty of a wrong many times greater than the wrong done by strict laws, for such transgression, if tolerated, would do even more than a rigid code to pervert all ordered activity.

**YOUNG SOCRATES:** Yes, of course it would.

**STRANGER:** Then so long as men enact laws and written codes governing any department of life, our second-best method of government is to forbid any individual or any group to perform any act in contravention of these laws.

**YOUNG SOCRATES:** True.

**STRANGER:** Then laws would seem to be written copies of scientific truth in the various departments of life they cover, copies based as far as possible on the instructions received from those who really possess the scientific truth on these matters.

**YOUNG SOCRATES:** Yes, of course.

**STRANGER:** And yet we must never lose sight of the truth we stated before. The man with the real knowledge, the true statesman, will in many instances allow his activities to be dictated by his art and pay no regard to written prescriptions. He will do this whenever he is convinced that there are measures which are better than the instruc-

tions he previously wrote and sent to people at a time when he could not be there to control them personally.

YOUNG SOCRATES: Yes, that was what we said.

STRANGER: So an individual or a group who possess a code of laws but try to introduce some change in them because they consider it an improvement are doing the same thing according to their lights as the true statesman.

YOUNG SOCRATES: Yes.

STRANGER: But if they acted like this with minds unenlightened by knowledge, they would indeed try to copy the true original, but would copy it very badly. If on the other hand they possessed scientific knowledge, it would no longer be a case of copying at all; it would be the real and original statesmanship we are talking about.

YOUNG SOCRATES: Yes—or so I should say.

STRANGER: Now it has been argued already and we have agreed that no large group of men is capable of acquiring any art, be it what you will.

YOUNG SOCRATES: That stands as our agreed conclusion.

STRANGER: Granted then that an art of kingly rule exists, the wealthy group or the whole citizen body would never be able to acquire this scientific art of statesmanship.

YOUNG SOCRATES: How could they?

STRANGER: It seems to follow that there is an invariable rule which these imitative constitutions must obey if they mean to reproduce as far as they can that one real constitution, which is government by a real statesman using real statecraft. They must all keep strictly to the laws once they have been laid down and never transgress written enactments or established national customs.

YOUNG SOCRATES: Quite right.

STRANGER: When the wealthy seek to copy the ideal constitution we call the constitution which results 'aristocracy,' but when they disregard the laws, the constitution produced is 'oligarchy.'

YOUNG SOCRATES: I suppose so.

STRANGER: But when one individual governs according to laws, imitating the truly wise ruler, we call him 'king.' We make no difference in name between the individual ruler guided by political science and the individual ruler guided by a right opinion and acting according to the laws.

YOUNG SOCRATES: That seems to be so.

STRANGER: And so if there really were an example of a truly wise ruler in power his name would undoubtedly be the same—'the king'—it could not be anything else. So the total of the names of the constitutions now under consideration comes to five only.

YOUNG SOCRATES: So it seems.

STRANGER: But stay, what of the case where one man rules but does not govern his actions either by laws or by ancient customs,

- c but claims falsely what only the truly wise ruler has a right to claim, and says that the 'best' course must be taken in defiance of written codes? If in fact it is only his passion and his ignorance that lead him to attempt to copy the true statesman in this defiance of law, must we not call him and all like him by the name of tyrant?

YOUNG SOCRATES: Unquestionably.

- STRANGER: So then we have the tyrant and the king, then oligarchy and aristocracy, then democracy, all of which arise when men turn down the idea of the one true and scientific ruler. Men doubt whether any man will ever be found fit to bear such perfect rule. They despair of finding any one man willing and able to rule with  
d moral and intellectual insight and to render every man his due with strictest fairness. They feel sure that a man with such absolute power will be bound to employ it to the hurt and injury of his personal enemies and to put them out of the way. But it remains true that if the ideal ruler we have described were to appear on earth he would be acclaimed, and he would spend his days guiding in strictest justice and perfect felicity that one and only true commonwealth worthy of the name.

YOUNG SOCRATES: That is so of course.

- STRANGER: We must take things as they are, however, and kings do not arise in cities in the natural course of things in the way  
e the royal bee is born in a beehive—one individual obviously outstanding in body and mind and capable of taking charge of things at once. And therefore it seems men gather together and work out written codes, chasing as fast as they can the fading vision of the true constitution.

YOUNG SOCRATES: So it would seem.

- STRANGER: Is it any wonder that under these makeshift constitutions of ours hosts of ills have arisen and more must be expected in the future? They all rest on the sandy foundation of action according to law and custom without real scientific insight. Another art that  
302 worked on such a foundation would obviously ruin all that it sought to build up. But something even more remarkable than these besetting ills is the sheer native strength a city possesses nevertheless. For all our cities, as we know, have been subject to such ills for many generations now, and yet some of them have not come to ruin but still stand firm. However, we see many instances of cities going down like sinking ships to their destruction. There have been such wrecks in the past and there surely will be others in the future, caused by the wickedness of captains and crews alike. For these are guilty men, whose sin is supreme ignorance of what matters most. They are men  
b who know little or nothing of real political truth and yet they consider themselves to know it from end to end and suppose that they are better instructed in this art than in any other.

YOUNG SOCRATES: Very true.

STRANGER: All these imperfect constitutions are difficult to live under, but we might ask ourselves which of them is hardest to bear and which is most tolerable. Ought we perhaps to examine this matter, though it is not directly relevant to our appointed theme? After all one must remember that, speaking quite generally, the aim of all the actions of men everywhere is to secure for themselves the most tolerable life they can.

YOUNG SOCRATES: Then we can hardly help considering the question.

STRANGER: There is one of three constitutions which you must regard as being at once the hardest to live under and the easiest.

YOUNG SOCRATES: How do you mean?

STRANGER: I just want to remind you that at the beginning of this supplementary discussion we enumerated three constitutions—the rule of one, the rule of the few, and the rule of the many.

YOUNG SOCRATES: We did.

STRANGER: Dividing each of three into two let us make six, having first separated the true constitution from all, calling it the seventh.

YOUNG SOCRATES: How shall we divide the three others?

STRANGER: Under the rule of one we get kingly rule and tyranny; under the rule of the few, as we said, come the auspicious form of it, aristocracy, and also oligarchy. As for the subdividing of democracy, though we gave both forms of it one name previously, we must now treat it as twofold.

YOUNG SOCRATES: How is this? How can it be divided?

STRANGER: By the same division as the others, even though the word 'democracy' proves to be doing double duty. Rule according to law is as possible under democracy as under the other constitutions.

YOUNG SOCRATES: Yes, it is.

STRANGER: This division of democracy into two kinds was not serviceable previously as we indicated at the time, for we were seeking then to define a perfect constitution. Now, however, we have excluded the perfect constitution from our reckoning and have before us those that have to serve us as constitutions in default of it. In this group we find the principle of obedience to law or contravention of law dividing each type of ruler into two types.

YOUNG SOCRATES: So it seems from the argument that was put forward just now.

STRANGER: The rule of one man, if it has been kept within the traces, so to speak, by the written rules we call laws, is the best of all the six. But when it is lawless it is hard, and the most grievous to have to endure.

YOUNG SOCRATES: So it would seem.

STRANGER: As for the rule of a few, just as the few constitute a middle term between the one and the many, so we must regard the

rule of the few as of middle potency for good or ill. The rule of the many is weakest in every way; it is not capable of any real good or of any serious evil as compared with the other two. This is because in a democracy sovereignty has been divided out in small portions among a large number of rulers. If therefore all three constitutions are law-abiding, democracy is the worst of the three, but if all three flout the laws, democracy is the best of them. Thus if all constitutions are unprincipled the best thing to do is to live in a democracy. But when constitutions are lawful and ordered, democracy is the least desirable, and monarchy, the first of the six, is by far the best to live under—unless of course the seventh is possible, for that must always be exalted, like a god among mortals, above all other constitutions.

YOUNG SOCRATES: Things do seem to work out in this way, and so we must take your advice and act as you say.

STRANGER: Therefore all who take part in one of these governments—apart from the one based on real knowledge—are to be distinguished from the true statesman. They are not statesmen; they are party leaders, leaders of bogus governments and themselves as bogus as their systems. The supreme imitators and tricksters, they are of all Sophists the arch-Sophists.

YOUNG SOCRATES: It seems to me that the wheel has come full circle, now that the title of Sophist goes to those who most deserve it, to the men who get themselves called political leaders.

STRANGER: So this fantastic pageant that seemed like some strange masque of centaurs or some band of satyrs stands revealed for what it is. At much pains we have succeeded at last in distinguishing them and setting them apart, as we must, from all true practice of statesmanship.

YOUNG SOCRATES: So we see.

STRANGER: There remains another task, and it is even more difficult because the class to be set apart is closer akin to the kingly ruler and also in itself harder to discern clearly. It seems to me that we have reached a point where we have to act like gold refiners.

YOUNG SOCRATES: How so?

STRANGER: We are told that at the first stage of their work they separate off earth and stones and much else from the ore. When these are gone there still remain those precious substances akin to gold which are so combined with it as to be separable only in the furnace: I mean bronze and silver and sometimes adamant as well. These are removed only with difficulty as the metal is tried in the refining fire until at last the process yields the sight of unalloyed gold separated off by itself.

YOUNG SOCRATES: Yes, they do say that refining is done like that.

STRANGER: It looks as though we are in a like situation. We have separated off the elements which are quite different from states-

manship, the elements which are quite foreign and repugnant to it, but there still remain the precious elements which are akin to it. These include the art of generalship, the art of administering justice, and that department of the art of public speaking which is closely allied to the kingly art. This last persuades men to do what is right and therefore takes its share in controlling what goes on in a true community. How can we best separate these arts also from statesmanship and so bring out the nature of the statesman as such, in his essential character? That, after all, is our present object. 304

YOUNG SOCRATES: Clearly we must make the attempt by one means or another.

STRANGER: If trying will do it, he shall be shown in his true character. Music will provide us with an example which will help us in our task. I will begin by putting a question to you.

YOUNG SOCRATES: What is it?

STRANGER: There is such a thing as learning the principles of music or the principles of any of the crafts, is there not? b

YOUNG SOCRATES: Yes.

STRANGER: But are we willing to admit that there exists an art of a higher order also concerned with this process of acquiring special skills? This second art is the one whose province is to decide whether or not we *ought* to learn any particular art.

YOUNG SOCRATES: Yes, we will attest the existence of an art of this higher order.

STRANGER: We must also agree then, that it is to be distinguished from all arts of the lower order.

YOUNG SOCRATES: Yes.

STRANGER: Ought there to be no priority at all as between these two orders of art? On the other hand, if there is to be priority, must the lower order control the higher or the higher guide and control the lower? c

YOUNG SOCRATES: The higher order should control the lower.

STRANGER: Your decision is then, that the art which decides whether we learn a skill or not ought to have control of the art which actually teaches us that skill.

YOUNG SOCRATES: Yes, certainly.

STRANGER: Then in the same way the art which decides whether persuasion should or should not be used ought to control the operation of the art of persuasion itself.

YOUNG SOCRATES: Undoubtedly.

STRANGER: Which is the art to which we must assign the task of persuading the general mass of the population by telling them suitable stories rather than by giving them formal instruction? d

YOUNG SOCRATES: I should say that it is obvious that this is the province to be assigned to rhetoric.

STRANGER: But to which art must we assign the function of

deciding whether in any particular situation we must proceed by persuasion, or by coercive measures against a group of men, or whether it is right to take no action at all?

YOUNG SOCRATES: The art which can teach us how to decide that will be the art which controls rhetoric and the art of public speaking.

STRANGER: This activity can be none other than the work of the statesman, I suggest.

YOUNG SOCRATES: Excellent! That is exactly what it is!

STRANGER: Oratory, it seems, has been quickly set apart from statesmanship. It is distinct from statesmanship, and yet its auxiliary.

YOUNG SOCRATES: Yes.

STRANGER: Now we must consider the working of another art.

YOUNG SOCRATES: Which is that?

STRANGER: Consider the taking of decisions on military strategy once war has been declared by the state on an enemy state. What shall we say about this? Is such decision governed by no art at all, or shall we say that there is most certainly an art involved here?

YOUNG SOCRATES: How could we dream of saying that no art is concerned? Surely generalship and the whole art of warfare operates precisely in this field.

STRANGER: But which is the art which possesses the knowledge and capacity to form a reasoned decision whether to fight or settle a dispute on friendly terms? Is this the work of generalship or does it belong to another art?

YOUNG SOCRATES: Consistency to our earlier argument requires us to say that it is a different one which is involved.

305 STRANGER: So if our views here are to be consistent with our earlier views on the place of rhetoric, we must decide that this second art controls generalship.

YOUNG SOCRATES: I agree.

STRANGER: What art can we attempt to enthrone as queen over that mighty and dreadful art, the art of war in all its range, except the art of truly royal rule?

YOUNG SOCRATES: None other.

STRANGER: Then we must not describe the art that generals practice as statesmanship, for it proves to be but a servant of statesmanship.

YOUNG SOCRATES: Apparently that is so.

b STRANGER: Now turn to another art and let us consider the activity of judges who make straight judgments.

YOUNG SOCRATES: By all means.

STRANGER: Does its province extend beyond the sphere of the mutual contractual obligations of the citizens? It has to act in this sphere by judging what is just or unjust according to the standards set up for it and embodied in the legal rules which it has received from

the kingly lawgiver. It shows its peculiar virtue by coming to an impartial decision on the conflicting claims it examines, by refusing to pervert the lawgiver's ordinance through yielding to bribery or threats or sentimental appeals, and by rising above all considerations of personal friendship or enmity.

YOUNG SOCRATES: Yes, that is so. You have given us, sir, a succinct account of the juryman's function and of his duty.

STRANGER: We find, then, that the power of the judges is a lesser thing than the power of the king. The judge guards the law and serves the king.

YOUNG SOCRATES: So it would seem.

STRANGER: If you will view the three arts we have spoken of as a group with a common character you will be bound to see that none of them has turned out to be itself the art of statesmanship. This is because it is not the province of the real kingly art to act for itself but rather to control the work of the arts which instruct us in the methods of action. The kingly art controls them according to its power to perceive the right occasions for undertaking and setting in motion the great enterprises of state. The other arts must do what they are told to do by the kingly art.

YOUNG SOCRATES: Precisely so.

STRANGER: The three arts we have just treated in detail may not control one another. They may not even control themselves, in fact. Each has its special field of action and each is entitled to the name which designates its proper sphere.

YOUNG SOCRATES: So it would seem.

STRANGER: There is an art which controls all these arts. It is concerned with the laws and with all that belongs to the life of the community. It weaves all into its unified fabric with perfect skill. It is a universal art and so we call it by a name of universal scope. That name is one which I believe to belong to this art and to this alone, the name of 'statesmanship.'

YOUNG SOCRATES: Yes, I agree absolutely.

STRANGER: Now that all the classes of arts active in the government of the state have been distinguished, shall we go on to scrutinize statesmanship and base our scrutiny of it on the art of weaving which provides our example for it?

YOUNG SOCRATES: Most certainly.

STRANGER: Then we must describe the kingly weaving process. What is it like? How is it done? What is the fabric that results from its labors?

YOUNG SOCRATES: These are just the questions we must answer.

STRANGER: The task of finding the answers is hard, but we cannot shirk it.

YOUNG SOCRATES: No, we must find them at all costs.

STRANGER: To say that 'one kind of goodness clashes with another kind of goodness' is to preach a doctrine which is an easy target for the disputatious who appeal to commonly accepted ideas.

b YOUNG SOCRATES: I do not follow you.

STRANGER: Then let me put the matter in this way. You regard courage as one part of virtue I suppose.

YOUNG SOCRATES: Surely.

STRANGER: Moderation differs from courage but is a specific kind of goodness just as courage is.

YOUNG SOCRATES: Yes.

STRANGER: We have now to be daring and make a startling statement about these two virtues.

YOUNG SOCRATES: What is it?

c STRANGER: This pair of virtues are in a certain sense enemies from of old, ranged in opposition to each other in many realms of life.

YOUNG SOCRATES: What do you mean?

STRANGER: The doctrine is not a familiar one by any means. I suppose that the usual statement is that all the several parts of goodness are in mutual accord.

YOUNG SOCRATES: Yes.

STRANGER: Then we must give our very special attention to the matter. Is the position quite so simple as that? Is there not, on the contrary, something inherent in them which keeps alive a family quarrel among them?

YOUNG SOCRATES: Certainly we must consider this. Please tell us how we are to do so.

STRANGER: We must consider instances drawn from all levels of existence of things which we regard as excellent and yet classify as mutually opposed.

YOUNG SOCRATES: Please explain still more clearly.

d STRANGER: Take swiftness and speed as an instance—swiftness of mind and body and rapid vibration of sound in a voice. Such swiftness may be seen in an actual living person or it may be represented in music or painting. Have you ever praised examples of such swiftness or listened with approval when one of your friends praised them?

YOUNG SOCRATES: Yes.

STRANGER: Do you happen to remember the way in which the approval is expressed in all these instances?

YOUNG SOCRATES: No, I can't say that I remember that in the least.

STRANGER: I wonder if I could really manage to put my thoughts on the subject into words and make them clear to you.

e YOUNG SOCRATES: I am sure you could.

STRANGER: You seem to think it a light task! However, let us

see the principle at work wherever those mutually opposite qualities are manifested. We admire speed and intensity and vivacity in many forms of action and under all kinds of circumstances. But whether the swiftness of mind or body or the vibrant power of the voice is being praised, we always find ourselves using one word to praise it—the word 'vigorous.'

YOUNG SOCRATES: How so?

STRANGER: 'That is alert and vigorous,' we say in the first instance, in another case, 'That is speedy and vigorous,' or, in yet another case, 'That is intense and vigorous.' In all the instances we use this epithet 'vigorous,' as applying in common to the people or things concerned, in order to express our approval of this quality in them.

YOUNG SOCRATES: True.

307

STRANGER: On the other hand, do we not quite often find ourselves approving gentleness and quietness when it is shown in many kinds of human behavior?

YOUNG SOCRATES: Yes, very decidedly.

STRANGER: Do we not describe this behavior by using an epithet which is the exact opposite of 'vigorous,' which was the term we applied to the other group of things?

YOUNG SOCRATES: How do you mean?

STRANGER: We constantly admire quietness and moderation, in processes of restrained thinking, in gentle deeds, in a smooth deep voice, in steady balance in movement, or in suitable restraint in artistic representation. Whenever we express such approval do we not use the expression 'controlled' to describe all these excellences rather than the word 'vigorous'?

YOUNG SOCRATES: Very true.

STRANGER: But when we find either of these kinds of behavior appearing out of its due time, we have different names for each of them and in that case we express our censure by attributing quite contrary qualities when we mention them.

YOUNG SOCRATES: How so?

STRANGER: If speed and swiftness are excessive and unseasonable and if the voice is harsh to the point of being violent we speak of all these as 'excessive' and even 'maniacal.' Unseasonable heaviness, slowness, or softness we call 'cowardly' or 'indolent.' One can generalize further. The very classes 'energy' and 'moderation' are ranged in mutual exclusiveness and in opposition to each other; it is not simply a case of conflict between these particular manifestations of them. They never meet in the activities of life without causing conflicts, and if we pursue the matter further, by studying people whose characters come to be dominated by either of them, we shall find inevitable conflict between them and people of the opposite type.

YOUNG SOCRATES: In what sphere do these conflicts occur?

STRANGER: In all the things we have just considered, of course,

- d but in many others too, I think. Men react to situations in one way or another according to the affinities of their own dispositions. They favor some forms of action as being akin to their own character, and they recoil from acts arising from opposite tendencies as being foreign to themselves. Thus men come into violent conflict with one another on many issues.

YOUNG SOCRATES: Yes, they seem to do so.

STRANGER: Considered as a conflict of temperaments, this is a mere trifle, but when the conflict arises over matters of high public importance it becomes the most inimical of all the plagues which can threaten the life of a community.

YOUNG SOCRATES: What kind of evils do you mean?

- e STRANGER: Of course I mean all which concern the organization of the community as a whole. Men who are notable for moderation are always ready to support 'peace and tranquillity.' They want to keep themselves to themselves and to mind their own business. They conduct all their dealings with their fellow citizens on this principle and are prone to take the same line in foreign policy and preserve peace at any price with foreign states. Because of their indulgence of this passion for peace at the wrong times, whenever they are able to carry their policy into effect they become unwarlike themselves without being aware of it and render their young men unwarlike as well. Thus they are at the mercy of the chance aggressor. He swoops down on them and the result is that within a very few years they and their children and all the community to which they belong wake up to find that their freedom is gone and that they are reduced to slavery.

- 308 YOUNG SOCRATES: You have described a hard and bitter experience.

STRANGER: What then is the history of the party whose bent is rather toward strong action? Do we not find them forever dragging their cities into war and bringing them up against powerful foes on all sides just because they love a military existence too fiercely? And what is the result? Either they destroy their country altogether, or else they bring it into subjection to its enemies just as surely as the peace party did.

- b YOUNG SOCRATES: Yes, that is true too.

STRANGER: Can we deny, then, that in these high matters the two types of character concerned are bound to become hostile to one another and so take up opposing party lines?

YOUNG SOCRATES: We are bound to admit it.

STRANGER: We have discovered, then, the answer to the question into which we set out to inquire when we began this conversation. We find that important parts of goodness are at variance with one another and that they set at variance the men in whom they predominate.

YOUNG SOCRATES : So it seems.

STRANGER : There is a further point to consider.

YOUNG SOCRATES : What is it?

STRANGER : Does any art which works by combining materials c deliberately choose to make any of its products, even the least important of them, out of a combination of good material with bad? Does not every art, whatever material it works in, reject bad material as far as possible and use what is good and serviceable? The materials may be alike or dissimilar, but surely it is desirable that they should be sound, so that the art may combine them to form one product and fashion them to a structure proper to their specific function.

YOUNG SOCRATES : Yes.

STRANGER : Surely then the true and genuine statesmanship d we are concerned with could never choose deliberately to construct the life of any community out of a combination of good characters with bad characters? Obviously it will first put the young children to the test in games. After this first test it will go on to entrust the young to competent educators trained to render this particular service, but it will retain direction and oversight of them all the time. This is exactly like weaving. The art of weaving hands over the materials it intends to use for the fabric to the carders and others concerned with preparatory processes, and yet it watches their work at every stage, retaining the direction and oversight itself and indicating to each auxiliary art such duties as it deems that each can usefully perform to make e ready the threads for its own task of fashioning the web.

YOUNG SOCRATES : Precisely.

STRANGER : This is the way I see the true statesman dealing with those who rear and educate children according to the educational laws. He keeps the power of direction to himself. The only form of training he will permit is the one by which the educator produces the type of character fitted for his own task of weaving the web of state. He bids the educator encourage the young in these activities and in no others. Some pupils cannot be taught to be courageous and moderate and to acquire the other virtuous tendencies, but are impelled to godlessness and to vaunting pride and injustice by the drive of an evil nature. These the king expels from the community. He puts them to death or banishes them or else he chastises them by the severest public disgrace.

YOUNG SOCRATES : So one usually hears it stated.

STRANGER : Furthermore, he makes those who prove incapable of rising above ignorance and groveling subservience slaves to the rest 309 of the community.

YOUNG SOCRATES : Quite rightly.

STRANGER : The statesman will then take over all the rest—all those who, under the training process, do in fact achieve sufficient nobility of character to stand up to the royal weaving process and yet to b

submit to it while it combines them all scientifically into a unity. Those in whom courage predominates will be treated by the statesman as having the firm warplike character as one might call it. The others will be used by him for what we may likewise call the supple, soft, wooflike strands of the web. He then sets about his task of combining and weaving together these two groups exhibiting their mutually opposed characters.

YOUNG SOCRATES: How does he do it?

- c STRANGER: He first unites that element in their souls which is supernatural by a divine bond, since this element in them is akin to the divine. After this supernatural link will come the natural bond, human ties to supplement the divine ones.

YOUNG SOCRATES: What do you mean by this? Once more I do not follow.

STRANGER: When there arises in the soul of men a right opinion concerning what is good, just, and profitable, and what is the opposite of these—an opinion based on absolute truth and settled as an unshakable conviction—I declare that such a conviction is a manifestation of the divine occurring in a race which is in truth of supernatural lineage.

YOUNG SOCRATES: It could not be more suitably described.

- d STRANGER: Do we realize that it is the true statesman, in that he is the good and true lawgiver, who alone is able—for who else should possess the power—to forge by the wondrous inspiration of the kingly art this bond of true conviction uniting the hearts of the young folk of whom we were speaking just now—the young folk who have profited as they should from their education?

YOUNG SOCRATES: That is certainly as one would expect.

STRANGER: The ruler who cannot weld that bond we will never honor with those glorious titles, 'statesman' and 'king.'

YOUNG SOCRATES: Most rightly not.

- e STRANGER: Well then, will it not work out like this? The soul full of vigor and courage will be made gentle by its grasp of this truth and there is nothing as well calculated as this to make it a willing member of a community based on justice. If such a soul refused this gift, it will sink in the scale and become savage like a beast.

YOUNG SOCRATES: True.

STRANGER: What of the moderate soul? Sharing this firm conviction of truth, will it not be truly moderate and prudent, or at any rate prudent enough, to meet its public duties? But if it refuses to share this conviction, it deserves to be called foolish and our reproach of it is entirely proper.

YOUNG SOCRATES: It is indeed.

STRANGER: Do we agree then that this interweaving, this linking together, can never be lasting and permanent if vicious men are joined with other vicious men or good men with vicious? Surely

no art would seriously try to forge such links where these faults of character exist?

YOUNG SOCRATES: How could it?

STRANGER: But in those of noble nature from their earliest 310 days whose nurture too has been all it should be, the laws can foster the growth of this common bond of conviction and only in these. This is the talisman appointed for them by the design of pure intelligence. This most godlike bond alone can unite the elements of goodness which are diverse in nature and would else be opposing in tendency.

YOUNG SOCRATES: Most true.

STRANGER: There remain the other bonds, the human ones. When one sets to work with the divine link already forged it is not very difficult to see what these are and then to set about the forging of them.

YOUNG SOCRATES: But what are these links and how can b they be forged?

STRANGER: They are forged by establishing intermarriage between the two types so that the children of the mixed marriages are so to speak shared between them and by restricting private arrangements for marrying off daughters. Most men make unsuitable matches from the point of view of the begetting of children of the best type of character.

YOUNG SOCRATES: What can you mean?

STRANGER: Would anyone think it worth while to censure in any respect the prevalent practice of pursuing wealth or influence when making such matches?

YOUNG SOCRATES: No, there is nothing very wrong in it.

STRANGER: But when we are specially concerned with the very people who make much of being 'well connected,' justice requires that we should be all the more outspoken if we find them acting un- c suitably.

YOUNG SOCRATES: That is reasonable.

STRANGER: They do not act on any sound or self-consistent principle. See how they pursue the immediate satisfaction of their desire by hailing with delight those who are like themselves and by disliking those who are different. Thus they assign far too great an importance to their own likes and dislikes.

YOUNG SOCRATES: In what way?

STRANGER: The moderate natures look for a partner like themselves, and so far as they can, they choose their wives from women of this quiet type. When they have daughters to bestow in marriage, once again they look for this type of character in the prospective husband. The courageous class does just the same thing and looks for others of d the same type. All this goes on, though both types should be doing exactly the opposite.

YOUNG SOCRATES: How can they, and why should they?

STRANGER: Because if a courageous character is reproduced for many generations without any admixture of the moderate type, the natural course of development is that at first it becomes superlatively powerful but in the end it breaks out into sheer fury and madness.

YOUNG SOCRATES: That is to be expected.

STRANGER: But the character which is too full of modest reticence and untinged by valor and audacity, if reproduced after its kind for many generations, becomes too dull to respond to the challenges of life and in the end becomes quite incapable of acting at all.

YOUNG SOCRATES: Yes, this is also the result one would expect.

STRANGER: I repeat what I was saying. There is no difficulty in forging these human bonds if the divine bond has been forged first. That bond is a conviction about values and standards shared by both types of character. There is one absorbing preoccupation for the kingly weaver as he makes the web of state. He must never permit the gentle characters to be separated from the brave ones; to avoid this he must make the fabric close and firm by working common convictions in the hearts of each type of citizen and making public honors and triumphs subserve this end, and finally, each must be involved with the other in the solemn pledges of matrimony. When he has woven his web smooth and 'close-woven,' as the phrase goes, out of men of these differing types, he must entrust the various offices of state to them to be shared in all cases between them.

YOUNG SOCRATES: How can he do this?

STRANGER: When a single magistrate happens to be needed, the statesman must choose a man possessing both characteristics and set him in authority. Where several magistrates are wanted he must bring together some representatives of each type to share the duties. Magistrates of the moderate type are exceedingly cautious, fair, and tenacious of precedent, but they lack pungency and the drive which makes for efficiency.

YOUNG SOCRATES: Yes, that certainly seems to be a fair summing up of the case.

STRANGER: The courageous type for their part have far less of the gifts of fairness and caution than their moderate brethren, but they have in a marked degree the drive that gets things done. A community can never function well either in the personal intercourse of its citizens or in its public activities unless both of these elements of character are present and active.

YOUNG SOCRATES: Of course that is so.

STRANGER: Now we have reached the appointed end of the weaving of the web of state. It is fashioned by the statesman's weaving; the strands run true, and these strands are the gentle and the brave. Here these strands are woven together into a unified character. For this unity is won where the kingly art draws the life of both types

into a true fellowship by mutual concord and by ties of friendship. It is the finest and best of all fabrics. It infolds all who dwell in the city, bond or free, in its firm contexture. Its kingly weaver maintains his control and oversight over it, and it lacks nothing that makes for happiness so far as happiness is obtainable in a human community.

SOCRATES: You have done what we requested of you, sir, and you have set beside your definition of the Sophist a picture drawn to perfection of the true king and statesman.

# PHILEBUS

---

*The characters in the dialogue are Socrates and a young man, Protarchus, who has come to see Socrates with some of his friends. One of these, Philebus, has been discussing with Socrates whether wisdom or pleasure is the greater good, Socrates maintaining the first and Philebus the second. When the dialogue opens the latter has stepped out of the argument and Protarchus has taken it on. Strictly speaking, however, there is no argument. Socrates does all the talking; Protarchus merely agrees or asks a question.*

*Little or nothing would be lost if Plato had dropped the dialogue form and made Socrates deliver a lecture, or left him entirely out and put the subject into an essay, for Socrates himself does not come through. There is never a touch of irony or gay self-depreciation or anything that recalls the vivid personality the earlier dialogues bring to us. Toward the end of his life Plato's writing changed. He has Socrates say to Philebus that he "must have weapons different from those of my previous arguments, though possibly some may be the same." But no idea of his amusing himself as he did in the Protagoras or the Symposium is now admitted, no laughing sketch of Very Important People, philosophers, mathematicians, statesmen, no pictures of delightful lads or of a grassy bank and a clear-flowing river. In the last dialogues there is an almost fierce concentration on the question to be solved. Plato is old and the end is too near to permit of digressions.*

*In the Philebus wisdom and pleasure are analyzed and contrasted again and again, always with the conclusion that the things of the mind are superior to all the enjoyments of the senses. Some pleasures are innocent and can have a part in the good life, but mind is a thousand times nearer and more akin to the excellent than any or all pleasures. Never, not even if every creature on earth proclaims that pleasure comes first, Socrates tells us, will we cease to seek the good—with the power and faculty which the soul has of loving the truth and of doing all things for the sake of the truth.*

**SOCRATES** : Now, Protarchus, consider what the two theories are— 11  
the one which you mean now to take over from Philebus, and the  
other which I and my friends maintain, and which you are to dispute  
if you don't find it to your liking. Would you like us to summarize b  
them both?

**PROTARCHUS** : Yes, do.

**SOCRATES** : Well, Philebus says that the good for all animate  
beings consists in enjoyment, pleasure, delight, and whatever can be  
classed as consonant therewith, whereas our contention is that the  
good is not that, but that thought, intelligence, memory, and things  
akin to these, right opinion and true reasoning, prove better and c  
more valuable than pleasure for all such beings as can participate in  
them, and that for all these, whether now living or yet to be born,  
nothing in the world is more profitable than so to participate. That, I  
think, Philebus, is the substance of our respective theories, is it not?

**PHILEBUS** : Yes, Socrates, that is perfectly correct.

**SOCRATES** : Well, Protarchus, will you take over this argument  
now offered to you?

**PROTARCHUS** : I must. Our fair friend Philebus has cried off.

**SOCRATES** : Then ought we to do everything we can to get at  
the truth of the matter?

**PROTARCHUS** : Indeed we ought. d

**SOCRATES** : Well then, I want us to reach agreement on one  
further point.

**PROTARCHUS** : What is that?

**SOCRATES** : What you and I are now to attempt is to put forward  
a certain state or condition of the soul which can render the life of  
every man a happy life. Am I right?

**PROTARCHUS** : Quite right.

**SOCRATES** : Then you people put forward the state of enjoy-  
ment, whereas we put forward that of intelligence?

**PROTARCHUS** : Yes.

**SOCRATES** : But suppose some other state better than these be  
found; then, if it were found more akin to pleasure, I imagine that e  
while we both of us yield to the life that securely possesses the fea-  
tures in question, the life of pleasure overcomes that of intelligence. 12

**PROTARCHUS** : Yes.

**SOCRATES** : But if it were found more akin to intelligence, then  
intelligence is victorious over pleasure, and it is pleasure that is  
worsted. What do you two say? Is that agreed?

**PROTARCHUS** : I think so, for my part.

**SOCRATES** : And you, Philebus? What do you say?

---

*From Plato's Examination of Pleasure: A Translation of the Philebus, with  
introduction and commentary by R. Hackforth (Cambridge and New York,  
1945).*

PHILEBUS: What I think, and shall continue to think, is that pleasure is victorious whatever happens. But you must decide for yourself, Protarchus.

PROTARCHUS: Now that you have handed over the argument to us, Philebus, you are no longer in a position to agree with Socrates or to disagree.

- b PHILEBUS: True, but no matter. I wash my hands of the affair, and hereby call the goddess herself to witness that I do so.

PROTARCHUS: You can have ourselves too as additional witnesses to one point, namely that you have said what you have. And now, Socrates, we must attempt—and Philebus may choose to help us or do as he likes—to come to a conclusion on what comes next.

SOCRATES: Yes, we must make the attempt, and plainly we shall begin with the goddess herself, who, according to our friend, is called Aphrodite, though her truest name, he tells us, is Pleasure.

PROTARCHUS: Excellent.

- c SOCRATES: For myself, Protarchus, in the matter of naming the gods I am always more fearful than you would think a man could be; nothing indeed makes me so afraid. So in this case I call Aphrodite by any name that is pleasing to her, but as for pleasure, I know that it is a thing of variety and, as I said, it is with pleasure that we must start, turning our thoughts to an examination of its nature. Of course the mere word 'pleasure' suggests a unity, but surely the forms it assumes are of all sorts and, in a sense, unlike each other. For example, we say that an immoral man feels pleasure, and that a moral man feels it too just in being moral; again, we say the same of a fool whose mind is a mass of foolish opinions and hopes; or once again an intelligent man, we say, is pleased just by being intelligent. Now if anyone asserts that these several kinds of pleasure are like each other, surely he will deserve to be thought foolish?

- d PROTARCHUS: They are unlike, because they arise from opposite sources, Socrates; nevertheless in themselves they are not opposites. How could pleasure be opposite to pleasure? Surely nothing in the world could be more completely similar than a thing to itself.

- e SOCRATES: As, of course, color to color. What a man you are! Certainly, in respect simply of its all being color there will be no difference, but for all that everyone recognizes that black is not merely different from white, but in fact its absolute opposite. Then again the same applies as between figure and figure; taken as a class all figure is one, but of its divisions some are absolutely opposite to each other. 13 while others have countless points of difference, and we can find many other instances of the same thing. So you mustn't put any faith in this argument that makes all sorts of absolutely opposite things into one thing. I am afraid we are going to find pleasures in some cases opposite to pleasures.

**PROTARCHUS:** Maybe, but what harm will that do to the argument of our side?

**SOCRATES:** This, that though the things in question are unlike you designate them by a name other than their own; that is what we shall reply. You say, I mean, that all pleasant things are good. Now of course nobody attempts to maintain the thesis that pleasant things are not pleasant, but though they are in some cases, indeed in most, bad and in others good—so those who think with me maintain—nevertheless you designate them all as good, although you would agree that they are unlike if anyone were to press you in argument. What then is the identical element present alike in the bad pleasures and in the good that makes you use the term 'good' in reference to them all?

**PROTARCHUS:** What do you mean, Socrates? Do you imagine that anyone will agree, after maintaining that pleasure is the good—that having done that he will endure to be told by you that certain pleasures are good, and certain others bad?

**SOCRATES:** Well, at all events you will allow that they are unlike, and in some cases opposite to, each other.

**PROTARCHUS:** Not in so far as they are just pleasures.

**SOCRATES:** We are drifting back to the old position, Protarchus; it seems that we are not going to allow even that one pleasure differs from another, all being alike. The examples given just now cause us no compunction; our beliefs and assertions will be those of the most commonplace persons, and most puerile in discussion.

**PROTARCHUS:** What exactly are you referring to?

**SOCRATES:** I mean this. Supposing that I were to retort by copying your method and were brazen enough to maintain that a pair of completely dissimilar things are completely similar; then I could say just what you say, with the result that we should be shown up as extraordinarily puerile, and our discussion would 'stranded be and perish.' Let us get it back again, then, into the water; then I dare say we shall be able to get fairly to grips and possibly come to agreement with each other.

**PROTARCHUS:** Tell me how, will you?

**SOCRATES:** You must be the questioner this time, Protarchus, and I will answer.

**PROTARCHUS:** What question precisely?

**SOCRATES:** When I was asked originally what the good is, I suggested intelligence, knowledge, mind, and so on, as being good. Now won't they be in the same case with your own suggestion?

**PROTARCHUS:** Will they? Why?

**SOCRATES:** Knowledge taken in its entirety will seem to be a plurality in which this knowledge is unlike that—even, it may be, this knowledge opposite to that, but, if it were, should I be a fit person to 14

carry on this present discussion if I took alarm at the point in question and maintained that knowledge is never unlike knowledge, thereby bringing our discussion to an end like a tale that is told, while we ourselves escaped from the wreck on a quibble?

PROTARCHUS: Well, of course, we've got to escape, but it mustn't be like that. However, I am attracted by having your thesis on all fours with my own. Let us take it that there are this plurality and unlikeness, or difference, in pleasure as in knowledge.

- b     SOCRATES: Well then, Protarchus, don't let us shut our eyes to the variety that attaches to your good as to mine. Let us have the varieties fairly before us and make a bold venture in the hope that perhaps they may, on inspection, reveal whether we ought to give the title of the good to pleasure or to intelligence or to some third thing. For I imagine we are not striving merely to secure a victory for my suggestions or for yours; rather we ought both of us to fight in support of the truth and the whole truth.

PROTARCHUS: We ought indeed.

- c     SOCRATES: Then let us come to an agreement that will give us a still surer basis for this assertion.

PROTARCHUS: To what assertion do you refer?

SOCRATES: The one that causes everybody trouble, whether they want it to, as some people sometimes do, or not, as others sometimes do not.

PROTARCHUS: I wish you would be plainer.

SOCRATES: I am referring to the assertion which came our way just now, and which is of a truly remarkable character. For really it is a remarkable thing to say that many are one, and one is many; a person who suggests either of these things may well encounter opposition.

- d     PROTARCHUS: Do you mean a person who says that I, Protarchus, though I am one human being am nevertheless many Protarchuses of opposite kinds, making me out to be both tall and short, both heavy and light, and so on and so forth, though I am really always the same person?

- e     SOCRATES: That isn't what I mean, Protarchus; the remarkable instances of one and many that you have mentioned are commonplace. Almost everyone agrees nowadays that there is no need to concern oneself with things like that, feeling that they are childish, obvious, and a great nuisance to argument; for that matter, the same applies to another class of instances, in which you discriminate a man's several limbs and members, get your opponent to admit that the individual in question is all those limbs and members, and then make him look ridiculous by showing that he has been compelled to make the incredible assertions that the one is many and indeed infinitely many, and that the many are only one.

- 15     PROTARCHUS: Then if these are commonplace instances, Soc-

rates, and everyone agrees about them, what are the other sort that you speak of involving this same assertion?

SOCRATES: The one that is taken, my dear boy, may be something that comes into being and perishes, as it was in the cases we have just been speaking of; with such cases, with a one like that, it is admitted, as we said a moment ago, that there is no need to thrash the matter out. But suppose you venture to take as your one such things as man, ox, the beautiful, the good; then you have the sort of unities that involve you in dispute if you give them your serious attention and subject them to division.

PROTARCHUS: What sort of dispute?

SOCRATES: First, whether we ought to believe in the real existence of monads of this sort; secondly, how we are to conceive that each of them, being always one and the same and subject neither to generation nor destruction, nevertheless is, to begin with, most assuredly this single unity and yet subsequently comes to be in the infinite number of things that come into being—an identical unity being thus found simultaneously in unity and in plurality. Is it torn in pieces, or does the whole of it, and this would seem the extreme of impossibility, get apart from itself? It is not your questions, Protarchus, but these questions, where the one and many are of another kind, that cause all manner of dissatisfaction if they are not properly settled, and satisfaction if they are.

PROTARCHUS: Then there, Socrates, is the first task for us to achieve here and now.

SOCRATES: That is what I should say.

PROTARCHUS: Well then, you may regard all of us here as agreeing with you herein. As for Philebus, perhaps we had better not put him any more questions at present, but let the sleeping dog lie.

SOCRATES: Very well. Now what is to be our first move in the great battle of all arms that rages on this issue? Here's a suggestion.

PROTARCHUS: Yes?

SOCRATES: We'll put the thing like this. We get this identity of the one and the many cropping up everywhere as the result of the sentences we utter; in every single sentence ever uttered, in the past and in the present, there it is. What we are dealing with is a problem that will assuredly never cease to exist; this is not its first appearance. Rather it is, in my view, something incidental to sentences themselves, never to pass, never to fade. As soon as a young man gets wind of it, he is as delighted as if he had discovered an intellectual gold mine; he is beside himself with delight, and loves to try every move in the game. First he rolls the stuff to one side and jumbles it into one; then he undoes it again and takes it to pieces, to the confusion first and foremost of himself, next of his neighbors at the moment, whether they be younger or older or of his own age. He has no mercy on his

- 16 father or mother or anyone else listening to him—a little more, and he would victimize even animals, as well as human beings in general, including foreigners, to whom of course he would never show mercy provided he could get hold of an interpreter.

PROTARCHUS: Let me call your attention, Socrates, to the fact that there are plenty of us here, all young people. Aren't you afraid that we shall join with Philebus in an assault on you, if you keep abusing us? Well, well, we realize what you mean. Perhaps there is some way, some device for getting this bothersome business to oblige us by removing itself from our discussion, and we might discover some  
b more attractive method of approach to the subject; if so, pray do your best about it, and we will keep you company—to the best of our power, that is, for we have a big subject in front of us, Socrates.

SOCRATES: Big indeed, my boys, if I may adopt Philebus' style of addressing you. Nevertheless there is not, and cannot be, a more attractive method than that to which I have always been devoted, though often in the past it has eluded me so that I was left desolate and helpless.

PROTARCHUS: Do tell us what it is.

- c SOCRATES: It is a method quite easy to indicate, but very far from easy to employ. It is indeed the instrument through which every discovery ever made in the sphere of the arts and sciences has been brought to light. Let me describe it for your consideration.

PROTARCHUS: Please do.

- SOCRATES: There is a gift of the gods—so at least it seems evident to me—which they let fall from their abode, and it was through Prometheus, or one like him, that it reached mankind, together with a fire exceeding bright. The men of old, who were better than ourselves and dwelt nearer the gods, passed on this gift in the form of a saying. All things, so it ran, that are ever said to be consist of a one and  
d many, and have in their nature a conjunction of limit and unlimitedness. This then being the ordering of things we ought, they said, whatever it be that we are dealing with, to assume a single form and search for it, for we shall find it there contained; then, if we have laid hold of that, we must go on from one form to look for two, if the case admits of there being two, otherwise for three or some other number of forms. And we must do the same again with each of the 'ones' thus reached, until we come to see not merely that the one that we started with is a one and an unlimited many, but also just how many it is. But we are not to apply the character of unlimitedness to our plurality until we have discerned the total number of forms the thing in ques-  
e tion has intermediate between its one and its unlimited number. It is only then, when we have done that, that we may let each one of all these intermediate forms pass away into the unlimited and cease bothering about them. There then, that is how the gods, as I told you, have committed to us the task of inquiry, of learning, and of teaching

one another, but your clever modern man, while making his one—or 17 his many, as the case may be—more quickly or more slowly than is proper, when he has got his one proceeds to his unlimited number straightaway, allowing the intermediates to escape him, whereas it is the recognition of those intermediates that makes all the difference between a philosophical and a contentious discussion.

PROTARCHUS: I think I understand, more or less, part of what you say, Socrates, but there are some points I want to get further cleared up.

SOCRATES: My meaning, Protarchus, is surely clear in the case of the alphabet; so take the letters of your school days as illustrating it. b

PROTARCHUS: How do you mean?

SOCRATES: The sound that proceeds through our mouths, yours and mine and everybody's, is one, isn't it, and also an unlimited variety?

PROTARCHUS: To be sure.

SOCRATES: And we have no real understanding if we stop short at knowing it either simply as an unlimited variety, or simply as one. What makes a man 'lettered' is knowing the number and the kinds of sounds.

PROTARCHUS: Very true.

SOCRATES: Then again, it is just the same sort of thing that makes a man musical.

PROTARCHUS: How so?

SOCRATES: If you take the art of music, don't you get, as before, a sound that is one? c

PROTARCHUS: Of course.

SOCRATES: And may we put down a distinction between low, high, and the level in pitch?

PROTARCHUS: That's right.

SOCRATES: But you wouldn't be a person of real understanding in music if you knew no more than these three terms, though indeed if you didn't know them you'd be of practically no account in musical matters.

PROTARCHUS: I should indeed.

SOCRATES: But when you have grasped, my dear friend, the number and nature of the intervals formed by high pitch and low pitch d in sound, and the notes that bound those intervals, and all the systems of notes that result from them, the systems which we have learned, conformably to the teaching of the men of old days who discerned them, to call 'scales,' and when, further, you have grasped certain corresponding features of the performer's bodily movements, features that must, so we are told, be numerically determined and be called 'figures' and 'measures,' bearing in mind all the time that this is always the right way to deal with the one-and-many problem—only

e then, when you have grasped all this, have you gained real understanding, and whatever be the 'one' that you have selected for investigating, that is the way to get insight about it. On the other hand, the unlimited variety that belongs to and is inherent in the particulars leaves one, in each particular case, an unlimited ignoramus, a person of no account, a veritable back number because he hasn't ever addressed himself to finding number in anything.

18 PROTARCHUS: Philebus, I think that what Socrates is now saying is excellent good sense.

PHILEBUS: What he's saying now, yes, so do I. But why, may I ask, is it addressed to us, and what is its purpose?

SOCRATES: A very proper question that, Protarchus, which Philebus has asked us.

PROTARCHUS: Indeed it is; so do you give him an answer.

SOCRATES: I will do so, but first a small additional point to what I have been saying. When you have got your 'one,' you remember, whatever it may be, you must not immediately turn your eyes to the unlimited, but to a number; now the same applies when it is the unlimited that you are compelled to start with. You must not immediately  
b turn your eyes to the one, but must discern this or that number embracing the multitude, whatever it may be; reaching the one must be the last step of all. We might take our letters again to illustrate what I mean now.

PROTARCHUS: How so?

SOCRATES: The unlimited variety of sound was once discerned by some god, or perhaps some godlike man; you know the story that there was some such person in Egypt called Theuth. He it was who originally discerned the existence, in that unlimited variety, of the vowels—not 'vowel' in the singular but 'vowels' in the plural—and  
c then of other things which, though they could not be called articulate sounds, yet were noises of a kind. There were a number of them too, not just one, and as a third class he discriminated what we now call the mutes. Having done that, he divided up the noiseless ones or mutes until he got each one by itself, and did the same thing with the vowels and the intermediate sounds; in the end he found a number of the things, and affixed to the whole collection, as to each single member of it, the name 'letter.' It was because he realized that none of us could ever get to know one of the collection all by itself, in isolation from all the rest, that he conceived of 'letter' as a kind of bond of unity,  
d uniting as it were all these sounds into one, and so he gave utterance to the expression 'art of letters,' implying that there was one art that dealt with the sounds.

PHILEBUS: Comparing the illustrations with one another, Protarchus, I understand the last one even more clearly than the others, but I still feel the same dissatisfaction about what has been said as I did a while ago.

**SOCRATES** You mean, Philebus, what is the relevance of it all?

**PHILEBUS** Yes, that is what Protarchus and I have been trying to find out for a long time.

**SOCRATES** Yet surely this that you tell me you have been long trying to find out is already right in front of you.

**PHILEBUS** How so?

**SOCRATES** Our discussion started, didn't it, with the question which of the two should be chosen, intelligence or pleasure?

**PHILEBUS** Certainly.

**SOCRATES** And of course we can say that each of them is one thing.

**PHILEBUS** Undoubtedly so.

**SOCRATES** Then what the foregoing discourse requires of us is just this, to show how each of them is both one and many, and how—mind you, we are not to take the unlimited variety straightaway—each possesses a certain number before the unlimited variety is reached.

**PROTARCHUS**: Philebus, it's no easy problem that Socrates has 19 plunged us into with his curiously roundabout methods. Which of us, do you think, should answer the present question? Perhaps it is a trifle ridiculous that I, after giving a full undertaking to replace you in the discussion, should require you to take the business on again because of my inability to answer the question now put, but it would be far more ridiculous, I think, if neither of us could do so. So what b shall we do, do you think? Socrates, I take it, is now raising the question of kinds of pleasure. Has it different kinds, or has it not, and if it has, how many are there and what are they like? And exactly the same question arises with regard to intelligence.

**SOCRATES**: Precisely, son of Callias. If we are incapable of doing this in respect of everything that is one, like, identical, and is also, as our foregoing account revealed, the opposite, then none of us will ever be any good at anything.

**PROTARCHUS**: That's about how it stands, Socrates. Still, c though the ideal for a sensible person is to know everything, I fancy it's not such a bad alternative to realize one's own position. Now why do I say that at this moment? I'll tell you. You made all of us a free offer of this discussion, in which you yourself, Socrates, were to share, for the purpose of deciding what is the best of all things possessed by man. When Philebus said pleasure, delight, enjoyment, and so forth, you rejoined that it was not those, but a different kind of things, which we have been glad frequently to remind ourselves of, as d we were right to do, so as to have the two kinds of things side by side in our memory while we subject them to examination. What you, I gather, maintain is that there is something which may properly be called a better good than pleasure at all events—namely, reason, knowledge, understanding, skill, and all that is akin to these things

—and that it is these, not pleasure and so on, that we ought to acquire. Now when these two views had been put forward, one maintained against the other, we threatened you by way of a joke that we would  
 e not let you go home until the discussion had been worked out and brought to a satisfactory termination, upon which you agreed to the demand, and allowed us to keep you for that purpose. What we tell you now is, as children say, that you can't take back a present once you have duly given it. So stop your present method of dealing with the questions before us.

SOCRATES: What method do you mean?

20 PROTARCHUS: That of plunging us into difficulties, and putting questions that it is impossible for us to answer satisfactorily here and now. We ought not to imagine that the object of our present endeavors is to get ourselves all into difficulties; no, if we are incapable of doing the job, it's for you to do it, since you gave your promise. And that being so, please make up your mind for yourself whether you must classify the kinds of pleasure and of knowledge or may pass them over—supposing, that is, that you are able and willing to follow another method and clear up our points of dispute in some other way.

b SOCRATES: Well, as you put it like that, there's no need for your poor victim to expect any further terrors; that 'if you are willing' banishes all my fears on every score. And what's more, I fancy some god has recalled to my mind something that will help us.

PROTARCHUS: Really? What is it?

SOOCRATES: I remember a theory that I heard long ago—I may have dreamed it—about pleasure and intelligence, to the effect that neither of them is the good, but that it is something else, different from either and better than both. Now, you know, if we could get a clear  
 c sight of this third thing now, then a victory for pleasure is out of the question; it couldn't continue to be identical with the good, could it?

PROTARCHUS: No.

SOOCRATES: No, and as to methods for classifying the kinds of pleasure, we shan't need them any longer, I imagine. However, we shall see better as we go on.

PROTARCHUS: That's good, and may your conclusion be so too.

SOOCRATES: Well, I should be glad if we could settle a few small points first.

PROTARCHUS: What are they?

d SOOCRATES: Must that which ranks as the good be perfect or imperfect?

PROTARCHUS: The most perfect of all things, Socrates, of course.

SOOCRATES: And must the good be adequate also?

PROTARCHUS: Yes indeed. In fact it must surpass everything in that respect.

SOOCRATES: And surely there is one more feature of it that

needs stressing, namely that every creature that recognizes it goes in pursuit of it, and makes quest of it, desiring to capture it and secure it for its very own, and caring for nothing save such things as involve this or that good in the course of their realization.

PROTARCHUS : I cannot but agree with that.

SOCRATES : Now if we're going to have a critical inspection of the life of pleasure and the life of intelligence, let us see them separately.

PROTARCHUS : How do you mean?

SOCRATES : Let us have no intelligence in the life of pleasure, and no pleasure in the life of intelligence. For if either of them is the good it must have no need of anything else to be added to it, and if we find that either has such a need, presumably it ceases to be possible for it to be our true good. 21

PROTARCHUS : Quite so.

SOCRATES : Then shall we take you as the subject on which to try our experiment?

PROTARCHUS : By all means.

SOCRATES : Then here's a question for you.

PROTARCHUS : Yes?

SOCRATES : Would you care, Protarchus, to live your whole life in the enjoyment of the greatest pleasures?

PROTARCHUS : Certainly.

SOCRATES : Then you wouldn't think you needed anything else, if you had that in the fullest measure?

PROTARCHUS : I'm sure I shouldn't.

SOCRATES : Now be careful, are you sure you wouldn't need anything in the way of thought, intelligence, calculating what is fitting, and so on?

PROTARCHUS : Why should I? If I had my enjoyment what more could I want?

SOCRATES : Then if you lived your whole life long like that you would be enjoying the greatest pleasures, would you?

PROTARCHUS : Of course.

SOCRATES : But if you were without reason, memory, knowledge, and true judgment, you would necessarily, I imagine, in the first place be unaware even whether you were, or were not, enjoying yourself, as you would be destitute of all intelligence.

PROTARCHUS : Necessarily.

SOCRATES : And surely again, if you had no memory you would necessarily, I imagine, not even remember that you had been enjoying yourself; of the pleasure you encountered at one moment not a vestige of memory would be left at the next. Once more, if you had no true judgment you couldn't judge that you were enjoying yourself when you were; if you were bereft of the power of calculation you couldn't even calculate that you would enjoy yourself later on. You c

would be living the life not of a human being but of some sort of sea lung or one of those creatures of the ocean whose bodies are incased in shells. Am I right, or can we imagine the situation to be otherwise?

d PROTARCHUS: We cannot.

SOCRATES: Then is a life like that one that we can desire?

PROTARCHUS: Your argument, Socrates, has reduced me for the moment to complete speechlessness.

SOCRATES: Well, don't let us lose heart yet; let us turn our attention to the life of reason, and have a look at that.

PROTARCHUS: What is the 'life of reason'?

SOCRATES: Imagine one of us choosing to live in the possession of intelligence, thought, knowledge, and a complete memory of everything, but without an atom of pleasure, or indeed of pain, in a condition of utter insensibility to such things.

PROTARCHUS: Neither of these lives seems desirable to me, Socrates, and unless I'm very much mistaken, nobody else will think them so either.

22 SOCRATES: And what about the combined life, Protarchus, the joint life consisting in a mixture of the two?

PROTARCHUS: You mean of pleasure, on the one hand, and reason with intelligence on the other?

SOCRATES: Yes, those are the sorts of ingredients I mean.

PROTARCHUS: Anybody, I imagine, will prefer this mixed life to either of those others. Indeed I will go further—everybody will.

SOCRATES: Then do we realize what result now emerges in our discussion?

b PROTARCHUS: Yes, to be sure. Three lives were offered us, and of the first two neither is sufficient or desirable for any human being or any animal.

SOCRATES: Then surely it is obvious by this time that, if you take these two lives, neither of them proves to contain the good. If it did, it would be sufficient and complete and desirable for all plants and animals that had the capacity of living their lives under such conditions from start to finish, and if any of us preferred something else, he would be mistaking the nature of what is truly desirable, and taking what he never meant to take, as the result of ignorance or some sort of unhappy necessity.

PROTARCHUS: It certainly looks as if that were so.

c SOCRATES: Well then, I think we've said all that needs saying to show that Philebus' goddess must not be conceived of as identical with the good.

PHILEBUS: No, and your 'reason' isn't the good either, Socrates; the case against it looks like being just the same.

SOCRATES: That may well apply to *my* reason, Philebus—not, however, to the true, divine reason which, I fancy, is in rather a differ-

ent position. Still I am not arguing at present for the claim of reason to win the first prize, as against the combined life, but certainly we ought to look and see what we are going to do about the second prize. For as to the cause that makes this combined life what it is, very likely one of us will say it is reason, and the other pleasure, so that while neither of the two would, on this showing, be the good, one of them might very possibly be that which makes the good what it is. This then is the point for which I will contend with Philebus even more warmly than before—that whatever it is which, by its inclusion in this mixed life, makes that life both desirable and good, it is something to which reason is nearer and more akin than pleasure. If that be so, pleasure cannot rightly be said to have any sort of claim either to the first prize or to the second; it misses even the third, if we may put any faith in my reasoning at this moment.

PROTARCHUS: Well yes, Socrates, it does look to me now as if pleasure had been given a knockout blow by your last arguments; in the fight for the victor's prize she has fallen. But I think we may say that it was prudent of reason not to put in for the first prize, as it would have meant a similar defeat. But if pleasure were to be disappointed of even second prize, she would undoubtedly find herself somewhat slighted by her own admirers; even they wouldn't think her as fair as they did.

SOCRATES: In that case hadn't we better leave her alone, and not cause her pain by subjecting her to the ordeal of a stringent examination?

PROTARCHUS: That's nonsense, Socrates.

SOCRATES: You mean it's impossible to talk of 'paining pleasure'?

PROTARCHUS: Not so much that, as that you don't realize that none of us will let you go until you have argued this matter out to the end.

SOCRATES: Phew! A considerable business still in front of us, Protarchus, and not exactly an easy one, I should say, to deal with now. It really looks as though I need fresh tactics. If my objective is to secure the second prize for reason I must have weapons different from those of my previous arguments, though possibly some may be the same. Is it to be, then?

PROTARCHUS: Yes, of course.

SOCRATES: Let us try to be very careful what starting point we take.

PROTARCHUS: Starting point?

SOCRATES: Of all that now exists in the universe let us make a twofold division, or rather, if you don't mind, a threefold.

PROTARCHUS: On what principle, may I ask?

SOCRATES: We might apply part of what we were saying a while ago.

PROTARCHUS: What part?

SOCRATES: We said, I fancy, that God had revealed two constituents of things, the unlimited and the limit.

PROTARCHUS: Certainly.

SOCRATES: Then let us take these as two of our classes, and, as  
d the third, something arising out of the mixture of them both, though I fear I'm a ridiculous sort of person with my sortings of things into classes and my enumerations.

PROTARCHUS: What are you making out, my good sir?

SOCRATES: It appears to me that I now need a fourth kind as well.

PROTARCHUS: Tell me what it is.

SOCRATES: Consider the cause of the mixing of these two things with each other, and put down that, please, as number four to be added to the other three.

PROTARCHUS: Are you sure you won't need a fifth to effect separation?

SOCRATES: Possibly, but not, I think, at the moment. But should  
e the need arise, I expect you will forgive me if I go chasing after a fifth.

PROTARCHUS: Yes, to be sure.

SOCRATES: Well then, let us confine our attention in the first place to three out of our four, and let us take two of these three, observing how each of them is split into many and torn apart, and then collecting each of them into one again, and so try to discern in what possible way each of them is in fact both a one and a many.

24 PROTARCHUS: Could you make it all a little clearer still? If so, I dare say I could follow you.

SOCRATES: Well, in putting forward 'two of the three' I mean just what I mentioned a while ago, the unlimited, and that which has limit. I will try to explain that in a sense the unlimited is a many; the limited may await our later attention.

PROTARCHUS: It shall.

SOCRATES: Your attention now, please. The matter which I request you to attend to is difficult and controversial, but I request you nonetheless. Take 'hotter' and 'colder' to begin with, and ask yourself whether you can ever observe any sort of limit attaching to them, or whether these kinds of thing have 'more' and 'less' actually resident in them, so that for the period of that residence there can be no ques-  
b tion of suffering any bounds to be set. Set a term, and it means the term of their own existence.

PROTARCHUS: That is perfectly true.

SOCRATES: And in point of fact 'more' and 'less' are always. we may assert, found in 'hotter' and 'colder.'

PROTARCHUS: To be sure.

SOCRATES: Our argument then demonstrates that this pair is

always without bounds, and being boundless means, I take it, that they must be absolutely unlimited.

PROTARCHUS: I feel that strongly, Socrates.

SOCRATES: Ah yes, a good answer, my dear Protarchus, which reminds me that this 'strongly' that you have just mentioned, and c 'slightly' too, have the same property as 'more' and 'less.' When they are present in a thing they never permit it to be of a definite quantity, but introduce into anything we do the character of being 'strongly' so-and-so as compared with 'mildly' so-and-so, or the other way round. They bring about a 'more' or a 'less,' and obliterate definite quantity. For, as we were saying just now, if they didn't obliterate definite quantity, but permitted definite and measured quantity to find a place where 'more and less' and 'strongly and slightly' reside, these lat- d ter would find themselves turned out of their own quarters. Once you give definite quantity to 'hotter' and 'colder' they cease to be; 'hotter' never stops where it is but is always going a point further, and the same applies to 'colder,' whereas definite quantity is something that has stopped going on and is fixed. It follows therefore from what I say that 'hotter,' and its opposite with it, must be unlimited.

PROTARCHUS: It certainly looks like it, Socrates, though, as you said, these matters are not easy to follow. Still, if things are said again and yet again, there is some prospect of the two parties to a e discussion being brought to a tolerable agreement.

SOCRATES: Quite right. That's what we must try to do. However, for the present, to avoid going over the whole long business, see whether we can accept what I shall say as a mark of the nature of the unlimited.

PROTARCHUS: What is it then?

SOCRATES: When we find things becoming 'more' or 'less' so-and-so, or admitting of terms like 'strongly,' 'slightly,' 'very,' and so forth, we ought to reckon them all as belonging to a single kind, namely 25 that of the unlimited; that will conform to our previous statement, which was, if you remember, that we ought to do our best to collect all such kinds as are torn and split apart, and stamp a single character on them.

PROTARCHUS: I remember.

SOCRATES: Then things that don't admit of these terms, but admit of all the opposite terms like 'equal' and 'equality' in the first place, and then 'double' and any term expressing a ratio of one number to another, or one unit of measurement to another, all these things b we may set apart and reckon—I think we may properly do so—as coming under the limit. What do you say to that?

PROTARCHUS: Excellent, Socrates.

SOCRATES: All right. Now what description are we going to give of number three, the mixture of these two?

PROTARCHUS: That, I think, will be for you to tell me.

SOCRATES: Or rather for a god to tell us, if one comes to listen to my prayers.

PROTARCHUS: Then offer your prayer, and look to see if he does.

SOCRATES: I am looking, and I fancy, Protarchus, that one of them has befriended us for some little time.

c PROTARCHUS: Really? What makes you believe that?

SOCRATES: I'll explain, of course. Please follow what I say.

PROTARCHUS: Pray go on.

SOCRATES: We spoke just now, I believe, of 'hotter' and 'colder,' did we not?

PROTARCHUS: Yes.

SOCRATES: Now add to these 'drier and wetter,' 'higher and lower,' 'quicker and slower,' 'greater and smaller,' and everything that we brought together a while ago as belonging to that kind of being which admits of 'the more' and 'the less.'

d PROTARCHUS: You mean the kind that is unlimited?

SOCRATES: Yes. And now, as the next step, combine with it the family of the limit.

PROTARCHUS: What is that?

SOCRATES: The one we omitted to collect just now; just as we collected the family of the unlimited together, so we ought to have collected that family which shows the character of limit, but we didn't.

e Still perhaps it will come to the same thing in spite of that, if in the process of collecting these two kinds the family we have spoken of is going to become plain to view.

PROTARCHUS: What family? Please explain.

SOCRATES: That of 'equal' and 'double,' and any other that puts an end to the conflict of opposites with one another, making them well proportioned and harmonious by the introduction of number.

PROTARCHUS: I see. By mixing in these you mean, apparently, that we find various products arising as they are respectively mixed.

SOCRATES: You take my meaning aright.

PROTARCHUS: Then continue.

SOCRATES: In cases of sickness does not the right association of these factors bring about health?

26 PROTARCHUS: Unquestionably.

SOCRATES: And in the case of high and low in pitch, or of swift and slow, which are unlimited, does not the introduction of these same elements at once produce limit and establish the whole art of music in full perfection?

PROTARCHUS: Admirably put.

SOCRATES: And then again, if they are introduced where there

is severe cold and stifling heat they remove all that is excessive and unlimited, and create measure and balance.

PROTARCHUS: Certainly.

SOCRATES: Then it is here that we find the source of fair weather and all other beautiful things, namely in a mixture of the unlimited with that which has limit?

PROTARCHUS: Of course.

SOCRATES: And indeed there are countless more things which I may omit to enumerate, such as beauty and strength along with health, besides a whole host of fair things found in our souls. For that goddess of ours, fair Philebus, must have observed the lawlessness and utter wickedness of mankind due to an absence of limit in men's pleasures and appetites, and therefore established among them a law and order that are marked by limit. You maintain that she thereby spoiled them. I assert that on the contrary she preserved them. What do you think about it, Protarchus?

PROTARCHUS: I am thoroughly satisfied, Socrates.

SOCRATES: Well, there are the three things I have spoken of, if you follow me.

PROTARCHUS: Yes, I think I see what you mean. You are asserting, I gather, two factors in things—first the unlimited, second the limit. But I can't altogether grasp what you mean by the third thing that you mention.

SOCRATES: The reason for that, my dear good sir, is that you are confused by the multiplicity of that third kind. And yet a plurality of forms was presented by the unlimited too, and in spite of that we stamped on them the distinguishing mark of 'the more' and its opposite, and so saw them as a unity.

PROTARCHUS: True.

SOCRATES: Then again we did not complain about the limit, either that it exhibited a plurality, or that it was not a real unity.

PROTARCHUS: No, there was no reason to do so.

SOCRATES: None whatever. And now as to the third kind, I am reckoning all this progeny of our two factors as a unity, and you may take me to mean a coming-into-being, resulting from those measures that are achieved with the aid of the limit.

PROTARCHUS: I understand.

SOCRATES: And now to continue. We said that besides the three kinds there is a fourth kind to be considered, and it is for our joint consideration. Now I expect you regard it as necessary that all things that come to be should come to be because of some cause.

PROTARCHUS: Yes, I do. Without that how could they come to be?

SOCRATES: Well, is there anything more than a verbal difference between a cause and a maker? Wouldn't it be proper to call that

which makes things and that which causes them one and the same?

27 PROTARCHUS: Quite proper.

SOCRATES: And further, shall we find that between that which is made and that which comes to be there is, once again, a mere verbal difference?

PROTARCHUS: Yes.

SOCRATES: And isn't it natural that that which makes should have the leading position, while that which is made follows in its train when coming into being?

PROTARCHUS: Certainly.

SOCRATES: Hence a cause and that which, as a condition of coming to be, is subservient to a cause are not the same but different?

PROTARCHUS: Of course.

SOCRATES: Now our three kinds gave us all things that come to be, and the constituents from which they come to be, did they not?

PROTARCHUS: Quite so.

SOCRATES: And this fourth kind that we are speaking of, which  
b fashions all these things, this cause, is pretty clearly different from them?

PROTARCHUS: Yes, different certainly.

SOCRATES: But now that the four kinds have been discriminated it will do no harm to enumerate them in order, so that we may remember each by itself.

PROTARCHUS: I agree.

SOCRATES: The first, then, I call the unlimited, the second the limit, and the third the being that has come to be by the mixture of these two; as to the fourth, I hope I shall not be at fault in calling it  
c the cause of the mixture and of the coming-to-be?

PROTARCHUS: No indeed.

SOCRATES: Come along now, what is our next point, and what was our purpose in getting where we have got? Wasn't it that we were trying to find out whether the second prize would go to pleasure or to intelligence? Was not that it?

PROTARCHUS: Yes, it was.

SOCRATES: Then shall we perhaps be in a better position, now that we have discriminated these kinds as we have, to achieve our decision about the first place and the second? For that of course was what we started to dispute about.

PROTARCHUS: Perhaps.

SOCRATES: Come on then. We laid it down, I think, that vic-  
d tory went to the mixed life of pleasure and intelligence. Was that so?

PROTARCHUS: It was.

SOCRATES: Then of course we can see what kind of life this is and to which kind it belongs?

PROTARCHUS: Undoubtedly.

SOCRATES: In fact we shall assert, I suppose, that it is a part

of our third kind. For that kind does not consist of just two things, but of all unlimited things bound fast by the limit; hence it is correct to make our victorious life a part of it.

PROTARCHUS: Yes, perfectly correct.

SOCRATES: Very well. And what about your pleasant unmixed life, Philebus? Under which of the kinds that we have mentioned should we be correct in saying that that falls? But before you express your view let us have your answer to a question I will put.

PHILEBUS: Please put it.

SOCRATES: Do pleasure and pain contain a limit, or are they among the things that admit of 'the more' and 'the less'?

PHILEBUS: They are, Socrates; they admit of 'the more.' Pleasure would not be supremely good, if it were not of its very nature unlimited both in quantity and degree.

SOCRATES: And similarly, Philebus, pain would not be supremely bad; hence we must look for something other than the character of being unlimited to explain how an element of good attaches to pleasures. Well, we may leave that topic, if you please, as one of unlimited speculation. But I will ask both of you, in which of our above-mentioned kinds may we now reckon intelligence, knowledge, and reason, without sinning against the light? I fancy a great deal turns on our present inquiry, according as we give the right answer or the wrong.

PHILEBUS: You are glorifying your own god, Socrates.

SOCRATES: And you your own goddess, my friend; still we ought to give an answer to our question.

PROTARCHUS: Socrates is right, you know, Philebus; we must do as he tells us.

PHILEBUS: Well, you have volunteered to speak on my behalf, have you not, Protarchus?

PROTARCHUS: Certainly, but at the moment I am rather at a loss, and beg you, Socrates, to state the case to us yourself; otherwise you may find us striking a false note and making mistakes about your candidate.

SOCRATES: I must do as you say, Protarchus; as a matter of fact it is no difficult task you impose on me. But did I really cause you alarm by my playful glorification, as Philebus has called it, when I asked you to which kind reason and knowledge belong?

PROTARCHUS: Very much so, Socrates.

SOCRATES: But really it's an easy question. For all the wise agree, thereby glorifying themselves in earnest, that in reason we have the king of heaven and earth. And I fancy they are right. But I should like us, if you don't mind, to make a fuller investigation of the kind in question itself.

PROTARCHUS: Proceed as you like, Socrates, and please feel no concern about being lengthy; we shan't quarrel with you.

SOCRATES: Thank you. Then let us begin, shall we, by putting the following question.

PROTARCHUS: What is it?

SOCRATES: Are we to say, Protarchus, that the sum of things or what we call this universe is controlled by a power that is irrational and blind, and by mere chance, or on the contrary to follow our predecessors in saying that it is governed by reason and a wondrous regulating intelligence?

e PROTARCHUS: A very different matter, my dear good Socrates. What you are suggesting now seems to me sheer blasphemy. To maintain that reason orders it all does justice to the spectacle of the ordered universe, of the sun, the moon, the stars, and the revolution of the whole heaven, and for myself I should never express nor conceive any contrary view on the matter.

SOCRATES: Then are you willing that we should assent to what earlier thinkers agree upon, that this is the truth? And ought we not merely to think fit to record the opinions of other people without  
29 any risk to ourselves, but to participate in the risk and take our share of censure when some clever person asserts that the world is not as we describe it, but devoid of order?

PROTARCHUS: I am certainly willing to do so.

SOCRATES: Come then, and direct your attention to the point that confronts us next.

PROTARCHUS: What is it, please?

SOCRATES: We can discern certain constituents of the corporeal nature of all animals, namely, fire, water, breath, and 'earth too like storm-tossed sailors we discern,' as the saying goes; these are all present in their composition.

b PROTARCHUS: Quite so, and storm-tossed in truth we are by difficulty in our present discussion.

SOCRATES: Well now, let me point out to you something that applies to each of these elements in our make-up.

PROTARCHUS: What?

SOCRATES: In each case it is only an inconsiderable fragment that is in us, and that too very far from being pure in quality or possessing a power befitting its real nature. Let me explain to you in one instance, which you must regard as applying to them all. There is fire, is there not, belonging to ourselves, and again fire in the universe?

PROTARCHUS: Of course.

c SOCRATES: And isn't the fire that belongs to ourselves small in quantity and weak and inconsiderable, whereas the fire in the universe is wonderful in respect of its mass, its beauty, and all the powers that belong to fire?

PROTARCHUS: What you say is perfectly true.

SOCRATES: And to continue, is the universal fire sustained and produced and increased by the fire that belongs to us, or is the op-

posite true, that my fire and yours and that of all other creatures owe all this to that other?

PROTARCHUS: That question doesn't even merit an answer.

SOCRATES: You are right; indeed I imagine you will say the same about the earth that we have here in creatures and the earth in the universe, and in fact about all the elements that I mentioned in my question a moment ago. Will your answer be as I suppose?

PROTARCHUS: Could anyone giving a different answer be deemed right in his head?

SOCRATES: I hardly think so, whoever he were. But come with me now to the next point. If we regard all these elements that I have been speaking of as a collective unity we give them, do we not, the name of body?

PROTARCHUS: Of course.

SOCRATES: Well, let me point out that the same holds good of what we call the ordered universe; on the same showing it will be a body, will it not, since it is composed of the same elements?

PROTARCHUS: You are quite right.

SOCRATES: Then, to put it generally, is the body that belongs to us sustained by this body of the universe, has it derived and obtained therefrom all that I referred to just now, or is the converse true?

PROTARCHUS: That is another question, Socrates, that doesn't deserve to be put.

SOCRATES: Well, does this one then? I wonder what you will say.

PROTARCHUS: Tell me what it is.

SOCRATES: Shall we not admit that the body belonging to us has a soul?

PROTARCHUS: Plainly we shall.

SOCRATES: And where, Protarchus my friend, could it have got it from, if the body of the universe, which has elements the same as our own though still fairer in every respect, were not in fact possessed of a soul?

PROTARCHUS: Plainly there can be no other source, Socrates.

SOCRATES: No, for surely we cannot suppose, Protarchus, that those four kinds, limit, unlimited, combined, and cause, which is present in all things as a fourth kind—we cannot suppose that this last-named, while on the one hand it furnishes the elements that belong to our bodies with soul, maintains our physique and cures a body when it has come to harm, and provides all sorts of arrangements and remedial measures, in virtue of all which we recognize it as wisdom in all her diverse applications, has nevertheless failed in the case of the elements of the universe—although they are these same elements that pervade the whole heaven on a great scale, fair moreover and untainted—failed, I say, there to contrive that which is fairest and most precious.

**PROTARCHUS** : No, to suppose that would be utterly unreasonable.

**SOCRATES** : Discarding that, then, we should do better to follow the other view and say, as we have said many times already, that there exist in the universe much 'unlimited' and abundance of 'limit,' and a presiding cause of no mean power, which orders and regulates the years, the seasons, and the months, and has every claim to the names of wisdom and reason.

**PROTARCHUS** : Every claim indeed.

**SOCRATES** : But wisdom and reason cannot come into existence without soul.

**PROTARCHUS** : They cannot.

d **SOCRATES** : Hence you will say that in the nature of Zeus a royal soul and a royal reason come to dwell by virtue of the power of the cause, while in other gods other perfections dwell, according to the names by which they are pleased to be called.

**PROTARCHUS** : Quite so.

**SOCRATES** : Now don't suppose, Protarchus, that we have spoken of this matter purposelessly; on the contrary it supports those ancient thinkers that we mentioned, who declared that reason always rules all things.

**PROTARCHUS** : Yes indeed it does.

e **SOCRATES** : And, what's more, it has provided an answer to my inquiry, to the effect that mind belongs to the family of what we called the cause of all things. By this time, I imagine, you grasp what our answer is.

**PROTARCHUS** : Yes, I grasp it completely, though indeed I hadn't realized you had given it.

**SOCRATES** : Well, Protarchus, playfulness is sometimes a relief from seriousness.

31 **PROTARCHUS** : You are right.

**SOCRATES** : I think, my friend, that we have now arrived at a fairly satisfactory demonstration of what kind reason belongs to, and what function it possesses.

**PROTARCHUS** : I am sure of it.

**SOCRATES** : And as for pleasure's kind, that we found some time ago.

**PROTARCHUS** : Exactly.

**SOCRATES** : Then let us have these points in mind about the pair of them, namely that reason was found akin to cause and belonging. we may say, to that kind, whereas pleasure is itself unlimited and belongs to the kind that does not and never will contain within itself and derived from itself either beginning, or middle, or end.

b **PROTARCHUS** : We shall bear that in mind, naturally.

**SOCRATES** : And now what we must do next is to see in what each of them is found, and what happens to bring it about that they

occur whenever they do. Take pleasure first; we took it first when examining its kind, and we will do the same in the present case. However, we shall never be able properly to examine pleasure apart from pain.

PROTARCHUS: Well, if that ought to be our line of approach, let us take it.

SOCRATES: Now I wonder if you share my view as regards their occurrence?

PROTARCHUS: What is your view?

SOCRATES: That both pleasure and pain are natural experiences that occur in the 'combined' class.

PROTARCHUS: Will you remind us, my dear Socrates, which of our previously mentioned classes you allude to by the term 'combined'?

SOCRATES: Really, Protarchus! Well, I'll do my best.

PROTARCHUS: Thank you.

SOCRATES: Let us understand 'combined' as the third of our four classes.

PROTARCHUS: The one you spoke of after the unlimited and the limit, and in which you put health and harmony, I think, also.

SOCRATES: Perfectly right. Now please give me your most careful attention.

PROTARCHUS: Continue, please.

SOCRATES: I maintain that, when we find a disturbance of the harmony in a living creature, that is the time at which its natural condition is disturbed and distress therewith occurs.

PROTARCHUS: That sounds very probable.

SOCRATES: Conversely, when the harmony is being restored and a return is made to its natural condition, we may say that pleasure occurs. I am permitting myself a very brief and rapid statement of a most important fact.

PROTARCHUS: I think you are right, Socrates, but let us try to express this same truth even more clearly.

SOCRATES: Well, I suppose commonplace, obvious instances will be the easiest to understand.

PROTARCHUS: Such as?

SOCRATES: Hunger, say, is a form of disturbance, of pain, isn't it?

PROTARCHUS: Yes.

SOCRATES: And eating, as the corresponding restoration, is a form of pleasure?

PROTARCHUS: Yes.

SOCRATES: Then again, thirst is a form of destruction, of pain, whereas the restoration effected by a liquid acting on that which has become dried up is a form of pleasure. Or once again, the unnatural disruption or dissolution brought about by stifling heat is a pain,

whereas the coolness which restores us to our natural state is a pleasure.

PROTARCHUS: Certainly.

SOCRATES: And the disturbance of a creature's natural state consequent on the freezing of its liquids by cold is a pain, while the reverse process, which restores that state when that which is frozen breaks up and returns to its former condition, is a pleasure. Now consider whether this statement is satisfactory, which puts the thing in a general formula. When the natural state of a living organism, constituted, as I have maintained, of the unlimited and the limit, is destroyed, that destruction is pain; conversely, when such organisms return to their own true nature, this reversion is invariably pleasure.

PROTARCHUS: So be it; I think that gives us at least an outline.

SOCRATES: Well then, may we take it that one kind of pleasure and pain consists in this pair of experiences?

PROTARCHUS: We may.

SOCRATES: Now take what the soul itself feels when expecting these experiences, the pleasant, confident feeling of anticipation that precedes a pleasure, and the apprehensive, distressful feeling that precedes a pain.

PROTARCHUS: Yes, of course, that is a different kind of pleasure and pain, which belongs to the soul itself, apart from the body, and arises through expectation.

SOCRATES: You grasp what I mean. I think, if I may put my own view, that by taking these two experiences pure and without any admixture of pain in the one case and pleasure in the other—I think that we shall get a clear answer to the question about pleasure, the question whether everything classed as pleasure is to be welcomed, or whether we ought to grant that to some other of those classes that we previously distinguished, while with pleasure and pain the case stands as with hot and cold and all things like that, namely that sometimes they are to be welcomed and sometimes are not—the reason being that they are not in themselves good, though some of them sometimes and somehow acquire the character of good things.

PROTARCHUS: You are quite right; that is the proper sort of way to thrash out the subject of our present quest.

SOCRATES: First, then, let us look together into the following point. If what we are maintaining is really true, if there is distress at the time of deterioration and pleasure at the time of restoration, then let us consider any such creatures as are experiencing neither deterioration nor restoration, and ask what their condition must be at the time in question. Please pay careful attention to what I ask, and tell me, is it not beyond all doubt that at such a time a creature feels neither pleasure nor pain in any degree whatever?

PROTARCHUS: Yes, it is beyond doubt.

SOCRATES: So this is a third sort of condition that we have, distinct alike from the condition of one who feels pleasure and from 33 that of one who feels pain?

PROTARCHUS: Certainly.

SOCRATES: Come along then, and do your best to bear it in mind; it will make a big difference as regards our judgment of pleasure whether you do bear it in mind or do not. Now there is a small point in this connection that we had better settle, if you please.

PROTARCHUS: Tell me what it is.

SOCRATES: You know that for one who has chosen the life of intelligence there is nothing to prevent him living in this fashion.

PROTARCHUS: A life, you mean, of neither pleasure nor pain? b

SOCRATES: Yes, for when we were comparing the lives just now we said, I believe, that for one who had chosen the life of reason and intelligence there must be no experiencing of any pleasure, great or small.

PROTARCHUS: That was certainly what we said.

SOCRATES: Then he at all events has it in his power to live after this fashion, and perhaps it is not a wild surmise that this is of all lives the most godlike.

PROTARCHUS: Certainly it is not to be supposed that the gods feel either pleasure or its opposite.

SOCRATES: No, of course it is not; it would be unseemly for either feeling to arise in them. But to that question we will give further consideration later on, if it should be relevant, and we will set c down the point to the score of intelligence in the competition for second prize, if we cannot do so in the competition for the first.

PROTARCHUS: Quite right.

SOCRATES: Now to continue, pleasure of this second kind, which belongs, as we said, to the soul alone, always involves memory.

PROTARCHUS: How so?

SOCRATES: I fancy that we must first take up the inquiry what memory is, or perhaps even, before memory, what sensation is, if we mean to get properly clear about these matters.

PROTARCHUS: What do you mean? d

SOCRATES: You must take it that among the experiences that are constantly affecting our bodies some are exhausted in the body before passing through to the soul, thus leaving the latter unaffected, while others penetrate both body and soul and set up a sort of disturbance which is both peculiar to each and common to both.

PROTARCHUS: Let us take it to be so.

SOCRATES: Now shall we be right if we say that those which do not penetrate both are undetected by the soul, while those which do penetrate both are not undetected thereby? e

PROTARCHUS: Of course.

SOCRATES: You must not suppose that by 'being undetected' I

mean that a process of forgetting is involved; forgetting is the passing away of memory, whereas in the case we are discussing memory has not as yet come to be, and it would be absurd to talk of the loss of what does not exist and never has existed, would it not?

PROTARCHUS: Of course.

SOCRATES: Then just alter the names.

PROTARCHUS: How?

- 34 SOCRATES: Instead of speaking, as you now do, of 'forgetting' what is undetected by the soul when it is unaffected by the disturbances of the body, you must substitute the term 'nonsensation.'

PROTARCHUS: I understand.

SOCRATES: And if you apply to that movement, which occurs when soul and body come together in a single affection and are moved both together, the term 'sensation,' you will be expressing yourself properly.

PROTARCHUS: Very true.

SOCRATES: Then we understand already what we mean by sensation.

PROTARCHUS: Certainly.

SOCRATES: Memory it would, in my opinion, be right to call the preservation of sensation.

- b PROTARCHUS: Quite so.

SOCRATES: Then by 'recollection' we mean, do we not, something different from memory?

PROTARCHUS: I suppose so.

SOCRATES: I will suggest the point of difference.

PROTARCHUS: What is it?

- c SOCRATES: When that which has been experienced by the soul in common with the body is recaptured, so far as may be, by and in the soul itself apart from the body, then we speak of 'recollecting' something. Is that not so?

PROTARCHUS: Undoubtedly.

SOCRATES: And further, when the soul that has lost the memory of a sensation or what it has learned resumes that memory within itself and goes over the old ground, we regularly speak of these processes as 'recollections.'

PROTARCHUS: I agree.

SOCRATES: And now I will tell you the point of all we have been saying.

PROTARCHUS: What is it?

SOCRATES: To get the clearest notion that we possibly can of the pleasure of soul apart from body, and of desire as well. I think that the procedure we are adopting promises to explain them both.

PROTARCHUS: Let us proceed then, Socrates.

- d SOCRATES: Our examination will necessarily, I think, involve saying a good deal about the origin of pleasure and the various shapes

it takes. And in point of fact it seems necessary to preface that with an understanding of the nature of desire and the seat of its occurrence.

PROTARCHUS: Then let us examine that; we shan't be the losers.

SOCRATES: Oh yes we shall, Protarchus, and I'll tell you of what; if we find what we are now looking for, we shall be the losers of the very perplexity that now besets us.

PROTARCHUS: A good retort! Then let us try to deal with our next point.

SOCRATES: Were we not saying just now that hunger, thirst, and so on and so forth, are desires of some sort?

PROTARCHUS: Unquestionably.

SOCRATES: What was the identical feature, then, that we had in view that makes us call such widely different things by one name?

PROTARCHUS: Upon my word, Socrates, I'm afraid it is not easy to answer that; still, answer it we must.

SOCRATES: Then let us go back to where we were and start afresh.

PROTARCHUS: Go back where?

SOCRATES: We talk commonly, do we not, of a man 'having a thirst'?

PROTARCHUS: Certainly.

SOCRATES: Meaning that he is becoming empty?

PROTARCHUS: Of course.

SOCRATES: Then is his thirst a desire?

PROTARCHUS: Yes, a desire for drink.

SOCRATES: For drink, or for a replenishment by drink?

35

PROTARCHUS: For a replenishment, I should think.

SOCRATES: When one becomes empty then, apparently he desires the opposite of what he is experiencing; being emptied, he longs to be filled.

PROTARCHUS: Obviously.

SOCRATES: Well now, is it possible that one who is emptied for the first time could apprehend replenishment whether by means of a perception or a memory, replenishment being something that he is neither experiencing in the present nor has ever experienced in the past?

PROTARCHUS: Of course not.

SOCRATES: Nevertheless we must admit that one who desires, b desires something.

PROTARCHUS: Yes, of course.

SOCRATES: Then it is not what he is experiencing that he desires, for he is thirsty, and thirst is an emptying, whereas what he desires is replenishment.

PROTARCHUS: Yes.

**SOCRATES:** Then there must be something in the make-up of a thirsty man which apprehends replenishment.

**PROTARCHUS:** Necessarily.

**SOCRATES:** And it cannot be the body, for that of course is being emptied.

**PROTARCHUS:** No.

**SOCRATES:** Hence the only alternative is that the soul apprehends the replenishment, and does so obviously through memory. For  
c through what else could it do so?

**PROTARCHUS:** It's hard to point to anything else.

**SOCRATES:** Then do we realize what has emerged from this discussion?

**PROTARCHUS:** What?

**SOCRATES:** It has told us that desire does not belong to the body.

**PROTARCHUS:** How so?

**SOCRATES:** Because it has revealed that the effort of every creature is opposed to that which its body is experiencing.

**PROTARCHUS:** Quite so.

**SOCRATES:** Moreover, the fact that impulse leads the creature in a direction opposite to its experience proves, I fancy, the existence of a memory of something opposite to that experience.

**PROTARCHUS:** Undoubtedly.

d **SOCRATES:** Our discussion then, inasmuch as it has proved that memory is what leads us on to the objects of our desire, has made it plain that it is to the soul that all impulse and desire, and indeed the determining principle of the whole creature, belong.

**PROTARCHUS:** You are perfectly right.

**SOCRATES:** Then there can be no gainsaying that our bodies cannot possibly feel thirst or hunger or anything of that sort?

**PROTARCHUS:** Very true.

**SOCRATES:** Now here is a further point that calls for our remark in this same connection. It seems to me that our argument aims at revealing a certain sort of life amidst these very things we have been speaking of.

3 **PROTARCHUS:** What things? What kind of life are you speaking of?

**SOCRATES:** The processes of replenishment and being emptied, in fact all processes concerned with the preservation or decay of living beings, and our alternating feelings of distress and pleasure, according as we pass from one of these processes to the other.

**PROTARCHUS:** Quite so.

**SOCRATES:** And what about such times as we are in an intermediate state?

**PROTARCHUS:** Intermediate?

**SOCRATES:** When we feel distress by reason of what we are ex-

periencing, and at the same time remember the pleasures whose occurrence would relieve our distress, though the replenishment in question is still in the future. How do we stand then? May we say that we are in an intermediate state, or may we not?

36

PROTARCHUS: By all means.

SOCRATES: And is the state as a whole one of distress or of pleasure?

PROTARCHUS: Pleasure! No, indeed, rather a state of twofold pain, pain of the body in respect of its actual experience, and pain of the soul in respect of an unsatisfied expectation.

SOCRATES: What makes you call it twofold pain, Protarchus? Is it not the case that sometimes the emptying process is associated with a distinct hope of coming replenishment, while at other times there is no such hope?

b

PROTARCHUS: Yes, of course.

SOCRATES: Then don't you think that when hoping for replenishment we feel pleasure through what we remember, though nevertheless we feel pain simultaneously because of the emptying process going on at the times in question?

PROTARCHUS: Yes, no doubt.

SOCRATES: At such a time then men, and animals too, feel both pain and pleasure at once.

PROTARCHUS: It looks like it.

SOCRATES: Now take the case when we are being emptied and have no hope of attaining replenishment. Is it not then that there occurs that twofold feeling of pain which you descried just now, though you thought the pain to be 'simply double,' drawing no distinctions?

c

PROTARCHUS: Very true, Socrates.

SOCRATES: Now let me suggest a use to which we may put our examination of these experiences.

PROTARCHUS: What is it?

SOCRATES: Shall we say that these pains and pleasures are true or false? Or that some are true, and others not?

PROTARCHUS: But how, Socrates, can pleasures or pains be false?

SOCRATES: How can fears be true or false, Protarchus? Or expectations, or opinions?

PROTARCHUS: For myself, I should be inclined to allow it in the case of opinions, but not in the other cases.

SOCRATES: What's that? It really looks as if we were raising a question of no small magnitude.

PROTARCHUS: That is true.

SOCRATES: But is it relevant to what has preceded? Philebus the younger should ask himself that question.

PROTARCHUS: That question perhaps, yes.

SOCRATES: Anyhow, we ought to have nothing to do with extraneous disquisitions, or with anything in the way of irrelevant discussion.

PROTARCHUS: You are right.

e SOCRATES: Now tell me this. I have felt curious ever so long about these same problems that we raised just now. What do you maintain? Are there not false, as opposed to true, pleasures?

PROTARCHUS: How could that be?

SOCRATES: Then, according to you, no one, be he dreaming or waking, or insane or deranged, ever thinks that he feels pleasure but does not really feel it, or thinks he feels pain, but does not really feel it.

PROTARCHUS: All of us, Socrates, regard all that as holding good.

37 SOCRATES: Well, are you right? Ought we not to consider whether what you say is right or wrong?

PROTARCHUS: I think we ought.

SOCRATES: Then let us state in even plainer terms what you were just now saying about pleasure and opinion. There is such a thing, I imagine, as holding an opinion?

PROTARCHUS: Yes.

SOCRATES: And as feeling a pleasure?

PROTARCHUS: Yes.

SOCRATES: Is there also that about which the opinion is held?

PROTARCHUS: Of course.

SOCRATES: And that in which the pleasure is felt?

PROTARCHUS: Undoubtedly.

SOCRATES: Then the subject holding an opinion, whether it be rightly or wrongly held, is always in the position of really holding an opinion?

b PROTARCHUS: Of course.

SOCRATES: And similarly the subject feeling pleasure, whether it be rightly or wrongly felt, will obviously be always in the position of really feeling a pleasure?

PROTARCHUS: Yes, that is so too.

SOCRATES: The question then must be faced, how it is that whereas we commonly find opinion both true and false, pleasure is true only, and that though in respect of reality holding an opinion and feeling a pleasure are on the same footing.

PROTARCHUS: Yes, that question must be faced.

c SOCRATES: Is the point this, do you think, that in the case of opinion falsehood and truth supervene, with the result that it becomes not merely an opinion but a certain sort of opinion, true or false, respectively?

PROTARCHUS: Yes.

SOCRATES: But then we have got a further question on which

we must come to an agreement, namely whether it is at all possible that, as against other things that have quality, pleasure and pain never have qualities but are simply what they are.

PROTARCHUS: Clearly so.

SOCRATES: But in point of fact it is easy to see that actually they do have qualities; we spoke a while ago of their being great, small, and intense, pains and pleasures alike.

PROTARCHUS: To be sure we did.

SOCRATES: And what's more, Protarchus, if badness is added to any of the things in question, shall we not say that it thereby becomes a bad opinion, and similarly a bad pleasure?

PROTARCHUS: Why, of course, Socrates.

SOCRATES: Once again, if rightness or its opposite is added to any of them, presumably we shall say that an opinion, if it has rightness, is right, and the same with a pleasure?

PROTARCHUS: Necessarily.

SOCRATES: But if the content of an opinion that is held be mistaken, then must we not agree that the opinion, inasmuch as it is making a mistake, is not right, not opining rightly?

PROTARCHUS: No, it cannot be.

SOCRATES: Well then, if we observe a pain or a pleasure making a mistake in regard to the object arousing the respective feelings, shall we attach to it any term of commendation such as 'right' or 'sound'?

PROTARCHUS: Impossible, if the pleasure is ex hypothesi mistaken.

SOCRATES: Now look here, I fancy we often experience pleasure in association with an opinion that is not right, but false.

PROTARCHUS: Of course, and then, that being so, Socrates, we call the opinion false, but the pleasure itself nobody could ever term false.

SOCRATES: Well, Protarchus, you are putting up a gallant defense of the cause of pleasure by what you say now.

PROTARCHUS: Oh no, I am merely repeating what I have heard.

SOCRATES: But do we find no difference, my friend, between a pleasure associated with right opinion and knowledge and one associated, as is constantly happening to every one of us, with false opinion and ignorance?

PROTARCHUS: I should say they differ considerably.

SOCRATES: Then let us proceed to contemplate the difference.

PROTARCHUS: Pray take the road on which you descry it.

SOCRATES: Very well, I will take you along this one.

PROTARCHUS: Yes?

SOCRATES: Opinion, we agree, is sometimes false, sometimes true?

PROTARCHUS: That is so.

SOCRATES: And, as we said just now, pleasure and pain frequently accompany these true and false opinions.

PROTARCHUS: Quite so.

SOCRATES: Now is it not always memory and perception that give rise to opinion and to the attempts we make to reach a judgment?

c PROTARCHUS: Certainly.

SOCRATES: Let me suggest what we must believe to occur in this connection.

PROTARCHUS: Well?

SOCRATES: If a man sees objects that come into his view from a distance and indistinctly, would you agree that he commonly wants to decide about what he sees?

PROTARCHUS: I should.

SOCRATES: Then the next step will be that he puts a question to himself.

PROTARCHUS: What question?

d SOCRATES: 'What is that object which catches my eye there beside the rock under a tree?' Don't you think that is what he would say to himself, if he had caught sight of some appearance of the sort?

PROTARCHUS: Of course.

SOCRATES: And then he would answer his own question and say, if he got it right, 'It is a man.'

PROTARCHUS: Certainly.

SOCRATES: Or again, if he went astray and thought what he was looking at was something made by shepherds, he might very likely call it an image.

PROTARCHUS: He might quite well.

e SOCRATES: And if he had someone with him, he would put what he said to himself into actual speech addressed to his companion, audibly uttering those same thoughts, so that what before we called opinion has now become assertion.

PROTARCHUS: Of course.

SOCRATES: Whereas if he is alone he continues thinking the same thing by himself, going on his way maybe for a considerable time with the thought in his mind.

PROTARCHUS: Undoubtedly.

SOCRATES: Well now, I wonder whether you share my view on these matters.

PROTARCHUS: What is it?

SOCRATES: It seems to me that at such times our soul is like a book.

PROTARCHUS: How so?

39 SOCRATES: It appears to me that the conjunction of memory with sensations, together with the feelings consequent upon memory

and sensation, may be said as it were to write words in our souls. And when this experience writes what is true, the result is that true opinion and true assertions spring up in us, while when the internal scribe that I have suggested writes what is false we get the opposite sort of opinions and assertions.

PROTARCHUS: That certainly seems to me right, and I approve of the way you put it.

SOCRATES: Then please give your approval to the presence of a second artist in our souls at such a time.

PROTARCHUS: Who is that?

SOCRATES: A painter, who comes after the writer and paints in the soul pictures of these assertions that we make.

PROTARCHUS: How do we make out that he in his turn acts, and when?

SOCRATES: When we have got those opinions and assertions clear of the act of sight, or other sense, and as it were see in ourselves pictures or images of what we previously opined or asserted. That does happen with us, doesn't it?

PROTARCHUS: Indeed it does.

SOCRATES: Then are the pictures of true opinions and assertions true, and the pictures of false ones false?

PROTARCHUS: Unquestionably.

SOCRATES: Well, if we are right so far, here is one more point in this connection for us to consider.

PROTARCHUS: What is that?

SOCRATES: Does all this necessarily befall us in respect of the present and the past, but not in respect of the future?

PROTARCHUS: On the contrary, it applies equally to them all.

SOCRATES: We said previously, did we not, that pleasures and pains felt in the soul alone might precede those that come through the body? That must mean that we have anticipatory pleasures and anticipatory pains in regard to the future.

PROTARCHUS: Very true.

SOCRATES: Now do those writings and paintings, which a while ago we assumed to occur within ourselves, apply to past and present only, and not to the future?

PROTARCHUS: Indeed they do.

SOCRATES: When you say "indeed they do," do you mean that the last sort are all expectations concerned with what is to come, and that we are full of expectations all our life long?

PROTARCHUS: Undoubtedly.

SOCRATES: Well now, here is a further question for you to answer.

PROTARCHUS: Yes?

SOCRATES: Isn't a man who is just, pious, and in every way good dear to the gods?

PROTARCHUS: To be sure.

SOCRATES: And may not the opposite be said of one who is unjust and altogether bad?

40 PROTARCHUS: Of course.

SOCRATES: But every human being, as we said just now, is full of expectations?

PROTARCHUS: Certainly.

SOCRATES: But what we call expectations are in fact assertions that each of us makes to himself.

PROTARCHUS: Yes.

SOCRATES: To which must be added the representations produced by our painter. People often have visions of securing great quantities of gold, and pleasure upon pleasure in consequence; indeed they behold themselves in the picture immensely delighted with themselves.

b PROTARCHUS: I know.

SOCRATES: Now may we say that what is written in the minds of the good is as a rule a true communication, since they are dear to the gods, while with the evil the opposite as a rule is the case? What do you think?

PROTARCHUS: Certainly we should say so.

c SOCRATES: So the evil, no less than the good, have pleasures painted in their minds, but these pleasures, I imagine, are false.

PROTARCHUS: Of course.

SOCRATES: Bad men, then, delight for the most part in false pleasures, good men in true ones.

PROTARCHUS: Inevitably so.

SOCRATES: Hence we reach the result that false pleasures do exist in men's souls, being really a rather ridiculous imitation of true pleasures, and the same applies to pains.

PROTARCHUS: Yes, they do exist.

SOCRATES: Now we found that, though a person holding any opinion at all must hold it in fact, yet it might sometimes have reference to what was not a fact, either of the present, the past, or the future.

PROTARCHUS: Quite so.

d SOCRATES: And there, I think, lay the source of our false opinion, of our holding opinions falsely. Did it not?

PROTARCHUS: Yes.

SOCRATES: Well then, should we not ascribe a corresponding condition, as regards these references, to pains and pleasures?

PROTARCHUS: How do you mean?

SOCRATES: I mean that though anyone who feels pleasure at all, no matter how groundless it be, always really feels that pleasure, yet sometimes it has no reference to any present or past fact, while in many cases, perhaps in most, it has reference to what never will be a fact.

PROTARCHUS: That too must be so, Socrates.

SOCRATES: Now will not the same principle hold good in respect of fear, anger, and all such feelings, namely that all of them are sometimes false? e

PROTARCHUS: Assuredly.

SOCRATES: Tell me now, can we distinguish bad opinions from good in any other respect than their falsity?

PROTARCHUS: No.

SOCRATES: Then neither can we detect any other sense in which pleasures are bad, save in that they are false. 41

PROTARCHUS: No, Socrates, what you say is just the opposite of the truth. Surely it is not at all because they are false that we set down pains and pleasures as bad, but because they involve some serious and considerable badness of another sort.

SOCRATES: Well, these bad pleasures whose character is due to badness we will speak of a little later on, if we still think fit to do so. We must, however, discuss those false pleasures—and they are numerous and frequent—which exist or come to exist in us in another way. Maybe we shall find this useful for the decisions we have to make. b

PROTARCHUS: Yes, of course, if there are any.

SOCRATES: Well, Protarchus, as I see it, there are. But of course we must not allow this belief to go unexamined until we have got it established.

PROTARCHUS: Very good.

SOCRATES: Then let us take up our positions for this next round in the argument.

PROTARCHUS: On we go.

SOCRATES: Well now, we said a while back, if our memory is correct, that when we have within us what we call 'desires,' the body stands aloof from the soul and parts company with it in respect of its affections. c

PROTARCHUS: Our memory is correct; we did say so.

SOCRATES: It was the soul, was it not, that desired a condition opposite to that of the body, and it was the body that caused our distress, or our pleasure, because of the way it was affected?

PROTARCHUS: It was.

SOCRATES: Then draw the inference in regard to what is happening.

PROTARCHUS: Tell me.

SOCRATES: Well, what happens at such a time is this. Pains and pleasures exist side by side; opposite as they are, we experience them simultaneously, one beside the other, as appeared just now. d

PROTARCHUS: It appears so, certainly.

SOCRATES: There is a further point that we have mentioned and agreed upon already as established, is there not?

PROTARCHUS: What is that?

SOCRATES: That pain and pleasure, both of them, admit of the more and the less, that is they belong to what is unlimited.

PROTARCHUS: We did say so. What then?

SOCRATES: What means have we of getting a right decision about these things?

e PROTARCHUS: Decision? In what sense do you mean?

SOCRATES: I mean that our resolve to get a decision in these matters regularly takes some such form as seeking to determine the comparative magnitude, or degree, or intensity, of a pain and a pleasure, or of one pain or pleasure as against another.

PROTARCHUS: Yes, those are the kind of questions; that is what we want to decide.

42 SOCRATES: Well now, if it is true that, in the case of vision, to observe magnitudes from a distance and from close at hand obscures the truth and engenders false judgment, does not the same hold good in the case of pains and pleasures?

PROTARCHUS: Yes, Socrates, and to a much greater degree.

SOCRATES: So here we have the reverse of what we spoke of a little while ago.

PROTARCHUS: Have we? How?

b SOCRATES: Just now it was the falsity or truth of those opinions that infected the pains and pleasures with what they had caught themselves.

PROTARCHUS: Very true.

SOCRATES: But now the reason why pleasures appear greater and more intense when compared with something painful, or again, in the reverse case, pains appear so by being compared with pleasures, is found in the pleasures and pains per se, according as we pass from a distant to a close observation of them, and set them beside one another.

PROTARCHUS: The reason for what you describe must necessarily be as you say.

c SOCRATES: Then if you subtract from each that unreal and only apparent excess which makes them look respectively greater or smaller than they really are, you will acknowledge the subtracted portion to be an incorrect appearance, and you will refrain from asserting that such pleasure or pain as is felt in respect of that portion is correct and true.

PROTARCHUS: Yes indeed.

SOCRATES: And next, if we take the road ahead of us, we shall discern pleasures and pains in living beings that appear false and are false, even more so than this last kind.

PROTARCHUS: What do you mean? What are they?

d SOCRATES: It has often been said, I think, that when the natural state of an organism is impaired by processes of combination and separation, of filling and emptying, and by certain kinds of growth

and decay, the result is pain, distress, suffering—in fact everything that we denote by names like these.

PROTARCHUS: Yes, that has often been said.

SOCRATES: And when the organisms are being established in their natural state, we satisfied ourselves that that establishment is a pleasure.

PROTARCHUS: And rightly so.

SOCRATES: But suppose none of these processes is going on in our body.

PROTARCHUS: When could that be so, Socrates?

SOCRATES: There, Protarchus, you have put a question that is not to the point.

PROTARCHUS: Why not?

SOCRATES: Because you don't prevent me from repeating my own inquiry.

PROTARCHUS: What inquiry?

SOCRATES: What I shall say is, supposing, Protarchus, that nothing of the kind were to be going on, what inference should we have to draw?

PROTARCHUS: You mean, if the body is not experiencing movement in either direction?

SOCRATES: Yes.

PROTARCHUS: Then one thing at all events is plain, Socrates; in such a case there can be no pleasure and no pain.

SOCRATES: You are perfectly right. But I expect you are going to tell me that we are assured by the wise that one of these processes must always be going on in us, since all things are always flowing up and down.

PROTARCHUS: Yes, they do assert that, and it is thought to carry some weight.

SOCRATES: Naturally. They are weighty persons. But as a matter of fact I should like to dodge this argument that is advancing upon us. Here is my intended line of retreat, on which I hope you will accompany me.

PROTARCHUS: Please explain the direction.

SOCRATES: Let us reply to them 'so be it,' but here is a question for yourself. Is a living being always conscious of everything that happens to it? Do we invariably notice that we are growing, and so on, or is that quite the reverse of the truth?

PROTARCHUS: Surely it is absolutely the reverse; almost all such processes pass unnoticed by us.

SOCRATES: Then we are not right in what was said just now, to the effect that changes up and down produce pains and pleasures.

PROTARCHUS: Of course not.

SOCRATES: I will suggest a better formula, and one less open to attack.

PROTARCHUS: Yes?

SOCRATES: Great changes cause us pains and pleasures, but moderate and small ones cause no pain or pleasure whatsoever.

PROTARCHUS: You are nearer the truth than you were, Socrates.

SOCRATES: Then, if that be so, here we are back again at the life we mentioned a while ago.

PROTARCHUS: What life?

SOCRATES: The one we described as painless, and devoid of joys.

PROTARCHUS: Very true.

SOCRATES: In view of this, let us recognize three sorts of life, d the pleasant, the painful, and that which is neither one nor the other. Or how do you see the matter?

PROTARCHUS: I see it precisely as you put it; the lives are three in number.

SOCRATES: Then to be without pain will not be the same as to feel pleasure?

PROTARCHUS: Certainly not.

SOCRATES: So when you hear someone say that the pleasantest of all things is to live one's whole life long without pain, what do you take his meaning to be?

PROTARCHUS: He appears to me to mean that being without pain is pleasant.

SOCRATES: Well now, let us take any three things you like, and, e to give them more attractive names, call the first gold, the second silver, and the third neither gold nor silver.

PROTARCHUS: I accept that.

SOCRATES: Now can we possibly identify the third with either of the others, with gold or silver?

PROTARCHUS: No, of course not.

SOCRATES: Similarly then, it cannot be right either to hold the intermediate life to be pleasant or painful, if it is a question of holding an opinion, or, to speak of it so, if it is a question of speaking, unless indeed we desert right reasoning.

PROTARCHUS: It cannot.

44 SOCRATES: Still, my friend, we do observe people saying and thinking so.

PROTARCHUS: We do, certainly.

SOCRATES: Do they then think that at such times as they are not feeling pain they are feeling pleasure?

PROTARCHUS: They say so at all events.

SOCRATES: Then they do think so; otherwise they would not say so, I imagine.

PROTARCHUS: Maybe.

SOCRATES: Nevertheless their opinion about their feeling of

pleasure is false, if not being pained and feeling pleasure are really two different things.

PROTARCHUS: And different they have certainly proved.

SOCRATES: Then are we to take the line that these things are three in number, as we said just now, or that they are only two, pain being an evil for mankind, and release from pain being called pleasant b as in itself a good?

PROTARCHUS: How can we put that question to ourselves, Socrates, at this stage? I don't understand.

SOCRATES: The fact is, Protarchus, you don't understand what enemies Philebus here has.

PROTARCHUS: What enemies do you mean?

SOCRATES: People with a great reputation for natural science, who maintain that pleasures do not exist at all.

PROTARCHUS: Oh, how so?

SOCRATES: What Philebus and his friends call pleasures are, c according to them, never anything but escapes from pains.

PROTARCHUS: And do you recommend that we should believe them, Socrates, or what do you think?

SOCRATES: Not believe them, but avail ourselves of their gift of divination, which rests not on science but on the dourness, if I may call it so, of a nature far from ignoble. They are men who have come to hate pleasure bitterly, to regard it as thoroughly unsound; its very attractiveness they regard, not as real pleasure, but as trickery. Well, d you may avail yourself of their doctrine on this point, having regard at the same time to their other dour characteristics, and next you shall learn what pleasures I regard as true, so that when we have examined the nature of pleasure from both points of view we may have a comparative basis for our decision.

PROTARCHUS: Very good.

SOCRATES: Then let us follow up the track of these allies of ours, and see where their dour footsteps lead us. I fancy that their basic position is stated something like this. If we want to see the true nature of any form, whatever it may be, for example that of hardness, should we understand it best by fixing our attention on the hardest e things there are or on those that have a minimum of hardness? Now, Protarchus, you must answer our dour friends just as you would answer me.

PROTARCHUS: Quite so, and I tell them that our attention must be fixed on what has the maximum amount.

SOCRATES: Then if the form or kind whose true nature we wanted to see were pleasure, we should have to fix our attention not on minimum pleasures but on such as are said to be the highest and 45 intensest.

PROTARCHUS: Everyone would agree with what you say now.

SOCRATES: Now are not our obvious pleasures, which are in

fact by common admission the greatest, the pleasures of the body?

PROTARCHUS: Of course.

SOCRATES: And are they, or do they become, greater with those who are suffering from sickness or with healthy people? Now let us be careful not to take a false step by answering hastily. I dare say we shall be inclined to say, with healthy people.

PROTARCHUS: Probably.

SOCRATES: But tell me, are not the outstanding pleasures those which are preceded by the greatest desires?

PROTARCHUS: That is true.

SOCRATES: And isn't it the man suffering from a fever or some similar complaint who feels thirst and cold and all the common bodily troubles more than others, who is more than others acquainted with want, and who when the want comes to be satisfied has greater pleasures? Shall we not admit that to be true?

PROTARCHUS: Yes, it certainly seems true, now you put it so.

SOCRATES: Well then, should we be plainly right if we said that anyone wishing to see the greatest pleasures should direct his attention not to health, but to sickness? You must be careful not to take me as intending to ask you whether the extremely sick have *more* pleasures than the healthy; you must realize that it is the magnitude of pleasure that I am concerned with. I am asking where instances of the extreme in point of magnitude are to be found. We must, as we said, understand the true nature of pleasure, and what account they give who maintain that there is no such thing at all.

PROTARCHUS: I follow your meaning pretty well.

SOCRATES: I dare say, Protarchus, you will do just as well as my guide. Tell me this. In a profligate existence do you find greater pleasures—not *more* pleasures, mind you, but pleasures that stand out as extreme or in point of degree—than in a life of temperance? Give your mind to it, and tell me.

PROTARCHUS: I understand your point, and I find a wide difference. The temperate man, surely, is regularly restrained by the proverbial warning, 'Never too much,' and heeds it, whereas the senseless profligate is mastered by his extreme pleasure, which ultimately drives him insane and makes him the talk of the town.

SOCRATES: Right. Then if that is so, clearly the greatest pleasures, and the greatest pains too, occur not when soul and body are good, but when they are bad.

PROTARCHUS: Certainly.

SOCRATES: And now we ought to select some of these and consider what characteristic made us call them the greatest.

PROTARCHUS: Yes, we must.

SOCRATES: Well, here is a type of malady, with pleasures whose characteristics I should like you to examine.

PROTARCHUS: What type is it?

SOCRATES: The offensive type, with its pleasures which are so thoroughly distasteful to the dour people we were speaking of.

PROTARCHUS: What pleasures are they?

SOCRATES: Relieving an itch, for example, by rubbing, and anything that calls for that sort of remedy. When we find ourselves experiencing that kind of thing, what, in heaven's name, are we to call it? Pleasure or pain?

PROTARCHUS: Well that, Socrates, I really think might be described as a mixed experience.

SOCRATES: Of course I did not introduce the subject with any reference to Philebus, but without a look at these pleasures and others associated with them I hardly think we shall be able to settle the question before us.

PROTARCHUS: Then we must proceed to attack the kindred pleasures.

SOCRATES: You mean those that share that characteristic of mixture?

PROTARCHUS: Exactly.

SOCRATES: Well, some of the mixtures concern the body and are found in the body alone, while others are found in the soul and belong to the soul alone, and thirdly we shall discover cases of pains being mixed with pleasures that involve both soul and body, where the total experience is sometimes called pleasure, sometimes pain.

PROTARCHUS: What do you mean?

SOCRATES: When the natural state of an organism is being established or impaired, it may be subject to two opposite experiences at once. It may be warmed while shivering, or again cooled while burning. It is seeking, I imagine, to attain one thing and get rid of the other, and the 'bittersweet' mixture, if I may use the current phrase, when it is hard to get rid of the thing, causes an uneasiness which develops into fierce excitement.

PROTARCHUS: What you are now saying is very true.

SOCRATES: Now in mixtures like these are not the pains and pleasures sometimes equal, while sometimes one or the other predominates?

PROTARCHUS: Of course.

SOCRATES: In the class in which the pains predominate over the pleasures you must count those pleasures of itching that we were speaking of, and of tickling. When the irritation or inflammation is internal, and by rubbing and scratching you fail to reach it and merely tear the surface skin, then, by bringing the parts affected near a fire and seeking to reverse your condition by means of the heat it gives out, you procure at one moment immense pleasure, at another a contrast between interior and exterior, a combination of pains with pleasures,

the balance tilting now this way now that, this being due to the forcible tearing apart of what was compact or the compressing of what was diffused.

PROTARCHUS: Very true.

SOCRATES: On the other hand when anything of this kind is happening and pleasure preponderates in the mixture, although the slight element of pain causes a tickling and a mild uneasiness, yet the inflowing stream of pleasure, which is much stronger, excites you and sometimes makes you jump for joy; it produces all manner of varieties in your complexion, in your attitude, in the very breath you draw, and drives you clean out of your wits, shouting aloud like a lunatic.

b PROTARCHUS: Yes indeed.

SOCRATES: And what's more, my friend, it makes people say of themselves, and makes others say of them, that they are almost dying of delight in these pleasures, and I would add that the more of a fool and profligate a man is, the more wholeheartedly is he sure to pursue them, calling them the greatest pleasures and accounting such as have the greatest amount thereof in their lives the happiest of beings.

PROTARCHUS: Everything, Socrates, that most people agree in thinking, is covered by your exposition.

c SOCRATES: Yes, Protarchus, as far as concerns those pleasures in which it is merely the body's superficial and internal parts that are interconnected in mutual affections. But there are cases in which the soul's contribution is opposed to that of the body, whether it be pain as against the body's pleasure or pleasure as against the body's pain, so that the two unite to form a single compound. These we discussed previously, showing that at such times as we are emptied we desire replenishment, and that we delight in the expectation of replenishment but are distressed by the process of emptying, but there is one thing that we did not declare then but assert now, namely that in all  
d these innumerable instances in which soul is at variance with body, we find a single type of the mixture of pain and pleasure.

PROTARCHUS: I am inclined to think you are quite right.

SOOCRATES: And now we have still left one more mixture of pain and pleasure.

PROTARCHUS: Which is that?

SOOCRATES: That mingling which, as we mentioned, the soul alone takes to itself.

PROTARCHUS: In what sense do we maintain that?

e SOCRATES: Anger, fear, longing, lamenting, love, emulation, malice, and so forth—don't you class these as pains of the soul itself?

PROTARCHUS: I do.

SOOCRATES: And shall we not find them replete with immense pleasures? Or need we remind ourselves of that feature of passion and anger—of the lines:

Wrath that spurs on the wisest mind to rage,  
Sweeter by far than stream of flowing honey,<sup>1</sup>

or of the pleasures mixed up with the pains in lamentation and longing?

PROTARCHUS: No, what you say is precisely what must happen.

SOCRATES: Then again do you remember how spectators of a tragedy sometimes feel pleasure and weep at once?

PROTARCHUS: Yes indeed.

SOCRATES: And if you take the state of our minds when we see a comedy, do you realize that here again we have a mixture of pain and pleasure?

PROTARCHUS: I don't quite take your meaning.

SOCRATES: No, Protarchus, for it is by no means easy to understand that we are regularly affected in this way on such an occasion.

PROTARCHUS: It certainly does not seem easy to me.

SOCRATES: Still, the obscurity of the matter ought to make us all the more eager to grasp it; we may make it easier for people to realize the mixture of pain and pleasure in other cases.

PROTARCHUS: Pray go on.

SOCRATES: We mentioned malice just now. Would you call that a pain of the soul, or what?

PROTARCHUS: Yes.

SOCRATES: Nevertheless one will find the malicious man pleased at his neighbors' ills.

PROTARCHUS: Undoubtedly.

SOCRATES: Now ignorance, or the condition we call stupidity, is an ill thing.

PROTARCHUS: Well?

SOCRATES: That being so, observe the nature of the ridiculous.

PROTARCHUS: Be kind enough to tell me.

SOCRATES: Taking it generally it is a certain kind of badness, and it gets its name from a certain state of mind. I may add that it is that species of the genus 'badness' which is differentiated by the opposite of the inscription at Delphi.

PROTARCHUS: You mean, 'Know thyself,' Socrates?

SOCRATES: I do. Plainly the opposite of that would be for the inscription to read, 'By no means know thyself.'

PROTARCHUS: Of course.

SOCRATES: Now, Protarchus, that is what you must split up into three parts; see if you can.

PROTARCHUS: How do you mean? I am quite sure I can't.

<sup>1</sup> *Iliad* 18.109 sq.

SOCRATES Do you then mean that I must make this division, here and now?

PROTARCHUS That is what I mean, and indeed I beg you to do so.

SOCRATES: If anyone does not know himself, must it not be in one of three ways?

PROTARCHUS: How so?

e SOCRATES: First, in respect of wealth, he may think himself richer than his property makes him.

PROTARCHUS: Plenty of people are affected that way, certainly.

SOCRATES: But there are even more who think themselves taller and more handsome and physically finer in general than they really and truly are.

PROTARCHUS: Quite so.

SOCRATES: But far the greatest number are mistaken as regards the third class of things, namely possessions of the soul. They  
49 think themselves superior in virtue, when they are not.

PROTARCHUS: Yes indeed.

SOCRATES: And is it not the virtue of wisdom that the mass of men insist on claiming, interminably disputing, and lying about how wise they are?

PROTARCHUS: Of course.

SOCRATES: And certainly we should be justified in calling all such behavior as this evil.

PROTARCHUS: Undoubtedly.

SOCRATES: Well now, Protarchus, it is this that we must once more divide, by bisection, if we mean to see that curious mixture of pleasure and pain that lies in the malice that goes with entertainment.

b How then, you will ask, do we make our bisection? All persons who are foolish enough to hold this false opinion about themselves fall, I think, like mankind in general, into two classes, those who are strong and powerful and those who are the reverse.

PROTARCHUS: Indubitably.

SOCRATES: Then make that your principle of division. Those whose delusion is accompanied by weakness, who are unable to retaliate when laughed at, you will be right in describing by the epithet 'ridiculous'; to those that have the ability and strength to retaliate you will most appropriately accord the epithets 'formidable' and 'hateful.'

c For ignorance in the strong is hateful and ugly; it is fraught with mischief to all around, and so are its copies on the stage, but weak ignorance ranks as the ridiculous, which in fact it is.

PROTARCHUS: You are perfectly right. All the same, I am not yet clear about the mixture of pleasures and pains here.

SOCRATES: Well, take first the nature of malice.

d PROTARCHUS: Pray continue.

SOCRATES: Both pain and pleasure can be wrongful, I imagine?

PROTARCHUS: Unquestionably.

SOCRATES: And to delight in our enemies' misfortunes is neither wrongful nor malicious?

PROTARCHUS: Of course not.

SOCRATES: Whereas to feel delight, as we sometimes do, instead of pain, when we see friends in misfortune, is wrongful, is it not?

PROTARCHUS: Of course.

SOCRATES: Now we said that ignorance is always an evil?

PROTARCHUS: That is so.

SOCRATES: Then if we find in our friends that imaginary wisdom and imaginary beauty, and the other delusions which we enumerated in our threefold classification just now, delusions that are ridiculous in the weak and hateful in the strong—if we find this disposition in its harmless form in our friends, shall we adhere, or shall we not, to my statement of a moment ago, namely that it is ridiculous?

PROTARCHUS: Certainly we shall.

SOCRATES: And do we not agree that, being ignorance, it is evil?

PROTARCHUS: Undoubtedly.

SOCRATES: And when we laugh at it, are we pleased or pained?

PROTARCHUS: Plainly we are pleased.

50

SOCRATES: And did we not say that it is malice that makes us feel pleasure in our friends' misfortunes?

PROTARCHUS: It must be.

SOCRATES: The upshot of our argument then is that when we laugh at what is ridiculous in our friends, we are mixing pleasure this time with malice, mixing, that is, our pleasure with pain, for we have been for some time agreed that malice is a pain in the soul, and that laughter is a pleasure, and both occur simultaneously on the occasions in question.

PROTARCHUS: True.

SOCRATES: Hence our argument now makes it plain that in b lamentations and tragedies and comedies—and not only in those of the stage but in the whole tragicomedy of life—as well as on countless other occasions, pains are mixed with pleasures.

PROTARCHUS: The most determined of opponents could not but agree with what you say, Socrates.

SOCRATES: Moreover we made a list including anger, longing, lamentation, fear, love, malice, and so on, in all of which we said that c we should find our oft-repeated mixture, did we not?

PROTARCHUS: Yes.

SOCRATES: Then do we realize that what we have just discussed was all concerned with lamentation, malice, and anger?

PROTARCHUS: I am sure we do.

SOCRATES: That being so, is there still much left to discuss?

PROTARCHUS: Yes indeed.

SOCRATES: Now what exactly do you suppose was my purpose in pointing out the mixture in comedy? Was it not to give you a ground  
 d for believing that it would be easy enough to demonstrate the same mingling in the case of fear, love, and the rest? I hoped that, having grasped the first example, you would relieve me of the necessity of entering upon a long argument about the others, and would grasp the general principle, that whether the body be affected apart from the soul, or the soul apart from the body, or both of them together, we constantly come upon the mixture of pleasure with pain. So tell me now, are you going to relieve me or will you keep me up till midnight? I fancy I shall secure your consent to release me if I just add this, that  
 e I shall be willing to go into the whole question with you tomorrow, but for the present I want to address myself to the matters which are still outstanding if we are to settle the problem set us by Philebus.

PROTARCHUS: Very good, Socrates, deal with the outstanding points as you fancy.

SOCRATES: Well, after the mixed pleasures we shall naturally go on in turn—indeed we can hardly avoid it—to the unmixed.

51 PROTARCHUS: Excellent.

SOCRATES: Then I will start afresh and try to indicate, to you and to myself, which they are. With those who maintain that all pleasures are a cessation of pains I am not altogether inclined to agree, but, as I said, I avail myself of their evidence that some pleasures are apparent and quite unreal, while others present themselves to us as being great and numerous, but are in fact jumbled up with pains and processes of relief from such severe suffering as besets both body and soul.

b PROTARCHUS: But which, Socrates, should we be justified in regarding as true?

SOCRATES: Those that attach to colors that we call beautiful, to figures, to most odors, to sounds, and to all experiences in which the want is imperceptible and painless, but its fulfillment is perceptible and pleasant.

PROTARCHUS: In what sense, Socrates, does what you say hold good of these?

c SOCRATES: Well, what I mean is not quite obvious immediately; however, I must try to explain it. The beauty of figures which I am now trying to indicate is not what most people would understand as such, not the beauty of a living creature or a picture; what I mean, what the argument points to, is something straight, or round, and the surfaces and solids which a lathe, or a carpenter's rule and square, produces from the straight and the round. I wonder if you understand. Things like that, I maintain, are beautiful not, like most things, in a relative sense; they are always beautiful in their very nature, and they carry pleasures peculiar to themselves which are quite unlike the

pleasures of scratching. And there are colors too which have this d characteristic. Do we grasp this? What do you say?

PROTARCHUS: I am trying to do so, Socrates. Perhaps you too would try to put it still more plainly.

SOCRATES: Very well. Audible sounds which are smooth and clear, and deliver a single series of pure notes, are beautiful not relatively to something else, but in themselves, and they are attended by pleasures implicit in themselves.

PROTARCHUS: Yes, certainly that is so.

SOCRATES: Odors provide pleasures of a less sublime type, but e the fact that no necessary pains are mixed with them, as well as the general character and source of the experience, induces me to class them as cognate with those just mentioned. Here then, if you follow me, are two of the types of pleasure we are now concerned with.

PROTARCHUS: I follow you.

SOCRATES: Now let us proceed to add to them the pleasures of 52 learning, if we do in fact think that they involve no hunger, that no initial distress is felt owing to a hunger for learning.

PROTARCHUS: I share that view.

SOCRATES: But suppose one who has been filled with learning loses it afterward by forgetting it, do you find that such loss involves distress?

PROTARCHUS: No, at least not to a man's natural self, but by way of his reflection upon what has happened, when he feels pain because of the usefulness of what he has lost. b

SOCRATES: But you know, my dear fellow, we are concerned at present only with the actual experiences of the natural self, apart from any reflections about them.

PROTARCHUS: Then you are right in saying that in cases of forgetting what we have learned we feel no pain.

SOCRATES: So we must assert that these pleasures of learning are unmixed with pains, and that they belong not to the general run of men but only to the very few.

PROTARCHUS: Certainly.

SOCRATES: Well, we have reached the point of drawing a satis- c factory line between pure pleasures and those that may with fair justification be called impure, and now let us add to our statement that those pleasures that are intense are marked by immoderateness, those that are not by moderation. Pleasures that can go to great lengths or to an intense degree, whether they actually do so often or seldom, let us class as belonging to that 'unlimited' kind of which we spoke, which penetrates body and soul alike in greater or in less degree, but the other sort let us class among things moderate. d

PROTARCHUS: You are quite right, Socrates.

SOCRATES: And now there is yet another feature of them which we must look into.

PROTARCHUS: What is that?

SOCRATES: What are we to reckon as making for truth? That which is pure, perfectly clear, and sufficient, or that which is extreme, vast, and huge?

PROTARCHUS: What is the object of your question, Socrates?

SOCRATES: My object, Protarchus, is to do all I can to determine whether some sorts of pleasure, and some sorts of knowledge also, are pure and others not pure, for if, in deciding about them, we can get each in its pure form, that will facilitate the decision which you and I and all of us here have to make.

PROTARCHUS: Quite right.

SOCRATES: Well then, I will suggest a general method for the consideration of anything we call pure—namely, that we should begin by examining one selected example.

PROTARCHUS: And what are we to select?

53 SOCRATES: First and foremost, if you like, let us contemplate whiteness.

PROTARCHUS: By all means.

SOCRATES: How shall we get a pure white? What will it be? The greatest possible quantity or bulk of it, or the white with the least possible admixture, with no portion of any other color in its composition?

PROTARCHUS: Plainly it will be the most perfectly clear color.

b SOCRATES: You are right. Then shall we not reckon that, Protarchus, as the truest of all white things, and the fairest too, rather than a great quantity or bulk of the color?

PROTARCHUS: Quite right.

SOCRATES: Then we shall be absolutely right in saying that a small quantity of pure white is not only whiter, but also fairer and truer, than a large quantity of mixed white.

PROTARCHUS: Yes, perfectly.

c SOCRATES: What then? I imagine we shall not need numerous examples of the same sort to make a pronouncement about pleasure, but are now in a position to realize that any and every sort of pleasure that is pure of pain will be pleasanter, truer, and fairer than one that is not, whatever be their comparative bulk or quantity.

PROTARCHUS: Unquestionably so. The example before us is sufficient.

SOCRATES: And now to pass to another point. Are we not told that pleasure is always something that comes to be, that there is no such thing as a pleasure that is? There again you have a theory which certain subtle thinkers endeavor to expound to us, and we should be grateful to them.

PROTARCHUS: Why so?

d SOCRATES: That is precisely the point which I shall treat at some length in my questions to you, my dear Protarchus.

PROTARCHUS : Pray continue, and put them.

SOCRATES : There are, as you know, two kinds of thing—that which exists independently, and that which is always aiming at something else.

PROTARCHUS : How do you mean? What are they?

SOCRATES : The one has always pride of place, and the other is its inferior.

PROTARCHUS : Will you put it still more plainly?

SOCRATES : We have observed before now, I imagine, manly lovers together with the fair and excellent recipients of their admiration?

PROTARCHUS : To be sure.

SOCRATES : Then see if you can find counterparts to such pairs e throughout the world of existence, as we call it.

PROTARCHUS : May I say yet a third time, 'Please make your meaning plainer, Socrates'?

SOCRATES : It's nothing abstruse, Protarchus; our discussion has been taking a playful turn, but its meaning is that things are always of two kinds, namely those which are with a view to something else, and those for the sake of which the first sort come to be, whenever they do come to be.

PROTARCHUS : I understand more or less, thanks to your repetitions.

SOCRATES : I dare say we shall understand better before long, my boy, when the argument has made more progress. 54

PROTARCHUS : No doubt.

SOCRATES : Now let us take another pair.

PROTARCHUS : Yes?

SOCRATES : All becoming on the one hand, and all being on the other.

PROTARCHUS : I accept your pair, being and becoming.

SOCRATES : Very good. Now which of these shall we say is for the sake of which? Becoming for the sake of being, or being for the sake of becoming?

PROTARCHUS : Are you now inquiring whether what you call being is what it is for the sake of becoming?

SOCRATES : Clearly I am.

PROTARCHUS : Good heavens! Are you asking me something of b this sort—'Tell me, Protarchus, do you maintain that shipbuilding goes on for the sake of ships, rather than that ships are for the sake of shipbuilding?'—and so on and so forth?

SOCRATES : That is precisely what I mean, Protarchus.

PROTARCHUS : Then why haven't you answered your own question, Socrates?

SOCRATES : I might well do so, but you must take your share in the discussion.

PROTARCHUS: Yes, certainly.

SOCRATES: Now I hold that while it is with a view to something coming into being that anyone provides himself with medicine, or tools of any kind, or any sort of material, the becoming always takes place with a view to the being of this or that, so that becoming in general takes place with a view to being in general.

PROTARCHUS: Yes, clearly.

SOCRATES: Then there must be some being with a view to which pleasure comes to be, if it is true that pleasure is becoming.

PROTARCHUS: Of course.

SOCRATES: But where there is this regular relation of means to end, the end falls under the heading of good, while the means, my excellent friend, must find a place under another heading.

PROTARCHUS: Most decidedly.

SOCRATES: Hence if pleasure is becoming, we shall be right in setting it under some other heading than that of good?

PROTARCHUS: Yes, perfectly right.

SOCRATES: And so, as I said at the beginning of our present argument, we ought to be grateful to the author of the doctrine that pleasure is something that comes to be, but in no case ever is, for plainly he laughs to scorn those who assert that pleasure is good.

PROTARCHUS: Quite so.

SOCRATES: And what's more, this same thinker will not fail to include in his scorn those who find their satisfaction in these becomingings.

PROTARCHUS: How do you mean? To whom are you referring?

SOCRATES: To people who, when they find relief for their hunger or thirst or such other troubles as becoming relieves, are delighted on account of the becoming, which they regard as a pleasure, saying that they would not care to live without hungering and thirsting and having all the rest of the experiences that might be enumerated as going with hunger and thirst.

55 PROTARCHUS: Your description fits them, certainly.

SOCRATES: Well now, we should all admit that the opposite of becoming is passing away.

PROTARCHUS: Necessarily.

SOCRATES: Hence it is an alternation of passing away and becoming that will be chosen by those who choose a life like that in preference to the third life we spoke of, the life which included neither pleasure nor pain, but the purest possible activity of thought.

PROTARCHUS: It appears, Socrates, that a number of untenable consequences follow from the proposal to make pleasure our good.

SOCRATES: Yes, and for that matter we might reinforce the argument.

PROTARCHUS: How?

**SOCRATES:** Surely it is untenable that there should be nothing <sup>b</sup> good nor admirable in our bodies, nor yet in anything else whatever except in our souls, and that there it should be pleasure alone that is good, not courage nor temperance nor reason nor any of the goods proper to soul—these being no good at all—and, what is more, that one who feels not pleasure, but distress, should be forced to admit that every time he feels distress he is evil, though he be in fact the best of men, and conversely that one who feels pleasure should gain an additional excellence proportionate to his pleasure, every time he feels <sup>c</sup> that pleasure.

**PROTARCHUS:** The whole idea, Socrates, is as untenable as it well could be.

**SOCRATES:** Well now, we have been trying every possible method of reviewing pleasure, but don't let us show ourselves over-tender toward reason and knowledge. Rather let us test their metal with a good honest ring, to see if it contains any base alloy, for by so doing we shall detect what is really the purest element in them, and so use, for the purpose of our joint decision, their truest parts together with the truest parts of pleasure.

**PROTARCHUS:** Right.

**SOCRATES:** Now we may, I think, divide the knowledge in- <sup>a</sup> volved in our studies into technical knowledge, and that concerned with education and culture, may we not?

**PROTARCHUS:** Yes.

**SOCRATES:** Then taking the technical knowledge employed in handicraft, let us first consider whether one division is more closely concerned with knowledge. and the other less so, so that we are justified in regarding the first kind as the purest, and the second as relatively impure.

**PROTARCHUS:** Yes, we ought so to regard them.

**SOCRATES:** Should we then mark off the superior types of knowledge in the several crafts?

**PROTARCHUS:** How so? Which do you mean?

**SOCRATES:** If, for instance, from any craft you subtract the element of numbering, measuring, and weighing, the remainder will be <sup>e</sup> almost negligible.

**PROTARCHUS:** Negligible indeed.

**SOCRATES:** For after doing so, what you would have left would be guesswork and the exercise of your senses on a basis of experience and rule of thumb, involving the use of that ability to make lucky shots which is commonly accorded the title of art or craft, when it has consolidated its position by dint of industrious practice.

56

**PROTARCHUS:** I have not the least doubt you are right.

**SOCRATES:** Well now, we find plenty of it, to take one instance, in music when it adjusts its concords not by measurement but by lucky shots of a practiced finger—in the whole of music, flute playing

and lyre playing alike, for this latter hunts for the proper length of each string as it gives its note, making a shot for the note, and attaining a most unreliable result with a large element of uncertainty.

PROTARCHUS: Very true.

- b     SOCRATES: Then again we shall find the same sort of thing in medicine and agriculture and navigation and military science.

PROTARCHUS: Quite so.

SOCRATES: Building, however, makes a considerable use of measures and instruments, and the remarkable exactness thus attained makes it more scientific than most sorts of knowledge.

PROTARCHUS: In what respect?

- SOCRATES: I am thinking of the building of ships and houses, and various other uses to which timber is put. It employs straight-edge and peg-and-cord, I believe, and compasses and plummet, and an  
c ingenious kind of set-square.

PROTARCHUS: You are perfectly right, Socrates.

SOCRATES: Let us then divide the arts and crafts so called into two classes, those akin to music in their activities and those akin to carpentry, the two classes being marked by a lesser and a greater degree of exactness, respectively.

PROTARCHUS: So be it.

SOCRATES: And let us take those arts, which just now we spoke of as primary, to be the most exact of all.

PROTARCHUS: I take it you mean the art of numbering, and the others which you mentioned in association with it just now.

- d     SOCRATES: To be sure. But ought we not, Protarchus, to recognize these themselves to be of two kinds? What do you think?

PROTARCHUS: What two kinds do you mean?

SOCRATES: To take first numbering or arithmetic, ought we not to distinguish between that of the ordinary man and that of the philosopher?

PROTARCHUS: On what principle, may I ask, is this discrimination of two arithmetics to be based?

- SOCRATES: There is an important mark of difference, Protarchus. The ordinary arithmetician, surely, operates with unequal units; his 'two' may be two armies or two cows or two anythings from the smallest thing in the world to the biggest, while the philosopher  
e will have nothing to do with him, unless he consents to make every single instance of his unit precisely equal to every other of its infinite number of instances.

PROTARCHUS: Certainly you are right in speaking of an important distinction among those who concern themselves with number, which justifies the belief that there are two arithmetics.

- SOCRATES: Then as between the calculating and measurement  
57 employed in building or commerce and the geometry and calculation practiced in philosophy—well, should we say there is one sort of each, or should we recognize two sorts?

PROTARCHUS: On the strength of what has been said I should give my vote for there being two.

SOCRATES: Right. Now do you realize our purpose in bringing these matters onto the board?

PROTARCHUS: Possibly, but I should like you to pronounce on the point.

SOCRATES: Well, it seems to me that our discussion, now no less than when we embarked upon it, has propounded a question here analogous to the question about pleasures. It is inquiring whether one kind of knowledge is purer than another, just as one pleasure is purer than another.

PROTARCHUS: Yes, it is quite clear that that has been its reason for attacking this matter.

SOCRATES: Well now, in what preceded, had it not discovered that different arts, dealing with different things, possessed different degrees of precision?

PROTARCHUS: Certainly.

SOCRATES: And in what followed did it not first mention a certain art under one single name, making us think it really was one art, and then treat it as two, putting questions about the precision and purity of those two to find out whether the art as practiced by the philosopher or by the nonphilosopher was the more exact?

PROTARCHUS: I certainly think that is the question which it puts.

SOCRATES: Then, Protarchus, what answer do we give it?

PROTARCHUS: We have got far enough, Socrates, to discern an astonishingly big difference between one kind of knowledge and another in respect of precision.

SOCRATES: Well, will that make it easier for us to answer?

PROTARCHUS: Of course, and let our statement be that the arts which we have had before us are superior to all others, and that those among them which involve the effort of the true philosopher are, in their use of measure and number, immensely superior in point of exactness and truth.

SOCRATES: Let it be as you put it; then relying on you we shall confidently answer the clever twisters of argument . . .

PROTARCHUS: Answer what?

SOCRATES: That there are two arts of numbering and two arts of measuring, and plenty of other kindred arts which are similarly pairs of twins, though they share a single name.

PROTARCHUS: Let us give that answer, Socrates, with our blessing to those clever folk, as you style them.

SOCRATES: Then these are the kinds of knowledge which we maintain to be pre-eminently exact?

PROTARCHUS: Certainly.

SOCRATES: But we, Protarchus, are likely to be repudiated by the art of dialectic, if we prefer any other to her.

58 PROTARCHUS: Then how ought we to describe her, in her turn?

SOCRATES: Plainly everyone will recognize her whom we now speak of. The cognition of that which is, that which exists in reality, ever unchanged, is held, I cannot doubt, by all people who have the smallest endowment of reason to be far and away truer than any other. What is your view? How would you, Protarchus, decide about this question?

PROTARCHUS: On the many occasions when I used to listen to Gorgias, he regularly said, Socrates, that the art of persuasion was  
b greatly superior to all others, for it subjugated all things not by violence but by willing submission, and was far and away the best of all arts, but on this occasion I should not care to take up a position against either you or him.

SOCRATES: 'Take up arms,' I fancy you meant to say, but you dropped them out of modesty.

PROTARCHUS: Well, have it as you choose.

SOCRATES: I wonder if I am to blame for your misconception.

PROTARCHUS: What is it?

SOCRATES: What I wanted to discover at present, my dear Protarchus, was not which art or which form of knowledge is superior to all others in respect of being the greatest or the best or the most serviceable, but which devotes its attention to precision, exactness, and  
c the fullest truth, though it may be small and of small profit—that is what we are looking for at this moment. What you must consider—and you won't give offense to Gorgias, if you allow his art the property of doing paramount service to mankind, while assigning to the procedure to which I have just referred just that property of possessing paramount truth which I illustrated by showing that a small quantity of  
d pure white color was superior to a large quantity of impure in that respect—what you must consider is, whether the art we have in mind may reasonably be said to possess in fullest measure reason and intelligence in their purity, or whether we ought to look for some other art with a better claim. The question calls for great thought and ample reflection, and we must have no regard for any benefits a science may confer or any repute it may enjoy. But if there is a certain faculty in our souls naturally directed to loving truth and doing all for the sake of truth, let us make diligent search and say what it is, and when we have done so you must consider the question I have put to you.

e PROTARCHUS: Well, I have been thinking it over, and in my opinion it would be difficult to concede that any other science or art has more of a hold on truth than this one.

59 SOCRATES: Now does it occur to you, in saying what you have just said, that the majority of arts, as also those who are busied therewith, are in the first place concerned with opinions and pursue their energetic studies in the realm of opinion? And are you aware that those of them who do consider themselves students of reality spend a

whole lifetime in studying the universe around us, how it came to be, how it does things, and how things happen to it? May we say that is so? What do you think?

PROTARCHUS: We may.

SOCRATES: Then the task which such students among us have taken upon themselves has nothing to do with that which always is, but only with what is coming into being, or will come, or has come.

PROTARCHUS: Very true.

SOCRATES: And can we say that any precise and exact truth attaches to things, none of which are at this present, or ever were, or ever will be free from change?

PROTARCHUS: Of course not.

SOCRATES: And how can we ever get a permanent grasp on anything that is entirely devoid of permanence?

PROTARCHUS: Nohow, I imagine.

SOCRATES: It follows then that reason too, and knowledge that gives perfect truth, are foreign to them.

PROTARCHUS: So it would seem.

SOCRATES: Then we should have done for good and all with your illustrious self, and mine, and with Gorgias and Philebus, and make the following reasoned declaration.

PROTARCHUS: Let us have it.

SOCRATES: That we find fixity, purity, truth, and what we have called perfect clarity, either in those things that are always, unchanged, unaltered, and free of all admixture, or in what is most akin to them; everything else must be called inferior and of secondary importance.

PROTARCHUS: What you say is very true.

SOCRATES: Then as regards names for what we have been discussing, will it not be fittest to assign the fairest names to the fairest things?

PROTARCHUS: I suppose so.

SOCRATES: And are not reason and intelligence the names that command the greatest respect?

PROTARCHUS: Yes.

SOCRATES: Then these names can be properly established in usage as precisely appropriate to thought whose object is true being.

PROTARCHUS: Certainly.

SOCRATES: But I may point out that it was just these names about which I originally suggested that we had to make our decision.

PROTARCHUS: To be sure, Socrates.

SOCRATES: Very well. Then here, one may say, we have at hand the ingredients, intelligence and pleasure, ready to be mixed, the materials in which, or out of which, we as builders are to build our structure—that would not be a bad metaphor.

PROTARCHUS: Quite a good one.

SOCRATES: Next then, I suppose, we must set to work to mix them.

PROTARCHUS: Of course.

SOCRATES: I suggest that there are points which we might do well to remind ourselves of first.

PROTARCHUS: What are they?

SOCRATES: Points we mentioned before, but I think there is a lot in the proverb about the need for repeating a good thing 'once and twice and once again.'

PROTARCHUS: To be sure.

SOCRATES: Come along, then, I beg and beseech you. I think I can give you the gist of what we said.

PROTARCHUS: Yes?

SOCRATES: Philebus maintains that pleasure is the proper quest of all living creatures, and that all ought to aim at it; in fact he says that the good for all is pleasure and nothing else, these two terms, pleasure and good, being properly applied to one thing, one single existent. Socrates on the other hand maintains that they are not one thing, but two, in fact as in name; 'good' and 'pleasant' are different from one another, and intelligence has more claim to be ranked as good than pleasure. Are not those the assertions, Protarchus, now as before?

PROTARCHUS: Exactly.

SOCRATES: And is there not a further point on which we should agree, now as then?

PROTARCHUS: What is that?

SOCRATES: That the good differs from everything else in a certain respect.

PROTARCHUS: In what respect?

SOCRATES: A creature that possesses it permanently, completely, and absolutely, has never any need of anything else; its satisfaction is perfect. Is that right?

PROTARCHUS: Yes, that is right.

SOCRATES: And we went on, by way of experiment, to imagine the individual lives corresponding to them when each was isolated from the other—that of pleasure unmixed with intelligence, and that of intelligence similarly devoid of any particle of pleasure.

PROTARCHUS: We did.

SOCRATES: And did we find that either of them was satisfactory to anybody?

PROTARCHUS: No indeed.

SOCRATES: But if we made any slip before, now is the time for anyone who likes to take the matter up and restate it more correctly. Let him class together memory, intelligence, knowledge, and true opinion, and ask himself whether there is anything whatever that he

would choose to have, or to get, without these—anything, let alone a pleasure which, for all its magnitude or extreme intensity, he felt without any true opinion that he felt it, without any recognition whatever of the character of his experience, without even a momentary memory of it. And then let him put the same question about intelligence, whether anyone would choose to have intelligence unaccompanied by any pleasure, even of the most fleeting character, in preference to its accompaniment by some, [or to have every pleasure without any intelligence in preference to its accompaniment by some].

PROTARCHUS: Impossible, Socrates. There is no need to put that question more than once.

SOCRATES: Then neither of the two can be the perfect thing that everyone desires, the absolute good. 61

PROTARCHUS: No.

SOCRATES: Then we shall have to grasp the good, either precisely or at least in rough outline, if we are to know to what we must give, as we put it, the second prize.

PROTARCHUS: You are quite right.

SOCRATES: And haven't we in a sense found a way toward the good?

PROTARCHUS: How?

SOCRATES: If you were looking for somebody and began by ascertaining correctly where he lived, I imagine that would be a big step toward discovering the man you looked for. b

PROTARCHUS: Of course.

SOCRATES: Well, so it is here. Our discussion has made it plain to us, now as at the outset, that we must not look for the good in the unmixed life, but in the mixed.

PROTARCHUS: Quite so.

SOCRATES: But there is more hope of what we are looking for coming to light in what is well mixed than in what is badly mixed?

PROTARCHUS: Much more.

SOCRATES: Then let us mingle our ingredients, Protarchus, with a prayer to the gods, to Dionysus or Hephaestus or whichever god has been assigned this function of mingling. c

PROTARCHUS: By all means.

SOCRATES: Why, it's just as if we were supplying drinks, with two fountains at our disposal; one would be of honey, standing for pleasure, the other standing for intelligence, a sobering, unintoxicating fountain of plain, salubrious water. We must get to work and make a really good mixture.

PROTARCHUS: Of course.

SOCRATES: Come then. To begin with, are we most likely to attain a good result by mixing all pleasure with all intelligence? d

PROTARCHUS: Possibly.

SOCRATES: No, it's not safe. I think I can show you what seems a less dangerous method of mixture.

PROTARCHUS: Tell me, please.

SOCRATES: One pleasure, so we thought, had a truer being than another, and again this art was more exact than that?

PROTARCHUS: Of course.

SOCRATES: And knowledge differed from knowledge—one having regard to the things that come into being and perish, the other to those that do not come into being nor perish, but are always, unchanged and unaltered. Reviewing them on the score of truth, we concluded that the latter was truer than the former.

PROTARCHUS: Perfectly right.

SOCRATES: Then if we were to see which were the truest portions of each before we made our mixture, would the fusion of these portions suffice to constitute and provide us with the fully acceptable life, or should we still need something different?

62 PROTARCHUS: My own opinion is that we should act as you say.

SOCRATES: Now let us imagine a man who understands what justice itself is, and can give an account of it conformable to his knowledge, and who moreover has a like understanding of all else that is.

PROTARCHUS: Very well.

SOCRATES: Will such a man be adequately possessed of knowledge, if he can give his account of the divine circle and the divine sphere themselves, but knows nothing of these human spheres and circles of ours, so that, when he is building a house, the rules that he uses, no less than the circles, are of the other sort?

PROTARCHUS: I am moved to mirth, Socrates, by this description we are giving of ourselves confined to divine knowledge.

SOCRATES: What's that? Are we to throw in alongside of our other ingredients the art of the false rule and false circle, with all the lack of fixity and purity it involves?

PROTARCHUS: We must, if we are going to find the way home when we want it.

c SOCRATES: And music too, which we said a while ago was so completely dependent on lucky shots and imitation, and so deficient in purity?

PROTARCHUS: I think we are bound to do so, if our life is ever to be a life at all.

SOCRATES: Do you want me, may I ask, to give way like a porter jostled and knocked about by the crowd, to fling open the doors and allow every sort of knowledge to stream in, the inferior mingling with the pure?

d PROTARCHUS: I don't really see, Socrates, what harm one

would suffer by taking all those other sorts of knowledge, providing one had the first sort.

SOCRATES: Then I am to allow the whole company to stream in and be gathered together in a splendid Homeric mingling of the waters?

PROTARCHUS: Certainly.

SOCRATES: It is done. And now we must return to our fount of pleasures. The method of mixing our ingredients which we intended, namely taking parts of the true sorts first, has broken down; our acquiescence in every sort of knowledge has made us admit the whole of it at one swoop before admitting any pleasure.

PROTARCHUS: That is quite true. e

SOCRATES: Hence it is time for us to raise the same question about pleasures, whether we are to let them all loose at once or should allow passage first to such of them as are true.

PROTARCHUS: It is most important in the interest of safety to let loose the true ones first.

SOCRATES: Then let that be taken as done. And what next? Ought we not to do as we did in the other case, and include in our mixture any necessary pleasures there may be?

PROTARCHUS: Oh yes, the necessary ones of course.

SOCRATES: Yes, but we found it harmless and useful to spend our lives in the knowledge of all the arts, and if we say the same about pleasures, if, that is, it is advantageous and harmless to us all to spend our lives in the enjoyment of all pleasures, then we must mix in all of them. 63

PROTARCHUS: Then what are we to say on this particular point? How are we to act?

SOCRATES: The question ought to be addressed not to us, Protarchus, but to the pleasures themselves and the intelligences, and here is the sort of inquiry we should make about their mutual relations.

PROTARCHUS: Yes? b

SOCRATES: 'Dear Pleasures—if that is the name by which I should call you, or whatever it ought to be—would you not choose to live in company with all intelligence rather than apart from any?' I imagine there can be no doubt about the reply they would make to that.

PROTARCHUS: What would it be?

SOCRATES: Conformably to what was previously said, it would be as follows: 'It is disadvantageous and hardly possible that one family should be kept in solitude and isolation, perfectly clear of all others, but our view is that, family for family, we cannot do better than have the family of knowledge to live with us, knowledge of all things in general and of each of ourselves in particular to the fullest extent possible.' c

PROTARCHUS: 'An excellent answer that,' we shall tell them.

SOCRATES: So we should. Then next we must put a question to intelligence and reason. 'Do you require any pleasures to be added to the mixture?' And when we ask that of reason and intelligence, they may possibly rejoin, 'What sort of pleasures?'

PROTARCHUS: I dare say.

- d       SOCRATES: To which our rejoinder is this. 'Over and above the true pleasures that you know of, do you further require the greatest and intensest pleasures for your associates?' And they may well reply, 'Is that likely, Socrates, seeing that they put countless obstacles in our way, disturbing with frenzy the souls in which we dwell, and prevent us from ever coming into existence, while as to our offspring, e they utterly ruin them in most cases, so careless and forgetful do they make us. No, the pleasures you have spoken of as true and pure you may regard as more or less related to us, and besides them you may add to the mixture those that consort with health and temperance, and in fact all that attend upon virtue in general, following her every- 64 where as their divinity. But to mix with reason the pleasures that always go with folly and all other manner of evil would surely be the most senseless act for one who desired to see a mixture and fusion as fair and peaceable as might be, so that he might try to learn from it what the good is, in man and in the universe, and what form he should divine it to possess.'

Shall we not say that in the words that reason has here used it has answered wisely and 'reason-ably' on behalf of itself and memory and right opinion?

PROTARCHUS: Completely so.

SOCRATES: But there is still a certain thing we must have, and nothing in the world could come into being without it.

- b       PROTARCHUS: What is that?

SOCRATES: Reality, for a thing with which we don't mean to mix reality will never really come into being, and if it ever did it wouldn't continue in being.

PROTARCHUS: No, of course not.

SOCRATES: No indeed. And now do you and Philebus tell me if there are any additional ingredients required. To me it appears that in our present discussion we have created what might be called an incorporeal ordered system for the rightful control of a corporeal subject in which dwells a soul.

PROTARCHUS: You may assure yourself, Socrates, that my own conclusion is the same.

- c       SOCRATES: Then perhaps we should be more or less right in saying that we now stand upon the threshold of the good and of that habitation where all that is like thereto resides?

PROTARCHUS: I at least think so.

SOCRATES: And what, may I ask, shall we regard as the most

valuable thing in our mixture, that which makes an arrangement of this sort commend itself to us all? If we discover that, we can go on to consider whether this factor in the whole scheme of things is closer and more akin to pleasure, or to reason.

PROTARCHUS: Very good, what you propose will do much to help us toward our decision.

SOCRATES: As a matter of fact, it is easy enough to see the cause that makes any mixture, be it what it may, possess high value or no value whatever.

PROTARCHUS: How so?

SOCRATES: Surely anyone in the world can recognize that.

PROTARCHUS: Recognize what?

SOCRATES: That any compound, whatever it be, that does not by some means or other exhibit measure and proportion, is the ruin both of its ingredients and, first and foremost, of itself; what you are bound to get in such cases is no real mixture, but literally a miserable mass of unmixed messiness.

PROTARCHUS: Very true.

SOCRATES: So now we find that the good has taken refuge in the character of the beautiful, for the qualities of measure and proportion invariably, I imagine, constitute beauty and excellence.

PROTARCHUS: Yes indeed.

SOCRATES: And of course we said that truth was included along with these qualities in the mixture.

PROTARCHUS: Quite so.

SOCRATES: Then if we cannot hunt down the good under a single form, let us secure it by the conjunction of three, beauty, proportion, and truth, and then, regarding these three as one, let us assert that *that* may most properly be held to determine the qualities of the mixture, and that because *that* is good the mixture itself has become so.

PROTARCHUS: Yes, that is quite proper.

SOCRATES: Well, Protarchus, by this time anyone would be competent to decide whether it is pleasure or intelligence that is more akin to the highest good, and more valuable with men and gods alike.

PROTARCHUS: The answer is clear, but for all that it would be as well to formulate it explicitly.

SOCRATES: Then let us examine each of our three forms separately in relation to pleasure and reason, for we must see to which of the two we shall assign each of them on the ground of closer kinship.

PROTARCHUS: By 'each of them' you mean beauty, truth, and measuredness?

SOCRATES: Yes, and in the first place, Protarchus, take hold of truth, and having done so, have a look at the three things, reason, truth, and pleasure, and then, taking your time, answer your own question whether pleasure or reason is the more akin to truth.

**PROTARCHUS:** What need for time? I think they differ widely. Pleasure is the worst of all impostors, and according to the accounts, when it is a question of the pleasures of love, which are commonly reckoned as the greatest, even perjury is forgiven by the gods—pleasures being presumably, like children, completely destitute of reason. Reason, on the other hand, if not identical with truth, is of all things the most like it, the truest thing in the world.

**SOCRATES:** Next then give a similar consideration to measuredness. Has pleasure more of it than intelligence, or is the reverse the case?

**PROTARCHUS:** There you set me another easy problem to consider. I don't think you could discover anything whatsoever more unmeasured in its character than pleasure and intense enjoyment, nor anything more measured than reason and knowledge.

**SOCRATES:** Well said. However, there is still a third thing I want you to tell me. Has reason more part in beauty than pleasure, that is to say is reason more beautiful than pleasure, or is the opposite the case?

**PROTARCHUS:** Well, of course, Socrates, no one whether in his waking hours or in his dreams has had a vision of intelligence and reason as ugly; no one can ever possibly have conceived them as being or becoming ugly, or ever going to be so.

**SOCRATES:** Right.

**PROTARCHUS:** But I fancy that when we see someone, no matter whom, experiencing pleasures—and I think this is true especially of the greatest pleasures—we detect in them an element either of the ridiculous or of extreme ugliness, so that we ourselves feel ashamed, and do our best to cover it up and hide it away, and we leave that sort of thing to the hours of darkness, feeling that it should not be exposed to the light of day.

**SOCRATES:** Then your message, Protarchus, to be sent out to the world at large and announced to your immediate listeners, will be this. Pleasure is not the first of all possessions, nor yet the second; rather, the first has been secured for everlasting tenure somewhere in the region of measure—of what is measured or appropriate, or whatever term may be deemed to denote the quality in question.

**PROTARCHUS:** So at least it appears on our present showing.

**SOCRATES:** And the second lies in the region of what is proportioned and beautiful, and what is perfect and satisfying and so forth—whatever terms denote that kind of quality.

**PROTARCHUS:** That seems right.

**SOCRATES:** And if you accept what I divine, and put reason and intelligence third, you won't be very wide of the truth.

**PROTARCHUS:** Perhaps not.

**SOCRATES:** Nor again, if beside these three you put as fourth

what we recognized as belonging to the soul itself, sciences and arts and what we called right opinions, inasmuch as these are more akin <sup>c</sup> than pleasure to the good.

PROTARCHUS: You may be right.

SOCRATES: And as fifth, the pleasures which we recognized and discriminated as painless, calling them pure pleasures of the soul itself—some of them attaching to knowledge, others to sensation.

PROTARCHUS: Perhaps so.

SOCRATES: 'But cease at sixth descent,' as Orpheus puts it, 'your ordered song'; really it looks as though our discussion, like the song, has ceased at the sixth choice. And now the only thing left for us to do is to crown our story with a capital. <sup>d</sup>

PROTARCHUS: That is what we must do.

SOCRATES: Come along then, let us have the 'third libation to the deliverer,' and repeat for the third time the same pronouncement that we made before.

PROTARCHUS: What is that?

SOCRATES: Philebus maintained that we find the good in the sum total and entirety of pleasure.

PROTARCHUS: I understand you, Socrates, to have meant by your 'third libation' just now that we were to recapitulate our original statement.

SOCRATES: Yes, and let us listen to what came next. I, having <sup>e</sup> in view the considerations which I have now detailed, and feeling distaste for the assertion which is not only that of Philebus but also frequently made by countless other people, maintained that reason is far better and more valuable than pleasure for human life.

PROTARCHUS: So you did.

SOCRATES: Moreover, while suspecting that many other things are so too, I said that if anything were to come to light that was better than both of these I should fight to the end on the side of reason against pleasure for the second prize, and that pleasure would be disappointed even of that.

PROTARCHUS: Yes, you did say so.

SOCRATES: And subsequently we were completely satisfied that <sup>67</sup> neither of them was satisfying.

PROTARCHUS: Very true.

SOCRATES: Then in that part of our argument had reason and pleasure alike been dismissed as being, neither of them, the good itself, inasmuch as they came short of self-sufficiency and the quality of being satisfying and perfect?

PROTARCHUS: Quite right.

SOCRATES: But now that we have found a third thing better than either of them, reason has been found ever so much nearer and more akin than pleasure to the character of the victor.

PROTARCHUS: Certainly.

SOCRATES: Then according to the decision now pronounced by our argument, pleasure will take fifth place.

PROTARCHUS: Apparently.

SOCRATES: And not first place, no, not even if all the oxen and horses and every other animal that exists tell us so by their pursuit of pleasure. It is the animals on which the multitude rely, just as diviners rely on birds, when they decide that pleasures are of the first importance to our living a good life, and suppose that animals' desires are authoritative evidence, rather than those desires that are known to reasoned argument, divining the truth of this and that by the power of the Muse of philosophy.

PROTARCHUS: The point has been reached, Socrates, at which we all agree that your conclusions are completely true.

SOCRATES: Then will you let me go?

PROTARCHUS: There is only a little still left to be done, Socrates. I am sure you won't give up sooner than we do; so I will remind you of the tasks that remain.

# TIMAEUS

*The Timaeus for many hundreds of years exercised a wide and profound influence over men's minds. It is Plato's account of the creation of the universe, but it is more than an account, it is an explanation. To Plato the universe was intelligible and therefore how it came to be could be discovered by the searching intellect. In the first chapter of Genesis, "God said, Let there be light, and there was light." That is not Plato's way of dealing with the matter. He thinks out what light is and how it must have come about. The chapter in Genesis is poetry; the Timaeus has a great deal of poetry in it, but its aim is science.*

*Plato sets himself to think out physics and astronomy and biology. His temper of mind nowhere even approaches the dogmatic, but in this dialogue it does so least of all. He hesitates and questions as he does in none of the ethical discussions in his earlier work. The statements he makes are possible, so he declares, even perhaps probable, but the only way to certainty about such matters would be to ask God and that is denied us. But at the very least it is better to use one's mind on these questions than to pass them by indolently without trying to think about them. Moreover, to do that kind of thinking, he says, is so diverting and refreshing—his prescription for resting a tired mind. "A man may sometimes set aside meditations about eternal things, and for recreation turn to consider the truths of generation, which are probable only; he will thus gain a pleasure not to be repented of, and secure for himself a wise and moderate pastime."*

*But when Plato's mind, never equalled for keenness and profundity could not find a probable explanation to rest in, then he turned to the other realm where he was also at home, the realm of poetry. In the Timaeus he says that truth is an eternal now, unchangeable, forever inexpressible. Time ever is, never has been, nor will be; it can be described as past or future only figuratively. It is "a moving image of eternity." What Plato said has been repeated by poets through the ages. Two thousand years later Vaughan wrote,*

I saw Eternity the other night,  
Like a great Ring of pure and endless light,  
All calm, as it was bright;

And round beneath it, Time in hours, days, years,  
Driven by the spheres  
Like a vast shadow moved . . .

*That came straight out of the Timaeus.*

*We must read the dialogue with such thoughts in mind because most of it is no longer to us what it was to Plato and through him to the men for centuries after, up to and into the Middle Ages, a statement of scientific truth combined with mythical truth in which great spiritual truths could be found. Inevitably we read it, at least to begin with, as an account of the incredibilities antiquity believed. God creates the universe from innumerable triangles, described and compared with careful accuracy. When man is created the way breath is put into him is of an astounding complexity, also described in accurate and bewildering detail. No doubt, as Plato said, he had relaxed just then and was amusing himself by this kind of writing, but he was also feeling, as we no longer can, how reasonable it all was and quite possibly the very truth itself.*

*It is certain, however, that Plato would have taken with complete tranquillity our modern skepticism. He would have pointed out that science cannot be accurately true since it deals with the temporal, the finite, the forever changing, never with the eternal. But yet the visible world is a copy, an image, of what is eternal and true. It is a changing reflection of that which is changeless and therefore, imperfect though it is, in it can be found the truth, God the Creator, the all-good. That is the matter of importance, not scientific accuracy, but to catch a glimpse of "the beyond, which ever thereafter the soul will strive to reach."*

*Toward the close of the Timaeus Plato says that death when it comes in old age is accompanied with pleasure, not pain. He was very old when he wrote that; he was near the end. The innumerable host of those who have learned from him and have loved him, who through the ages have found in him inspiration and guidance for life, vision to see "the beyond" and that the ultimate truth is God, our Creator and Father—all those whom he has taught so greatly have rejoiced that as death approached him he declared that he felt his soul "loosened from bonds and able to fly away with joy." Aristotle, who was best able to understand him, wrote that he had proved that the good man was the happy man. That is an aspect of Platonism which has been too little emphasized.*

SOCRATES : One, two, three, but where, my dear Timaeus, is the 17  
fourth of those who were yesterday my guests and are to be my entertainers today?

TIMAEUS : He has been taken ill, Socrates, for he would not willingly have been absent from this gathering.

SOCRATES : Then, if he is not coming, you and the two others must supply his place.

TIMAEUS : Certainly, and we will do our utmost not to disappoint you. Having been handsomely entertained by you yesterday, those of us who remain should be only too glad to return your hospitality.

SOCRATES : Do you remember what were the points of which I required you to speak?

TIMAEUS : We remember some of them, and you will be here to remind us of anything which we have forgotten, or rather, if we are not troubling you, will you briefly recapitulate the whole, and then the particulars will be more firmly fixed in our memories?

SOCRATES : To be sure I will. The chief theme of my yesterday's discourse was the state—how constituted and of what citizens composed it would seem likely to be most perfect.

TIMAEUS : Yes, Socrates, and what you said of it was very much to our mind.

SOCRATES : Did we not begin by separating the husbandmen and the artisans from the class of defenders of the state?

TIMAEUS : Yes.

SOCRATES : And when we had given to each one that single employment and particular art which was suited to his nature, we spoke of those who were intended to be our warriors, and said that they were to be guardians of the city against attacks from within as well as from without, and to have no other employment; they were to be merciful 18 in judging their subjects, of whom they were by nature friends, but fierce to their enemies, when they came across them in battle.

TIMAEUS : Exactly.

SOCRATES : We said, if I am not mistaken, that the guardians should be gifted with a temperament in a high degree both passionate and philosophical, and that then they would be as they ought to be—gentle to their friends and fierce with their enemies.

TIMAEUS : Certainly.

SOCRATES : And what did we say of their education? Were they not to be trained in gymnastics and music and all other sorts of knowledge which were proper for them?

TIMAEUS : Very true.

- b **SOCRATES:** And being thus trained they were not to consider gold or silver or anything else to be their own private property. They were to be like hired troops, receiving pay for keeping guard from those who were protected by them—the pay was to be no more than would suffice for men of simple life—and they were to spend in common, and to live together in the continual practice of virtue, which was to be their sole pursuit.

**TIMAEUS:** That was also said.

- c **SOCRATES:** Neither did we forget the women, of whom we declared that their natures should be harmoniously developed by training, equally with those of the men, and that common pursuits should be assigned to them all both in time of war and in their ordinary life.

**TIMAEUS:** That, again, was as you say.

- SOCRATES:** And what about the procreation of children? Or rather was not the proposal too singular to be forgotten? For all wives and children were to be in common, to the intent that no one should ever know his own child, but they were to imagine that they were all  
d one family; those who were within a suitable limit of age were to be brothers and sisters, those who were of an elder generation parents and grandparents, and those of a younger, children and grandchildren.

**TIMAEUS:** Yes, and the proposal is easy to remember, as you say.

- SOCRATES:** And do you also remember how, with a view of securing as far as we could the best breed, we said that the chief  
e magistrates, male and female, should contrive secretly, by the use of certain lots, so to arrange the nuptial meeting that the bad of either sex and the good of either sex might pair with their like, and there was to be no quarreling on this account, for they would imagine that the union was a mere accident and was to be attributed to the lot?

**TIMAEUS:** I remember.

- SOCRATES:** And you remember how we said that the children  
19 of the good parents were to be educated, and the children of the bad secretly dispersed among the inferior citizens, and while they were all growing up the rulers were to be on the lookout, and to bring up from below in their turn those who were worthy, and those among themselves who were unworthy were to take the places of those who came up?

**TIMAEUS:** True.

**SOCRATES:** Then have I now given you all the heads of our yesterday's discussion? Or is there anything more, my dear Timaeus, which has been omitted?

- b **TIMAEUS:** Nothing, Socrates. The discussion was just as you have said.

**SOCRATES:** I should like, before proceeding further, to tell you how I feel about the state which we have described. I might compare

myself to a person who, on beholding beautiful animals either created by the painter's art, or, better still, alive but at rest, is seized with a desire of seeing them in motion or engaged in some struggle or conflict to which their forms appear suited—this is my feeling about the state c which we have been describing. There are conflicts which all cities undergo, and I should like to hear someone tell of our own city carrying on a struggle against her neighbors, and how she went out to war in a becoming manner, and when at war showed by the greatness of her actions and the magnanimity of her words in dealing with other cities a result worthy of her training and education. Now I, Critias and Hermocrates, am conscious that I myself should never be able to d celebrate the city and her citizens in a befitting manner, and I am not surprised at my own incapacity; to me the wonder is rather that the poets present as well as past are no better—not that I mean to depreciate them, but everyone can see that they are a tribe of imitators, and will imitate best and most easily the life in which they have been brought up, while that which is beyond the range of a man's education he finds hard to carry out in action, and still harder adequately to e represent in language. I am aware that the Sophists have plenty of brave words and fair conceits, but I am afraid that being only wanderers from one city to another, and having never had habitations of their own, they may fail in their conception of philosophers and statesmen and may not know what they do and say in time of war, when they are fighting or holding parley with their enemies. And thus people of your class are the only ones remaining who are fitted by nature and education to take part at once both in politics and philosophy. Here is Timaeus, of Locri in Italy, a city which has admirable laws, who is himself in wealth and rank the equal of any of his 20 fellow citizens; he has held the most important and honorable offices in his own state, and, as I believe, has scaled the heights of all philosophy. And here is Critias, whom every Athenian knows to be no novice in the matters of which we are speaking, and as to Hermocrates, I am assured by many witnesses that his genius and education qualify him to take part in any speculation of the kind. And therefore yesterday when I saw that you wanted me to describe the formation of the state, I readily assented, being very well aware that, b if you only would, none was better qualified to carry the discussion further, and that when you had engaged our city in a suitable war, you of all men living could best exhibit her playing a fitting part. When I had completed my task, I in return imposed this other task upon you. You conferred together and agreed to entertain me today, as I had entertained you, with a feast of discourse. Here am I in festive array, and c no man can be more ready for the promised banquet.

HERMOCRATES: And we too, Socrates, as Timaeus says, will not be wanting in enthusiasm, and there is no excuse for not complying with your request. As soon as we arrived yesterday at the guest-

chamber of Critias, with whom we are staying, or rather on our way thither, we talked the matter over, and he told us an ancient tradition  
 a which I wish, Critias, that you would repeat to Socrates, so that he may help us to judge whether it will satisfy his requirements or not.

CRITIAS : I will, if Timaeus, who is our other partner, approves.

TIMAEUS : I quite approve.

CRITIAS : Then listen, Socrates, to a tale which, though strange, is certainly true, having been attested by Solon, who was the  
 e wisest of the seven sages. He was a relative and a dear friend of my great-grandfather, Dropides, as he himself says in many passages of his poems, and he told the story to Critias, my grandfather, who remembered and repeated it to us. There were of old, he said, great and  
 21 marvelous actions of the Athenian city, which have passed into oblivion through lapse of time and the destruction of mankind, and one in particular, greater than all the rest. This we will now rehearse. It will be a fitting monument of our gratitude to you, and a hymn of praise true and worthy of the goddess, on this her day of festival.

SOCRATES : Very good. And what is this ancient famous action of the Athenians, which Critias declared, on the authority of Solon, to be not a mere legend but an actual fact?

CRITIAS : I will tell an old-world story which I heard from an aged man, for Critias, at the time of telling it, was, as he said, nearly  
 b ninety years of age, and I was about ten. Now the day was that day of the Apaturia which is called the Registration of Youth, at which, according to custom, our parents gave prizes for recitations, and the poems of several poets were recited by us boys, and many of us sang the poems of Solon, which at that time had not gone out of fashion. One of our tribe, either because he thought so or to please Critias, said  
 c that in his judgment Solon was not only the wisest of men, but also the noblest of poets.

The old man, as I very well remember, brightened up at hearing this and said, smiling, Yes, Amynander, if Solon had only, like other poets, made poetry the business of his life and had completed the tale which he brought with him from Egypt, and had not been compelled, by reason of the factions and troubles which he found stirring in his own country when he came home, to attend to other matters, in my  
 d opinion he would have been as famous as Homer or Hesiod, or any poet.

And what was the tale about, Critias? said Amynander.

About the greatest action which the Athenians ever did, and which ought to have been the most famous, but, through the lapse of time and the destruction of the actors, it has not come down to us.

Tell us, said the other, the whole story, and how and from whom Solon heard this veritable tradition.

e He replied, In the Egyptian Delta, at the head of which the river Nile divides, there is a certain district which is called the district of

Sais, and the great city of the district is also called Sais, and is the city from which King Amasis came. The citizens have a deity for their foundress; she is called in the Egyptian tongue Neith, and is asserted by them to be the same whom the Hellenes call Athena. They are great lovers of the Athenians and say that they are in some way related to them. To this city came Solon and was received there with great honor; he asked the priests, who were most skillful in such matters, about antiquity, and made the discovery that neither he nor any other Hellene knew anything worth mentioning about the times of old. On one occasion, wishing to draw them on to speak of antiquity, he began to tell about the most ancient things in our part of the world—about Phoroneus, who is called 'the first man,' and about Niobe, and after the Deluge, of the survival of Deucalion and Pyrrha, and he traced the genealogy of their descendants and, reckoning up the dates, tried to compute how many years ago the events of which he was speaking happened. 22

Thereupon one of the priests, who was of a very great age, said, O Solon, Solon, you Hellenes are never anything but children, and there is not an old man among you. b

Solon in return asked him what he meant.

I mean to say, he replied, that in mind you are all young; there is no old opinion handed down among you by ancient tradition, nor any science which is hoary with age. And I will tell you why. There have been, and will be again, many destructions of mankind arising out of many causes; the greatest have been brought about by the agencies of fire and water, and other lesser ones by innumerable other causes. There is a story which even you have preserved, that once upon a time Phaethon, the son of Helios, having yoked the steeds in his father's chariot, because he was not able to drive them in the path of his father, burned up all that was upon the earth, and was himself destroyed by a thunderbolt. Now this has the form of a myth, but really signifies a declination of the bodies moving in the heavens around the earth, and a great conflagration of things upon the earth which recurs after long intervals; at such times those who live upon the mountains and in dry and lofty places are more liable to destruction than those who dwell by rivers or on the seashore. And from this calamity we are preserved by the liberation of the Nile, who is our never-failing savior. When, on the other hand, the gods purge the earth with a deluge of water, the survivors in your country are herdsmen and shepherds who dwell on the mountains, but those who, like you, live in cities are carried by the rivers into the sea. Whereas in this land, neither then nor at any other time, does the water come down from above on the fields, having always a tendency to come up from below, for which reason the traditions preserved here are the most ancient. The fact is that wherever the extremity of winter frost or of summer sun does not prevent, mankind exist, sometimes in greater, sometimes in e d

23 lesser numbers. And whatever happened either in your country or in ours, or in any other region of which we are informed—if there were any actions noble or great or in any other way remarkable, they have all been written down by us of old and are preserved in our temples. Whereas just when you and other nations are beginning to be provided with letters and the other requisites of civilized life, after the usual interval, the stream from heaven, like a pestilence, comes pouring  
 b down and leaves only those of you who are destitute of letters and education, and so you have to begin all over again like children, and know nothing of what happened in ancient times, either among us or among yourselves.

As for those genealogies of yours which you just now recounted to us, Solon, they are no better than the tales of children. In the first place you remember a single deluge only, but there were many previous ones; in the next place, you do not know that there formerly dwelt in your land the fairest and noblest race of men which ever  
 c lived, and that you and your whole city are descended from a small seed or remnant of them which survived. And this was unknown to you, because, for many generations, the survivors of that destruction died, leaving no written word. For there was a time, Solon, before the great deluge of all, when the city which now is Athens was first in war and in every way the best-governed of all cities, and is said to have performed the noblest deeds and to have had the fairest constitution of  
 d any of which tradition tells, under the face of heaven.

Solon marveled at his words, and earnestly requested the priests to inform him exactly and in order about these former citizens.

You are welcome to hear about them, Solon, said the priest, both for your own sake and for that of your city, and above all, for the sake of the goddess who is the common patron and parent and educator of both our cities. She founded your city a thousand years before ours, receiving from the Earth and Hephaestus the seed of your race, and  
 e afterward she founded ours, of which the constitution is recorded in our sacred registers to be eight thousand years old. As touching your citizens of nine thousand years ago, I will briefly inform you of their  
 24 laws and of their most famous action; the exact particulars of the whole we will hereafter go through at our leisure in the sacred registers themselves. If you compare these very laws with ours you will find that many of ours are the counterpart of yours as they were in the olden time. In the first place, there is the caste of priests, which is separated from all the others; next, there are the artificers, who ply their several crafts by themselves and do not intermix, and also there  
 b is the class of shepherds and of hunters, as well as that of husbandmen. And you will observe, too, that the warriors in Egypt are distinct from all the other classes, and are commanded by the law to devote themselves solely to military pursuits; moreover, the weapons which they carry are shields and spears—a style of equipment which the

goddess taught of Asiatics first to us, as in your part of the world first to you.

Then as to wisdom, do you observe how our law from the very first made a study of the whole order of things, extending even to prophecy and medicine which gives health, out of these divine elements deriving what was needful for human life, and adding every sort of knowledge which was akin to them. All this order and arrangement the goddess first imparted to you when establishing your city, and she chose the spot of earth in which you were born, because she saw that the happy temperament of the seasons in that land would produce the wisest of men. Wherefore the goddess, who was a lover both of war and of wisdom, selected and first of all settled that spot which was the most likely to produce men likest herself. And there you dwelt, having such laws as these and still better ones, and excelled all mankind in all virtue, as became the children and disciples of the gods.

Many great and wonderful deeds are recorded of your state in our histories. But one of them exceeds all the rest in greatness and valor. For these histories tell of a mighty power which unprovoked made an expedition against the whole of Europe and Asia, and to which your city put an end. This power came forth out of the Atlantic Ocean, for in those days the Atlantic was navigable, and there was an island situated in front of the straits which are by you called the Pillars of Heracles. The island was larger than Libya and Asia put together, and was the way to other islands, and from these you might pass to the whole of the opposite continent which surrounded the true ocean, for this sea which is within the Straits of Heracles is only a harbor, having a narrow entrance, but that other is a real sea, and the land surrounding it on every side may be most truly called a boundless continent. Now in this island of Atlantis there was a great and wonderful empire which had rule over the whole island and several others, and over parts of the continent, and, furthermore, the men of Atlantis had subjected the parts of Libya within the columns of Heracles as far as Egypt, and of Europe as far as Tyrrhenia. This vast power, gathered into one, endeavored to subdue at a blow our country and yours and the whole of the region within the straits, and then, Solon, your country shone forth, in the excellence of her virtue and strength, among all mankind. She was pre-eminent in courage and military skill, and was the leader of the Hellenes. And when the rest fell off from her, being compelled to stand alone, after having undergone the very extremity of danger, she defeated and triumphed over the invaders, and preserved from slavery those who were not yet subjugated, and generously liberated all the rest of us who dwell within the Pillars. But afterward there occurred violent earthquakes and floods, and in a single day and night of misfortune all your warlike men in a body sank into the earth, and the island of Atlantis in like

manner disappeared in the depths of the sea. For which reason the sea in those parts is impassable and impenetrable, because there is a shoal of mud in the way, and this was caused by the subsidence of the island.

- e I have told you briefly, Socrates, what the aged Critias heard from Solon and related to us. And when you were speaking yesterday about your city and citizens, the tale which I have just been repeating to you came into my mind, and I remarked with astonishment how, by some mysterious coincidence, you agreed in almost every particular  
26 with the narrative of Solon, but I did not like to speak at the moment. For a long time had elapsed, and I had forgotten too much; I thought that I must first of all run over the narrative in my own mind, and then I would speak. And so I readily assented to your request yesterday, considering that in all such cases the chief difficulty is to find a tale suitable to our purpose, and that with such a tale we should be fairly well provided.

- And therefore, as Hermocrates has told you, on my way home  
b yesterday I at once communicated the tale to my companions as I remembered it, and after I left them, during the night by thinking I recovered nearly the whole of it. Truly, as is often said, the lessons of our childhood make a wonderful impression on our memories, for I am not sure that I could remember all the discourse of yesterday, but I should be much surprised if I forgot any of these things which I have  
c heard very long ago. I listened at the time with childlike interest to the old man's narrative; he was very ready to teach me, and I asked him again and again to repeat his words, so that, like an indelible picture, they were branded into my mind. As soon as the day broke, I rehearsed them as he spoke them to my companions, that they, as well as myself, might have something to say. And now, Socrates, to make an end of my preface, I am ready to tell you the whole tale. I will give you not only the general heads, but the particulars, as they were told to me. The city and citizens, which you yesterday described to us in fiction, we will now transfer to the world of reality. It shall be the  
d ancient city of Athens, and we will suppose that the citizens whom you imagined were our veritable ancestors of whom the priest spoke; they will perfectly harmonize, and there will be no inconsistency in saying that the citizens of your republic are these ancient Athenians. Let us divide the subject among us, and all endeavor according to our ability gracefully to execute the task which you have imposed upon us. Consider then, Socrates, if this narrative is suited to the purpose, or  
e whether we should seek for some other instead.

- SOCRATES: And what other, Critias, can we find that will be better than this which is natural and suitable to the festival of the goddess, and has the very great advantage of being a fact and not a fiction? How or where shall we find another if we abandon this? We cannot, and therefore you must tell the tale, and good luck to you, and  
27 I in return for my yesterday's discourse will now rest and be a listener.

CRITIAS: Let me proceed to explain to you, Socrates, the order in which we have arranged our entertainment. Our intention is that Timaeus, who is the most of an astronomer among us, and has made the nature of the universe his special study, should speak first, beginning with the generation of the world and going down to the creation of man; next, I am to receive the men whom he has created, and of whom some will have profited by the excellent education which you have given them; and then, in accordance with the tale of Solon, and b equally with his law, we will bring them into court and make them citizens, as if they were those very Athenians whom the sacred Egyptian record has recovered from oblivion, and thenceforward we will speak of them as Athenians and fellow citizens.

SOCRATES: I see that I shall receive in my turn a perfect and splendid feast of reason. And now, Timaeus, you, I suppose, should speak next, after duly calling upon the gods.

TIMAEUS: All men, Socrates, who have any degree of right feeling, at the beginning of every enterprise, whether small or great, always call upon God. And we, too, who are going to discourse of the nature of the universe, how created or how existing without creation, if we be not altogether out of our wits, must invoke the aid of gods and goddesses and pray that our words may be above all acceptable to them and in consequence to ourselves. Let this, then, be our invocation of the gods, to which I add an exhortation of myself to speak in a such manner as will be most intelligible to you, and will most accord with my own intent.

First then, in my judgment, we must make a distinction and ask, What is that which always is and has no becoming, and what is that which is always becoming and never is? That which is apprehended by intelligence and reason is always in the same state, but that which is conceived by opinion with the help of sensation and without 28 reason is always in a process of becoming and perishing and never really is. Now everything that becomes or is created must of necessity be created by some cause, for without a cause nothing can be created. The work of the creator, whenever he looks to the unchangeable and fashions the form and nature of his work after an unchangeable pattern, must necessarily be made fair and perfect, but when he looks b to the created only and uses a created pattern, it is not fair or perfect. Was the heaven then or the world, whether called by this or by any other more appropriate name—assuming the name, I am asking a question which has to be asked at the beginning of an inquiry about anything—was the world, I say, always in existence and without beginning, or created, and had it a beginning? Created, I reply, being visible and tangible and having a body, and therefore sensible, and all sensible things are apprehended by opinion and sense, and are in a c process of creation and created. Now that which is created must, as we affirm, of necessity be created by a cause. But the father and

- maker of all this universe is past finding out, and even if we found him, to tell of him to all men would be impossible. This question, however, we must ask about the world. Which of the patterns had the artificer in view when he made it—the pattern of the unchangeable or
- 29 of that which is created? If the world be indeed fair and the artificer good, it is manifest that he must have looked to that which is eternal, but if what cannot be said without blasphemy is true, then to the created pattern. Everyone will see that he must have looked to the eternal, for the world is the fairest of creations and he is the best of causes. And having been created in this way, the world has been framed in the likeness of that which is apprehended by reason and mind and is unchangeable, and must therefore of necessity, if this
- b admitted, be a copy of something. Now it is all-important that the beginning of everything should be according to nature. And in speaking of the copy and the original we may assume that words are akin to the matter which they describe; when they relate to the lasting and permanent and intelligible, they ought to be lasting and unalterable, and, as far as their nature allows, irrefutable and invincible—nothing
- c less. But when they express only the copy or likeness and not the eternal things themselves, they need only be likely and analogous to the former words. As being is to becoming, so is truth to belief. If then, Socrates, amidst the many opinions about the gods and the generation of the universe, we are not able to give notions which are altogether and in every respect exact and consistent with one another, do not be surprised. Enough if we adduce probabilities as likely as
- d any others, for we must remember that I who am the speaker and you who are the judges are only mortal men, and we ought to accept the tale which is probable and inquire no further.

SOCRATES: Excellent, Timaeus, and we will do precisely as you bid us. The prelude is charming and is already accepted by us—may we beg of you to proceed to the strain?

- TIMAEUS: Let me tell you then why the creator made this
- e world of generation. He was good, and the good can never have any jealousy of anything. And being free from jealousy, he desired that all
- 30 things should be as like himself as they could be. This is in the truest sense the origin of creation and of the world, as we shall do well in believing on the testimony of wise men. God desired that all things should be good and nothing bad, so far as this was attainable. Wherefore also finding the whole visible sphere not at rest, but moving in an irregular and disorderly fashion, out of disorder he brought order, considering that this was in every way better than the other. Now the deeds of the best could never be or have been other than the fairest,
- b and the creator, reflecting on the things which are by nature visible, found that no unintelligent creature taken as a whole could ever be fairer than the intelligent taken as a whole, and again that intelligence could not be present in anything which was devoid of soul. For which

reason, when he was framing the universe, he put intelligence in soul, and soul in body, that he might be the creator of a work which was by nature fairest and best. On this wise, using the language of probability, we may say that the world came into being—a living creature truly endowed with soul and intelligence by the providence of God. c

This being supposed, let us proceed to the next stage. In the likeness of what animal did the creator make the world? It would be an unworthy thing to liken it to any nature which exists as a part only, for nothing can be beautiful which is like any imperfect thing. But let us suppose the world to be the very image of that whole of which all other animals both individually and in their tribes are portions. For the original of the universe contains in itself all intelligible beings, d just as this world comprehends us and all other visible creatures. For the deity, intending to make this world like the fairest and most perfect of intelligible beings, framed one visible animal comprehending within itself all other animals of a kindred nature. Are we right in 31 saying that there is one world, or that they are many and infinite? There must be one only if the created copy is to accord with the original. For that which includes all other intelligible creatures cannot have a second or companion; in that case there would be need of another living being which would include both, and of which they would be parts, and the likeness would be more truly said to resemble not them, but that other which included them. In order then that the world might be solitary, like the perfect animal, the creator made not b two worlds or an infinite number of them, but there is and ever will be one only—begotten and created heaven.

Now that which is created is of necessity corporeal, and also visible and tangible. And nothing is visible where there is no fire, or tangible which has no solidity, and nothing is solid without earth. Wherefore also God in the beginning of creation made the body of the universe to consist of fire and earth. But two things cannot be rightly put together without a third; there must be some bond of union c between them. And the fairest bond is that which makes the most complete fusion of itself and the things which it combines, and proportion is best adapted to effect such a union. For whenever in any three numbers, whether cube or square, there is a mean, which is to the last term what the first term is to it, and again, when the mean is to the 32 first term as the last term is to the mean—then the mean becoming first and last, and the first and last both becoming means, they will all of them of necessity come to be the same, and having become the same with one another will be all one. If the universal frame had been created a surface only and having no depth, a single mean would have sufficed to bind together itself and the other terms, but now, as the b world must be solid, and solid bodies are always compacted not by one mean but by two. God placed water and air in the mean between fire and earth, and made them to have the same proportion so far as was

possible—as fire is to air so is air to water, and as air is to water so is water to earth—and thus he bound and put together a visible and tangible heaven. And for these reasons, and out of such elements which are in number four, the body of the world was created, and it was harmonized by proportion, and therefore has the spirit of friendship, and having been reconciled to itself, it was indissoluble by the hand of any other than the framer.

Now the creation took up the whole of each of the four elements, for the creator compounded the world out of all the fire and all the water and all the air and all the earth, leaving no part of any of them nor any power of them outside. His intention was, in the first place, that the animal should be as far as possible a perfect whole and of perfect parts, secondly, that it should be one, leaving no remnants out of which another such world might be created, and also that it should be free from old age and unaffected by disease. Considering that if heat and cold and other powerful forces surround composite bodies and attack them from without, they decompose them before their time, and by bringing diseases and old age upon them make them waste away—for this cause and on these grounds he made the world one whole, having every part entire, and being therefore perfect and not liable to old age and disease. And he gave to the world the figure which was suitable and also natural. Now to the animal which was to comprehend all animals, that figure would be suitable which comprehends within itself all other figures. Wherefore he made the world in the form of a globe, round as from a lathe, having its extremes in every direction equidistant from the center, the most perfect and the most like itself of all figures, for he considered that the like is infinitely fairer than the unlike. This he finished off, making the surface smooth all around for many reasons—in the first place, because the living being had no need of eyes when there was nothing remaining outside him to be seen, nor of ears when there was nothing to be heard, and there was no surrounding atmosphere to be breathed, nor would there have been any use of organs by the help of which he might receive his food or get rid of what he had already digested, since there was nothing which went from him or came into him, for there was nothing besides him. Of design he was created thus—his own waste providing his own food, and all that he did or suffered taking place in and by himself. For the creator conceived that a being which was self-sufficient would be far more excellent than one which lacked anything, and, as he had no need to take anything or defend himself against anyone, the creator did not think it necessary to bestow upon him hands, nor had he any need of feet, nor of the whole apparatus of walking. But the movement suited to his spherical form was assigned to him, being of all the seven that which is most appropriate to mind and intelligence, and he was made to move in the same manner and in the same spot, within his own limits revolving in a circle. All the

other six motions were taken away from him, and he was made not to partake of their deviations. And as this circular movement required no feet, the universe was created without legs and without feet.

Such was the whole plan of the eternal God about the god that was to be; he made it smooth and even, having a surface in every direction equidistant from the center, a body entire and perfect, and formed out of perfect bodies. And in the center he put the soul, which he diffused throughout the body, making it also to be the exterior environment of it, and he made the universe a circle moving in a circle, one and solitary, yet by reason of its excellence able to converse with itself, and needing no other friendship or acquaintance. Having these purposes in view he created the world a blessed god.

Now God did not make the soul after the body, although we are speaking of them in this order, for when he put them together he would never have allowed that the elder should be ruled by the younger, but this is a random manner of speaking which we have, because somehow we ourselves too are very much under the dominion of chance. Whereas he made the soul in origin and excellence prior to and older than the body, to be the ruler and mistress, of whom the body was to be the subject. And he made her out of the following elements and on this wise. From the being which is indivisible and unchangeable, and from that kind of being which is distributed among bodies, he compounded a third and intermediate kind of being. He did likewise with the same and the different, blending together the indivisible kind of each with that which is portioned out in bodies. Then, taking the three new elements, he mingled them all into one form, compressing by force the reluctant and unsociable nature of the different into the same. When he had mingled them with the intermediate kind of being and out of three made one, he again divided this whole into as many portions as was fitting, each portion being a compound of the same, the different, and being. And he proceeded to divide after this manner. First of all, he took away one part of the whole [1], and then he separated a second part which was double the first [2], and then he took away a third part which was half as much again as the second and three times as much as the first [3], and then he took a fourth part which was twice as much as the second [4], and a fifth part which was three times the third [9], and a sixth part which was eight times the first [8], and a seventh part which was twenty-seven times the first [27]. After this he filled up the double intervals [that is, between 1, 2, 4, 8] and the triple [that is, between 1, 3, 9, 27], cutting off yet other portions from the mixture and placing them in the intervals, so that in each interval there were two kinds of means, the one exceeding and exceeded by equal parts of its extremes [as for example, 1,  $\frac{4}{3}$ , 2, in which the mean  $\frac{4}{3}$  is one third of 1 more than 1, and one third of 2 less than 2], the other being that kind of mean which exceeds and is exceeded by an equal number. Where

there were intervals of  $\frac{3}{2}$  and of  $\frac{4}{3}$  and of  $\frac{9}{8}$ , made by the connecting  
 b terms in the former intervals, he filled up all the intervals of  $\frac{4}{3}$  with  
 the interval of  $\frac{9}{8}$ , leaving a fraction over, and the interval which this  
 fraction expressed was in the ratio of 256 to 243. And thus the whole  
 mixture out of which he cut these portions was all exhausted by him.  
 This entire compound he divided lengthwise into two parts which he  
 joined to one another at the center like the letter X, and bent them  
 c into a circular form, connecting them with themselves and each other  
 at the point opposite to their original meeting point, and, compre-  
 hending them in a uniform revolution upon the same axis, he made  
 the one the outer and the other the inner circle. Now the motion of the  
 outer circle he called the motion of the same, and the motion of the  
 inner circle the motion of the other or diverse. The motion of the same  
 he carried round by the side to the right, and the motion of the di-  
 verse diagonally to the left. And he gave dominion to the motion of  
 d the same and like, for that he left single and undivided, but the inner  
 motion he divided in six places and made seven unequal circles having  
 their intervals in ratios of two and three, three of each, and bade the  
 orbits proceed in a direction opposite to one another. And three [sun,  
 Mercury, Venus] he made to move with equal swiftness, and the re-  
 maining four [moon, Saturn, Mars, Jupiter] to move with unequal  
 swiftness to the three and to one another, but in due proportion.

Now when the creator had framed the soul according to his will,  
 he formed within her the corporeal universe, and brought the two to-  
 e gether and united them center to center. The soul, interfused every-  
 where from the center to the circumference of heaven, of which also  
 she is the external envelopment, herself turning in herself, began a  
 divine beginning of never-ceasing and rational life enduring  
 37 throughout all time. The body of heaven is visible, but the soul is in-  
 visible and partakes of reason and harmony, and, being made by the  
 best of intellectual and everlasting natures, is the best of things cre-  
 ated. And because she is composed of the same and of the different  
 and of being these three, and is divided and united in due proportion,  
 and in her revolutions returns upon herself, the soul, when touching  
 anything which has being, whether dispersed in parts or undivided, is  
 stirred through all her powers to declare the sameness or difference  
 of that thing and some other, and to what individuals are related,  
 b and by what affected, and in what way and how and when, both in the  
 world of generation and in the world of immutable being. And when  
 reason, which works with equal truth, whether she be in the circle of  
 the diverse or of the same—in voiceless silence holding her onward  
 course in the sphere of the self-moved—when reason, I say, is hover-  
 ing around the sensible world and when the circle of the diverse also  
 moving truly imparts the intimations of sense to the whole soul, then  
 c arise opinions and beliefs sure and certain. But when reason is con-  
 cerned with the rational, and the circle of the same moving smoothly

declares it, then intelligence and knowledge are necessarily achieved. And if anyone affirms that in which these two are found to be other than the soul, he will say the very opposite of the truth.

When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods, he rejoiced, and in his joy determined to make the copy still more like the original, and as this was an eternal living being, he sought to make the universe eternal, so far as might be. Now the nature of the ideal being was everlasting, but to bestow this attribute in its fullness upon a creature was impossible. Wherefore he resolved to have a moving image of eternity, and when he set in order the heaven, he made this image eternal but moving according to number, while eternity itself rests in unity, and this image we call time. For there were no days and nights and months and years before the heaven was created, but when he constructed the heaven he created them also. They are all parts of time, and the past and future are created species of time, which we unconsciously but wrongly transfer to eternal being, for we say that it 'was,' or 'is,' or 'will be,' but the truth is that 'is' alone is properly attributed to it, and that 'was' and 'will be' are only to be spoken of becoming in time, for they are motions, but that which is immovably the same forever cannot become older or younger by time, nor can it be said that it came into being in the past, or has come into being now, or will come into being in the future, nor is it subject at all to any of those states which affect moving and sensible things and of which generation is the cause. These are the forms of time, which imitates eternity and revolves according to a law of number. Moreover, when we say that what has become *is* become and what becomes *is* becoming, and that what will become *is* about to become and that the nonexistent *is* nonexistent—all these are inaccurate modes of expression. But perhaps this whole subject will be more suitably discussed on some other occasion.

Time, then, and the heaven came into being at the same instant in order that, having been created together, if ever there was to be a dissolution of them, they might be dissolved together. It was framed after the pattern of the eternal nature—that it might resemble this as far as was possible, for the pattern exists from eternity, and the created heaven has been and is and will be in all time. Such was the mind and thought of God in the creation of time. The sun and moon and five other stars, which are called the planets, were created by him in order to distinguish and preserve the numbers of time, and when he had made their several bodies, he placed them in the orbits in which the circle of the other was revolving—in seven orbits seven stars. First, there was the moon in the orbit nearest the earth, and the next the sun, in the second orbit above the earth; then came the morning star and the star said to be sacred to Hermes, moving in orbits which have an equal swiftness with the sun, but in an opposite direction, and this

is the reason why the sun and Hermes and Lucifer regularly overtake and are overtaken by each other. To enumerate the places which he assigned to the other stars and to give all the reasons why he assigned them, although a secondary matter, would give more trouble than the primary. These things at some future time, when we are at leisure, may have the consideration which they deserve, but not at present.

Now, when each of the stars which were necessary to the creation of time had come to its proper orbit, and they had become living creatures having bodies fastened by vital chains, and learned their appointed task—moving in the motion of the diverse, which is diagonal and passes through and is governed by the motion of the same—they  
 39 revolved, some in a larger and some in a lesser orbit, those which had the lesser orbit revolving faster, and those which had the larger more slowly. Now by reason of the motion of the same, those which revolved fastest appeared to be overtaken by those which moved slower although they really overtook them, for the motion of the same  
 b made them all turn in a spiral, and, because some went one way and some another, that which receded most slowly from the sphere of the same, which was the swiftest, appeared to follow it most nearly. That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits, that it might give light to the whole of heaven, and that the animals, as many as nature intended, might participate in number, learning  
 c arithmetic from the revolution of the same and the like. Thus, then, and for this reason the night and the day were created, being the period of the one most intelligent revolution. And the month is accomplished when the moon has completed her orbit and overtaken the sun, and the year when the sun has completed his own orbit. Mankind, with hardly an exception, have not remarked the periods of the other stars, and they have no name for them, and do not measure them against one another by the help of number, and hence they can  
 d scarcely be said to know that their wanderings, being of vast number and admirable for their variety, make up time. And yet there is no difficulty in seeing that the perfect number of time fulfills the perfect year when all the eight revolutions, having their relative degrees of swiftness, are accomplished together and attain their completion at the same time, measured by the rotation of the same and equally moving. After this manner, and for these reasons, came into being such of the stars as in their heavenly progress received  
 e reversals of motion, to the end that the created heaven might be as like as possible to the perfect and intelligible animal, by imitation of its eternal nature.

Thus far and until the birth of time the created universe was made in the likeness of the original, but inasmuch as all animals were not

yet comprehended therein, it was still unlike. Therefore, the creator proceeded to fashion it after the nature of the pattern in this remaining point. Now as in the ideal animal the mind perceives ideas or species of a certain nature and number, he thought that this created animal ought to have species of a like nature and number. There are four such. One of them is the heavenly race of the gods; 40 another, the race of birds whose way is in the air; the third, the watery species; and the fourth, the pedestrian and land creatures. Of the heavenly and divine, he created the greater part out of fire, that they might be the brightest of all things and fairest to behold, and he fashioned them after the likeness of the universe in the figure of a circle, and made them follow the intelligent motion of the supreme, distributing them over the whole circumference of heaven, which was to be a true cosmos or glorious world spangled with them all over. And he gave to each of them two movements—the first, a movement on the same spot after the same manner, whereby they ever b continue to think consistently the same thoughts about the same things, in the same respect; the second, a forward movement, in which they are controlled by the revolution of the same and the like—but by the other five motions they were unaffected, in order that each of them might attain the highest perfection. And for this reason the fixed stars were created, to be divine and eternal animals, ever abiding and revolving after the same manner and on the same spot, and the other stars which reverse their motion and are subject to deviations of this kind were created in the manner already described. The earth, which is our nurse, clinging around the pole which is extended through the universe, he framed to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of c heaven. Vain would be the attempt to tell all the figures of them circling as in dance, and their juxtapositions, and the return of them in their revolutions upon themselves, and their approximations, and to say which of these deities in their conjunctions meet, and which of them are in opposition, and in what order they get behind and before one another, and when they are severally eclipsed to our sight and again reappear, sending terrors and intimations of the future to those d who cannot calculate their movements—to attempt to tell of all this without a visible representation of the heavenly system would be labor in vain. Enough on this head, and now let what we have said about the nature of the created and visible gods have an end.

To know or tell the origin of the other divinities is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the gods—that is what they say—and they must surely have known their own ancestors. How can we e doubt the word of the children of the gods? Although they give no probable or certain proofs, still, as they declare that they are speaking

of what took place in their own family, we must conform to custom and believe them. In this manner, then, according to them, the genealogy of these gods is to be received and set forth.

Oceanus and Tethys were the children of Earth and Heaven, and from these sprang Phorcys and Cronus and Rhea, and all that generation, and from Cronus and Rhea sprang Zeus and Hera, and all those  
 41 who are said to be their brethren, and others who were the children of these.

Now, when all of them, both those who visibly appear in their revolutions as well as those other gods who are of a more retiring nature, had come into being, the creator of the universe addressed them in these words. Gods, children of gods, who are my works and of whom I am the artificer and father, my creations are indissoluble, if  
 b so I will. All that is bound may be undone, but only an evil being would wish to undo that which is harmonious and happy. Wherefore, since ye are but creatures, ye are not altogether immortal and indissoluble, but ye shall certainly not be dissolved, nor be liable to the fate of death, having in my will a greater and mightier bond than those with which ye were bound at the time of your birth. And now listen to my instructions. Three tribes of mortal beings remain to be created—without them the universe will be incomplete, for it will not contain  
 c every kind of animal which it ought to contain, if it is to be perfect. On the other hand, if they were created by me and received life at my hands, they would be on an equality with the gods. In order then that they may be mortal, and that this universe may be truly universal, do ye, according to your natures, betake yourselves to the formation of animals, imitating the power which was shown by me in creating you. The part of them worthy of the name immortal, which is called divine and is the guiding principle of those who are willing to follow justice and you—of that divine part I will myself sow the seed, and having made a beginning, I will hand the work over to you. And do ye then  
 d interweave the mortal with the immortal and make and beget living creatures, and give them food and make them to grow, and receive them again in death.

Thus he spoke, and once more into the cup in which he had previously mingled the soul of the universe he poured the remains of the elements, and mingled them in much the same manner; they were not, however, pure as before, but diluted to the second and third degree. And having made it he divided the whole mixture into souls equal in number to the stars and assigned each soul to a star, and having there  
 e placed them as in a chariot he showed them the nature of the universe and declared to them the laws of destiny, according to which their first birth would be one and the same for all—no one should suffer a disadvantage at his hands. They were to be sown in the instruments of time severally adapted to them, and to come forth the most religious  
 42 of animals, and as human nature was of two kinds, the superior race

was of such and such a character, and would hereafter be called man. Now, when they should be implanted in bodies by necessity and be always gaining or losing some part of their bodily substance, then, in the first place, it would be necessary that they should all have in them one and the same faculty of sensation, arising out of irresistible impressions; in the second place, they must have love, in which pleasure and pain mingle—also fear and anger, and the feelings which are akin or opposite to them. If they conquered these they would live righteously, and if they were conquered by them, unrighteously. He who lived well during his appointed time was to return and dwell in his native star, and there he would have a blessed and congenial existence. But if he failed in attaining this, at the second birth he would pass into a woman, and if, when in that state of being, he did not desist from evil, he would continually be changed into some brute who resembled him in the evil nature which he had acquired, and would not cease from his toils and transformations until he helped the revolution of the same and the like within him to draw in its train the turbulent mob of later accretions made up of fire and air and water and earth, and by this victory of reason over the irrational returned to the form of his first and better state. Having given all these laws to his creatures, that he might be guiltless of future evil in any of them, the creator sowed some of them in the earth, and some in the moon, and some in the other instruments of time. And when he had sown them he committed to the younger gods the fashioning of their mortal bodies, and desired them to furnish what was still lacking to the human soul, and having made all the suitable additions, to rule over them, and to pilot the mortal animal in the best and wisest manner which they could and avert from him all but self-inflicted evils.

When the creator had made all these ordinances he remained in his own accustomed nature, and his children heard and were obedient to their father's word, and receiving from him the immortal principle of a mortal creature, in imitation of their own creator they borrowed portions of fire and earth and water and air from the world, which were hereafter to be restored—these they took and welded them together, not with the indissoluble chains by which they were themselves bound, but with little pegs too small to be visible, making up out of all the four elements each separate body, and fastening the courses of the immortal soul in a body which was in a state of perpetual influx and efflux. Now these courses, detained as in a vast river, neither overcame nor were overcome, but were hurrying and hurried to and fro, so that the whole animal was moved and progressed, irregularly however and irrationally and anyhow, in all the six directions of motion, wandering backward and forward, and right and left, and up and down, and in all the six directions. For great as was the advancing and retiring flood which provided nourishment, the affections produced by external contact caused still greater tumult—when the

- c body of anyone met and came into collision with some external fire or with the solid earth or the gliding waters, or was caught in the tempest borne on the air—and the motions produced by any of these impulses were carried through the body to the soul. All such motions have consequently received the general name of 'sensations,' which they still retain. And they did in fact at that time create a very great and mighty
- d movement; uniting with the ever-flowing stream in stirring up and violently shaking the courses of the soul, they completely stopped the revolution of the same by their opposing current and hindered it from predominating and advancing, and they so disturbed the nature of the other or diverse that the three double intervals [that is, between 1, 2, 4, 8] and the three triple intervals [that is, between 1, 3, 9, 27], together with the mean terms and connecting links which are expressed by the ratios of 3:2 and 4:3 and of 9:8—these, although they cannot be wholly undone except by him who united them, were twisted
- e by them in all sorts of ways, and the circles were broken and disordered in every possible manner, so that when they moved they were tumbling to pieces and moved irrationally, at one time in a reverse direction, and then again obliquely, and then upside down, as you might imagine a person who is upside down and has his head leaning upon the ground and his feet up against something in the air, and when he is in such a position, both he and the spectator fancy that the right of either is his left, and the left right. If, when powerfully experiencing these and similar effects, the revolutions of the soul come in contact
- 44 with some external thing, either of the class of the same or of the other, they speak of the same or of the other in a manner the very opposite of the truth, and they become false and foolish, and there is no course or revolution in them which has a guiding or directing power. And if again any sensations enter in violently from without and drag after them the whole vessel of the soul, then the courses of the soul, though they seem to conquer, are really conquered.

- And by reason of all these affections, the soul, when incased in a
- b mortal body, now, as in the beginning, is at first without intelligence, but when the flood of growth and nutriment abates and the courses of the soul, calming down, go their own way and become steadier as time goes on, then the several circles return to their natural form and their revolutions are corrected, and they call the same and the other by their right names and make the possessor of them to become a rational being. And if these combine in him with any true nurture or
- c education, he attains the fullness and health of the perfect man, and escapes the worst disease of all, but if he neglects education he walks lame to the end of his life and returns imperfect and good for nothing to the world below. This, however, is a later stage; at present we must treat more exactly the subject before us, which involves a preliminary inquiry into the generation of the body and its members, and how the

soul was created—for what reason and by what providence of the gods—and holding fast to probability we must pursue our way. d

First, then, the gods, imitating the spherical shape of the universe, enclosed the two divine courses in a spherical body, that, namely, which we now term the head, being the most divine part of us and the lord of all that is in us; to this the gods, when they put together the body, gave all the other members to be servants, considering that it must partake of every sort of motion. In order then that it might not tumble about among the high and deep places of the earth, e but might be able to get over the one and out of the other, they provided the body to be its vehicle and means of locomotion, which consequently had length and was furnished with four limbs extended and flexible. These God contrived to be instruments of locomotion with which it might take hold and find support, and so be able to pass 45 through all places, carrying on high the dwelling place of the most sacred and divine part of us. Such was the origin of legs and hands, which for this reason were attached to every man, and the gods, deeming the front part of man to be more honorable and more fit to command than the hinder part, made us to move mostly in a forward direction. Wherefore man must needs have his front part unlike and distinguished from the rest of his body. And so in the vessel of the head, they first of all put a face in which they inserted organs to minister in all things to the providence of the soul, and they appointed this part, which has authority, to be the natural front. And of the organs they first contrived the eyes to give light, and the principle according to which they were inserted was as follows. So much of fire as would not burn, but gave a gentle light, they formed into a substance akin to the light of everyday life, and the pure fire which is within us and related thereto they made to flow through the eyes in a stream smooth and dense, compressing the whole eye and especially the center part, so that it kept out everything of a coarser nature and allowed to pass only this pure element. When the light of day surrounds the stream of vision, then like falls upon like, and they coalesce, and one body is formed by natural affinity in the line of vision, wherever the light that falls from within meets with an external object. And the whole stream of vision, being similarly affected in virtue of similarity, d diffuses the motions of what it touches or what touches it over the whole body, until they reach the soul, causing that perception which we call sight. But when night comes on and the external and kindred fire departs, then the stream of vision is cut off, for going forth to an unlike element it is changed and extinguished, being no longer of one nature with the surrounding atmosphere which is now deprived of fire, and so the eye no longer sees, and we feel disposed to sleep. For e when the eyelids, which the gods invented for the preservation of sight, are closed, they keep in the internal fire, and the power of the

fire diffuses and equalizes the inward motions; when they are equalized, there is rest, and when the rest is profound, sleep comes over us

46 scarce disturbed by dreams, but where any greater motions still remain, according to their nature and locality, they engender within us corresponding visions in dreams, which are remembered by us when we awaken to the external world. And now there is no longer any difficulty in understanding the creation of images in mirrors and all smooth and bright surfaces. For from the communion of the internal and external fires, and again from the union of them and their numerous transformations when they meet in the mirror, all these appearances of necessity arise when the fire from the face coalesces with the fire from the eye on the bright and smooth surface. And right appears left and left right, because the visual rays come into contact with the rays emitted by the object in a manner contrary to the usual mode of meeting. But the right appears right, and the left left, when the position of one of the two concurring lights is reversed, and this happens when the mirror is concave and its smooth surface repels

c the right stream of vision to the left side, and the left to the right. Or if the mirror be turned vertically, then the concavity makes the countenance appear to be all upside down, and the lower rays are driven upward and the upper downward.

All these are to be reckoned among the second and co-operative

d causes which God, carrying into execution the idea of the best as far as possible, uses as his ministers. They are thought by most men not to be the second, but the prime causes of all things, because they freeze and heat, and contract and dilate, and the like. But they are not so, for they are incapable of reason or intellect; the only being which can properly have mind is the invisible soul, whereas fire and water, and earth and air, are all of them visible bodies. The lover of

e intellect and knowledge ought to explore causes of intelligent nature first of all, and, secondly, of those things which, being moved by others, are compelled to move others. And this is what we too must do. Both kinds of causes should be acknowledged by us, but a distinction should be made between those which are endowed with mind and are the workers of things fair and good, and those which are deprived of intelligence and always produce chance effects without order or design. Of the second or co-operative causes of sight, which help to give to the eyes the power which they now possess, enough has been said. I will therefore now proceed to speak of the higher use and purpose

47 for which God has given them to us. The sight in my opinion is the source of the greatest benefit to us, for had we never seen the stars and the sun and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the months and the revolutions of the years have created number and have given us a conception of time, and the power of inquiring about the nature of the universe. And from this

source we have derived philosophy, than which no greater good ever b  
was or will be given by the gods to mortal man. This is the greatest  
boon of sight, and of the lesser benefits why should I speak? Even  
the ordinary man if he were deprived of them would bewail his loss,  
but in vain. Thus much let me say however. God invented and gave us  
sight to the end that we might behold the courses of intelligence in the  
heaven, and apply them to the courses of our own intelligence which  
are akin to them, the unperturbed to the perturbed, and that we, learn- c  
ing them and partaking of the natural truth of reason, might imitate  
the absolutely unerring courses of God and regulate our own vagaries.  
The same may be affirmed of speech and hearing. They have been  
given by the gods to the same end and for a like reason. For this is the  
principal end of speech, whereto it most contributes. Moreover, so  
much of music as is adapted to the sound of the voice and to the sense  
of hearing is granted to us for the sake of harmony. And harmony, d  
which has motions akin to the revolutions of our souls, is not re-  
garded by the intelligent votary of the Muses as given by them with a  
view to irrational pleasure, which is deemed to be the purpose of it in  
our day, but as meant to correct any discord which may have arisen  
in the courses of the soul, and to be our ally in bringing her into har-  
mony and agreement with herself, and rhythm too was given by them  
for the same reason, on account of the irregular and graceless ways e  
which prevail among mankind generally, and to help us against them.

Thus far in what we have been saying, with small exceptions, the  
works of intelligence have been set forth, and now we must place by  
the side of them in our discourse the things which come into being  
through necessity—for the creation of this world is the combined work  
of necessity and mind. Mind, the ruling power, persuaded necessity 48  
to bring the greater part of created things to perfection, and thus and  
after this manner in the beginning, through necessity made subject to  
reason, this universe was created. But if a person will truly tell of the  
way in which the work was accomplished, he must include the varia-  
ble cause as well, and explain its influence. Wherefore, we must re-  
turn again and find another suitable beginning—as about the former b  
matters, so also about these. To which end we must consider the na-  
ture of fire and water and air and earth, such as they were prior to the  
creation of the heaven, and what was happening to them in this pre-  
vious state, for no one has as yet explained the manner of their gen-  
eration, but we speak of fire and the rest of them, as though men knew  
their natures, and we maintain them to be the first principles and let-  
ters or elements of the whole, when they cannot reasonably be com-  
pared by a man of any sense even to syllables or first compounds. And c  
let me say thus much. I will not now speak of the first principle or  
principles of all things, or by whatever name they are to be called, for  
this reason—because it is difficult to set forth my opinion according  
to the method of discussion which we are at present employing. Do not

imagine, any more than I can bring myself to imagine, that I should be right in undertaking so great and difficult a task. Remembering  
 d what I said at first about probability, I will do my best to give as probable an explanation as any other—or rather, more probable—and I will first go back to the beginning and try to speak of each thing and of all. Once more, then, at the commencement of my discourse, I call upon God and beg him to be our savior out of a strange and unwonted  
 e inquiry, and to bring us to the haven of probability. So now let us begin again.

This new beginning of our discussion of the universe requires a fuller division than the former, for then we made two classes; now a third must be revealed. The two sufficed for the former discussion. One, which we assumed, was a pattern intelligible and always the same, and the second was only the imitation of the pattern, generated  
 49 and visible. There is also a third kind which we did not distinguish at the time, conceiving that the two would be enough. But now the argument seems to require that we should set forth in words another kind, which is difficult of explanation and dimly seen. What nature are we to attribute to this new kind of being? We reply that it is the receptacle, and in a manner the nurse, of all generation. I have spoken the  
 b truth, but I must express myself in clearer language, and this will be an arduous task for many reasons, and in particular because I must first raise questions concerning fire and the other elements, and determine what each of them is, for to say, with any probability or certitude, which of them should be called water rather than fire, and which should be called any of them rather than all or some one of them, is a difficult matter. How, then, shall we settle this point, and what questions about the elements may be fairly raised?

In the first place, we see that what we just now called water, by  
 c condensation, I suppose, becomes stone and earth, and this same element, when melted and dispersed, passes into vapor and air. Air, again, when inflamed, becomes fire, and, again, fire, when condensed and extinguished, passes once more into the form of air, and once more, air, when collected and condensed, produces cloud and mist—and from these, when still more compressed, comes flowing water, and from water comes earth and stones once more—and thus generation appears to be transmitted from one to the other in a circle. Thus,  
 d then, as the several elements never present themselves in the same form, how can anyone have the assurance to assert positively that any of them, whatever it may be, is one thing rather than another? No one can. But much the safest plan is to speak of them as follows. Anything which we see to be continually changing, as, for example, fire, we must not call 'this' or 'that,' but rather say that it is 'of such a nature,' nor let us speak of water as 'this,' but always as 'such,' nor must  
 e we imply that there is any stability in any of those things which we indicate by the use of the words 'this' and 'that,' supposing ourselves

to signify something thereby, for they are too volatile to be detained in any such expressions as 'this,' or 'that,' or 'relative to this,' or any other mode of speaking which represents them as permanent. We ought not to apply 'this' to any of them, but rather the word 'such,' which expresses the similar principle circulating in each and all of them; for example, that should be called 'fire' which is of such a nature always, and so of everything that has generation. That in which the elements severally grow up, and appear, and decay, is alone to be called by the name 'this' or 'that,' but that which is of a certain nature, 50 hot or white, or anything which admits of opposite qualities, and all things that are compounded of them, ought not to be so denominated. Let me make another attempt to explain my meaning more clearly. Suppose a person to make all kinds of figures of gold and to be always remodeling each form into all the rest; somebody points to one of them and asks what it is. By far the safest and truest answer is, 'That is gold,' and not to call the triangle or any other figures which are formed in the gold 'these,' as though they had existence, since they are in process of change while he is making the assertion, but if the questioner be willing to take the safe and indefinite expression, 'such,' we should be satisfied. And the same argument applies to the universal nature which receives all bodies—that must be always called the same, for, inasmuch as she always receives all things, she never departs at all from her own nature and never, in any way or at any time, assumes a form like that of any of the things which enter into her; she is the natural recipient of all impressions, and is stirred and informed c by them, and appears different from time to time by reason of them. But the forms which enter into and go out of her are the likenesses of eternal realities modeled after their patterns in a wonderful and mysterious manner, which we will hereafter investigate. For the present we have only to conceive of three natures: first, that which is in process of generation; secondly, that in which the generation takes place; and thirdly, that of which the thing generated is a resemblance d naturally produced. And we may liken the receiving principle to a mother, and the source or spring to a father, and the intermediate nature to a child, and may remark further that if the model is to take every variety of form, then the matter in which the model is fashioned will not be duly prepared unless it is formless and free from the impress of any of those shapes which it is hereafter to receive from without. For if the matter were like any of the supervening forms, e then whenever any opposite or entirely different nature was stamped upon its surface, it would take the impression badly, because it would intrude its own shape. Wherefore that which is to receive all forms should have no form, as in making perfumes they first contrive that the liquid substance which is to receive the scent shall be as inodorous as possible, or as those who wish to impress figures on soft substances do not allow any previous impression to remain, but begin by making

51 the surface as even and smooth as possible. In the same way that which is to receive perpetually and through its whole extent the resemblances of all eternal beings ought to be devoid of any particular form. Wherefore the mother and receptacle of all created and visible and in any way sensible things is not to be termed earth or air or fire or water, or any of their compounds, or any of the elements from which these are derived, but is an invisible and formless being which  
 b receives all things and in some mysterious way partakes of the intelligible, and is most incomprehensible. In saying this we shall not be far wrong; as far, however, as we can attain to a knowledge of her from the previous considerations, we may truly say that fire is that part of her nature which from time to time is inflamed, and water that which is moistened, and that the mother substance becomes earth and air, in so far as she receives the impressions of them.

c Let us consider this question more precisely. Is there any self-existent fire, and do all those things which we call self-existent exist, or are only those things which we see or in some way perceive through the bodily organs truly existent, and nothing whatever besides them? And are those intelligible forms, of which we are accustomed to speak, nothing at all, and only a name? Here is a question which we must not leave unexamined or undetermined, nor must we affirm too confidently that there can be no decision; neither must we interpolate  
 d in our present long discourse a digression equally long, but if it is possible to set forth a great principle in a few words, that is just what we want.

Thus I state my view. If mind and true opinion are two distinct classes, then I say that there certainly are these self-existent ideas unperceived by sense, and apprehended only by the mind; if, however, as some say, true opinion differs in no respect from mind, then  
 e everything that we perceive through the body is to be regarded as most real and certain. But we must affirm them to be distinct, for they have a distinct origin and are of a different nature; the one is implanted in us by instruction, the other by persuasion; the one is always accompanied by true reason, the other is without reason; the one cannot be overcome by persuasion, but the other can; and lastly, every man may be said to share in true opinion, but mind is the attribute of the gods and of very few men. Wherefore also we must acknowledge that one kind of being is the form which is always the same, uncreated  
 52 and indestructible, never receiving anything into itself from without, nor itself going out to any other, but invisible and imperceptible by any sense, and of which the contemplation is granted to intelligence only. And there is another nature of the same name with it, and like to it, perceived by sense, created, always in motion, becoming in place and again vanishing out of place, which is apprehended by opinion  
 b jointly with sense. And there is a third nature, which is space and is eternal, and admits not of destruction and provides a home for all

created things, and is apprehended, when all sense is absent, by a kind of spurious reason, and is hardly real—which we, beholding as in a dream, say of all existence that it must of necessity be in some place and occupy a space, but that what is neither in heaven nor in earth has no existence. Of these and other things of the same kind, relating to the true and waking reality of nature, we have only this dreamlike sense, and we are unable to cast off sleep and determine the truth about them. For an image, since the reality after which it is modeled does not belong to it, and it exists ever as the fleeting shadow of some other, must be inferred to be in another [that is, in space], grasping existence in some way or other, or it could not be at all. But true and exact reason, vindicating the nature of true being, maintains that while two things [that is, the image and space] are different they cannot exist one of them in the other and so be one and also two at the same time.

Thus have I concisely given the result of my thoughts, and my verdict is that being and space and generation, these three, existed in their three ways before the heaven, and that the nurse of generation, moistened by water and inflamed by fire, and receiving the forms of earth and air, and experiencing all the affections which accompany these, presented a strange variety of appearances, and being full of powers which were neither similar nor equally balanced, was never in any part in a state of equipoise, but swaying unevenly hither and thither, was shaken by them, and by its motion again shook them, and the elements when moved were separated and carried continually, some one way, some another. As, when grain is shaken and winnowed by fans and other instruments used in the threshing of corn, the close and heavy particles are borne away and settle in one direction, and the loose and light particles in another. In this manner, the four kinds or elements were then shaken by the receiving vessel, which, moving like a winnowing machine, scattered far away from one another the elements most unlike, and forced the most similar elements into close contact. Wherefore the various elements had distinct places also before they were arranged so as to form the universe. At first, however, they were all without reason and measure. But when the world began to get into order, fire and water and earth and air did indeed show faint traces of themselves, but were altogether in such a condition as one may expect to find wherever God is absent. Such, I say, being their nature, God now fashioned them by form and number. Let it be consistently maintained by us in all that we say that God made them as far as possible the fairest and best, out of things which were not fair and good. And now I will endeavor to show you the disposition and generation of them by an unaccustomed argument which I am compelled to use. But I believe that you will be able to follow me, for your education has made you familiar with the methods of science.

In the first place, then, as is evident to all, fire and earth and water

- and air are bodies. And every sort of body possesses volume, and every volume must necessarily be bounded by surfaces, and every rectilinear surface is composed of triangles, and all triangles are originally of two kinds, both of which are made up of one right and two acute angles; one of them has at either end of the base the half of a divided right angle, having equal sides, while in the other the right angle is divided into unequal parts, having unequal sides. These, then, proceeding by a combination of probability with demonstration, we assume to be the original elements of fire and the other bodies, but the principles which are prior to these God only knows, and he of men who is the friend of God. And next we have to determine what are the four most beautiful bodies which could be formed, unlike one another, yet in some instances capable of resolution into one another, for having discovered thus much, we shall know the true origin of earth and fire and of the proportionate and intermediate elements. For we shall not be willing to allow that there are any distinct kinds of visible bodies fairer than these. Wherefore we must endeavor to construct the four forms of bodies which excel in beauty, and secure the right to say that we have sufficiently apprehended their nature. Now of the two triangles, the isosceles has one form only; the scalene or unequal-sided has an infinite number. Of the infinite forms we must again select the most beautiful, if we are to proceed in due order, and anyone who can point out a more beautiful form than ours for the construction of these bodies, shall carry off the palm, not as an enemy, but as a friend. Now, the one which we maintain to be the most beautiful of all the many triangles—and we need not speak of the others—is that of which the double forms a third triangle which is equilateral.
- b The reason of this would be long to tell; he who disproves what we are saying, and shows that we are mistaken, may claim a friendly victory. Then let us choose two triangles, out of which fire and the other elements have been constructed, one isosceles, the other having the square of the longer side equal to three times the square of the lesser side.

- Now is the time to explain what was before obscurely said. There was an error in imagining that all the four elements might be generated by and into one another; this, I say, was an erroneous supposition, for there are generated from the triangles which we have selected four kinds—three from the one which has the sides unequal, the fourth alone framed out of the isosceles triangle. Hence they cannot all be resolved into one another, a great number of small bodies being combined into a few large ones, or the converse. But three of them can be thus resolved and compounded, for they all spring from one, and when the greater bodies are broken up, many small bodies will spring up out of them and take their own proper figures. Or, again, when many small bodies are dissolved into their triangles, by their total number, they can form one large mass of another kind. So much

for their passage into one another. I have now to speak of their several kinds, and show out of what combinations of numbers each of them was formed. The first will be the simplest and smallest construction, and its element is that triangle which has its hypotenuse twice the lesser side. When two such triangles are joined at the diagonal, and this is repeated three times, and the triangles rest their diagonals and shorter sides on the same point as a center, a single equilateral triangle is formed out of six triangles, and four equilateral triangles, if put together, make out of every three plane angles one solid angle, being that which is nearest to the most obtuse of plane angles. And out of the combination of these four angles arises the first solid form which distributes into equal and similar parts the whole circle in which it is inscribed. The second species of solid is formed out of the same triangles, which unite as eight equilateral triangles and form one solid angle out of four plane angles, and out of six such angles the second body is completed. And the third body is made up of one hundred and twenty triangular elements, forming twelve solid angles, each of them included in five plane equilateral triangles, having altogether twenty bases, each of which is an equilateral triangle. The one element [that is, the triangle which has its hypotenuse twice the lesser side], having generated these figures, generated no more, but the isosceles triangle produced the fourth elementary figure, which is compounded of four such triangles, joining their right angles in a center, and forming one equilateral quadrangle. Six of these united form eight solid angles, each of which is made by the combination of three plane right angles; the figure of the body thus composed is a cube, having six plane quadrangular equilateral bases. There was yet a fifth combination which God used in the delineation of the universe with figures of animals.

Now he who, duly reflecting on all this, inquires whether the worlds are to be regarded as indefinite or definite in number will be of opinion that the notion of their indefiniteness is characteristic of a sadly indefinite and ignorant mind. He, however, who raises the question whether they are to be truly regarded as one or five, takes up a more reasonable position. Arguing from probabilities, I am of opinion that they are one; another, regarding the question from another point of view, will be of another mind. But, leaving this inquiry, let us proceed to distribute the elementary forms, which have now been created in idea, among the four elements.

To earth, then, let us assign the cubic form, for earth is the most immovable of the four and the most plastic of all bodies, and that which has the most stable bases must of necessity be of such a nature. Now, of the triangles which we assumed at first, that which has two equal sides is by nature more firmly based than that which has unequal sides, and of the compound figures which are formed out of either, the plane equilateral quadrangle has necessarily a more stable

- basis than the equilateral triangle, both in the whole and in the parts.
- 56 Wherefore, in assigning this figure to earth, we adhere to probability, and to water we assign that one of the remaining forms which is the least movable, and the most movable of them to fire, and to air that which is intermediate. Also we assign the smallest body to fire, and the greatest to water, and the intermediate in size to air, and, again, the acutest body to fire, and the next in acuteness to air, and the third to water. Of all these elements, that which has the fewest bases must
- b necessarily be the most movable, for it must be the acutest and most penetrating in every way, and also the lightest as being composed of the smallest number of similar particles, and the second body has similar properties in a second degree, and the third body, in the third degree. Let it be agreed, then, both according to strict reason and according to probability, that the pyramid is the solid which is the original element and seed of fire, and let us assign the element which was next in the order of generation to air, and the third to water. We must
- c imagine all these to be so small that no single particle of any of the four kinds is seen by us on account of their smallness, but when many of them are collected together, their aggregates are seen. And the ratios of their numbers, motions, and other properties, everywhere God, as far as necessity allowed or gave consent, has exactly perfected and harmonized in due proportion.

- From all that we have just been saying about the elements or
- d kinds, the most probable conclusion is as follows. Earth, when meeting with fire and dissolved by its sharpness, whether the dissolution take place in the fire itself or perhaps in some mass of air or water, is borne hither and thither until its parts, meeting together and mutually harmonizing, again become earth, for they can never take any other form. But water, when divided by fire or by air, on re-forming,
- e may become one part fire and two parts air, and a single volume of air divided becomes two of fire. Again, when a small body of fire is contained in a larger body of air or water or earth, and both are moving, and the fire struggling is overcome and broken up, then two volumes of fire form one volume of air, and when air is overcome and cut up into small pieces, two and a half parts of air are condensed into one part of water. Let us consider the matter in another way. When one
- 57 of the other elements is fastened upon by fire and is cut by the sharpness of its angles and sides, it coalesces with the fire, and then ceases to be cut by them any longer. For no element which is one and the same with itself can be changed by or change another of the same kind and in the same state. But so long as in the process of transition the weaker is fighting against the stronger, the dissolution continues. Again, when a few small particles, enclosed in many larger ones, are
- b in process of decomposition and extinction, they only cease from their tendency to extinction when they consent to pass into the conquering nature, and fire becomes air and air water. But if bodies of another

kind go and attack them [that is, the small particles], the latter continue to be dissolved until, being completely forced back and dispersed, they make their escape to their own kindred, or else, being overcome and assimilated to the conquering power, they remain c where they are and dwell with their victors, and from being many become one. And owing to these affections, all things are changing their place, for by the motion of the receiving vessel the bulk of each class is distributed into its proper place, but those things which become unlike themselves and like other things are hurried by the shaking into the place of the things to which they grow like.

Now all unmixed and primary bodies are produced by such causes as these. As to the subordinate species which are included in the greater kinds, they are to be attributed to the varieties in the structure of the two original triangles. For either structure did not originally produce the triangle of one size only, but some larger and some smaller, and there are as many sizes as there are species of the four elements. Hence when they are mingled with themselves and with one another there is an endless variety of them, which those who would arrive at the probable truth of nature ought duly to consider. d

Unless a person comes to an understanding about the nature and conditions of rest and motion, he will meet with many difficulties in the discussion which follows. Something has been said of this matter e already, and something more remains to be said—which is that motion never exists in what is uniform. For to conceive that anything can be moved without a mover is hard or indeed impossible, and equally impossible to conceive that there can be a mover unless there be something which can be moved—motion cannot exist where either of these is wanting, and for these to be uniform is impossible; wherefore we must assign rest to uniformity and motion to the want of uniformity. Now inequality is the cause of the nature which is wanting in uniformity, and of this we have already described the origin. But there still remains the further point—why things when divided after their kinds do not cease to pass through one another and to change their place—which we will now proceed to explain. In the revolution of the universe are comprehended all the four elements, and this being circular and having a tendency to come together, compresses everything and will not allow any place to be left void. Wherefore also b fire, above all things, penetrates everywhere, and air next, as being next in rarity of the elements, and the two other elements in like manner penetrate according to their degrees of rarity. For those things which are composed of the largest particles have the largest void left in their compositions, and those which are composed of the smallest particles have the least. And the contraction caused by the compression thrusts the smaller particles into the interstices of the larger. And thus, when the small parts are placed side by side with the larger, and the lesser divide the greater and the greater unite the lesser, all 58

- c the elements are borne up and down and hither and thither toward their own places, for the change in the size of each changes its position in space. And these causes generate an inequality which is always maintained, and is continually creating a perpetual motion of the elements in all time.

In the next place we have to consider, first, that there are diverse kinds of fire. There are, for example, first, flame, secondly, those emanations of flame which do not burn but only give light to the eyes, and thirdly, the remains of fire, which are seen in red-hot embers  
 d after the flame has been extinguished. There are similar differences in the air, of which the brightest part is called the aether, and the most turbid sort mist and darkness, and there are various other nameless kinds which arise from the inequality of the triangles. Water, again, admits in the first place of a division into two kinds, the one liquid and the other fusile. The liquid kind is composed of the small and unequal particles of water, and moves itself and is moved by other bodies owing to the want of uniformity and the shape of its particles,  
 e whereas the fusile kind, being formed of large and uniform particles, is more stable than the other and is heavy and compact by reason of its uniformity. But when fire gets in and dissolves the particles and destroys the uniformity, it has greater mobility, and becoming fluid is thrust forth by the neighboring air and spreads upon the earth, and this dissolution of the solid masses is called melting, and their spread-  
 59 ing out upon the earth flowing. Again, when the fire goes out of the fusile substance, it does not pass into a vacuum, but into the neighboring air, and the air which is displaced forces together the liquid and still movable mass into the place which was occupied by the fire, and unites it with itself. Thus compressed the mass resumes its equability, and is again at unity with itself, because the fire which was the author of the inequality has retreated, and this departure of the fire is called cooling, and the coming together which follows upon it is termed  
 b congealment. Of all the kinds termed fusile, that which is the densest and is formed out of the finest and most uniform parts is that most precious possession called gold, which is hardened by filtration through rock; this is unique in kind, and has both a glittering and a yellow color. A shoot of gold, which is so dense as to be very hard, and takes a black color, is termed adamant. There is also another kind which has parts nearly like gold, and of which there are several spe-  
 c cies; it is denser than gold, and it contains a small and fine portion of earth and is therefore harder, yet also lighter because of the great interstices which it has within itself, and this substance, which is one of the bright and denser kinds of water, when solidified is called copper. There is an alloy of earth mingled with it which, when the two parts grow old and are disunited, shows itself separately and is called rust. The remaining phenomena of the same kind there will be no difficulty in reasoning out by the method of probabilities. A man

may sometimes set aside meditations about eternal things, and for recreation turn to consider the truths of generation, which are probable only; he will thus gain a pleasure not to be repented of, and secure for himself, while he lives, a wise and moderate pastime. Let us grant ourselves this indulgence and go through the probabilities relating to the same subjects which follow next in order.

Water which is mingled with fire, so much as is fine and liquid—being so called by reason of its motion and the way in which it rolls along the ground—and soft, because its bases give way and are less stable than those of earth, when separated from fire and air and isolated, becomes more uniform, and by their retirement is compressed into itself. And if the condensation be very great, the water above the earth becomes hail, but on the earth, ice, and that which is congealed in a less degree and is only half solid, when above the earth is called snow, and when upon the earth and condensed from dew, hoarfrost. Then, again, there are the numerous kinds of water which have been mingled with one another and are distilled through plants which grow in the earth, and this whole class is called by the names of juices or saps. The unequal admixture of these fluids creates a variety of species—most of them are nameless, but four which are of a fiery nature are clearly distinguished and have names. First, there is wine, which warms the soul as well as the body; secondly, there is the oily nature, which is smooth and divides the visual ray, and for this reason is bright and shining and of a glistening appearance, including pitch, the juice of the castorberry, oil itself, and other things of a like kind; thirdly, there is the class of substances which expand the contracted parts of the mouth, until they return to their natural state, and by reason of this property create sweetness—these are included under the general name of honey; and, lastly, there is a frothy nature which differs from all juices, having a burning quality which dissolves the flesh and is called *opos* [a vegetable acid].

As to the kinds of earth, that which is filtered through water passes into stone in the following manner. The water which mixes with the earth and is broken up in the process changes into air, and taking this form mounts into its own place. But as there is no surrounding vacuum it thrusts away the neighboring air, and this being rendered heavy, and, when it is displaced, having been poured around the mass of earth, forcibly compresses it and drives it into the vacant space whence the new air had come up, and the earth when compressed by the air into an indissoluble union with water becomes rock. The fairer sort is that which is made up of equal and similar parts and is transparent; that which has the opposite qualities is inferior. But when all the watery part is suddenly drawn out by fire, a more brittle substance is formed to which we give the name of pottery. Sometimes also moisture may remain, and the earth which has been fused by fire becomes, when cool, a certain stone of a black color.

A like separation of the water which had been copiously mingled with them may occur in two substances composed of finer particles of earth and of a briny nature; out of either of them a half-solid body is then formed, soluble in water—the one, soda, which is used for purging away oil and earth, the other, salt, which harmonizes so well in combinations pleasing to the palate, and is, as the law testifies, a substance dear to the gods. The compounds of earth and water are not soluble by water, but by fire only, and for this reason. Neither fire nor air melts masses of earth, for their particles, being smaller than the interstices in its structure, have plenty of room to move without forcing their way, and so they leave the earth unmelted and undissolved, but particles of water, which are larger, force a passage and dissolve and melt the earth. Wherefore earth when not consolidated by force is dissolved by water only; when consolidated, by nothing but fire, for this is the only body which can find an entrance. The cohesion of water again, when very strong, is dissolved by fire only; when weaker, then either by air or fire—the former entering the interstices, and the latter penetrating even the triangles. But nothing can dissolve air, when strongly condensed, which does not reach the elements or triangles, or if not strongly condensed, then only fire can dissolve it. As to bodies composed of earth and water, while the water occupies the vacant interstices of the earth in them which are compressed by force, the particles of water which approach them from without, finding no entrance, flow around the entire mass and leave it undissolved, but the particles of fire enter into the interstices of the water and fire does to water what water does to earth. Such particles are the sole causes of the compound body of earth and water liquefying and becoming fluid. Now these bodies are of two kinds. Some of them, such as glass and the fusible sort of stones, have less water than they have earth: on the other hand, substances of the nature of wax and incense have more of water entering into their composition.

I have thus shown the various classes of bodies as they are diversified by their forms and combinations and changes into one another, and now I must endeavor to set forth their affections and the causes of them. In the first place, the bodies which I have been describing are necessarily objects of sense. But we have not yet considered the origin of flesh, or what belongs to flesh, or of that part of the soul which is mortal. And these things cannot be adequately explained without also explaining the affections which are concerned with sensation, nor the latter without the former, and yet to explain them together is hardly possible, for which reason we must assume first one or the other and afterward examine the nature of our hypothesis. In order, then, that the affections may follow regularly after the elements, let us presuppose the existence of body and soul.

First, let us inquire what we mean by saying that fire is hot, and about this we may reason from the dividing or cutting power which it

exercises on our bodies. We all of us feel that fire is sharp, and we may further consider the fineness of the sides, and the sharpness of the angles, and the smallness of the particles, and the swiftness of the motion—all this makes the action of fire violent and sharp, so that it cuts whatever it meets. And we must not forget that the original figure of fire [that is, the pyramid], more than any other form, has a dividing power which cuts our bodies into small pieces (κερματίζει), and thus naturally produces that affection which we call heat, and hence the origin of the name (θερμός, κέρμα). Now, the opposite of this is sufficiently manifest; nevertheless we will not fail to describe it. For the larger particles of moisture which surround the body, entering in and driving out the lesser, but not being able to take their places, compress the moist principle in us, and this, from being unequal and disturbed, is forced by them into a state of rest which is due to equability and compression. But things which are contracted contrary to nature are by nature at war and force themselves apart, and to this war and convulsion the name of shivering and trembling is given, and the whole affection and the cause of the affection are both termed cold. That is called hard to which our flesh yields, and soft which yields to our flesh, and things are also termed hard and soft relatively to one another. That which yields has a small base, but that which rests on quadrangular bases is firmly posed and belongs to the class which offers the greatest resistance; so, too, does that which is the most compact and therefore most repellent. The nature of the light and the heavy will be best understood when examined in connection with our notions of above and below, for it is quite a mistake to suppose that the universe is parted into two regions, separate from and opposite to each other—the one a lower to which all things tend which have any bulk, and an upper to which things only ascend against their will. For as the universe is in the form of a sphere, all the extremities, being equidistant from the center, are equally extremities, and the center, which is equidistant from them, is equally to be regarded as the opposite of them all. Such being the nature of the world, when a person says that any of these points is above or below, may he not be justly charged with using an improper expression? For the center of the world cannot be rightly called either above or below, but is the center and nothing else, and the circumference is not the center, and has in no one part of itself a different relation to the center from what it has in any of the opposite parts. Indeed, when it is in every direction similar, how can one rightly give to it names which imply opposition? For if there were any solid body in equipoise at the center of the universe, there would be nothing to draw it to this extreme rather than to that, for they are all perfectly similar, and if a person were to go round the world in a circle, he would often, when standing at the antipodes of his former position, speak of the same point as above and below. For, as I was saying just now, to speak of the whole which is in the form of

- a globe as having one part above and another below is not like a sensible man. The reason why these names are used, and the circumstances under which they are ordinarily applied by us to the division of the heavens, may be elucidated by the following supposition. If a
- b person were to stand in that part of the universe which is the appointed place of fire, and where there is the great mass of fire to which fiery bodies gather—if, I say, he were to ascend thither, and, having the power to do this, were to abstract particles of fire and put them in scales and weigh them, and then, raising the balance, were to draw the fire by force toward the uncongenial element of the air, it
- c would be very evident that he could compel the smaller mass more readily than the larger, for when two things are simultaneously raised by one and the same power, the smaller body must necessarily yield to the superior power with less reluctance than the larger, and the larger body is called heavy and said to tend downward, and the smaller body is called light and said to tend upward. And we may detect ourselves who are upon the earth doing precisely the same thing. For we often separate earthy natures, and sometimes earth itself, and draw them into the uncongenial element of air by force and contrary to nature, both clinging to their kindred elements. But that which is
- d smaller yields to the impulse given by us toward the dissimilar element more easily than the larger, and so we call the former light, and the place toward which it is impelled we call above, and the contrary state and place we call heavy and below, respectively. Now the relations of these must necessarily vary because the principal masses of the different elements hold opposite positions, for that which is light, heavy, below, or above in one place will be found to be and become
- e contrary and transverse and every way diverse in relation to that which is light, heavy, below, or above in an opposite place. And about all of them this has to be considered—that in some cases the tendency of each toward its kindred element makes the body which is moved heavy, and the place toward which the motion tends below, but things which have an opposite tendency we call by an opposite name. Such are the causes which we assign to these phenomena. As to the smooth and the rough, anyone who sees them can explain the reason of them
- 64 to another. For roughness is hardness mingled with irregularity, and smoothness is produced by the joint effect of uniformity and density.

The most important of the affections which concern the whole body remains to be considered—that is, the cause of pleasure and pain in the perceptions of which I have been speaking, and in all other things which are perceived by sense through the parts of the body, and have both pains and pleasures attendant on them. Let us imagine the causes of every affection, whether of sense or not, to be of the following nature, remembering that we have already distinguished between

b the nature which is easy and which is hard to move, for this is the direction in which we must hunt the prey which we mean to take. A

body which is of a nature to be easily moved, on receiving an impression however slight, spreads abroad the motion in a circle, the parts communicating with each other, until at last, reaching the principle of mind, they announce the quality of the agent. But a body of the opposite kind, being immobile and not extending to the surrounding region, merely receives the impression and does not stir any of the neighboring parts, and since the parts do not distribute the original impression to other parts, it has no effect of motion on the whole animal, and therefore produces no effect on the patient. This is true of the bones and hair and other more earthy parts of the human body, whereas what was said above relates mainly to sight and hearing because they have in them the greatest amount of fire and air. Now we must conceive of pleasure and pain in this way. An impression produced in us contrary to nature and violent, if sudden, is painful, and, again, the sudden return to nature is pleasant, but a gentle and gradual return is imperceptible and vice versa. On the other hand, the impression of sense which is easily produced is most readily felt, but is not accompanied by pleasure or pain; such, for example, are the affections of the sight, which, as we said above, is a body naturally uniting with our body in the daytime, for cuttings and burnings and other affections which happen to the sight do not give pain, nor is there pleasure when the sight returns to its natural state; yet very clear and strong sensations arise for every affection of sight, whether the eye is passive or is deliberately turned upon an object. The reason is that no violence at all is involved in the separation and reunion of the visual ray. But bodies formed of larger particles yield to the agent only with a struggle, and then they impart their motions to the whole and cause pleasure and pain—pain when alienated from their natural conditions, and pleasure when restored to them. Things which experience gradual withdrawals and emptyings of their nature, and great and sudden replenishments, fail to perceive the emptying, but are sensible of the replenishment, and so they occasion no pain, but the greatest pleasure, to the mortal part of the soul, as is manifest in the case of perfumes. But things which are changed all of a sudden, and only gradually and with difficulty return to their own nature, have effects in every way opposite to the former, as is evident in the case of burnings and cuttings of the body.

Thus have we discussed the general affections of the whole body, and the names of the agents which produce them. And now I will endeavor to speak of the affections of particular parts, and the causes and agents of them, as far as I am able. In the first place, let us set forth what was omitted when we were speaking of juices, concerning the affections peculiar to the tongue. These too, like most of the other affections, appear to be caused by certain contractions and dilations, but they have besides more of roughness and smoothness than is found in other affections, for whenever earthy particles enter into

- d the small veins which are the testing instruments of the tongue, reaching to the heart, and fall upon the moist, delicate portions of flesh—when, as they are dissolved, they contract and dry up the little veins, they are astringent if they are rougher, but if not so rough, then only harsh. Those particles which act upon these veins as an abstergent, and purge the whole surface of the tongue, if they do it in excess and so encroach as to consume some part of the flesh itself, like
- e potash and soda, are all termed bitter. But the particles which are deficient in the alkaline quality, and which cleanse only moderately, are called salt, and having no bitterness or roughness are regarded as rather agreeable than otherwise. Bodies which share in and are made smooth by the heat of the mouth, and which are inflamed and again in turn inflame that which heats them, and which are so light that they are carried upward to the sensations of the head and cut all that
- 66 comes in their way, by reason of these qualities in them, are all termed pungent. There are other particles which, previously refined by putrefaction, enter into the narrow veins, and being duly proportioned to the particles of earth and air which are there, set them whirling about one another, and while they are in a whirl cause them to dash against and enter into one another, and so form hollows surrounding the particles that enter. These watery vessels of air—for a film of moisture, sometimes earthy, sometimes pure, is spread around the air—are hollow spheres of water, and those of them which are pure are transparent and are called bubbles, while those composed of the earthy liquid, which is in a state of general agitation and effervescence, are said to boil or ferment. Of all these affections the cause is termed acid. And there is the opposite affection arising from an op-
- c posite cause, when the mass of entering particles, immersed in the moisture of the mouth, is congenial to the tongue, and smooths and oils over the roughness, and relaxes the parts which are unnaturally contracted, and contracts the parts which are relaxed, and disposes them all according to their nature—that sort of remedy of violent affections is pleasant and agreeable to every man, and has the name sweet. But enough of this.
- d The faculty of smell does not admit of differences of kind, for all smells are of a half-formed nature, and no element is so proportioned as to have any smell. The veins about the nose are too narrow to admit earth and water, and too wide to detain fire and air, and for this reason no one ever perceives the smell of any of them. But smells always proceed from bodies that are damp, or putrefying, or liquefying,
- e or evaporating, and are perceptible only in the intermediate state, when water is changing into air and air into water, and all of them are either vapor or mist. That which is passing out of air into water is mist, and that which is passing from water into air is vapor, and hence all smells are thinner than water and thicker than air. The proof of this is that when there is any obstruction to the respiration

and a man draws in his breath by force, then no smell filters through, but the air without the smell alone penetrates. Wherefore the varieties 67 of smell have no name, and they have not many or definite and simple kinds, but they are distinguished only as painful and pleasant, the one sort irritating and disturbing the whole cavity which is situated between the head and the navel, the other having a soothing influence and restoring this same region to an agreeable and natural condition.

In considering the third kind of sense, hearing, we must speak of the causes in which it originates. We may in general assume sound b to be a blow which passes through the ears, and is transmitted by means of the air, the brain, and the blood, to the soul, and that hearing is the vibration of this blow which begins in the head and ends in the region of the liver. The sound which moves swiftly is acute, and the sound which moves slowly is grave, and that which is regular is equable and smooth, and the reverse is harsh. A great body of sound is c loud, and a small body of sound the reverse. Respecting the harmonies of sound I must hereafter speak.

There is a fourth class of sensible things, having many intricate varieties, which must now be distinguished. They are called by the general name of colors and are a flame which emanates from every sort of body, and has particles corresponding to the sense of sight. I have spoken already, in what has preceded, of the causes which generate sight, and in this place it will be natural and suitable to give a d rational theory of colors.

Of the particles coming from other bodies which fall upon the sight, some are smaller and some are larger, and some are equal to the parts of the sight itself. Those which are equal are imperceptible, and we call them transparent. The larger produce contraction, the e smaller dilation, in the sight, exercising a power akin to that of hot and cold bodies on the flesh, or of astringent bodies on the tongue, or of those heating bodies which we termed pungent. White and black are similar effects of contraction and dilation in another sphere, and for this reason have a different appearance. Wherefore we ought to term white that which dilates the visual ray, and the opposite of this black. There is also a swifter motion of a different sort of fire which strikes and dilates the ray of sight until it reaches the eyes, forcing a way through their passages and melting them, and eliciting from them a union of fire and water which we call tears, being itself an opposite fire which comes to them from an opposite direction—the inner fire flashes forth like lightning, and the outer finds a way in and is extinguished in the moisture, and all sorts of colors are generated by the mixture. This affection is termed dazzling, and the object which produces it is called bright and flashing. There is another sort of fire which is intermediate and which reaches and mingles with the mois- b ture of the eye without flashing, and in this the fire, mingling with the

ray of the moisture, produces a color like blood, to which we give the name of red. A bright hue mingled with red and white gives the color called auburn (ξανθόν). The law of proportion, however, according to which the several colors are formed, even if a man knew he would be foolish in telling, for he could not give any necessary reason, nor indeed any tolerable or probable explanation of them. Again, red, when mingled with black and white, becomes purple, but it becomes umber (ὄρφνινον) when the colors are burned as well as mingled and the black is more thoroughly mixed with them. Flame color (πυρρόν) is produced by a union of auburn and dun (φαίον), dun by an admixture of black and white, and pale yellow (ώχρόν) by an admixture of white and auburn. White and bright meeting, and falling upon a full black, become dark blue (κυανοῦν), and when dark blue mingles with white, a light blue (γλαυκόν) color is formed, as flame color with black makes leek-green (πράσιον). There will be no difficulty in seeing how and by what mixtures the colors derived from these are made according to the rules of probability. He, however, who should attempt to verify all this by experiment would forget the difference of the human and divine nature. For God only has the knowledge and also the power which are able to combine many things into one and again resolve the one into many. But no man either is or ever will be able to accomplish either the one or the other operation.

These are the elements, thus of necessity then subsisting, which the creator of the fairest and best of created things associated with himself when he made the self-sufficing and most perfect god, using the necessary causes as his ministers in the accomplishment of his work, but himself contriving the good in all his creations. Wherefore we may distinguish two sorts of causes, the one divine and the other necessary, and may seek for the divine in all things, as far as our nature admits, with a view to the blessed life, but the necessary kind only for the sake of the divine, considering that without them and when isolated from them, these higher things for which we look cannot be apprehended or received or in any way shared by us.

Seeing, then, that we have now prepared for our use the various classes of causes which are the material out of which the remainder of our discourse must be woven, just as wood is the material of the carpenter, let us revert in a few words to our beginning, and hasten back to the point from which we set out on our road hither. We may then endeavor to crown our tale with a suitable conclusion.

As I said at first, when all things were in disorder, God created in each thing in relation to itself, and in all things in relation to each other, all the measures and harmonies which they could possibly receive. For in those days nothing had any proportion except by accident, nor was there anything deserving to be called by the names which we now use—as, for example, fire, water, and the rest of the

elements. All these the creator first set in order, and out of them he constructed the universe, which was a single animal comprehending in itself all other animals, mortal and immortal. Now of the divine, he himself was the creator, but the creation of the mortal he committed to his offspring. And they, imitating him, received from him the immortal principle of the soul, and around this they proceeded to fashion a mortal body, and made it to be the vehicle of the soul, and constructed within the body a soul of another nature which was mortal, subject to terrible and irresistible affections—first of all, pleasure, the greatest incitement to evil; then, pain, which deters from good; also rashness and fear, two foolish counselors, anger hard to be appeased, and hope easily led astray—these they mingled with irrational sense and with all-daring love according to necessary laws, and so framed man. Wherefore, fearing to pollute the divine any more than was absolutely unavoidable, they gave to the mortal nature a separate habitation in another part of the body, placing the neck between them to be the isthmus and boundary, which they constructed between the head and breast, to keep them apart. And in the breast, and in what is termed the thorax, they incased the mortal soul, and as the one part of this was superior and the other inferior they divided the cavity of the thorax into two parts, as the women's and men's apartments are divided in houses, and placed the midriff to be a wall of partition between them. That part of the inferior soul which is endowed with courage and passion and loves contention, they settled nearer the head, midway between the midriff and the neck, in order that being obedient to the rule of reason it might join with it in controlling and restraining the desires when they are no longer willing of their own accord to obey the word of command issuing from the citadel.

The heart, the knot of the veins and the fountain of the blood which races through all the limbs, was set in the place of guard, that, when the might of passion was roused by reason making proclamation of any wrong assailing them from without or being perpetrated by the desires within, quickly the whole power of feeling in the body, perceiving these commands and threats, might obey and follow through every turn and alley, and thus allow the principle of the best to have the command in all of them. But the gods, foreknowing that the palpitation of the heart in the expectation of danger and excitement of passion must cause it to swell and become inflamed, formed and implanted as a supporter to the heart the lung, which was, in the first place, soft and bloodless, and also had within hollows like the pores of a sponge, in order that by receiving the breath and the drink, it might give coolness and the power of respiration and alleviate the heat. Wherefore they cut the air channels leading to the lung, and placed the lung about the heart as a soft spring, that, when passion

was rife within, the heart, beating against a yielding body, might be cooled and suffer less, and might thus become more ready to join with passion in the service of reason.

- The part of the soul which desires meats and drinks and the other things of which it has need by reason of the bodily nature, they
- e placed between the midriff and the boundary of the navel, contriving in all this region a sort of manger for the food of the body, and there they bound it down like a wild animal which was chained up with man, and must be nourished if man was to exist. They appointed this lower creation his place here in order that he might be always feeding at the manger, and have his dwelling as far as might be from the
  - 71 council chamber, making as little noise and disturbance as possible, and permitting the best part to advise quietly for the good of the whole and the individual. And knowing that this lower principle in man would not comprehend reason, and even if attaining to some degree of perception would never naturally care for rational notions, but that it would be especially led by phantoms and visions night and day—
  - b planning to make this very weakness serve a purpose, God combined with it the liver and placed it in the house of the lower nature, contriving that it should be solid and smooth, and bright and sweet, and should also have a bitter quality in order that the power of thought, which proceeds from the mind, might be reflected as in a mirror which receives likenesses of objects and gives back images of them to the sight, and so might strike terror into the desires when, making use of the bitter part of the liver, to which it is akin, it comes threatening and invading, and diffusing this bitter element swiftly through the whole liver produces colors like bile, and contracting every part
  - c makes it wrinkled and rough, and twisting out of its right place and contorting the lobe and closing and shutting up the vessels and gates causes pain and loathing. And the converse happens when some gentle inspiration of the understanding pictures images of an opposite character, and allays the bile and bitterness by refusing to stir or touch the nature opposed to itself, but by making use of the natural sweetness of the liver corrects all things and makes them to be right
  - d and smooth and free, and renders the portion of the soul which resides about the liver happy and joyful, enabling it to pass the night in peace, and to practice divination in sleep, inasmuch as it has no share in mind and reason. For the authors of our being, remembering the command of their father when he bade them create the human race as good as they could, that they might correct our inferior parts and
  - e make them to attain a measure of truth, placed in the liver the seat of divination. And herein is a proof that God has given the art of divination not to the wisdom, but to the foolishness of man. No man, when in his wits, attains prophetic truth and inspiration, but when he receives the inspired word, either his intelligence is enthralled in sleep or he is demented by some distemper or possession. And he who would

understand what he remembers to have been said, whether in a dream or when he was awake, by the prophetic and inspired nature, or would determine by reason the meaning of the apparitions which he has seen, and what indications they afford to this man or that, of past, present, or future good and evil, must first recover his wits. But, while he continues demented, he cannot judge of the visions which he sees or the words which he utters; the ancient saying is very true—that 'only a man who has his wits can act or judge about himself and his own affairs.' And for this reason it is customary to appoint interpreters to be judges of the true inspiration. Some persons call them prophets, being blind to the fact that they are only the expositors of dark sayings and visions, and are not to be called prophets at all, but only interpreters of prophecy.

Such is the nature of the liver, which is placed as we have described in order that it may give prophetic intimations. During the life of each individual these intimations are plainer, but after his death the liver becomes blind and delivers oracles too obscure to be intelligible. The neighboring organ [the spleen] is situated on the left-hand side and is constructed with a view of keeping the liver bright and pure—like a napkin, always ready-prepared and at hand to clean the mirror. And hence, when any impurities arise in the region of the liver by reason of disorders of the body, the loose nature of the spleen, which is composed of a hollow and bloodless tissue, receives them all and clears them away, and when filled with the unclean matter, it swells and festers, but, again, when the body is purged, shrinks and settles down into the same place as before.

Concerning the soul, as to which part is mortal and which divine, and how and why they are separated, and in what company they are placed, if God acknowledges that we have spoken the truth, then, and then only, can we be confident; still, we may venture to assert that what has been said by us is probable, and will be rendered more probable by investigation. Let us assume thus much.

The creation of the rest of the body follows next in order, and this we may investigate in a similar manner. And it appears to be very meet that the body should be framed on the following principles.

The authors of our race were aware that we should be intemperate in eating and drinking and take a good deal more than was necessary or proper, by reason of gluttony. In order then that disease might not quickly destroy us, and lest our mortal race should perish without fulfilling its end—intending to provide against this, the gods made what is called the lower belly, to be a receptacle for the superfluous meat and drink, and formed the convolution of the bowels, so that the food might be prevented from passing quickly through and compelling the body to require more food, thus producing insatiable gluttony and making the whole race an enemy to philosophy and culture, and rebellious against the divinest element within us.

- b The bones and flesh, and other similar parts of us, were made as follows. The first principle of all of them was the generation of the marrow. For the bonds of life which unite the soul with the body are made fast there, and they are the root and foundation of the human race. The marrow itself is created out of other materials. God took such of the primary triangles as were straight and smooth and were adapted to produce fire and water, and air and earth in the highest
- c perfection—these, I say, he separated from their kinds, and mingling them in due proportions with one another, made the marrow out of them to be a universal seed of every mortal kind, and in this seed he then planted and enclosed the souls, and in the original distribution gave to the marrow as many and various forms as the different kinds of souls were hereafter to receive. That which, like a field, was to receive the divine seed, he made round every way, and called that portion of the marrow 'brain,' intending that, when an animal was
- d perfected, the vessel containing this substance should be the head, but that which was intended to contain the remaining and mortal part of the soul he distributed into figures at once round and elongated, and he called them all by the name 'marrow.' And to these, as to anchors, fastening the bonds of the whole soul, he proceeded to fashion around them the entire framework of our body, constructing for the marrow, first of all, a complete covering of bone.

- Bone was composed by him in the following manner. Having
- e sifted pure and smooth earth he kneaded it and wetted it with marrow, and after that he put it into fire and then into water, and once more into fire and again into water—in this way, by frequent transfers from one to the other, he made it insoluble by either. Out of this he fashioned, as in a lathe, a globe made of bone, which he placed around
- 74 the brain, and in this he left a narrow opening, and around the marrow of the neck and back he formed vertebrae which he placed under one another like pivots, beginning at the head and extending through the whole of the trunk. Thus wishing to preserve the entire seed, he enclosed it in a stonelike casing, inserting joints, and using in the formation of them the power of the other or diverse as an intermediate nature, that they might have motion and flexure. Then again, con-
- b sidering that the bone would be too brittle and inflexible, and when heated and again cooled would soon mortify and destroy the seed within—having this in view, he contrived the sinews and the flesh, that so binding all the members together by the sinews, which admitted of being stretched and relaxed about the vertebrae, he might thus make the body capable of flection and extension, while the flesh would serve as a protection against the summer heat and against
- c external bodies, like articles made of felt, and containing in itself a warm moisture which in summer exudes and makes the surface damp, would impart a natural coolness to the whole body, and again

in winter by the help of this internal warmth would form a very tolerable defense against the frost which surrounds it and attacks it from without. He who modeled us, considering these things, mixed earth with fire and water and blended them, and making a ferment of acid and salt, he mingled it with them and formed soft and succulent <sup>d</sup> flesh. As for the sinews, he made them of a mixture of bone and unfermented flesh, attempered so as to be in a mean, and gave them a yellow color; wherefore the sinews have a firmer and more glutinous nature than flesh, but a softer and moister nature than the bones. With these God covered the bones and marrow, binding them together by sinews, and then enshrouded them all in an upper covering of flesh. The more living and sensitive of the bones he enclosed in the thinnest <sup>e</sup> film of flesh, and those which had the least life within them in the thickest and most solid flesh. So again on the joints of the bones, where reason indicated that no more was required, he placed only a thin covering of flesh, that it might not interfere with the flexion of our bodies and make them unwieldy because difficult to move, and also that it might not, by being crowded and pressed and matted together, destroy sensation by reason of its hardness, and impair the memory and dull the edge of intelligence. Wherefore also the thighs <sup>75</sup> and the shanks and the hips, and the bones of the arms and the forearms, and other parts which have no joints, and the inner bones, which on account of the rarity of the soul in their marrow are destitute of reason—all these are abundantly provided with flesh, but such as have mind in them are in general less fleshy, except where the creator has made some part solely of flesh in order to give sensation—as, for example, the tongue. But commonly this is not the case. For the nature which comes into being and grows up in us by a law of necessity does not admit of the combination of solid bone and much flesh <sup>b</sup> with acute perceptions. More than any other part, the framework of the head would have had them if they could have coexisted, and the human race, having a strong and fleshy and sinewy head, would have had a life twice or many times as long as it now has, and also more healthy and free from pain. But our creators, considering whether they should make a longer-lived race which was worse, or a shorter-lived race which was better, came to the conclusion that everyone <sup>c</sup> ought to prefer a shorter span of life, which was better, to a longer one, which was worse, and therefore they covered the head with thin bone, but not with flesh and sinews, since it had no joints, and thus the head was added, having more wisdom and sensation than the rest of the body, but also being in every man far weaker. For these reasons <sup>d</sup> and after this manner God placed the sinews at the extremity of the head, in a circle round the neck, and glued them together by the principle of likeness and fastened the extremities of the jaw-bones to them below the face, and the other sinews he dispersed throughout the body, fastening limb to limb. The framers of us

- framed the mouth, as now arranged, having teeth and tongue and lips,
- e with a view to the necessary and the good, contriving the way in for necessary purposes, the way out for the best purposes. For that is necessary which enters in and gives food to the body, but the river of speech, which flows out of a man and ministers to the intelligence, is the fairest and noblest of all streams. Still the head could neither be left a bare frame of bones, on account of the extremes of heat and cold in the different seasons, nor yet be allowed to be wholly covered and so become dull and senseless by reason of an overgrowth of flesh. The fleshy nature was not therefore wholly dried up, but a large sort of
- 76 peel was parted off and remained over, which is now called the skin. This met and grew by the help of the cerebral moisture, and became the circular envelopment of the head. And the moisture, rising up under the sutures, watered and closed in the skin upon the crown, forming a sort of knot. The diversity of the sutures was caused by the power of the courses within the soul and of the food; the sutures were more numerous where these were strongly opposed to one another, fewer if the struggle were less violent. This skin the divine
- b power pierced all round with fire, and out of the punctures which were thus made the moisture issued forth, and the liquid and heat which was pure came away, and a mixed part which was composed of the same material as the skin, and had a fineness equal to the punctures, was borne up by its own impulse and extended far outside the head, but, being too slow to escape, was thrust back by the external
- c air and rolled up underneath the skin, where it took root. Thus the hair sprang up in the skin, being akin to it because it is like threads of leather, but rendered harder and closer through the pressure of the cold, by which each hair, while in process of separation from the skin, is compressed and cooled. Wherefore the creator formed the head hairy, making use of the causes which I have mentioned, and
- d reflecting also that instead of flesh the brain needed the hair to be a light covering or guard which would give shade in summer and shelter in winter, and at the same time would not impede our quickness of perception. From the combination of sinew, skin, and bone, in the structure of the finger, there arises a triple compound which, when dried up, takes the form of one hard skin partaking of all three natures, and was fabricated by these second causes, but designed by mind which is the principal cause with an eye to the future. For
- e our creators well knew that women and other animals would someday be framed out of men, and they further knew that many animals would require the use of nails for many purposes; wherefore they fashioned in men at their first creation the rudiments of nails. For this purpose and for these reasons they caused skin, hair, and nails to grow at the extremities of the limbs.

And now that all the parts and members of the mortal animal

77 had come together, since its life of necessity consisted of fire and

breath, and it therefore wasted away by dissolution and depletion, the gods contrived the following remedy. They mingled a nature akin to that of man with other forms and perceptions and thus created another kind of animal. These are the trees and plants and seeds which have been improved by cultivation and are now domesticated among us; anciently there were only the wild kinds, which are older than the cultivated. For everything that partakes of life may be truly called a living being, and the animal of which we are now speaking partakes of the third kind of soul, which is said to be seated between the midriff and the navel, having no part in opinion or reason or mind, but only in feelings of pleasure and pain and the desires which accompany them. For this nature is always in a passive state, and is not endowed by nature with the power of revolving in and about itself, repelling the motion from without and using its own, in such a way as to observe and reflect upon any of its own concerns. Wherefore it lives and does not differ from a living being, but is fixed and rooted in the same spot, having no power of self-motion.

Now after the superior powers had created all these natures to be food for us who are of the inferior nature, they cut various channels through the body as through a garden, that it might be watered as from a running stream. In the first place, they cut two hidden channels or veins down the back where the skin and the flesh join, which answered severally to the right and left side of the body. These they let down along the backbone, so as to have the marrow of generation between them, where it was most likely to flourish, and in order that the stream coming down from above might flow freely to the other parts, and equalize the irrigation. In the next place, they divided the veins about the head, and interlacing them, they sent them in opposite directions; those coming from the right side they sent to the left of the body, and those from the left they diverted toward the right, so that they and the skin might together form a bond which should fasten the head to the body, since the crown of the head was not encircled by sinews, and also in order that the sensations from both sides might be distributed over the whole body. And next, they ordered the watercourses of the body in a manner which I will describe, and which will be more easily understood if we begin by admitting that all things composed of lesser parts retain the greater, but those composed of greater parts cannot retain the lesser. Now of all natures fire has the smallest parts, and therefore penetrates through earth and water and air and their compounds, nor can anything hold it. And a similar principle applies to the human belly, for when meats and drinks enter it, it holds them, but it cannot hold air and fire because the particles of which they consist are smaller than its own structure.

These elements, therefore, God employed for the sake of distributing moisture from the belly into the veins, weaving together a network of fire and air like a creel, having at the entrance two lesser

creels; further he constructed one of these with two openings, and from the lesser creels he extended cords reaching all round to the extremities of the network. All the interior of the net he made of fire, but the lesser creels and their cavity, of air. The network he took and spread over the newly formed animal in the following manner. He let the lesser creels pass into the mouth; there were two of them, and one he let down by the air pipes into the lungs, the other by the side of the air pipes into the belly. The former he divided into two branches, both of which he made to pass out at the channels of the nose, so that when the way through the mouth was not open, the streams of the mouth as well were replenished through the nose. With the other cavity [that is, of the greater creel] he enveloped the hollow parts of the body, and at one time he made all this to flow into the lesser creels, quite gently, for they are composed of air, and at another time he caused the lesser creels to flow back again. And the net he made to find a way in and out through the pores of the body, and the rays of fire which are bound fast within followed the passage of the air either way, never at any time ceasing so long as the mortal being holds together. This process, as we affirm, the namegiver named inspiration and expiration. And all this movement, active as well as passive, takes place in order that the body, being watered and cooled, may receive nourishment and life. For when the respiration is going in and out, and the fire, which is fast bound within, follows it, and ever and anon moving to and fro, enters through the belly and reaches the meat and drink, it dissolves them, and dividing them into small portions and guiding them through the passages where it goes, pumps them as from a fountain into the channels of the veins, and makes the stream of the veins flow through the body as through a conduit.

Let us once more consider the phenomena of respiration, and inquire into the causes which have made it what it is. They are as follows. Seeing that there is no such thing as a vacuum into which any of those things which are moved can enter, and the breath is carried from us into the external air, the next point is, as will be clear to everyone, that it does not go into a vacant space, but pushes its neighbor out of its place, and that which is thrust out in turn drives out its neighbor. And in this way everything of necessity at last comes round to that place from whence the breath came forth, and enters in there and following the breath fills up the vacant space, and this goes on like the rotation of a wheel, because there can be no such thing as a vacuum. Wherefore also the breast and the lungs, when they emit the breath, are replenished by the air which surrounds the body and which enters in through the pores of the flesh and is driven round in a circle, and again, the air which is sent away and passes out through the body forces the breath inward through the passage of the mouth and the nostrils. Now the origin of this movement may be supposed to be as

follows. In the interior of every animal the hottest part is that which is around the blood and veins; it is in a manner an internal fountain of fire, which we compare to the network of a creel, being woven all of fire and extended through the center of the body, while the outer parts are composed of air. Now we must admit that heat naturally proceeds outward to its own place and to its kindred element, and as there are two exits for the heat, the one out through the body, and the other through the mouth and nostrils, when it moves toward the one, it drives round the air at the other, and that which is driven round falls into the fire and becomes warm, and that which goes forth is cooled. But when the heat changes its place, and the particles at the other exit grow warmer, the hotter air inclining in that direction and carried toward its native element, fire, pushes round the air at the other, and this being affected in the same way and communicating the same impulse, a circular motion swaying to and fro is produced by the double process, which we call inspiration and expiration.

The phenomena of medical cupping glasses and of the swallowing of drink and of the projection of bodies, whether discharged in the air or bowled along the ground, are to be investigated on a similar principle, and swift and slow sounds, which appear to be high and low, and are sometimes discordant on account of their inequality, and then again harmonic on account of the equality of the motion which they excite in us. For when the motions of the antecedent swifter sounds begin to pause and the two are equalized, the slower sounds overtake the swifter and then propel them. When they overtake them they do not intrude a new and discordant motion, but introduce the beginnings of a slower which answers to the swifter as it dies away, thus producing a single mixed expression out of high and low, whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sort of delight, being an imitation of divine harmony in mortal motions. Moreover, as to the flowing of water, the fall of the thunderbolt, and the marvels that are observed about the attraction of amber and the Heracleian stones—in none of these cases is there any attraction, but he who investigates rightly will find that such wonderful phenomena are attributable to the combination of certain conditions—the nonexistence of a vacuum, the fact that objects push one another round, and that they change places, passing severally into their proper positions as they are divided or combined.

Such, as we have seen, is the nature and such are the causes of respiration—the subject in which this discussion originated. For the fire cuts the food and following the breath surges up within, fire and breath rising together and filling the veins by drawing up out of the belly and pouring into them the cut portions of the food, and so the streams of food are kept flowing through the whole body in all animals. And fresh cuttings from kindred substances, whether the

- e fruits of the earth or herb of the field, which God planted to be our daily food, acquire all sorts of colors by their intermixture, but red is the most pervading of them, a quality created by the cutting action of fire and by the impression which it makes on a moist substance, and hence the liquid which circulates in the body has a color such as we have described. The liquid itself we call blood, which nourishes the  
 81 flesh and the whole body, whence all parts are watered and empty places filled.

Now the process of repletion and evacuation is effected after the manner of the universal motion by which all kindred substances are drawn toward one another. For the external elements which surround us are always causing us to consume away and distributing and sending off like to like; the particles of blood, too, which are divided and contained within the frame of the animal as in a sort of heaven, are  
 b compelled to imitate the motion of the universe. Each, therefore, of the divided parts within us, being carried to its kindred nature, replenishes the void. When more is taken away than flows in, then we decay, and when less, we grow and increase.

The frame of the entire creature when young has the triangles of each kind new, and may be compared to the keel of a vessel which is just off the stocks; they are locked firmly together and yet the whole mass is soft and delicate, being freshly formed of marrow and nurtured  
 c on milk. Now when the triangles out of which meats and drinks are composed come in from without, and are comprehended in the body, being older and weaker than the triangles already there, the frame of the body gets the better of them and its newer triangles cut them up, and so the animal grows great, being nourished by a multitude of similar particles. But when the roots of the triangles are loosened by having undergone many conflicts with many things in the  
 d course of time, they are no longer able to cut or assimilate the food which enters, but are themselves easily divided by the bodies which come in from without. In this way every animal is overcome and decays, and this affection is called old age. And at last, when the bonds by which the triangles of the marrow are united no longer hold and are parted by the strain of existence, they in turn loosen the bonds of the soul, and she, obtaining a natural release, flies away with joy. For  
 e that which takes place according to nature is pleasant, but that which is contrary to nature is painful. And thus death, if caused by disease or produced by wounds, is painful and violent, but that sort of death which comes with old age and fulfills the debt of nature is the easiest of deaths, and is accompanied with pleasure rather than with pain.

Now everyone can see whence diseases arise. There are four  
 82 natures out of which the body is compacted—earth and fire and water and air—and the unnatural excess or defect of these, or the change of any of them from its own natural place into another, or, since there

are more kinds than one of fire and of the other elements, the assumption by any of these of a wrong kind, or any similar irregularity, produces disorders and diseases. For when any of them is produced or changed in a manner contrary to nature, the parts which were previously cool grow warm, and those which were dry become moist, and the light become heavy, and the heavy light; all sorts of changes occur. For, as we affirm, a thing can only remain the same with itself, whole and sound, when the same is added to it, or subtracted from it, in the same respect and in the same manner and in due proportion, and whatever comes or goes away in violation of these laws causes all manner of changes and infinite diseases and corruptions. Now there is a second class of structures which are also natural, and this affords a second opportunity of observing diseases to him who would understand them. For whereas marrow and bone and flesh and sinews are composed of the four elements, and the blood, though after another manner, is likewise formed out of them, most diseases originate in the way which I have described, but the worst of all owe their severity to the fact that the generation of these substances proceeds in a wrong order: they are then destroyed. For the natural order is that the flesh and sinews should be made of blood, the sinews out of the fibers to which they are akin, and the flesh out of the clots which are formed when the fibers are separated. And the glutinous and rich matter which comes away from the sinews and the flesh, not only glues the flesh to the bones, but nourishes and imparts growth to the bone which surrounds the marrow, and there remains a part, consisting of the purest and smoothest and oiliest sort of triangles, which filters through the solid texture of the bones, from which it drops like dew and waters the marrow. Now when each process takes place in this order, health commonly results; when in the opposite order, disease. For when the flesh becomes decomposed and sends back the wasting substance into the veins, then an oversupply of blood of diverse kinds, mingling with air in the veins, having variegated colors and bitter properties as well as acid and saline qualities, contains all sorts of bile and serum and phlegm. For all things go the wrong way, and having become corrupted, first, they taint the blood itself, and then ceasing to give nourishment to the body they are carried along the veins in all directions, no longer preserving the order of their natural courses, but at war with themselves, because they receive no good from one another, and are hostile to the abiding constitution of the body, which they corrupt and dissolve. The oldest part of the flesh which is corrupted, being hard to decompose, from long burning grows black, and from being everywhere corroded becomes bitter, and is injurious to every part of the body which is still uncorrupted. Sometimes, when the bitter element is refined away, the black part assumes an acidity which takes the place of the bitterness; at other times the bitterness being tinged with blood has a redder color, and

this, when mixed with black, takes the hue of grass, and again, an auburn color mingles with the bitter matter when new flesh is decomposed by the fire which surrounds the internal flame—to all which symptoms some physician, perhaps, or rather some philosopher who had the power of seeing in many dissimilar things one nature deserving of a name has assigned the common name of bile. But the other kinds of bile are variously distinguished by their colors. As for serum, that sort which is the watery part of blood is innocent, but that which is a secretion of black and acid bile is malignant when mingled by the power of heat with any salt substance, and is then called acid phlegm. Again, the substance which is formed by the liquefaction of new and tender flesh when air is present, if inflated and incased in liquid so as to form bubbles which separately are invisible owing to their small size, but when collected are of a bulk which is visible and have a white color arising out of the generation of foam—all this decomposition of tender flesh when intermingled with air is termed by us white phlegm. And the whey or sediment of newly formed phlegm is sweat and tears, and includes the various daily discharges by which the body is purified. Now all these become causes of disease when the blood is not replenished in a natural manner by food and drink, but gains bulk from opposite sources in violation of the laws of nature. When the several parts of the flesh are separated by disease, if the foundation remains, the power of the disorder is only half as great, and there is still a prospect of an easy recovery, but when that which binds the flesh to the bones is diseased, and no longer being separated off from the muscles and sinews, ceases to give nourishment to the bone and to unite flesh and bone, and from being oily and smooth and glutinous becomes rough and salty and dry, owing to bad regimen, then all the substance thus corrupted crumbles away under the flesh and the sinews and separates from the bone, and the fleshy parts fall away from their foundation and leave the sinews bare and full of brine, and the flesh again gets into the circulation of the blood and makes the previously mentioned disorders still greater. And if these bodily affections be severe, still worse are the prior disorders, as when the bone itself, by reason of the density of the flesh, does not obtain sufficient air, but becomes moldy and hot and gangrened and receives no nutriment, and the natural process is inverted, and the bone crumbling passes into the food, and the food into the flesh, and the flesh again falling into the blood makes all maladies that may occur more virulent than those already mentioned. But the worst case of all is when the marrow is diseased, either from excess or defect, and this is the cause of the very greatest and most fatal disorders, in which the whole course of the body is reversed.

There is a third class of diseases which may be conceived of as arising in three ways, for they are produced sometimes by wind, and

sometimes by phlegm, and sometimes by bile. When the lung, which **d** is the dispenser of the air to the body, is obstructed by rheums and its passages are not free, some of them not acting, while through others too much air enters, then the parts which are unrefreshed by air corrode, while in other parts the excess of air forcing its way through the veins distorts them and decomposing the body is enclosed in the midst of it and occupies the midriff; thus numberless painful diseases are produced, accompanied by copious sweats. And oftentimes when the **e** flesh is dissolved in the body, wind, generated within and unable to escape, is the source of quite as much pain as the air coming in from without, but the greatest pain is felt when the wind gets about the sinews and the veins of the shoulders and swells them up, and so twists back the great tendons and the sinews which are connected with them. These disorders are called tetanus and opisthotonos, by reason of the tension which accompanies them. The cure of them is difficult; relief is in most cases given by fever supervening. The white phlegm, though dangerous when detained within by reason of the air **85** bubbles, yet if it can communicate with the outside air, is less severe, and only discolors the body, generating leprous eruptions and similar diseases. When it is mingled with black bile and dispersed about the courses of the head, which are the divinest part of us, the attack, **b** if coming on in sleep, is not so severe, but when assailing those who are awake it is hard to be got rid of, and being an affection of a sacred part, is most justly called sacred. An acid and salt phlegm, again, is the source of all those diseases which take the form of catarrh, but they have many names because the places into which they flow are manifold.

Inflammations of the body come from burnings and inflamings, and all of them originate in bile. When bile finds a means of discharge, it boils up and sends forth all sorts of tumors, but when imprisoned **c** within, it generates many inflammatory diseases, above all when mingled with pure blood, since it then displaces the fibers which are scattered about in the blood and are designed to maintain the balance of rare and dense, in order that the blood may not be so liquefied by heat as to exude from the pores of the body, nor again become too dense and thus find a difficulty in circulating through the veins. The **d** fibers are so constituted as to maintain this balance, and if anyone brings them all together when the blood is dead and in process of cooling, then the blood which remains becomes fluid, but if they are left alone, they soon congeal by reason of the surrounding cold. The fibers having this power over the blood, bile, which is only stale blood, and which from being flesh is dissolved again into blood, at the first influx coming in little by little, hot and liquid, is congealed by the power of the fibers, and so congealing and made to cool, it pro- **e** duces internal cold and shuddering. When it enters with more of a flood and overcomes the fibers by its heat, and boiling up throws them

- into disorder, if it have power enough to maintain its supremacy, it penetrates the marrow and burns up what may be termed the cables of the soul, and sets her free, but when there is not so much of it, and the body though wasted still holds out, the bile is itself mastered and is either exuded from the whole body, or is thrust through the veins into the lower or upper belly, and is driven out of the body like
- 86 an exile from a state in which there has been civil war, whence arise diarrheas and dysenteries, and all such disorders. When the constitution is disordered by excess of fire, continuous heat and fever are the result; when excess of air is the cause, then the fever is quotidian; when of water, which is a more sluggish element than either fire or air, then the fever is a tertian; when of earth, which is the most sluggish of the four, and is only purged away in a fourfold period, the result is a quartan fever, which can with difficulty be shaken off.
- b Such is the manner in which diseases of the body arise; the disorders of the soul, which depend upon the body, originate as follows. We must acknowledge disease of the mind to be a want of intelligence, and of this there are two kinds—to wit, madness and ignorance. In whatever state a man experiences either of them, that state may be called disease, and excessive pains and pleasures are justly to be regarded as the greatest diseases to which the soul is liable. For a man
- c who is in great joy or in great pain, in his unseasonable eagerness to attain the one and to avoid the other, is not able to see or to hear anything rightly, but he is mad and is at the time utterly incapable of any participation in reason. He who has the seed about the spinal marrow too plentiful and overflowing, like a tree overladen with fruit, has many throes, and also obtains many pleasures in his desires and their offspring, and is for the most part of his life deranged because his
- d pleasures and pains are so very great; his soul is rendered foolish and disordered by his body; yet he is regarded not as one diseased, but as one who is voluntarily bad, which is a mistake. The truth is that sexual intemperance is a disease of the soul due chiefly to the moisture and fluidity which is produced in one of the elements by the loose consistency of the bones. And in general, all that which is termed the incontinence of pleasure and is deemed a reproach under the idea that the wicked voluntarily do wrong is not justly a
- e matter for reproach. For no man is voluntarily bad, but the bad become bad by reason of an ill disposition of the body and bad education—things which are hateful to every man and happen to him against his will. And in the case of pain, too, in like manner the soul suffers much evil from the body. For where the acid and briny phlegm and other bitter and bilious humors wander about in the body and find no exit or escape, but are pent up within and mingle their
- 87 own vapors with the motions of the soul, and are blended with them, they produce all sorts of diseases, more or fewer, and in every degree of intensity, and being carried to the three places of the

soul, whichever they may severally assail, they create infinite varieties of ill temper and melancholy, of rashness and cowardice, and also of forgetfulness and stupidity. Further, when to this evil constitution of body evil forms of government are added and evil discourses are uttered in private as well as in public, and no sort of instruction is given in youth to cure these evils, then all of us who are bad become bad from two causes which are entirely beyond our control. In such cases the planters are to blame rather than the plants, the educators rather than the educated. But however that may be, we should endeavor as far as we can, by education and pursuits and learning, to avoid vice and attain virtue; this, however, is part of another subject.

There is a corresponding inquiry concerning the mode of treatment by which the mind and the body are to be preserved, about which it is meet and right that I should say a word in turn, for it is more our duty to speak of the good than of the evil. Everything that is good is fair, and the fair is not without proportion, and the animal which is to be fair must have due proportion. Now we perceive lesser symmetries or proportions and reason about them, but of the highest and greatest we take no heed, for there is no proportion or disproportion more productive of health and disease, and virtue and vice, than that between soul and body themselves. This however we do not perceive, nor do we reflect that when a weak or small frame is the vehicle of a great and mighty soul, or conversely, when a little soul is incased in a large body, then the whole animal is not fair, for it lacks the most important of all symmetries, but the due proportion of mind and body is the fairest and loveliest of all sights to him who has the seeing eye. Just as a body which has a leg too long, or which is unsymmetrical in some other respect, is an unpleasant sight, and also, when doing its share of work, is much distressed and makes convulsive efforts, and often stumbles through awkwardness, and is the cause of infinite evil to its own self—in like manner we should conceive of the double nature which we call the living being. And when in this compound there is an impassioned soul more powerful than the body, that soul, I say, convulses and fills with disorders the whole inner nature of man, and when eager in the pursuit of some sort of learning or study, causes wasting. Or again, when teaching or disputing in private or in public, and strifes and controversies arise, inflames and dissolves the composite frame of man and introduces rheums, and the nature of this phenomenon is not understood by most professors of medicine, who ascribe it to the opposite of the real cause. And once more, when a body large and too strong for the soul is united to a small and weak intelligence, then inasmuch as there are two desires natural to man—one of food for the sake of the body, and one of wisdom for the sake of the diviner part of us—then, I say, the motions of the stronger, getting the better and increasing their own power, but making the

- soul dull and stupid and forgetful, engender ignorance, which is the greatest of diseases. There is one protection against both kinds of disproportion—that we should not move the body without the soul or the soul without the body, and thus they will be on their guard
- c against each other and be healthy and well balanced. And therefore the mathematician or anyone else whose thoughts are much absorbed in some intellectual pursuit, must allow his body also to have due exercise, and practice gymnastics, and he who is careful to fashion the body should in turn impart to the soul its proper motions and should cultivate the arts and all philosophy if he would deserve to be called truly fair and truly good. And the separate parts should be treated in
- d the same manner, in imitation of the pattern of the universe, for as the body is heated and also cooled within by the elements which enter into it, and is again dried up and moistened by external things, and experiences these and the like affections from both kinds of motions, the result is that the body if given up to motion when in a state of quiescence is overmastered and perishes. But if anyone, in imitation of that which we call the foster mother and nurse of the universe, will not allow the body ever to be inactive, but is always producing motions and agitations through its whole extent, which form the
- e natural defense against other motions both internal and external, and by moderate exercise reduces to order according to their affinities the particles and affections which are wandering about the body, as we have already said when speaking of the universe, he will not allow enemy placed by the side of enemy to stir up wars and disorders in the body, but he will place friend by the side of friend, so as to create health. Now of all motions that is the best which is produced in a
- 89 thing by itself, for it is most akin to the motion of thought and of the universe, but that motion which is caused by others is not so good, and worst of all is that which moves the body, when at rest, in parts only and by some external agency. Wherefore of all modes of purifying and reuniting the body the best is gymnastics; the next best is a surging motion, as in sailing or any other mode of conveyance which
- b is not fatiguing; the third sort of motion may be of use in a case of extreme necessity, but in any other will be adopted by no man of sense—I mean the purgative treatment of physicians, for diseases unless they are very dangerous should not be irritated by medicines, since every form of disease is in a manner akin to the living being, whose complex frame has an appointed term of life. For not the whole race
- c only, but each individual—barring inevitable accidents—comes into the world having a fixed span, and the triangles in us are originally framed with power to last for a certain time beyond which no man can prolong his life. And this holds also of the constitution of diseases; if anyone regardless of the appointed time tries to subdue them by medicine, he only aggravates and multiplies them. Wherefore we ought always to manage them by regimen, as far as a man can

spare the time, and not provoke a disagreeable enemy by medicines. d

Enough of the composite animal and of the body which is a part of him, and of the manner in which a man may train and be trained by himself so as to live most according to reason, and we must above and before all provide that the element which is to train him shall be the fairest and best-adapted to that purpose. A minute discussion of this subject would be a serious task, but if, as before, I am to give only e an outline, the subject may not unfitly be summed up as follows.

I have often remarked that there are three kinds of soul located within us, having each of them motions, and I must now repeat, in the fewest words possible, that one part, if remaining inactive and ceasing from its natural motion, must necessarily become very weak, but that which is trained and exercised, very strong. Wherefore we should take care that the movements of the different parts of the 90 soul should be in due proportion.

And we should consider that God gave the sovereign part of the human soul to be the divinity of each one, being that part which, as we say, dwells at the top of the body, and inasmuch as we are a plant not of an earthly but of a heavenly growth, raises us from earth to our kindred who are in heaven. And in this we say truly, for the divine power suspends the head and root of us from that place where the generation of the soul first began, and thus makes the whole body b upright. When a man is always occupied with the cravings of desire and ambition, and is eagerly striving to satisfy them, all his thoughts must be mortal, and, as far as it is possible altogether to become such, he must be mortal every whit because he has cherished his mortal part. But he who has been earnest in the love of knowledge and of true wisdom, and has exercised his intellect more than any other part of him, must have thoughts immortal and divine, if he attain truth, c and in so far as human nature is capable of sharing in immortality, he must altogether be immortal, and since he is ever cherishing the divine power and has the divinity within him in perfect order, he will be singularly happy. Now there is only one way of taking care of things, and this is to give to each the food and motion which are natural to it. And the motions which are naturally akin to the divine d principle within us are the thoughts and revolutions of the universe. These each man should follow, and by learning the harmonies and revolutions of the universe, should correct the courses of the head which were corrupted at our birth, and should assimilate the thinking being to the thought, renewing his original nature, so that having assimilated them he may attain to that best life which the gods have set before mankind, both for the present and the future.

Thus our original design of discoursing about the universe down e to the creation of man is nearly completed. A brief mention may be made of the generation of other animals, so far as the subject admits of brevity; in this manner our argument will best attain a due

proportion. On the subject of animals, then, the following remarks may be offered. Of the men who came into the world, those who were cowards or led unrighteous lives may with reason be supposed to  
 91 have changed into the nature of women in the second generation. And this was the reason why at that time the gods created in us the desire of sexual intercourse, contriving in man one animated substance, and in woman another, which they formed, respectively, in the following manner. The outlet for drink by which liquids pass through the lung under the kidneys and into the bladder, which receives and then by the pressure of the air emits them, was so fashioned by them as to penetrate also into the body of the marrow, which passes from the  
 b head along the neck and through the back, and which in the preceding discourse we have named the seed. And the seed, having life and becoming endowed with respiration, produces in that part in which it respire a lively desire of emission, and thus creates in us the love of procreation. Wherefore also in men the organ of generation becoming rebellious and masterful, like an animal disobedient to reason, and  
 c maddened with the sting of lust, seeks to gain absolute sway, and the same is the case with the so-called womb or matrix of women. The animal within them is desirous of procreating children, and when remaining unfruitful long beyond its proper time, gets discontented and angry, and wandering in every direction through the body, closes up the passages of the breath, and, by obstructing respiration, drives them to extremity, causing all varieties of disease, until at length the desire and love of the man and the woman, bringing them together  
 d and as it were plucking the fruit from the tree, sow in the womb, as in a field, animals unseen by reason of their smallness and without form; these again are separated and matured within; they are then finally brought out into the light, and thus the generation of animals is completed.

Thus were created women and the female sex in general. But the race of birds was created out of innocent light-minded men who, although their minds were directed toward heaven, imagined, in their simplicity, that the clearest demonstration of the things above was to be obtained by sight; these were remodeled and transformed into  
 e birds, and they grew feathers instead of hair. The race of wild pedestrian animals, again, came from those who had no philosophy in any of their thoughts, and never considered at all about the nature of the heavens, because they had ceased to use the courses of the head, but followed the guidance of those parts of the soul which are in the breast. In consequence of these habits of theirs they had their front legs and their heads resting upon the earth to which they were drawn by natural affinity, and the crowns of their heads were elongated and of all sorts of shapes, into which the courses of the soul were crushed by reason of disuse. And this was the reason why they  
 92 were created quadrupeds and polypods. God gave the more senseless

of them the more support that they might be more attracted to the earth. And the most foolish of them, who trail their bodies entirely upon the ground and have no longer any need of feet, he made without feet to crawl upon the earth. The fourth class were the inhabitants of the water; these were made out of the most entirely senseless and ignorant of all, whom the transformers did not think any longer worthy of pure respiration, because they possessed a soul which was made impure by all sorts of transgression, and instead of the subtle and pure medium of air, they gave them the deep and muddy sea to be their element of respiration. And hence arose the race of fishes and oysters, and other aquatic animals, which have received the most remote habitations as a punishment of their outlandish ignorance. These are the laws by which all animals pass into one another, now, as in the beginning, changing as they lose or gain wisdom and folly. b  
c

We may now say that our discourse about the nature of the universe has an end. The world has received animals, mortal and immortal, and is fulfilled with them, and has become a visible animal containing the visible—the sensible God who is the image of the intellectual, the greatest, best, fairest, most perfect—the one only-begotten heaven.

# CRITIAS

*The Critias, of which we have only a few pages, is the second in a proposed series of three dialogues. The first is the Timaeus, where Socrates reviews the main heads of a discussion held the day before on the constitution of the ideal state, when he had asked three of those present to discuss at their next meeting how such a state would act in a great war. Timaeus, speaking for the three, declares that they are ready to do so and calls on Critias to tell Socrates the story he had heard from his grandfather of the greatest struggle Athens ever waged, thousands of years ago.*

*His grandfather had heard it from Solon, who was told it by the priests when he went to Egypt. Athens' antagonist was the splendid and powerful island of Atlantis in the great ocean, which little Athens magnificently conquered when she threatened to enslave all the nations of the Mediterranean. Very soon after the conquest the sea overwhelmed her; she sank and no part of her was ever seen again. Critias now proposes to use the account of this glorious struggle and victory of ancient Athens as the illustration of the way Socrates' ideal state would fight under like circumstances. Timaeus is to begin at the very beginning with the origin of the universe and hand the discourse over to Critias with the creation of man. He then will tell how the ideal state that Athens was in very ancient days acted when confronted with vastly superior power.*

*All of this is in the Timaeus, not the Critias. Strictly speaking, it is part of an introduction to the two dialogues, but it really belongs more to the second than to the first. The tale of Atlantis is not important in the Timaeus, but the little we have of the Critias consists chiefly of a description of the fabulous island. Plato is again resting his mind. He is making up a fairy tale, the most wonderful island that could be imagined. On why the dialogue was never finished we have no information at all.*

**TIMAEUS:** Well, Socrates, at last I am barely in port after my voyage on the seas of discourse, and with what a sense of relief! I feel like some traveler at the end of a weary journey. So I make it my prayer to the god who has been born but now in our tale, though so long ago in fact, that he will of his grace vouchsafe us retention of what has been spoken to purpose and visit us with the proper penalty for any false note we have unwittingly struck in our treatment of these matters. Now the right penalty is that he who strays from tune should be brought back to it. To the end, then, that our discourses of the making of gods may be rightly uttered hereafter, I call on him to grant us that surest and best of medicines, knowledge, and with this prayer I hand over the further continuance of the tale to Critias, as we agreed I should do.

**CRITIAS:** Aye, Timaeus, and I accept the task. But I, too, must once more make the same request you yourself advanced before me. I must crave indulgence on the score of the magnitude of the subject, and I think I have an even better claim than yourself to a still further measure of consideration for what yet remains to be told. To be sure, I am well aware that my request will seem vastly presumptuous and unduly tactless; yet made it must be. What man in his sound senses, indeed, could venture to dispute the excellence of your exposition? What I must try to show, as I can, is that the theme still to be expounded is more difficult to handle and consequently calls for yet more generous allowances. In fact, Timaeus, upon an audience of human beings it is easier to produce the impression of adequate treatment in speaking of gods than in discoursing of mortals like ourselves. The combination of unfamiliarity and sheer ignorance in an audience makes the task of one who is to treat a subject toward which they are in this state easy in the extreme, and in this matter of gods, we know, of course, how the case stands with us. But to make my meaning still clearer, kindly follow an illustration. All statements made by any of us are, of course, bound to be an affair of imagery and picturing. Now, suppose we consider the ease or difficulty with which an artist's portraiture of figures divine and human, respectively, produces the impression of satisfactory reproduction on the spectator. We shall observe that in the case of earth, mountains, rivers, woodland, the sky as a whole, and the several revolving bodies located in it, for one thing, the artist is always well content if he can reproduce them with some faint degree of resemblance, and, for another, that since our knowledge of such objects is never exact, we submit his design to no criticism or scrutiny, but acquiesce, in these cases, in a dim and deceptive outline. But when it is our own human form that the artist undertakes to depict, daily familiar observation makes us quick to detect shortcomings and we show ourselves severe critics of one who

---

From *Timaeus and Critias*, translated by A. E. Taylor (London, 1929).

does not present us with full and perfect resemblance. Well, we should recognize that the same is true of discourses. Where the subjects of them are celestial and divine, we are satisfied by mere faint verisimilitudes; where mortal and human, we are exacting critics. So with our present unrehearsed narrative; if we do not succeed in reproducing the proper touches perfectly, allowances should be made. In fact, we ought to understand that to depict human life impressively is hard, not easy. It is to remind you all of this, Socrates, and to plead for a greater, not a lesser, measure of indulgence for what I am now to relate, that I have made this long speech. If you all feel that my appeal for this favor is justified, pray grant it without demur.

SOCRATES: To be sure we will, Critias. What is more, the same favor may be taken as granted by anticipation to Hermocrates after you. For I see plainly enough that by and by, when it comes to his turn to speak, he will make the same request as his precursors. As I would have him cast about for a fresh exordium and not be driven to repeat the old one, he may make his speech with the assurance that consideration is guaranteed him when the time comes. Still, I would warn you, my dear Critias, of the temper of your auditory; the composer who preceded you made a wonderfully favorable impression, and you will need the most generous indulgence if you are to prove equal to succeeding him.

HERMOCRATES: That, Socrates, is a warning as much to me as to our friend. Still, Critias, 'faint heart never yet set up trophy,' so you must launch out into your narrative like a man, calling Pagan and the Muses to aid you in displaying and lauding the worth of your fellow Athenians of ancient days.

CRITIAS: Ah, my dear Hermocrates, your post is in the rear rank, under cover of another; that is why your spirits are still undashed. Well, you may very possibly discover what the situation is like for yourself, in the course of events; meanwhile I must, at any rate, follow your encouraging advice and invoke the gods at large, including those you have mentioned, but above all Memory. She is the power on whom the whole fortune of my discourse most depends. If I can only sufficiently recall and repeat the story as it was once told by the priests and brought home to this country by Solon, I am confident that my present audience will pronounce me to have discharged my task with reasonable credit. Well, I must proceed to the story itself at once, without further delay.

In the very first place, let us remind ourselves that it is in all nine thousand years since a general war, of which we are now to relate the course, was declared between those who dwelt without and those who dwelt within the Pillars of Heracles. The command of the latter was taken, and the war conducted throughout, as the story ran, by our own city; the leaders of the other party were the kings of the island of Atlantis. Atlantis, as you will recollect, was once, we

said, an island larger than Libya and Asia together; it has now been engulfed by earthquakes and is the source of the impassable mud which prevents navigators from this quarter from advancing through the straits into the open ocean. As for the mass of the barbarian peoples and the Hellenic communities of those days, the various details will become plain on occasion as the course of the narrative unfolds. But we shall have to begin with a preliminary review of the respective resources and politics of the Athenians of the time and the antagonists against whom the war was waged, and of the two parties we must give the precedence to our own countrymen. 109

Of old, then, the gods distributed the whole earth by regions, and that without contention. That gods know not their several dues, or if they know them, yet some seek by contention to engross to themselves what more properly belongs to others—these are perverse imaginations. They apportioned to each his own by righteous allotment, settled their territories, and, when they had settled them, fell to feeding us, their bestial and flocks there, as herdsmen do their cattle. Only they would not coerce body with body in the fashion of shepherds who drive their flocks to pasture with blows; they set the course of the living creature from that part about which it turns most readily, its prow, controlling its soul after their own mind by persuasion as by a rudder, and so moving and steering the whole mortal fabric. Thus diverse gods received diverse districts as their portions and reigned over them. But Hephaestus and Athena, as they had one nature, being brother and sister by the same father, and at one, moreover, in their love of wisdom and artistry, so also obtained one lot in common, this our land, to be a home meet for prowess and understanding. They produced from the soil a race of good men and taught them the order of their polity; their names have been preserved, but their deeds forgotten by reason of the destructions of their successors and the lapse of time. For the remnant of survivors, as has, indeed, been already said, was ever left unlettered among its mountains, and had heard no more than the names of the country's rulers and a few of their deeds. So they were well pleased to give the names to their sons, but as for the virtues and laws of older generations, they knew nothing of them beyond some dim reports, but were, for many generations, themselves and their children, in want of bare necessities. So they gave their minds to their own needs and made their discourses of them, forgetting the story of faraway early days. For legendary lore and inquiry into ancient things both visit cities in the train of leisure, when they see men already provided with the necessities of life, and not before. Thus it has come about that the names of the ancients have been preserved without any memorial of their deeds. My warrant for what I say is this. Cecrops, Erechtheus, Erichthonius, Erysichthon, and most of the recorded names before Theseus are, in the main, the very names given, as Solon said, by the priests in their tale of that distant 110

war, as are also the names of the women. And in especial, the figure and image of the goddess, whom they of old set up in armor, according to the custom of their time, when exercises of war were common  
 c to woman and man alike, signify that in all living creatures that company together, female with male, nature ever grants it to both to practice the excellence proper to their kind.

Now, at that time most sorts of citizens who dwelt in this land were busied with handicrafts and tillage of the soil, but the fighting sort had been set apart at the first by godlike men and dwelt by themselves, furnished with all that was proper for their sustenance and  
 d training. None of them had any private possession of his own; they looked on all things as the common store of all, seeking to receive from their fellow citizens nothing beyond sufficient sustenance; in short, they followed all the practices we spoke of yesterday when we talked of those feigned guardians. In particular, there is truth and credibility in what we said of the territory, as first that its boundaries were then drawn at the Isthmus and, on the side of the mainland, at the summits of Cithaeron and Parnes, and its borders came down to  
 e the sea with Oropia on the right, and the Asopus shut out on the left, and again, that the soil far surpassed all others, which, indeed, is why the district could then maintain a great army exempt from all tasks of husbandry. And here is good evidence of its excellence. The remnant now left of it is a match for any soil in the world in the variety  
 111 and quality of its harvests and the pasturage it yields to all sorts of cattle. But of old its yield was most copious as well as excellent. What proof is there of this, and why are we right to call it a remnant of the land of those days? It is one long projection running out from the main body of the continent into the open sea, like a headland, and, as we know, the marine basin that borders it is extremely deep. So, while there have been many formidable deluges in the course of the nine thousand years—that is the interval between the date we are  
 b speaking of and the present—the soil washed away from the higher levels in these periodic convulsions does not deposit any notable sediment, as in some other regions, but is regularly carried off and lost in the depths. Consequently that has happened which happens in little islets. By comparison with the original territory, what is left now is, so to say, the skeleton of a body wasted by disease; the rich, soft soil has been carried off and only the bare framework of the district left. At the time we are speaking of these ravages had not begun. Our pres-  
 c ent mountains were high crests, what we now call the plains of Phel-leus were covered with rich soil, and there was abundant timber on the mountains, of which traces may still be seen. For some of our mountains at present will only support trees, but not so very long ago trees fit for the roofs of vast buildings were felled there and the rafters are still in existence. There were also many other lofty cultivated trees  
 d which provided unlimited fodder for beasts. Besides, the soil got the

benefit of the yearly 'water from Zeus,' which was not lost, as it is to-day, by running off a barren ground to the sea; a plentiful supply of it was received into the soil and stored up in the layers of nonporous potter's clay. Thus the moisture absorbed in the higher regions percolated to the hollows and so all quarters were lavishly provided with springs and rivers. Even to this day the sanctuaries at their former sources survive to prove the truth of our present account of the country.

This, then, was the natural condition of the district at large, and e it had received cultivation such as might be expected from true husbandmen, with no other vocation, who were also lovers of all that is noble and men of admirable natural parts, possessed of an excellent soil, a generous water supply and an eminently temperate climate. As for the town, its plan at that time was as follows. To begin with, the Acropolis was not then as it is now. At present it has been 112 washed bare of soil by one night of extraordinary floods in which an earthquake and the third terrible deluge before that of Deucalion befell together. But in other and earlier days it was so large that it reached to the Eridanus and Ilissus, enclosing the Pnyx and bounded on the side facing it by Lycabettus; the whole was covered with soil and, save here and there, the surface was level. Without, directly under its slopes, were the dwellings of the craftsmen and the husband- b men who tilled the adjoining fields; higher up the fighting force had its abode by itself round the temple of Athena and Hephaestus, girdled by a single wall, like the garden of one house. On the northern side they had fashioned their common dwelling houses and winter messrooms, with all that was proper for their mode of life in common in the way of buildings for themselves and temples, but no gold nor c silver, for they made no use of these metals for any purpose. They aimed at the mean between splendor and meanness, dwelling in decent houses where they grew old, themselves and their children's children, each succeeding generation leaving them to another like itself. As for the southern side, in the summer, as was natural, they forsook their gardens, gymnasiums, and messrooms and used it for these purposes. There was only one fountain, on the site of the present Acropolis. This has been choked by the earthquake and today only d shrunken rills remain in the vicinity. Then it provided all with an abundant supply of water equally wholesome in winter and summer. Such was their manner of life, then; they were at once guardians of their fellow citizens and freely followed leaders of the Hellenes at large; the number of both sexes already qualified and still qualified to bear arms they were careful to keep, as nearly as possible, always e the same, roughly some twenty thousand.

With such personalities and such a standing method of administering Hellas and their own commonwealth in righteousness, they were famous throughout Europe and Asia alike for the comeliness of

their persons and for every virtue of the soul, and had the greatest name of the time. As for the condition and early history of their antagonists, if my memories of the tale I heard as a boy do not play me false, I will now impart the story freely to you as friends.

- 113 But before I begin my narrative, I must make a brief explanation, or you may be surprised to hear of so many barbarians with Hellenic names. So I will give you the reason for this. Solon had a fancy to turn the tale to account in his own poetry; so he asked questions about the significance of the names and discovered that the original Egyptian authors of the narrative had translated them into their own speech. In his turn, as he learned the sense of a name, he  
 b translated it back again, in his manuscript, into our own language. His actual papers were once in my father's hands, and are in my own, to this day, and I studied them thoroughly in my boyhood. So if you hear names like those of our own countrymen, you must not be surprised; I have given you the explanation. Well, then, the story—and a long story it is—began much in this fashion. As we said before, when we were speaking of the 'lots,' the gods divided the whole earth  
 c into lots, some larger, some smaller, and established their temples and sacrifices in them. Poseidon, then, thus receiving as his lot the isle of Atlantis, settled his sons by a mortal woman in a district of it which must now be described. By the sea, in the center of the island, there was a plain, said to have been the most beauteous of all such plains and very fertile, and, again, near the center of this plain, at a distance of some fifty stadia, a mountain which was nowhere of any great altitude. In this mountain lived one of the original earthborn  
 d men of that region, named Evenor, with his wife Leucippe. The pair had an only daughter, Clito, who was just husband-high when her mother and father both died. Poseidon desired this damsel, had to do with her, and fortified the hill where she had her abode by a fence of alternate rings of sea and land, smaller and greater, one within another. He fashioned two such round wheels, as we may call them, of earth and three of sea from the very center of the island, at uniform  
 e distances, thus making the spot inaccessible to man, for there were as yet no ships and no seafaring. The island left at their center he adorned with his own hand—a light enough task for a god—causing two fountains to flow from underground springs, one warm, the other cold, and the soil to send up abundance of food plants of all kinds.
- 114 He then begot five twin births of male offspring and divided the whole isle of Atlantis into ten parts. On the earliest-born of the first pair he bestowed their mother's dwelling place with the lot of land surrounding it, the best and largest of all, and appointed him king over his brethren. The rest he made princes, granting each of them the sovereignty over a large population and the lordship of wide lands. Further, he gave names to them all. Their king, the eldest, received a name from which the ocean, as well as the whole island, got its desig-

nation; it is called Atlantic, because the name of the first king of old times was Atlas. His younger twin brother, to whose share fell the extremity of the island off the Pillars of Heracles, fronting the region now known as Gadira, from the name of his territory, was called in Greek Eumelus, but in the language his own country Gadirus, and no doubt his name was the origin of that of the district. One of the second pair was called Ampheres, the other Evaemon, the elder of the third Mneseus and his junior Autochthon, the elder of the fourth Elasippus, the younger Mestor; Azaes was the name of the elder of the fifth pair, that of his brother Diaprepes. All these and their descendants for many generations reigned as princes of numerous islands of the ocean besides their own, and were also, as has been already said, suzerains of the population of the hither or inner side of the straits, as far as Egypt and Tyrrhenia.

Now from Atlas sprang a prolific and illustrious house which retained the throne for many generations, the eldest being always king and transmitting the succession to his eldest descendant. They possessed wealth such as had never been amassed by any royal line before them and could not be easily matched by any after, and were equipped with all resources required for their city and dominions at large. Though their empire brought them a great external revenue, it was the island itself which furnished the main provision for all purposes of life. In the first place it yielded all products of the miner's industry, solid and fusible alike, including one which is now only a name but was then something more, orichalch, which was excavated in various parts of the island, and had then a higher value than any metal except gold. It also bore in its forests a generous supply of all timbers serviceable to the carpenter and builder and maintained a sufficiency of animals wild and domesticated; even elephants were plentiful. There was ample pasture for this the largest and most voracious of brutes, no less than for all the other creatures of marsh, lake and river, mountain and plain. Besides all this, the soil bore all aromatic substances still to be found on earth, roots, stalks, canes, gums exuded by flowers and fruits, and they thrived on it. Then, as for cultivated fruits, the dry sort which is meant to be our food supply and those others we use as solid nutriment—we call the various kinds pulse—as well as the woodland kind which gives us meat and drink and oil together, the fruit of trees that ministers to our pleasure and merriment and is so hard to preserve, and that we serve as welcome dessert to a jaded man to charm away his satiety—all these were produced by that sacred island, which then lay open to the sun, in marvelous beauty and inexhaustible profusion. So the kings employed all these gifts of the soil to construct and beautify their temples, royal residences, harbors, docks, and domain in general on the following plan.

They first bridged the rings of sea round their original home, thus

making themselves a road from and to their palace. This palace they originally built at the outset in the dwelling place of the god and their ancestors, and each monarch, as he inherited it in his turn, added beauties to its existing beauties, always doing his utmost to surpass his predecessor, until they had made the residence a marvel for the size and splendor of its buildings. They began on the seaside by cutting a canal to the outermost ring, fifty stadia long, three hundred feet broad, and a hundred feet deep; the 'ring' could now be entered from the sea by this canal like a port, as the opening they had made would admit the largest of vessels. Further, at these bridges they made openings in the rings of land which separated those of water, just sufficient to admit the passage of a single trireme, and covered the openings in so that the voyage through them became subterranean, for the banks of the rings of earth were considerably elevated above the sea level. The breadth of the largest ring of water, that to which the canal from the sea had been made, was three stadia and a half, and that of the contiguous ring of land the same. Of the second pair, the ring of water had a breadth of two stadia and that of land was once more equal in breadth to the water outside it; the land which immediately surrounded the central islet was in breadth one stadium; the islet on which the palace stood had a diameter of five stadia. So they enclosed this islet with the rings and bridge, which had a breadth of a hundred feet, completely by a stone wall, building towers and gates on the bridges at either end of each passage for the sea water. The stone, black, white, and red, they quarried beneath the whole central islet and outer and inner rings, thus, by the same process, excavating a pair of interior basins for shipping with a roofing of native rock. Some of their buildings were of a single color; in other cases they entertained themselves by intermingling the stones to produce variegated surfaces of an inherently agreeable character. The whole circuit of the outermost wall they covered with a coat, a ceruse [ointment], as one might say, of copper, the inner with melted tin, and the wall of the actual acropolis with orichalch, which gleamed like fire.

Within the acropolis was the palace with the following design. In the very center, surrounded by a golden railing, which it was forbidden to enter, was an untrodden sanctuary sacred to Clito and Poseidon, the very place where the race of the ten princes had been first conceived and begotten; here, too, the seasonal offerings were made yearly to each of them from all the ten lots. Poseidon himself had a temple, a stadium long and half a stadium broad, with a proportionate height, but something un-Hellenic in its aspect. The whole exterior of this temple was coated with silver, except the figures on the pediments; these were covered with gold. Within, the roof was of ivory throughout, ornamented with gold, silver, and orichalch, and all the rest, walls, columns, pavement, were covered with orichalch.

It contained golden statues of the god standing in a chariot drawn by e six winged horses, and on such a scale that his head touched the roof, and of a hundred Nereids round him riding on dolphins, for that was then believed to be the number of the Nereids. It also contained many other statues dedicated by private persons. Outside the temple there stood golden statues of all the wives of those who had been of the number of the ten kings and of themselves, and many other great statues, dedicated by kings and private persons of the country itself and the foreign nations over whom they were suzerain. There was an altar of size and workmanship to match the edifice; the palace, too, was no less worthy of the grandeur of the empire and the magnificence of its temples.

117

Uses were found for the waters of the two springs, the cold and the warm. The supply from both was copious and the natural flavor and virtues of their waters remarkable. So they were surrounded by buildings and plantations of appropriate trees as well as with a number of basins, some open to the air and others, which were used b as warm baths in winter, covered. Of these there were several sets, for the kings, for private citizens, and for women, and yet others for horses and other beasts of burden, each set with its own appropriate equipment. The waste from them was conducted to the grove of Poseidon, where the trees were of every kind and, thanks to the excellence of the soil, of incredible size and beauty, and then let into the outer rings of water by conduits at the bridges. Here, besides numerous temples to different gods, they had constructed a variety of c gardens and gymnasiums. Some of the latter were for men; there were others on each of the two islands formed by the rings, specially for horses. In particular, they had a space reserved as a racecourse in the center of the larger of these islands; its breadth was a stadium and the whole length of the circumference was left free for the contests. Round this racecourse on both sides were barracks for the main body of the bodyguards; a number of the more trusty were stationed in the d smaller ring, nearer the citadel; to the most eminently trustworthy of all, quarters were assigned within the citadel about the persons of the kings. The dockyards were filled with triremes and their appropriate equipment, all in excellent order. So much, then, for the appointments of the royal residence. When one had passed the three outer harbors, a wall ran all round, starting at the sea, at a uniform e distance of fifty stadia from the greatest ring and its harbor, returning on itself at the mouth of the canal from the sea. This wall was completely filled by a multitude of closely set houses, and the large harbor and canal were constantly crowded by merchant vessels and their passengers arriving from all quarters, whose vast numbers occasioned incessant shouting, clamor, and general uproar, day and night.

I have now given you a pretty faithful report of what I once learned of the town and the old palace, and must do my best to recall

- 118 the general character of the territory and its organization. To begin with, the district as a whole, so I have heard, was of great elevation and its coast precipitous, but all round the city was a plain, enclosing it and itself enclosed in turn by mountain ranges which came right down to the sea. The plain itself was smooth, level, and of a generally oblong shape; it stretched for three thousand stadia in one direction, and, at its center, for two thousand inland from the coast.
- b All through the island this level district faced the south and was thus screened from the cold northerly winds. In those times it was famous for its encircling mountains, which were more numerous, huge, and beautiful than any that exist today. These mountains contained numerous villages with a wealthy population, besides rivers, lakes, and meadows which provided plentiful sustenance for all sorts of animals, wild or domestic, and timber of different kinds in quantities amply sufficient for manufactures of every type.

- Well, this plain, in consequence partly of its original structure, c partly of the long-continued exertions of a succession of kings, had assumed an aspect which I shall now describe. From the first, it was naturally quadrangular, oblong, and nearly rectangular; departures from that shape had been corrected by the carrying of a fosse round it. As to the depth, breadth, and length of this fosse, it sounds incredible that any work of human hands should be so vast by comparison with other achievements of the kind, but I have to tell the tale as I heard it. It had been dug to the depth of a hundred feet, had every- d where a stadium in breadth, and, as it was carried completely round the plain, its length came to ten thousand stadia. It received the watercourses which came down from the mountains, made the tour of the plain, meeting the city in both directions, and was thence allowed to discharge into the sea. Beyond the city, straight canals of some hundred feet in width, terminated once more at the fosse on the sea- side, were drawn across the plain, with a distance of a hundred stadia e between every two. They were used for the floating of timber down to the town from the mountains and the conveyance by boat of natural produce generally, oblique channels of cross-communication being cut from these canals to one another and the city. There were actually two harvests in the year; in the winter the husbandmen trusted to the sky for their irrigation, in the summer they looked to the earth, and released the waters of the canals. As to their numbers, each allotment of land was under an injunction to furnish one 119 leader of a military detachment, the area of the allotment was ten stadia by ten, and the total number of these allotments mounted to sixty thousand. The number of units supplied by the mountains and the territory at large was said to be enormous, and all were regularly assigned to the different allotments and leaders according to their districts or villages. Each leader was then enjoined to furnish the army with the following contribution: one-sixth part

of a war chariot, up to the full complement of ten thousand such chariots; two chargers with their riders; a pair of horses without car but supplied with a dragoon with light shield and a driver for the pair, to stand behind the combatant; two hoplites, a pair of archers, and the same number of slingers; three light-armed throwers of stones and the same number of javelin men; four marines, up to the full complement of twelve hundred vessels. This was the war equipment of the royal city; in the other nine there were various arrangements which would take much time to describe.

The distribution of power and prerogative was, and had from the first, been this. Each of the ten kings was, in his own territory and government, supreme over persons and, for the most part, over the laws, and could chastise and put to death at his pleasure. But their authority over and intercourse with one another was regulated by the commands of Poseidon, as they were informed by the law and by an inscription left by the earliest kings on a column of orichalch preserved in the sanctuary of Poseidon in the center of the island. Here, in fact, they were accustomed to assemble at alternate intervals of four and five years, thus showing equal respect for even number and odd; in these sessions, they deliberated on their common affairs, made inquiry whether any of them were transgressing the law, and pronounced judgment. When they were to give judgment, they first exchanged pledges in this fashion. In the sanctuary of Poseidon consecrated bulls roamed at large. So the ten came unattended and made prayer to the god that they might capture the victim of his preference. Then they gave chase with wooden clubs and cords only, but no implement of iron; what bull soever they took they brought him to the column and slew him over it, wetting the inscription with his blood. Now there was written on the column, besides the laws, an oath calling down grievous curses on the disobedient. So when they had offered sacrifice after their own ritual and were devoting all the bull's members, they would mingle a bowl of wine, casting in one clot of the blood for each man; the rest of the blood they cast into the fire, first cleansing the column. Then they drew the wine from the bowl in golden beakers, made a libation over the fire, and swore on oath that they would give judgment according to the laws upon the column, would chastise any who had heretofore transgressed, and hereafter transgress none of these ordinances wittingly, neither giving nor obeying commandment save according to the laws of their father. When each had taken this vow for himself and his house after him, he drank and dedicated his beaker in the god's sanctuary, and so betook himself to the banquet and necessary business. When dark fell and the fire of the offerings was burned down, all vested themselves in fair robes of deep blue, and seated themselves so by the embers of their sacrifice, on the bare earth, and by night, quenching all fire in the sanctuary. Thus they gave and received judgment, if any charged

any with transgression. Judgment given, when the morning came, they wrote the judgments on a plate of gold and dedicated it and their robes for a memorial. Now there were many more special laws concerning the rights of the several kings, but the chief of these were that they should bear no arms one against another and that if any should  
 d essay to overthrow the royal house of any city, all should come to its help—but ever in accord with the rule of their ancestors—they should take counsel in common for war and all other affairs, and the chief command should be given to the house of Atlas. Also, the king should have no power over the life of any of his kinsmen, save with the approval of more than half of the ten.

Now this mighty and wondrous power, which then was in that region, the god arrayed and brought against this our own region, the cause, as the tale goes, being this. For many generations, while the  
 e god's strain in them was still vigorous, they gave obedience to the laws and affection to the divine whereto they were akin. They were indeed truehearted and greathearted, bearing themselves to one another and to their various fortunes with judgment and humbleness. They thought scorn of all things save virtue and counted their present prosperity a little thing. So they found the weight of their gold and  
 121 other possessions a light load. Wealth made them not drunken with wantonness; their mastery of themselves was not lost, nor their steps made uncertain. They perceived with the clear vision of the sober that even these things all receive increase from virtue and mutual love, whereas where the first are sought and held in honor, they decay themselves and the others perish with them. So by reason of such thoughts and the divine strain that persisted in them, their wealth in the things of which we have told was still further increased. But when the god's part in them began to wax faint by constant crossing with  
 b much mortality, and the human temper to predominate, then they could no longer carry their fortunes, but began to behave themselves unseemly. To the seeing eye they now began to seem foul, for they were losing the fairest bloom from their most precious treasure, but to such as could not see the true happy life, to appear at last fair and blessed indeed, now that they were taking the infection of wicked coveting and pride of power. Zeus, the god of gods, who governs his kingdom by law, having the eye by which such things are seen, beheld their goodly house in its grievous plight and was minded to lay a  
 c judgment on them, that the discipline might bring them back to tune. So he gathered all the gods in his most honorable residence, even that that stands at the world's center and overlooks all that has part in becoming, and when he had gathered them there, he said . . .

# L A W S

*The Laws was written a few years before Plato's death and is the last thing he ever wrote. It is unlike all the other dialogues and the difference is emphasized by the fact that in it alone Socrates is absent. He plays little or no part in the Sophist, Statesman, and Timaeus, but he is there and the conversation is directed toward him. In the Laws he is never mentioned.*

*Three elderly men, a Cretan, a Spartan, and an Athenian, meet while walking in Crete and fall to talking about good and bad laws. Finally the other two ask the Athenian, who has shown himself their superior in knowledge, to say what laws there should be in a good constitution. They agree that this will not be the ideal state, which should have no laws at all because where the law governs there will always be injustices. Nevertheless the rule of law is the second best. It is the expression of the true opinion of the community and, if carried out, will lead to an increasing understanding of the ideal, by which the actual laws can be improved.*

*Plato is old. Death cannot be far away. The world he is about to leave wears a different look from what it did. It has become of pressing importance. He does not want to look farther and farther into "the beyond," but to come down to earth and realize some of the truth he has seen. He drops poetical thought and storytelling; he holds up now as the chief business of the state to mold character rather than to forward knowledge, although it is true that nowhere does he even imply anything against that basic conviction of his that only he who knows what justice is can be just.*

*In the Republic he had said that human affairs were not worth taking very seriously. He repeats the statement in the Laws, but adds that it is yet necessary to take them seriously, and he proceeds to do so through many pages of laws that regulate life in great detail. One law begins, "As to pears and apples and pomegranates and similar fruits." That sort of thing makes heavy reading, but whoever persists will find Plato again and again treading the sunlit heights. He cannot keep long on the level of the commonplace.*

*The Golden Rule is here: "May I do to others as I would that they should do to me." Four hundred years later Christ said it. The essence of the parable of the good Samaritan is in the words,*

*"Offenses by alien against alien, compared with sins against fellow citizens, more directly draw down the vengeance of God. For the alien, being without friends or kinsmen, has the greater claim on pity, human and divine." The Old Testament declares that the sins of the fathers shall be visited on the children. Plato says, "But children and family, if they forsake their father's ways, shall have an honorable name and good report, as those that have done well and manfully in leaving evil for good." He probes more deeply than the Old Testament into the nature of sin when he writes, "The sorest judgment on evil-doing is that a man grows like those who already are evil," and "Violent attachment to self is the constant source of misdeeds in every one of us." He stands with the Old Testament when he says, "It is God who is, for you and me, the measure of all things."*

## BOOK I

624 **ATHENIAN**: To whom is the merit of instituting your laws ascribed, gentlemen? To a god, or to some man?

**CLINIAS**: Why, to a god, sir, indubitably to a god—in our case to Zeus, in the case of Lacedaemon, to which our friend here belongs. I believe, according to their own story, to Apollo. That is so, is it not?

**MEGILLUS**: Certainly.

**ATHENIAN**: You mean that Minos, just as Homer relates, used  
b to repair to a conference with his father every ninth year, and that his legislation for your Cretan cities was based on his father's oracles?

**CLINIAS**: So our local story has it. It adds the further detail  
625 that Rhadamanthus, the brother of Minos—the name will, of course, be familiar to you—was conspicuous for his justice. Well, as we Cretans insist, it was his ancient administration of our judicial business which earned him this deserved reputation.

**ATHENIAN**: An honorable distinction indeed, and most appropriate to a son of Zeus. But as you and our friend Megillus have both been brought up under such venerable legal institutions, I trust you  
b will not find it disagreeable to spend the time, as we walk this morning, in conversation on questions of politics and jurisprudence. The distance from Cnossus to the cave and chapel of Zeus is, I understand, quite considerable, and there are presumably shady resting places, such as the sultry season demands, on the way, among the

From *The Laws of Plato*, translated by A. E. Taylor (London and New York, 1934; subsequently pub. in Everyman's Library).

lofty trees, where it will be a comfort, at our age of life, to make frequent halts and entertain one another with discourse. Thus we may reach the end of our long journey without fatigue.

CLINIAS: To be sure, sir, there are groves of prodigiously fine, tall cypresses farther on, as well as meadows, where we can take a c rest.

ATHENIAN: I am glad to hear it.

CLINIAS: No doubt you are, but we shall all be gladder still when we come to them. Well, let us make our start, and good luck go with us!

ATHENIAN: With all my heart! Come now, tell me, what is the purpose of your laws in prescribing your system of common meals and physical training, and your distinctive accouterments?

CLINIAS: Why, in the case of my own countrymen, sir, I take the purpose to be very obvious. As you can both see for yourselves, Crete, as a whole, unlike Thessaly, has not a level surface. This is, of course, why the Thessalians rely by preference on cavalry, but we on rapid infantry movements, since with us the ground is uneven and better adapted for training in these maneuvers. On such a terrain a soldier must naturally be lightly accoutered, and not carry a load as he runs; consequently, bow and arrows are felt to be recommended by their light weight. These arrangements, then, have all been made with a military purpose, and it is warfare, if I am to speak my own conviction, which our lawgiver kept in view in all his dispositions. For instance, his reason for establishing the common meals was presumably that he saw that when the whole population are in the field, that very circumstance compels them to take their meals together, through the campaign, for self-protection. He meant, I believe, to reprove the folly of mankind, who refuse to understand that they are all engaged in a continuous lifelong warfare against all cities whatsoever. Hence, if a force must take its meals together in wartime, for the sake of self-defense, and post relays of officers and men to act as its guards, the same thing should equally be done in time of peace. In fact, the peace of which most men talk—so he held—is no more than a name; in real fact, the normal attitude of a city to all other cities is one of undeclared warfare. By reflection on these lines you will discover that our Cretan legislator constructed the universal scheme of all our institutions, public and private, with a view to war, and transmitted his laws to us for observance in precisely the same spirit. It was his conviction that there is no benefit to be got from any other possessions or associations, where there is a failure to maintain supremacy in the field; all the advantages of the vanquished pass to the victors.

ATHENIAN: Your training, sir, would appear to have given you an admirable insight into the institutions of Crete. But you might be a little more definite on one point. As to your test of a well-constituted

city, I understand you to be saying that such a city must be so equipped as to be victorious over its rivals in warfare. Am I right?

CLINIAS: Most decidedly, and I fancy our friend here will be of the same mind, too.

MEGILLUS: Why, my good man, what other answer would you expect from any Lacedaemonian?

ATHENIAN: Well, possibly this is the right test in comparing cities with cities, but there may be a different test for the comparison of village with village?

CLINIAS: Not at all.

ATHENIAN: The same test holds good?

CLINIAS: Certainly.

ATHENIAN: Well, and when we compare one household in our village with another, and one man with one other man? The same test still holds?

CLINIAS: The very same.

d ATHENIAN: And the individual man? Must we think of him as related to himself as foeman to foeman, or what are we to say in this case?

CLINIAS: Ah, my Athenian friend! I would rather not say Attic for I think you deserve to take your appellation by preference from the goddess. You have made the position all the more incontestable by this reduction of it to first principles. The more readily, then, can you satisfy yourself of the truth of what has just been said. Humanity is in a condition of public war of every man against every man, and private war of each man with himself.

e ATHENIAN: And pray, how are we to understand that?

CLINIAS: Why, here, sir, is the field in which a man may win the primal and subtlest victory, victory over *self*, and where defeat, defeat by *self*, is most discreditable as well as most ruinous. There lies the proof that every one of us is in a state of internal warfare with himself.

627 ATHENIAN: Then suppose we invert the argument, thus. If each individual man is master of himself, or, alternatively, mastered by himself, may we, or may we not, say that a family, a village, a city, exhibit this same feature?

CLINIAS: You mean that they may be masters of, or again mastered by, themselves?

ATHENIAN: Exactly.

CLINIAS: Again a very proper question. The facts are beyond doubt, particularly in the case of cities. Any city where the better sort are victorious over the masses and inferior classes may properly be said to be mistress of herself and be rightly congratulated on the victory; where the reverse happens, we must speak in the opposite sense.

b ATHENIAN: The question whether worse is ever really master of better is one we shall do well not to raise, since it calls for fuller

consideration. Your present assertion, as I understand, comes to this. An unrighteous majority may sometimes make a combined effort to subdue by violence a righteous minority of their kinsmen and fellow citizens. When this attempt succeeds, the city may properly be spoken of as enslaved to herself, and called bad; when it fails, we call her good, and say that she is mistress of herself.

CLINIAS: This language certainly sounds paradoxical, sir, but we cannot withhold our assent.

ATHENIAN: Now stay a moment, and consider a further point. There might be a great number of brothers, with the same father and mother, and it would not be remarkable that the majority of them should prove unrighteous and only a minority righteous?

CLINIAS: Not in the least.

ATHENIAN: Nor would it be seemly for you and me to press too minutely the point that such a household or family can be said as a whole to be worsted by itself when its wicked members triumph, and to be its own mistress when they fail. The aim of our present inquiry into current language is to examine, not the propriety or impropriety of its phraseology, but the objective truth or falsehood of a theory of legislation.

CLINIAS: Truly said, sir.

MEGILLUS: Yes, excellently put so far, as I agree.

ATHENIAN: Well, let us go on to a further point. These brothers of whom I have just spoken might conceivably have an adjudicator to decide between them?

CLINIAS: To be sure they might.

ATHENIAN: Now which would be the better adjudicator? One who exterminated all the bad brothers and enjoined the better to govern themselves, or one who put the government into the hands of the good, but spared the lives of the worse and brought them to voluntary submission to this government? There might be still a third degree of merit in an adjudicator, if we could find one who would take in hand a family at variance with itself, reconcile its members for the future by his regulations, without the loss of a single life, and keep them on permanent amicable terms.

CLINIAS: And this third sort would be far and away the best of adjudicators or lawgivers.

ATHENIAN: But, mark you, in all the regulations he gave them, he would be legislating with a view to the complete contrary of war.

CLINIAS: That much is true enough.

ATHENIAN: Then what of the man who organizes a city? Is it with a view to external warfare he would order its life? Would he not much rather pay regard to the internal warfare which arises, from time to time, within the city, and is called, as you know, *faction*—a kind of war any man would desire never to see in his own city, or, if it broke out, to see appeased at once?

CLINIAS: Obviously he would.

ATHENIAN: Now which of two courses would one prefer? That peace should be restored by the victory of one party or the other to the faction, and the destruction of its rival, or rather that friendship and amity should be re-established by a reconciliation, and the citizens  
c compelled to bestow their attention on an external enemy?

CLINIAS: Why, any man would prefer the latter issue, for his own city.

ATHENIAN: A lawgiver, no less than another?

CLINIAS: Why, of course.

ATHENIAN: And any legislator will have the best as the object of all his enactments?

CLINIAS: Undeniably.

ATHENIAN: But the best is neither war nor faction—they are things we should pray to be spared from—but peace and mutual good will. And thus a victory of a city over itself turns out, it would seem,  
d to be not so much a good as a necessary evil. It is as though one fancied that a diseased body which has been subjected to medical purgation were at its best in that condition, and ignored a body which has never stood in need of such treatment. So, if a man takes a similar view of the happiness of the city, or indeed, of the individual man—I mean, if external wars are the first and only object of his regard—he will never be a true statesman, nor will any man be a finished legislator, unless he legislates for war as a means to peace, rather than for peace as a means to war.

e CLINIAS: Your argument, sir, has the appearance of being sound; yet I am very much mistaken if the institutions of Lacedaemon, as well as those of my own country, have not the latter as their one serious end.

629 ATHENIAN: Very conceivably they have, but our present concern is to submit them to calm inquiry, rather than obstinate contention, as we are convinced that their authors have the same interests at heart as ourselves. We may begin, if you will kindly assist in the examination, by an appeal to the words of an enthusiast for warfare, Tyrtaeus, an Athenian by birth, and a naturalized fellow citizen of our friend from Sparta. He says, you will remember, that he would 'make  
b no reckoning or count'<sup>1</sup> of any man, no matter how vast his wealth, or what his advantages—and he makes a pretty full enumeration of such advantages—unless he proves himself at need a first-rate warrior. You are sure to have heard the verses, Clinias; as for Megillus, no doubt he has them at his fingers' ends.

MEGILLUS: Naturally.

CLINIAS: We know the lines in this country, too; we got them from Sparta.

<sup>1</sup> Tyrtaeus 12.

ATHENIAN: Well now, suppose we join in putting a question to our poet to some such effect as this. Tyrtaeus, you inspired poet, we are convinced of your wisdom and merit by the excellence of your eulogies of the eminent in warfare. So Clinias of Cnossus, myself, and our friend here believe ourselves to be decidedly of one mind with you already on the main point, but we should like to be quite certain that we are all speaking of the same persons. Tell us, then, do you agree with us in making a marked distinction between two forms of war, or not?

I fancy it would not require a poet of anything like the eminence of Tyrtaeus to give the true answer that there are two forms. There is what all mankind call faction, and it is, of course, the most dangerous kind of war, as we said a few minutes ago; the other, and much milder form, as I imagine we shall all agree, is that waged when we are at variance with external aliens.

CLINIAS: Just so.

ATHENIAN: Then to which kind of warriors, or war, do your magnificent eulogies, and your corresponding censures, refer? Presumably to the external. At least, you speak in your verses of your intolerance of men who have not the nerve to 'face the carnage, close with the foe and strike him down.' So we might continue thus. Your special commendation, Tyrtaeus, is, we gather, meant for those who distinguish themselves in an external war against the stranger.

No doubt he would agree to admit this?

CLINIAS: To be sure.

ATHENIAN: But we affirm that good as such men are, those who prove themselves conspicuously best in the gravest kind of war are still better, and immensely better, and we, too, can cite a poet, Theognis of Megara in Sicily, whose words are: 'A loyal man, Cynus, is worth his weight in gold and silver in the hour of deadly feuds.'<sup>2</sup> We assert, then, that this type of character proves himself, and proves himself in a deadlier warfare, a far better man than the other in the measure in which justice, self-command, and wisdom, combined together and seconded by valor, are better than mere valor by itself. For a man will never prove himself loyal and soundhearted in times of faction unless he has all virtue, whereas there are plenty of hired combatants who are ready enough to take a firm stand and fight to the death in the kind of war of which Tyrtaeus has to speak, though most of them prove reckless, unjust, brutal, and superlatively imprudent, but for a very few rare exceptions. Now to what does our argument conclude? What do we mean to establish by urging it? Obviously that your Cretan legislator from the school of Zeus, or any other worth his salt, could have no other object in view in his legislation than the supreme virtue. This supreme virtue is what Theognis speaks of as

<sup>2</sup> Theognis 77-78.

loyalty in peril, and we may call it complete righteousness. As for the quality specially commended by Tyrtaeus, it is noble enough, and nobly celebrated by the poet, but, to speak with precision, it comes only  
 a fourth in order and worth.

CLINIAS: That, sir, is to rank our Cretan legislator very low.

ATHENIAN: No, not your legislator, my friend, but ourselves, if we dream that Lycurgus or Minos had warfare primarily in view in all his legislation for Lacedaemon or Crete.

CLINIAS: But what, then, ought we to have said?

ATHENIAN: What, I take it, is true and ought to be said in an  
 e inquiry into the truth. Their legislation was framed in the interest of virtue as a whole, not of one fragment of it, and that the least considerable. They aimed at devising a classified code, though not on the lines of our present-day framers of such codes. Today each of them frames any additional paragraph he finds necessary—one a section  
 631 on estates and their heiresses, another one on assault and battery, others, others of the same kind, in indefinite number. But we contend that the right procedure for the framer of a legislation is that with which we have just made a beginning. I unreservedly approve the intention of your own remarks about your national jurisprudence. It was quite right to begin with virtue, and explain that virtue was the aim your legislator had in view. But when you stated that the whole of his enactments regards only one fragment of it, and that the most inconsiderable, I thought you were misapprehending. But there is a further distinction I could wish you to observe in your own discourse  
 b and to expect in that of others. May I explain its nature?

CLINIAS: With all my heart.

ATHENIAN: Sir—so I would have had you say—it is not without good cause that the laws of Crete have this exceptionally high repute with all Hellenes. They serve the right end, that of effecting the happiness of those who enjoy them. They, in fact, secure them all good things. But there are two different kinds of good things, the merely human and the divine; the former are consequential on the latter. Hence a city which accepts the greater goods acquires the lesser along with them, but one which refuses them misses both. The lesser are  
 c those among which health holds the first place, comeliness the second, strength for the race and all other bodily exercises the third, while the fourth place belongs to a wealth which is not 'blind,' but clear-sighted, because attendant on wisdom. Of divine goods, the first and chiefest is this same wisdom, and next after it, sobriety of spirit; a third, resultant from the blending of both these with  
 d valor, is righteousness, and valor itself is fourth. All of these naturally rank before the former class, and, of course, a lawgiver must observe that order. Next, he should impress it on his citizens that all his other injunctions have a view to these ends, and that among the ends, the human look to the divine, and all the divine to their leader, wisdom.

He should superintend, by a right distribution of honor and dishonor, the matrimonial alliances among his citizens, and their subsequent behavior in the procreation of offspring, male and female, and rearing of it, from infancy right on to old age. He must make a careful and observant study of the pleasures, the pains, the desires, and all the vehement passions aroused in them by all these social relations, and distribute censure and praise among them rightly, in the actual text of his laws. So, again, with the passions of anger and fear, with the various troubles of soul engendered by misfortune, and the reactions from them in seasons of good fortune, and the emotions which are incidental to humanity in sickness, in war, in penury, and their opposites—in all such cases, he should explain and determine how far each human mood is becoming, and how far it is not. 632

Next, our legislator must watch over the methods by which his citizens acquire and expend their wealth, and have an eye to the presence or absence of justice in the various procedures by which they all contract or dissolve associations with one another, voluntary or involuntary, assigning marks of honor to those of them who conform to his laws, and imposing specific penalties on the disobedient. When he comes at last to the close of his whole constitution making, he must decide in what manner the funeral rites of each class of citizen should be celebrated, and what marks of respect should be assigned to them. When the lawmaker has completed his discovery he will set over the whole system a body of guardians endowed some with wisdom, some with true beliefs, to the end that intelligence may knit the whole into one, and keep it in subjection to sobriety and justice, not to wealth or self-seeking. c

Those, gentlemen, are the lines on which I should have wished, and do still wish you to explain how all these merits are to be found in the laws ascribed to Zeus and the Pythian Apollo, and enacted by Minos and Lycurgus, and how they form a system, readily discernible by one familiar with law from scientific study, or even habit of life, though far from manifest to ordinary persons like myself. d

CLINIAS : Then what, sir, should be our next step?

ATHENIAN : I think there will need to be a fresh start of the examination, beginning, as before, with the practices by which courage is developed; then we will examine a second, and then a third form of virtue, if you are so minded. When once we have dealt with our first topic, we may try to take it as a model of procedure, and beguile our journey with further chat on the same lines. After we have treated of all virtue, we will try, with God's permission, to show that all the regulations we were just enumerating have it for their object. e

MEGILLUS : Excellent. And suppose you begin by trying your criticism on our friend here, the admirer of Zeus. 633

ATHENIAN : On you and myself, no less than on him. We are all concerned in the argument. Come, then. We may say that your

common meals and physical exercises were devised by your legislator with a view to war?

MEGILLUS: Yes.

ATHENIAN: And thirdly, or fourthly? For in considering this and other virtues, it is possibly well to make such an enumeration of their parts, or whatever else they should be called, so long as a man's meaning is clear.

b MEGILLUS: Well, thirdly, as I, or any other Lacedaemonian would say, he devised the chase.

ATHENIAN: Suppose we try to find a fourthly, or a fifthly, if we can.

c MEGILLUS: Then I will venture on naming a fourthly, too, the endurance of bodily pain which finds so much scope among us Spartans in our boxing matches and our system of foraging raids, which regularly involve heavy whippings. Besides, we have what we call a *crypteia*, which is a wonderfully hard discipline in endurance, as well as the practices of going without shoes or bedding in the winter, and wandering all over the country, night and day, without attendants, performing one's menial offices for oneself. Further, again, our *gymnopaediae* involve rigid endurance, as the matches are fought in the heat of the summer, and we have a host of other similar tests—in fact, almost too many for particular enumeration.

d ATHENIAN: You state your case well, my Lacedaemonian friend. But, pray, what are we to make of courage? Is it a conflict with fear and pain, just that and no more? Or does it also include conflict with longings and pleasures and their dangerous seductive blandishments, which melt even the mettle of the would-be precisian like so much wax?

MEGILLUS: That, I believe, is the true account; it is a conflict with all of these.

ATHENIAN: Now, unless we have forgotten our earlier conversation, our friend from Cnossus spoke of cities, and men too, as defeated by themselves. Did you not?

CLINIAS: To be sure, I did.

e ATHENIAN: Well, shall we give the name *bad* now to the man who is defeated by pain, or to him who is defeated by pleasure as well?

CLINIAS: I think it belongs more properly to one who is defeated by pleasure. And I imagine all of us are readier to say that one who is mastered by pleasure is shamefully self-defeated than to say it of one who succumbs to pain.

ATHENIAN: Then very surely our pair of legislators instructed  
634 by Zeus and Apollo cannot have canonized a lopsided courage, which can only stand its ground before a sinister enemy, but proves impotent against the dexterously and ingeniously seductive opponent? Surely they would have her face both?

CLINIAS: Both, I am confident.

ATHENIAN: Then I must ask a second question. What practices have your two cities which teach a man the taste of pleasures without any evasion? Just as pains were not evaded—the man was thrust into the thick of them, but forced, or persuaded by marks of honor, to get the mastery of them. Where, I say, is the same regulation about pleasure to be found in your laws? I want to know what there is in your institutions to give the same person courage alike against pain and against pleasure, to make him victorious where he ought to be victorious, and secure him from defeat at the hands of his most intimate and mortal enemies.

MEGILLUS: Nay, sir, possibly I could not readily allege conspicuous illustrations, on a large scale, in the matter of pleasure, to match the numerous laws I was able to produce as a counterpoise to pain, though I might be more fortunate with minor details.

CLINIAS: I, too, cannot produce an equally obvious illustration from our Cretan laws.

ATHENIAN: No, my friends, and it is no matter for surprise. But if any of us should be led, in his desire to discover what is true and best, into censure of some detail in the national laws of any of us, I trust we shall take such treatment from each other gently, without resentment.

CLINIAS: Truly spoken, Athenian. We must do as you say.

ATHENIAN: Harshness would, in fact, hardly become our days, Clinias.

CLINIAS: Indeed, it would not.

ATHENIAN: Well, how far the reproaches which are brought against the systems of Laconia and Crete may be deserved or undeserved is another matter; in any case, I am probably better qualified than either of you to report the criticisms which are generally current. If your laws are but reasonably good, as they are, we must reckon among the best of them the enactment that no young man shall raise the question which of them all are what they should be and which not, but that all should agree, without a dissonant voice, that they are all god-given and admirable, flatly refusing a hearing to anyone who disputes the point, while if an older man has any reflections to make, he must impart them to a magistrate of his own age, when none of the younger men are by.

CLINIAS: Perfectly true, sir. Remote as today is from the times of our ancient legislator, I believe you have fairly divined his intentions and are exactly right.

ATHENIAN: Well, we have no younger men with us now, and for ourselves, our years give us the legislator's license to hold a private conversation on the subject without offense.

CLINIAS: Just so. Accordingly we invite you to criticize our

- institutions without reserve. One is not insulted by being informed of something amiss, but rather gets an opportunity for amendment, if  
 b the information is taken in good part, without resentment.

ATHENIAN: Thank you. But my object for the present is not to criticize your laws, which we have not yet thoroughly examined, so much as to state a difficulty. You are the only communities, Greek or non-Greek, known to us whose lawgiver has enjoined you to leave the intensest pleasures and delights utterly untasted, though, in the matter of pains and fears which we have just been discussing, he  
 c held that one who is allowed to flinch from them on system from his boyhood, and then has to face fatigues and fears and pains which are not to be evaded, will flinch from those who have been disciplined in them, and be enslaved by them. Now, surely the legislator, to be consistent, should take the same view of pleasures. He should say to himself, if our citizens are to grow up from childhood without experience of the intensest pleasures, if they are to have no training in constancy and refusal to disgrace themselves when assailed by pleasures, susceptibility to pleasure will lead them to the same fate as  
 d those who succumb to their fears. They will fall slaves, in a different, but even more dishonorable fashion, to those who can resist the allurements of pleasure, and have the means of producing it at their disposal, though these may sometimes be utterly evil men. Thus, their souls will be half enslaved, half free, and they will not deserve to be called brave men, or free men, without qualification. I would have you consider whether you find these remarks at all pertinent.

e CLINIAS: Pertinent enough, on such a first hearing. But it might show immaturity and folly to form confident conclusions on such weighty matters on the instant.

ATHENIAN: Then suppose we proceed to the next point of our program, my friends, and turn from courage to sobriety. Can we discover any point of superiority in these two systems over those of societies organized on no systematic principles, as we did in connection with war?

636 MEGILLUS: Not too easily. Still, our common meals and physical exercises were presumably well devised to promote both virtues.

ATHENIAN: Ah, my friends, how difficult it seems to ensure that the working of an institution shall be as unquestionable as its theory! Presumably it is with states as it is with human bodies—one cannot prescribe one definite treatment for one subject which involves no physically injurious consequences along with its beneficial effects. For  
 b example, these physical exercises and common meals you speak of, though in many ways beneficial to a city, provide dangerous openings for faction, as is shown by the cases of the Milesians, Boeotians, and Thurians. And, in particular, this practice is generally held to have corrupted the ancient and natural rule in the matter of sexual indulgence common to mankind with animals at large, and the blame for

these corruptions may be charged, in the first instance, on your two cities and such others as are most devoted to physical exercises. c Whether these matters are to be regarded as sport, or as earnest, we must not forget that this pleasure is held to have been granted by nature to male and female when conjoined for the work of procreation; the crime of male with male, or female with female, is an outrage on nature and a capital surrender to lust of pleasure. And you know it is our universal accusation against the Cretans that they were the inven- d tors of the tale of Ganymede; they were convinced, we say, that their legislation came from Zeus, so they went on to tell this story against him that they might, if you please, plead his example for their indulgence in this pleasure too. With the tale we have no further concern, but the pleasures and pains of communities and of private lives are as good as the whole subject of a study of jurisprudence. For pain and pleasure are, as it were, nature's twin fountainheads; whoso draws from the right fount, at due times, and in due measure, be it city, or e person, or any living creature, is happy, but he that draws without science, and out of due season, has the completely contrary lot.

MEGILLUS: Sure, sir, this is finely said, and I would not deny that we are dumfounded for an answer to it. Yet, for myself, I hold that our Lacedaemonian lawgiver is right to command avoidance of pleasures. As to the law of Cnossus, its defense shall be made by our friend, if he will accept the task. In Sparta, to my mind, this matter of pleasure is ordered better than in any place on earth. That which, by 637 its keen delightsomeness, most easily entangles men in outrage and all manner of follies is, by our law, banished entirely from our territory. Neither in our country districts, nor in towns which are controlled by Spartans, can you find drinking parties, with the strong incentives to various pleasures that attend them. There is not a man of us who would not forthwith lay the heaviest penalty on a tipsy reveler, if he b fell in with him; the very festival of Dionysus would not serve as an excuse for the offender's discharge. I have seen such reveling before now in your Attica on the 'wagons,' and at Tarentum, a settlement of our own, I beheld the whole city in its cups at the feast of Dionysus, but there is no such practice among us.

ATHENIAN: Friend from Sparta, any recreation of this kind is commendable, when the power of resistance persists, though mere foolishness when it is relaxed. A countryman of my own might well defend himself by retorting on you the license of your Spartan women. c To be sure, there is a rejoinder which is commonly held to be a sufficient vindication in all such cases at Tarentum, or in my own country, no less than in yours. A native will always meet the stranger's astonishment at an unfamiliar practice with the words, There is no call for surprise; this is our established custom in the matter, though yours may perhaps be different. d

What you and I are now discussing is not the practice of mankind

at large, but the merits or demerits of the legislators who create the customs. So we must take the whole subject of convivial drinking into fuller consideration; it is a practice of grave importance, and calls for the judgment of no mean legislator. The question is not that of the mere drinking of wine or its complete prohibition, but of the convivial drinking of it. Should we follow the fashion of Scythians and Persians—to say nothing of Carthaginians, Celts, Iberians, and Thracians, who are all of them warlike peoples—or that of your own countrymen? They, as you remind me, absolutely reject the practice, whereas the Scythians and Thracians, men and women alike, take their wine neat, and let it run down over their garments, and count this a laudable and glorious practice. The Persians, again, indulge freely in this, as in other luxurious habits which you Spartans prohibit, though with less disorder than the nations I have mentioned.

638 MEGILLUS: Yes, my dear sir, but do not forget that we make them all run when we have weapons in our hands.

ATHENIAN: Nay, sir, you must not urge that plea. A flight or pursuit has so often gone unrecorded, and will in the future; this shows that we cannot regard victory or defeat in the field as more than a very dubious test of the laudability of a practice. For the matter of that, the more populous city may defeat the less populous and reduce it to subjection, as Syracuse has done with Locri, which, you know, has the reputation of enjoying the best laws to be found in that part of the world, or Athens with Ceos, and no doubt many similar instances could be produced. No, we must leave victories and defeats out of court for the present, and discuss the various practices on their own merits, in the hope of convincing ourselves that some are laudable and others the reverse. But first let me make an observation as to the right method of investigating the worth of such practices.

c MEGILLUS: And what is it you would say?

ATHENIAN: When such a practice is under consideration, I hold that it is always highly improper to undertake to condemn or approve it out of hand, on the bare mention of its name. This is as though one who had heard wheat, for instance, commended as a wholesome article of diet should denounce it out of hand, without any inquiry into its effects, or the manner of its administration—I mean, how it is to be administered, and to whom, or with what accompaniments, in what form it is to be served, and to persons in what state of health. Well, d that is exactly how I think we all argue our present question. As soon as we hear the mere word 'drinking,' one party condemns the practice and another commends it, and both in a very odd fashion. Both sides rest their case on producing evidence to fact or character—the one thinking it decisive that its witnesses are so numerous, the other that we see the abstainers victorious in the field of battle—though there e even the fact is open to dispute. Now if we are to go on to deal with established customs in general on these lines, I, for one, shall be left

unsatisfied. So I propose to deal with our immediate subject, drinking, by a different method—the right one, I believe—as an attempt to illustrate the proper procedure in treating such questions generally. For there are countless peoples ready to contest the issues at stake in these matters against your two cities.

MEGILLUS: Most certainly, if a right way of treating such problems is to be found, we must not refuse it a hearing. 639

ATHENIAN: Then let us treat our question somewhat in this fashion. Suppose that someone should commend goat keeping, or the goat itself as a valuable animal, and another man, who had seen goats damaging lands under cultivation by grazing on them without a keeper, should denounce the brutes, or find fault with any creature he had seen thus under no control or bad control. Can we say that censure of anything coming from such a quarter would have the least validity?

MEGILLUS: Of course not.

ATHENIAN: And what do you say to this? Is a man a useful commander at sea, so long as he only possesses the science of navigation, whether he happens to be seasick or not? b

MEGILLUS: Certainly not, if he combines that disorder with his professional knowledge.

ATHENIAN: And what of the commander of an army in the field? Is he a competent commander, so long as he has military science, even if he is a coward and falls seasick in peril from the inebriation of terror?

MEGILLUS: A thoroughly useless officer, that! A commander for the veriest of women, not for men!

ATHENIAN: And what of him who commends or condemns any social activity, be it what it may, which naturally calls for a leader, and is beneficial under his conduct, though he has never seen that activity rightly organized under such leadership, but only discharged with no leaders, or bad ones? Can we possibly imagine that there is any value in the censure or commendation of such concerted action by such observers? c

MEGILLUS: How can we, on the assumption that they have never witnessed nor taken part in any such association, conducted as it should be? d

ATHENIAN: Now, stay. I suppose we may reckon a drinking party and its members as one kind of social activity?

MEGILLUS: Surely, surely.

ATHENIAN: Then has anyone ever seen such a party conducted as it ought to be? Neither of you can hesitate to give the answer, 'never'—the whole thing is foreign and unfamiliar to you both. And for my own part, though I have been present at many, in different places, and what is more, may even say I have studied them all carefully, I have never seen nor heard of one rightly managed e

throughout; here and there a few minor details may not have been amiss, but, in the main, I have found universal wrong management.

CLINIAS: You must explain your meaning, sir, rather more precisely. Our inexperience in these matters, as you were saying, is such that, even if we were present at such a gathering, we should very likely not distinguish proper management from improper at first sight.

640 ATHENIAN: No, possibly not. But do your utmost to follow my explanation. No doubt you understand as much as this, that in every assembly or concerted action for any purpose, there should always be someone in control of the parties?

CLINIAS: Beyond a doubt.

ATHENIAN: And mark that we were lately saying that in a combat the commander must be a brave man.

CLINIAS: So we were, to be sure.

ATHENIAN: Now a brave man is less agitated by alarms than a coward.

b CLINIAS: True again.

ATHENIAN: And if we could contrive to place an army under a general who was utterly devoid of alarm and agitation, we should by all means do so, should we not?

CLINIAS: Most decidedly.

ATHENIAN: But at the present moment we are contemplating a man who is to take command, not in the embattled meeting of foes with foes, but in the peaceful intercourse of friends with friends, for the promotion of common good feeling.

CLINIAS: Exactly.

c ATHENIAN: Now, as the kind of gathering we have in view is to be attended by drinking, it will not be free from excitement.

CLINIAS: Of course not—very much the contrary, I should presume.

ATHENIAN: To begin with then, here, too, a commander is wanted.

CLINIAS: Wanted, indeed—nowhere more.

ATHENIAN: And should we secure freedom from excitement in such a commander, if the thing is possible?

CLINIAS: Decidedly.

d ATHENIAN: And further, I presume, he should be a man of social tact. For his business is to conserve the existing friendly relations between the parties, as well as to ensure that they shall be still further augmented by the gathering.

CLINIAS: True enough.

ATHENIAN: So the commander set to control a company of drinkers should be both sober and sagacious, not the reverse. If the drinkers are under the control of a young and indiscreet man who is drinking himself, he may think himself very fortunate if no grave disaster results.

CLINIAS : Indeed, he may.

ATHENIAN : Well then, if such parties were conducted among us under the most correct regulations attainable, an unfavorable critic who should attack the institution as such might perhaps be right in his disapproval, but when a man inveighs against a practice because he sees it mismanaged in every possible respect, he is obviously unaware, in the first place, that the practice in question is misconducted, and in the second, that any proceeding whatever will appear mischievous on the understanding that it is executed without a sober master or commander. Surely you can see that a tippling navigator, or commander of any kind, will wreck anything, vessel, or car, or army, or whatever it may be, for which he sets the course. 641

CLINIAS : Your last remark, sir, is unquestionably true. But pray go on to explain what possible good this custom of drinking bouts would do us, if they were rightly conducted. Take the case of an army, such as we were just speaking of. If it gets the right kind of leadership, the result is a victory for the force—no inconsiderable good—and so with our other examples. But what appreciable benefit accrues to individuals, or to the city, from the proper surveillance of a wine party? b

ATHENIAN : Well, and what appreciable benefit could we say accrues to the city from the proper surveillance of one boy, or one group of boys? If the question is to be put in that form, must we not reply that the city certainly gets but a trifling advantage from the single case? But if the question is universally what considerable advantage the city derives from the education of the educated, the answer is easy. Education is the way to produce good men, and, once produced, such men will live nobly, and vanquish their enemies in the field into the bargain. So education brings victory in her train, though victory sometimes leads to loss of education, since victorious warfare often enough leads men to pride, and through pride they take the taint of other vices innumerable. Moreover, there has never been a Cadmean education, whereas Cadmean victories have been, and will be, only too common. c

CLINIAS : We may gather, then, that you regard time spent in companionship over the bottle as contributing much to education, d when it is rightly so spent?

ATHENIAN : Most assuredly.

CLINIAS : Then can you, in the next place, offer us proof that the statement is true?

ATHENIAN : Why, sir, as to truth, to be positive the thing is so, when there are so many to dispute it, must be left to a god. But if I am called on to give my personal opinion, I will state it frankly, since our present conversation has struck into the subject of law and politics.

CLINIAS : That is just what we are attempting to do—to discover your own conviction on the matter now in dispute. e

ATHENIAN: Well then, to our task. You will have to make an effort to follow, and I to elucidate the argument, with such powers as I have. But first let me make one observation. The universal belief of Hellas is that whereas my own city delights in discourse and is copious in it, Lacedaemon is inclined to taciturnity, and Crete to versatility of mind rather than fluency of utterance. So I fear you may get the impression that I am expending too many words on a minor matter, if I deliver myself of a long discourse on so inconsiderable a topic as drinking. But the truth is that a really sound theory on the point cannot be surely and adequately expounded apart from a true theory of music, nor that, again, apart from a theory of education at large, and these are subjects for protracted discussion. How would it be, then, I ask you, if we should drop them for the present, and divert the conversation to some other department of jurisprudence?

MEGILLUS: Sir, you may perhaps be unaware that my own family hold the position of proxeni for Athens. Now it may well be the universal experience of boys anywhere that when they are told they are proxeni for a city, an early kindness for that city promptly finds its way into the boys' hearts—we feel that it is a second fatherland, only next to our own. This is certainly what has happened in my own particular case. From the first, if Lacedaemon felt herself aggrieved by Athens, or obliged by her, the boys used to tell me, Megillus, your city has done the shabby—or the handsome—thing by us.

Well, by listening to these speeches and constantly replying in your defense against persons who brought reproaches against your city, I contracted a strong affection for her. To this day, I love the sound of your dialect, and am persuaded of the truth of the current saying that when an Athenian is a good man, he is exceptionally good. It is only at Athens that goodness is an unconstrained, spontaneous growth, a genuine 'gift of God' in the full sense of the words. So, as far as I am concerned, you need feel no misgiving in discoursing at any length you please.

CLINIAS: I, too, sir, have a statement to make which will relieve you from diffidence in speaking your full mind. You have presumably heard of Epimenides, an inspired person born in this city and connected with my own family, who visited Athens ten years before the Persian Wars at the bidding of the oracle, and offered certain sacrifices enjoined by the god, besides telling the citizens, who were alarmed by the Persian preparations, that the enemy would not come within ten years, and when they did, would depart again with their purpose uneffected, after receiving more damage than they inflicted. That was when my family contracted their friendship with your countrymen, and my ancestors and myself have had a kindness for them ever since.

ATHENIAN: I take it, then, that there is full readiness to hear on your part. On mine, there is readiness enough of intention, but per-

formance is none too easy; still I must do my endeavor. As the first step in the argument, then, let us define education and its effect, since we hold that the discussion on which we have adventured must follow that route to its destination, the wine god.

CLINIAS : By all means, since that is your pleasure.

ATHENIAN : Good. Then I will attempt an account of what true education is; you must consider whether the account is acceptable.

CLINIAS : Pray proceed.

ATHENIAN : Well, I proceed at once to say that he who is to be good at anything as a man must practice that thing from early childhood, in play as well as in earnest, with all the attendant circumstances of the action. Thus, if a boy is to be a good farmer, or again, a good builder, he should play, in the one case at building toy houses, in the other at farming, and both should be provided by their tutors with miniature tools on the pattern of real ones. In particular, all necessary preliminary instruction should be acquired in this way. Thus, the carpenter should be taught by his play to use the rule and plumb line, and the soldier to sit a horse, and the like. We should seek to use games as a means of directing children's tastes and inclinations toward the station they are themselves to fill when adult. So we may say, in fact, the sum and substance of education is the right training which effectually leads the soul of the child at play on to the love of the calling in which he will have to be perfect, after its kind, when he is a man. But, as I said, you must consider whether what has been said has your approval so far.

CLINIAS : Indeed, it has.

ATHENIAN : Then let us further guard against leaving our account of what education is too indeterminate. When we are to express approval or censure of a man's training, we correctly speak of one of ourselves as educated and another as uneducated—and the reference is sometimes to the business of a huckster or a supercargo—and of other such fellows of mighty fine education. But our present discourse is in place only on the lips of one who holds that education is none of these things, but rather that schooling from boyhood in goodness which inspires the recipient with passionate and ardent desire to become a perfect citizen, knowing both how to wield and how to submit to righteous rule. Our argument, I take it, would isolate this training from others and confine the name education exclusively to it; any training which has as its end wealth, or perhaps bodily strength, or some other accomplishment unattended by intelligence and righteousness, it counts vulgar, illiberal, and wholly unworthy to be called education. So we must not wrangle over a word, but abide by the proposition on which we have just agreed, that the rightly educated prove what we mean by good, and that no aspect of education is to be disparaged; it is the highest blessing bestowed on mankind, and it is

there were no other, in the sheer incredibility of your paradox, that it can be right for a man to fling himself voluntarily into a state of sheer degradation.

ATHENIAN: Degradation of soul, that is?

CLINIAS: Yes.

ATHENIAN: Well, my good sir, and what of a bad habit of  
c body—leanness, disfigurement, feebleness? Would it be a paradox that a man can voluntarily bring himself into those conditions?

CLINIAS: Of course it would.

ATHENIAN: Why, sir, when men freely go to the physician for a course of medicaments, must we imagine they do not know they will very soon be, for days together, in such a state of body that, were it to be permanent, they would be sick of life? Again, when men resort to gymnasiums, or to heavy bodily exertions, we know their health suffers for the time being, do we not?

CLINIAS: Yes, we know all that.

ATHENIAN: As also that they go of their own motion, for the sake of subsequent benefits?

d CLINIAS: To be sure.

ATHENIAN: And surely we should take the same point of view about other habitual practices too?

CLINIAS: I own we should.

ATHENIAN: And therefore also about spending time over the wine cup, if it is a view which can rightly be taken in this case?

CLINIAS: Naturally.

ATHENIAN: Then, if only wine drinking can be shown to lead to benefits comparable with those to be secured for the body, it certainly has the advantage over physical training in its initial stage; the second begins in pain, the other not so.

e CLINIAS: Quite true, but I shall be surprised if we can find any such benefit in the custom.

ATHENIAN: That, I take it, is just what we have at last to do our best to make clear. Tell me this. Can we not distinguish two kinds of fear?

CLINIAS: And what may they be?

ATHENIAN: They are these. In the first place, we are afraid of evil, when we expect it to befall us.

CLINIAS: We are.

ATHENIAN: But we are often also afraid for our reputation,  
647 when we apprehend we are getting a bad reputation from some unworthy act or speech; it is fear of this sort to which we, and I fancy the rest of the world too, give the name of shame.

CLINIAS: Certainly.

ATHENIAN: Well, those are the two fears of which I was speaking, and the second kind opposes itself to our commonest and most

passionate pleasures, as much as to pains and to fears other than itself.

CLINIAS : Very true.

ATHENIAN : Now does not a lawgiver, or any other man worth his salt, hold this sort of fear in the highest honor? He calls it modesty, and regards the kind of confidence contrary to it, which he calls impudence, as universally one of the gravest evils in private or public life. b

CLINIAS : True again.

ATHENIAN : And, to say nothing of the many other great advantages this kind of fear secures for us, when you take one thing with another, nothing contributes more effectually to victory and preservation in war itself. In fact, victory has a double source, fearlessness of the enemy, and fear of disgrace in the eyes of one's friends.

CLINIAS : Just so.

ATHENIAN : And consequently each of us needs to be at once free from fear and filled with fear, the reason for these contrasted moods being as we have stated. c

CLINIAS : Agreed.

ATHENIAN : And when we intend to make a man immune from various fears, we achieve our purpose by bringing him into contact with fear, under the direction of law.

CLINIAS : So it would appear.

ATHENIAN : But now, suppose our aim is to make him rightly *fearful*. What then? Must we not ensure his victory in the conflict with his own lust for pleasures by pitting him against shamelessness and training him to face it? If a man can only attain mature courage by fighting the cowardice within himself and vanquishing it, whereas without experience and discipline in that contest, no man will ever be half the champion he might be, is it credible he should come to fullness of self-command unless he first fights a winning battle against the numerous pleasures and lusts which allure him to shamelessness and wrong, by the aid of precept, practice, and artifice, alike in his play and in his serious hours? Can he be spared the experience of all this? d

CLINIAS : The view, certainly, does not seem plausible.

ATHENIAN : Now, tell me, has any god bestowed on mankind a specific to induce fear—a drug whose effect is that the more a man permits himself to imbibe of it, the darker he fancies his fortunes at every draught, present and future alike grow increasingly alarming, and the climax is abject terror in the bravest, though when the subject has recovered from his stupor and shaken off the effects of the potion, he regularly becomes his own man again? e

648

CLINIAS : Nay, sir, where in all the world can we find a liquor like this?

ATHENIAN : Why, nowhere. But suppose one could have been found. Would the lawgiver have availed himself of it to develop

courage? I mean, it would have been very much to the purpose to discuss it with him to some such effect as this. Pray, sir legislator—whether it is for Cretans or for any other society your legislation is intended—in the first place, would you be thankful for a touchstone of the courage or cowardice of your citizens?

CLINIAS: And he would, no doubt, be sure to say yes.

ATHENIAN: Well then, would you like the touchstone to be safe and applicable without serious risks, or the reverse?

CLINIAS: There, again, he would be certain to prefer safety.

ATHENIAN: You would employ it to bring your citizens into such a state of fear and test them under its influence, thus constraining a man to become fearless, by encouragement, precept, and marks of recognition, as well as of disgrace for those who declined to be such as you could have them in all situations? He who shaped himself to this discipline well and manfully would be discharged from the test unscathed, but on him who shaped badly you would lay some penalty? Or would you simply refuse to employ the liquor, supposing you had no fault to find with it on other grounds?

CLINIAS: Why, of course he would employ it, my dear sir.

ATHENIAN: It would, at least, give us an infinitely readier and safer training than our present arrangements, whether for the individual, for small groups, or for groups of any desired numbers. A man would do pretty right to save endless trouble by providing himself with this single specific and training himself in privacy to face his fears, isolating himself, of course, from public view behind his regard for decorum until he had obtained a satisfactory result. And, again, he would do right, when confident that he was already adequately prepared by native endowment and preliminary practice, to prosecute his training in the company of fellow drinkers, and make public exhibition of the virtue which enables him to transcend and master the effects of the inevitable disturbances due to the potion, without once suffering a serious fall or deterioration, though he would leave off before he reached the final draught from fear of our universal human weakness before the liquor.

CLINIAS: Why yes, sir, even such a man as you speak of would be wise to do that.

649 ATHENIAN: Then let us resume our conversation with the legislator. Very good, we shall say to him, as for such a fear-inducing specific, providence has given us none, and we have invented none ourselves, for we need not take quacksalvers into account, but what about fearlessness, excessive confidence, improper confidence at the wrong moment? Is there a liquor which has these effects, or is there not?

CLINIAS: He will, of course, say yes, and he will mean wine.

ATHENIAN: And are not its effects the very opposite of all we have just mentioned? When a man drinks it, its first immediate effect is to make him merrier than he was, and the more he takes, the

more it fills him with optimistic fancies and imaginary capacity. In the very final phase the drinker is swollen with the conceit of his own wisdom to the pitch of complete license of speech and action, and utter fearlessness; there is nothing he will scruple to say, nothing he will scruple to do. I think this will be universally conceded.

CLINIAS : Of course.

ATHENIAN : Then let me remind you of something we said before. There are two qualities to be cultivated in our souls, supreme confidence, and its contrary, supreme fearfulness. c

CLINIAS : What you spoke of as modesty, I take it.

ATHENIAN : Well recollected. And seeing that the practice of courage and fearlessness has to be learned in the midst of alarms, it has to be considered whether the contrary quality does not demand the contrary conditions for its cultivation.

CLINIAS : The presumption, certainly, is that it does.

ATHENIAN : It would seem, then, that the conditions in which we are naturally inclined to be more than usually confident or bold are the very conditions in which we must practice to be least audacious or unashamed, but rather apprehensive of ever presuming to say a shameful word, or submit to a shameful act, or even commit a one. d

CLINIAS : So it seems.

ATHENIAN : Now, are not all the following conditions in which we are in the mood in question—anger, lust, pride, folly, greed, cowardice? We may add to the list wealth, beauty, physical vigor, and whatever else drives us frantic with the intoxication of pleasure. And if we want an inexpensive and comparatively harmless pleasure to serve, in the first place, as a test of these conditions, and in the next, as a training for them, what can we find more suitable than the sportive touchstone of the wine cup, provided only that it is employed with a little precaution? For do but consider. Which is the more dangerous course with a sullen and untamed temper—the source of so many crimes—to test it by entering into a business agreement, with the risk of its failure, or by association in a bacchanalian celebration? Or to put the soul of a slave of sex to the test by entrusting him with e our own daughters, sons, and wives, and discover his character at the risk to our nearest and dearest? One might allege endless such illustrations without exhausting the advantages of a sportive method of inquiry involving no serious painful cost. And there is certainly one part of the case which, I fancy, will not be disputed by Cretans, or b any other body of men. The proposed test of one another is a reasonably good one, and has the advantage of others in point of inexpensiveness, security, and speediness.

CLINIAS : That, at least, is beyond doubt.

ATHENIAN : Here, then, in the discovery of native disposition and character, we have something of incomparable service to the art

whose business it is to cultivate them—that is, as I suppose we may say, to the art of the statesman.

CLINIAS : Just so.

## BOOK II

652 ATHENIAN : Then the question which next arises in discussing these matters, as I think, is this. Rightly controlled fellowship over our cups affords a disclosure of our native disposition, but is this its sole recommendation? Or has it some further considerable and serious advantages? Yes or no? Yes, or so our argument should seem to suggest. But if we are to learn just what these advantages are, we must be on our guard against the snares it lays for us.

CLINIAS : Say on, then.

ATHENIAN : I am fain, then, for my part, to recall once more  
653 our account of right education; 'tis this, or so I seem to divine, for which this institution, under proper management, affords a safeguard.

CLINIAS : Truly a bold assertion!

ATHENIAN : And therefore what I would say is this. A child's first infant consciousness is that of pleasure and pain; this is the domain wherein the soul first acquires virtue or vice. For wisdom and assured true conviction, a man is fortunate if he acquires them even on the verge of old age, and, in every case, he that possesses them with all their attendant blessings has come to the full stature of man.  
b By education, then, I mean goodness in the form in which it is first acquired by a child. In fact, if pleasure and liking, pain and dislike, are formed in the soul on right lines before the age of understanding is reached, and when that age is attained, these feelings are in concord with understanding, thanks to early discipline in appropriate habits—this concord, regarded as a whole, is virtue. But if you consider the one factor in it, the rightly disciplined state of pleasures and pains whereby a man, from his first beginnings on, will abhor what  
c he should abhor and relish what he should relish—if you isolate this factor and call it education, you will be giving it its true name. At least, that is my own conviction.

CLINIAS : Yes indeed, sir, we grant the truth of what you have just said, no less than of your former observations about education.

ATHENIAN : Good, but to proceed, education—this rightly disciplined state of pleasures and pains—is apt to be relaxed and spoiled in many ways in the course of a man's life. But the gods, in their compassion for the hardships incident to our human lot, have appointed the cycle of their festivals to provide relief from this fatigue,  
d besides giving us the Muses, their leader Apollo, and Dionysus to share these festivals with us and keep them right, with all the spiritual sustenance these deities bring to the feast. Wherein we must see

whether the argument whereon we are now harping is true to the facts of things or no. What that argument says is this. No young creature whatsoever, as we may fairly assert, can keep its body or its voice still; all are perpetually trying to make movements and noises. <sup>e</sup> They leap and bound, they dance and frolic, as it were with glee, and again, they utter cries of all sorts. Now animals at large have no perception of the order or disorder in these motions, no sense of what we call rhythm or melody. But in our own case, the gods of whom we spoke as given us for companions in our revels have likewise given us <sup>654</sup> the power to perceive and enjoy rhythm and melody. Through this sense they stir us to movements and become our choir leaders. They string us together on a thread of song and dance, and have named our choirs so after the delight (χαρά) they naturally afford. Now may we begin by taking this point as settled? May we assume that our earliest education comes through the Muses and Apollo, or not?

CLINIAS: We may make that assumption.

ATHENIAN: So by an uneducated man we shall mean one who <sup>b</sup> has no choric training, and by an educated man one whose choric training has been thorough?

CLINIAS: Exactly.

ATHENIAN: And, mark you, the choric art as a whole embraces both dance and song.

CLINIAS: No doubt.

ATHENIAN: Thus it follows that a well-educated man can both sing well and dance well.

CLINIAS: So it would seem.

ATHENIAN: Next let us observe what that statement comes to.

CLINIAS: What statement precisely?

ATHENIAN: Why, we say the man sings well and dances well. But should we, or should we not, add the qualification, if he sings *good* songs and dances *good* dances? <sup>c</sup>

CLINIAS: Suppose we take in that qualification.

ATHENIAN: Well, suppose he judges the really good to be good and the bad bad, and acts accordingly. Shall we call a man who is in that case better educated in choric and musical art when he can be regularly counted upon for adequate physical and vocal rendering of what he apprehends to be good, though he feels no pleasure in the <sup>d</sup> good, nor dislike of the bad, or rather when, though none too capable of correctness of vocal and physical execution, or of apprehension, he has correct feelings of pleasure and pain, is attracted by the good, and repelled by its opposite?

CLINIAS: Sir, the advantage is vastly on the side of the education you are describing.

ATHENIAN: Then if the three of us understand what is good in song and dancing, we likewise know who has been rightly educated and who is not so, whereas, if we do not know this, we shall be

- e equally at a loss to decide whether there is any safeguard for education, and wherein it lies. Do I take you with me?

CLINIAS: Entirely.

ATHENIAN: So we must follow up the trail by investigating the goodness of figure, melody, song, and dance. If we let the quarry escape us, all further discourse of right education—Hellenic or non-Hellenic—will be so much waste of breath.

CLINIAS: Just so.

- ATHENIAN: Well, come now, pray what are we to speak of as  
655 *goodness* in a figure, or a melody? For instance, take a manly soul struggling with distress and a cowardly soul in the same or equal straits. Do we find they express themselves in similar postures and utterances?

CLINIAS: Why, of course not, not even in similar complexions.

- ATHENIAN: True, indeed, friend. But though there are figures and tunes in music, as its subject matter is rhythm and melody, and we may accordingly speak of a tune or a posture as rhythmical or melodious, we cannot properly use the metaphorical expression of the choir trainers, 'brilliantly colored,' of either. But coward and  
b brave man have their characteristic postures and strains, and it is very proper to call those of brave men good, those of cowards bad. In fact, to spare ourselves a great deal of verbal repetition in our treatment of the whole subject, we may take it, once and for all, that universally all postures and melodies connected with goodness of soul or body—whether with such goodness itself or with some image of it—are good, and those connected with badness universally the reverse.

CLINIAS: An excellent proposal, and you may treat it as understood that we have answered you to that effect.

- ATHENIAN: And now to one further point. Does any choric performance give all men the like degree of enjoyment, or is the state  
c of the case very different?

CLINIAS: Very different? Utterly different.

- ATHENIAN: Then what shall we say is likely to be the source of this confusion? Is it that the excellent is not the same thing for all alike? Or that it is in fact the same, but not believed to be so? For no one, I take it, would profess that the choric expressions of vice can in fact be more excellent than those of virtue, or that he personally enjoys the postures of turpitude, though other men may  
d prefer the opposite Muse—though, to be sure, it is commonly *said* that the standard of rightness in music is its pleasure-giving effect. That, however, is an intolerable sentiment; in fact, 'tis a piece of flat blasphemy. The cause of our confusion is more probably that I am now to mention.

CLINIAS: And what is that?

ATHENIAN: A choric exhibition is a mimic presentation of

manners, with all variety of action and circumstance, enacted by performers who depend on characterization and impersonation. Hence, those who, from temperament, or habit, or both at once, find words, melodies, or other presentation of the choir, to their taste cannot but enjoy and applaud the performance, and further pronounce it good, whereas they who find it repugnant to temperament, taste, or training can neither enjoy nor applaud, and so call it bad. But where a man's native temperament is right, and his training wrong, or his training right and his natural temperament wrong, there enjoyment and approbation are at variance. The performance is, in fact, said to be pleasant, but bad; the man is ashamed to declare his serious approval by executing such movements or singing such tunes before others whom he credits with judgment, but in his own heart he enjoys the performance. 656

CLINIAS: Perfectly true.

ATHENIAN: Now do you think a man is in any way the worse for enjoying degrading postures or melodies, or any the better for getting his pleasure from the opposite quarter?

CLINIAS: Presumably he is.

ATHENIAN: Only presumably? Is not his case inevitably the same as that of one who views the evil characters of bad companions in real life not with disgust, but with enjoyment, condemning their actions in a playful fashion, like one not awake to their vileness? In such a case it is, surely, inevitable that a man should grow like whatever he enjoys, whether good or bad, even though he may be ashamed to approve it. The result is absolutely inevitable—and what result could we call more momentous for good or evil?

CLINIAS: None, as I believe.

ATHENIAN: Then is it conceivable that anywhere where there are, or may hereafter be, sound laws in force touching this educative-playful function of the Muses, men of poetic gifts should be free to take whatever in the way of rhythm, melody, or diction tickles the composer's fancy in the act of composition and teach it through the choirs to the boys and lads of a law-respecting society, leaving it to chance whether the result prove virtue or vice?

CLINIAS: To be sure, that does not sound rational—decidedly not.

ATHENIAN: And yet this is precisely what they are actually left free to do, I may say, in every community with the exception of Egypt.

CLINIAS: And in Egypt itself, now—pray how has the law regulated the matter there?

ATHENIAN: The mere report will surprise you. That nation, it would seem, long enough ago recognized the truth we are now affirming, that poses and melodies must be good, if they are to be habitually practiced by the youthful generation of citizens. So they drew

up the inventory of all the standard types, and consecrated specimens of them in their temples. Painters and practitioners of other arts of design were forbidden to innovate on these models or entertain any but the traditional standards, and the prohibition still persists, both for these arts and for music in all its branches. If you inspect their paintings and reliefs on the spot, you will find that the work of ten thousand years ago—I mean the expression not loosely  
 657 but in all precision—is neither better nor worse than that of today; both exhibit an identical artistry.

CLINIAS: A most amazing state of things!

ATHENIAN: Or rather, one immensely to the credit of their legislators and statesmen. No doubt one could find grounds for censure in other Egyptian institutions, but in this matter of music, at least, it is a fact, and a thought-provoking fact, that it has actually proved possible, in such a sphere, to canonize melodies which exhibit an intrinsic rightness permanently by law. That must have been the doing of a god, or a godlike man—as, in fact, the local tradition is  
 b that the melodies which have been preserved for so many ages were the work of Isis. So, as I was saying before, if we can but detect the intrinsically right in such matters, in whatever degree, we should reduce them to law and system without misgiving, since the appeal to feeling which shows itself in the perpetual craving for novel musical sensation can, after all, do comparatively little to corrupt choric art, once it has been consecrated, by deriding it as out of fashion. In Egypt, at any rate, its corrupting influence appears to have been no-wise potent, but very much the reverse.

c CLINIAS: That seems to be the state of the case from your present account.

ATHENIAN: Then may we say boldly that the right way to employ music and the recreations of the choric art is on some such lines as these? When we believe things are going well with us, we feel delight, and, conversely, when we feel delight we believe things are well with us. You agree with me?

CLINIAS: Surely, surely.

ATHENIAN: And, mark, when we are in that case—I mean, when we feel delight—we cannot keep still.

CLINIAS: Just so.

d ATHENIAN: And so our young folk are eager to dance and sing themselves, while, as for us elders, we think it the becoming thing to pass the time by looking on at them and enjoying their play and merriment. We miss the agility which is beginning to fail us at our years, and so we are glad to arrange competitions for performers who can reawaken the youthfulness in us by reminiscence.

CLINIAS: Very true.

ATHENIAN: So we can hardly deny that there is much in the current popular judgment about the providers of entertainments. I

mean, the judgment that the palm for superior ingenuity should be awarded to the entertainer who gives us most pleasure and enjoyment. Since we are granted the liberty to play on such occasions, so it is argued, of course he who gives the keenest enjoyment to the greatest number is rightly held in the highest esteem, and, as I just put it, carries off the palm. That is the right thing to say, and the right way to act, too, if the occasion arises? 658

CLINIAS: Yes, perhaps it is.

ATHENIAN: Still, my dear sir, let us avoid a hasty pronouncement on such a topic. It would be better to break the subject up into its details for consideration, in some such fashion as this. Suppose a man were to institute a competition without any further qualification, not specifying that it was to be an athletic or a musical contest, or a horse race. Imagine him to collect all his fellow citizens, offer a prize, and announce that anyone may enter as a competitor in simple pleasure giving—the prize to be awarded to the performer who entertains the spectators most. There are to be no restrictions as to the manner of the entertaining, so long as the man beats his competitors on that one score, and is voted the most pleasing. What should we expect to be the likely result of the announcement? b

CLINIAS: What have you in your mind?

ATHENIAN: Well, it is likely enough that one performer would produce a recitation of epic poetry, like a Homer, a second a chant to the lyre, a third a tragedy, and a fourth, perhaps, a comedy, and I should not be surprised if one of them actually thought his best chance of the prize was to exhibit a puppet show. But, now, can we say which of all these competitors, and the host of others who would enter, *deserves* the prize? c

CLINIAS: That is a singular question. How could anyone answer you, as though he could decide before he had listened and given a personal hearing to each of the different candidates?

ATHENIAN: Well, come now, would you like me to give the answer to this singular question for both of you?

CLINIAS: To be sure.

ATHENIAN: Then here it is. If the tiny children are to decide, they will, no doubt, give it for the man with the puppet show.

CLINIAS: Why, of course. d

ATHENIAN: The bigger boys for the comedian; the cultivated women, youths, and perhaps the absolute majority, for the tragedy.

CLINIAS: Yes, perhaps they would.

ATHENIAN: Whereas oldsters like ourselves would be likely to get most pleasure from a reciter who gave a fine rendering of the *Iliad*, or *Odyssey*, or a Hesiodic poem, and put him far and away first. Then, who would be the rightful winner? That is our next question, I presume?

CLINIAS: Yes.

e ATHENIAN: Clearly you and I cannot avoid saying that right-  
ful winners are those who are preferred by men of our own age.  
From our point of view that custom is far the best of existing ar-  
rangements in all societies everywhere.

CLINIAS: And naturally so.

ATHENIAN: So I actually go myself with the current opinion so  
far as this. The standard by which music should be judged is the  
pleasure it gives—but not the pleasure given to any and every audi-  
tor. We may take it that the finest music is that which delights the  
659 best men, the properly educated, that, above all, which pleases the  
one man who is supreme in goodness and education. And the reason  
why we say judges in such matters need goodness is that they re-  
quire to be equipped not only with wisdom, but particularly with  
courage. A judge who is truly a judge must not learn his verdict from  
the audience, letting himself be intimidated into it by the clamor of  
the multitude and his own incompetence, nor yet, out of cowardice  
b and poltroonery, weakly pronounce a judgment which belies his own  
convictions with the very lips with which he invoked the gods as he  
entered on his functions. To tell the plain truth, the judge takes his  
seat not to learn from the audience, but to teach them, and to set  
himself against performers who give an audience pleasure in wrong  
and improper ways. By the ancient and general Hellenic rule, there  
was none of the freedom of the present custom of Sicily and Italy,  
which leaves things to the majority of the audience and decides the  
c victory by their votes, a practice which has corrupted the poets them-  
selves—since their standard in composition is the debased taste of  
their judges, with the result that it is actually the audience who edu-  
cates *them*—and equally corrupted the tastes of the audience. The  
repeated exhibition of characters better than their own ought to pro-  
duce an improvement in their taste; as things are, the result is the  
direct contrary, and it is their own doing. Once more, then, what  
lesson is indicated by the conclusion of our present argument? Some-  
thing, perhaps, to this effect.

CLINIAS: To what effect?

ATHENIAN: Why, I believe the argument is bringing us back  
for the third or fourth time to our old position, that education is, in  
d fact, the drawing and leading of children to the rule which has been  
pronounced right by the voice of the law, and approved as truly  
right by the concordant experience of the best and oldest men. That  
the child's soul, then, may not learn the habit of feeling pleasure  
and pain in ways contrary to the law and those who have listened  
to its bidding, but keep them company, taking pleasure and pain in  
e the very same things as the aged—that, I hold, proves to be the  
real purpose of what we call our 'songs.' They are really spells for  
souls, directed in all earnest to the production of the concord of which  
we have spoken, but as the souls of young folk cannot bear earnest-

ness, they are spoken of as 'play' and 'song'. Just so, in the case of the physically invalid, the physician seeks to administer wholesome nutriment of meat and drink, but unwholesome in unpatient to accept the one and reject the other. In the same fashion a true lawgiver likewise will perforce fail, will compel, the man of poetic gifts to employ his noble and fine-filed phrases to represent the bearing, and by their melodies the strains, valiant, and, in a word, good.

CLINIAS: Great God, sir, do you imagine that music actually produced in other cities? As far as my own city is concerned, I know of no such practice as you recommend, either in Athens or in Lacedaemon; elsewhere I notice endless inns and all branches of music generally, constant chiefly by the laws but by a sort of unregulated taste which is being fixed and permanent, as is the case in Egypt, where that it never shows any constancy.

ATHENIAN: Well observed, Clinias. But if you wish to make marks to refer to existing practice, the unfortunate result is probably due to my failure to make my thought clear. I may say things which might give you that impression, but I have explained what I would wish to see done in the matter of the denunciation of error which is far advanced and though sometimes unavoidable, is a decidedly unpleasant thing since we are at one about the principle, pray tell me how you practice better among yourselves and our Spartan friends than the Greeks at large?

CLINIAS: Certainly it is.

ATHENIAN: And suppose the rest of us followed your practice. May we say that this would be an improvement in the state of things?

CLINIAS: An extraordinary improvement, I think it would follow the example of Sparta and ourselves, and which you yourself have just given us.

ATHENIAN: Come then, let us have an understanding of the issue before us. In both your communities the teaching of all education and music is to this effect, is it not? You compel poets to teach that a good man, since he is temperate and brave, is a fortunate and happy man, no matter whether he be mighty or small and feeble, rich or poor. But if a man is not so, even though he were 'richer than Midas or Cinyras,' he is a wretched creature, and his life a miserable one. To borrow the words of your own poet, 'I would neither be rich nor poor, but middle between the two.'

nor 'hold him in any account,' though he should practice or acquire all that is currently reputed good without justice, not though, being  
 661 the man he is, 'he should close with the foe and strike him down.' If a man be unjust, I would not have him 'look the bloody carnage in the face unblenched,' or 'outstrip the north wind of Thrace,' nor enjoy any of the goods currently so reputed. For the things popularly called goods do not really deserve the name. The saying, you know, is that health is the greatest of all goods, beauty ranks second, and wealth third, and there are innumerable other goods, such as keen  
 b sight and hearing, and acute sensibility generally; it is good also to be an autocrat and gratify all one's passions, and the very crown of felicity would be that the possessor of all these advantages should forthwith become immune from death. But what you and I maintain is that though all these endowments are great goods to men of justice and religion, one and all of them, from health down, are great  
 c evils to the unjust. To be more specific, sight, hearing, sensation, life itself, are superlatively evil, if one could persist forever without dying in the enjoyment of all these so-called goods unaccompanied by justice and virtue at large, though less evil if he who is in such case survive only for a short while. This is my teaching, and I conceive you will persuade, or constrain, your national poets to teach it too, and likewise to produce correspondent rhythms and scales for the education of your young people. Consider, now, I affirm with confidence that so-called evils are good for the unjust, though evil for  
 d the just, and so-called goods, though really good for a good man, evil for a bad one. So, as I was asking, are you and I in accord, or not?

CLINIAS: Partly, I think, in accord, partly decidedly not so.

ATHENIAN: Then can the point on which I fail to convince you, by any chance, be this, that if a man enjoys lifelong health, wealth, and absolute power—and I will add, if you like, exceptional  
 e strength, and immunity from death, and exemption from all other so-called evils—so long as he but has injustice and arrogance within himself, such a man's life is miserable, not happy?

CLINIAS: Exactly. That is the point.

ATHENIAN: Good. Then what should I say next? Granted that a man is brave, strong, handsome, rich, and can satisfy every passion of a lifetime, do you deny that, if he is an unjust and arrogant man, his life must inevitably be dishonorable? Or possibly you would go so far as to concede the dishonor.

CLINIAS: Readily.

ATHENIAN: And inevitably evil, too? Would you allow that?

CLINIAS: No, that is not to be so readily admitted.

ATHENIAN: And, further, unpleasant and inexpedient for himself?

CLINIAS: How can we possibly carry concession to that pitch?

b ATHENIAN: How? Apparently only by the intervention of a

god to produce a concord as complete as our present discordance. For my part, dear Clinias, I find it even more certain that these truths are beyond question than that Crete is an island. Were I a legislator, I would do my best to constrain my poets and all my citizens to proclaim them. I would inflict a penalty little short of the capital on any inhabitant heard to maintain that there are wicked men who have a pleasant life, or that one course may be advantageous and profitable, but a different course more truly rightful—not to mention many other points on which I would try to persuade my citizens to use language very different from that current, apparently, among Cretans and Lacedaemonians, and, certainly, among mankind in general. Why, for the love of Zeus and Apollo, my worthy friends, imagine we could put the question to the very gods who were the authors of your own laws. Is the justest life also the most pleasant, or are there two different lives, one which is the most pleasant, and another which is the most just? Should they answer that there are two, we might probably go on to ask, if we knew how to put the right question, which should be called the happier men, those who live the more just life, or those who live the more pleasant. Should they say, those who live the more pleasant, the statement would come very oddly from *them*. Yet I could wish not to introduce the names of gods into such a matter, and should prefer to use those of fathers and legislators. We will, therefore, take my questions as having been addressed to such a father and lawgiver, and imagine him to reply that he who lives the pleasantest life is the most blessed of mankind.

Father, I should next remark, did you not mean me to have the happiest of lives? Yet you were never weary of enjoining me to lead the justest life. Thus the father or legislator, whichever he might be, who should decide in that sense, would, I fancy, appear strangely wanting in self-consistency. But should he take the other view that the justest life is happiest, any hearer, I conceive, would ask what good or blessing greater than pleasure that life has in it, that the law should commend it. What good, in fact, can come to the just man unattended by pleasure? Good fame, for example, and commendation from men and gods—are they good and honorable, but unpleasant? And is the reverse true of ill fame? Not a bit of it, respected legislator. Or again, neither to inflict wrong nor to suffer it—is that a course which, though good and honorable, is unpleasant, or its opposite pleasant, though dishonorable and evil?

CLINIAS: Surely not.

ATHENIAN: And thus the theory which declines to separate the pleasant from the just, or the good from the honorable, if it has no other merits, is at least a persuasive to a just and religious life. Hence from the legislator's point of view any theory which denies these positions is highly disgraceful and dangerous, since no one, if

CLINIAS: To be sure it does.

ATHENIAN: We are in agreement, then, upon the results reached so far?

c CLINIAS: And what are they?

ATHENIAN: That the spell we have described must be recited without intermission by everyone, adult or child, free man or slave, man or woman; in fact the whole city must repeat it incessantly to itself in forms to which we must somehow contrive at all costs to give inexhaustible variety and subtlety, so that the performers' appetite for their own hymnody and enjoyment of it may persist unabated.

CLINIAS: That is the result to be secured, as everyone must agree.

d ATHENIAN: Now where must this worthiest element in our city—its combined years and wisdom will give it more authority than any other class, and the matter of its odes will be the noblest of all—do its singing, if it is to be most potent for good? Are we, in pure folly, to leave the body principally responsible for the noblest and most useful music without directions?

CLINIAS: We certainly must not neglect it, if your argument is to be trusted.

ATHENIAN: What, then, would be the becoming arrangement? Something of this kind, perhaps?

CLINIAS: Of what kind?

e ATHENIAN: As a man gets into years, the reluctance to sing grows upon him. He feels less pleasure in the act, and, if it is forced on him, the older and more sober-minded he grows, the more bashful he feels about it. I am right, am I not?

CLINIAS: Decidedly right.

ATHENIAN: And of course he will feel still more bashful about standing up and singing in a theater before an audience of all sorts. And besides, if men of such years and character were made, like competing choirs, to train their voices for the performance by a lowering regimen and abstinence from food, their singing would surely be a  
666 thoroughly disagreeable and humiliating task, and consequently their execution would be spiritless.

CLINIAS: There is no disputing what you say.

ATHENIAN: Then how shall we encourage them to sing with spirit? Might we not make a law to the following effect? In the first place, we shall absolutely prohibit the taste of wine to boys under eighteen. We shall tell them they must have too much concern for the passionate temperament of youth to feed the fire of body or soul with a further current of fire before they address themselves to the labors of life. In the next, while we permit a moderate use of wine to men  
b under thirty, we shall absolutely forbid carousing and free potations. But when a man is verging on the forties, we shall tell him, after he has finished banqueting at the general table, to invoke the gods, and

more particularly to ask the presence of Dionysus in that sacrament and pastime of advancing years—I mean the wine cup—which he bestowed on us for a comfortable medicine against the dryness of old age, that we might renew our youth, and our harsher mood be melted to softness by forgetfulness of our heaviness, as iron is melted in the furnace, and so made more tractable. To begin with, in that mood any man would be ready, would he not, to render his song—or, as we have so often called it, his spell—with more spirit and less bashfulness, not perhaps before a numerous audience of strangers, but in a smaller circle of personal friends?

CLINIAS: Emphatically so.

ATHENIAN: As a means of inducing them to take their part in our proposed singing, then, the device is not so wholly out of place? d

CLINIAS: Out of place? By no means.

ATHENIAN: But what manner of strain should they utter? Of course it must be a music in keeping with their persons.

CLINIAS: Why, of course.

ATHENIAN: And what is the music which befits godlike men? Choric song?

CLINIAS: Why, sir, personally we Spartans and our Cretan friends are quite incapable of any singing but that we learned when we were trained to sing in choirs.

ATHENIAN: I am not surprised at it; in plain fact, you have never risen to the noblest kind of song. Your cities are organized like armies, not like societies of town dwellers; you keep your young men in herds like so many colts at grass in one troop. None of you ever takes his own colt, draws him out of the general herd, for all his restiveness and fuming, and puts him in the charge of a special groom to be stroked and tamed and treated with all the attention required by a training which will make him no mere good soldier, but a man fit to administer a state and its townships—will make him, in fact, the type of man of whom we spoke at first as a better warrior than those of Tyrtaeus, because he will esteem valor, always and everywhere, the fourth, not the first, point of goodness in individuals and in society at large. e 667

CLINIAS: Somehow or other, sir, you are back again at your belittling of our legislators.

ATHENIAN: Nay, my dear sir, if I do so at all, it is of no set purpose, but please let us follow where our argument leads. If we can find a music more excellent than that of choirs and public theaters, let us make the attempt to assign it to these men, who, as we are saying, are anxious to take their part in the noblest music, though bashful where the kind just mentioned is concerned. b

CLINIAS: By all means.

ATHENIAN: Well, to begin with, must it not hold good of all things which have an attendant charm that their chief value lies

either in this mere charm itself, in their rightness in some sense, or, finally, in their utility? To give an example, I mean that meat and drink, and articles of nutriment generally, are attended by a charm  
 c which we may call flavor; as to rightness and utility, it is precisely what we call the wholesomeness of the various viands which is also their true rightness.

CLINIAS: Exactly.

ATHENIAN: Again, the act of learning is attended by a charm, a gusto, but it is the truth of what is learned which gives it its rightness and utility, its goodness and nobility.

CLINIAS: Just so.

d ATHENIAN: And what of the various arts of imitation which work by producing likenesses? If they are so far successful, I mean if they give rise to an attendant pleasure, charm, I suppose, would be just the right name for it?

CLINIAS: Yes.

ATHENIAN: Whereas the rightness of such products, speaking generally, depends not on their pleasantness, but on accurate correspondence in quality and magnitude?

CLINIAS: True.

ATHENIAN: Thus the only case in which it will be right to make pleasure our standard of judgment is that of a performance which provides us with neither utility, nor truth, nor resemblance, though, of  
 e course, it must do us no harm either, an activity practiced solely with a view to this concomitant charm, which is very properly called *pleasure*, unattended by any of the results just specified?

CLINIAS: You refer only to *harmless* pleasure?

ATHENIAN: Yes, and I also use the name *play* for it in cases where it does neither harm nor good worth taking into serious account.

CLINIAS: Very true.

ATHENIAN: Then surely it follows from the argument that a man's feeling of pleasure, or his erroneous belief, is never a proper standard by which to judge of any representation, and I will add, any  
 668 proportionality. Equal is never equal, nor symmetrical symmetrical, because someone believes it to be so, or because someone feels no pleasure; no, we should judge by the standard of truth, never, on any account, by any other.

CLINIAS: Assuredly.

ATHENIAN: Now we may say that all music is an art of producing likenesses or representations.

CLINIAS: Of course.

ATHENIAN: Consequently, when a man tells us that in music pleasure is the standard of judgment, we must refuse to accept his statement. It is not this type of music, if indeed there could be such a

type, which we should make our serious object, but that other which retains its likeness to the model of the noble.

CLINIAS: Just so.

ATHENIAN: And these citizens of ours, too, will naturally have to do the same. As they aim at the noblest kind of song, they will also have to aim not at a music which is pleasing, but at one which is *right*. In fact, we explained the rightness of a representation to lie in reproduction of the proportions and quality of the original.

CLINIAS: To be sure.

ATHENIAN: Again, it would be universally allowed of music that its productions are all of the nature of representation and portraiture. Composers, performers, audience, all of them would be in complete agreement so far?

CLINIAS: Beyond doubt.

ATHENIAN: Hence it should seem that a man who is to make no mistake of judgment about a particular production must, in every case, understand what that production is. If he does not understand what it is, that is, what it is meant for, or of what it is in fact an image, it will be a long time before he will discern the rightness or wrongness in the artist's purpose.

CLINIAS: A long time indeed.

ATHENIAN: And if a man does not understand this *rightness*, can he possibly be in a position to discuss the *goodness* or *badness* of the work? My question is not very clearly expressed, but it will perhaps become clearer if I put it thus.

CLINIAS: How, pray?

ATHENIAN: There are, as you know, numerous likenesses which are apprehended by the eye.

CLINIAS: Of course.

ATHENIAN: Now suppose that, in their case too, a man did not know what the various bodies represented were. Could he possibly judge of the rightness of the artist's work? For example, could he tell whether it shows the members of the body in their true and natural numbers and real situations, so disposed relatively to one another as to reproduce the natural grouping—to say nothing of color or shape—or whether all this is confused in the representation? Could a man, think you, possibly decide the question, if he simply did not know what the creature depicted was?

CLINIAS: Naturally he could not.

ATHENIAN: Now suppose we are aware that the figure the artist has drawn or modeled is that of a human being, and that he has reproduced all its members, with their colors and outlines. Does it follow that one who is alive to this need be competent to judge on the further point whether the work is beautiful, or falls short of beauty in some way?

CLINIAS: Why, sir, at that rate, we should all, without exception, be connoisseurs of an animal's points.

ATHENIAN: Quite true. Then must not one who is to be an intelligent judge of any representation, whether in drawing, in music, or in any other branch of art, have three qualifications? He must understand, first, what the object reproduced is, next, how *correctly*,  
b third and last, how *well* a given representation has been effected, in point of language, melody, or rhythm.

CLINIAS: So it would appear.

ATHENIAN: Now we must not omit the full explanation of the difficulty of music. There is much more talk about musical imagery than about any other kind, and this is the very reason why such imagery demands more cautious scrutiny than any other. It is here that error is at once most dangerous, as it encourages morally bad dispositions, and most difficult to detect, because our poets are not altogether  
c on the level of the Muses themselves. The Muses, we may be assured, would never commit the grave mistake of setting masculine language to an effeminate scale, or tune, or wedding melody, or postures worthy of free men with rhythms only fit for slaves and bondsmen, or taking the pose of a free man and combining it with an air or words of inappropriate rhythm. Not to say that they would never make a pretended presentation of a single theme out of a medley of human  
d voices, animal cries, noises of machinery, and other things. Whereas our mere human poets tend to be only too fond of provoking the contempt of those of us who, in the phrase of Orpheus, are 'ripe for delight,' by this kind of senseless and complicated confusion. In fact, not only do we see confusion of this kind, but our poets go still further. They divorce rhythm and figure from melody, by giving metrical form  
e to bare discourse, and melody and rhythm from words, by their employment of cithara and flute without vocal accompaniment, though it is the hardest of tasks to discover what such wordless rhythm and tune signify, or what model worth considering they represent. Nay, we are driven to the conclusion that all this so popular employment of cithara or flute, not subordinated to the control of dance or song for the display of speed and virtuosity, and the reproduction of the cries  
670 of animals, is in the worst of bad taste; the use of either as an independent instrument is no better than unmusical legerdemain. So much for the theory of the thing. But, after all, the question for ourselves is what kind of music our citizens of thirty or more, and again our men of over fifty, are to practice, not what they are to avoid. And I think we may at once infer from what has been said as much as this.  
b Those quinquagenarians whose business it will be to sing for us must at least have had an education better than that of a choir. They must, of course, be keenly sensitive to rhythms and melodies and able to judge of them. How, indeed, is a man with little or no familiarity with

the Dorian scale to judge of the rightness of the airs, or the rightness or wrongness of the rhythm to which the poet has set his air?

CLINIAS : Plainly he can do nothing of the sort.

ATHENIAN : In fact, the general public are simply ridiculous in their belief that men are adequate judges of what is good or otherwise in melody and rhythm, if they have merely been drilled into singing to the flute and marching in step, though it never occurs to them that they do the acts without understanding anything about them. Whereas, of course, any tune is correct if it has the proper constituents, incorrect if it has unsuitable ones.

CLINIAS : Undeniably.

ATHENIAN : But what now about a man who does not even know what constituents a piece has? As I was asking, will he be a judge of its correctness in any instance whatever?

CLINIAS : Unquestionably not.

ATHENIAN : Thus it seems we are brought back again to our discovery that these singers of ours, whom we are urging and placing under a kind of voluntary coercion to sing, will need as much previous education as this. They will all need the ability to follow the steps of the rhythms and the notes of the airs, to qualify them to pass the scales and rhythms under review, select from them those proper to be rendered by men of their own years and character, and sing them as they should be sung, a performance which will both give the performers an immediate innocent pleasure and provide their juniors with a lesson in proper appreciation of sound character. If they are educated to this pitch they will have at their disposal a more careful education than either that which is applicable to the generality, or that of the poets themselves. For the poet it is not indispensable to be a judge of our third point—whether his representation is a good one or not—though judgment of scale and rhythm certainly cannot be dispensed with, but the men we have in view will need all these qualifications to fit them to make the selection of the absolute best and the second best; otherwise none of them will effectually charm the young into virtue. The argument has now done its best to achieve its original purpose, to show that our defense of the 'choir of Dionysus' is a good one, and we have to consider its success. Of course, any such gathering inevitably grows noisy as the drinking goes further and further, as we began by assuming is bound to happen in cases like these.

CLINIAS : Yes, inevitably.

ATHENIAN : In such a company everyone soars above his common level of lightsomeness and jollity, bubbles over with loquacity, pays no heed to the talk of his companions, but thinks himself fully entitled to give the law to himself and all the rest.

CLINIAS : Assuredly.

ATHENIAN : As we were saying, then, in this state of affairs the

- souls of the drinkers grow softer as they are heated, like heated iron, and become more juvenile, and consequently more ductile in the hands of one who has the power and skill to train them and mold them, much as when they were still youthful, and the molding should now, as formerly, be the task of the good legislator. It is for him to lay down laws for the wine party effectual to induce our reveler, who is growing so sanguine and confident, so unduly relieved of his modesty, and so unwilling to observe order and alternation of silence with speech, drinking with music, to do the contrary of all this of his own accord—effectual also to confront this uncomely confidence, at its first entrance, with a righteous antagonist in that most comely, that divine, fear which has received the name of modesty and the sense of shame.

CLINIAS: Very true.

- ATHENIAN: And for wardens of these laws and fellow workers with them, we must set the unperturbed and sober as captains over the unsober, for without them the battle with drink is more hazardous than a battle against an enemy in the field without unperturbed commanders. Moreover, if a man cannot yield willing obedience to them and to Dionysus, his officers, that is, the citizens of over sixty, he must be put to as much disgrace as one who disobeys the officers of Ares, or to more.

CLINIAS: Rightly said.

- ATHENIAN: Then if wine and merriment were used in such fashion, would not the members of such a party be the better for it, and part, not as they do today, on terms of enmity, but with an increase of friendship, seeing their intercourse would have been regulated throughout by laws, and they would have followed the path marked out by the sober for the unsober?

CLINIAS: True enough, if there could indeed be a party such as you describe.

- ATHENIAN: Then pray let us have done with the old unqualified censure of the gift of Dionysus as an evil thing, not fit to be tolerated in a city. Indeed, one might be still more copious on the topic, though I feel some reluctance even to mention the principal benefit of the god's gift before the public, as the statement has been misunderstood and misjudged.

CLINIAS: And what benefit is that?

- ATHENIAN: There is a current of story and pious tradition to the effect that this god was bereft of his wits by his stepmother Hera, and that this is why he afflicts his victims with Bacchic possession and all its frenzied dancing, by way of revenge—that that, and nothing else, was the motive for his gift of wine. For my own part I leave such stories to those who think it safe to tell them of deities, but of one thing I am certain. No creature whatsoever is born with that intelligence, or all that intelligence, which characterizes it in its maturity.

Hence, so long as a creature has not yet attained its proper level of native sense, it is quite mad, indulging in random cries, and, as soon as it has found its feet, in equally random leaps. And let me remind you that we pronounced these the source of both music and gymnastics.

CLINIAS: Naturally we have not forgotten that.

ATHENIAN: You will recollect, too, how we said that in mankind this beginning has preluded to perception of rhythm and melody, and that the gods responsible for that development are Apollo, the Muses, and Dionysus?

CLINIAS: To be sure.

ATHENIAN: And as for wine in particular, the general story would seem to hold that it has been bestowed on men in vindictiveness, to drive us frantic, whereas our present version is that the gift was meant, on the contrary, as a medicine, to produce modesty of soul, and health and strength of body.

CLINIAS: An admirable summary of the argument, sir.

ATHENIAN: Then we have finished our treatment of one half of the choric art. Shall we go on with further consideration of the other half, or should we perhaps dismiss the subject?

CLINIAS: What are the halves you speak of? How do you distinguish the one from the other?

ATHENIAN: Why, the choric art as a whole we found to be the same thing as the whole of education, and one half of the art, that which has to do with the voice, consists of rhythms and melodies.

CLINIAS: Just so.

ATHENIAN: And the part which deals with bodily movement has rhythm in common with the movements of the voice, but posture and gesticulation are proper to it, just as melody, on the other side, is to vocal movement.

CLINIAS: Precisely so.

ATHENIAN: Now the training of the voice to goodness, continued till it reaches the soul, we named, in a sense, music.

CLINIAS: And a very proper name for it, too.

ATHENIAN: As for the training of the body—we spoke of it as the dancing of creatures at play—when the process culminates in goodness of body, let us call scientific bodily discipline with that purpose gymnastics.

CLINIAS: As we may very properly do.

ATHENIAN: As for music—that half of the choric art of which we have just professed to have given a complete review—our statement may be taken as still standing. How shall we proceed next? Shall we discuss the other branch, or what?

CLINIAS: My dear sir, you are conversing with Cretans and Lacedaemonians. What possible answer, then, do you expect from either of us to that question, if we pass over gymnastics, now that we have disposed of music?

ATHENIAN: I take that remark as a pretty plain answer to my question; in fact, I recognize that though in form a question, it is actually what I have called it, an answer, and something more—an instruction to complete our treatment of gymnastics.

CLINIAS: You take my meaning correctly, and I entreat you to comply with it.

ATHENIAN: Why, so I will, nor will it be particularly difficult, as you are both at home in the subject, having indeed made more experimental acquaintance with this art than with the former.

CLINIAS: There you are very much in the right.

ATHENIAN: Well, this art similarly has its origin in the habitual leaping native to all living things, and in mankind, as we have said, the acquisition of a sense of rhythm has generated dancing. Since melody suggests and awakens consciousness of rhythm, the two in conjunction have given rise to the play of the choric dance.

CLINIAS: Quite so.

ATHENIAN: One branch of the subject, as I have said, we have treated already, and will next do our best to deal with the other.

CLINIAS: With all my heart.

ATHENIAN: Then, if you both approve, we may first give the final touch to our account of drinking.

CLINIAS: And how do you propose to do this?

ATHENIAN: If a city is to practice the custom now under discussion in a serious spirit, in subjection to the control of law and rule, as a training in self-command, and permits a similar indulgence in other pleasures on the same principle, as a means to mastery of them, all without exception should be treated on the lines we have laid down. But if the practice is treated as mere play, and free license is to be given to any man to drink whenever he pleases, in what company he pleases, and when engaged on any undertaking he pleases, I could no longer vote for allowing any indulgence in the wine cup to such a city, or such a man. I would even go further than the practice of Crete and Lacedaemon and propose an addition to the Carthaginian law which prohibits the very taste of this liquor to all soldiers in the field, and enforces water-drinking throughout the duration of a campaign. I would absolutely prohibit its taste in civic life to slaves of both sexes, to magistrates throughout the year of their office, and equally absolutely to captains of vessels and jurymen when on duty, and likewise to any member of an important council when about to attend its meetings. Further, I would prohibit its use during the day absolutely, except under the orders of a trainer or a physician, and at night also to any person of either sex contemplating the procreation of children, to pass over many other cases in which wine is not to be drunk by rational men with a sound law. Thus you see that by our argument no city would need many vineyards; agricultural production and bodily regimen in general would be matters for regulation, and viticulture in

particular would be kept within very reasonable and narrow bounds. And this, gentlemen, if it has your approval, may be taken as the finale of my remarks on the subject of wine.

CLINIAS : It is well said, indeed, and we fully concur.

## BOOK III

ATHENIAN : Enough, then, on this matter. But what may we take to 676 have been the first beginning of a state? I wonder whether the best and easiest way to treat the problem may not be this?

CLINIAS : What?

ATHENIAN : To start from the same point with which we regularly have to begin when we would study the double progressive development of a city in virtue and vice.

CLINIAS : And that point is?

ATHENIAN : Why, the interminable length of time, I conceive, and the changes time brings with it.

CLINIAS : Pray explain yourself.

ATHENIAN : Well, cities have existed and men have lived in civil society for a long time. Do you think you could possibly tell how long?

CLINIAS : Not readily, to say the least of it.

ATHENIAN : But you admit at least that it must have been so for an immense and incredible time?

CLINIAS : Oh yes, there is no doubt about that.

ATHENIAN : And you will surely grant that thousands and thousands of cities have come into being during this time, and no less a number have ceased to exist? Moreover, every form of constitution has repeatedly appeared in one or other of them. Sometimes a small city has grown larger, sometimes a large city smaller; a bad city has sometimes grown better, a good city sometimes worse.

CLINIAS : Indubitably.

ATHENIAN : Thus we have, if possible, to discover the cause of these variations; there, I suspect, we may find the key to the primal origin of constitutions and their modification.

CLINIAS : A happy thought, and we must all do our best endeavor—you to expound your thoughts on the subject, and my friend and myself to keep pace with you.

ATHENIAN : Then what view do you both take of the ancient 677 legends? Have they any truth behind them?

CLINIAS : Which legends might you mean?

ATHENIAN : Those which tell of repeated destructions of mankind by floods, pestilences, and from various other causes, which leave only a handful of survivors.

CLINIAS : Oh, that kind of story must be perfectly credible to any man.

ATHENIAN: Very well, let us suppose one of those various extinctions, that which was once effected by the Flood.

CLINIAS: And what is the point you would have us observe about it?

- b ATHENIAN: That the few who then escaped the general destruction must all have been mountain shepherds, mere scanty embers of humanity left unextinguished among their high peaks.

CLINIAS: Why, obviously.

ATHENIAN: And of course men like these were bound to be unfamiliar with the crafts at large and, above all, with the tricks of town dwellers for overreaching and outdistancing one another and the rest of their devices for mutual infliction of mischief.

CLINIAS: The probabilities are certainly on that side.

- c ATHENIAN: Now may we assume that at such a time there is a total destruction of the cities situated in the lowlands and on the sea-coast?

CLINIAS: We may, no doubt.

ATHENIAN: And we may add that all implements are lost, and that any discoveries of value due to the science of statesmen or other specialists all vanish at such a time? For to be sure, my dear sir, if such inventions could persist permanently in their present excellence, how could there ever be a new discovery of anything?

- d CLINIAS: As much as to say that we must take the men of those ages to have known nothing of these matters for untold tens of thousands of years. It is only some thousand or two thousand years since they were revealed, partly by Daedalus, partly by Orpheus, partly by Palamedes, music by Marsyas and Olympus, the lyre by Amphion, and various other discoveries by numerous other persons—a mere business, so to say, of yesterday and the day before.

ATHENIAN: It is delicate in you, Clinias, to omit your connection, who was in strict fact a man of yesterday.

CLINIAS: You refer to Epimenides, I presume?

- e ATHENIAN: To no other. You know, my friend, his invention left them all in the lurch. True, Hesiod had long before had a glimmer of it in theory, but the practical achievement belonged to the other, by your Cretan story.

CLINIAS: It did, indeed.

- ATHENIAN: Then I suppose one may say that the state of mankind at the time of the calamity was this. There was frightful and widespread depopulation, but a vast territory of unoccupied land; most of the animals had perished, but there were a few herds of cattle,  
678 and perhaps a surviving stock of goats, and these provided those who grazed them with a sustenance which would be scanty enough in the first instance.

CLINIAS: No doubt.

ATHENIAN: But as for a city, a constitution, a legislation—the

themes of our present conversation—can we imagine that, to put it broadly, the faintest recollection of them was preserved?

CLINIAS : Why, surely not.

ATHENIAN : Now that is the condition which has given rise to the whole complex of our actual life, with its cities and constitutions, its sciences, its laws, its manifold moral evil and equally manifold moral goodness?

CLINIAS : I do not quite follow you.

ATHENIAN : Why, my good sir, can we suppose that the men of that day, unacquainted as they were alike with the numerous blessings and the numerous curses of town life, would be mature either in moral virtue or in vice?

CLINIAS : Well demanded. We appreciate your point.

ATHENIAN : Thus it is by progress of time and the multiplication of the species that life has come to be as we actually find it?

CLINIAS : Exactly.

ATHENIAN : And that, I presume, not all at once, but little by little in the course of an immense period of time.

CLINIAS : Nothing can be more likely.

ATHENIAN : Indeed, they were still haunted, I should presume, by a terror of coming down from the highlands to the plains.

CLINIAS : Naturally.

ATHENIAN : Thus, though the sight of another's face must have been welcome indeed in those days when men's numbers were so few, all conveyances for travel by land or water must have been pretty universally abolished, must they not, with the loss of the arts? So social intercourse, I conceive, was not easily feasible. For iron, copper, and metallic deposits in general had been so obliterated by the inundation that it was a problem to get them clear again, and they had little opportunity of cutting timber. For what few tools might have survived among their mountains must soon have been used up and disappeared, and they would not be in a condition to replace them until the art of mining reappeared among them.

CLINIAS : Of course not.

ATHENIAN : And how many generations must we suppose to pass before that would happen?

CLINIAS : A very considerable number, beyond all doubt.

ATHENIAN : Consequently, all arts which require iron, copper, and similar materials had then been lost for this period, or even longer.

CLINIAS : Naturally.

ATHENIAN : And therefore both civil conflict and war had equally disappeared all through this period, for more reasons than one.

CLINIAS : And what were those reasons?

ATHENIAN : For one thing, men's loneliness made them socia-

ble and friendly; for another, there could be no quarreling over the means of subsistence. Except perhaps in some instances at the very first, they were not stinted for flocks and herds, the principal support of life in that age; in fact, there was no shortage of milk or meat, and besides, they could supply themselves with plenty of excellent viands by hunting. Again, they were quite well off for clothes, bedding, shelter, or vessels, culinary and other. Iron, as you know, is wholly superfluous for the arts of the potter and the weaver, and these two crafts have, by divine appointment, been empowered to supply all our wants, that our species may still be enabled to germinate and increase when it falls into such straits. Thus they were not extremely poor, for the reason I have assigned, and so were not set at variance by the stress of penury; rich they could never become in the absence of gold and silver which was then their case. Now, a society in which neither riches nor poverty is a member regularly produces sterling characters, as it has no place for violence and wrong, nor yet for rivalry and envy. Thus they were good men, partly for this reason, and partly from their proverbial simplicity; they were so simple that when they heard things called fair or foul, they obediently took the statements for infallible truths. No one was sufficiently subtle to suspect deception, as men do today; what they were told about God or man they believed to be true, and lived by it. Thus they came to be just the kind of men you and I have been describing.

d CLINIAS: I agree with the statement, for one, and so does my friend here.

ATHENIAN: Then I take it we may say that the many generations of men who led such a life were bound, by comparison with the age before the Deluge or with our own, to be rude and ignorant in the various arts, particularly in those of warfare, as practiced today by land or water, and again within the city, under the names of litigation and party faction, with their manifold artful contrivances for the infliction of mutual injury and wrong by word and by deed; they were simpler and manlier, and by consequence more self-controlled and more righteous generally. The reason of this has already been explained.

CLINIAS: Just so.

ATHENIAN: Now it must be understood that our purpose in the statement we have made, and all the inferences we have based on it, is simply to learn how laws came to be needed in those remote ages and who enacted them.

CLINIAS: Yes, excellently put.

ATHENIAN: May we not perhaps say, then, that in that age men were in no need of a lawgiver, and that such a thing as a law was as yet unusual? In fact, those whose lives fall in that part of the cycle do not as yet so much as possess an alphabet, but regulate their lives by custom and what is called *traditionary* law.

CLINIAS : That is at least the fair presumption.

ATHENIAN : Still, even this is already a form of polity.

CLINIAS : But what form?

ATHENIAN : The form of polity in that age was, I believe, what <sup>b</sup> is universally called *dynasty*, a form still to be found in many places among Greeks, as well as among non-Greeks. Homer, for one, apparently speaks of it as the mode of life of the Cyclopes, when he says, 'These have neither gatherings for council nor oracles of law, but they dwell in hollow caves on the crests of the high hills, and each one utters the law to his children and his wives, and they reckon not one of another.' <sup>4</sup>

CLINIAS : This poet of yours seems indeed to have been quite <sup>c</sup> a pretty fellow. I assure you I have perused other passages from him which are equally neat, though not many, as we Cretans are not much given to cultivating verse of alien origin.

MEGILLUS : Now in Sparta we do cultivate it, and regard Homer as the best composer of it, though the life he is always describing is decidedly Ionian rather than Laconian. He certainly seems to give <sup>d</sup> full confirmation to your present theory where he ascribes the primitive manners of the characters in his story to their savage condition.

ATHENIAN : Yes, to be sure he does, and we may take him as evidence to show that this type of polity is actually to be found at times.

CLINIAS : Certainly.

ATHENIAN : That is, they are found among such men as we are speaking of, who have been dispersed in single homesteads and families as a result of the distress caused by these disasters? In such societies do we not find that the oldest members rule, because their <sup>e</sup> authority has come down to them from father or mother? The rest follow them, and form one flock, like so many birds, and are thus under patriarchal control, the most justifiable of all types of royalty.

CLINIAS : Exactly so.

ATHENIAN : The next step is to come together in larger numbers, which will increase the size of the communities, and turn to agriculture. This will be at first practiced in the skirts of the hill country; <sup>681</sup> dry fences of a kind will be contrived as walls for defense against savage beasts, and a new and larger single homestead thus erected for the community.

CLINIAS : At least that is the probable succession of events.

ATHENIAN : Well, and is there not something else which is no less probable?

CLINIAS : And what may that be?

ATHENIAN : As these larger homesteads are in process of growth from the smaller and most primitive, each of the smaller

- b groups will bring along with it its patriarchal ruler and certain private customs of its own—private, I mean, because the groups are isolated from each other, and the several groups have been trained by their different progenitors and fosterers in different habits of conduct toward gods and fellow men, in more orderly habits where the ancestors have been more orderly, in more valiant where they have been valiant. Thus each group comes accordingly, as I say, into the larger settlement with special laws of its own, and prepared to imprint its own preferences upon its children, and their children after them.

CLINIAS: Why, inevitably so.

- c ATHENIAN: And of course each group unavoidably gives its approval to its own laws, and only in the second place to those of the others.

CLINIAS: Exactly.

ATHENIAN: And thus, to all appearances, we find ourselves insensibly embarked on the beginnings of legislation.

CLINIAS: Yes, precisely so.

- ATHENIAN: At least the next step is bound to be that the coalescing groups choose certain representatives who will, of course, review all the usages, publicly and plainly indicate those which most win their own approval to the chiefs and leaders of the various clans—  
d their kings as we may call them—and propose them for adoption. Hence these representatives will themselves get the name of legislators, and when they have appointed the chiefs as magistrates, and thus made the patriarchal groups into an aristocracy, or possibly a monarchy, they will direct affairs during this transformation of the polity.

CLINIAS: To be sure, this may be presumed to be the next stage in the process.

ATHENIAN: Then let us proceed to remark the rise of a third type of polity, under which polities and the societies which exhibit them alike manifest all varieties of form and fortunes.

CLINIAS: And what type is that?

- e ATHENIAN: That which Homer, too, has commemorated as succeeding the second, when he says that the third form originated thus. 'He founded Dardania'—those, I believe, are his words—'for holy Ilium had not yet been built in the plain, a city for mortal men, but they still dwelt on the slopes of many-fountained Ida.'<sup>5</sup> The lines,  
682 like those which speak of the Cyclopes, are as true to nature as they are inspired. Poets, you know, singing as they do under the divine afflatus, are among the inspired and so, by the help of their Graces and Muses, often enough hit upon true historical fact.

CLINIAS: I can fully believe it.

ATHENIAN: Well, let us carry the tale which has engaged our

<sup>5</sup> *Iliad* 20.216 sq.

imagination some steps further, as it may very probably suggest some hints which will be much to our purpose. So the procedure will surely be proper?

CLINIAS : Most proper.

b

ATHENIAN : Well, as I say, the foundation of Ilium was due to a descent from the heights to a wide and noble plain; it was built on a hill of low elevation watered by a number of rivers coming down from the higher ground of Ida.

CLINIAS : So the story goes.

ATHENIAN : Then we must surely suppose that this happened many ages after the Deluge?

CLINIAS : Many ages later, no doubt.

ATHENIAN : The founders, in fact, must have been singularly oblivious of the disaster we are now recalling, to build a city on such a site exposed to a number of rivers flowing from the mountains, with such confidence in hills of inconsiderable height.

CLINIAS : Why, yes, that calamity must obviously have belonged to a very remote past.

ATHENIAN : There were also by that time, I conceive, a good many other city-communities, thanks to the multiplication of mankind.

CLINIAS : Yes, of course.

ATHENIAN : It was they, you know, who assailed her, and probably enough by sea too, as all mankind had long ago forgotten their dread of the sea.

CLINIAS : So it should seem.

d

ATHENIAN : And there was a delay of some ten years before the Achaeans succeeded in sacking Troy.

CLINIAS : Just so.

ATHENIAN : Now during this period of ten years while Ilium was under investment, occurred the various domestic misfortunes of the different besiegers, occasioned by the insurrectionary movements of the younger generation. Moreover, when the warriors returned to their cities and families, the reception they met at the hands of these young men was neither honorable nor equitable, but attended with numerous instances of homicide, massacre, and expulsion. The expelled then returned again under a new name, calling themselves now not Achaeans, but Dorians, after Dorus, who reassembled the exiles of that time. As to the sequel of the story, it is told, and told fully, in your own Lacedaemonian tradition.

MEGILLUS : It is indeed.

ATHENIAN : Thus we find ourselves, providentially as it were, brought back to the very point at which we were led into a digression at the outset of our discussion of law by our stumbling upon this topic of music and the wine cup, and we may now, so to say, close with the argument. For it has come round to the actual settlement of Lacedae-

683 mon, a system you both declared sound—as also that of Crete which has closely related laws. And we have certainly gained this much vantage from our desultory argument, with its review of a variety of polities and foundations. We have inspected a first, a second, and a third community succeeding one another in order of foundation through a vast period of time, and now at last we come, in the fourth place, to the foundation of a city—or you may prefer to say, a *nation*—which  
 b persists to this day as it was founded. If the whole discussion enables us to understand what has been commendable in such foundations, or the reverse, what types of laws lead to their preservation, where it is achieved, and what, in the opposite case, to their dissolution, and what kind of changes will contribute to the happiness of a community, why then, Megillus and Clinias, we must cover the ground again pretty much from the beginning, unless, indeed, you have some objections to urge against what has been already said.

MEGILLUS: Why, sir, if we could have the word of a god for it  
 c that on our second attempt to study this matter of legislation we are to hear discourse as good, yes, and as long, as that which has already passed, I would readily make our walk a long one and should think this day short enough, though, if I am rightly informed, it is the day of the summer solstice.

ATHENIAN: Then I presume we are to undertake the inquiry.

MEGILLUS: With all my heart.

ATHENIAN: Then, Megillus, let us place ourselves in imagination at the date at which Lacedaemon, Argos, and Messene, with all  
 d their domains, had come, to all intents, into the power of your ancestors. Their next step, as the story goes, was the resolution to divide their forces into three, and establish three cities, Argos, Messene, and Lacedaemon.

MEGILLUS: Precisely.

ATHENIAN: Thus Argos became the kingdom of Temenus, Messene of Cresphontes, Lacedaemon of Procles and Eurysthenes.

MEGILLUS: To be sure.

ATHENIAN: Whereupon the whole body took an oath to these  
 e sovereigns to support them against any attempt to subvert their monarchy.

MEGILLUS: Certainly.

ATHENIAN: And, in God's name, is a monarchy ever subverted, or, for the matter of that, has any government ever been overthrown, except by itself? That was our position when we fell a while ago into a discussion of the point, and can we have forgotten it now?

MEGILLUS: Oh, surely not.

ATHENIAN: Then we may assert the position even more confidently now, as we have met with historical facts which seem to lead to the same conclusion, and shall thus be dealing with realities and facts,

not empty fiction. The historical facts, as we know, are these. Three 684  
reigning houses and the cities over which they reigned swore a mutual  
oath to one another, as required by the laws they had adopted as defini-  
tive of sovereignty and allegiance, the monarchs engaging that the  
continuance of the crown in the family should lead to no enlargement  
of prerogative, their subjects that, so long as they respected the com-  
pact, they would neither abolish the monarchies from within, nor sub-  
mit to their subversion from without; the monarchs convenanted to  
support a populace, no less than a monarch, if its rights should be in- b  
fringed, and the peoples, in like case, to support a monarch no less  
than a populace. Those, I believe, are the facts?

MEGILLUS: And so they are.

ATHENIAN: Well then, have we not here provision made by  
the legislation of the three cities from the outset for a matter of prime  
importance to the established constitutions—whether the initiative  
was due to the monarchs or to others?

MEGILLUS: What matter do you mean?

ATHENIAN: I mean that in any case of infraction of the law of  
the constitution, there were always to be two cities leagued against the  
single defaulter.

MEGILLUS: Yes, manifestly.

ATHENIAN: Now I may remind you that a legislator is com- c  
monly expected to enact only such laws as a populace, or multitude,  
will accept of its own motion, which is much as though a trainer or  
physician were expected to make his treatment, or cure, of the body a  
pleasure to the recipient.

MEGILLUS: Exactly.

ATHENIAN: Whereas in real fact one has often ground for  
thankfulness if one can secure bodily health and good condition at  
the cost of a moderate amount of pain.

MEGILLUS: To be sure.

ATHENIAN: The statesmen of that period had moreover a sec- d  
ond initial advantage which would greatly facilitate their legislative  
task.

MEGILLUS: And what was that?

ATHENIAN: They were not exposed, in their attempts to estab-  
lish a certain equality of possessions, to the grave charge so persist-  
ently leveled, in connection with the passing of laws for other cities,  
at one who proposes change in the tenure of land, or a cancellation of  
debts, from his perception that equality can never be properly attained  
without these measures. When a legislator attempts a change in these  
matters, everyone meets him with a cry of 'no meddling with funda- e  
mentals,' and an imprecation on the author of redistribution of lands  
and repudiation of debts, sufficient to reduce any man to despair. Now  
the Dorians, you know, from their situation, had this further initial

advantage, which relieved them of unpleasant recriminations. The land could be divided without controversy, and they had no burden of accumulated debts.

MEGILLUS : True enough.

ATHENIAN : Then what, I must ask you, can be the reason that their foundation and its legislation proved the failure it has been?

685 MEGILLUS : Why, in what respect has it failed, and why this censure of them?

ATHENIAN : Because in two of their three settlements there was a rapid degeneration of constitution and laws, only one of the three, your own city of Sparta, remaining unperverted.

MEGILLUS : Not precisely an easy question to answer.

ATHENIAN : All the same, there is the point we have now to envisage and discuss, if we are to relieve the distress of our journey by this sober old man's game of jurisprudence, as we called it at the beginning of our walk.

MEGILLUS : No doubt, and so we must do as you say.

ATHENIAN : What laws, then, could be a fairer subject of inquiry than those by which these communities have been regulated? What greater and more illustrious cities are there, whose foundation we might take for our consideration?

MEGILLUS : If we dismiss them, it will be no easy matter to name any others.

ATHENIAN : Well, one thing is plain enough. The founders of that age meant their creation to be an adequate protection, not merely for Peloponnesus, but for the Greek world at large, if it should be  
c wronged by an alien people, as it had already been wronged by the inhabitants of Ilium, when they provoked the expedition against Troy in their arrogant confidence in the power of the Assyrians of Nineveh. For the still-surviving prestige of that empire was considerable. The men of that age had then the same fear of that united dominion which  
d we feel today of the Great King, as the second capture of Troy, a city which formed part of the Assyrian Empire, was a formidable grievance against them. It was to meet this situation that the militia of those days was organized as a single body, distributed over three cities under monarchs who were brothers, being all sons of Heracles, an excellent invention and disposition, superior, as was generally believed, to that of the force which had invaded Troy. For in the first place, commanders for commanders, the Heraclidae were thought better  
e than the Pelopidae, and in the second, this army was held to have the advantage in valor of that which had assailed Troy, since it was composed of the victorious Dorians, but the other of the defeated Achaeans. Such, may we not say, were the dispositions of that time, and such was their purpose.

MEGILLUS : Why, surely.

686 ATHENIAN : So it was presumably expected that their work

would prove stable and endure for ages, considering their past association in so many difficulties and dangers, and their subordination to three royal brothers of the same house—to say nothing of the fact that they had the sanction of many oracles, in particular of the Delphic Apollo.

MEGILLUS: That, to be sure, was the presumption.

ATHENIAN: And yet, as we see, these magnificent anticipations vanished speedily into air, except, as we were saying, in the case of the fraction in your territory of Laconia, and it, you know, has been in incessant warfare with the other two thirds to this day. Though had the original project been carried out, and a single confederacy formed, its military power would have been irresistible.

MEGILLUS: Yes, quite irresistible.

ATHENIAN: Then where was the source of the failure? Surely it is a question worth examining—what mischance may have been the undoing of so vast and admirable a formation.

MEGILLUS: Yes, surely. One who turned his attention from this case in another direction might look long enough for an example of the laws and institutions which preserve or destroy grandeur and greatness.

ATHENIAN: So here, I take it, we find ourselves happily launched on an inquiry of magnitude.

MEGILLUS: Very certainly.

ATHENIAN: Then I would ask, my dear sir, whether we were not just now unconscious victims of a mistake universal to mankind. Men are perpetually fancying they have discovered some splendid creation which might have worked wonders if only someone had known the proper way—whatever it may be—to use it. Now it is just on this point I suspect you and I may be thinking falsely and unnaturally, like everyone else who has the same thought about anything.

MEGILLUS: Pray, what do you mean? What is the special point of your observation?

ATHENIAN: Why, my friend, I am actually amused by my own recent mood. As I pictured to myself the army of which we were talking, I thought, What a splendid force, and what a wonderful acquisition it would have proved for the Greeks, if only, as I was saying, the proper use had been made of it at the time!

MEGILLUS: Well, and was not all you said, like our assent to it, the soundest of sense?

ATHENIAN: That may be, but what is in my mind is this. When anyone sees something big, strong, and powerful, he feels at once that if the owner of such a marvelous thing knew how to use it, he could effect wonders with it, and so achieve felicity.

MEGILLUS: Well, and that is equally true, is it not?

ATHENIAN: Let me beg you to consider the light in which a thing must be viewed to justify this eulogy. Take the case of the

- armament of which we are now speaking as a first example. If its creators had understood how to construct it properly, they would fairly have attained their aim—but how? I presume, if they had constituted it securely and assured its permanent continuance in being, with the consequences of freedom for themselves, sovereignty over any desired subjects, and, in a word, ability for themselves and their posterity to
- b deal at their pleasure with all mankind, Greeks and non-Greeks alike. These are the grounds on which they might base their eulogy.

MEGILLUS: Exactly.

ATHENIAN: And, again, when a man's notice is attracted to a great fortune, or pre-eminent family distinction, or the like, and he expresses the same commendation, he speaks from the same point of view; his thought is that the advantage will enable its possessor to gratify all his desires, or the most numerous and considerable of them?

MEGILLUS: So I should suppose.

- c ATHENIAN: So it follows that there is a certain desire, that indicated by our argument, which is universal in all men, as the argument itself asserts.

MEGILLUS: And that is?

ATHENIAN: That events shall fall out in accord with the bidding of a man's own soul, all of them, if possible, but if not, at least those which depend on human agency.

MEGILLUS: Of course.

ATHENIAN: Now if this is what all of us, from boyhood to age, are wishing all the time, it will necessarily also be our standing prayer.

MEGILLUS: Certainly.

ATHENIAN: And, again, I suppose, our petition for our dear ones will be that they may receive what they ask for themselves.

MEGILLUS: Of course.

ATHENIAN: Now a son, who is a boy, is dear to his father, a grown man.

MEGILLUS: Certainly.

ATHENIAN: And, mark you, there is much a boy prays to befall him, of which his father would beseech heaven that it may never fall out as the son prays.

MEGILLUS: You mean when the petitioner is thoughtless and still young?

- e ATHENIAN: Yes, and what of the case when the father—old, or only too youthful as you please to consider him—has no sense of good and right, and prays from the heart in a passion akin to that conceived by Theseus against his unfortunate victim, Hippolytus, but the son has such a sense? Will the son, think you, second the father's prayer in such a case?

MEGILLUS: I see your point. You mean, I apprehend, that the

object of a man's prayers and endeavors should not be that the universal course of events should conform to his own wishes, unless his wishes further conform to his sober judgment. It is the possession of intelligence that should be the mark of prayer and aspiration for the community and every individual of us alike. 688

ATHENIAN: Yes, and I am particular to remind myself that it is this which a statesmanlike legislator should always have in view in framing his enactments—as I would also remind you, if we have not forgotten how our conversation began—that whereas you both agreed that a good legislator must devise all his institutions with an eye to war, I, for my part, urged that this is an injunction to legislate with a view to one single virtue out of four. He should keep them all in view, I said, but chiefly and in the first place that virtue which brings all the rest in its train, that is, judgment, intelligence, and right conviction attended by appropriate passionate desire. So our argument has come back again to the old point. I, its mouthpiece, say once more now what I said before, in jest or earnest, as you please to take it. I look on prayer, I say, as a dangerous instrument in the hands of the man without intelligence; it defeats his wishes. If you please to consider me in earnest, pray do so. I have every confidence that if you follow up the story we have just set before ourselves for consideration, you will directly discover that the cause of the ruin of the three kings and their whole design was no cowardice and no military ignorance on the part of commanders or commanded; what ruined them was their abundant vice of other kinds, and, above all, their folly in the supreme concerns of man. That this was the sequence of events on that occasion, is so still today in similar cases, and will be the same in the future—that is what, by your leave, I shall try to establish in the fuller development of our argument, and friendship will lead me to make the point as clear to you as I possibly can. c

CLINIAS: Verbal applause, sir, might be in doubtful taste, but our conduct will show our emphatic approval. We shall follow your discourse with the keenest attention; that is the way in which a self-respecting man best shows approbation or the reverse.

MEGILLUS: Well said, Clinias—so we will. e

CLINIAS: Certainly, with God's permission. Pray proceed.

ATHENIAN: Well then, to follow up the thread of our argument, we say that what then destroyed that mighty power was the greatest folly, and that it inevitably produces the same results today. This being so, then, a legislator's aim must be to create all the wisdom he can in a community, and with all his might to eradicate unwisdom.

CLINIAS: Yes, manifestly.

ATHENIAN: Now what type of folly may fairly be called the greatest I should certainly say that I am on the point of describing, but you must consider whether you agree with the observation. 689

CLINIAS: What type do you mean?

ATHENIAN: That of a man who hates, not loves, what his judgment pronounces to be noble or good, while he loves and enjoys what he judges vile and wicked. It is this dissonance between pleasure and pain and reasoned judgment that I call the worst folly, and also the *greatest*, since its seat is the commonalty of the soul, for pain and  
 b pleasure are in the soul what the populace or commonalty is in a community. Accordingly, when the soul sets itself at variance with knowledge, judgment, discourse, its natural sovereigns, you have what I describe as unwisdom, alike in a community where the commons rebel against magistrates and laws, and in one individual man when  
 c fair discourse is present in the soul, but produces no effect, but rather the very contrary. These are the types of folly I would pronounce the gravest dissonances in community or individual citizen, not the follies of professionals—if you take my meaning.

CLINIAS: Indeed we do, sir, and we grant your point.

ATHENIAN: Then let us take it as definitely settled, and proclaim our conviction that no function of government may be entrusted to citizens who are foolish in this sense. They must be reprehended for their folly, though they were the most expert of calculators, and  
 d laboriously trained in all curious studies and everything that makes for nimbleness of mind, while those of the contrary sort should be styled wise, even though, as the proverb puts it, they can 'neither read nor swim,' and it is to them, as the men of sense, that our magistracies should be given. How, indeed, my friends, can there be the barest particle of wisdom where there is no concord? 'Tis a flat impossibility, whereas the fairest and greatest of consonances may very properly be called the greatest wisdom. In this wisdom he who lives by rule has his share, while he who is without it will invariably be found to be a waster of his substance and no savior of society but the very  
 e reverse, all because of his folly in this respect. Well, as I just said, let this stand as our recorded conviction.

CLINIAS: By every means.

ATHENIAN: Now in a community, I take it, there must be those who govern and those who are governed?

CLINIAS: Of course there must.

690 ATHENIAN: Very good. Now what recognized titles to government and obedience, and how many, do we find alike in large cities, in small, and in families? Is there not, for one, the claim of father and mother? Or speaking generally, would it not be universally recognized that parents have a title to rule their offspring?

CLINIAS: Most assuredly.

ATHENIAN: And next by consequence that the wellborn have a title to rule the worse-born, and third, by further consequence, that it is for elder men to rule and for younger to submit?

CLINIAS: To be sure.

ATHENIAN: And fourth, that it is for slaves to submit and for b  
their owners to rule them?

CLINIAS: Why, of course.

ATHENIAN: And fifth, I conceive, for the stronger to rule, and  
for the weaker to submit?

CLINIAS: Aye, there is a title which is not to be disputed.

ATHENIAN: Yes, and one which is prevalent all through the  
animal kingdom—by nature's own appointment, as Pindar of Thebes  
has said. And sixth we may place the supreme claim of all which pre-  
scribes that it is for the ignorant to follow and for the wise men to take  
the lead and rule. And yet it is just this, this unforced rule of law over  
willing subjects, my all-accomplished Pindar, that I cannot pro- c  
nounce unnatural. I should call it nature's own ordinance.

CLINIAS: And you would be quite right.

ATHENIAN: Then there is a seventh kind of rule by the favor of  
heaven and fortune, as we say. We bring our men to a casting of lots,  
and call it the most equitable of arrangements that he who has the  
chance of the lot should rule, and he who misses it retire into the  
ranks of subjects.

CLINIAS: True, indeed.

ATHENIAN: You see, then, my legislator—so we might play- d  
fully address a man who sets lightheartedly about the enactment of  
laws—how many titles there are in this matter of governing, and how  
conflicting they are. We have just discovered a whole fountainhead of  
dissensions; it is yours to provide the remedy for them. But suppose  
you begin by joining in our inquiry about the kings of Argos and  
Messene. How did they effect their own ruin and that of the Hellenic  
power which was so superb in their day? What offense did they com-  
mit against these principles? Was not their error that they forgot the e  
solid truth of Hesiod's saying that 'the half is often more than the  
whole'? <sup>6</sup> He meant that when it is baneful to get the whole, but the  
half is sufficient, then the modestly sufficient, the better, is more than  
the disproportionate, the worse.

CLINIAS: He was right, too.

ATHENIAN: Now when the ruin sets in, where does it regularly  
make its first appearance? In kings or in the common people? How say  
you?

CLINIAS: Probability and common experience suggest that it is 691  
the malady of kings whose luxury leads to pomp.

ATHENIAN: Plainly, then, this infection of encroachment on  
the established laws began, in the old days, with the kings. They did  
not keep concord with one another, as they were pledged and sworn to  
do. It was this discord—in our judgment really supreme folly, for all

its semblance of wisdom—which ruined the whole system by its shrill and tuneless dissonance.

CLINIAS: Probably enough.

- b ATHENIAN: Well and good. Now what precaution should a legislator have taken at the time against the development of this symptom? God knows it is easy enough to give the answer now and takes no great wisdom to perceive it, but a prophet who could have foreseen it at the time would have been a wiser man than ourselves, would he not?

MEGILLUS: And what answer may you mean?

ATHENIAN: Why, Megillus, what should have been done then may be discovered and readily stated today if we will only look at what was done in your own society.

MEGILLUS: You must put it still more plainly.

ATHENIAN: Well, what is absolutely plain is just this.

MEGILLUS: What?

- c ATHENIAN: If we disregard due proportion by giving anything what is too much for it, too much canvas to a boat, too much nutriment to a body, too much authority to a soul, the consequence is always shipwreck; rankness runs in the one case to disease, in the other to presumption, and its issue is crime. What is it we would say, you ask. Why, my friends, surely this. No soul of man, while young or accountable to no control, will ever be able to bear the burden of supreme social authority without taking the taint of the worst spiritual disease, folly, and so becoming estranged from its dearest intimates. When this happens, that soul very soon suffers ruin and the loss of all its powers. Hence it calls for a great legislator to forestall this danger by his insight into due proportion. The reasonable inference today, then, is that the danger was forestalled, but in very truth it seems there must have been . . .

MEGILLUS: What?

- ATHENIAN: Some divinity in charge of you with prevision of the future, who gave you a double line of kings instead of a single, and  
e so contracted their power within more proportionate limits. Even after this a human intelligence, with some divine assistance, observed that your rulers were still in their fever fit, and so blended the tem-  
692 perate authority of age with the peremptory self-will of royal lineage by giving the eight-and-twenty elders an equal voice with the kings in affairs of moment. Then a third deliverer remarked that your governing body was still swelling with mettle and introduced the office of the ephorate, an office as good as filled by lot, as a curb. This is how the monarchy of your own Laconian state came to be a mixture of the right ingredients, and acquired due limitation, with the result that it was preserved itself, and has proved the means of our general preservation.  
b For had things been left to Temenus, Cresphontes, and the legislators of that age, whoever they may have been, not even the 'portion of Aristodemus' itself would have survived. In fact, they were mere ama-

teurs in legislative work, or they could hardly have fancied an oath a guarantee of moderation in a youthful spirit succeeding to an authority which could be converted into autocracy, but God has shown us by the event how a government should have been constituted then and must be constituted now, if it is to have good prospects of permanence. c That you and I should be able to understand this today, as I said before, is no proof of wisdom—it is always easy to see by the light of examples from the past—but had there been a man at the time with such foresight, and with the power to limit the sovereignties and make one of three, the excellent discoveries of that age would have been retained in their entirety, and contempt of our slender resources would never have launched a Persian, nor any other, armada against Hellas.

CLINIAS: Very true.

ATHENIAN: Indeed, Clinias, the repulse of those attacks was d no credit to anyone. I do not mean, when I say this, that the victories of the time, on land and sea alike, were not honorable to the victors; what I mean by calling the history discreditable is this. Only one of those three states took up arms for the defense of Hellas on the first assault; the other two were so badly corrupted that one of them even tried to hinder the efforts of Lacedaemon by vigorous hostilities against her, while the second, Argos, which had held the primacy in e the old days of the first division of the Peloponnesus, sent no answer to the appeal for aid against the foreigner, and did nothing at all. And if a man were to tell the story of that war at length, it would amount to an unseemly indictment of Hellas. In fact, Hellas could not truly be said to have made any defense. Had not the combined resolution of Athens and Lacedaemon repelled the menace of enslavement, there 693 would long ago have been a complete confusion of Hellenic stocks with one another, of barbarian with Hellenic and Hellenic with barbarian, like the wretched sporadic condition of the present dispersed and confused subjects of the Persian despotism.

This, Clinias and Megillus, is the charge I bring against the so-called statesmen and legislators of both past and present, and I bring it in the hope that examination into its causes will disclose the very different course which ought to have been taken. It was in this spirit b that I said just now that after all it is wrong to establish overpowerful or unmixed sovereignties, when we consider that a community should be at once free, sane, and at amity with itself, and that these are the ends a legislator must keep in view in his enactments. And I must ask you not to be surprised that we have already more than once proposed certain ends as those to which the legislator must look, and that c our proposals have not always appeared to be identical. You must reflect that when we say he must look to sobriety, or again to wisdom, or to amity, these ends are not distinct but identical, and if we find ourselves using a further variety of expressions to the same effect, we must not be confused by that.

CLINIAS: We shall do our best to keep it in mind as we review our discussions. For the present, you might explain your remarks about amity, wisdom, and liberty. What is it you were going to say a legislator should aim at?

ATHENIAN: Then let me have your attention. There are two matrices, as we may call them, of constitutions from which all others may truly be said to be derived; the proper name of the one is monarchy, of the other democracy. The first is seen in its perfection among the Persians, the second among my own countrymen. These are the strands, as I have said, of which all other constitutions, generally speaking, are woven. Very well, it is indispensably necessary that there should be both ingredients where there is to be the combination of liberty and amity with wisdom. This is what our argument means to enjoy when it urges that no community which has not those characters can be rightly administered.

CLINIAS: Of course it cannot.

ATHENIAN: Well, one of the societies we have mentioned has shown exclusive and inordinate devotion to the principle of monarchy, the other to that of liberty, and thus neither has effected a proper balance between them, whereas yours of Laconia and Crete have succeeded better. There was a time when this was more or less true of Athens and Persia, but it is less true today. Shall we inquire into the causes of this or not?

694 CLINIAS: By all means, if we mean to complete our investigations.

ATHENIAN: Then lend me your ears. While the Persians steered a middle course between subjection and liberty, in the time of Cyrus, they began by winning their own freedom and went on to make themselves masters of numerous peoples. As a government they gave these subjects their share of liberty and placed them on equal terms with themselves; their soldiers thus grew attached to their commanders, b and showed themselves forward in danger. Again, if a subject was a man of wisdom and a capable adviser, the king showed no jealousy of him, but permitted free speech and bestowed distinctions on such competent counselors, so that the gift of wisdom was freely placed at the disposal of the public service. Hence the combination of liberty with amity and generally diffused intelligence led, for the time, to all-round progress.

CLINIAS: That certainly seems to have been much the course of the history.

c ATHENIAN: Then what can have brought about the decay under Cambyses and the general recovery under Darius? Shall we hazard a guess at the reading of the riddle?

CLINIAS: It would at least be a contribution to the study of our original problem.

ATHENIAN: Then my own present reading of Cyrus is this.

Though a good general and a true patriot, he had been wholly untouched by right education, and had never given a thought to the discipline of his household.

CLINIAS: What are we to understand by that remark?

ATHENIAN: It should seem that he spent his life, from his youth, in perpetual campaigning, and left the training of his sons to the women, who treated them from their childhood as blessed creatures and born favorites of fortune endowed with every advantage. They would allow no one to cross such vastly superior beings in anything, forced everyone to commend all their sayings and doings, and so turned them out what you might expect.

CLINIAS: A mighty fine training, by your account of it.

ATHENIAN: Why, the training one could look for when the children were left to the women of a royal harem, new to affluence and without a man to help them, thanks to perpetual preoccupation with the wars and their dangers.

CLINIAS: That sounds reasonable, to be sure.

ATHENIAN: As for their father, he was busy winning for them flocks and herds and drove after drove of men and other creatures, but he forgot that the successors to whom he was to bequeath this wealth were getting no training in their ancestral Persian calling, an austere one—for the Persians, you know, were shepherds and sons of the barren hills—well fitted to turn out sturdy shepherds, equal to the endurance of exposure and wakefulness, and the hardships of a campaign too, when necessary. He shut his eyes to the way in which his sons had been imbued by women and eunuchs with an education—the Median—corrupted by what is called fortune, and so they proved what might have been anticipated from the neglect of correction in their training. At least, when the succession fell to them, at their father's death, they were swollen with pride and indiscipline. Camby-ses, the elder, would brook no equal, and began by making away with his brother; then, what with strong drink and want of education, he went out of his own wits, and lost his throne at the hands of the Medes and the famous eunuch, who had conceived a contempt for his folly.

CLINIAS: Certainly that is how the story runs, and it is presumably pretty true to the facts.

ATHENIAN: And then, we are told, the throne was recovered for the Persians by Darius and the Seven [chiefs].

CLINIAS: Exactly.

ATHENIAN: Well, let us follow up the train of thought suggested by our argument. Darius, you know, was no king's son, educated in pride and pomp. When he came to a kingdom which he had won with the help of six companions, he divided it into seven departments, of which some faint traces are still surviving. He was satisfied to live under laws of his own devising which introduced a certain

equality into the state; he promoted general amity and public spirit  
 d among the Persians by fixing, by his legislation, the tribute Cyrus had  
 promised them and thus won the hearts of the common people by his  
 liberality and munificence. Consequently his armies served with  
 loyalty, and won him fresh territory as extensive as that left by Cyrus.  
 But when Darius was gone, Xerxes, who had again received the pam-  
 pering education of a prince of the blood! . . . Darius, Darius, so I  
 think we may righteously protest, to think you should never have  
 e found out the fault in Cyrus, and should have trained your Xerxes in  
 the same ways as he his Cambyses! . . . Xerxes, as I say, was a  
 product of the same kind of education, and naturally the conse-  
 quence was a career of the same sort. From his time to ours,  
 speaking broadly, the Persians have never had a real Great King, who  
 has been more than nominally such. And the cause of this, on my own  
 theory, is not accidental; it is the evil life commonly led by the sons  
 of autocrats and men of extraordinary wealth. Such a training will  
 696 never, never lead to outstanding goodness in boy, or man, or gray-  
 beard. This, I maintain, is a consideration for legislators and equally  
 for ourselves in our present discussion. And I would remark in fair-  
 ness to you Lacedaemonians as creditable to your community that you  
 assign no special distinction or special upbringing whatsoever to poor  
 man or rich man, private citizen or prince of the royal house, beyond  
 b what your original source of inspiration revealed on divine authority.  
 For assuredly special civic honors ought not to be assigned to excep-  
 tional wealth, any more than to speed of foot, beauty of form, or  
 strength of limb unaccompanied by goodness, or even to goodness  
 which does not include temperance.

MEGILLUS: How is that remark to be understood, sir?

ATHENIAN: Courage, you will grant, is one part of goodness.

MEGILLUS: To be sure it is.

ATHENIAN: Good. Then listen to my argument and decide the  
 point for yourself. Would you like a man of great courage who should  
 also be intemperate and profligate as an inmate of your house, or a  
 next-door neighbor?

c MEGILLUS: Heaven forbid!

ATHENIAN: And what do you say to a man of professional  
 skill, and wise in that sense of the word, but unjust?

MEGILLUS: I have nothing to say to him.

ATHENIAN: And justice, again, does not flourish where tem-  
 perance is not.

MEGILLUS: No, how should it?

ATHENIAN: Neither does the sort of wisdom we were lately  
 contemplating, that of the man whose pleasures and pains are ac-  
 cordant with and consequent on his right thinking.

MEGILLUS: No, decidedly not.

ATHENIAN: Besides, we have still a further point to consider

for its bearing on the right or wrong distribution of various civic distinctions.

MEGILLUS : And what may it be?

ATHENIAN : Suppose temperance to exist in a man's soul all by itself, apart from any further goodness. Ought it, or ought it not, to be a rightful title to distinction?

MEGILLUS : That is more than I can say.

ATHENIAN : A most becoming answer. Had you said either yes or no, in either case you would have struck what I take to be a wrong note.

MEGILLUS : Then it is as well I replied as I did.

ATHENIAN : Just so. A mere adjunct to the true object of honorable distinction, or the reverse, calls for no discussion, and may well be passed over in silence.

MEGILLUS : By the adjunct in question, I take it you mean temperance.

ATHENIAN : I do. The truly sound procedure would be to assign the first place in honor to that other thing, be it what it may, which, combined with this adjunct, does us the chiefest service, and the second to that which serves us in the next degree. We have only to travel in the same fashion down the whole series for everything to receive its right place in the scale of distinctions.

MEGILLUS : I quite agree with you.

ATHENIAN : Well then, surely it is one part of the legislator's business to construct this scale.

MEGILLUS : Most assuredly.

ATHENIAN : Then, while leaving it to him to make the construction as a whole, and in all its particulars and details, shall we try to establish a threefold division, a distinct first, second, and third class, for ourselves, who are also, in a sort, amateurs of legislation?

MEGILLUS : With all my heart.

ATHENIAN : Then I say that it is clearly an imperative duty for a society, which is minded to survive and enjoy all the felicity men may, to award its marks of honor and dishonor in the right way. And the right way is to put the good qualities of the soul in the first and most honorable rank—its temperance always presupposed as a *sine qua non*—advantages and good qualities of body in the second, and in the third, goods of estate, wealth, as we call them. Should any legislator or society transgress these limits by promoting wealth to honor, or giving anything of a lower class the distinctions of a higher, the act is an offense alike against religion and statesmanship. May we take this as our conviction?

MEGILLUS : Emphatically and absolutely, yes.

ATHENIAN : What led us into this lengthy discussion of the point was our examination of the Persian commonwealth. We find that they degenerated still further. The reason is that excessive

curtailment of the liberty of the commons, and improper intensification of autocracy, made an end of their national feeling and public spirit. Since their disappearance, the concern of the authorities is no longer for their subjects, the commonalty, but for their own position; they give over loyal cities and peoples to fire and desolation whenever they think it of the slightest advantage to themselves, and consequently hate and are hated with savage and unrelenting animosity. On the other side, when they need the arms of the common people for their defense, they find no patriotism in them, no loyal readiness to hazard themselves in the field; in theory their forces are reckoned by countless thousands, but all these thousands are worthless for service. Hence they hire mercenaries and aliens, as though they had no troops of their own, and look to them for their salvation. Moreover they are forced to an exhibition of their folly, since their habitual conduct amounts to a proclamation that all that society esteems honorable and of good repute is a toy in comparison with gold and silver.

MEGILLUS: Exactly so.

ATHENIAN: And with this we may close our proof that the present maladministration of Persia is due to an excess of servitude and autocracy.

MEGILLUS: Undoubtedly.

ATHENIAN: Next as to the state of Attica, we are similarly to show that unqualified and absolute freedom from all authority is a far worse thing than submission to a magistrate with limited powers. In the old days of the Persian assault on the Greeks—or perhaps I should say on the denizens of Europe at large—my countrymen enjoyed a venerable constitution with magistracies based on a fourfold system of social classes. Moreover conscience had a sovereignty among us which disposed us to willing subjection to the laws. Besides, the spectacle of the sheer magnitude of the military and naval armament threw us into helpless consternation, and led us to submit to laws and magistrates with a still stricter obedience. All these causes continued to intensify our loyalty to one another. Some ten years before the naval engagement at Salamis, Datis arrived at the head of the Persian armada, with express orders from Darius against the Athenians and Eretrians; he was to capture and deport them, and had been warned that his own life would be the price of failure. Well, Datis speedily effected the complete capture of the Eretrians by force of numbers, and thus originated the alarming report which reached us in Athens. It was said that not a man of the Eretrians escaped; in fact, the troops of Datis joined hands and so swept the whole territory of Eretria as with a net. True or false, whatever its source, this story appalled the Greeks, and more particularly the Athenians; they sent out appeals for help to every quarter, but were refused by all except the Lacedaemonians. Even they, whether under the pressure of their war with Messene, or from some other impediment—I am not acquainted

with any statement on the point—even they, from whatever cause, arrived a day too late for the Battle at Marathon.

After Marathon there were frequent reports of vast preparations, and repeated menaces reached us from the king, and in course of time it was learned that Darius was dead and had been succeeded by his son, who was persisting in the project with all the heat of youth. The Athenians conceived the whole undertaking to be directed against themselves in reprisal for Marathon. When they heard of the canalizing of Athos, the bridging of the Hellespont, and the numbers of the enemy's flotilla, they felt that there was no escape for them by land or by sea. No support could be looked for. They remembered how they had found no supporters or allies in peril before, when the first expedition sailed to deal with Eretria, and naturally supposed that on land events would take the same course again. On the other side, all hope of escape by sea was visibly precluded, since they had a fleet of a thousand vessels and more threatening them. There was just one chance of deliverance conceivable—faint and desperate, indeed, but still their only chance—when they looked at the past and observed how then, too, victory had appeared to emerge from the struggles of desperation. Supported by such hopes, they realized that their only refuge lay in their own right arm, and their gods. These causes combined to inspire them with loyalty to one another—the fear aroused by their present plight, and that other fear instilled by subjection to pre-existing law, which they had learned by subjection to the existing laws—conscience, as we have called it more than once already. This, as we said, is the sovereign to whom we must submit if we are ever to become men of worth; 'tis the dastards who are emancipate from that service and immune to that fear. Had they not been terrified at the time we are speaking of, they could never have rallied for the repulse of the invader and the defense of temples, tombs, country, and all that is nearest and dearest, as in fact they did; we should have been pulverized at such a crisis and scattered severally to all the quarters of heaven.

MEGILLUS: The observation sir, is not only perfectly just, but most becoming to yourself and your countrymen.

ATHENIAN: No doubt, Megillus, and you, who have inherited the character of your ancestors, are the right person to hear the history of those times. But I would have you and Clinias consider the relevance of my narrative to our legislation. I give it, not for the sake of the story, but for the reasons I indicate. For do but mark. Seeing that our fate has, in a way, been the same as that of the Persians—though they reduced the commonalty to utter subjection, whereas we encouraged the multitude toward unqualified liberty—our foregoing conversation has been, in a way, very pertinent to the question what should be said next and how it should be said.

MEGILLUS: Good, but you must try to make the point of the remark a little plainer.

ATHENIAN: And so I will. Under our old laws, my friends, our commons were not masters; in a sense they were the willing servants of the laws.

MEGILLUS: Of what laws are you thinking in particular?

ATHENIAN: In the first instance, if our progress in extravagant liberty of living is to be traced from its origin, of the laws of music as it was in those days. Our music was then divided into several kinds and patterns. One kind of song, which went by the name of a *hymn*,  
 b consisted of prayers to the gods; there was a second and contrasting kind which might well have been called a *lament*; *paean*s were a third kind, and there was a fourth, the *dithyramb*, as it was called, dealing, if I am not mistaken, with the birth of Dionysus. The actual word *nome* was used as the name of still another kind, though with the qualification *citharoedic*. Now these and other types were definitely fixed, and it was not permissible to misuse one kind of melody for  
 c another. The competence to take cognizance of these rules, to pass verdicts in accord with them, and, in case of need, to penalize their infraction was not left, as it is today, to the catcalls and discordant outcries of the crowd, nor yet to the clapping of applauders; the educated made it their rule to hear the performances through in silence, and for the boys, their attendants, and the rabble at large, there was the  
 d discipline of the official's rod to enforce order. Thus the bulk of the populace was content to submit to this strict control in such matters without venturing to pronounce judgment by its clamors.

Afterward, in course of time, an unmusical license set in with the appearance of poets who were men of native genius, but ignorant of what is right and legitimate in the realm of the Muses. Possessed by a frantic and unhallowed lust for pleasure, they contaminated laments with hymns and paeans with dithyrambs, actually imitated the strains  
 e of the flute on the harp, and created a universal confusion of forms. Thus their folly led them unintentionally to slander their profession by the assumption that in music there is no such thing as a right and a wrong, the right standard of judgment being the pleasure given to the hearer, be he high or low. By compositions of such a kind and discourse to the same effect, they naturally inspired the multitude with  
 701 contempt of musical law, and a conceit of their own competence as judges. Thus our once silent audiences have found a voice, in the persuasion that they understand what is good and bad in art; the old 'sovereignty of the best' in that sphere has given way to an evil 'sovereignty of the audience.' If the consequence had been even a democracy, no great harm would have been done, so long as the democracy was confined to art, and composed of free men. But, as things are with us, music has given occasion to a general conceit of universal knowledge and contempt for law, and liberty has followed in their train. Fear was cast out by confidence in supposed knowledge, and the loss of it  
 b gave birth to impudence. For to be unconcerned for the judgment of

one's betters in the assurance which comes of a reckless excess of liberty is nothing in the world but reprehensible impudence.

MEGILLUS : Very true.

ATHENIAN : So the next stage of the journey toward liberty will be refusal to submit to the magistrates, and on this will follow emancipation from the authority and correction of parents and elders; then, as the goal of the race is approached, comes the effort to escape obedience to the law, and, when that goal is all but reached, contempt for oaths, for the plighted word, and all religion. The spectacle of the Titanic nature of which our old legends speak is re-enacted; man returns to the old condition of a hell of unending misery. Now, once more, why have we said all this? I think we should rein in our argument from time to time. We must not let it run away with us, as though it had no curb in its mouth, and so, as the proverb says, lose our seat in the saddle. No, as I was saying, we must be constantly asking ourselves why we have said what we have.

MEGILLUS : To be sure.

ATHENIAN : Well then, I said it for its relevance to what had gone before.

MEGILLUS : And what was that?

ATHENIAN : Why, I said a legislator should have three aims in his enactments—the society for which he makes them must have freedom, must have amity with itself, must have understanding. That, I believe, was our position.

MEGILLUS : Exactly.

ATHENIAN : This was why we took the examples of the most autocratic of communities and the freest, and are now asking ourselves in which of the two public life is what it should be. We found that when we had a certain due proportionality in either case, in the one of authority, in the other of liberty, there was a maximum of well-being in both societies, whereas when things were pushed to an extreme in either case, an extreme of subjection in the one, and of its opposite in the other, the consequences were unsatisfactory in both societies alike.

MEGILLUS : Very true.

ATHENIAN : It was for the same purpose that we reviewed the settlement of the Dorian invaders, the foundation of Dardanus in the foothills, and that of the city on the coast, and even the life of the first survivors of the Deluge. Our earlier conversations about music and drinking, and all that preceded them, were equally to the same end. The purport of the whole discourse has been to learn how a society is best administered and how a man will best conduct his personal life. But have we achieved any result? I would ask you both, Megillus and Clinias, what test we can propose to ourselves.

CLINIAS : Why, sir, I believe I can find one. I fancy there has been something providential in the whole course of our argument; in

fact, I find myself just now in a position in which it meets my needs well, and both your appearance and that of our friend Megillus are  
 c most opportune. So far from hiding my situation from you, I even count your presence a favorable omen. You must know that the largest part of Crete is undertaking the foundation of a colony, and has charged the Cnossians with the management of the business, which has been entrusted by the authorities of Cnossus to myself and nine others. Our instructions are further to frame a legislation from such local Cretan laws as have our approval, or laws from other quarters; we are not to concern ourselves about their foreign origin, so long as we judge them superior. Suppose then we serve my turn and yours at  
 d once; let us use a selection from our results for the theoretical construction of a society, which we will imagine we are founding from the very start. The procedure will disclose the object of our search, and, at the same time, I may find our construction useful for the society that is to be.

ATHENIAN: No declaration of hostilities that, Clinias! If Megillus has no objections to offer, I, for one, promise compliance to the best of my ability.

CLINIAS: Thank you.

MEGILLUS: And so do I for another.

e CLINIAS: My best thanks to both of you. Well, let us begin by trying to imagine the foundation of the city.

## BOOK IV

704 ATHENIAN: Good, then, what must we suppose our state is to be? I do not mean that I am asking what its name is at present, or by what name it will have to be called hereafter. That might well come from the circumstances of the foundation or the locality, or the appellation of some river, or fountain, or local divinities might confer their own  
 b revered title on the city in its earliest days. What I am more concerned about in my question is this. Is the site maritime or inland?

CLINIAS: Why, sir, the city of which I was just speaking is some eighty stadia, more or less, from the coast.

ATHENIAN: Well, and are there harbors on that side of it, or is it entirely without a harbor?

CLINIAS: By no means, sir. The coast on that side is as well furnished with harbors as a coast can be.

c ATHENIAN: Tut, tut! How distressing! And what about the surrounding territory? Does it yield produce of all sorts, or has it its deficiencies?

CLINIAS: None to speak of.

ATHENIAN: Is there a neighboring city within easy distance?

CLINIAS: Dear me, no. That is the very reason for the settlement. There was long ago an emigration from the district which has left this territory vacant for ages.

ATHENIAN: What about plainland, mountain, and forest? Pray, a how is it furnished in all these respects?

CLINIAS: Much like the rest of Crete in general.

ATHENIAN: You mean it is rugged rather than level?

CLINIAS: Decidedly so.

ATHENIAN: Then its case, from the point of view of the acquisition of goodness, is not desperate. Had it to be on the coast, well furnished with harbors and ill off for many of its necessities, not productive of all, we should need a mighty protector and lawgivers who were more than men to prevent the development of much refined vice in consequence of such a situation. As it is, there is comfort in those eighty stadia. Even so, the site is nearer to the sea than it should be, all the more as you say it is well provided with a harbor. Still, we ought to be thankful for even so much. It is agreeable enough to have the sea at one's door in daily life, but, for all that, it is, in very truth, a briny and bitter neighbor. It fills a city with wholesale traffic and retail huckstering, breeds shiftiness and distrustful habits of soul, and so makes a society distrustful and unfriendly within itself as well as toward mankind at large. In view of this situation, there is further comfort, however, in the universal productiveness of our site. Clearly, since it is so rugged, it cannot at once produce everything and yield much of anything. Were that the case, there would be the opportunity for exportation on a large scale, and, once more, our city would abound with currency in gold and silver. Now, all things considered, nothing is a more serious impediment to the development of noble and righteous character in a society, as you may recollect that we have already said.

CLINIAS: We well recollect the remark and agree with you now, as we did before, about its truth.

ATHENIAN: Then, as to a further point, how is our territory supplied with materials for shipbuilding?

CLINIAS: It has neither fir nor pine to speak of, and not much in the way of cypress. As for the kinds of wood which, as you know, builders regularly require for the interior of boats, larch and plane, there is a little of them to be found.

ATHENIAN: That again is not a bad feature in the topography.

CLINIAS: How so?

ATHENIAN: It is just as well that a society should have a difficulty in copying the practice of its antagonists to its own undoing.

CLINIAS: Now which of our results have you in view when you say that?

ATHENIAN: Why, my dear sir, I would have you watch my procedure in the light of our opening observations about the single object of your Cretan institutions. You both affirmed more precisely that this object is military, whereas I rejoined that it is right enough that goodness should be the object of such institutions, but could not quite concede that their aim should be some part of goodness short of the whole. It is now the turn of both of you to follow me in my

proposals, taking care that I enjoin nothing which does not tend to goodness, or some part of goodness.

- 706 I take it as a postulate from the outset that a law is rightly enacted only when its aim is exclusively directed on that object of all others which is steadily and invariably attended by some worthy result, to the disregard of every other end whatsoever, be it wealth or anything else of the sort, divorced from the objects I have specified. And as for the pernicious imitation of an antagonist to which I referred, this is how it comes about in the case of a maritime population harassed by an enemy. Minos, for example—and I tell the story without any vindictive feeling against your countrymen, Clinias—Minos, in fact, b once laid Attica under a cruel tribute, thanks to his strength at sea. His victims had as yet no men-of-war such as they have today, nor yet was their territory rich in timber suitable for the facile construction of a navy. So they could not imitate his seamen by turning sailors themselves and promptly repelling the invader out of hand. Had the case been so, it would have been better for them to lose many times c seven youths than to convert themselves from steady infantrymen into marines, with the marines' tricks of repeated descents followed by a helter-skelter retreat to the boats, their notion that there is nothing discreditable in shuffling out of dying at one's post when the enemy attacks, and their plausible and ready excuses for throwing down their arms and betaking themselves to 'flight without dishonor,' as it is called. Phrases like this are the normal consequences of employing men-at-arms on shipboard, and what they call for is not infinite d commendation, but the very reverse. Men should never be trained to evil ways—least of all, the best element in the community. That the practice in question is ignoble might actually have been learned, I take it, from Homer, whose Odysseus upbraids Agamemnon for directing the ships to be drawn down to the water's edge when the Achaeans were hard pressed by the Trojans. What Odysseus says by way of remonstrance is this.

- e When thou biddest draw down the fair-benched ships to the sea while the battle and din encompass us, that the Trojans, fain as they are, may have their desire yet more fulfilled, and sheer destruction fall on ourselves. For when the ships are drawing seaward the Achaeans will not cleave to the battle, but look askance from it and flinch from the onset; then will 07 counsel such as thou givest prove our bane.<sup>7</sup>

Thus, you see, Homer was too well aware what a bad thing it is for infantry in an engagement to be supported by a line of men-of-war. Why, lions would learn to run from deer if trained in habits like these. Not to add that states which owe their power to a navy also bestow the reward for their security on an inferior element of their

<sup>7</sup> *Iliad* 14.96 sq.

forces. As they owe the security to the arts of the sea captain, the lieutenant, the oarsman, and to a miscellaneous and not overreputable crowd, there is no possibility of awarding honors aright to the various individuals. Yet where this is excluded, how can the state continue unimpaired?

CLINIAS: It is hardly possible it should. And yet, sir, it was the sea fight at Salamis between Hellenes and non-Hellenes which was the salvation of Hellas—or so, at least, we say here in Crete.

ATHENIAN: To be sure that is what mankind at large say, Greeks or otherwise. But we—that is to say, Megillus here and myself—insist that the deliverance of Hellas was begun by one engagement on land, that at Marathon, and completed by another, that at Plataea. More over these victories made better men of the Hellenes, whereas the others did not, if such language is permissible about actions which contributed to the deliverance of those times. You see I am ready to throw you in the naval engagement at Artemisium along with the action at Salamis. The fact is, the object we are keeping in view in our present investigations into topography and legislation is the moral worth of a social system; we do not agree with the multitude that the most precious thing in life is bare preservation in existence. We hold, as I think we have said before, that it is better to become thoroughly good and to remain so as long as existence lasts.

CLINIAS: Surely, surely.

ATHENIAN: Then the one and only point we have to consider is whether our treatment of settlements and legal enactments is following the same lines—the best for a society.

CLINIAS: Indeed far the best.

ATHENIAN: Then tell me, in the next place, what is the population for which you are to construct a settlement? Is it made up of volunteers from all parts of Crete—the masses in the various communities presumably having grown too great for the local food supply? For you are not, I take it, collecting applicants from Hellas at large, though I do observe that contingents from Argos, Aegina, and other Hellenic districts have settled in your country. But pray tell me from what quarter you expect the present host of citizens now to be dealt with.

CLINIAS: They will most likely come from all over Crete. Of other Hellenes, Peloponnesians seem to have had the warmest welcome as settlers. In fact, it is true, as you were just saying, that we have emigrants from Argos among us, and among them the most distinguished of our societies of the present day, that of Gortyn; it is an offshoot from the well-known Gortyn in the Peloponnesus.

ATHENIAN: Well, it is not such an easy matter for a state to deal with a settlement when it is not formed, like a swarm of bees, by the emigration of a single stock from a single territory, with friendly feeling on both sides, under the stress of insufficient territory, or the

pressure of some similar necessity. Sometimes, again, one section of a community may be driven to expatriate itself by the violence of party strife, and there has been the case of a whole society going into exile because it had been utterly crushed by an overwhelming attack. Now

- c in one way the work of settlement and legislation is the easier in all these cases, but in another the harder. The unity of descent, speech, and institutions certainly promotes friendly feeling, since it involves the community in religious ceremonies and the like, but is not readily tolerant of novel laws or a constitution different from that of the homeland, while a group which has, perhaps, been driven into faction by the badness of the laws, yet still clings, from force of habit, to the very practices which had already led to its undoing, proves recalcitrant to  
d the founder and his legislation, and refuses obedience. On the other side, a stock due to a confluence of various elements may perhaps be more willing to submit to novel laws, but it is a difficult business, and takes a long time for it to 'breathe and blow in unison,' as the proverbial phrase has it of a pair of horses. No, in very truth to make a legislation or found a society is the perfect consummation of manly excellence.

CLINIAS: No doubt, but you might explain the point of the remark a little more clearly.

- e ATHENIAN: Why, my dear man, I suspect my reiterated reflections about legislators will lead me to say something which is partly derogatory; still, if the remark is pertinent, no harm will be done. After all, why should I scruple at it; it is much what might be said about all human concerns.

709 CLINIAS: What is it you have in your mind?

- ATHENIAN: I was on the brink of saying that man never legislates at all; our legislation is always the work of chance and infinitely various circumstance. Constitutions are wrecked and laws revolutionized by the violence of war, or the helplessness of sheer destitution. Again, innovations are often forced on us by disease, in the case of the visitations of pestilence, or of protracted and recurrent periods of insalubrious weather. In view of such facts one might be  
b moved to say, as I have just done, that no law is ever made by a man, and that human history is all an affair of chance. Still, the same thing may be said with apparent plausibility of seafaring, navigation, medicine, or strategy, and yet there is something else which may also be said with no less plausibility of them all.

CLINIAS: And what is that?

- ATHENIAN: That God is all, while chance and circumstance, under God, set the whole course of life for us, and yet we must allow  
c for the presence of a third and more amenable partner, skill. Thus I should count it no small advantage that the navigator's skill should co-operate with circumstance in a tempest, would not you?

CLINIAS : Naturally.

ATHENIAN : Now the same thing will hold good for the other cases, and so we should make the same admission in the case of legislation. Granting the concurrence of the local conditions necessary for a fortunate settlement, such a community necessarily presupposes the appearance of a true legislator.

CLINIAS : Beyond all doubt.

ATHENIAN : Thus one who has the skill called for by any of the contingencies we have mentioned will also know well enough what form of fortune to pray for, that he may be dependent on nothing further besides his own skill.

CLINIAS : To be sure.

ATHENIAN : And any of the other professionals we have mentioned could, no doubt, tell us, if we asked them, what it is they are praying for?

CLINIAS : Of course.

ATHENIAN : And presumably, then, a legislator could do so, too.

CLINIAS : Presumably.

ATHENIAN : Come, then, legislator—let us so apostrophize him—what must we give you—I mean what social conditions—if their provision is to make you competent to model your society for the rest by your own efforts?

CLINIAS : Now I wonder what is the right reply.

ATHENIAN : You understand we are speaking in the name of the legislator?

CLINIAS : Yes.

ATHENIAN : Then here is the answer. Give me a society, he will say, which is under an autocrat, but let that autocrat be young, of retentive memory, quick to learn, and temperamentally bold and high-souled. Also, if all these advantages are to be of any service, they must be further attended in the autocrat's soul by something we have already mentioned as an indispensable accompaniment of all the parts of goodness. 710

CLINIAS : I think, Megillus, what our friend means by this accompaniment is temperance. Am I right, sir?

ATHENIAN : Yes, Clinias, temperance in the popular sense of the word, not in that high and forced sense in which temperance might be said to be the same thing with wisdom. 'Tis a native surface quality which shows in mere children and animals that some of them have no self-restraint in the matter of pleasures, and others have—a quality, as we said, of no great account when divorced from the various other goods. You take me, no doubt? b

CLINIAS : Why, certainly.

ATHENIAN : Very well, our autocrat must have that endowment as well as all those we have named, if the society is to achieve the

constitution which will bring felicity into its life with maximum speed and success. I assure you there neither is, nor can be, any better and more rapid way to the settlement of the constitution.

c CLINIAS: Nay, sir, how or by what argument can a man possibly persuade himself of the truth of such a doctrine?

ATHENIAN: Why, surely, Clinias, it is easy enough to see how natural it is that it should be so.

CLINIAS: What is the theory, once more? There is to be an autocrat, you say, and he must be young, temperate, quick to learn, retentive, bold, and high-souled?

ATHENIAN: And, you must add, fortunate—fortunate, that is, in the single point that there is a contemporary legislator of distinction  
d with whom chance has brought him in contact. With that one coincidence, God has done his utmost toward his purpose of heaping blessings on a community. The next-best thing would be that there should be a pair of such potentates; it would be third best, and so on proportionately more difficult, the more of them there were, and vice versa.

CLINIAS: The best state, as I understand you, might arise out of an autocracy, provided, that is, there were a consummate legislator and an autocrat of disciplined character, and the transition to it would  
e be particularly easy and rapid in that case, less so from an oligarchy—is not that your meaning—and still less from a democracy?

ATHENIAN: By no means. The readiest starting point would be autocracy, the next-best, constitutional monarchy, the next-best again, democracy of a kind; oligarchy would come fourth, and only admits of such a development with great difficulty, for there the number of persons of influence is greatest. The occasion for it, mark you, is provided,  
711 according to us, when nature produces a real legislator who happens to share power of a kind with the most influential persons in society. Where, as in an autocracy, this latter element is numerically fewest but strongest, you have the normal occasion and opportunity for facile and speedy revolution.

CLINIAS: What? This is more than we can follow.

ATHENIAN: Yet the point has been made, unless I am mistaken, more than once already. But perhaps you and your friend have never observed a society under an autocrat.

CLINIAS: And I must say I have no particular desire to do so, either.

b ATHENIAN: If you did, you would certainly remark the presence of the feature I first spoke of.

CLINIAS: What feature?

ATHENIAN: An autocrat who desires to make a change in the tone of public life has no laborious or protracted task. He has only to take in his own person the first steps on the road—be it the path to virtue or to vice—into which he would guide the community. He  
c must first set the copy of his own conduct, awarding credit and distinc-

tions to one course, discredit to another, and disgracing the refractory in the various departments of conduct.

CLINIAS: But why should you suppose that the rest of society will be so quick to follow the example of the wielder of this combined persuasion and coercion?

ATHENIAN: O my friends, never let yourselves be persuaded that there is any speedier or easier way to change the laws of a community than the personal guidance of those in authority; there is none today, and will be none hereafter. No, it is not there that we shall find the impossibility or difficulty; the true difficulty lies in the occurrence d of something which has been uncommon enough in the whole course of history, but never happens without bringing a whole infinity of blessings to the society in which it occurs.

CLINIAS: Now I wonder what this may be.

ATHENIAN: The awakening of a heaven-sent passion for ways of temperance and justice in persons of the highest station, monarchs, for example, or men of exceptionally outstanding wealth or family, or, it may be, in one who recalls the qualities of Nestor who is said e to have towered above all his contemporaries even more by his temperance than by his eloquence. That happened, we are told, in Trojan times, though it has never been known in our own. Be that as it may, if such a man there has been, or should be hereafter, or is now among us, how blessed is his own life, and how blessed they who hearken to the words which proceed from those virtuous lips! We may say the same of power in all its forms. When supreme power is combined in one person with wisdom and temperance, then, and on no other conditions conceivable, nature gives birth to the best of constitutions with the best of laws. So you may take these oracular remarks as a parable embodying the proof that though in one way it is hard for a society to get good laws, in another, if things only fall out as I say, it would be the quickest and easiest of all developments. 712

CLINIAS: But why so?

ATHENIAN: Suppose we apply the parable to your city and try to model its laws in imagination, like elderly men playing a boys' b game.

CLINIAS: *En avant*, then, and a truce to all delays!

ATHENIAN: Of course we must invoke God's presence at our foundation. So may he hear us and come, gracious and debonair, to our help as we construct our city and its laws!

CLINIAS: Amen to that!

ATHENIAN: And pray what type of constitution are we proposing to impose on our society?

CLINIAS: But what do you mean by that question? You should c put it a little more plainly. You mean, is it to be a democracy, an oligarchy, an aristocracy, or a monarchy? You surely cannot be thinking of an autocracy, or at least my friend and I can hardly credit it.

ATHENIAN: Come now, which of those names describes your own constitution? I wonder which of you will be the readier with his answer.

MEGILLUS: As I am the elder man, perhaps it would be fairer that I should speak first?

d CLINIAS: Yes, I think so.

MEGILLUS: Why, sir, when I consider our Lacedaemonian constitution, I really cannot tell you offhand which would be the proper name for it. It actually seems to have its resemblances to an autocracy—in fact, the power of our ephors is astonishingly autocratic—and yet at times I think it looks like the most democratic of all societies. e Again, it would be sheer paradox to deny that it is an aristocracy, while yet again a feature of it is a life monarchy, asserted by all mankind, as well as ourselves, to be the very oldest of such institutions. When the question is put to me, like this, on a sudden, as I say, I really cannot tell definitely to which of these types of constitution it belongs.

CLINIAS: I find myself in the same perplexity as you, Megillus. I am quite at a loss to identify our Cnossian constitution confidently with any of them.

ATHENIAN: That, my friends, is because you enjoy real constitutions, whereas the types we have specified are not constitutions, but 713 settlements enslaved to the domination of some component section, each taking its designation from the dominant factor. But if a society must take its name from such a quarter, the proper course is to call it by the name of the god who is the master of rational men.

CLINIAS: And what god is that?

ATHENIAN: Perhaps we may need to employ parable a little longer, if I am to answer the question to your full satisfaction.

CLINIAS: Oh, so that is the way we must proceed, is it?

ATHENIAN: Certainly. Why, long before the time of the societies whose foundation we have discussed, in the age of Cronus—so b they say—there was a much earlier form of settled government, and a very happy one, which is reflected in the best of our present-day communities.

CLINIAS: Then, I should say, we must very decidedly be told about it.

ATHENIAN: Certainly, in my own judgment, and that is the very reason why I have brought it into the argument.

CLINIAS: Very properly, too, and, seeing how relevant it is, c you will do right to tell the whole story.

ATHENIAN: I must do as you propose. Well, according to the received tradition, in that age of bliss, all life needs was provided in abundance and unsought, and the reason, we are told, was this. Cronus was of course aware that, as we have explained, no human being is competent to wield an irresponsible control over mankind without becoming swollen with pride and unrighteousness. Being alive to this

he gave our communities as their kings and magistrates, not men but spirits, beings of diviner and superior kind, just as we still do the same d with our flocks of sheep and herds of other domesticated animals. We do not set oxen to manage oxen, or goats to manage goats; we, their betters in kind, act as their masters ourselves. Well, the god, in his kindness to man, did the same; he set over us this superior race of spirits who took charge of us with no less ease to themselves than convenience to us, providing us with peace and mercy, sound law and e unscanted justice, and endowing the families of mankind with internal concord and happiness. So the story teaches us today, and teaches us truly, that when a community is ruled not by God but by man, its members have no refuge from evil and misery. We should do our utmost—this is the moral—to reproduce the life of the age of Cronus, and therefore should order our private households and our public societies alike in obedience to the immortal element within us, giving 714 the name of law to the appointment of understanding. But when a single person, an oligarchy, or a democracy with a soul set on its pleasures and passions and lusting for its satisfaction—a soul that cannot contain itself, and is in the grip of unending and insatiate disease—when such a one tramples law under his feet and takes command of an individual or society, then, as I was just saying, all hope of deliverance is gone. That is my thesis, Clinias, and we have to consider b whether it convinces us or not.

CLINIAS : Convinces us? Of course it does.

ATHENIAN : Then are you acquainted with a theory that there are as many types of law as of constitution? And we have just seen how many types of constitution there are in the popular view. And pray believe me that the issue now at stake is no trifle, but of paramount moment. We are back again at the question of the standard of right and wrong. The standard of our laws, it is said, should be neither war nor a goodness as a whole. Whatever the existing constitution c may be, the law should look to its interest, its permanent security against dissolution, and the best way to define real justice would be to say . . .

CLINIAS : To say what?

ATHENIAN : That it is the interest of the sovereign.

CLINIAS : You must explain yourself rather more clearly.

ATHENIAN : And so I will. They say, you know, that the laws in a society are always enacted by the dominant section?

CLINIAS : Just so.

ATHENIAN : Well then, it is said, can you imagine that when d the populace, or some other political party, or an autocrat, if you like, has got the upper hand, the victorious side will, of its own accord, enact laws with any principal aim but its own interest in the permanence of its authority?

CLINIAS : Of course not.

ATHENIAN: And if a man contravenes these enactments, their author will punish him for his violation of justice, meaning by justice these same enactments.

CLINIAS: So I should apprehend.

ATHENIAN: These enactments, then, will in every case be justice, and for these reasons.

CLINIAS: Yes, according to this account of the matter.

e ATHENIAN: In fact, this is one of our former principles of sovereignty.

CLINIAS: Principles? What principles?

ATHENIAN: Why, the claims to authority which we passed under review. We found parents claiming authority over their descendants, the older men over the younger, the wellborn over the baseborn, and you may remember that there were several other mutually incompatible claims. This was actually one of the list, and we remarked that Pindar treats the 'high hand of violence'—to use his own phrase—as natural justice.

715 CLINIAS: Yes, that is certainly what we said before.

ATHENIAN: Now consider to which side we are to entrust our society. For here is a situation which has recurred over and over again in public life before now.

CLINIAS: What situation is that?

ATHENIAN: After a contest for office, the victorious side engrosses the conduct of public affairs so completely to itself that no share whatsoever of office is left to the vanquished, or even to their  
b descendants; each party watches the other in jealous apprehension of insurrection, due to the attainment of office by someone with memories of past wrongs. Such societies, we are now, of course, contending, are no constitutional states, just as enactments, so far as they are not for the common interest of the whole community, are no true laws; men who are for a party, we say, are factionaries, not citizens, and their so-called rights are empty words. And our reason for saying it is that you and I have no intention of conferring an office in your society on anyone for his wealth, or his possession of some similar  
c advantage, such as physical strength, stature, or family. It is, we hold, the man who is most perfect in obedience to established law, the man whose victory over his fellow citizens takes that form, to whom we should give the function of ministry to the gods, the highest post to him who stands first, the second to him who is next in the contest—the remaining posts being assigned similarly to the succeeding candidates in order. If I have just styled the so-called authorities *ministers*  
d of the law, it is not for the sake of a novel phrase, but because I am persuaded that the preservation or ruin of a society depends on this more than on anything else. Where the law is overruled or obsolete, I see destruction hanging over the community; where it is sovereign

over the authorities and they its humble servants, I discern the presence of salvation and every blessing heaven sends on a society.

CLINIAS: Right, sir, right in God's name! You have the long sight of your years.

ATHENIAN: Why, yes, a man is always most shortsighted in such matters in youth, and most farsighted in age. e

CLINIAS: Yes, indeed.

ATHENIAN: Well, and our next step? May we not assume our settlers to be here in the country and under our eyes, and address the rest of our discourse to them in person?

CLINIAS: By all means.

ATHENIAN: My friends!—this is what I would say to them—God, who, as the old saw has it, holds in his hands beginning, end, and middle of all that is, moves through the cycle of nature, straight to 716 his end, and ever at his side walks right, the justicer of them that forsake God's law. He that would be happy follows close in her train with lowly and chastened mien, but whoso is lifted up with vanity—with pride of riches or rank or foolish conceit of youthful comeliness—and all on fire within with wantonness, as one that needs neither governor nor guide, but is fitted rather to be himself a guide to others—such a b one is left alone, forsaken of God. In his abandonment he takes to him others like himself, and works general confusion by his frantic career. Now to some he seems to be some great one, but after no long while he makes no stinted amend to right by the sheer ruin of himself, his house, and his state. Now since these things are so, what must the man of judgment do or purpose, and what forbear?

CLINIAS: So much is plain; every man must purpose to be of the company who follow after the god.

ATHENIAN: What line of conduct, then, is dear to God and a c following of him? There is but one, and it is summed up in one ancient rule, the rule that 'like'—when it is a thing of due measure—'loves its like.' For things that have no measure can be loved neither by one another nor by those that have. Now it is God who is, for you and me, of a truth the 'measure of all things,' much more truly than, as they say, 'man.' So he who would be loved by such a being must himself become such to the utmost of his might, and so, by this argument, he that is temperate among us is loved by God, for he is like God, whereas he d that is not temperate is unlike God and at variance with him; so also it is with the unjust, and the same rule holds in all else. Now from this rule, I would have you note, follows another—of all rules, to my mind, the grandest and truest, which is this. For the good man 'tis most glorious and good and profitable to happiness of life, aye, and most excellently fit, to do sacrifice and be ever in communion with heaven through prayer and offerings and all manner of worship, but for the evil, entirely the contrary. For the evil man is impure of soul, where e

the other is pure, and from the polluted neither good men nor God may ever rightly accept a gift; thus all this toil taken with heaven is  
 717 but labor thrown away for the impious, though ever seasonable in the pious.

Here, then, is the target at which we have to aim, but what shall we call the shafts which make straight for it, and the engine from which they are fired? Well, first, I say, the mark of godliness will be truly hit if the gods of the lower world are held in honor next to the Olympians, and the patron deities of the state, the even, the second  
 b best, and the left hand being consecrated to them, their superior counterparts to the powers which have just been named. After these gods a man of judgment will do worship to spirits, and after them to heroes, and I would give the next place to each man's images of his household gods, worshiped as the law directs.

And now we come to honor to be shown to parents while they are yet in life. Here religion demands the due discharge of this earliest and heaviest debt, the most sacred of all our obligations. It bids a man  
 c count all he has and owns at the service of those who gave him birth and breeding, to minister to their needs to his utmost ability, first with his substance, then with his body, and then with his mind, in repayment of a loan of care and painful labor made so long ago on the security of his youth, and now to be made good to his elders in their age and sore necessity. Moreover, all his life through, a man should ob-  
 d serve particular reverence of tongue toward his parents, for light and winged speech brings heavy doom; right has her appointed messenger, Nemesis, to keep watch over the matter. So one should yield to them when they feel anger, and discharge it, in word or deed, and understand that 'tis but natural in a father who thinks himself wronged by his son to be moved to uncommon anger. But when parents are once no more, the most modest burial is the best. A man should not exceed the customary pomps, nor yet come short of those wherewith  
 e his forefathers were wont to entomb their own sires; he should keep also to the same rule in paying the decent annual rites of tendance to the departed. Above all, he should honor the deceased at all times by  
 718 keeping the memory of them green, while he expends on them what is proportionate to the means fortune permits him. If we act thus and frame our lives to this model, we shall, one and all, always reap the due reward from heaven and the higher powers, and our days, for the main of life, will be passed with bright hopes. As regards duties to children and kinsmen, friends and fellow citizens, as well as works of pious service to strangers, and our relations with them all, by dis-  
 b charge whereof, as the law enjoins, a man should adorn and illustrate his life—in all this the actual recital of the laws will, with heaven's consent, ensure our society bliss and well-being, in part by persuasion, and in part by enforced and legal correction of characters not amenable to persuasion.

There are other things, too, which should be said and must be said by a legislator like-minded with myself, and yet cannot be fittingly said in the form of a statute. As to these I would advise him, when he has finished the rest of his discourse to the best of his power, to propound a sample to himself and those for whom he is to legislate before he enters on his actual enactments. In what form, then, is such matter best couched? To confine it all within the bounds of a single outline, as I might call it, is none too easy; still, we may be able to reach a definite result if we look at the matter in some such way as this.

CLINIAS: And what result may that be?

ATHENIAN: I should wish the subjects to give a ready audience to persuasions to virtue, and plainly this is the effect at which our legislator will aim throughout his legislation.

CLINIAS: Of course.

ATHENIAN: Well, it struck me that what we have said might do some service—if our words have not been an appeal to utterly brutal souls—toward gaining a civil and friendly hearing. So, as I say, if it makes an auditor a little, even if ever so little, more friendly, and so readier to be instructed, we have every reason to be thankful. Men earnestly bent on becoming thoroughly good, and that with all speed, are not easily to be found, nor in large numbers, and Hesiod is commonly pronounced a wise man for his saying that ‘the path to vice is smooth,’ and, being so short, can be traveled without sweat, whereas ‘before virtue the immortal gods have set sweat, and the road thither is long and uphill and rough at the outset, though when the summit is reached, the going is easy, for all its hardness.’<sup>s</sup>

CLINIAS: And a fine saying it is, too.

ATHENIAN: Yes, no doubt. But I should like to propose to your common consideration the effect our foregoing argument has produced on myself.

CLINIAS: Then let us hear it.

ATHENIAN: Well, let us address our remarks to the legislator, thus. Tell us one thing, legislator. If you knew what we ought to do and say, you would tell us what it is. Surely that is manifest?

CLINIAS: Of course it is.

ATHENIAN: Well, but did we not hear you not so long ago pronouncing that a legislator must not permit poets to compose whatever they please? For they are not likely to know where they may contradict the law to the detriment of the society.

CLINIAS: I must admit that it is the fact.

ATHENIAN: Then suppose we put the case for the poets to him. I wonder whether it might fairly be stated thus.

CLINIAS: How?

c ATHENIAN: As follows. 'Tis an old story, legislator, which we poets are always telling with the universal approval of the rest of the world, that when a poet takes his seat on the Muse's tripod, his judgment takes leave of him. He is like a fountain which gives free course to the rush of its waters, and since representation is of the essence of his art, must often contradict his own utterances in his presentations of contrasted characters, without knowing whether the truth is on the side of this speaker or of that. Now it is not the legislator's business d in his law to make two such statements about one and the same topic; he has regularly to deliver himself of one pronouncement on one matter. Take, as an example, one of the very topics on which you have just delivered yourself. A funeral may be extravagant, it may be mean, it may be decently modest. You select one and only one of those types, the intermediate type, for universal imposition and unrestricted commendation. But, in my case, if my poem dealt with an opulent woman and her instructions for her own funeral, I should commend e extravagance, whereas a frugal poor man would be for parsimony, and a man of moderate estate and modest personality would have the same preference as yourself. But in your position it is not enough to use the word 'moderate,' as you did just now; you must tell us what and how much is moderate, or else confess that your statement is not yet a law.

CLINIAS: Truly said, indeed.

ATHENIAN: Then is our appointed lawmaker to set no such prefatory statement in front of his code? Is he just to tell us curtly what we are to do or not to do, add the threat of a penalty, and then 720 turn to the next enactment, without one word of exhortation or advice to the recipients? Just as one type of physician treats us, when we call him in, in one way, and a second in another—but let us remind ourselves of the difference between the two methods, and then we shall have a request to make of our legislator, as children might beg their physician to give them the gentlest treatment. You would like an illustration? Well, there are physicians, and again there are physicians' assistants, whom we also speak of as physicians.

b CLINIAS: Just so.

ATHENIAN: All bear the name, whether free men or slaves who gain their professional knowledge by watching their masters and obeying their directions in empirical fashion, not in the scientific way in which free men learn their art and teach it to their pupils. You agree that there are those two types of so-called physicians?

CLINIAS: Certainly I do.

c ATHENIAN: Now have you further observed that, as there are slaves as well as free men among the patients of our communities, the slaves, to speak generally, are treated by slaves, who pay them a hurried visit, or receive them in dispensaries? A physician of this kind never gives a servant any account of his complaint, nor asks him for

any; he gives him some empirical injunction with an air of finished knowledge, in the brusque fashion of a dictator, and then is off in hot haste to the next ailing servant—that is how he lightens his master's medical labors for him. The free practitioner, who, for the most part, attends free men, treats their diseases by going into things thoroughly from the beginning in a scientific way, and takes the patient and his family into his confidence. Thus he learns something from the sufferers, and at the same time instructs the invalid to the best of his powers. He does not give his prescriptions until he has won the patient's support, and when he has done so, he steadily aims at producing complete restoration to health by persuading the sufferer into compliance. Now which of the two methods is that of the better physician or director of bodily regimen? That which effects the same result by a twofold process or that which employs a single process, the worse of the two, and exasperates its subject?

CLINIAS: Nay, sir, the double process is vastly superior.

ATHENIAN: Then would you like us to consider the two methods, the double and the single, in their application to legislation itself?

CLINIAS: To be sure I should.

ATHENIAN: Then, I ask you, what will be the first law our legislator will enact? Is not his natural course to begin with an ordinance regulating the first stage in the creation of a society? 721

CLINIAS: Why, of course.

ATHENIAN: And the first stage in the creation of any society is surely conjugal conjunction and association?

CLINIAS: Certainly.

ATHENIAN: Presumably, then, if the legislation of any society is to be sound and right it must start with a marriage law.

CLINIAS: I quite agree.

ATHENIAN: Then let us state that law in the simple form first. It might run to some such effect as this.

A man to marry when he has reached the age of thirty and before he comes to that of thirty-five; neglect to do so to be penalized by fine and loss of status; the fine to be of such and such an amount, and the loss of status to take such and such form.

That may be taken as the simple form of our law of marriage. Its double form we may word thus.

*A man to marry when he has reached the age of thirty and before he comes to that of thirty-five, bethinking him that there is a sense in which mankind naturally partakes of immortality, a prize our nature makes desirable to all of us in its every form, for to win renown and not lie in our graves without a name is a desire of this. Thus the race of man is time's equal twin and companion, bound up with him in a union never to be broken, and the manner of their immortality is in this wise. By succession of generations the race abides one and the same, so partaking in immortality through procreation. Whence piety*

flatly forbids a man to deprive himself of the boon by his own act, as he willfully deprives himself who takes no thought of children and wife. So him who will obey the law we will hold scatheless, but as for him who disobeys and comes to five-and-thirty unwed, let him be yearly *mulcted in such and such a sum*, that he may not take his solitary state for a source of profit or ease, and *let him have no part in the public honors* paid from time to time by the younger folk to their elders.

You have heard this law set by the side of that, and are now in case to judge universally whether our laws, thus joining persuasion to menace, should be, at the very least, of double length, or should confine themselves to menace and so be of half the length.

MEGILLUS: To prefer the concise, sir, is ever our Laconian way; yet were I bidden to decide which of these statutes of yours I would rather see in force in our city, my vote would be for the more  
722 prolix. Indeed, my choice would be the same about any law whatsoever after this model, if both alternatives were possible. But we must not forget that our present proposals need the approval of our friend Clinias, too, since it is his city which is now proposing to adopt such laws as we may enact.

CLINIAS: My thanks for your words, Megillus.

ATHENIAN: Why, to raise debate about a number of syllables more or less were, indeed, futile—it is quality, I take it, not length or brevity we should prize—’tis the matter of the one kind of law just mentioned that is of more than double excellence in use, by comparison with the other. As I said but now, our illustration of the two types of physicians was exactly apposite. Yet, in despite of us, none of our legislators would seem ever to have remarked that they rely wholly on one instrument in their work, whereas there are two available, so far as the mass’s lack of education will permit, persuasion and compulsion. Authority is never tempered in their lawmaking with persuasion; they work by compulsion unalloyed. Aye, and by heaven, to my mind, there is yet a third requisite of a law which is universally disregarded in fact.

CLINIAS: And pray what may it be?

ATHENIAN: Why, it has been providentially disclosed by our own conversation today. Since we began our talk of law, daybreak has given place to noonday, and we have reached this delightful arbor, and all our conversation has been exclusively of laws. Yet I fancy we are only now beginning to talk laws; all we have said hitherto has been but preambles to laws. Now why do I say this? Because I would observe that discourse and vocal utterance of every kind have their preludes, their preliminaries, as I might say, preliminaries which furnish a useful methodical introduction to the coming performance. High-wrought and elaborate preludes are prefixed, for example, to the so-called ‘nomes’ for the harp, and to musical compositions in gen-

eral, whereas in the case of what we regard as the real 'nomes,' the laws of the community, no one has ever uttered the name, nor constructed or published anything of the kind; it is taken for granted that such a thing does not exist. Yet our present conversation, I believe, suggests that it does. The deliverances which impressed me just now as laws of double length are not, I think, just precisely that; they contain two things at once, a law and the prelude to it. The dictatorial prescription in tones which we compared with the prescriptions of our unfree physician is unqualified law, while all that preceded—persuasive, as Megillus called it—is, in fact, such a persuasive, but has the rhetorical character of a preamble. For I find I framed the whole of this discourse, uttered by its speaker in the tones of persuasion, to prepare the auditor of the legislator's enactments to receive his prescription, that is to say, his law, in a spirit of friendliness and consequent docility, and for that very reason, it should, in my opinion, properly be called by no other name; it is not the text of the law but its preamble. e 723 b

You will ask me, then, how I propose to follow up the observation. Thus. I would have a legislator take constant care to leave neither his code as a whole nor its various divisions unprovided with introductory preludes. This will make as great a difference as in the two examples we were just considering.

CLINIAS: I, too, would urge a legislator who understands his business to do the work in this fashion and no other.

ATHENIAN: I thoroughly agree with you, Clinias, as far as this. All laws have their preambles, and anyone who is beginning the work of legislation should prefix to each section the preamble appropriate to the whole subject. The pronouncement he is about to make is no trifle, and it will make a great difference whether it can be distinctly remembered or not. Yet we should be wrong if we insisted on the presence of a preamble alike for minor laws, as they are called, and major. In fact, one must not treat every song or every speech in that fashion. It is true that there are appropriate preludes in all cases, but we are not to make invariable use of them; we must leave it to the individual speaker, or singer, or legislator to use his own judgment in each case. c d

CLINIAS: I fully agree with you. But, pray, sir, let us waste no more time in delay. Let us go back to our argument and make a start, if you please, with what you said a while ago, though not as an avowed preamble. Let us begin it all over again, as they say in games, with a better 'second shot,' on the understanding that we are no longer constructing a casual argument, but a preamble—let us begin, I say, with the admission that we are making our preamble. As for the worship of the gods and the service of our progenitors, what has been already said is adequate enough, but we must try to pursue the theme further until you feel that our whole prelude is sufficiently complete. Then, and not before, you shall rehearse the actual statutes.

724 ATHENIAN: Good, then. Our preamble, as we are now agreed, has already dealt adequately with gods, subordinate powers, and ancestors living and dead. As I understand you, you want me to throw some light on such parts of the subject as we have not yet touched.

CLINIAS: Precisely.

ATHENIAN: Why, in the next place, it is proper and to their common highest interest that speaker and hearers should do their utmost to achieve their own education by meditation on their duties of effort and remission in all that concerns mind, body, and substance. Whence these, and no others, are doubtless the matters of which we must next speak and hear.

CLINIAS: Very true.

## BOOK V

726 ATHENIAN: Listen then, all ye who but now gave ear to our discourse of gods and well-beloved sires. Of all a man has—after his gods—the divinest thing, and the most truly his own, is his soul. Now things which pertain to any man are ever of two sorts, a superior and  
727 better sort to be sovereign, an inferior and worse to be subject. So a man should ever prefer those that are sovereign in honor before those that are subject. Therefore, when I bid men honor their own souls next to the gods, our sovereign lords, and the powers under them, the counsel I give is right. Yet not a man of us, I may say, honors his soul aright, though he dreams he does. Honor, I take it, is a thing divinely good, and can be conferred by nothing that is evil. He who deems he is advancing his soul by speech, gifts, or compliances, and all the while makes it no better than it was before, may dream that he shows it honor, but in truth does it none.

Barely, for example, has a man come to boyhood before he counts  
b himself fit to pronounce on all things, honors his soul, as he fancies, by this flattery, and gives it ready license to act whatever it will. Now our present declaration is that by these courses he does it hurt, not honor, whereas we bid him honor it next to heaven. So again, when a man lays the blame for his several misdeeds and the greater and graver part of his mischances not on himself but on others, ever accounting himself clear of fault, by way of reverence—or so he fancies  
c —for his soul, that is no honor done the soul—far from it—but hurt. Again, when he courts pleasures in defiance of the legislator's admonition and approval, he does his soul no honor, but rather dishonor, by thus defiling it with misery and remorse. Again, in a different way, when a man will not harden himself to endure commended hardships, fears, pains, sufferings, but makes submission, the surrender brings  
d no honor, for all such courses bring disgrace on the soul. Again, when a man counts it good to live at all costs, that also is dishonor to the

soul; 'tis surrender to that within him which accounts the unseen world merely evil, whereas a man should make head against his fancy with cogent proof that he knows not even whether our chiefest good may not be in the gift of the gods of that land. Again, when a man prefers comeliness before goodness, this also is no other than real and utmost dishonor to the soul. For this estimate pronounces body more honorable than soul, and that most falsely. Nothing born of earth is more honorable than the heavenly, and he that conceits himself otherwise of the soul than this knows not the preciousness of this possession he despises. Again, when a man lusts after wealth basely won, or has no disrelish for the winning, he does no real honor to his soul by such offerings—far, far from it! He sells its goodly treasure for a parcel of coin, but all the gold on earth or under earth is no equal exchange for goodness. 728

To say all in one word, whosoever will not at all hazards keep himself from all the legislator lists in his count of things base and bad, and exercises himself with all his might in all that is in the contrary table of things good and lovely, knows not that by all such ways a man ever heaps foul dishonor and deformity on the divinest thing he has, his soul. In fact, none of us, or few, reckon with the sorest 'judgment'—as the phrase is—on evil-doing, which judgment is that a man grows like those who already are evil, and, as the likeness grows, avoids good men and good converse, and cuts himself off from them, but follows after the other sort and cleaves to them in intimate fellowship, and he who clings to such men cannot but do and have done to him what men of that sort naturally do and say. This state then is not *judgment*—for judgment is, like justice, a good—but vengeance, the painful consequence of iniquity. He that meets it and he that misses it are alike unhappy, the one because he gets no healing for his disease, the other in that he is cut off for the salvation of many another. But honor, we hold, is, in sum, to follow after what is better, and for what is worse but may be amended, even to make it good as best may be. c

There is nothing, then, of all a man owns so natively quick as the soul to shun the evil but follow on the trail of the chief good, win it, and spend the rest of a lifetime at home with it. Whence we have given the soul the second place in honor. The third, and so much must be plain to any vision, belongs to due honor to the body. But next it must be asked what various honors there are, which of them ring true, which are counterfeit, and here is a task for our legislator. He will suggest, I think, that they are these and the like. The body to be honored is not the comely, nor the strong, nor swift, no, nor the healthy, though so many might be of that mind—nor yet that of the contrary sort. The body which displays all these qualities in intermediate degree is by far the most sober, and soundest as well, for the one sort make men's souls vain and overbearing, the other tame and d e

729 object. 'Tis the same with ownership of wealth and property, and they must be rated by the same scale. Excess of all such things, as a rule, breeds public and private feuds and factions, defect, subjection.

Let no man covet wealth for his children's sake, that he may leave them in opulence; 'tis not for their own good nor for the state's. For the young an estate that tempts no sycophants and yet has no lack of things needful is of all others best and most consonant; it works general concord and concert and banishes pains from our lives. We  
b should leave our children rich, not in gold but in reverence. Now we fancy we shall assure that inheritance if we rebuke the young when they forget their modesty, but in truth the thing is not to be done by giving the young such admonition as they receive today when they are told that 'youth must respect all men.' A legislator of judgment will be more likely to charge older men to respect their juniors and, of all things, to take heed that no young man ever see or hear one of them-  
c selves doing act or speaking word of shame, since when the old forget their modesty, the young, too, cannot but be most graceless. Far the best way to educate our young men and ourselves along with them is not by admonition, but by lifelong visible practice of all to which a man would admonish others. If a man pays honor and respect to kindred and all fellowship of common blood in worship of the gods of the kin, he may reasonably expect the favor of the gods of birth for the propagation of his own children.

d As to friends and comrades in the several affairs of life, a man will gain their good will if he counts their services to him greater and ampler than they do, but rates his own kindnesses to friend and companion lower than they themselves. In all that concerns city and fellow citizens, the best man, and the best by far, is he who would prize before an Olympian victory or any triumph in war or peace, the credit  
e of victory in service to the laws of his home, as one who has all his life been their true servant above all men. Then, as regards the alien, we must remember that compacts have a peculiar sanctity; indeed, offenses by alien against alien, we may say, compared with sins against fellow citizens, more directly draw down the vengeance of God. For the alien, being without friends or kinsmen, has the greater claim on pity, human and divine. Whence he that is able to exact the vengeance is all the readier to come to his help, and none is so able as the  
730 god or spirit who protects the alien as minister of Zeus Xenios. What anxious care, then, should a man of any foresight take to come to the end of life's journey guiltless of offense toward aliens! Moreover, the gravest of offenses, whether against landmen or aliens, is always that done to a suppliant, for the god in whose name the suppliant made his appeal when he obtained a promise keeps jealous watch over the sufferer, and thus he will never suffer his wrongs unavenged.  
b We have now fairly reviewed a man's relations to parents, to himself, his possessions, his city, his friends, his kindred, to aliens

and to countrymen, and must next in order consider what manner of man he must himself be to pass through life with full credit. We come to speak now, of the effects not of law, but of education through commendation and reproach in making men more amenable and well disposed toward the laws we are hereafter to enact.

Now of all things good, truth holds the first place among gods <sup>c</sup> and men alike. For him who is to know felicity and happiness, my prayer is that he may be endowed with it from the first, that he may live all the longer a true man. For such a man is trusty, whereas he that loves voluntary deception is untrustworthy, and he that loves involuntary, a fool, and neither lot is to be envied. For, sure, the traitor or the fool is a man of no friends. Course of time discovers him and he prepares for himself utter loneliness in the trials of age at the end of <sup>d</sup> his days, so living equally destitute of companions and children, whether they survive or not. Honor is due to him who himself does no wrong, but he that will not so much as suffer another to do it merits twofold and more than twofold honor; the first has the worth of one man, the second, who reveals the wrongdoing of others to the authorities, the worth of many. But he that further does his endeavor to second the authorities in their work of repression, he is the great and perfect citizen, and the palm of virtue shall be declared to be his. We <sup>e</sup> must make this same grading in our recognition of temperance and judgment and all good qualities which a man imparts to others as well as enjoys in his own person. To him who communicates them we should give the supreme degree of honor; he that cannot impart them, yet would fain do so, must be left in the second rank. As for him who <sup>731</sup> engrosses good things to himself and will never, if he can help it, share them with a friend, we should censure his person, but with no depreciation of the quality on the possessor's account; rather we must do all we can to make it our own.

In this contest for virtue we will have all men competitors, but there must be no jealousies. For a man such as we would have him promotes a state, since he runs in the race himself without hampering others by evil reports, whereas the jealous man, who fancies slander of others the right means to his own advancement, strains less to reach real virtue himself, and causes his rivals to be discouraged by unmerited censure. Thus he cripples the whole society for the <sup>b</sup> race for virtue, and does what lies in him to lower its good repute. High-spirited every man should be, but likewise gentle in eminent degree. For cruel and almost or wholly irreparable wrongs at the hands of others are only to be escaped in one way, by victorious encounter and repulse, and stern correction, and such action is impossible for the soul without generous passion. But as concerns the transgressions <sup>c</sup> of those who commit wrong, but reparable wrong, we must first of all rest assured that no wrongdoer is so of deliberation. For no man will ever deliberately admit supreme evil, and least of all in his most

precious possessions. But every man's most precious possession, as we said, is his soul; no man, then, we may be sure, will of set purpose receive the supreme evil into this most precious thing and live with it there all his life through. And yet, though a wrongdoer or a man in  
 d evil case is always a pitiable creature, it is with him whose disease is curable that there is scope for pity. With him one may curb and tame one's passion, and not scold like a vixen, but against the unqualified and incorrigible offender, the utterly corrupt, we must give the rein to wrath. This is why we say it is meet for a good man to be high-spirited and gentle, as occasion requires.

But of all faults of soul the gravest is one which is inborn in most men, one which all excuse in themselves and none therefore attempts  
 e to avoid—that conveyed in the maxim that 'everyone is naturally his own friend,' and that it is only right and proper that he should be so, whereas, in truth, this same violent attachment to self is the constant source of all manner of misdeeds in every one of us. The eye of love is blind where the beloved is concerned, and so a man proves a bad judge  
 732 of right, good, honor, in the conceit that more regard is due to his personality than to the real fact, whereas a man who means to be great must care neither for self nor for its belongings, but for justice, whether exhibited in his own conduct, or rather in that of another. From this same fault springs also that universal conviction that one's own folly is wisdom, with its consequences that we fancy we know  
 b everything when we know as good as nothing, refuse to allow others to manage business we do not understand, and fall into inevitable errors in transacting it for ourselves. Every man, then, must shun extreme self-love and follow ever in the steps of his better, undeterred by any shame for his case.

There are also minor and often-formulated, but no less salutary, rules which must be kept in mind by repetition. For where waters, as we may say, are wasted by emission there must always be a balancing immission, and recall is the immission which makes waste of wisdom  
 c good. This is why there must be restraint of unseasonable laughter and tears and each of us must urge his fellow to consult decorum by utter concealment of all excess of joy or grief, whether the breeze of fortune is set fair, or, by a shift of circumstance, the fortunes of an enterprise are confronted by a mountain of difficulty. It should be our constant hope that God, by the blessings he bestows, will lighten the  
 d troubles that come upon us, and change our present state for the better, while, with heaven's favor, the very reverse will always be true of our blessings. These are the hopes, and these and the like the meditations, in which each of us should live, sparing no pains, alike in work and in play, to bring them to his neighbor's confident recollection and to his own.

We have now dealt pretty completely with what divinity has to  
 e say of the institution which ought to be established, and the personal

character to which all should aspire. On purely human considerations we have not touched, and yet we must; it is to men, not to gods, we are speaking. Nothing is so native to men as pleasure, pain, and desire; they are, so to say, the very wires or strings from which any mortal nature is inevitably and absolutely dependent. We have therefore to commend the noble life, not only as superior in comeliness of repute, but further as superior, if a man will but taste it and not decline it in the days of his youth, in that on which we are all set, lifelong predominance of pleasures over pains. That this will certainly be so, if only the tasting is done in the right way, will easily be made abundantly apparent. But what is the right way? This is what we must now learn from our argument to see. The following are the lines along which we must discover, by comparison of the relative pleasantness and painfulness of lives, whether one is naturally conformable to our constitution and another unconformable. We wish for pleasure; pain we neither choose nor wish for. A neutral state, though not desired as an alternative to pleasure, is desired as a relief from pain. Less of pain with more of pleasure is desired; less of pleasure with more of pain is not desired. As for an equal balance of both, we can give no certain reason for desiring it. And all these objects affect our several choices or leave them unaffected, in virtue of their frequency, their magnitude, their intensity, their equality, and the conditions which are the opposites of these in their influence on desire. All this, then, being inevitably ordered so, a life which contains numerous, extensive, and intense feelings of both kinds is desired, if there is an excess of pleasures, not desired if the excess is on the other side. Again, a life where both kinds of feeling are few, inconsiderable, and of low intensity is not desired if the pains predominate, but is desired in the opposite case. As for a life in which the balance is even, we must stand to our earlier pronouncement; we desire it so far as it contains a predominance of what attracts us, and yet do not desire it so far as it is predominant in what repels. So we must regard our lives as confined within these limits and must consider what kind of life it is natural to desire. But if we ever speak of ourselves as desiring an object other than those aforesaid, the statement is due to ignorance and defective experience of actual lives.

What lives, then, are there, and how many, from which, on a review of the desirable and undesirable, a selection must be made and erected into a self-imposed law, if the choice of the course which is pleasant and attractive as well as virtuous and noble may lead to an existence of supreme human felicity? We shall, of course, name the life of temperance as one, and may count that of wisdom as another, that of courage as another, and that of health as another, thus making four in all, against which we may set four other types, the lives of folly, cowardice, profligacy, disease. Now the verdict of one acquainted with the facts will be that the life of temperance is

uniformly gentle. The pains and pleasures it offers are alike unexciting, its desires and passions never furious, but mild, whereas that of  
 734 profligacy is uniformly rash. The pains and pleasures it offers are alike violent, its intense desires and frantic passions maddening in the extreme. But in the temperate life the pains are surpassed by the pleasures; in the profligate the pleasures are surpassed by the pains, in respect of magnitude, number, and condensation. Hence it follows naturally and inevitably that the former is the more pleasurable life, the latter the more painful, and a man who desires a pleasant life is  
 b no longer free to choose a career of profligacy. Nay, it is at once patent, if our present reasoning is sound, that the profligate must always be what he is against his own will. The reason why the great mass of men live without temperance is always either ignorance, or lack of self-control, or both at once. We must say the same thing of the lives of disease and of health; there are pleasures and pains in both, but  
 c pleasure predominates over pain in health, in disease pain over pleasure.

Now the object of our choice between lives is not to secure preponderance of pain; the life we have pronounced the pleasanter is one in which the preponderance is on the other side. The temperate life, then, we shall maintain exhibits both sorts of feeling in lesser number, smaller magnitude, and looser concentration than the profligate—the  
 d wise than the foolish, and the life of courage than that of cowardice. But since in each case the first-named has the superiority in pleasure over its rival, which has a superiority in pain, the life of courage is triumphant over that of cowardice, that of wisdom over that of folly, with the consequence that, lives for lives, the temperate, courageous, wise, and wholesome are pleasanter than the cowardly, foolish, licentious, and diseased, and, in sum, the life of bodily or mental excellence pleasanter than that of depravity—to say nothing of its further superiority on the score of comeliness, rightness, virtue, and fair fame  
 e —whence it results that such a life renders its possessor's existence absolutely and unreservedly happier than that of his rival.

Here our discourse by way of prelude to our legislation may come to its end. After the prelude, of course, must come the composition itself, or, as it would be truer to say, an outline of a civic code. Now  
 735 just as in the case of a web or other piece of woven work, woof and warp cannot be fashioned of the same threads, but the material of the warp must be of superior quality—it must be tough, you know, and have a certain tenacity of character, whereas the woof may be softer and display a proper pliancy. Well, the illustration shows that there must be some similar distinction made between citizens who are to fill magistracies, and those who have been but lightly tested by education, this distinction being drawn appropriately to the various cases. For you must know that there are two things which go to the making of a

constitution. The conferring of office on individuals is one; the other is the providing of the officials with a code of laws.

But before we come to any of these subjects, the following observations should be made. A man who takes in hand a herd of animals, a shepherd, neatherd, horse breeder, or the like, will never b dream of trying to tend that herd without first submitting the group to the purgation proper to it. He will separate the sound animals from the sickly, the thoroughbreds from the mongrels, removing the latter to other herds, and exercising his tendance on the former, since he is well aware that, unless he thus purges his stock, he will have endless and fruitless trouble with bodies and minds already degenerate by c nature or ill management, which will further communicate a taint to the sound and unimpaired in body and disposition in the various herds. With the lower animals this does not so much matter—they only call for mention by way of an illustration—but in the case of man it is of the first concern to the legislator to discover and explain the method of procedure appropriate to various cases, in this matter of purgation as well as in all his other dealings with them. For instance, in the business of social purgation, the case stands thus. d There are many ways of effecting a purgation, some of them milder, some sharper. Some—the sharpest and best of all—will be at the disposal of one who is at once autocrat and legislator, but a legislator who establishes a new society and new laws with less than autocratic power will be well satisfied if he can so much as reach his end of purgation by the mildest of methods. The best method of all, like the most potent medicines, is painful; it is that which effects correction e by the combination of justice with vengeance, and carries its vengeance, in the last instance, to the point of death or exile, usually with the result of clearing society of its most dangerous members, great and incurable offenders. The milder method of purgation we may describe much as follows. Persons who, from want of the means of subsistence, show themselves ready to follow their leaders in an attack of the have-nots on the haves are treated by the legislator as a deep- 736 seated disease in the body of the state, and, with all possible good feeling, sent abroad as a 'measure of relief,' to use the euphemistic phrase; the name given to the procedure is colonization. Now every legislator has to act more or less in this way at the outset, but our own situation, at the present juncture, is still less irksome; we need contrive neither a colonization, nor any other method of selecting our purgation. We have, so to say, a conflux into the reservoir of waters from many sources, some springs, some mountain becks, and need b only take careful pains to secure maximum purity in the accumulating water by drawing off the supply from one quarter and diverting it into a different course in another. True, there is naturally some trouble and risk about any political undertaking; still, as we are concerned at

the moment with theory, not with practical execution, we may take our recruitment of citizens to have been completed, and its purity ensured to our wish. We shall, in fact, submit the bad among those who  
 c propose to come into our proposed state as members to the test of manifold exhortation and adequate time, and prevent their arrival; the good we shall welcome with all benevolence and complaisance.

Do not forget that we enjoy the same good fortune on which we congratulated the foundation of the Heraclidae, escape from cruel and dangerous controversy about confiscating of estates, cancellation of debts, and redistribution of property. In an old-established society, when legislation of this kind has become inevitable, innovation and  
 d refusal to innovate prove, in a way, alike impossible; room is left for little more than pious wishes and insensible and cautious modification by slow and gradual advances in the following direction. Among the innovators there should always be a section with extensive property in land and numerous debtors, who are not indisposed to share their advantages in a liberal spirit with the distressed by a remission  
 e of debts and redistribution of estates, thus evincing a certain regard for moderation, and showing their conviction that poverty consists not so much in the diminution of one's property as in the intensification of one's cupidity. This conviction is the surest of all sources of social security, a firm foundation for the subsequent erection of any political superstructure in keeping with such conditions. Where these initial conditions are unsound, a statesman's subsequent action will always  
 737 be beset with difficulties. The danger, as I say, is one from which we are exempt; still, it is the better course to explain how we might have escaped it even without this exemption. Let us say, then, once for all, that escape must be sought in the combination of justice with freedom from avarice. There is no road to deliverance, broad or narrow, on other lines, and we must take the principle as a buttress of our society. In fact, properties must be fixed by some system which  
 b excludes recriminations among their owners; otherwise, any man of any intelligence will refuse to go further, if he can help it, with a social system for a population among whom there are long-standing mutual jealousies. In persons who have, like ourselves at this moment, the providential opportunity to found a new society where there are as yet no internal hostilities, to introduce such hostilities by the distribution of land and houses would be a combination of sheer depravity with superhuman folly.

c What, then, would be the right method of distribution? First we must fix the total number of the citizens at the suitable figure; next we must come to an agreement about their distribution, the number and size of the sections into which they should be subdivided; the land and houses should be partitioned among these sections as equally as may be. What would be a satisfactory total for the population is more than can be rightly said without consideration of the territory

and the neighboring communities. The territory should be large enough for the adequate maintenance of a certain number of men of modest ambitions, and no larger; the population should be sufficient to defend themselves against wrongs from societies on their borders, and to assist their neighbors when wronged to some purpose. These points we will settle, practically and theoretically, by an inspection of the territory and its neighbors, but for the present our argument may proceed to the completion of our code of laws, in outline and as a general sketch.

Let us assume—to take a convenient number—that we have five thousand and forty landholders, who can be armed to fight for their holdings, and that the territory and houses are likewise divided among the same number, so that there will be one man to one holding. Let this total be divided first by two, and then by three; in fact it will permit of division by four, five, and the successive integers up to ten. Of course anyone who is acting as a legislator must be at least familiar enough with figures to understand what number, or kind of number, will prove most useful in a given state. Accordingly we will select that which has the greatest number of immediately successive divisions. The whole integer series, of course, admits division by any number and with any quotient, while our five thousand and forty can be divided, for purposes of war, or to suit the engagements and combinations of peace, in the matter of taxes to be levied and public distributions to be made, into fifty-nine quotients and no more, ten of them, from unity onward, being successive. 738

These facts of number, then, must be thoroughly mastered at leisure by those whose business the law will make it to understand them—they will find them exactly as I have stated them—and they must be mentioned by the founder of a city, for the reason I shall now give. Whether a new foundation is to be created from the outset or an old one restored, in the matter of gods and their sanctuaries—what temples must be founded in a given community, and to what gods or spirits they should be dedicated—no man of sense will presume to disturb convictions inspired from Delphi, Dodona, the oracle of Ammon, or by old traditions of any kind of divine appearances or reported divine revelations, when those convictions have led to the establishment of sacrifice and ritual—whether original and indigenous, or borrowed from Etruria, Cyprus, or elsewhere—the consequent consecration by the tradition of oracles, statues, altars, and shrines, and the provision for each of these of its sacred precinct. A legislator should avoid the slightest interference with all such matters; he should assign every district its patron god, or spirit, or hero, as the case may be, and his first step in the subdivision of a territory should be to assign to each of them his special precinct with all appertaining dues. His purpose in this will be that the convocations of the various sections at stated periods may provide opportunities for the satisfac-

tion of their various needs, and that the festivities may give occasion for mutual friendliness, familiarity, and acquaintance. There is indeed no such boon for a society as this familiar knowledge of citizen by citizen. For where men have no light on each other's characters, but are in the dark on the subject, no one will ever reach the rank or office he deserves, or get the justice which is his proper due. Hence in every society it should always be the endeavor of every citizen, before anything else, to prove himself to all his neighbors no counteffeit, but a man of sterling sincerity, and not to be imposed on by any counterfeiting in others.

739 Our next move in this business of legislation must be—like the moving of a man on the draughtboard from the 'sacred line'—so singular that it may well surprise you on a first hearing. Yet reflection and practical experience will make it clear that a society is likely to enjoy but a second-best constitution. Some of us may be dissatisfied with such a society from their unfamiliarity with the situation of a legislator who does not possess autocratic power, but the procedure of strict exactitude is to discriminate a best constitution, a second-best, and a third-best, and then to leave the choice between them to the party responsible for the foundation. Accordingly, I propose that we should adopt this method in our present proceedings. We will describe the best, second-best, and third-best constitutions, and leave the choice between them to Clinias in the present case, or to anyone else who may at any time come to the task of selection with a desire to incorporate what he values in his own native institutions to suit his own taste.

The first-best society, then, that with the best constitution and code of law, is one where the old saying is most universally true of the whole society. I mean the saying that 'friends' property is indeed common property.' If there is now on earth, or ever should be, such a society—a community in womenfolk, in children, in all possessions whatsoever—if all means have been taken to eliminate everything we mean by the word *ownership* from life; if all possible means have been taken to make even what nature has made our *own* in some sense common property, I mean, if our eyes, ears, and hands seem to see, hear, act, in the common service; if, moreover, we all approve and condemn in perfect unison and derive pleasure and pain from the same sources—in a word, when the institutions of a society make it most utterly one, that is a criterion of their excellence than which no truer or better will ever be found. If there is anywhere such a city, with a number of gods, or sons of gods, for its inhabitants, they dwell there thus in all joyousness of life. Whence for the pattern of a constitution we should look to no other quarter, but cleave to this and strive to come as near it as may be in our state. That we have now in hand, were it once brought to the birth, would be in its fashion the nearest to immortality and the only one which takes the second place;

of the third, under heaven's favor, we will treat hereafter. For the present, what, in any case, is this system we speak of, and how may it come to be what it is?

First, then, let them make a division of lands and houses among themselves, and not till the soil in common, for that were a project beyond their birth, breeding, and education. But let the division be made with some such thought as this, that he to whom a lot falls is yet bound to count his portion the common property of the whole society, and, since the territory is his fatherland, to tend it with care passing that of son for mother, the more that the land is the divine mistress of her mortal children, and to think likewise of all the gods and spirits of the locality. That this temper may persist for all time to come, we must practice this further contrivance. The number of hearth fires established by our present division must remain forever unchanged, without increase or deviation whatsoever. Now the way to ensure this in any city will be as follows. Let him who has a lot assigned him ever leave after him one son, of his own preference, to be his heir in that household and successor in the worship of the gods of clan and in ministering to the family, living or already previously deceased. As for other children, when a man has more than the one, let him give the females in marriage as a law yet to be enjoined shall direct; the males let him distribute among citizens who have a lack of offspring, to be their sons, and that preferably by friendly agreement. If a man have no friendly connections, or if there be families too numerous in issue, female or male, as in the contrary case, when there is a paucity of issue due to childlessness, in all these cases the highest and most august of the magistracies we shall create must consider what should be done to meet the excess or defect, and contrive the best device they may to keep the number of households always at our five thousand and forty and no more. Now there are several such devices. There are shifts for checking propagation when its course is too facile, and, on the other side, there are ways of fostering and encouraging numerous births which affect the young by marks of honor and dishonor and admonition conveyed in warning speeches of their seniors, and these will do our business. Besides, in the final extremity, if all means fail us to keep the number of five thousand and forty households constant, if mated love should cause an excessive glut of population, and we find ourselves at a loss, we have ready to our hand the old contrivance we have more than once spoken of—we can send out colonies of such persons as we deem convenient with love and friendship on both parts. Or in the contrary event, if our citizens are visited by a flood tide, as we may call it, of disease, or by destruction in battle, and so reduced far below the appointed number by untimely deaths, why, then, though we should never, if we can help it, foist in citizens whose education has been base, with necessity, as the proverb says, not even a god can cope.

Let us fancy, then, that we hear our present argument exhorting us in tones like these. Worthiest of men, see to it that you grow not slack in rendering the honor nature bids render to congruity and equality, identity and conformity, alike of number and of all that can produce fair and good effects. In especial you are herewith charged, first, to keep fixed throughout life the numbers prescribed you, and next to do no despite by mutual purchase and sale to the bulk and measure of substance assigned you at the first as your fitting portion; therein you will have against you the lot by which the division was made—and it is a god—and the lawgiver to boot. For first of all, our present law, with its warning that a man must take the lot, if so he pleases, on those terms or let it alone, contains this further enactment, that whereas the soil is consecrate to all gods, and whereas moreover priests of either sex shall offer prayers with sacrifice to that intent, once and twice and thrice, he who shall vend house or land assigned him, or purchase the same, shall suffer the fitting penalties for his act, written records inscribed on tables of cypresswood being laid up in the temples as a memorial to times to come. Moreover, surveillance over the execution of this statute shall be made the charge of the magistracy which shall be deemed most keen-sighted, that contraventions of it, when they occur, may not go unremarked, but the offense at once against the law and against God receive its chastisement. What a wealth of blessing the regulation now enjoined brings to any society which complies with it, if it be but conjoined with an organization to match, no evil man will ever know, but only, to speak with the old proverb, one who has made trial of it and is formed to ways of virtue. For such an organization leaves no great room for the making of fortunes; 'tis a consequence of it that none has either need or license to make them in any sordid calling—as even the sound of the reproach 'base mechanical' repels the man of free soul—and none will ever stoop to amass wealth by such devices.

742 With these injunctions goes also a further law by which no possession of gold or silver is permitted to any private man, but only a currency for the purpose of daily exchange, such as is hardly to be avoided by craftsmen or any whose business it is to pay wages in such a kind to wage earners, whether slaves or alien settlers; whence we shall lay it down that they must have an internal currency, of value at home but worthless abroad. As for a common Hellenic currency, to meet the needs of campaigns and foreign expeditions, such as embassies or other necessary missions of state on which a man may be dispatched, to serve these various purposes the state must possess current Hellenic money. If a private man should ever be forced to travel in foreign parts, let him get leave of the magistrates before he departs, and if on his return he have coin from any foreign quarter left, let him deposit it with the state, receiving the equivalent in local currency; if he be found to be secreting it, let it be confiscated to the

treasury, and let any who is privy to the act and conceals it be liable equally with the importer to curse and reproach, and in addition to a fine of amount not less than the amount of foreign currency imported. Let there be no dowry whatsoever, given or received, in marrying or giving in marriage, no depositing of money with one who is not trusted, and no lending on usury, the law permitting the borrower to withhold both interest and capital. That these practices are best for a society will be rightly discerned by the inquirer who considers them in the following light, with constant reference to their principle and intention. The intention of a sane statesman, mark you, is not what the many suppose. The good legislator, they would say, must intend the city for which he legislates in his wisdom to be as great as may be, and as wealthy, to possess mines of gold and silver, and to have a multitude of subjects by land and sea. They would further add that if he is a legislator of the right kind he must intend his city to be as good and as happy as possible. Now some of these objects are possibilities, others not so. Hence the state builder will intend the possible; the impossible he will neither make the object of a futile intention nor attempt it. In fact, speaking generally, happiness necessarily waits on goodness; so that combination he would intend. But to be at once exceedingly wealthy and good is impossible, if we mean by the wealthy those who are accounted so by the vulgar, that is, the exceptional few who own property of great pecuniary value—the very thing a bad man would be likely to own. Now since this is so, I can never concede to them that a rich man is truly happy unless he is also a good man, but that one who is exceptionally good should be exceptionally wealthy too is a mere impossibility. But why so, someone may ask. Why, I answer, because the profits of righteousness and iniquity together are more than double those from righteousness alone, while the expenditure of one who will spend neither honorably nor discredibly is less by half than that of one who is ready to lay out money honorably on honorable objects. Hence he who acts in the contrary fashion can never become wealthier than the man whose gains are double his own, and his expenditure but half his. Now of the two men, the one is good; the other, when he is frugal, not bad—though on occasion he can be utterly bad too—but good, as I have just said, he never is. In fact, the man who will get by honest and dishonest means alike, and will spend neither righteously nor unrighteously, if he is only frugal to boot, grows wealthy, though the utterly bad man, being as a general rule a prodigal, is very poor, whereas a man who will spend on honorable objects and only make gains from honest sources, will not find it easy to become either remarkably wealthy or exceedingly poor. Thus our thesis that the immensely rich are not good men is sound, and if they are not good, neither are they happy.

The object our laws had in view was that our people should be supremely happy and devotedly attached to one another, but citizens

d will never be thus attached where there are many suits at law be-  
 tween them, and numerous wrongs committed, but where both are  
 rarest and of least consequence. Our society, we pronounce, must have  
 neither gold nor silver, nor yet much making of profits from mechan-  
 ical crafts, or usury, or raising of sordid beasts, but only such as hus-  
 bandry yields or permits, and of it only so much as will not force a man  
 in his profit gathering to forget the ends for which possessions exist,  
 e that is to say, soul and body, which will never be of any account with-  
 out bodily training and education at large. Wherefore we have said,  
 and said more than once, that concern for possessions should take the  
 lowest place in our esteem, for whereas the objects of universal inter-  
 est to man are in all three, interest in possessions, rightly pursued,  
 holds the third and lowest rank, the interest of the body is second, of  
 the soul first. And so also with the polity now under consideration; if  
 744 it prescribes its honors on these principles, its laws have been rightly  
 made, but should any law there to be imposed be found to put health  
 before sobriety in point of public esteem, or wealth before health and  
 sober-mindedness, it will stand detected as wrongly imposed. Hence a  
 legislator should time and time again ask himself the plain questions,  
 What is my intent? Do I hit the mark in this, or do I miss it? Thus per-  
 haps, but in no other way whatsoever, will he finish his work of legis-  
 lation and relieve others of the task.

Let him who has obtained a lot, then, as we say, hold it on the  
 b conditions here stated. It had indeed been well that all settlers should  
 further enter our colony with equal means of every kind. But since  
 this cannot be, but one arrival will bring more property and another  
 less, there must be classes of unequal census, and that on many  
 grounds, and in particular because of the equal opportunities our so-  
 ciety affords, that so in election to office and assessment of payments to  
 and receipts from the exchequer regard may be had to a man's due  
 c qualifications—not only of personal and ancestral virtue, or of bodily  
 strength and comeliness, but of enjoyment of means or lack of them,  
 honors and offices apportioned fairly by a rule of proportional, though  
 unequal, distribution—and dissensions avoided. On these grounds we  
 must arrange our citizens in four classes according to the amount of  
 their property, a first, a second, a third, and a fourth—or they may be  
 called by some other names—whether the members remain in the  
 same class, or shift, as they pass from poverty to wealth, or wealth to  
 d poverty, each to the class appropriate to him.

As a further consequence of what has preceded I would enact an-  
 other law of the following type. In a society which is to be immune  
 from the most fatal of disorders which might more properly be called  
*distraction than faction, there must be no place for penury in any sec-*  
*tion of the population, nor yet for opulence, as both breed either conse-*  
*quence. Accordingly the legislator must now specify the limit in either*  
 ● *direction. So let the limit on the side of penury be the value of an al-*

lotment; this must remain constant, and no magistrate, and no other person who is ambitious of a repute for goodness must connive, in any case, at its diminution. The legislator will take it as a measure, and permit the acquisition of twice, thrice, and as much as four times its value. If a man acquires further possessions, from treasure-trove, donation, or business, or by any other similar chance makes acquisitions in excess of this measure, he may retain his good name and escape all proceedings by consigning the surplus to the state and its gods. If there is any disobedience to this law, it shall be open to anyone who pleases to lay an information and claim half the property, the convicted offender also paying a fine to the same amount out of his own possessions; the other half shall go to the gods. The whole property of every citizen, other than his allotment, must previously be inscribed in a public record under the custody of magistrates appointed by law for the purpose with a view to making suits at law affecting any question of property capable of easy and most assured determination. 745

Next, the founder must see that his city is placed as nearly as possible at the center of the territory, after selecting a site possessed of the other favorable conditions for his purpose—it will not be difficult to discover or to state them. Then he must divide his city into twelve parts, but first he should establish and enclose a sanctuary of Hestia, Zeus, and Athena—which he will call the citadel—from which he will draw his twelve divisions of the city and its whole territory. Equality of the twelve regions should be secured by making those of good soil small and those of worse soil larger. He should then make a division into five thousand and forty allotments. Each of these, again, should be bisected and two half sections, a nearer and a remoter, paired together to form an allotment, one which is contiguous to the city with one on the border, one in the next degree of proximity to the city with one next most nearly on the border, and so on in all cases. We should further practice in these half sections the already-mentioned contrivance relative to the poverty or excellence of the soil and effect an equalization by the greater or less size of the divisions. Of course, the legislator must also divide the population into twelve sections, constructing these sections so as to be as nearly as possible on an equality in respect of their other property, of the whole of which he will have made a careful record. Next he will be at pains to assign the twelve divisions to twelve gods, naming each section after the god to whom it has been allotted and consecrated, and calling it a tribe. Further, the twelve segments of the city must be made on the same lines as the division of the territory in general, and each citizen must have two houses, one nearer the center of the state and the other nearer the border. And this shall complete the business of settlement. c

But here is a consideration on which we must be careful to reflect. All the arrangements we have just proposed are never likely to find just such conditions that the whole program will be completely d

746 executed. The conditions suppose a population with no disrelish for such social regulations, who will tolerate lifelong fixed limitation of property, restrictions such as those we have proposed on procreation, and deprivation of gold and other things which it is certain, from what has been said already, that the legislator will prohibit. They presuppose further the central position of the capital, and the distribution of the dwelling houses over the territory, as he has prescribed, almost as though he were telling his dreams or fashioning a city and its inhabitants out of waxwork. To be sure, the scheme does not sound  
 b amiss, but its author needs to give it his reconsideration to the following effect. So our legislator gives us once more the ensuing admonition.

Do not imagine, my friends, that I am less alive than yourselves to a certain truth in what you urge in your present discourse. But the fact is that I take it to be always the most equitable course in dealing with a plan for the future that he who exhibits the model on which an undertaking should be fashioned should abate nothing of perfect  
 c excellence and absolute truth, while one who finds it impossible to compass some point of this perfection should decline to put it into practice, and contrive the realization of the remaining possibility which approximates most nearly to what ought to be done and is most akin to it in character. But he should allow the legislator to perfect the delineation of his heart's desire; only when that has been done should he begin to discuss with him which of his legislative proposals are expedient and which involve difficulties. For self-consistency, you know, must be aimed at in everything, even by the artificer  
 d of the paltriest object, if he is to be of any account.

Our immediate concern, now that we have resolved on the division into twelve parts, must be precisely to see in what conspicuous fashion these twelve parts, admitting, as they do, such a multitude of further divisions, with the subsequent groups which arise from them, down to the five thousand and forty individuals—this will give us our brotherhoods, wards, and parishes, as well as our divisions of battle and columns of route, not to mention our currency and measures of capacity, dry and liquid and of weight—to see, I say, how all these details must be legally determined so as to fit in and harmonize with  
 e each other. There is a further fear we must dismiss, apprehension of a possible reputation for finicking pedantry if the law enacts that no utensil whatever in the possession of a citizen shall be of other than the standard size. The legislator must take it as a general principle  
 747 that there is a universal usefulness in the subdivisions and complications of numbers, whether these complications are exhibited in pure numbers, in lengths and depths, or again in musical notes and motions, whether of rectilinear ascent and descent or of revolution. All must be kept in view by the legislator in his injunction to all citizens, never, so far as they can help it, to rest short of this numerical stand-

ardization. For alike in domestic and public life and in all the arts and crafts there is no other single branch of education which has the same potent efficacy as the theory of numbers, but its greatest recommendation is that it rouses the naturally drowsy and dull, and makes him quick, retentive, and shrewd—a miraculous improvement of cultivation upon his native parts. So all these branches of study will be found fair and becoming, if only by further laws and institutions you expel illiberality and commercialism from the souls of those who are to pursue them thoroughly to their profit; otherwise you will be surprised to find that you have produced not a philosopher but a regular knave—an effect already produced, as we can see, in the case of Egyptians, Phoenicians, and many other races, by the illiberality of their other pursuits and of their opulence, whether the result may have been due to the defects of their legislator, to incidental misfortune, or possibly to some other natural circumstance of such a tendency.

In fact, Megillus and Clinias, there is a further consideration we must not ignore. Some localities have a more marked tendency than others to produce better or worse men, and we are not to legislate in the face of the facts. Some, I conceive, owe their propitious or ill-omened character to variations in winds and sunshine, others to their waters, and yet others to the products of the soil, which not only provide the body with better or worse sustenance, but equally affect the mind for good or bad. Most markedly conspicuous of all, again, will be localities which are the homes of some supernatural influence, or the haunts of spirits who give a gracious or ungracious reception to successive bodies of settlers. A sagacious legislator will give these facts all consideration a man can, and do his best to adapt his legislation to them. So you, too, Clinias, must of course do the same. As the intending colonizer of a district you must give your first attention to such points.

CLINIAS: Admirably said, sir. I must certainly do as you recommend.

## BOOK VI

ATHENIAN: Well, now, your next business, after all that has now been dealt with, will presumably be to constitute the magistracies in your society.

CLINIAS: Why, of course it will.

ATHENIAN: There are really two branches of social organization implied here. First there are the creation of offices and the appointment of the persons who are to fill them, the determination of the proper number of such posts and the proper manner of appointing to them. Then, when this has been done, comes the assignment of the laws to the several offices, the decision which laws, how many, and of what type it is proper for each magistracy to administer. But before we

make our election, we may pause a little while to lay down a principle of some relevance to the occasion.

CLINIAS: And what may this principle be?

ATHENIAN: Why, it is this. Anyone may surely see that, while legislation is a great achievement, if a well-equipped state gives its excellent laws into the charge of unqualified officials, not merely does no good come of all their excellence, and not only does the state  
c become a general laughingstock, but such societies are pretty sure to find their laws a source of the gravest detriment and mischief.

CLINIAS: Yes, surely.

ATHENIAN: Why then, my friend, we must note the presence of this danger in the case of the society you are now contemplating, and its constitution. You see, no doubt, how necessary it is first that men who are to be rightly advanced to posts of power should, in every case, have been thoroughly put to the proof, themselves and their families, from earliest boyhood to the time of their election, and next that those who are to elect them should have been well trained by a schooling in  
d law-abiding habits for the work of selecting with right approval, and rejecting with proper disapprobation, candidates who deserve either fate. But in this case how can men who have but recently come together and are unfamiliar with one another, and devoid of education into the bargain, be expected to choose their magistrates in an irreproachable fashion?

CLINIAS: Indeed, 'tis hardly possible.

ATHENIAN: Still, when you are once in the ring, as they say, the time for excuses is past, and that is the case just now with you,  
e and with me too. You with your nine colleagues, as I understand, have pledged yourselves to the Cretan people to throw your souls into the work of the foundation, and I, on my side, am pledged to help you  
752 with our present fanciful tale. And, to be sure, since I am telling a tale, I should not like to leave it without its head; it would look monstrous ugly if it roamed at large in that condition.

CLINIAS: Very true, sir.

ATHENIAN: Yes, and besides, I mean to do my best for you.

CLINIAS: Then, with all my heart, let us do as we say.

ATHENIAN: So we will, with God's permission, if we can get the better of our years so far.

b CLINIAS: We may fairly count on God's permission.

ATHENIAN: To be sure we may. So with his help, let us make a further point.

CLINIAS: What point is that?

ATHENIAN: What a spirited adventure our present experiment in founding a state will prove.

CLINIAS: Of what are you thinking in that remark, and why in particular do you make it?

ATHENIAN: Of the lighthearted temerity with which we are

legislating for the inexperienced in the hope that they will end by accepting our proposed enactments. Yet this much must be reasonably clear, Clinias, even to the not specially discerning, that no body of men will accept them readily from the first, but only if we could contrive to wait until those who have been given a taste of them in their boyhood, grown up under them, and become thoroughly at home with them come to play their part in choosing the whole body of public officials. But, mark you, this point once compassed, supposing there is any plan or device by which it can be truly secured, I believe a society so schooled would have an assured guarantee of survival well beyond that interval.

CLINIAS : That sounds reasonable enough.

ATHENIAN : Well then, let us consider whether some such measure as this would be sufficient for our purpose. What I maintain, Clinias, is that it is the duty of you Cnossians, before all other Cretans, not merely to treat the soil you are now settling with all religious care, but to give unflagging attention to the appointment of the original officials by the surest and best method possible. In general, this will be a comparatively light task, but it is indispensably necessary that we should begin by taking the utmost pains with the selection of curators of the laws.

CLINIAS : Well, what measure or plan have we in contemplation for this?

ATHENIAN : I will tell you. Sons of Crete, I declare it the Cnossians' duty, in view of their leading position among your numerous cities, to join with the new arrivals in your settlement to elect a body of thirty-seven men in all from both sections, nineteen from the new arrivals and the rest from Cnossus itself. This body the Cnossians should present to your city, including yourself as a citizen of the colony and one of the eighteen, either with their free consent or by a modest measure of compulsion.

CLINIAS : But pray, sir, why have you not proposed a share in our citizenship for yourself and Megillus as well?

ATHENIAN : Why, Clinias, Athens is a proud state and so is Sparta, and both are far away, but you have every proper qualification, as have also your fellow founders. What has just been said about you is equally applicable to them. So much, then, for the most satisfactory procedure in our present circumstances. In course of time, if the constitution has survived, let the board be appointed by some such process as this. All shall have a voice in the election of these magistrates who bear arms in the cavalry or infantry and have served in the field as long as their age permitted. The election shall be held in the sanctuary regarded as most venerable by the state. Each voter shall deposit on the altar a tablet inscribed with the name of his nominee, his father, his tribe, and the ward to which he belongs, and subscribe his own name with the same particulars. Anyone who pleases shall be

permitted to remove any voting tablet to the contents of which he has an objection and expose it in the market place within not less than thirty days. The names found to head the poll, to the number of three hundred, shall then be exhibited by the authorities to the view of the whole community, and every citizen shall again vote for any of them he pleases, the officials once more publishing the hundred names which stand first. On the third occasion anyone who pleases is to vote for any name he pleases of the hundred, passing between sacrificial victims; the seven-and-thirty who receive most votes shall be submitted to a scrutiny and appointed to the magistracy by the officials.

Who, then, Megillus and Clinias, are to institute all these regulations in our state about official posts and the scrutiny for them? We can see, I suppose, that there must be such persons in a society which is just beginning to get under way, but who they can be before there are any magistrates is a problem. Have them we must, by hook or crook, and they must be no common fellows either, but men of the highest parts. For, as the adage runs, 'Well begun is half done,' and we all commend a fair beginning of anything, though the beginning is, in my own opinion, more than half the work, and a fair beginning has never yet been commended to its full merits.

CLINIAS: Very true.

ATHENIAN: Then as we are agreed on the point we must not pass it over in silence without making clear to ourselves how it should be set about. Though, for my own part, I am ready with no more than one observation which is needful and salutary at this juncture.

CLINIAS: And what is that?

ATHENIAN: That the city we are about to found has, as I may say, neither father nor mother, other than the society which is founding it. Not that I forget that plenty of such foundations have often enough been, and will hereafter be, at variance with their founders. But as things stand at present, it is as it is with a child; even if he is someday to have his differences with his parents, yet while the helplessness of childhood lasts, he is attached to them and they to him; he is always running to his family and finds his only allies among his own relatives. Now I say the same connection is to be found all ready to our purpose between the Cnossians and our new state—thanks to their care for it—and between it and Cnossus. So I maintain, as I have already maintained—a sound thought is not spoiled by repetition—that the Cnossians must join in taking charge of all this business. They should co-opt not less than a hundred of the newly arrived colonists, selecting the most aged and best men they can, and there should be another hundred from Cnossus itself. These latter, as I say, must come to our new city and take their share in providing for the lawful appointment of officials and the scrutiny following on appointment. When this business has been done, the Cnossians should keep themselves to Cnossus, and the new state should be left to preserve

itself and prosper by its own endeavors. To proceed, let those who belong to the thirty-seven, now and for all time to come, be taken to be appointed for the following purposes. They are to be curators in the first place of the laws, and in the next of the records in which every citizen has made his return to the officials of the amount of his property, with the exception of four minas for those of the highest assessment, three for the second, two for the third, and one for the lowest. If anyone is detected in possession of anything further in excess of the returns, let the whole of such sum be forfeited to the public, and let it further be open to anyone who will to pursue him on a charge that is neither creditable nor of comely name, but infamous for him who is convicted of contemning law for gain. Let him who will, that is, lay an indictment for *infamous gain* and prosecute the case before the curators in person. If the defendant lose the case, he shall have no share in the 'common good,' and in any distribution from the public funds, he shall go without his part, except for his allotment; his conviction shall also be recorded, for his lifetime, in a place where it may be read by all who will. No curator shall hold office for more than twenty years, or be elected to his office at an age earlier than fifty; if he is sixty at the time of appointment he shall hold office no longer than ten years, and conformably to this rule, when a man's life is prolonged beyond seventy, he must in no case expect to hold office on this important board.

As to the curators of the laws, then, let us take it that they are charged with these three duties. Each fresh statute, as legislation proceeds, will lay on them such further duties as they should undertake beyond those now specified. For the present we may turn to the appointment of the rest of our officials in order. We must next, of course, choose generals of the forces, and their military assistants, as we may call them, hipparchs and phylarchs, as well as divisional commanders of the tribal infantry, whom we may very conveniently designate by that very title, taxiarchs; it is, in fact, the name commonly given them. As to these posts, there shall be a first nomination of generals, taken solely from among our citizens, by the curators of the laws, and a selection from the nominees by all who have borne arms at the proper age, or are actually bearing them on the occasion. Should anyone, however, judge a person whose name has not been included a better candidate than one of the nominees, he shall name his man, as well as the person in whose place he proposes him, take an oath to that effect, and put him forward as a rival candidate; whichever of the two shall be approved by show of hands shall then be placed on the select list. The three who receive most votes shall be appointed generals and controllers of military affairs, after passing the same scrutiny as the curators of laws. The generals so elected shall make their own preliminary nomination of taxiarchs to the number of twelve, one for each tribe; the procedure as to counternomination,

voting, and final scrutiny shall be for taxiarchs the same as for generals. This assembly shall for the present—as neither council nor prytaes have been appointed—be convoked by the curators in the holiest and most spacious area available, the full-armed infantry and the cavalry occupying distinct stations, and all who rank after them in the forces forming a third group. Generals and hipparchs shall be chosen by a vote of the whole body, taxiarchs by a vote of all the infantry, and their phylarchs by a vote of all the cavalry. The generals must appoint their own commanders of light-armed troops, archers, or other divisions of the forces. Thus it only remains to arrange for the appointment of hipparchs. Accordingly, the preliminary nomination in their case shall be made by the same authority which nominates in the case of generals, and the selection and counternomination shall proceed as in the case of generals. The cavalry shall give its vote in the presence of the infantry, and the two candidates who receive most votes shall be commanders in chief of the whole mounted force. There may be two challenges of the vote; if it is challenged a third time, those whose business it was to deal with the several returns shall put the issue to a vote among themselves.

There shall be a council of thirty dozen—three hundred and sixty will be a convenient number for our subdivisions—and this whole number shall be divided into four groups of ninety, ninety councilors being elected from each property class. First there shall be a vote compulsory upon all citizens for representatives of the highest property class, abstention being visited with a fine prescribed by law. When the voting is over, the names shall be duly recorded, and representatives of the second class voted for on the following day with the same procedure as before. On the third day representatives of the third class shall be chosen by a vote open to all citizens, but compulsory on those of the three first classes, the fourth and lowest class being exempt from fine in the case of abstention from the voting. On the fourth day representatives of this lowest fourth class shall be chosen by a vote of all, but there shall be no penalty for members of the third and fourth classes who may choose to abstain, whereas members of the second and first classes who decline to vote shall be fined, a member of the second class thrice and a member of the first four times the amount of the previous fine. On the fifth day, the authorities shall exhibit the names already recorded to public view, and there shall be a selection from them in which every citizen shall once more vote, or else pay a fine to the original amount. A hundred and eighty names shall thus be selected from each class; half of them shall be taken by lot and submitted to their scrutiny, and these shall form the council for the year.

Conducted in this way, the election will strike a mean between monarchy and democracy, as a constitutional system always should.

757 There can never be friendship between the slave and his owner, nor between the base and the noble when equal honors are bestowed on

both; indeed, equal treatment of the unequal ends in inequality when not qualified by due proportion; it is these two conditions, in fact, which are the fertile sources of civil discord. It is an old saying, and as true as old, that equality gives birth to friendship; that maxim is most sound and admirable. But 'tis none too clear what sort of equality b it is that has these effects, and the ambiguity makes havoc with us. There are, in fact, two equalities under one name, but, for the most part, with contrary results. The one equality, that of number, weight, and measure, any society and any legislator can readily secure in the award of distinctions, by simply regulating their distribution by the lot, but the true and best equality is hardly so patent to every vision. 'Tis the very award of Zeus. Limited as is its scope in human life, wherever it has scope, in public affairs or private, it works nothing but blessings. For it assigns more to the greater and less to the lesser, c adapting its gifts to the real character of either. In this matter of honors, in particular, it deals proportionately with either party, ever awarding a greater share to those of greater worth, and to their opposites in trained goodness such share as is fit. For we shall in truth find that this sheer justice is always also the statesmanlike policy. It is this, Clinias, at which we must aim, this equality on which we must fix our gaze, in the establishment of our nascent city. And if others would found other such societies, they should shape their legislation with a view to the same end—not to the interest of a handful of dic- d tators or a single dictator, or the predominance of a populace, but always to justice, the justice we explained to be a true and real equality, meted out to various unequals. And yet, after all, a society as a whole will also have to apply these standards with some qualification, if it is to escape dissensions somewhere among its constituent parts. Equity e and indulgence, you know, are always infractions of the strict rule of absolute and perfect justice—which is, in fact, the reason why we must introduce some use of the equality of the lot to avoid disaffection among the masses, though when men do so they should breathe a prayer to God and good luck to direct even the fall of the lot to the justest issue. So you see that while we cannot help availing ourselves of both sorts of equality, we should make the most sparing use we can of one of them, that which appeals to luck.

Such, my friends, must be the conduct of a society which means 758 to survive, for the reasons we have given. Now, just as a ship at sea must have a perpetual watch set, day and night, so also a state, tossed, as it is, on the billows of interstate affairs and in peril of being trapped by plots of every sort. Magistrate must therefore follow magistrate in steady sequence from day to night and night to day, sentinel make b over to and take over from sentinel in unbroken succession. No large body will ever be able to discharge these tasks with dispatch; no, we must perforce leave the most part of the councilors for most of the time to stay at home and administer their local business, appointing a

twelfth part of them for each of the twelve months of the year to  
 c serve as guardians who will give prompt audience to all comers, from  
 abroad or from our citizens themselves, with reports to make or ques-  
 tions to put about matters in which it concerns a state to reply to other  
 states or receive their replies to its own inquiries, and will, before all  
 things, see to it in view of the frequent internal innovations of all  
 kinds which so commonly occur, that, if possible, no such incidents  
 d arise, or, if they do, that the state may be quick to perceive and repair  
 the mischief. For all these reasons the power of convoking and dis-  
 solving all meetings of the citizen body, ordinary and stated, or ex-  
 traordinary and occasional, must lie with this presidential board. The  
 twelfth part of the council, then, will take order for all these functions,  
 and will be relieved of them for eleven months of the year, but a  
 twelfth part of that body must be perpetually associated with our other  
 officials in maintaining this watch over the state.

e This, then, will be a reasonable way of ordering matters within  
 the city. But what of the general superintendence and regulation of  
 the territory at large? Now that our city and territory as wholes have  
 both been divided into twelve sections, must we not designate superin-  
 tendents of the city streets, of buildings, private and public, of har-  
 bors, of the market, of springs, and not least, of consecrated precincts,  
 sanctuaries, and the like?

CLINIAS: To be sure we must.

759

ATHENIAN: So we may say that there will have to be sacristans,  
 priests, priestesses, for the sanctuaries. For streets and buildings and  
 the maintenance of proper order in them, for human beings—to avoid  
 infringement of rights—for lower animals—to secure decent civil  
 conditions within the city walls and in the suburbs—we shall have to  
 appoint officials of three kinds, of whom we may call those who are  
 concerned with the matters just specified 'city commissioners,' and  
 those who have the control of the market, 'commissioners of the mar-  
 ket.' As to priests of either sex for the sanctuaries, any whose dignity  
 b is hereditary must be left undisturbed, but if—as may well be the case  
 in such matters in a first settlement—few or none are so provided,  
 priests of either sex should be instituted, where they are not already  
 instituted, to act as sacristans for the gods. In all these appointments  
 use should be made partly of election, partly of the lot; in each urban  
 and rural district we must effect a friendly combination of the popular  
 element with the nonpopular element in the way which will make for  
 fullest concord. As far as priesthoods are concerned, then, we must al-  
 c low God to effect his own good pleasure by just leaving appointments  
 to the inspired decision of the lot, but every man on whom the lot may  
 fall must be subjected to a scrutiny, first as to his freedom from blem-  
 ishes and legitimate birth, next as to his provenance from houses pure  
 of all pollution, and the cleanness of his own life, and likewise of those  
 of his father and mother from bloodguiltiness and all such offenses

against religion. Religious law universally should be fetched from Delphi, and this must be adhered to, official exponents of it being first appointed. Each priesthood should be tenable for a year and no longer; the man who is to celebrate worship in accord with our sacred law should be of the age of not less than sixty; the same regulations shall apply to priests of the other sex. As for the exponents, groups of four tribes are thrice to elect four persons, one from each of themselves; when they have held the scrutiny on the three who obtain most votes, they must send the nine to Delphi for the oracle to nominate one from each three—the rules for the scrutiny and age on appointment to be the same as for priests. The election to a vacancy shall be made by the group of four tribes in which the vacancy occurs. As concerns treasures of the sacred funds and precincts of the various sanctuaries and controllers of their produce and rents, three persons shall be appointed from the highest property class for the largest sanctuaries, two for those of medium size, and one for the smallest—the procedure in their election and scrutiny to be the same as in that of the generals. Thus much, then, for the regulation of religion. d  
e  
760

Nothing, if we can help it, shall be left unguarded. As for the city, guard shall be kept over it thus. It shall be the concern of generals, taxiarchs, hipparchs, phylarchs, and prytanes as well as of the commissioners of city and market, when once we have them duly elected and instituted. Watch shall be kept over all the rest of our territory in the following manner. As our territory as a whole has been divided into twelve nearly equal districts, one tribe shall be annually assigned by lot to each district and shall provide five 'rural commissioners and captains of the watch,' as we may style them; it shall be the business of each of the five to select from his own tribe twelve of the younger men, who must be twenty-five years of age or over, but not over thirty. The territorial districts shall be assigned to these groups in rotation by lot, each for a month of the year, to ensure personal experience and knowledge of the whole territory on the part of every member. These guards and their commanders shall hold their respective posts for a term of two years. From the position, or district, originally determined by the lot they shall be regularly conducted by the captains of the watch, at monthly intervals, to the next in order clockwise, clockwise being deemed to be in the sense from west to east. On the expiry of the first year of service, to familiarize as many of the guards as possible, not merely with the state of the country at one single season of the year, but with the course of the seasons in all districts, they shall be conducted by the officers then in command through the successive districts in the reverse order—counterclockwise—until the expiry of their second year. For the following year there must be a fresh election of rural commissioners and captains of watch, the five superintendents of twelves. Their functions while on duty in the various stations shall be these. First, they must provide for the most b  
c  
d  
e

effectual blocking of the territory against an enemy by the construction of all necessary dikes and trenches, and the erection of fortifications as a check on any would-be despoilers of territory or cattle. For these purposes they may employ the draft animals and household servants of the various districts, who shall act as their instruments and be under their orders, though they should do their best to avoid requisitioning them in their own busy seasons. In a word, they are to do their utmost to make the whole country inaccessible to an enemy and easily accessible to friends, whether human beings, beasts of burden, or cattle; it shall be their charge to make all the roads as comfortable as possible, and to ensure that the flow of rain water from the highlands into the hollow valleys between the hills does good rather than harm to the countryside by regulating its discharge by dams and trenches, so that as the valleys receive or absorb the rainfall, they may supply all the lower-lying farms and localities with watercourses and springs, and furnish even the driest localities with an abundance of excellent water. Spring waters, whether rivers or fountains, they are to adorn and beautify by plantations and buildings; they shall secure a copious supply by collecting their streams in hewn watercourses. If there is any consecrated grove or precinct in the vicinity they shall enhance its charm by making conduits which convey their waters at all seasons into the very sanctuaries. In all such places our young men should construct exercising grounds for themselves and their seniors, furnished with warm baths for the service of the latter and supplied with plenty of dry seasoned fuel; here they shall provide a friendly home for the treatment of invalids and persons worn with the labors of husbandry—a treatment much more profitable than a poorly qualified physician.

Work of this and similar kinds will be both useful and ornamental to a district and will also afford charming recreation. The serious duties of the office shall be as follows. Each group of sixty shall protect its district, not merely against enemies, but against professed friends. If a wrong is done to neighbor or fellow citizen by any person, bond or free, the case shall come for trial before the five commanders, who shall act alone in petty cases, and in more serious cases of complaint, where the sum involved is one not exceeding three minas, in concert with the twelves. No judge shall try a case, and no official shall discharge an office, without liability to an audit, except those who, like monarchs, pronounce a final decision. In the case of our rural commissioners in particular, if they oppress those who are under their care, by imposing unfair burdens, by attempts to requisition any of their farm stock without their consent, by reception of presents intended to purchase their good graces, or finally by unjust distributions, they shall be branded with public disgrace for their yielding to corruption; for all further wrong to the inhabitants of a district, where the value involved is one mina or less, they shall submit to a voluntary

trial before the villagers and neighbors. If they decline to do so in any case of a major or even a minor charge, in the hope that their constant monthly migration to a fresh district will prove a sufficient defense against the prosecution, the complainant in such a case shall take proceedings in the public courts; if he gains the case, he shall exact a double penalty from the absconder who has declined to submit himself to a voluntary judgment. The daily course of life of the commanders and rural commission during their two years of office shall be as follows. In the first place, there shall be in each district a public mess at which all shall take their meals together. If a man absent himself from mess for a single day, or sleep out of bounds for a single night, except at the command of his officers or from some sudden and absolute necessity, provided the five report the case and post him in the market place as a deserter from his watch, he shall suffer disgrace as a traitor to his duty to his country, and be subject to chastisement by stripes, for which there shall be no redress, at the hands of any who meet him and care to inflict it. Should one of the five commanders themselves act in the same way on his own authority, it shall be a matter for the attention of the whole sixty, and any of them who may observe the fact or be informed of it without taking action shall fall under the provisions of the same laws and be penalized more severely than the younger men; he shall be deemed disqualified for holding any post of authority over his juniors. The curators of the law shall exercise an exact inquisition into such cases, with a view to their complete prevention, or failing that to the imposition of a merited punishment. It must be strictly binding on all to believe that no man whatsoever will prove a creditable master until he has first been a servant, and that less pride should be taken in successful ruling than in loyal service—service, in the first place, of the laws—since to serve them is to serve heaven—and after the laws, of a young man's honorably distinguished seniors. In the next place, a member of our rural police must have partaken through his two-years' service of the mean and meager daily rations. In fact, immediately after their selection, the twelves shall come together with their five commanders and resolve that, like the servants they are, they shall have no further servants, or slaves of their own, nor yet apply to farmers and villagers at large, and use their servants to minister to their own private requirements, but only upon public employments. In other matters they shall make up their minds to a life of personal exertion in which they shall be their own employers and attendants. They shall further carry out a thorough exploration of the whole country under arms, both summer and winter, with a view to complete familiarity with its topography, as well as to its defense, since such universally diffused and exact acquaintance with their own country may be presumed to be as important a study as they can have. Hence they should practice coursing and other forms of hunting while they are in their prime, quite as

much for this reason as for the combined pleasure and benefit which commonly attends such exercises. The men and their profession, then, may be known by any name one likes, scouts, or rural commission, or another, but the calling must be followed with might and main by  
 c any man who is minded to be a competent defender of his native city.

The next step in our selection of officials will be concerned with the appointment of commissioners for the market and the city. To our sixty rural commissioners will correspond three commissioners for the city. These shall divide the twelve urban districts into three regions, and, like the former board, have charge of the roads—the streets of the town itself, and the several highways leading from the country to  
 d the capital—as well as of the conformity of all the buildings erected with the legal regulations. In particular, they must take care that the water supply, which the rural police shall transmit and deliver to them in proper condition, shall reach the reservoirs in due plenty and purity, and so serve the ends of beauty no less than of utility. Hence they must be men at once of capacity and of leisure for public affairs. Accordingly, any citizen may propose for the office any name he pleases from the highest property class; when the names have been  
 e put to the vote and reduced to the six who receive the most numerous suffrages, the officer charged with that function shall select three by lot; these, when they have passed their scrutiny, shall hold the office under the regulations made for them.

There shall next be a selection of five commissioners of the market, to be taken from the first and second property classes. The procedure in this case shall be in general the same as for the urban commissioners; of the ten who receive most votes, they shall take five by lot and, on their passing their scrutiny, proclaim them appointed. In every case, every elector shall cast his vote; any who declines shall,  
 764 if his conduct is brought to the cognizance of the authorities, be fined fifty drachmas, and in addition be declared a bad citizen. Attendance at the assembly, or public convention, shall be open to any citizen, and compulsory on a member of the first or second property class, under a fine of ten drachmas if detected in absentsing himself from these gatherings. For the third and fourth classes, there shall be no compulsion, and their members may escape the penalty, except in the case  
 b of a notification by authority that all are to attend for some urgent cause. The commissioners, then, shall superintend the orderly conduct of the market in conformity with legal regulations, and be charged with the prevention of injury to sanctuaries and fountains in its precincts; in the case of such injury they shall punish the offender, if a slave or an alien, by whipping or imprisonment. If the author of such disorders is a citizen, they shall be competent to fine the offender up to one hundred drachmas on their own sole authority—  
 c or to double the sum when acting in conjunction with the urban commissioners. The urban commissioners shall have the same power of

fine and chastisement in their own department; they may impose a fine of a mina on their own authority, or of two, when they act with the commissioners of the market.

It will next be in place to create authorities in music and physical training, in either case two sets, to have charge respectively of education and of competitions. By officers of education the law understands superintendents of gymnasiums and schools in charge of their seemly maintenance as well as of the education given and the connected supervision of attendances and accommodation for children of both sexes. By officers for competitions it understands judges of performers contending in both musical and athletic competitions, and of these there should, once more, be two sorts, the one for music and the other for athletics. In athletics it will be proper to have the same officials as judges of both men and horses, but in music to have one set of judges for solo performances—e.g., those of reciters, harpists, flutists, and the like—and a second and different set for choral singing. So we should, I take it, begin by selecting our authority for the play of our choirs of children, men, and maids as exhibited in the dance and the whole system of the musician's art. One such authority will be sufficient for them, who must be not under the age of forty years. One official of not less than thirty years of age will also be sufficient for the soloists, to enter the performers and pronounce a competent decision between competitors. The actual president or controller of the choirs should be appointed in the following way. All amateurs of such pursuits must attend the assembly on pain of a fine if they absent themselves—a matter which shall come under the jurisdiction of the curators of the laws—but attendance shall not be compulsory on others against their will. Then an elector must take the name he proposes from the list of experts, and the only point that shall count for inclusion or rejection at the scrutiny shall be the candidate's competence or, on the other side, incompetence in the subject. Of the ten candidates who head the poll, he who wins the lot shall, after scrutiny, preside over the choirs for the year as the law requires. In precisely the same way the candidate who wins the lot shall preside for the year over competitors who have entered for the solos and concerted pieces, the winner of the lot thus submitting to the decision of the judges. Next we have to appoint from the third and second of our property classes directors of the athletic competitions for horses and human beings; it shall be compulsory on the first three classes to attend this election, but the meanest class shall not be penalized for their absence. The successful candidates shall be those who shall be taken by lot from twenty elected by a previous vote and must also be approved by the suffrage of the scrutinizing body. In appointing to or selection for any office whatsoever, if any names are rejected on scrutiny, others shall be substituted by the same methods and submitted to scrutiny by the same procedure.

There is still one office to be filled in the department under our consideration, that of the supervisor of education, male and female, as a whole. Accordingly, the law will require this post also to be held by a single official who must be a man of not less than fifty years, and the father of a legitimate family, preferably of both sexes, but failing that, of one or the other sex, and nominee and nominator alike must

e bear in mind that the post is far the most important of the highest offices in the state. For in all growing creatures alike—trees, beasts gentle or savage, humankind—the first sprouts and shootings, if but fair, are most potent to effect the happy consummation of goodness

766 according to kind. Now man we call a gentle creature, but in truth, though he is wont to prove more godlike and gentle than any if he have but the right native endowments and the right schooling, let him be trained insufficiently or amiss, and he will show himself more savage than anything on the face of the earth. Wherefore the legislator must make the training of children no secondary or subordinate task; since 'tis a first and primary need that their director shall be well chosen, he must do all that in him lies to appoint to the charge of their direction

b him who is in all points best of all the citizens. Accordingly, all officials, with the exception of the council and its committees, shall repair to the temple of Apollo, where each of them shall give his vote by secret ballot for one of the curators of the laws, whomsoever he judges fittest to control education. He that shall receive most votes shall pass a scrutiny before all hitherto-appointed officers other than the curators themselves and thereafter hold his post for five years; in the sixth, there

c shall be a fresh appointment to this charge by the same procedure. If a public official die before his term of office be expired, and there be still more than thirty days to run, a substitute shall be appointed in the same manner by the body already duly charged with the election. If an overseer of orphans decease, their resident relatives on both sides down to children of first cousins shall appoint a successor within ten days, or, in default, each such person shall incur a fine of

d one drachma per diem until the appointment of such guardian have been made. A society, as we know, will soon become no society at all, without duly appointed courts of justice. But a judge who may not make his voice heard, and, like an arbitrator, has no more to say in the preliminary proceedings than the contending parties, will in no case be a sufficient judge of disputed rights, and therefore a good court cannot well be either numerous or small and of poor capacity. It

e should be clear in every case what the contending claim of either party is, and time and slow and repeated preliminary inquiry conduce to this elucidation of the issues at stake. Hence the challenging parties should first appear before neighbors and friends who are best ac-

767 quainted with the matters in dispute. If, when all is done, a man cannot get a satisfactory decision from this body, he shall proceed to

another court. If the two courts fail to settle the matter, the judgment of a third shall be final in the case.

In a certain sense the appointment of these courts is also an election of magistrates. In fact, any magistrate is bound also to be a judge in some questions, while a judge, though not actually a magistrate, becomes a magistrate, and one of considerable moment, for the day on which he finally decides a case. Thus we may include the judges among our magistrates and proceed to say who will be suited for the function, with what matters they shall deal, and what their number should be in various cases. The truest court, then, will be that which the various litigants appoint themselves for their own cases by an agreed choice. But for all other cases there shall be two tribunals, one when one private person complains of wrong received from another, and desires to bring him before a court for its decision between them, a second when a citizen believes the public wronged by some other and desires to support the state. And we must explain what and who their members are to be. First of all, we must institute a common court of justice for all private persons whose controversies reach the third hearing, and it shall be constituted thus. On the day before that on which a new year opens with the month following the summer solstice, all magistrates, whether their office be annual or of longer duration, shall assemble in the same temple; then, after an oath sworn in the name of the god, they shall set apart, as a choice offering, if I may say so, one judge from each board of magistrates, viz., the member they judge to have filled his magistracy best and to be likely to decide the cases of his fellow citizens best and most religiously for the ensuing year. When the selection has been made, there shall be a scrutiny by this electing body itself, and if any name be rejected, another shall be chosen in like manner; those who pass this scrutiny shall act as judges for parties who have declined other jurisdiction, and their suffrages shall be open. Presence as eyewitnesses and auditors of these trials shall be compulsory on the members of council and other officials who appointed the judges, permissive to others who may wish to attend. A person who charges any judge with deliberate wrongful decision in a case shall go before the curators of the laws with his accusation; the judge convicted on such a count shall be liable to make good half the damage to the party who has incurred it; if the case be deemed to call for a graver penalty, the judges who deal with the suit shall specify the further punishment to be inflicted or fine to be paid to the public and the institutor of the prosecution. As to charges of crime against the public, it will be necessary, in the first place, to give the commonalty a voice in the hearing—when the state is wronged all are sufferers, and all would have a just grievance if deprived of a part in such decisions—but while the initial and final stages in such a case should be assigned to the populace, the investiga-

- tion should take place before three of the highest magistrates, agreed upon by defendant and plaintiff; if the two cannot come to an agreement for themselves, the council shall revise the choice of each party.
- b As far as possible, too, all citizens should take their part in the private cases, since a man who has no share in the right to sit in judgment on others feels himself to be no real part of the community. Hence there must, of course, be courts for the several tribes with judges appointed by lot, as occasion arises, to give their verdicts uninfluenced by personal appeals, but the final determination in all such suits must be with this court which we claim to have constituted with the utmost freedom from corruptibility possible to human power for the service of
- c those who can reach no settlement either before their neighbors or in the tribal judicatures.

- This matter of courts of justice, then—as I say, it is equally hard to give them the name of magistracies as to refuse it without qualification—has partly now been dealt with in what I may call its outlines, partly left unfinished. In fact, far the best place for a more exact regulation of judicial procedure and classification of actions at law will be found toward the end of our legislation. So we may tell the subject
- d to wait till we come to the end of our work, but the method of appointment to other magistracies has received fairly full regulation. But a full and exact treatment of every single point of civil and political administration cannot be confidently given until our survey has covered the whole ground from start to finish in detail in the natural order. Still you will see that the stage it has now reached with these
- e arrangements for the election of our officials forms a sufficient conclusion of preliminaries and starting point for legislation without further delay or hesitation.

CLINIAS: Your treatment of the preliminaries, sir, has been wholly to my mind, and the way in which you have just linked up the beginning of what is still to come with the conclusion of what has gone before pleases me even better.

- 769 ATHENIAN: Then so far, we may say, our grave game for the aged has been finely played.

CLINIAS: What you really mean to call fine, I fancy, is the hard work of active men.

ATHENIAN: Possibly, but ask yourself whether you agree with me on a further point.

CLINIAS: What is it, and to what does it relate?

- ATHENIAN: Why you know how the painter's brush never seems to have finished its work on a figure; it seems as though it could go on with endless embellishments of coloring or relief—or whatever may
- b be the professional name for the process—without ever reaching a point at which the picture admits no further enhancement of beauty or vivacity.

CLINIAS: I think I have heard enough about such matters to

follow your description, though I have no personal familiarity with these arts.

ATHENIAN: And no loss either! Still there is a point which we may use this chance reference to them to illustrate. Suppose it were an artist's intention to paint a figure of great beauty which should moreover be steadily enhanced, not deteriorated, by the lapse of years. You are aware that since the painter is not immortal, either he must leave behind him a successor capable of repairing any damage done to the figure by time, as well as of embellishing it by improving on defects due to the artist's imperfect craftsmanship, or his immense labor have very transitory results?

CLINIAS: To be sure.

ATHENIAN: Well now, and the legislator, has he not a similar intention? He wants first of all to frame his laws with the closest approach to absolute perfection he can compass. Then, as time goes on and he puts his scheme to the test of practice, will any legislator, think you, be thoughtless enough to forget that they must be full of such lacunae which some successor will have to correct, to ensure that the constitution and system of the society he has founded may steadily improve, not deteriorate?

CLINIAS: That is the presumable intention of every lawgiver. Of course it must be.

ATHENIAN: So if a man found some means of effecting this—found out a method of teaching another by example or precept how to understand, better or worse, the way to conserve laws and improve them—he would never tire of explaining that method, I conceive, until he achieved success.

CLINIAS: Of course not.

ATHENIAN: Well, must not I myself and both of you do the same thing now? 770

CLINIAS: Do just what, do you mean?

ATHENIAN: Why since we are about to form a code of law and have appointed curators of it, and those young men by comparison with ourselves, whose sun is setting, we must, as I say, not merely legislate, but at the same time do all we can to make them also legislators as well as curators of law.

CLINIAS: By all means, if only we are equal to it.

ATHENIAN: Well, we must at least make the attempt and do our best.

CLINIAS: Certainly.

ATHENIAN: So let this be our language to them. Friends and preservers of law, there will be a host of omissions in the different departments of our present legislation; that simply is not to be helped. Not but what we shall do all we can to sketch the outlines of the more considerable departments as well as of the whole system. But you will have to fill up this outline and must be told what your aim in

- c doing so is to be. Megillus, Clinias, and myself have repeatedly stated it to one another, and are agreed that we stated it well, but we are anxious that you should be our sympathetic disciples, that your aim should be that which we one and all hold should be kept in mind by
- d both curators and authors of law. Our unanimous pronouncement was, in sum, this, that whatever the way which promises to make a member of our citizen body—male or female, young or old—truly excellent in the virtues of soul proper to human character, be they results of some occupation, some native disposition, some possession, or passion, or conviction, or course of study, that and no other shall be the end, as I say, toward which every nerve shall be strained so long as life endures, and that not a single soul shall be found to prefer aught which hampers these pursuits. In the last event, should there be no
- e choice but to be driven from the state itself before she deigns to crouch under the servile yoke of rule by the base, or to leave her for exile, any such fate must be borne rather than the change to a polity which will breed baser men. This was *our* concurrent judgment before you. *You*, in your turn, are now to set both ends before you in your commendation or censure of our laws, to censure such as cannot serve the purpose, accept those that can with cordial good will, and make them the
- 771 rule of your lives. All other pursuits, which lead to some different so-called good, you must dismiss.

- We may open the legislation which is now to follow in some such way as this, with religion as our starting point. We must first return to our number of five thousand and forty and the various convenient subdivisions we find both in this total and in the constituent tribe, which
- b was, you will remember, by assumption one twelfth of the whole, and is thus the exact product of one-and-twenty by twenty. Now our total number permits of division by twelve, and so likewise does that of the tribe; so each such division must be thought of as a sacred thing, a gift of heaven corresponding with the months of the year and the revolution of the universe. This, in fact, is why all communities are under the sway of an instinct which consecrates them, though some authorities perhaps have made a truer division than others, and been more fortunate in the result of the consecration. For our own
- c part, our present point is that we were justified in our preference for the number, five thousand and forty, as it is divisible by every integer from one to twelve with the exception of eleven, and that can be very readily put right, since one way of mending it is to set two hearths on one side. That the fact is so could be proved in a very few words if we
- d had the leisure. So we may trust in our present task to the traditional belief in question and make this division. Each section will be called by the name of a god or a child of the gods and provided with altars and their furniture, where we shall convoke two sacrificial assemblies per month—twelve for the divisions into tribes, and twelve for the corresponding sections of the town itself. Their first purpose will

be to ensure the divine favor and to promote religion, and their second, from our point of view, to encourage mutual intimate acquaintance and social intercourse of all kinds. For it is particularly necessary in view of the contraction of marriages and the connections to which they give rise to do away with our ignorance of the quarter from which a bride is taken, the bride herself, and the family she is entering; the utmost possible care should be taken to prevent any mistakes in such matters. To ensure that grave result, even the sports of our lads and lasses should take the form of dances of both sexes, 772 which will incidentally give them the opportunity, within reason and at an age which affords a colorable justification, of seeing and being seen in undress, so far as sober modesty in all the parties will permit. The superintendence and control of all such matters should be in the hands of our directors of choirs, who should also, in conjunction with the curators of laws, legislate on any points we may omit in our regulations. As I said, in all such cases of multifarious minor details, it is inevitable that the legislator should make omissions for which those b who have regular yearly experience of them should learn by practice to provide by regulations and annual amendments until a sufficient rule for such observances and customs is felt to have been reached. So a moderate but a definite time to allow for the experiment to cover each and all of the details would be a ten-years' cycle of sacrifices and festal dances, within which the various magistracies—acting in concert with the original legislator, if he is still alive, or alone if he has c deceased—may report omissions in their several departments to the curators of laws, and attempt amendments until the various regulations are felt to have been brought to perfection; they should then declare them incapable of modification and thereafter enforce them with the rest of the laws originally established by the legislator's imposition. On these statutes they must in no case make any willful innovation, but if they should ever judge themselves under the stress of absolute necessity, they are to consult the advice of all magistrates, d the whole popular assembly, and all the oracles, and make such modifications as are approved by all these authorities, but no other changes whatever; the law will require that the *noncontents* shall always prevail.

Whensoever, then, a man of five-and-twenty or upward, on inspection made and submitted to, is satisfied that he has found in any quarter a congenial and suitable match for the common procreation of children, he shall in all cases marry before he comes to five-and-thirty. e But let him first be informed of the right manner of seeking for the suitable and fitting, for, as Clinias says, each law must be introduced by its own preamble.

CLINIAS: Thank you, sir, for the allusion. You have taken what I find to be a most appropriate occasion for its introduction.

ATHENIAN: You are most kind. This, then, is what we shall say 773

- to the son of a worthy stock. My lad, the match to be made is that which will find favor with men of sense, and their counsel to you will be not to set your heart overmuch on avoidance of a poor match, or pursuit of a wealthy, but rather, when other things are equal, always to enter the bond with a preference for the humbler party. This will, in truth, be to the benefit of both society at large and the contracting houses, for balance and due proportion are out of all comparison more excellent than an unqualified extreme. And he who knows himself
- b overhot of temper and overhasty to act in all he does should connect himself by preference with a quiet family, while he of the contrary bent should look for connections of the contrary kind. And we may lay down one sole rule for all matches. A man should 'court the tie' that is for the city's good, not that which most takes his own fancy. Yet there is a native instinct by which each of us is ever drawn to his own nearest like, and this brings inequalities of manner and moral
- c temper into society at large; these lead by unfailing consequence in most states to effects which we would not have in ours. To make express and formal statutes, indeed, to such effect—to forbid the rich man to marry into a wealthy house, or the capable into a capable, to force the hasty-tempered to seek partners in matrimony among the phlegmatic and the placid among the hasty—would be ridiculous, and would, moreover, rouse general resentment. It is none too easy to see
- d that a state should be like a well-compounded bowl where the wine when poured in is hot to madness, but when corrected by another and a soberer divinity and fairly mated furnishes us a healthful and modest draught. I say no man, or hardly any, has the wit to discern that it is even so with the blending of offspring. And this is why we are driven to let the matter alone in our law and do our endeavor to charm the individual man to set an inward equipoise among his offspring above that equality of condition in wedlock that thirsts so insatiably
- e after riches, and to direct him who is bent upon a wealthy match by reproaches without the compulsion of written enactment.

This, then—as well, of course, as what we said before—shall be our exhortation to wedlock and the duty of man to cleave to everlastingness by ever leaving children and children's children after him to serve God in his room. All this, and still more, might be said in a proper preamble on the obligation to matrimony. But should there be any who refuses willing obedience, but keeps himself apart and unfellowed in the city, and so comes to five-and-thirty unwedded, he shall pay a yearly fine of a hundred drachmas if he belong to the wealthiest class, of seventy if to the second, of sixty for the third, and thirty for

b the fourth, and this fine shall be dedicate to Hera. He that defaults in his yearly payment shall be indebted in ten times the amount. Payment shall be enforced by the treasurer of that goddess, who shall be liable himself to the debt in case of nonexaction, and all shall be bound to render account of such matters at the audits. This shall be

the pecuniary penalty of refusal to marry. As to marks of honor from his juniors, the offender shall receive none, and no junior, if he can help it, shall show him any deference whatsoever. If he presume to chastise any of them, all shall come to the support and defense of the injured party, and any person present who fails in this shall be legally proclaimed both a dastard and a traitor. c

With dowries we have already dealt, but may say once more that there is every reasonable presumption that the poor will reach old age when neither he that takes a wife nor he who gives her is straitened in means, for in our society all citizens are assured of the necessities of life; moreover, there will be less of arrogance on the wife's side, and of mean sordid slavery to her moneybags on the husband's. So he that obeys us will have one good deed to his score; he that disobeys, d whether by accepting or by offering more than the worth of fifty drachmas toward the bride's appareling—or of one mina, or half as much again, or in the case of the wealthiest class, twice so much—shall be liable in an equal sum to the public exchequer, and the surplus offered or received shall be sacred to Hera and Zeus. Payment shall be enforced by the treasurers of these deities precisely as we directed its enforcement against celibates by the treasurers of Hera, or e in case of nonenforcement, they shall discharge the fine from their own private purses.

The right of valid betrothal shall belong in the first instance to the father, failing him to the grandfather, in default of both to brothers on the father's side; if there are no such kinsmen, it shall pass in like manner to the kindred on the mother's side. Should a case of exceptional destitution arise, the nearest kinsmen, whoever they may be, shall have the right to act in conjunction with the guardians.

Concerning the ceremonies introductory to wedlock and any 775 other holy rites it may be proper to fulfill before, during, or after the nuptials, the citizen should make inquiry of the exponents of religious law, and be satisfied that all is well and truly done if he follows their instructions.

In the matter of the marriage feast, the persons to be bidden to it should be not more than five male or female friends of either family, with the same number of kinsmen and connections of either, and in no case shall the expenditure be disproportionate to the means of the giver—one mina for a person of the wealthiest class, half that sum for one of the second, and thus in proportion as the means of the party diminish. Obedience to the law should receive commendation from all; the disobedient shall be punished by the curators of the laws as a boor with tastes untrained in the strains of the hymeneal Muses. As for drinking to excess, 'tis everywhere unseemly, except at a feast of the divine giver of the grape—and dangerous as well—above all, in one whose mind is seriously set on wedlock. Then, if ever, 'tis meet for bride and bridegroom to be in their sober senses, seeing they are come c

to so grave a turning on life's road, and must take all care, moreover, that that which is at any moment begetting shall be the work of sober parents, for 'tis quite unknown what night or day shall—under God—give it its being. Besides all this, the work of kind must never be left to bodies dissolved by revelry; the growing life must be fashioned with all due order, surely, firmly, in quiet. But a man in his cups does but sprawl and fumble all ways at once; his body is as crazy as his mind.

- d By consequence the drinker is an awkward, bungling sower of his seed, and 'tis no wonder he commonly begets shambling, shifty creatures with souls as twisted as their bodies. Wherefore a man should the rather be wary all the year long, and all his life through, and more particularly while he is procreating offspring, to forbear, so far as he may, from all action that prejudices health or is touched with wrong or violence—he cannot but imprint its color and impress on the souls  
e and bodies of the unborn and become sire to a sorely degenerate brood—above all, to keep himself clear of such things all that day and night. For in all the affairs of man's life the first step holds the place of God himself and makes all the rest right, if but approached with  
776 proper reverence by all concerned.

He that has marriage in mind must think of one of the two homesteads on his own actual lot as a nest and nursery for his chicks, must leave father and mother and hold his nuptials there, and there keep house and home for himself and his children. For in all the kind affections of life the presence of some dash of unfulfilled longing rivets hearts and knits them in one, while unbroken companionship, when there is none of this longing bred of absence, causes them to drift apart from utter satiety. This is why our young pair should leave  
b mother, father, bride's kindred, to their old abodes, and live like settlers in a colony; they will pay visits to the old home and receive visits from it, beget children and bring them up, and thus hand the torch of life on from one generation to another and perpetuate that service of God which our laws demand.

Next for goods and chattels. Which of them should a man possess if proprietorship is to give him true satisfaction? The more part of such goods are as easy to name as to acquire, but there are difficulties of every kind about servants. Why is this? Because the things we say  
c about them are partly false, partly true; our very language about slaves contradicts our experience of them and confirms it at once.

MEGILLUS: But pray how are we to take your words? As yet, sir, my friend and I are at a loss for your meaning.

ATHENIAN: And not to be wondered at, Megillus. The status of the Helots of Laconia—the controversy as to its merits or demerits—is probably the most puzzling problem of Hellenic life. There may be a similar, though less acute, controversy about the system of slavery  
d under which the Mariandynians are held down at Heraclea, and the position of the serfs of Thessaly. When we take these instances and

others like them into account, how shall we set about proprietorship in servants? The point on which I touched in the course of my argument, when you very naturally asked what I had in mind, is simply this. Of course, we are aware that we should all say a man should have the best and most trusty slaves who are to be had. Why, slaves have often enough before now shown themselves far better men in every way than brothers or sons; they have often been the preservation of their masters' persons, property, and whole family. No doubt you e know that such language about slaves is common.

MEGILLUS: So it is, to be sure.

ATHENIAN: And equally common the rival theory that slaves are rotten at heart, and no man of sense should ever put any trust in the whole tribe of them. Nay, the greatest genius among our poets, in speaking of Zeus, makes the explicit declaration that he

fixed it certain that whatever day  
Makes man a slave, takes half his worth away.<sup>9</sup>

777

So a man takes one or other side in the dispute for himself. Some distrust the whole class and make their servants threefold—nay, a hundredfold—slaves at heart by the scourge and the lash, as though they were dealing with so many wild beasts; others take the very opposite course.

MEGILLUS: Very true.

CLINIAS: Well, then, sir, where there is such utter disagree- b ment, how should we act about this territory of ours? How shall we deal with the right to own and to discipline slaves?

ATHENIAN: Why, Clinias, the human animal is a kittle beast, and so, clearly, is not likely to be, or become, readily amenable to the indispensable distinction between real slave and real free man and master, and so this form of property presents a difficulty. The facts of the common and repeated risings in Messenia and the experience c of communities where there are great numbers of serfs all speaking the same dialect provide accumulated proof of the evils of the system—not to mention the multifarious depredations and adventures of the corsairs of Italy. When we face all this evidence we may well feel perplexed to know how to treat the whole problem. Indeed I see only two courses left open to us—the one that slaves who are to submit to their condition quietly should neither be all of one stock, nor, as far as pos- d sible, of one speech, the other that we should treat them properly and show them consideration, for their own sake indeed, but still more for ours. And proper treatment of men in that position is to use no violence toward a servant, but to wrong him—if such a thing could be—with even more reluctance than an equal. For it is his dealings with those whom he can easily wrong which reveal a man's genuine

<sup>9</sup> *Odyssey* 17.322 sq.

unfeigned reverence for right and real abhorrence of wrong. Hence the man whose character and conduct are unsullied with wickedness  
 e and wrong in his relations with slaves is, beyond all others, sowing the seed for a harvest of goodness, and we may truthfully say the same of every master, or autocrat, or wielder of any kind of power in his relations with a weaker party. Not, of course, but what we should chastise our slaves when they deserve it, not spoil them by such mere admonition as we should use to free men. Our language to a servant should  
 778 commonly be that of simple command, and there should be no familiar jesting with servants of either sex, though many masters show great unwisdom in this way in their behavior to their slaves, spoiling them in a fashion which makes life hard at once for the servant who is to obey, and the master who is to command him.

CLINIAS: Very rightly said.

ATHENIAN: Well, now that we have done our best to provide the citizen with a sufficient number of servants qualified to assist him in his various tasks, I suppose our next step should be to produce a plan of our houses.

CLINIAS: Yes, of course.

b ATHENIAN: In fact, as our city is a new foundation, without any earlier habitations, it will have to give its attention to the whole subject of its architecture in all its details, not forgetting those of the temples and city walls. This, Clinias, is a subject which properly comes before that of marriage, but as our whole construction is imaginary, the present will be an excellent opportunity to dispose of it. When our scheme takes actual shape, we shall, God willing, deal with domestic architecture first and make our marriage law the crown and  
 c completion of our work in this kind. For the present we shall attempt no more than a brief outline.

CLINIAS: Just so.

ATHENIAN: The temples, then, should be built all round the market square, and in fact round the whole city, on elevated sites, with a view at once to security and cleanliness. In their vicinity should be the offices of the magistrates and courts of law, where, as on holy ground, judgment will be received and given, partly because  
 d the business itself is so solemn, partly because these are the seats of awful deities, and among them courts of law where cases of murder and other crimes worthy of death may fitly be heard. As for walls, Megillus, I am of the same mind as your own Sparta. I would leave them to slumber peacefully in the earth without waking them, and here are my reasons. As the oft-quoted line of the poet happily words  
 e it, a city's walls should be of bronze and iron, not of stone, and we in particular shall cover ourselves with well-merited ridicule, after taking our young men in annual procession to the open country to block an enemy's path by ditches, entrenchments, and actual buildings of various kinds—all, if you please, with the notion of keeping the foe

well outside our borders—if we shut ourselves in behind a wall. A wall is, in the first place, far from conducive to the health of town life and, what is more, commonly breeds of certain softness of soul in the townsmen; it invites inhabitants to seek shelter within it and leave the enemy unrepulsed, tempts them to neglect effecting their deliverance by unrelaxing nightly and daily watching, and to fancy they will find a way to real safety by locking themselves in and going to sleep behind ramparts and bars as though they had been born to shirk toil, and did not know that the true ease must come from it, whereas dishonorable ease and sloth will bring forth toil and trouble, or I am much mistaken. No, if men must have a wall of sorts, they should construct their own dwellings from the outset in such a fashion that the whole town forms one unbroken wall, every dwelling house being rendered readily defensible by the uniformity and regularity with which all face the streets. Such a town, with its resemblance to one great house, would be no unpleasing spectacle, and the ease with which it could be guarded would give it an unqualified advantage over any other in point of security. The preservation of the original buildings will properly be, in the first instance, the business of the occupiers, while the urban commissioners will be charged with the task of superintendence, to the extent of compulsion by fines in the case of neglect, as well as of making general provision for sanitation within the city boundary, and of prohibiting all interference with the plan of the city by buildings or excavations on the part of private persons. They should also be responsible for the proper carrying-off of rain water and any other desirable regulations of housing within or without the city. For these and any other matters of detail which have been omitted in our law from inability to deal with them, the curators shall issue supplementary ordinances, in the light of their practical experience. And now that these buildings and those of the market place, the gymnasiums, schools, theaters, are all ready and waiting—the schools for their pupils, the theaters for their audiences—we may proceed, in the proper legislative order, to what follows upon matrimony.

CLINIAS : By all means.

ATHENIAN : Well, then, Clinias, let us suppose the marriage ceremonies over. On them will follow, before the birth of children, an interval of not less than a year. How bride and bridegroom in a society which is to be so far above the common level should spend their time—for that is what I meant by 'what follows in the proper order'—is not the easiest of questions. We have had not a few such awkward problems already, but none so unpalatable to the great mass of mankind. Still, I suppose, Clinias, what we really believe to be right and true must be said at all costs.

CLINIAS : Of course it must.

ATHENIAN : If a man proposes to give a society laws for the conduct of public and communal life; and yet imagines that law is

superfluous when it comes to compulsion in private affairs, that it is improper to submit everything to regulation and that the individual should be left free to spend the day just as he pleases—if he leaves personal conduct exempt from legal control and yet flatters himself that his citizens will be ready to guide their communal and public action by law—he is seriously mistaken. Why do I say this? Because I  
 b am going to insist that our newly married men shall frequent the public tables neither more nor less than they did in the years before marriage. That institution aroused surprise when it made its first appearance in your countries, at the dictation, as I presume, of a war or some situation equally urgent for a small population in a desperate extremity, but when you have tried the experiment and been driven to  
 c avail yourselves of these public messes, the practice was pronounced to be highly conducive to security. That in fact is the way in which the public table became one of your institutions.

CLINIAS: In all probability it is.

ATHENIAN: Well, here is the point. Though there were once persons who found the practice singular, and its imposition dangerous, a legislator who should wish to enjoin it would have no such difficulty today. But it has a natural consequence, at present adopted nowhere, though its adoption offers every prospect of success, which  
 d is, and waste his labor in a host of other such ways, and this consequence is no light one either to propose or to put into effect.

CLINIAS: And pray, sir, what is this point you are apparently so reluctant to explain?

ATHENIAN: To avoid long and useless discourse on the subject, let me have your attention. Wherever due order and law are found in the life of a society, their fruits are blessings, but neglect of regulation or misregulation more often than not undoes the work of sound regulation in other directions. And this is just where our present argument  
 e comes to a halt. In fact, my friends, your public table for men is an admirable institution, miraculously originated, as I was saying, by a truly providential necessity, but it is a grave error in your law that the position of women has been left unregulated, and that no vestige of this same institution of the common table is to be seen in their case.  
 781 No, the very half of the race which is generally predisposed by its weakness to undue secrecy and craft—the female sex—has been left to its disorders by the mistaken concession of the legislator. Through negligence of the sex you have then allowed many things to get out of  
 b hand which might be far better ordered than they are if only they had come under the laws. Woman—left without chastening restraint—is not, as you might fancy, merely half the problem; nay, she is a twofold and more than a twofold problem, in proportion as her native disposition is inferior to man's. Hence it would be better from the point of view of the good of the state, to submit this matter to revision and

correction and devise a set of institutions for both sexes alike. As things are, mankind are unhappily so far from such a consummation c that it is impossible for a prudent man so much as to mention the proposal in other territories or societies, where the very existence of the public table as a recognized institution of society is unknown. So how is the actual attempt to compel women to take their meat and drink in public to escape derision? There is nothing about which a sex so accustomed to the life of the shady corner would make more difficulties; try to force a woman out into the daylight and she will offer a furious resistance far too powerful for the legislator. As I was d saying, in other societies the sex will not so much as suffer the right rule to be named without a storm of outcries, though perhaps in our own they might. So if you desire our discussion of politics at large to attain its ends—so far as theory goes—I am ready to defend my proposal as sound and becoming, provided you would both like to hear my arguments; otherwise we may let the subject drop.

CLINIAS: Sir, I assure you, we are both singularly in favor of hearing you.

ATHENIAN: Why, then, so you shall. But you must not be surprised if you find me going a fair way back for my starting point. You e know we have plenty of time on our hands, and there is no pressing business to keep us from examining our subject, law, on all its sides.

CLINIAS: Quite true.

ATHENIAN: Good, then, let us revert to the position we began with. Any man, indeed, should be perfectly aware of one thing. Either the human race never had a beginning at all, any more than it will ever have an end, but always was and always will be, or else the time which has elapsed since its beginning must have covered immeasur- 782 able ages.

CLINIAS: No doubt.

ATHENIAN: Very well, then, can we suppose there have not been, all over the world, all manner of risings and fallings of states, all kinds of institutions, orderly and disorderly, as well as every sort of taste in meat and drink, and multifarious climatic revolutions which presumably lead to many modifications of living organisms? b

CLINIAS: No, of course not.

ATHENIAN: Why, we believe, do we not, that there was once a time when the vine made its first appearance, and that the same is true of the olive and the gifts of Demeter and the Virgin [Persephone], and that Triptolemus, or someone, was the instrument in the change? So we must suppose, must we not, that before the existence of these supplies, animals had recourse, as they have today, to feeding upon one another?

CLINIAS: No doubt.

ATHENIAN: Besides, we remark the persistence of human sacri- c fice to this day in many quarters, while it is reported, on the other

hand, of other peoples that they shrank from tasting even the flesh of oxen, and offered no animals in sacrifice; they honored their gods with cakes and meal soaked in honey and other such 'pure' sacrifices, but abstained from flesh, counting it criminal to eat it, or to pollute the altars of the gods with blood. Man's life in those days conformed to the rule known as Orphic, universal insistence on vegetarianism, and  
 a entire abstention from all that is animal.

CLINIAS: 'Tis the widely current and highly credible tradition.

ATHENIAN: Well, I may of course be asked the question, What is your point in mentioning all this just now?

CLINIAS: That, sir, is a well-founded apprehension.

ATHENIAN: And so, Clinias, I will try, if I can, to expound the thought to which these considerations give rise.

CLINIAS: Pray proceed.

ATHENIAN: I observe that mankind are universally impelled by needs or desires, of three kinds, and that this impulsion results in virtue if men are well trained, in its contrary if they are ill trained. Their  
 e needs are, in the first place, food and drink, from the hour of their birth. All creatures have the instinctive appetite for gratification in that kind and are furiously defiant of the voice which says that one has any duty except to sate one's craving for pleasures from that source, and to avoid all discomfort of any kind; our third and most  
 783 imperious need and fiercest passion arises later, but most of all fires men to all manner of frenzies—I mean lust of procreation with its blaze of wanton appetite. These three unwholesome appetites, then, we must divert from the so-called pleasant toward the good; we must try to check them by the three supreme sanctions—fear, law, true dis-  
 course—not without the aid of the Muses and the gods of games, and  
 b so to quench their growth and onrush.

Thus we may make the procreation of children follow on our regulations of marriages, and on their procreation, their nurture, and education. As our discourse proceeds on these lines, our several laws may possibly reach their completion, as in the former instance when we had reached the subject of a common table—whether, after all, women should be admitted to share the institution, or it should be kept exclusively for men, we shall perhaps see more clearly when we view it at close quarters—we shall reduce the necessary preliminaries, for which we have as yet given no regulations to order and shelter  
 c ourselves behind them. Thus, as I was just saying, we shall get a more precise view of these preliminaries themselves, besides being more likely to fit them with appropriate and becoming legislation.

CLINIAS: Very true.

ATHENIAN: Then let us keep the points just referred to well before our memory, as we shall probably have to refer to them all.

CLINIAS: But exactly what are the points you would have us remember?

ATHENIAN: Those which we made in our three clauses; we spoke, you may recollect, of meat, then of drink, and thirdly, of the d excitements of sex.

CLINIAS: Why, sir, I take it we shall be sure to remember what you are now impressing on us.

ATHENIAN: Well and good. So let us proceed to our regulations for the wedded pair, with the object of instructing them how and in what fashion they should set about procreation, or, if they should prove disobedient, appealing to the menace of law.

CLINIAS: In what manner?

ATHENIAN: Bride and bridegroom should make it their purpose to present the city with the best and finest progeny they may. Now whenever you have human beings conjoined in any action, when the parties give their minds to themselves and what they are doing, the results of their work are every way fair and good, but entirely contrary if they have no mind or apply it not to their work. So let a bridegroom give his mind to his bride and his work of procreation—and the same with the bride—and most of all while children have not yet been born to them. The mother shall be under the surveillance of the women we have appointed—their number to be more or fewer and the time of their election to be determined as the magistrates shall see fit to ordain—who shall assemble daily for not less than the third part of an hour at the temple of Ilithyia. At these assemblies each member shall report to the board any person, male or female, among the procreants, whom she sees to be paying regard to aught else than the injunctions imposed amid the sacrifices and rites of matrimony. This period of procreation and supervision of procreants shall last ten years and no longer, in cases of plentiful issue; if a pair are without progeny at the end of the period they shall, in consultation with their kinsmen and the official board of women, arrange terms of separation with a view to the interest of both parties. If there should be any dispute as to what is seemly or advantageous to either party, they shall choose ten of the curators of the laws, and be bound by this selection of arbitrators and their decisions. The ladies are to have entrance to the households of the young people, and are to stay them from their sinful folly, partly by admonition, partly by threats; if they fail they shall appear before the curators with their report, and the curators shall prevent the offense. If their action, too, proves unavailing, they shall bring the matter before the public, posting the offender's name with a sworn declaration of their 'failure to reform the herein designated.' A man so posted—except in the case of his successful prosecution of the authors of the notification before a court of law—shall be subject to the following disabilities. He shall be excluded from both weddings and birthday feasts, or, if he shows himself there, anyone who pleases may inflict a beating on him with impunity. The same law shall extend to the case of a female offender; if posted for similar disorders and unsuc- e

cessful in her action at law, she shall be excluded from the women's processions and honorable distinctions, and forbidden to attend weddings and children's birthday parties. When they have once produced their children as the law requires, a man who has dealings in this kind with a woman not his wife, or a woman who has to do with a man not her husband, shall, if the other party be still among the procreants, incur the same penalties which have been prescribed for those who are still producing offspring. Outside this limit he or she that is continent in the matter shall be held in all esteem, he that is of the other  
 785 sort in the contrary repute, or rather disrepute. While the more part show reasonable moderation in such things, the law will be silent on the topic, and leave it alone, but if there are disorders, regulations must be put in force as aforesaid, in accord with the laws but now prescribed.

A man's first year is the opening of his whole life; it should be registered with that title—'beginning of life'—in the shrines of the kindred. There must also be, for each boy or girl in every phratry, a further record on a whitened wall bearing the number of the magistrates after whom dates are reckoned; in the vicinity there must be a  
 b record of such members of the phratry as are alive at each date, the names of those who de cease being expunged. For a girl the limiting age for marriage—the longest period specified—shall be from sixteen to twenty, and for a male from thirty to thirty-five. That for official appointments shall be forty for a woman, thirty for a man. For military service the term, in the case of a man, shall be from the age of twenty to that of sixty, for a woman—whatever military employments it may be thought right to impose on women—after she has borne her children, what it is possible and fit to enact in such cases, up to the age of fifty.

## BOOK VII

788 ATHENIAN: Now that we have our boys and girls born, the proper course will naturally be to deal with their nurture and education; this subject cannot possibly be passed over in silence, but our treatment will wear the guise rather of instruction and admonition than of legal enactment. The privacy of home life screens from the general observation many little incidents, too readily occasioned by a child's pains,  
 b pleasures, and passions, which are not in keeping with a legislator's recommendations, and tend to bring a medley of incongruities into the characters of our citizens. Now this is an evil for the public as a whole, for while the frequency and triviality of such faults make it both improper and undignified to penalize them by law, they are a real danger to such law as we do impose, since the habit of transgression is  
 c learned from repetition of these petty misdeeds. Hence, though we are at a loss to legislate on such points, silence about them is also im-

possible. But I must try to illuminate my meaning by the production of what I may call samples; at present my remarks must seem something of a riddle.

CLINIAS: You are quite right there.

ATHENIAN: Well, now, I suppose we may take this much as truly said. The right system of nurture must be that which can be shown to produce the highest possible perfection and excellence of body and soul.

CLINIAS: Certainly.

ATHENIAN: And perfection of the children's bodies, I conceive, means—to put it at the simplest—that they must grow straight from their earliest days.

CLINIAS: Why, of course.

ATHENIAN: And further, is it not a fact of observation that in all living things growth is most conspicuous and rapid in its initial sproutings—so much so, indeed, that many have contended that the stature reached by a human being in its first five years is not doubled by the increment due to the following twenty?

CLINIAS: Surely.

ATHENIAN: Well, then, when a body is subjected to vast augmentation of bulk without a counterbalancing abundance of appropriate forms of exercise, the consequences are disastrous in all sorts of ways. That, I think, is a known fact.

CLINIAS: Indeed it is.

ATHENIAN: And so the period when the body is receiving its principal increment from nutrition is also the period when it demands the maximum of exercise.

CLINIAS: What, sir? Are we actually to impose the maximum of exercise on infants and newborn babies?

ATHENIAN: Not precisely that. We must impose it at a still earlier stage while the child is being nursed in its mother's womb.

CLINIAS: What, my dear sir! On the embryo? You cannot mean that!

ATHENIAN: Indeed I do, though I am not surprised you should be unaware of the proper regimen for the case. 'Tis a singular one, but I could wish to expound it for you.

CLINIAS: By all means do so.

ATHENIAN: Well, the point would be more readily understood by my own countrymen, thanks to the undue devotion of some of them to sport. Among us, in fact, children, and some who are no longer children, too, are in the habit of rearing young birds for the purpose of cockfighting. Now they are very far from thinking the performances in which they train these animals by pitting them against one another adequate discipline for such creatures. Over and above all this, everyone keeps birds somewhere on his person—the smaller ones in the hand, the bigger within his cloak, under the elbow—and

takes walks of many furlongs, with an eye not to his own physique but to that of his beasties—a practice which at least indicates to the intelligent observer that all bodies are beneficially braced by every sort of shaking and stirring, whether due to their own movements, to the oscillations of a conveyance or a boat, the trot of a horse, or however the motion of the body may be caused. The frame is thus enabled to cope with its nutriment, solid or liquid, and presents a spectacle of health and beauty, to say nothing of robustness. Now in view of these facts, how, let me ask, shall we proceed to act? Would you have us raise a laugh by express statutes directing the pregnant mother to take constitutionals, to mold her infant, when she has borne it, like so much wax while it is still plastic, and to keep it swaddled for its first two years? And what of the nurse? Shall we compel her under legal penalties to be incessantly carrying her charges to the country, the public temples, the homes of their relatives, until they are strong enough to stand on their own feet, and ever later to persist in carrying a child about until it has completed its third year, for fear the limbs may be distorted in infancy if too much weight is thrown upon them? Shall we enact that our nurses must be the most robust we can get, and that there must be more than one for each infant, and crown our work by prescribing a penalty for the offender in case of neglect of any of these various directions? Surely not. It would be to lay ourselves open to more than enough of the consequences I have mentioned.

CLINIAS : What consequences?

ATHENIAN : Why the ridicule we should be sure to incur. Not to add that our nurses will have the minds of women, and slavewomen at that, and be none too ready to obey.

CLINIAS : Then, pray, why have we thought it needful to give all these instructions?

ATHENIAN : I will tell you why. Because the minds of our masters and free citizens may probably be led by hearing them to recognize the truth that while the right regulation of the private households within a society is neglected, it is idle to expect the foundations of public law to be secure. A citizen who understands this will be likely to regard the directions we are now giving as so many laws for his own conduct, and, so regarding them, to be happy in his administration alike of his own household and of his city.

CLINIAS : I believe there is much truth in what you say.

ATHENIAN : Consequently, we are not to suppose that we have done with this sort of legislation until we have given a full account of the training of the infant's mind on the same lines as those with which we began our remarks about its body.

CLINIAS : Very true.

ATHENIAN : We may take it then as the A B C of the matter in

both cases that it is universally beneficial for infants, particularly very young infants, to have the process of bodily and mental nursing continued without intermission, all day and all night long. If it were only possible, it would be desirable for them to spend all their time, so to say, at sea, and as it is, we should come as near that ideal as we can with the newborn baby. We may learn the same lesson from the following facts. The truth and utility of our principles has been learned from experience by children's nurses, and the female healers of Corybantic troubles. You know, when mothers want to put fractious babies to sleep, the remedy they exhibit is not stillness, but its very opposite, movement—they regularly rock the infants in their arms—and not e silence, but a tune of some kind; in fact they, so to say, put a spell on their babies just as the priestess does on the distracted in the Dionysiac treatment, by this combination of the movements of dance and song.

CLINIAS: And pray, sir, what explanation are we to give of these facts?

ATHENIAN: Why, the explanation is not far to seek.

CLINIAS: But what is it?

ATHENIAN: Both disturbances are forms of fright, and fright is due to some morbid condition of soul. Hence, when such disorders are treated by rocking movement the external motion thus exhibited dominates the internal, which is the source of the fright or frenzy. By 791 its domination it produces a mental sense of calm and relief from the preceding distressing agitation of the heart, and thus effects a welcome result in both cases, the induction of sleep in the one, in the other—that of patients who are made to dance to the flute in the ritual of the deities to whom sacrifice is done on these occasions—the substitution of sanity for their temporary state of distraction. This, b though a brief and summary, is a plausible account of the matter.

CLINIAS: Indeed, most plausible.

ATHENIAN: That these methods have such effects should lead us to recognize that a mind subjected from its early days to such frights will be all the more likely to contract a habit of fearfulness; now everyone will admit that this is tantamount to a training not in courage, but in timidity.

CLINIAS: Surely.

ATHENIAN: Whereas it will be granted that the contrary course, that of mastering our frights and alarms as they arise, is a life- c long discipline in courage.

CLINIAS: Very true.

ATHENIAN: Why then, here, we may say, is one important element in virtue of soul to which this exercising of infants by movement is contributory.

CLINIAS: Yes, certainly.

ATHENIAN: Furthermore, the encouragement of placidity of temper will play a prominent part in the development of moral excellence, and that of a fretful temper in that of vice.

CLINIAS: Unquestionably.

- d ATHENIAN: So we must try to explain the way by which either may be induced in the newborn child at pleasure, so far as the means of effecting such results lie in our power.

CLINIAS: To be sure we must.

ATHENIAN: Then—to state the conviction which I share—while spoiling of children makes their tempers fretful, peevish, and easily upset by mere trifles, the contrary treatment, the severe and unqualified tyranny which makes its victims spiritless, servile, and sullen, renders them unfit for the intercourse of domestic and civic life.

- e CLINIAS: But pray how should the authority of the state be brought to bear on the nurture of creatures who as yet cannot understand human speech, and are wholly incapable of education.

ATHENIAN: Why, much in this fashion I believe. Newborn creatures, especially newborn human beings, have from the very first a way of screaming, and the human infant in particular is given not only to screaming but to tears.

CLINIAS: Very true.

- 792 ATHENIAN: So when the nurse would discover its desires she guesses from these indications what to offer it; if the child is quiet when something is offered it, she thinks she has found the right thing, but the wrong if it cries and screams. Thus, you see, the baby's likes and dislikes are disclosed by these ominous signals, its tears and screams; this holds good for a period of no less than three years, no inconsiderable part of one's life to be spent ill or well.

CLINIAS: Just so.

- b ATHENIAN: Now a man of peevish and melancholy temper will be given to self-pity and commonly more prone to complaining than a good man should be. I take it you will both admit this?

CLINIAS: I certainly shall.

ATHENIAN: Well, then, if we employ all our ingenuity to keep our growing child all through these three years from the experience of distress, alarms, and, so far as possible, pain itself, the growing soul is all this time being rendered more cheerful and gracious. Do you not think so?

- c CLINIAS: Not a doubt of it, sir—above all, if we provide it with plenty of pleasures.

ATHENIAN: My dear sir! That is just where Clinias and I must part. The course you propose to us is the most mischievous we could possibly take, because the mischief is systematically introduced at the starting point of the process of growth. Let us see whether I am not right.

CLINIAS: Pray unfold your meaning.

ATHENIAN: Why, I mean that the point now at issue between you and me is of no light consequence. So you must consider it too, Megillus, and help us to a decision. My own contention is that the right road in life is neither pursuit of pleasure nor yet unqualified avoidance of pain, but that contentment with the intermediate condition to which I have just given the name of *graciousness*—a state which we all, on the strength of an oracular saying, plausibly assign to God himself. It is this habit of mind, I maintain, which must likewise be pursued by the man who would be like God; he must not fling himself headlong into the quest for pleasures, or forget that he, too, will have his share of pains, nor yet must we let him suffer such behavior in another, man or woman, old or young, and least of all, so far as he can help it, in the newly born, for that is the age at which it is most strictly true that character is made by habit. Why, if I did not apprehend I should be taken to be jesting, I would go still further. I would enjoin that special watch should be kept over our pregnant women during the year of their pregnancy to guard the expectant mother against the experience of frequent and violent pleasures—or pains either—and ensure her cultivation of a gracious, bright, and serene spirit.

CLINIAS: You need not, sir, put it to Megillus which of us has more of the truth on his side. Frankly and freely I make the admission that all of us must avoid a life of untempered pain or pleasure, and steer a middle course in everything. Here is the proper answer to your very proper speech.

ATHENIAN: And an admirably true one, Clinias. Then let us, all three, turn our thoughts to a further point.

CLINIAS: Which is?

ATHENIAN: That all we are now discussing is nothing other than what mankind at large call the unwritten law; it is the whole body of such regulations, and nothing else, to which they give the name, law of our forefathers. Further, we were quite right in the conviction borne in on us by our recent talk that such traditions should neither be designated laws nor left unformulated. They are the mortises of a constitution, the connecting links between all the enactments already reduced to writing, and preserved by it, and those yet to be recorded, a true corpus of ancestral and primitive tradition which, rightly instituted and duly followed in practice, will serve as a sure shield for all the statutes hitherto committed to writing, while if they once swerve from the right bounds, it is as when a builder's supports give and subside under his edifice. The result is a general collapse of one part upon another, substructure and all that has been so admirably built upon it alike, when once the original supports have fallen. We must keep this in mind, Clinias, and do all we can to rivet your city together, while it is still in its inception, with no avoidable omission, major or minor, of anything that may be called law, a

custom, or usage; all are the rivets of society, and the one sort will not be permanent without the other. Thus we must not be surprised if the bulk of our legislation should be somewhat swelled by a torrent of numerous and—supposedly—petty traditional practices and customs.

CLINIAS: To be sure you are right, and we will not forget the caution.

ATHENIAN: Then until the age of three has been reached by boy or girl, scrupulous and unperfunctory obedience to the instructions  
 e just given will be of the first advantage to our infantile charges. At the stage reached by the age of three, and the after ages of four, five, six, play will be necessary, and we must relax our coddling and inflict punishments—though not such as are degrading—as we were saying  
 794 in the case of slaves that we should neither inflame the culprit by brutal punishments nor spoil a servant by leaving him uncorrected, so we must adopt the same course with the freeborn. And for their play, there are games which nature herself suggests at that age; children readily invent these for themselves when left in one another's company. All children of the specified age, that of three to six, should first be collected at the local sanctuary—all the children of each village being thus assembled at the same place. Further, the nurses are to have an eye to the decorum or indecorum of their behavior; as for that of the nurses themselves and the whole group, it must be subjected, in each case, for the year to the control of one of the already-  
 b mentioned matrons to be assigned by the curators of the laws. These matrons are to be elected, one for each tribe, by the ladies charged with the supervision of marriages, and must be of the same age with them. It will be the official duty of a person so appointed to pay a daily visit to the sanctuary, and to chastise any offender—if a slave or alien of either sex, by the hand of some public menial, if a citizen who disputes the justice of the correction, she shall bring him before the court  
 c of the urban commissioners, but where there is no dispute, she shall punish even a citizen on her own authority. When the age of six has been passed by either sex, there shall henceforth be a separation of the sexes—boys now being made to associate with boys, and girls with girls—and it shall be time for both to turn to their lessons, the boys being sent to instructors in riding, archery, the management of the dart and sling—the girls may share in the instruction if they  
 d please—but, above all, in the use of spear and shield. To be sure, the prevalent notion about these matters rests on an all but universal misunderstanding.

CLINIAS: What notion?

ATHENIAN: The belief that there is a real and natural difference in the serviceability of either hand for various actions, though, in fact, where the feet and lower limbs are concerned, there is no such  
 e difference in capacity to be detected; it is only the folly of nurses and mothers to which we owe it that we are all, so to say, lame of one

hand. Nature, in fact, makes the members on both sides broadly correspondent; we have introduced the difference between them for ourselves by our improper habits. No doubt in actions of no particular importance the practice is immaterial—as for example, that the player should hold his lyre in the left hand and his plectrum in the right, and the like—but to make these cases, without any necessity, precedents for others, is fairly foolish. This is illustrated by the practice of the Scythians, who do not confine the left hand to the drawing back of the bow and the right to the stringing of the arrow, but employ both alike for both purposes, and there are many other examples from the driving of chariots and other sources which may teach us how unnatural are the devices by which it is contrived to make a man's left weaker than his right. Now, as I said, this is no great matter when one is concerned with a plectrum of horn, or some similar implement, but it makes all the difference when one comes to deal with the iron implements of warfare, bows and arrows, javelins, and the rest, and most of all when spear and shield must be plied against shield and spear. And there is all the difference in the world between one who has learned his lesson, and one who has not, one who is well trained, and one who is not trained at all. A man who has practiced the pancratium, or boxing, or wrestling to perfection does not find himself incapable of fighting with his left; he does not halt or make ungainly lunges if his opponent drives him to shift his position and bring that side of his body into play. Well, I take it, it should similarly be expected as the proper thing, in swordplay and all other cases, that a man who has two sets of members for defense and attack should leave neither set unpracticed or untaught, so far as he can help it. Why, if a man should be born with the physique of a Geryon, or a Briareus, if you like, he ought to be able to throw a dart with every one of his hundred hands. All this must be the care of officers of both sexes, the women undertaking the superintendence of the games and meals, the men being responsible for the instruction, so that all our boys and girls may grow up ambicrural and ambidextrous, their native endowments suffering no preventable distortion through acquired habit.

Their instruction may be said to fall, for practical purposes, under two heads, *physical culture*, which is concerned with the body, and *music*, which aims at mental excellence. *Physical culture*, again, has two branches, *dancing* and *wrestling*. One department of dancing is the presentation of works of poetical inspiration with the care for the preservation of dignity and decorum; the other, which aims at physical fitness, nobility, and beauty, ensures an appropriate flexure and tension in the actual bodily limbs and members, and endows them all with a grace of movement which is incidentally extended to every form of the dance and pervades all intimately. To come to *wrestling*, the devices introduced into their systems by Antaeus or Cercyon—or again into boxing by Epeus or Amycus—from mere idle vainglory, are

useless in encounters in the field and unworthy of celebration. But anything which comes under 'stand-up wrestling,' exercises in the disengaging of neck, arms, and ribs which can be practiced with spirit and gallant bearing to the benefit of strength and health, is serviceable  
 b for all occasions and may not be neglected. When we come to the appropriate place in our code we shall make it an injunction to our pupils and their prospective teachers alike that all such knowledge shall be generously imparted on the one side and gratefully received on the other. Nor again, must we neglect the presentation of appropriate choric action, the armored sports sacred in this island to the Curetes and at Lacedaemon to the heavenly twins. The virgin queen of my own country, too, I may remark, who delights in this choric pastime, deemed it wrong to disport herself with empty hands, and right to perform her dance in all the splendor of full battle array. It will certainly  
 c be most proper that our boys and girls should copy these models in courting the favor of the goddess, both for their usefulness in war and for the embellishment of our festivals. Moreover, it will be obligatory on the boys, from the very first until they reach the age of liability to service in the field, to be equipped with arms and horses in every festal procession with which they honor a god; their litanies to gods and  
 d sons of gods shall always be accompanied by a march or dance, quick or slow. Besides, their matches and practices for matches must have the same objects and no others. Such competitions, in fact, are, in war and in peacetime, beneficial alike to the community and the individual household, whereas other physical exercises, playful or serious, are not for freeborn men.

I have now fairly described such a course of physical training as I said at first we should have to examine; the entire scheme is now  
 e before you. If either of you can propose a better, it is for you to lay it before us.

CLINIAS: Nay, sir, if we reject these proposals, it will be hard to devise a better plan of physical training and athletic contests.

ATHENIAN: As for the subject which naturally comes next, the gifts of Apollo and the Muses, we thought at first that we had said all there is to be said, and had only the treatment of bodily training still left on our hands, but now it is plain both what must be said of it to everyone, and that these things should be said to them before anything else.

797 CLINIAS: Aye, to be sure they should.

ATHENIAN: Then I will ask you to give me your attention. It is true you have done so once already; still, speaker and hearer alike are called on to show the greatest caution in dealing with a startling paradox, above all in the present case. I feel some misgivings in advancing the thesis I shall lay before you; still, I will take heart as best I may not to flinch from it.

CLINIAS: And what is your thesis, sir?

ATHENIAN: Why, as to this matter of children's games I maintain that our communities are sunk in a universal ignorance; it is not seen that they have a decisive influence on the permanence or impermanence of a legislation once enacted. Where there is prescription on this point, where it is ensured that the same children shall always <sup>b</sup> play the same games in one and the same way, and get their pleasure from the same playthings, the regulations in more serious matters too are free to remain undisturbed, but where there is change and innovation in the former, incessant variation of all sorts and perpetual fluctuation in the children's tastes; where they have no fixed and settled standard of what is pretty or the reverse in their own bearing and movements, or in the pattern of their toys, where the inventor and in- <sup>c</sup> troducer of an innovation in pattern, color, or the like is always held in particular esteem—how truly may we say society can suffer from no worse pest. Such a man is constantly changing the young folks' character behind your back; he teaches them to despise the old-fashioned and worship novelty. Once more I say, there can be no graver danger to any society than such language and such notions. Pray let me explain how serious this evil is.

CLINIAS: You mean the evil of public dissatisfaction with the <sup>a</sup> ancient fashions?

ATHENIAN: That and nothing else.

CLINIAS: Why, we of all men are least likely to turn a deaf ear to that plea. We shall listen in the most friendly spirit.

ATHENIAN: So I should anticipate.

CLINIAS: Speak on, then.

ATHENIAN: Come, then, let us rise above ourselves, as listeners or speakers, as we plead the case thus. Change—except when it is change from what is bad—is always, we shall find, highly perilous, whether it be change of seasons, of prevailing winds, of bodily regimen, of mental habit, or, in a word, change of anything whatever <sup>e</sup> without exception, except in the case I have just mentioned, change from bad. Thus, if we consider our body and the way it can familiarize itself with any kind of food or drink or exertion—how, though they may upset it at first, in time their very use leads to the formation of flesh akin to themselves, and so the body is reconciled to its scheme of regimen, grows familiar and at home with it, and enjoys a life of pleasure and health; how, if it should be compelled to change again to <sup>798</sup> some approved regimen, the man is at first upset by disorders and only recovers slowly as he once more becomes familiarized with his diet—why, we can but suppose the same thing takes place with men's under-standings and souls. When men have been brought up under any system of laws and that system has, by some happy providence, per- <sup>b</sup> sisted unchanged for long ages, so that no one remembers or has ever heard of a time when things were otherwise than as they are, the whole soul is filled with reverence and afraid to make any innovation

on what was once established. A lawgiver, then, must contrive one device or another to secure this advantage for his community, and here is my own suggestion toward the discovery. They all suppose, as we were saying, that innovation in children's play is itself a piece of play and nothing more, not, as it is in fact, a source of most serious and  
 c grievous harm; hence they make no attempt to avert such changes, but compliantly fall in with them. They never reflect that these boys who introduce innovations into their games must inevitably grow to be men of a different stamp from the boys of an earlier time, that the change in themselves leads to the quest for a different manner of life, and this to a craving for different institutions and laws, and thus none of them is apprehensive of the imminent consequence, of which we  
 d just spoke as the worst misfortune for a community. A change in other respects, in mere external forms, would, of course, do less mischief, but frequent modifications of moral approbation and disapprobation are of all changes the gravest and need to be most anxiously guarded against.

CLINIAS: Yes, of course.

ATHENIAN: Well, then, are we, or are we not, still of the same mind as before, when we said that rhythms and music generally are a reproduction expressing the moods of better and worse men?

e CLINIAS: Our conviction on the point remains exactly what it was.

ATHENIAN: Every means, then, shall we say, must be employed to keep our children from the desire to reproduce different models in dance or song, as well as to prevent a possible tempter from offering them the inducement of a variety of delights?

CLINIAS: Perfectly true.

799 ATHENIAN: Well, can any of us find a better device for this purpose than that employed in Egypt?

CLINIAS: And what is that?

ATHENIAN: Why, the plan is to consecrate all our dances and all our tunes. First, the festivals must be fixed by compiling an annual calendar to show what feasts are to be celebrated, at what dates, and in honor of what deities, sons of deities, or spirits, respectively. Next, certain authorities must determine what hymn is to be sung on the feast of each divinity, and by what dances the ceremony of the day is to be graced. When this has been determined, the whole citizen body  
 b must do public sacrifice to the Destinies and the entire pantheon at large, and consecrate each hymn to its respective god or other patron by solemn libation. If any man tries to introduce hymn or dance into the worship of any deity in contravention of these canons, the priests of either sex, acting in conjunction with the curators of law, shall have the warrant both of religion and law in excluding him from the festival; if the excluded party declines to submit to this excommunica-

tion, he shall for life be liable to indictment for impiety at the instance of any who cares to institute proceedings.

CLINIAS: And rightly so.

ATHENIAN: Then, now we are upon this subject, we must be careful to act as becomes us.

CLINIAS: What have you in mind?

ATHENIAN: When a young man—not to say an elderly man—has seen or heard something out of the common and quite unfamiliar, he will not be likely to rush on a solution of the puzzle all in a moment. He is more likely to stop short, as a man, traveling alone or in company, who has come to a crossroad and is none too sure of his way, will stop and question himself or his companions about his difficulty, and refuse to take a step farther until he has formed a pretty definite opinion whither the road is leading. Now that is exactly what we should do at this point. The point of jurisprudence which has now arisen is a singular one, and we are bound, of course, to investigate it thoroughly; men of our years must not lightly insist that we can off-hand make a confident pronouncement about it.

CLINIAS: Very true.

ATHENIAN: So we will take our time over the question, and only decide it after searching investigation. Still, we do not wish the completion of the regulations which belong to our legislation on the topic before us to be interrupted to no good purpose, and so we will go on with them to the end. Perhaps, indeed, by the kindness of providence, when the complete recital reaches its end, it will incidentally provide the answer to our present problem.

CLINIAS: A good suggestion, sir. Let us act on it.

ATHENIAN: Well, then, let us, I say, take the paradox as granted. Our songs have become *canons*, as the men of earlier times seem to have given some such name to melodies for the harp—thus perhaps they too were not altogether strangers to the idea. Someone 800 presumably divined the truth in his dreams, or possibly in a vision of waking life. In fine, let us assume a clause on the subject of the following effect. No man shall contravene the public standards of song, ritual, or choric performance of the young at large, whether by vocal utterance or by movement in the dance, any more than he would any other of our canons. Conformity shall be clear of the law; nonconformity shall be visited with penalties by curators of law and priests of either sex as before enjoined. May we now take this point as settled? b

CLINIAS: We may.

ATHENIAN: Then what sort of legal rules can a man lay down on such matters without exposing himself to sheer derision? Here is a further point it will be relevant to consider. Our safest course will be to begin by imagining a few typical cases, and as one such case I propose the following. Suppose sacrifice has been offered and the victims

burned as law directs, when some worshiper—a son or a brother—in the immediate presence of the altar and the offering upon it, breaks out into downright blasphemy. The utterance, may we not say, will  
 c fill his father and the rest of the group of kinsmen with dismay, forebodings, and gloomy apprehensions?

CLINIAS : To be sure it will.

ATHENIAN : Now that is precisely what happens in pretty nearly all societies in our own world. A magistrate has just offered sacrifice in the name of the public when a choir, or rather a number of choirs, turn up, plant themselves not at a remote distance from the altar, but, often enough, in actual contact with it, and drown the solemn ceremony with sheer blasphemy, harrowing the feelings of their audience with their language, rhythms, and lugubrious strains, and the choir which is most successful in plunging the city which has just offered sacrifice into sudden tears is adjudged the victor. Surely our vote will be cast against such a practice. If there is really any need for our citizens to listen to such doleful strains on some day which stands  
 d e accursed in the calendar, surely it would be more proper that a hired set of performers should be imported from abroad for the occasion to render them, like the hired minstrels who escort funerals with Carian music. The arrangement, I take it, would be equally in place in performances of the sort we are discussing, and I may add—to dismiss the topic as briefly as may be—that the appropriate costume for these dirges would not be garlands and cloth of gold, but the very opposite. The only question I want us to ask ourselves once more is whether we are satisfied that our first typical rule for hymnody should be . . .

CLINIAS : Should be what?

801 ATHENIAN : That of auspiciousness of language. Indeed, may we lay it down that our hymnody must be wholly auspicious in every particular? Or perhaps I need not repeat the question, but may simply impose the rule.

CLINIAS : Out of doubt, you may do so; the proposal is carried by a unanimous vote.

ATHENIAN : Then what shall our second regulation be? That there must always be a prayer to the gods to whom sacrifice is being done?

CLINIAS : Obviously.

ATHENIAN : And a third, I take it, must be that our poets must  
 b understand that a prayer is a request made to a god, and should therefore be scrupulously careful not inadvertently to ask for a curse in mistake for a blessing. To offer such a petition, you know, would be a ridiculous proceeding.

CLINIAS : Of course.

ATHENIAN : Now we satisfied ourselves, I believe, a little while ago that wealth of silver or gold must have neither sanctuary nor abode in our city.

CLINIAS : To be sure we did.

ATHENIAN : Now what principle, we may ask, did that statement illustrate? Was not the implication that poets are not quite the most competent judges of good and evil? Hence a poet who goes wrong in language or melody on this point—that of praying for the wrong thing—will of course lead our citizens to transgress our regulations in their prayers for things of supreme moment, though, as we just said, it would be hard to find a more serious error. Shall we then add another typical regulation about music to this effect?

CLINIAS : But to what effect? We should be glad of a clearer statement.

ATHENIAN : No poet shall compose anything in contravention of the public standards of law and right, honor and good, nor shall he be at liberty to display any composition to any private citizen whatsoever until he has first submitted it to the appointed censors of such matters and the curators of law, and obtained their approval. These censors we have to all intents appointed by our election of legislators for music and a superintendent of education. Well then—to repeat the question—shall this be taken as our third example of a typical regulation, or what do you say?

CLINIAS : Why, of course it shall.

ATHENIAN : This matter once determined, the gods may be properly addressed in hymns and strains of mingled praise and petition; under them, spirits and heroes may similarly receive the prayers and praises appropriate to them.

CLINIAS : Certainly.

ATHENIAN : And next, we may now proceed straightaway, without any occasion for scruples, to the following regulation. Such citizens as have brought to an end a life of honorable and arduous physical or mental achievements and obedience to law shall be deemed fitting recipients for our praises.

CLINIAS : Why, of course.

ATHENIAN : As for those still living, it is perilous to award the honor of praises and hymns until the whole course of life has been crowned by a glorious end. All these distinctions shall be awarded alike to persons of either sex who have been illustrious for their goodness. The regulations for the songs and dances should be determined in the following way. The music of earlier times is rich in fine old poems, and similarly also in dances for the body, from which we shall be perfectly free to select whatever is appropriate and suitable for the society we are instituting. The selection should be made by appointing a number of triers of not less than fifty years of age; old poems pronounced satisfactory shall be accepted, while any that are judged to be defective, or wholly unsuitable, shall in the one case be simply rejected, in the other, revised and corrected, with the aid of advice from experts in poetry and music. While we shall make full use of the

poetical gifts of these experts, we shall not, except in a very few cases, trust to their tastes or preferences, but make ourselves interpreters of the legislator's intentions, and construct the whole scheme of dance, c song, and choric activity in the closest conformity to their purport. Any unregulated pursuit of music is infinitely improved by being subjected to system, even without any addition of musical sweetmeats; delight is something which can be provided by all styles alike. If a man has from childhood to the age of sobriety and discretion been familiar with austere, classical music, he is repelled by the sound of the opposite kind and pronounces it unmanly; if brought up on music of the popular, cloying kind, he finds its opposite frigid and displeasing. Thus, as I was saying, neither type has any advantage or disadvantage over the other in respect of pleasing or displeasing, and there is the additional consideration that the one regularly makes those who are brought up on it better men, the other worse.

CLINIAS : Perfectly true.

ATHENIAN : It will further be necessary to make a rough general distinction between two types of songs, those suited for females and those suited for males, and so we shall have to provide both with their appropriate scales and rhythms; it would be a dreadful thing that the whole tune or rhythm of a composition should be out of place, as it will be if our various songs are inappropriately treated in these respects. So we shall further have to legislate on these points, at any rate in general outline. Now it is perfectly possible to make the necessary regulations for both kinds of songs in both respects, but what music should be assigned to females is indicated by the actual natural distinction of sex, which should therefore be our basis for discrimination. Accordingly, we shall pronounce the majestic and whatever tends to valor masculine, while it will be the tradition of our law and our theory alike that what makes rather for order and purity is peculiarly feminine. So much, then, for our regulations. We must 803 next deal with the imparting of instruction in these subjects—how the teaching in the various departments is to be given, to whom, and at what times. The shipwright, you know, begins his work by laying down the keel of the vessel and indicating her outlines, and I feel myself to be doing the same thing in my attempt to present you with b outlines of human lives answering to types of character. I am really laying the keels of the vessels by due consideration of the question by what means or manner of life we shall make our voyage over the sea of time to best purpose. To be sure, man's life is a business which does not deserve to be taken too seriously; yet we cannot help being in earnest with it, and there's the pity. Still, as we are here in this world, no doubt, for us the becoming thing is to show this earnestness in a suitable way. But I may probably be met—and very properly met—here by the question, What on earth do you mean?

CLINIAS : You certainly may.

ATHENIAN: Why, I mean we should keep our seriousness for c  
serious things, and not waste it on trifles, and that, while God is the  
real goal of all beneficent serious endeavor, man, as we said before,  
has been constructed as a toy for God, and this is, in fact, the finest  
thing about him. All of us, then, men and women alike, must fall in  
with our role and spend life in making our *play* as perfect as possible—  
to the complete inversion of current theory.

CLINIAS: Inversion? In what way? d

ATHENIAN: It is the current fancy that our serious work should  
be done for the sake of our play; thus it is held that war is serious work  
which ought to be well discharged for the sake of peace. But the truth  
is that in war we do not find, and we never shall find, either any real  
play or any real education worth the name, and *these* are the things I  
count supremely serious for such creatures as ourselves. Hence it is  
peace in which each of us should spend most of his life and spend it  
best. What, then, is our right course? We should pass our lives in the  
playing of games—*certain* games, that is, sacrifice, song, and dance— e  
with the result of ability to gain heaven's grace, and to repel and van-  
quish an enemy when we have to fight him. What sort of song and  
dance will effect both results has partly been stated in outline. The  
path has, so to say, been cut for us, and we should walk in it, in as-  
surance that the poet was right when he said,

Search, for some thoughts, thine own suggesting mind,  
And others, dictated by heavenly power,  
Shall rise spontaneous in the needful hour.  
For nought unprosperous shall thy ways attend,  
Born with good omens, and with heaven thy friend.<sup>10</sup>

804

Our nurslings, too, must be of the poet's mind. They must be-  
lieve that what we have said has been sufficient for its purpose, and  
that, for the rest, they will be visited by promptings, superhuman and  
divine, as to their sacrifices and dances, suggestions as to the several b  
gods in whose honor, and the several times at which, they are to play  
their play, win heaven's favor for it, and so live out their lives as what  
they really are—puppets in the main, though with some touch of re-  
ality about them, too.

MEGILLUS: I must say, sir, you have but a poor estimate of our  
race.

ATHENIAN: Do not be amazed by that, Megillus. Bear with me.  
I had God before my mind's eye, and felt myself to be what I have just  
said. However, if you will have it so, man shall be something not so  
insignificant but more serious. c

To proceed with our subject, we have already arranged for three  
public schools with attached training grounds within the city, and

<sup>10</sup> *Odyssey* 3.26 sq.

three training grounds and ample exercising grounds outside it for horses, suitably equipped for the use of the bow and other long-range weapons, where our young people may both learn and practice these accomplishments; or if adequate arrangements have not been already made they must be introduced into our theory and the corresponding

d code at this point. They shall all be adequately staffed with paid resident and salaried masters in the various subjects, who must be non-citizens, and must give a complete course of instruction alike in the arts of war and in that of music to the boys who attend their classes. A boy is not to attend if his father so desires, but otherwise to be exempted from this education. Education is, if possible, to be, as the phrase goes, compulsory for every mother's son, on the ground that the child is even more the property of the state than of his parents.

e And, mind you, my law will apply in all respects to girls as much as to boys; the girls must be trained exactly like the boys. And in stating my doctrine I intend no reservation on any point of horsemanship or physical training, as appropriate for men but not for women. In fact, I give full credit to the tales I have heard of ancient times, and I actually know that at the present day there are untold thousands, one may fairly say, of women living round the Black Sea—Sarmatian

805 women, they are called—on whom not horsemanship only but familiarity with bows and other weapons is enjoined no less than it is on their husbands, and by whom it is equally cultivated. Besides, here is a consideration I would submit to you. If such results are feasible, then I say the present practice in our own part of the world is the merest folly; it is pure folly that men and women do not unite to follow the same pursuits with all their energies. In fact, almost every one of our cities on our present system, is, and finds itself to be, only

b the half of what it might be at the same cost in expenditure and trouble. And yet, what an amazing oversight in a legislator!

CLINIAS: Why, so it would seem, sir, though a good many of our present proposals are at variance with our customary systems. However, your proposal to let the argument take its course, and not to decide on our verdict until it has reached its end, was most apposite—and in view of it, I feel self-condemned for my present observation. So pray go on with your exposition according to your own mind.

c ATHENIAN: Well, Clinias, my mind, as I have already said, is that if the feasibility of our proposals had not been sufficiently established by actual facts, there might have been some ground for disputing the theory. As it is, an opponent who refuses our proposal a hearing must surely take a different line. Such tactics will not deter us from insisting on our principle that there must be the completest association of the female sex with the male in education as in everything else. In fact, we may treat the matter from some such stand-

d point as this. If women are not to take their part along with men in all

the business of life, we are bound, are we not, to propose some different scheme for them?

CLINIAS: To be sure we are.

ATHENIAN: And which of the various systems now recognized can we prefer to the comradeship we are just imposing on them? The system followed by the Thracians and many other peoples, that the women till the fields, look after the flocks and herds, and perform menial offices, exactly like slaves? Or the practice universal in our own part of the world? You know what our own customs in this matter are. We 'pack' all our belongings, as the phrase goes, 'into one' house, and make over to our women the control of the store closet and the superintendence of the spinning and woolwork at large. Or should we perhaps vote for the *via media*, which you take, Megillus, in Laconia? Your women are expected in their girlhood to take their share in physical training and music. When they have grown up, they have no woolwork to occupy them, but you expect them to contrive a composite sort of life, one that calls for training and is far from being unworthy or frivolous, and to go halfway with the work of medicine chest, store chamber, and nursery, but to take no share in the business of war. The consequence is that if circumstances should ever force them to a fight for their city and their children, they would prove quite unequal to playing an expert's part with the bow, like Amazons, or any other missile weapon. They could not, could they, even copy our goddess by taking up spear and shield with the mien of doughty protectors of a harried motherland, and so strike an invader with alarm, if with nothing more, by their appearance in martial formation? As for the Sarmatian women, yours, while they lead the life they do, would never venture on imitating them at all; by comparison with women like yours, theirs would pass for men. Let him who will applaud your legislators in this matter. I can only speak as I think. A legislator should be thorough, not halfhearted; he must not, after making regulations for the male sex, leave the other to the enjoyment of an existence of uncontrolled luxury and expense, and so endow his society with a mere half of a thoroughly felicitous life in place of the whole.

MEGILLUS: What are we to do, Clinias? Must we suffer our visitor to run Sparta down in our hearing like this?

CLINIAS: Indeed we must. We allowed him full liberty of speech, and so we must let him alone until our review of our legislation has fairly reached its completion.

MEGILLUS: I own you are right.

ATHENIAN: Then it is for me to proceed once more with my exposition.

CLINIAS: Yes, certainly.

ATHENIAN: What, then, should life be like with men whose

necessities have been moderately provided for, their trades and crafts put into other hands, their lands let out to villeins who render  
 e from the produce such rent as is sufficient for sober livers—men, moreover, furnished with common dining halls, some for themselves, others near at hand for the members of their families, their daughters and their daughters' mothers, under presidents of either sex, whose  
 807 appointed function is daily to dismiss the tables after review and inspection of the conduct of the company, and thereafter, libation first duly made by the president and the company to the gods to whom that night and day stand consecrate, so to betake themselves home to bed? When they have been so provided is there no necessary and wholly proper work left them to do? Is each man of them to pass his time fattening himself like a stalled ox? No, I say, it were neither right nor seemly nor yet possible that he who lives so should miss his  
 b proper destiny, that of an idle, sluggish, fattened beast—which is commonly to be the prey of some other beast, one worn to bitter leanness by risks and exertions. Now if we are going to look for an exact realization of our scheme, as we have styled it, it will perhaps never be found, so long as there are private wives, children, and houses, and each of us has his private belongings of all sorts. Still, if we can secure the second-best conditions, which we are now describing, we shall indeed come off well enough.

c But there is, I maintain, a work left for men who lead this life, and that none of the most trivial or meanest; righteous law has appointed them to the gravest work of all. The life of the aspirant to victory at Olympia or Pytho leaves no leisure for any other tasks whatever, and there is a double, or more than double, glut of occupation in the life we have rightly described as concerned with the practice of  
 d every virtue of body and mind. No other business can be allowed to come in as a by-end and hinder the provision of needful exercises and regimen for the body, nor of necessary studies and habitual discipline for the mind; the whole day and night is verily not long enough for one who is engaged on this sole work of getting the full and perfect benefit from these pursuits. Now, since this is so, every free citizen will need an ordered disposition of all his hours; he must begin with it at daybreak, and follow it without any intermission until the succeeding dawn and sunrise. A legislator, to be sure, will show lack of  
 e dignity if he stoops to a multitude of little trivial directions about household arrangements, and among them to the restrictions on sleep proper in a population which will have to keep perpetual and diligent watch over its whole city. In fact, that any citizen whatsoever should spend the whole of any night in unbroken sleep, and not let all his servants see him always awake and astir before anyone else in the  
 808 house, must be unanimously pronounced a disgrace and an act unworthy of a free man, whether such a regulation should be regarded as law or as custom. In particular, that the mistress of a house should

be called by her maids in the morning, and not get up first herself and wake them, and the whole building itself, if only that were possible, that is what every servant, man, woman, or boy, must cry shame on. Much of the business of public and household life should certainly be done in the night hours saved from sleep by the state officials and by the masters and mistresses at home. Overmuch sleep, indeed, is naturally as unsuitable to us in body and mind as it is incongruous with business of all these kinds. In fact, a man asleep is of no more account than a corpse. He who sets most store on vital and mental activity keeps awake all the hours he can, only reserving for sleep what his health requires, and this is not much, when the habit has been well established. And public officials who are awake betimes by night are no less a source of fear to evildoers, whether enemies or citizens, and of awe and reverence in the righteous and virtuous than of benefit to themselves and their whole community.

So much, then, for night, and we may add to what we have said that to spend it in this fashion will further promote the spirit of courage in the souls of citizens of all sorts. With the return of day and dawn, the boys should betake themselves to school. And just as sheep, or any other creatures, cannot be allowed to live unshepherded, so neither must boys be left without the care of attendants, nor slaves without that of a master. Now of all wild young things a boy is the most difficult to handle. Just because he more than any other has a fount of intelligence in him which has not yet 'run clear,' he is the craftiest, most mischievous, and unruliest of brutes. So the creature must be held in check, as we may say, by more than one bridle—in the first place, when once he is out of the mother's and nurse's hand, by attendants to care for his childish helplessness, and then, further, by all the masters who teach him anything, and, as befits a freeborn man, by the teaching he gets. But further chastisement, as befits a slave, shall be inflicted on the boy and his attendant and teacher as well, by any free person in whose presence he commits any of these faults. If such a person omits to inflict the due correction, he shall, in the first place, be held to have disgraced himself most deeply. Also, the curator of law appointed to take control of boys shall take cognizance of the party who is present at an offense of the sort we are dealing with without imposing the necessary correction; this magistrate must be a man of keen vision, thoroughly devoted to his work of supervising the training of the boys, who will guide their native dispositions into right ways, always directing them to the good and lawful.

But, now, as to this minister himself, how is he to be sufficiently instructed by the lips of our law? For so far, its utterances have been neither clear nor full, but only partial, though where he is concerned, the law must make no omission it can help, but impart its whole doctrine to him, that he may so prove interpreter and foster father to others. Now we have dealt already with the choric art—song and dance,

that is. We have said what types of these should be selected or corrected, and consecrated, but as for writings without meter, which of them may be put in the hands of your charges and on what terms, that, most worthy director of education, you have not been told. You have indeed been informed what their military lessons and exercises must be. But what must they know, first of letters, and next of the lyre and of ciphering, of which we said all must master what is needful for war, domestic business, or civil administration, as well as such knowledge of the courses of the heavenly bodies—sun, moon, planets—as is useful for these same ends, in so far as any city is bound to deal with the matter? What matter, you say? The grouping of days into monthly periods, and months into the year in such fashion that the seasons with their sacrifices and feasts may fit into the true natural order and receive their several proper celebrations, and the city be thus kept alive and alert, its gods enjoying their rightful honors and its men advancing in intelligence of these matters. These, my friend, are questions to which the legislator has as yet given you no full and sufficient answer. Give diligent heed, then, to what is now to be said.

Your instructions, we have said, are deficient, in the first place, as to reading and writing. Now what is the defect of which we complain? It is that you have so far not been told whether the lad who would be a decent citizen must attain to finished mastery of the study, or must leave it wholly alone, and the same is true of the lyre. Well, we tell you now that these studies must not be left alone. For reading and writing three years or so, from the age of ten, are a fair allowance of a boy's time, and if the handling of the lyre is begun at thirteen, the three following years are long enough to spend on it. No boy and no parent shall be permitted to extend or curtail this period from fondness or distaste for the subjects; to spend either more or less time upon them shall be an infraction of the law, and the disobedience shall be visited by exclusion from the school distinctions we shall shortly describe. But what more specifically is to be learned by the children and taught by their masters during these years? That is the very question to which you are first to hear our answer. They must, of course, carry their study of letters to the point of capacity to read and write, but perfection of rapid and accomplished execution should not be insisted on in cases where the natural progress within the prescribed term of years has been slower. As to the study of written compositions without musical accompaniment, whether written in meter or without rhythmical subdivisions—in fact, compositions in simple prose with no embellishments of rhythm or melody—difficult problems are raised by some of the works bequeathed to us by our numerous authors in this kind. How then will you deal with them, reverend curators of law? Or what would be the right injunction for the legislator to lay upon you as to their treatment? I can conceive they will cause him no little perplexity.

CLINIAS: Pray, sir, what is the difficulty, for it is plain you speak with a real sense of a personal difficulty?

ATHENIAN: I do, indeed, Clinias. You are right there. But you and your friend are my colleagues in this juristic discussion, and so I am bound to tell you frankly where I see difficulties and where I see none.

CLINIAS: Well, and why do you mention the point just now? d What is the feeling which leads you to do so?

ATHENIAN: Why, here it is. 'Tis no light matter to speak against so many thousands of voices.

CLINIAS: But, bless me, do you imagine what we have already said about jurisprudence only contradicts popular opinion in a few trifles!

ATHENIAN: Yes, that is true enough. You tell me, I conceive, that though this legislative path of ours is repellent to so many—perhaps those who find it attractive may be as numerous, or if fewer, at least not inferior—you tell me, I say, to join this latter party and follow the path our present discussions have laid down for us with a stout courage and a good heart, not to flinch. e

CLINIAS: I do, indeed.

ATHENIAN: Then there shall be no flinching. Now mark my words. We have a great number of poets, in hexameter verse, in iambic trimeter, in a word in all the recognized meters, some grave and some gay. On them, so those many thousands of voices proclaim, young people who are being rightly educated should be fed, in them they should be steeped; their reading lessons must give them a wide acquaintance with their works and an extensive scholarship in them; whole poets must be learned by heart. There are others who compile anthologies of the poets and make collections of whole passages, which they say must be committed to memory and learned by heart if our protégé's wide familiarity with literature and extensive learning is to make a good and wise man of him. What you are now calling on me to do is to tell those persons without any reserve where they are right and where they are wrong?

CLINIAS: To be sure.

ATHENIAN: Well, what adequate verdict can I conceivably give about them all in a single sentence? Perhaps something like this—and it is a statement in which I suppose everyone will concur. In every poet there is much that is admirably said and also much that is not. But if so, this extensive learning, I must tell you, has its dangers for our young people.

CLINIAS: Then how would you advise our curator of law?

ATHENIAN: Advise him? On what point?

CLINIAS: On the choice of a standard by reference to which he will permit all the young folk to learn one piece and forbid their learning another. Tell us your mind without any diffidence. c

ATHENIAN: There, my dear Clinias, I venture to think I am in a way fortunate.

CLINIAS: Fortunate in what?

ATHENIAN: In not being altogether at a loss for a standard. As I look back on the discourse you and I have been holding ever since daybreak until this moment—and I really believe there has been some divine guiding about the matter—well, be that as it may, our converse has been, to my mind, just like a kind of poem. I dare say there is nothing surprising in my having felt this keen pleasure in reviewing this compact formation, as I may call it, of discourse of my own composition. The fact is that of all the many compositions I have met with or listened to, in verse or in plain prose, I find it the most satisfactory and the most suitable for the ears of the young. So I really think I could not direct our curator of law and minister of education to a better standard, or bid him do better than instruct his schoolmasters to teach it to their pupils, and also if in his researches he should light upon connected and similar matter in the verse of our poets, in our prose literature, or even in the form of simple unwritten discourse of the same type as the present, by no means to neglect it, but get it put into writing. He should begin by making it compulsory on the teachers themselves to learn this material and appreciate it. Teachers who are dissatisfied with it he must not employ as colleagues; those who concur with his own appreciation he should employ, and to them he should entrust the young for their instruction and education. And with this what I have to say about reading and writing and the teachers of the subject may come to an end.

CLINIAS: If one is to judge by reference to our professed intentions, sir, I believe we have kept the discussion on the lines originally laid down for it. Whether our whole attitude is the right one or not it might be harder to pronounce.

ATHENIAN: That, Clinias—to repeat what I have said more than once already—will presumably become clearer of itself when we have reached the end of our review of our legislation.

CLINIAS: True.

ATHENIAN: Then we may leave the teacher of letters, may we not, and direct our discourse to the instructor in the cithara?

CLINIAS: By all means.

ATHENIAN: Well, as for the teachers of that instrument, I fancy we shall be making a proper assignment of their functions as instructors, and more generally as trainers, in that branch of education, if we call to mind our earlier pronouncements.

CLINIAS: And, pray, what were they?

ATHENIAN: Why, I believe we said the sexagenarians of the 'chorus of Dionysus' would need to be exceptionally sensitive to rhythmic and melodic structure to ensure their competence to distinguish a good musical imitation of a soul under the stress of its emo-

tions from a bad—competence, that is, to distinguish the counterfeit presentments of a good soul from those of an evil, to reject the second but produce the first publicly in their hymnody, and thus to put a charm on the youthful mind, challenging one and all to join them in pursuit of virtue by means of these same imitations.

CLINIAS: Truly said, indeed.

ATHENIAN: That is the purpose, then, for which teacher and pupil must employ the notes of the lyre; they must do so to get the benefit of the emphasis given by its strings, and so must make their tones accordant with those of the voice. As for diversification and complication of the instrumental part—the strings giving out one tone and the composer of the melody another—and, in fact, for correspondence, within or without the octave, of lesser interval with greater, quicker note with longer, lower tones with higher, and equally for all sorts of complication of the rhythm by instrumental accompaniment, no such devices are to be employed with pupils who are to acquire the benefits of their musical studies in the brief space of three years. Such a clash of opposites makes learning a slow business, and it is imperative that our young people should learn their lessons with ease; the compulsory subjects we have imposed on them are neither few nor light, as the progress of our discourse will disclose in due time. All these matters, then, are for our minister of education to supervise on the lines laid down. As for the actual tunes and words which the trainers of our choirs are to teach, and the character of them, that too has already been fully discussed. As you remember, we said they must be consecrated and assigned each to its appropriate festival to provide a society with a pleasure that is in very deed fortunate. 813

CLINIAS: Here, again, what you say is true.

ATHENIAN: Aye, absolutely true. So our chosen director of music shall have the matter put under his care for supervision, and the blessings of fortune go with him! Our business shall be to add further specifications to what we have already said on the subject of the dance and the training of physique in general. We supplemented our treatment of music by adding directions for the teacher, and we will do the same for physical culture. Both the boys and the girls will, of course, have to dance and practice bodily exercises, will they not? b

CLINIAS: Yes.

ATHENIAN: So the convenient arrangement for these exercises will be that there should be dancing masters for boys and mistresses for girls.

CLINIAS: I don't dispute it.

ATHENIAN: Then once more we must call in the busiest of our functionaries, the director of education. His supervision of music and physical training will keep his hands pretty full. c

CLINIAS: How then, at his advanced age, will he be equal to the supervision of such varied business?

ATHENIAN: Oh, easily enough. The law will permit him, as it has already done, to associate with himself in this work any citizens he may choose of either sex. He will know who are the right persons and have no wish to go wrong in such matters, as he will have a prudent respect for his office and an understanding of its importance, and a lifelong conviction that so long as the young generation is, and continues to be, well brought up, our ship of state will have a fair voyage, while in the contrary case the consequences are better left unspoken, and we will leave them so in the case of a city which we are founding for the first time, from regard for the anxious observers of omens. On this subject, too—dancing and the motions of physical training in general—we ourselves have already said much. We are instituting gymnasiums and all kinds of military exercises—exercises in archery, the throwing of various sorts of missiles, light skirmishing, infantry fighting in its different departments, tactical maneuvers, field marches of all kinds, encampment, and any studies which go to form a cavalryman. In fact, there must be public teachers in all these branches, receiving a stipend from the state, and they must have for their scholars not merely boys and men, but the girls and women, who must get a knowledge of all this. While they are still in their girlhood they must practice dancing and fighting in armor thoroughly, and as women they must take their share in the maneuvering, company drill, and grounding and shouldering of arms, for this reason if for no other. If circumstances should ever require our whole force to take the field en masse outside the city, there will be a defense for the children and the city at large equal to its immediate purpose. On the other hand, if—and the possibility cannot be excluded—there should be a foreign invasion of a large and powerful force of Greeks or others, which might compel a pitched battle for the actual safety of the city, it would be a sad disgrace to the community if it had trained its women so ill that they had not even the courage of the hen bird, who will face the most dangerous beast in defense of her chicks at the risk of death or any other peril—if they rushed straight to the temples, beset all the altars and shrines, and bespattered mankind with the opprobrium of being the most abject creature alive.

CLINIAS: Why, no sir, such a performance would be no credit to any city in which it might occur—to say nothing of the mischief it would do.

ATHENIAN: Then we may impose the law that, up to the point indicated, our women are not to neglect the arts of war—they must be practiced by all citizens, male and female alike?

CLINIAS: You have one supporter at any rate in me.

ATHENIAN: Now as to wrestling, we have dealt with it already, but we said nothing of what is to my mind the most important point, though one not easy to explain in the absence of an actual physical demonstration. So we will leave the decision of that issue

until theory and practice combined have cleared up the whole subject and made it plain that the kind of wrestling we have in mind is far more closely connected with military combat than any other sort of movement, and also that it is to be cultivated with a view to this latter, not the latter with a view to it.

CLINIAS : That last point is well taken.

ATHENIAN : So much, then, at present for what we have to say of the value of wrestling. As for other movement of the body as a whole—in the main it may properly be called dancing—we must bear in mind that it has two species, one reproducing motions of comely bodies with a dignified effect, the other those of uncomely bodies with a ludicrous, and that, further, the comic and the serious kinds have each two subspecies. One species of the serious sort represents the movements of the comely body and its valiant soul in battle and in the toils of enforced endurance, the other the bearing of the continent soul in a state of prosperity and duly measured pleasure; an appropriate name for this latter would be the *dance of peace*. The war dance has a different character, and may properly be called the *Pyrrhic*; it depicts the motions of eluding blows and shots of every kind by various devices of swerving, yielding ground, leaping from the ground or crouching, as well as the contrary motions which lead to a posture of attack, and aim at the reproduction of the shooting of arrows, casting of darts, and dealing of all kinds of blows. In these dances the upright, well-braced posture which represents the good body and good mind, and in which the bodily members are in the main kept straight, is the kind of attitude we pronounce right, that which depicts their contrary, wrong. In the case of the dance of peace, the question to be raised in every case is whether the performer succeeds or fails in maintaining throughout his performance a graceful style of dancing in a way becoming to the law-abiding man. So we have, in the first place, to draw a distinction between questionable dances and those which are above question. What then is the distinction, and where should the line be drawn?

As for dances of bacchanals and their likes, which present what is called a 'mimic' exhibition of persons in liquor, under the designations of nymphs, panes, sileni, or satyrs, and are performed as a part of certain rituals and initiations, it is hard to pronounce that whole style of dance either warlike or pacific, or to determine what possible purpose it has. The most correct course, I think, will be to discriminate it alike from the dances of war and of peace, declare it unfit for a citizen, and leave it so on one side, returning once more to the war dance and peace dance as matters which unquestionably concern us. The nonmartial arts of worship of gods and their progeny in dances will all form a single genre expressive of a sense of well-being, and may be divided into two branches, one expressive of escape from hardships and perils to good fortune, in which the pleasure conveyed is

- keener, and one of retention and augmentation of good already enjoyed, in which this pleasure is more sedate. Now, as we know, any man in such conditions executes movements of the body, more vigorous when his pleasure is more intense, less vigorous when it is less so. Again, the more sober the man and the more schooled to fortitude,
- 816 the less violent these motions; the more fearful the man and the less disciplined in continence, the more violent and vehement these movements. But to speak generally, no man who is using his vocal organs, whether for song or for speech, can keep his body perfectly still. Hence it is from this representation of things spoken by means of posture and gesture that the whole art of the dance has been elaborated. And in all such cases, one man's motions keep time and tune with his utterance, another's do not. Hence, in fact, the well-merited praise
- b which may be given to many of our traditional names for their excellence and truth to fact, one of which is that bestowed on the dances of prosperous men who preserve measure in their pleasures. We should give credit to the inventor, whoever he may have been, for the truth and musical taste of the names, and the philosophical insight shown by designating fine dancing as a whole *emmeliae* and proceeding to distinguish two kinds, each with its fitting and proper
- c name—the war dance, or *Pyrrhic*, and the *emmelia*, or dance of peace. The legislator must deal with these matters in general outline, and the curator make them an object of study. His investigations should result in the combination of dancing with the rest of music, the assignment to each sacrificial feast of the appropriate measures, and the consecration of the whole arrangement in due course. Thenceforth there must be no innovation in anything which has to do either with dance or with song. No, our citizens and their city must preserve their identity
- d by a uniform life of unvarying pleasures, where all are as utterly alike as may be in all happiness and bliss.

- This concludes our treatment of the employment of comely body and noble mind in choric performances such as we have said these displays should be. As for the play of uncomely body and mind and the artistes of ludicrous burlesque in diction, song, dance, and all the caricaturistic effects of the three, we cannot avoid taking notice of this and passing it under review. A man who means to form his judgment can no more understand earnest apart from burlesque than any other contrary apart from its contrary, but, on the other side, a man who
- e means to have any part in goodness, were it never so little, cannot possibly produce both. The very reason why he must get to know such a thing is that he may never be betrayed by ignorance into doing or saying a ludicrous thing when it is out of place. We shall enjoin that such representations be left to slaves or hired aliens, and that they receive no serious consideration whatsoever. No free person, whether woman or man, shall be found taking lessons in them, and there must always be some novelty in a performance of the kind. The sportive en-

tainment to which the name *comedy* is universally given may be 817 taken as disposed of on these lines by our law with its accompanying explanation.

For our tragic poets and their so-called serious compositions, we may conceive some of them to approach us with a question couched in these words or the like. May we pay your city and its territory a visit, sirs, or may we not? And may we bring our poetry along with us, or what decision have you reached on the point?

What would be the right answer to give to such men of genius?

Why this, I believe. Respected visitors, we are ourselves authors b of a tragedy, and that the finest and best we know how to make. In fact, our whole polity has been constructed as a dramatization of a noble and perfect life; that is what *we* hold to be in truth the most real of tragedies. Thus you are poets, and we also are poets in the same style, rival artists and rival actors, and that in the finest of all dramas, one which indeed can be produced only by a code of true law —or at least that is our faith. So you must not expect that we shall c lightheartedly permit you to pitch your booths in our market square with a troupe of actors whose melodious voices will drown our own, and let you deliver your public tirades before our boys and women and the populace at large—let you address them on the same issues as ourselves, not to the same effect, but commonly and for the most part to the very contrary. Why, we should be stark mad to do so, and so would the whole community, if you could find one which would let you do as you are now proposing, until its magistrates had decided whether your d compositions are fit to be uttered and edifying to be heard by the public or not. Go to, then, ye scions of the softer Muses, first exhibit your minstrelsy to the magistrates for comparison with our own. Then, if your sentiments prove to be the same as ours, or even better, we will grant you a chorus, but if not, I fear, my friends, we never can.

Such, then, subject to your approval, shall be our legislation, and e such our conjoined practice in the whole matter of the choric art and the instruction in it—slaves and their masters to receive separate treatment.

CLINIAS : Well, of course, we approve—at any rate, for the moment.

ATHENIAN : Then there are, of course, three subjects for the freeborn still to study. Ciphery and arithmetic make one subject; mensuration, linear, superficial, and solid, taken as one single study, forms a second; the third is the true relations of the planetary orbits to one another. The elaborate prosecution of all these studies into 818 their minute details is not for the masses but for a select few—who these should be shall be indicated later as our argument draws to its conclusion, where the indication will be in place. For the multitude it will be proper to learn so much of the matter as is indispensable, and as it may truly be said to be a disgrace to the common man not to

know, though it would be hard, or actually impossible, to pursue the research into minute detail. We simply cannot dispense with its character of *necessity*; in fact, it is this which the author of the proverb presumably had in view when he said that 'even God is never to be seen contending against necessity.' No doubt he meant the necessity which is *divine*, for if you understand the words of mere human necessities, like those to which men in general apply such sayings, they are far and away the silliest of speeches.

CLINIAS: Yes, sir, but where in these studies do the other sort of necessities, the divine, come in?

ATHENIAN: Why, I presume they are those in neglect or sheer ignorance of which no being could possibly play the part of a god or superior spirit toward us, nor yet of a hero capable of serious supervision of humanity. How far would he be below the level of even inspired humanity who could not tell three from two, or even odd from even, in fact, could not so much as count, or could not even tell off night and day, or had no acquaintance with the orbits of moon, sun, and the rest of the planets! So the mere thought that all this information is not indispensable to anyone who means to *know* anything whatsoever of the noblest of all sciences is the idlest folly. What branches of them are to be studied, to what extent, and at what times, which must be taken in conjunction with another and which pursued by itself, and how they are all to be blended into a whole—these are the questions which we must first settle correctly. We may then proceed under the guidance of these sciences to the study of all the rest. It is the natural order, and it has that necessity with which, as we say, no god contends or ever will contend.

CLINIAS: Yes, sir, the views you have just expressed sound true and natural, as you expound them.

ATHENIAN: Indeed, they are so, Clinias, though it is difficult to legislate on the subject by anticipation as we are now doing. The more precise details of legislation, with your consent, we may postpone to another occasion.

CLINIAS: You are apprehensive, I take it, sir, of the common unfamiliarity of our countrymen with such topics, but your concern is unwarranted. Pray do your best to state your views without any reservation on that score.

ATHENIAN: I certainly feel the apprehension you speak of, but am still more alarmed by students who have actually taken up these sciences, but taken them up in the wrong way. Complete unacquaintance with a subject is never a dangerous or formidable obstacle, nor is it the worst of evils; much graver harm is done by wide acquaintance with a subject and extensive learning in it, when they are conjoined with bad training.

CLINIAS: Truly observed.

ATHENIAN: Well then, I maintain that freeborn men should

learn of these various subjects as much as in Egypt is taught to vast numbers of children along with their letters. To begin with, lessons have been devised there in ciphering for the veriest children which they can learn with a good deal of fun and amusement, problems about the distribution of a fixed total number of apples or garlands among larger and smaller groups, and the arranging of a successive series of 'byes' and 'pairs' between boxers and wrestlers as the nature of such contests requires. More than this, the teachers have a game in which they distribute mixed sets of saucers of gold, silver, copper, and similar materials or, in other cases, whole sets of one material. In this way, they, as I was saying, incorporate the elementary application of arithmetic in the children's play, give the pupils a useful preparation for the dispositions, formations, and movements of military life as well as for domestic management, and make them more alert and more serviceable to themselves in every way. Then they go on to exercises in measurements of length, surface, and cubical content, by which they dispel the native and general, but ludicrous and shameful, ignorance of mankind about the whole subject.

CLINIAS : And in what may this native ignorance consist?

ATHENIAN : My dear Clinias, when I was told, rather belatedly, of our condition in this matter, like you, I was utterly astounded. Such ignorance seemed to me more worthy of a stupid beast like the hog than of a human being, and I blushed not for myself alone, but for our whole Hellenic world.

CLINIAS : But what was the reason for your blushes? Let us have your account of it, sir.

ATHENIAN : Why, so I will. Or rather I will make it plain by a question. Pray tell me one little thing. You know what is meant by *line*?

CLINIAS : Of course I do.

ATHENIAN : And by *surface*?

CLINIAS : Certainly.

ATHENIAN : And you know that they are two distinct things, and that *volume* is another and a third?

CLINIAS : Just so.

ATHENIAN : Now you hold, do you not, that all three are commensurable with one another?

CLINIAS : Yes.

ATHENIAN : That is, that *line* is in its very nature measurable by *line*, *surface* by *surface*, and similarly with *volume*?

CLINIAS : Most assuredly.

ATHENIAN : But suppose this cannot be said of some of them, neither with more assurance nor with less, but is true in some cases, but not in others, and you believe it true universally. What do you think of your state of mind on the matter?

CLINIAS : That it is unsatisfactory, to be sure.

ATHENIAN: And what of the relations of line and surface to volume, or of line and surface to one another? Is it not the fact that we Hellenes all imagine they are commensurable in some way or other?

b CLINIAS: Why certainly that is the fact.

ATHENIAN: Then if this is another entire impossibility, though we Hellenes, as I said, all fancy it possible, are we not bound to blush for them all as we tell them, Worthy Hellenes, here is one of the things of which we said that ignorance is a disgrace and knowledge on a point so necessary, no great accomplishment?

CLINIAS: We are, indeed.

c ATHENIAN: There are, besides, other closely related points which frequently give rise to errors akin to those just mentioned.

CLINIAS: Such for example as?

ATHENIAN: The real relation of commensurability and incommensurability to one another. A man must be able to distinguish them on examination, or else must be a very poor creature. We should frequently propound such problems to each other—a much more elegant pastime for the elderly than draughts—and give our passion for victory an outlet in amusements worthy of us.

d CLINIAS: I dare say, after all, the game of draughts and these studies are not so widely different.

ATHENIAN: Accordingly, Clinias, I hold that these are subjects which our young people must learn. Indeed there is neither danger nor difficulty in them, and if they are learned through the medium of play, they will do our city no harm, but rather good.

CLINIAS: Just so.

ATHENIAN: Still, while we must clearly include them in our scheme, if our case for this proves to be made out, equally clearly we shall reject them if it is not made out.

e CLINIAS: Oh, plainly, plainly.

ATHENIAN: Well then, for the present, sir, let them be set down among the requisite studies, to leave no gap in the body of our laws, but set down as detachable from the rest of our polity—like so many redeemable pledges—should they prove unacceptable to us who have deposited them, or you who have received them.

CLINIAS: The terms of proposal are fair enough.

ATHENIAN: Next you must consider astronomy. Are we to adopt the recommendation that our young folk should study it, or are we not?

CLINIAS: Well, say on.

ATHENIAN: Now here, mark you, I find a strange, indeed, a wholly intolerable paradox.

821 CLINIAS: And of what kind?

ATHENIAN: It is currently said that it is wrong—indeed, positively blasphemous—to prosecute inquiry or busy ourselves with the quest for explanation where the supreme God and the universe as a

whole are concerned, though the very opposite should seem to be our right course.

CLINIAS: What!

ATHENIAN: What I am trying to say, I know, is startling, and might be thought unbecoming in a man of our years, but the plain truth is that a man who knows of a study which he believes sublime, true, beneficial to society, and perfectly acceptable to God, simply cannot refrain from calling attention to it.

CLINIAS: Presumably not, but what astronomical study shall we find answering to this description?

ATHENIAN: Why, my friends, at this moment, all our Hellenic world, as I may fairly say, habitually charges high gods, sun and moon, falsely.

CLINIAS: And what may this false charge be?

ATHENIAN: We say that they, and certain heavenly bodies associated with them, never keep to the same path, which is why we call them planets.

CLINIAS: Egad, sir, and that is true enough. Why, in my own lifetime I myself have often seen the morning and evening stars and some others never keeping to the same track, but divagating in all directions. As for sun and moon, of course, I have seen them behave as we all know they regularly do behave.

ATHENIAN: Well then, Megillus and Clinias, that is just the reason why I am now insisting that *our* citizens and their young people must learn enough of all the facts about the divinities of the sky to prevent blasphemy of them, and to ensure a reverent piety in the language of all our sacrifices and prayers.

CLINIAS: That is right, provided, of course, that, in the first place, the knowledge of which you speak is possible. On that assumption, if there are errors in our present language on such matters which study will correct, I, too, confess that a subject of such scope and quality must be taught. Do your best, then, with the demonstration that the facts are as you say, as we will do our best to follow your instruction.

ATHENIAN: Why, the lesson I have in mind, to be sure, is not an easy one—and yet it is not so hopelessly difficult either, and takes no very great time to learn, as this one fact is enough to prove. I was not a young man when I heard of the truth myself, and it was no long time ago, and yet I may possibly make it clear to both of you now at no great expense of time. Were the point a really hard one, a man of my age would never be able to explain it to men of yours.

CLINIAS: Quite true. But pray what may this knowledge be—this doctrine, as you maintain, so surprising, yet so proper for the young to learn, and so unsuspected by us? You must try to explain so much of the subject with all possible clarity.

ATHENIAN: I will do my best. The fact is, my friends, that the

belief that sun, moon, and other heavenly bodies are 'wandering stars' of any sort is not true. The very reverse is the truth—each of these bodies always revolves in the same orbit and in one orbit, not many, for all that it looks to be moving in several, and again the actually swift-est of them is wrongly believed to be the slowest and the slowest the  
 b swiftest. Well now, suppose these are the real facts, but we hold a discrepant view about them. If we had fancies of this kind about the competing horses or long-distance runners at Olympia, and so were to call the quickest runner slowest and the slowest quickest, and to compose triumphal odes in which we celebrated the vanquished as victor, why, I conceive our bestowal of our praises would neither be correct nor to the liking of the runners, who, after all, are but men. But when  
 c we actually make the same mistake today about our deities, must we not think that an error which was risible in the other case and on the racecourse, is now, when transferred to this context, no laughing matter, and no very godly opinion either, since it means reiterated mendacity about divine beings?

CLINIAS: Nothing can be truer—if the facts are really as you say.

ATHENIAN: Then, if we can show that they are so, all these matters must be studied—within the limits we have proposed—if not, we must let them alone. May we take it that our agreement extends so far?

d CLINIAS: With all my heart.

ATHENIAN: Then we may say that our regulations for the studies to be included in our education are now complete. As to the chase, we should recur to the thought which has guided us in other cases of the same kind. It should seem that a legislator's task extends to something more than the mere imposing of a law and so dismissing a topic; there is something else he must do besides laying down the law, something which verges at once on admonition and on legislation, as our argument has led us to remark more than once already. A  
 e case in point is our treatment of the regimen of infants. As we say, we must not leave our demands unformulated, and yet when we formulate them it is perfect folly to imagine we are laying them down as law. So when the legal code, and the whole system of the constitution, have been reduced to written form, it is not a final encomium on the pre-eminently virtuous citizen to say that he is the good citizen who has shown himself the best servant of the laws and gives them the fullest obedience; there would be more finality in the statement that he is the  
 823 best who has spent his life without qualification in obedience to all the legislator has written, whether by way of enactment, of approbation, or of reprobation. This is the truest eulogy which can be bestowed on a citizen, and a real legislator should not confine himself to the composition of statutes; he should further entwine with the text of his laws an exposition of all he accounts laudable or the reverse, and the

citizen of eminent goodness must feel himself no less bound by such directions than by those enforced with a legal sanction.

We may make our meaning plainer if we call the subject of our present remarks, so to say, in evidence. The chase, in fact, is a pursuit with very various departments, all currently comprehended under that single name. There are many ways of taking the denizens of the water, and again of fowling, and especially there are numerous devices for the capture of land animals. I mean not of brutes merely, but of the noteworthy hunting of men to be seen in warfare, as well as in the various forms under which that quarry is pursued in the way of kindness, some laudable and others the reverse; the kidnappings of brigands and forces in the field are also forms of the chase. Now the legislator framing his statutes of venery can neither omit to explain this, nor yet can he impose a set of legal regulations with directions for all cases and threatened penalties for their breach. What course is he, then, to take in such a case? He must—I mean the legislator must—commend some forms of the chase and condemn others, always with an eye on the exercises and sports of the younger men; the younger man, in his turn, must obey this advice. Neither hope of pleasure nor dread of hardship must interfere with his obedience, and he must treat the legislator's various commendations with still deeper respect and more dutiful compliance than his penalty-sanctioned ordinances.

These preliminary remarks may naturally be succeeded by judicious commendation and reprobation of diverse forms of the chase, commendation of such as tend to improve the young man's soul, reprobation of those which have the contrary tendency. So we will now, without more delay, direct our address to the young people, couching it in the language of pious wish.

Our prayer, beloved, is that you may never be smitten with the lust or passion for sea fishery, for angling or any taking of the creatures of the waters, or for the use of weels, by which the slothful hunter's work is done for him equally whether he wakes or sleeps. May you never be visited by hankerings for the pirate's trade—the chasing of men on the high seas—to make you cruel and lawless hunters! As for petty poaching in town or country, may the bare thought never so much as enter your minds! And may no young soul be haunted by the seductive itch for fowling—hardly a taste for the freeborn man! Thus we have left our athletes only the chase and taking of land creatures. One form of this, again, that practiced by parties who take it in turns to sleep—night trapping, as it is called—is for sluggards and deserves no commendation; the intervals of inaction fill as much time as the exercise, and the strength and violence of the quarry are overpowered not by the triumph of an energetic soul, but by nets and snares. Thus the only variety left free to all, and the best variety, is the chase of a four-footed quarry in reliance upon one's horse, one's dogs, and one's own limbs, where the hunters—those, that is, who

- cultivate godlike courage—all hunt in their own persons and achieve  
 b all their success by running, striking, and shooting.

The discourse we have just rehearsed may serve the end of general commendation and censure in the matter. The actual law may run to this effect. Such hunters are truly 'sacred,' and none shall hinder them from following the game with their hounds when and as they please. The night trapper who trusts to his nets and springes no one shall permit to pursue his game at any time or place. The fowler is not to be disturbed on uncultivated ground or in the mountains, but shall be turned off tilled fields or untilled consecrated demesnes by any  
 c who may find him there. The fisherman shall be free to take his fish anywhere save in harbors and consecrated rivers, marshes, or lakes, with the sole proviso that he may not foul the waters with stupefying juices.

And with this we may say our regulation of education is at last completed.

CLINIAS : And well completed, too.

## BOOK VIII

- 828 ATHENIAN : The next task awaiting us is, with the help of oracles from Delphi, to construct the calendar of festivals and give it the authority of law—to determine what sacrifices it will be 'to the welfare and profit' of the state to celebrate, and to what deities they should be offered. The question of their dates and their number will be, to some extent, one for our own decision.

CLINIAS : That of their number will no doubt be so.

ATHENIAN : Then let me deal with the question of number first.

- b This shall be not less than three hundred and sixty-five, to ensure that sacrifice shall be done by at least one magistracy to some god or spirit on behalf of the state, its members, and their chattels without any interruption. Canonists, priests of both sexes, and prophets are to meet in committee with the curators of law and prescribe any details which the legislator has unavoidably omitted; the same committee shall further decide how the omissions aforesaid are to be supplied.  
 c The provision of the actual law will be, in fact, that there shall be twelve festivals of the twelve gods after whom the different tribes are named, to be kept by the doing of monthly sacrifice to each of these deities, with the adjuncts of such choirs and contests, both musical and athletic, as are suitable to the character of the deity and the season of the festival, and the demarcation of celebrations for women from which men must be excluded from those in which this regulation is not necessary. Further, there must be no confusion between the cults of the gods of the underworld with their accessories and those of the celestial powers, as we should call them; the law will keep the  
 a two distinct, and put the former in the month sacred to Pluto, the

twelfth of the year. True warriors must cherish no repugnance for such a deity of death, but venerate him as the-constant benefactor of mankind, for union of soul with body, as I would assure you in all earnest, is in no way better than dissolution.

Furthermore, an authority which is to make these arrangements to our satisfaction must be possessed with the convictions that the like of this society of ours is not to be found in the world for ample leisure and abundant provision of all necessities, that its business, like that of an individual man, is to live well, and that the indispensable precondition of a happy life is that we commit no sin 829 against ourselves and suffer no wrongs from others. Now there is no great difficulty about the first condition, but grave difficulty in compassing a power to protect oneself from *suffering* wrongs; 'tis, indeed, only to be fully got in one way, by becoming fully good. Now the case will be the same with a society—if it become good, its life will be one of peace, if evil, of warfare without and within. And since this is so, its members must train themselves for warfare, not in actual time of war, b but during the life of peace. Hence the wise state will be under arms not less than one day in each month, and as many more as its magistrates may think good, without regard to stress of weather, cold or hot; men, women, children, will take the field, in one body when the magistrates so ordain, at other times in sections. They must also devise a round of noble sports, with their accompanying sacrifices, so as to provide festal combats which shall reproduce real warfare with all c possible truth to life. On these occasions there should always be a distribution of prizes and rewards for merit, and the citizens should compose panegyrics and censures upon one another according to a man's performance in these contests and in life at large, the honor of the panegyric going to him who proves himself of perfect worth, and the censure to him who fails.

The composition of such verses shall not be for everyone. The author must, in the first place, have reached the age of not less than fifty; moreover he must not be one of those who have within them a sufficient vein of literature and music but have never achieved one noble and illustrious deed. But the verse of composers who are in their d own persons men of worth, held in public honor as authors of noble deeds, may be sung, even though it have no real musical quality. The selection of composers shall be in the hands of the minister of education and his colleagues, the curators of law, who are to allow them this special privilege. Their music, and theirs only, shall be free and uncensored, whereas this liberty shall be granted to no one else, and no other citizen shall presume, without the curator's license, to sing an e unauthorized air, were its notes more ravishing than those of Thamyra or Orpheus themselves, but only such verse as has been duly consecrated to the gods and such compositions by men of true worth as have been pronounced to convey laudation or reproof with due

propriety. These directions as to maneuvers and freedom to compose uncensored verse are to be taken as applying equally to both sexes. The legislator must put the case to himself thus in his meditations. Go to, now, what manner of men am I training by the whole scheme  
 830 of my institutions? Are they not men who are to be competitors in the most momentous of all contests, where they will find countless opponents pitted against them? 'Why, certainly,' will be the ready and the right answer.

Well then, suppose our training were meant for boxers, or pugilists, or athletes in some similar competition. Should we be for going straight into the actual contest without any previous daily combat with an opponent? Surely, were we boxers, for days together before the actual event we should be learning how to fight and working ourselves  
 b hard. We should rehearse all the movements we expected to make in the actual match, when the time for it should come, and we should come as near as we could to the reality; we should fit our hands with practice gloves in place of match gloves, to make sure that we were getting the best training we could. If we were exceptionally put to it to find partners to practice with, would fear of the laughter of fools  
 c frighten us from hanging up an inanimate dummy to practice on? If we were actually without any opponent living or lifeless, and had no partners whatsoever, should we not have gone the length of quite literally sparring 'at our own shadows'? What other name could you give to the training in 'using one's mauleys'?

CLINIAS: Why, sir, I can think of none but the name you have just employed.

ATHENIAN: Very well, then. And is the fighting force of our society to be worse prepared than such combatants as these when it ventures itself, as the occasion arises, in the gravest of all contests, in  
 d which the stake is the very existence of self, children, possessions, nay, of the whole community? Is this precious fear that our practice on one another may provoke some laughter to keep the legislator from his work? Should he not require drill on the small scale, not involving the use of heavy arms, to be performed, if possible, daily, directing all physical training, whether in combined groups or otherwise, to that end, and exercises of another kind, major and minor, to be held at least once a month, in which the citizens throughout our territories will contend with one another in the occupation of military positions and  
 e the laying of ambushes, and imitate all branches of warfare by very real fighting with gloves and missiles closely modeled on the genuine articles? These weapons should be comparatively dangerous, that the sport may not be wholly without its perils, but give occasion for alarms, and thus serve, in its way, to discriminate a man of courage from a  
 831 coward. Thus it will enable the legislator to train the whole community to lifelong efficient service in the real conflict, by a right apportionment of marks of distinction and discredit, and if a life should happen to be lost in this fashion, the homicide will be regarded as in-

voluntary, and its author pronounced clear of the innocent blood, when he has undergone ritual cleansing as the law directs. The legislator's view will be that if a few men come to their end, others as good will be born to take their place, whereas, if fear of dangers comes to its end, if I may so express myself, he can find no touchstone of better and worse in situations of the kind, and this is a much graver misfortune for his society than the other.

CLINIAS: My friend and I, sir, agree with you that this is what the law should enjoin and the whole community practice.

ATHENIAN: Now I wonder whether all of us understand the reason why such contests between opposing teams are nowhere to be found in our existing societies, except perhaps on the smallest scale. Should we lay the blame on the ignorance of the generality of mankind and their legislators?

CLINIAS: Very likely we should.

ATHENIAN: My dear Clinias! Not in the least! The true causes are two, both very powerful.

CLINIAS: And what are they?

ATHENIAN: One arises from the passion for wealth which leaves a man not a moment of leisure to attend to anything beyond his personal fortunes. So long as a citizen's whole soul is wrapped up in these, he cannot give a thought to anything but the day's takings. Any study or pursuit which tends to that result everyone sets himself eagerly to learn and practice; all others are laughed to scorn. Here, then, we may say, is one reason in particular why society declines to take this or any other wholly admirable pursuit seriously, though everyone in it is ready enough, in his furious thirst for gold and silver, to stoop to any trade and any shift, honorable or dishonorable, which holds out a prospect of wealth, ready to scruple at no act whatsoever—innocent, sinful, or utterly shameful—so long as it promises to sate him, like some brute beast, with a perfect glut of eating, drinking, and sexual sport.

CLINIAS: Too true.

ATHENIAN: Well then, this, as I say, may be set down for one reason which tends to keep societies from efficient cultivation of noble activities, military and otherwise; it turns the naturally quiet and decent man into a tradesman, skipper, or mere menial, and makes the more adventurous, pirates, burglars, temple thieves, swashbucklers, and bullies, though often enough they are not so much vicious as unfortunate.

CLINIAS: Unfortunate? Why so?

ATHENIAN: Why, what epithet but 'most unfortunate' can I find for men who are forced to go through the world with an incessant hunger gnawing at their own souls?

CLINIAS: Well, that is one of your causes, sir, but what do you mean by the other?

ATHENIAN: Thank you for the reminder.

CLINIAS: One cause, as I understand you, is this lifelong insatiate quest which leaves none of us an hour's leisure, and so keeps us  
 b all from practicing the arts of war as we should. Good, but let us hear something of the other reason.

ATHENIAN: I fancy you think my reason for being so slow to name it is that I cannot.

CLINIAS: Not so, but what one must call your abhorrence of the character just described is leading you, as we think, into an invective irrelevant to our present argument.

ATHENIAN: I stand properly rebuked, gentlemen. You wish me, it appears, to proceed.

CLINIAS: You have only to do so.

ATHENIAN: Then I say the reason is to be found in those 'no-  
 c constitutions' we have so often touched on already, democracy, oligarchy, autocracy. Not one of them is a true constitution; the proper name for all would rather be 'party ascendancies.' In none do we find a willing sovereign with willing subjects; in all a willing sovereign is controlling reluctant subjects by violence of some sort. But a sovereign who goes in fear of his subject will never, if he can help it, permit that subject to become noble, wealthy, powerful, valiant, nor so much as a good fighting man. Here, then, we have the main sources of almost all mischief—certainly the main sources of the mischief we are treat-  
 d ing of now. Both are avoided in the constitution we are now engaged in framing. It provides more ample leisure than any other; its citizens are free from one another's dictation. Our laws, I take it, are very unlikely to make them greedy of riches. Hence it is but natural and reasonable to believe that a society so constituted, and only such a society of all others, would have a place for the warrior's education described above, which is also his sport, as duly set forth in our discussion.

CLINIAS: Quite true.

ATHENIAN: Then I suppose we may next make a general observation about all athletic contests. Those which provide a training  
 e for war should be encouraged and prizes instituted for success in them; those which do not may be dismissed. Which these are it will be better to make matter for explicit statement and legislation from the very first. To begin with, I apprehend there should be such institution of prizes for fleetness of foot and rapidity of movement in general.

CLINIAS: There should.

ATHENIAN: To be sure, bodily agility—quickness of hand as well as of foot—is a first-rate point in the soldier's equipment; fleetness of foot has its use in flight and pursuit, and readiness of hand in the  
 833 close stand-up fighting which calls for so much stocky strength.

CLINIAS: Of course.

ATHENIAN: And again, neither yields its best service without the aid of weapons.

CLINIAS: Naturally not.

ATHENIAN: So our herald will follow the existing custom and announce the furlong race as the first event of our sports. The competitor shall make his entry in full armor; we shall give no prize for an unarmed competitor. No, the order of entry will be *first* the runner for the furlong, in full equipment, *second* for the two furlongs, *third* for the chariot course, *fourth* for the long-distance; *fifth* there will be an entrant whom we shall call the hoplite, and set in the first place to run, in full armor of heavy weight, over a smooth course of sixty furlongs, to a temple of Ares and back, and his rival, an archer in complete archer's equipment, who must run against him over a course of a hundred furlongs, through hilly and varied ground, to a temple of Apollo and Artemis. In arranging the events, we shall wait for their return, and prizes will be given to the victors in each event. c

CLINIAS: A good arrangement.

ATHENIAN: Now let us make three classes in these athletic events, one for boys, one for lads, and one for men. We will fix the length of the course for lads at two thirds, and that for boys at one half the length of the full course, whether they enter as hoplites or as archers. In the case of females, we shall have races of one and two furlongs, a chariot course, and a long-distance event, in which girls d below the age of puberty must actually compete stripped, while girls who have passed thirteen and are still awaiting marriage—to ensue at latest at twenty and at earliest at eighteen—must be clad in the proper accouterment when they enter into these competitions. So much then for races for both males and females.

As for competitions of strength, in place of wrestling and the like, the 'heavy events' of current practice, we shall institute fights in armor, single combats, or combats between pairs, or contests between e any number of combatants up to ten a side. In determining what points will disqualify for victory or count toward it, we shall follow the precedent set by existing authorities on wrestling in their rules for the proper conduct of that sport. We shall, in like manner, call in experts in fencing under arms and invite their help in regulating the faults which must be avoided, and hits which must be scored, to qualify for a victory in these contests, and the code which shall determine de- 834 feat. The same regulations shall equally apply to females under the age of marriage. For the element of boxing in the *pancratium* we shall substitute a general combat of peltasts in which the contest will be waged with bow and arrow and light target, darts, stones thrown by the hand, and slings, and in this case too we shall have to draw up the rules and award the prizes of victory to those who best fulfill the demands of our regulations.

We should naturally proceed now to make rules for the horse b race. But in a district like Crete there will be no great use for horses and few horses to use; hence there will, of course, be less interest in

breeding them and matching them against one another. As for chariots, to be sure, there will be no one to keep them, and probably no one to cherish any particular aspirations in that direction; hence if we instituted anything so contrary to native custom as a chariot race, we should look like the fools we should in fact be. But if we offer prizes  
 c for races with ridden horses—young and half-grown colts as well as full-grown beasts—we shall be cultivating a form of the sport well in keeping with the nature of our territory. So the law will provide for competitive matches between these classes of sportsmen and no others, and appoint the phylarchs and hipparchs as public judges both of the course and of the competitors entering—who must be in their armor. Here, as in the case of the athletic sports, it would be a mistake  
 d for the law to institute contests for the unarmed. A Cretan, again, can do useful service as a mounted bowman or javelin man, and so we should further have matches between rivals in these lines for our amusement. As to women, it is really not worth our while to force them to take part in these competitions by legal enactments, but if their earlier training has led to the growth of such habits that they are physically equal, in their girlhood or later maidenhood, to take part without unwelcome results, they should be allowed to do so unproved.

We have at last come to the end of this subject of athletic contests, and the teaching of physical culture, with all the work it entails both in the competitions and in the daily routine of school. We have similarly completed our main treatment of music. Rules for rhapsodes and their likes and for the competitions between choirs requisite at our festivals shall be drawn up later, when months, days, and years have first been assigned to the various gods and lesser objects of worship—e.g., regulations deciding whether these festivals should be  
 e kept at intervals of two years, or of four, or in any other order we may be inspired to think of. On these occasions, further, we must expect that the musical competitions shall be held, each in its proper turn, as directed by the presidents of the sports, the minister of education, and the curators of law, who are to act in concert as a special committee for the purpose, and must make their own legislation for all choirs and dancers as to the dates at which competitions shall be held, the persons who may compete, and the company in which they may do so. The original legislator has explained more than once what the various compositions must be like, in words spoken or sung and in mingled  
 b melody, rhythm, and dance movement. His later successors must follow his lead in their regulations, assigning the several competitions to appropriate sacrifices at suitable times, and so providing our city with feasts for her observance. There is no difficulty in discovering how to reduce these details and others of the kind to a legitimate order, nor again will a different arrangement of them cause much benefit or detriment to society. But there is a matter of vast moment, as to which  
 c it is truly hard to inspire conviction. The task, indeed, is one for God

himself, were it actually possible to receive orders from him. As things are, it will probably need a bold man, a man who puts plain speaking before everything, to declare his real belief about the true interest of state and citizens, and make the regulations the whole social system requires and demands in a corrupt age—a man who will oppose the passions at their strongest, and stand alone in his loyalty to the voice of truth without one creature on earth to second him.

CLINIAS: Pray, sir, where may our argument be getting to now? d  
As yet we do not see its drift.

ATHENIAN: I am not surprised you do not. But come! I must try to put the matter more plainly still. When our conversation brought us to this theme of education, there rose before me a vision of young people of both sexes living in affectionate intimacy. As you may imagine, I was moved to uneasy apprehensions when I asked myself how one is to manage such a society—a society where the young of both sexes are in the pink of condition, exempt from the severe menial labor which does more than anything else to damp the fires of e wantonness, and all make sacrifices, feasts, and choric song the concern of their lives. How, indeed, in such a society, are they to be kept free from the passions which bring such multitudes to their undoing, the passions from which wisdom, striving to convert itself into law, bids us abstain? To be sure, it would be nothing surprising that our regulations as already enacted should get the better of most of these 836 passions. Our prohibition of excessive opulence, conducive as it is to temperance, is no trivial boon, and the whole course of the training is likewise under sound regulations of the same tendency. Besides, the magistrate's eye, drilled as it is to keep its object, and the young generation itself, constantly in view without a moment's diversion, provides a curb for most passions, so far as any device of men can.

But what of the passion of love in the young of either sex, or love b of grown woman or man for the other? We know its untold effects in the life of private persons and whole societies, but what precautions should we take against it? Whence are you to cull the specific that shall protect all and sundry from its perils? There, Clinias, we have a difficulty indeed. In fact, Crete as a whole and Lacedaemon, which lend weighty and deserved support to a great deal of our proposed legislation where it is counter to common sentiment, are dead against us—I may say it between ourselves—in this business of sex. Were one to follow the guidance of nature and adopt the law of the old days c before Laius—I mean, to pronounce it wrong that male should have to do carnally with youthful male as with female—and to fetch his evidence from the life of the animals, pointing out that male does not touch male in this way because the action is unnatural, his contention would surely be a telling one, yet it would be quite at variance with the practice of your societies. Moreover, the very end we require the legislator to keep in constant view is ill suited with your practices.

- d You know the question we are repeatedly raising is what enactments foster goodness and what do not. Very well, then, suppose our present legislation pronounces this practice laudable, or free from discredit. How will it promote goodness? Will it lead to the growth of the temper of valor in the soul of the seduced? Or the growth of a temperate character in his seducer? That is surely more than any man can believe. Surely, the very opposite is the truth. Everyone must censure the unmanliness of the one party, who surrenders to his lusts because he is too weak to offer resistance, and reproach the other—the impersonator of the female—with his likeness to his model. Who in the world, then, will give legislative countenance to a practice of such a tendency? No one, I say, who has any notion of what a true law is. You ask how I prove my point? We shall have to examine the real nature of affection and its attendant desire and of love so called, if we are to think rightly of this matter. There are, in fact, two different things, as well as a third compounded of them both, covered here by one single name, and it is this which causes so much confusion and obscurity.

CLINIAS: How so?

ATHENIAN: Why, we speak, you know, of the attachment between those who are alike in goodness, or between equals, and again of that between the indigent and the rich, where the one party is the opposite of the other, and when either feeling is intense we call it love.

- b CLINIAS: We do.

ATHENIAN: Now this attachment between opposites is fierce and furious, and we do not often find it reciprocated, whereas that founded on similarity is equable and permanently reciprocal. Where both factors are present at once, for one thing it is hard to perceive what the subject of this 'love' is really seeking, and for another, he is distracted and baffled by rival impulses, one inviting him to enjoy the charms of the object, the other forbidding the enjoyment. The man whose love is a physical passion, a hunger for another's charms, like that for ripe fruit, tells himself to take his fill and gives not a thought to his minion's state of soul. But he that treats carnal appetite as out of the question, that puts contemplation before passion, he whose desire is veritably that of soul for soul, looks on enjoyment of flesh by flesh as wanton shame; as one that reverences, aye and worships, chastity and manhood, greatness and wisdom, he will aspire to live with his love in constant purity on both parts. The sort of love in which both factors are involved is that we have now reckoned the third. Now since loves are of so many kinds, should the presence of all kinds be excluded from our midst by legal prohibition? Is it not obvious rather that we shall wish to find in our city the sort that has goodness for its object, the desire to make a youth as good as he can possibly be, but prohibit the other two, if only we can? Megillus, my friend, what would you have us say?

MEGILLUS: All you have even now said of this same matter, sir, e is perfectly well.

ATHENIAN: I expected I should find you in accord with myself, friend, and it seems I was right. What your Spartan law thinks about such matters is a question I need not raise; I need only welcome your assent to our doctrine. As for Clinias, I must do my best to charm him into acceptance of our view on some later occasion. But enough of your common concession. By all means let us return to our legislating.

MEGILLUS: Rightly proposed.

838

ATHENIAN: Well now, and about a device to make the establishment of our law secure? I have one actually ready to my hand, easy enough in one way, though in another, of the utmost possible difficulty.

MEGILLUS: You mean to say?

ATHENIAN: Even today, as you know, lawless as most men are, they are very effectually deterred from cohabitation with the fair, and not against their own will either, but with their full and entire consent.

MEGILLUS: Of what cases are you thinking?

ATHENIAN: Of persons who have a fair sister or brother. The same law, though unwritten, proves a complete safeguard of son and daughter—so much so that no one lies with them, openly or covertly, or approaches them with any familiarities of that sort—nay the very wish for such congress never so much as enters the mind of the ordinary person.

MEGILLUS: True enough.

ATHENIAN: Well then, you see how all such lusts are extinguished by a mere phrase.

MEGILLUS: Phrase? What phrase?

ATHENIAN: The saying that they are all unhallowed, abominations to God, deeds of black shame. The explanation must surely be c that no one holds a different language about them. All of us, from our very cradles, are constantly hearing the same report of them from all quarters; we hear it alike from the lips of the buffoon, and again delivered with all the so-called solemnity of tragedy, on those many occasions when the stage presents us with a Thyestes, an Oedipus, or a Macareus, some character who acts the stealthy paramour to a sister and freely sentences himself to death for his crime on discovery. d

MEGILLUS: You are perfectly right on one point. Common fame is indeed a wonderfully potent force, provided only no single soul dares to entertain a sentiment contrary to the established usage.

ATHENIAN: So you see how right I was to say that if only the legislator has a mind to subjugate one of the passions which keep humanity in the hardest bondage, it is easy enough for him to find out the way to get a hold on it. He has merely to get the sanction of a common fame which is universal—embraces bond and free, women and children, and every section of society alike—and he will e without more ado have secured the best of guarantees for his law.

MEGILLUS: No doubt, but, then, how a whole community is ever to be brought to this voluntary unanimity of language on such a point . . .

ATHENIAN: A pertinent rejoinder. That was exactly my own meaning when I said I knew of a device for establishing this law of restricting procreative intercourse to its natural function by abstention  
 839 from congress with our own sex, with its deliberate murder of the race and its wasting of the seed of life on a stony and rocky soil, where it will never take root and bear its natural fruit, and equal abstinence from any female field whence you would desire no harvest. Once suppose this law perpetual and effective—let it be, as it ought to be, no less effective in the remaining cases than it actually is against incest with parents—and the result will be untold good. It is dictated, to begin with, by nature's own voice, leads to the suppression of the mad frenzy of sex, as well as marriage breach of all kinds,  
 b and all manner of excess in meats and drinks, and wins men to affection of their wedded wives. There are also numerous other blessings which will follow, if one can only compass the establishment of such a law. Yet should some young and lusty bystander of exuberant virility overhear us as we propose it, he might probably denounce our enactments as impracticable folly and make the air ring with his clamor. This was what led me to say, as I did, in so many words, that the device I knew for establishing such a law in perpetuity, though  
 c easy enough in one way, was most difficult in another. To see that the thing can be done, and how it can be done, is perfectly easy. As I say, if once the regulation receives adequate sanction, the minds of all will be subjugated and there will be a universal dread of the established law and conformity to it. But the fact is, things have come to such a pass today that no such result is thought possible, even in the case I have supposed. It is just as with the system of the common meal, a practice which it is thought beyond the bounds of possibility for a whole city to adopt throughout its daily life. The institution is  
 d proved as a fact to exist in your own societies, yet it is thought its extension to women would be outside the bounds of nature, even in them. It was in that sense, in view of this dead weight of incredulity, that I spoke of the great difficulty of establishing either practice as a permanent law.

MEGILLUS: And there was truth in what you said.

ATHENIAN: Still, would you like me to do what I can to urge an argument, and a telling one, to show that the proposal is feasible, not out of the range of human possibility?

CLINIAS: Most certainly.

e ATHENIAN: Then tell me, in which case would a man find it an easier task to abstain from sexual gratifications and obey orders on the matter readily, as a decent man should—if his physique were in good condition—in training, in fact—or if it were in poor form?

CLINIAS: If he were in training, of course. Most decidedly so.

ATHENIAN: Well, we have all heard, have we not, how Iccus of Tarentum is said to have acted for the sake of distinction at Olympia and elsewhere? Such was his passion for victory, his pride in his calling, the combined fortitude and self-command of his character that, as the story goes, he never once came near a woman, or a boy either, all the time he was in training. And you know the same is said of Crison, Astylus, Diopompus, and not a few others. And, after all, Clinias, they had much worse-cultivated minds than the citizens for whom you and I are providing, and much more rebellious bodies. 840

CLINIAS: You are perfectly right when you say that tradition asserts this emphatically as actual fact about these athletes. b

ATHENIAN: Why then, they made no hardship of denying themselves this 'heaven of bliss,' as the vulgar account it, for the sake of winning a victory in the ring, or the racecourse, or the like. And are our pupils to fail in endurance for the sake of a far nobler victory—one whose supreme nobility we shall extol in their hearing, from their earliest years, by story, speech, and song—it is to be hoped with the result of bringing them under the spell? c

CLINIAS: And what victory is that?

ATHENIAN: The conquest of their lusts. If they achieve it, we shall tell them, their life will be bliss; if they fail, the very reverse. And besides, are we to think the dread of so utterly unhallowed a deed will be so wholly powerless to compass a mastery which has been attained before by other men, and worse men?

CLINIAS: We can hardly suppose so.

ATHENIAN: Then if this is how we stand in the matter of this law—if it is the general viciousness which has brought us to a standstill—I say it is the law's simple duty to go straight on its way and tell our citizens that it is not for them to behave worse than birds and many other creatures which flock together in large bodies. Until the age for procreation these creatures live in continence and unspotted virginity; when they have reached that age, they pair together, the male with the female and the female with the male their preference dictates, and they live thereafter in piety and justice, steadfastly true to their contract of first love. Surely you, we shall say, ought to be better than the beasts. But if, alas, they should be corrupted by the example of the great mass of other Greeks and of non-Greeks, as they learn from their eyes and ears how all-powerful so-called free love is among them all, and should so fail to win the victory, I would have our curators of law turn legislators and contrive a second law to meet their case. d

CLINIAS: And what law do you advise them to enact, if the one we are now proposing slips through their fingers? 841

ATHENIAN: Why, of course, Clinias, the next best to it.

CLINIAS: And what is that?

ATHENIAN: There was a way of effectively checking the

development of the full violence of these lusts, that of directing the rising current into some other physical channel by hard work. Now this result may be attained if sexual indulgence is attended by a sense of shame; this feeling will make indulgence infrequent, and the infrequency of the indulgence will moderate the tyranny of the appetite. So it must be the ordinance of custom and unwritten usage that secrecy in such matters is a point of honor, and the discovery of the act, though not necessarily its mere commission, discreditable. The establishment of such a tradition would give us a second-best standard of honor and dishonor with its own inferior rightness; the morally corrupt class whom we speak of as 'slaves to their vices' would be circumvented and constrained to compliance with the law by no less than three influences.

CLINIAS : And what are the three?

ATHENIAN : Fear of God, desire of honorable distinction, and the development of the passion for a beauty which is spiritual, not physical. It may be that my present proposals are no more than the aspirations of a pious imagination, though I assure you any society would find their realization a supreme blessing. However, by God's help, we might not impossibly enforce one or other of two rules for sexual love. One would be that no freeborn citizen should dare to touch any but his own wedded wife, and that there should be no sowing of unhallowed and bastard seed with concubines, and no sterile and unnatural intercourse with males. Failing this, we may suppress such relations with males utterly, and as for women, if a man should have to do with any—whether acquired by purchase or in any way whatsoever—save those who have entered the house with the sanction of heaven and holy matrimony, and his act become known to man or woman, we shall probably be pronounced to do well by enacting that he be deprived of the honors of a citizen, as one that proves himself an alien indeed. So whether this be taken as one single statute, or should rather be called two, let it stand as our law in the matter of sex and the whole business of love, our rule of right and wrong in all relations inspired by those passions.

842 MEGILLUS : Indeed sir, I for one shall welcome this law with all my heart. Clinias, of course, must declare his mind on the matter for himself.

CLINIAS : And so I shall, Megillus, when I think I have fitting occasion. For the moment, however, suppose we permit our friend to proceed with his legislation.

MEGILLUS : Well and good.

b ATHENIAN : Observe then. Our progress has now brought us to a point at which we may well take the public meals to have been instituted. As I say, there would be difficulties about this anywhere else, but in Crete no one is likely to recommend any other arrangement. But on what system they should be conducted, that of this country,

that of Lacedaemon, or whether some third type of public meal would be better than either, is, I think, not a problem of great difficulty, nor does its solution promise any considerable advantage. In fact, I believe the arrangements we have already made quite sufficient.

The question which arises next in natural order is that of commissariat. What will be the appropriate sources of provisions? Of course, the sources from which societies in general can be provisioned are varied and numerous, twice as numerous, at least, as those open to our citizens, since a Greek population, as a rule, draws its food supply from land and sea alike, whereas ours is confined to the land. So far as the legislator is concerned, this makes his work lighter. The number of laws necessary for adequacy will be reduced not merely to one half, but within still narrower compass, and those which are required will also be fitter for freeborn men. The maker of our city's code is free to turn his back on the regulation of commerce, water-borne or land-borne, of retail trading, innkeeping, tolls and customs, mining operations, interest simple and compound, and a thousand such details. His statutes will be made for husbandmen, graziers, beekeepers, custodians of such stock, and users of the implements connected with it. His principal task has already been achieved by his regulation of marriage, procreation and rearing of children, education, appointment of civic officials. He has now to turn his attention to regulations for those who raise the food supply or are concerned in its preparation.

We shall begin, then, with a number of statutes under the rubric, *Of Agriculture*. At their head shall stand a law of the sacred landmark, and it shall run thus. No man shall move his neighbor's landmark, whether that neighbor be a fellow citizen, or the property lie on the border marches and the neighbor be thus an alien. The act must be held to be a literal 'moving of the not-to-be-moved,' and every man must be readier to venture the shifting of the heaviest boulder that marks no boundary than to move the tiny stone, consecrate by oath to heaven, that marks off the land of a friend or a foe. For Zeus the god of common clanship is witness to one of these sanctities, Zeus protector of the stranger to the other, and when the wrath of these powers is awakened, deadliest hostilities ensue. He that is obedient to the law shall feel none of its penalties, but he that sets it at naught shall be guilty at more bars than one, first and foremost at the bar of heaven, and next at that of the law. None, I say, shall move a neighbor's boundary stone of his own free purpose; if they are so moved, he that will may lay an information before the husbandman, who shall bring the matter into court. If a man be cast in such a suit, he shall be held for one that seeks by stealth or violence to assail freehold, and the court shall assess the penalty the culprit shall suffer or the mulct he shall pay.

Further, little repeated torts between neighbors by their frequency engender a heavy burden of ill will and make neighborhood a

- c grievous and bitter hardship. Hence neighbor must take every care to do nothing exceptionable to neighbor, must keep himself strictly from all such acts, and above all from encroachment on a neighbor's lands, for whereas by no means every man can do his neighbor a service, to cause him hurt is easy enough, and any man can do it. He that disregards boundary marks and works soil that belongs to his neighbor
- d shall make the damage good to him, and shall, moreover, by way of medicine for his churlish insolence, pay a further sum of double the amount of the damage to the sufferer. In all such cases the inspection, conviction, and assessment of penalties shall be in the hands of the rural commissioners—action being taken, as has already been said, in graver cases with the whole staff for the district, in the lighter with their commanders. If any man graze his cattle on a neighbor's land, they shall likewise decide the case and fix the penalty by ocular inspection of the damage done. If a man appropriate the bees of another's
- e hive by humoring their tastes, and so beat down the swarm and make it his own, he shall pay for the damage done. If in making a bonfire he take no precaution for the timber of his neighbor's land, he shall pay such fine as the magistrates think good. And so, likewise, if in planting trees he should set them at an insufficient space from his neighbor's land. These matters have received competent treatment from many
- 844 legislators, and we should adopt their regulations; we must not expect the great author of our social order to make statutes for all these numerous little matters with which any and every legislator can deal.

Thus, to take one instance, there are sound old laws extant concerning the farmer's water supplies. There is no need that they should be distilled in our discourse, but any who is minded to bring water to his steading may draw it from the public watercourses, so long as he does not tap exposed springs owned by another private person, and may conduct it in any channel he pleases, provided he avoids houses, temples, and tombs, and causes no damage beyond the cutting of the

b channel itself. If certain districts are naturally arid from failure to retain rain water, and so there is a scarcity of the needful supply, the owner may dig on his own land down to the clay. If he should find no water at that depth, he shall be furnished by his neighbors with just so much as he needs for the drinking supply of his domestic staff; if the distress extends to the neighbors also, he shall procure an order for his ration of water from the rural commissioners, and receive that

c quantity daily by contribution from the neighbors. If a man causes damage to the occupant of the farm or dwelling house immediately above his own by impeding the outflow of rain water, or again to the occupant of a lower site by careless discharge of the efflux from a higher, with the consequence that the parties decline to oblige one another in the matter, either may obtain an order for the conduct of both from an urban commissioner, if the case arise within the town, or a rural commissioner, if it occur in a country district. A party who dis-

regards such an order shall render himself liable to proceedings by his grudging and unaccommodating spirit, and on conviction shall pay <sup>d</sup> the sufferer double the amount of damage caused as a penalty for his refusal to comply with the magistrate's directions.

As to the fruit harvest, there must be an accepted general understanding to some such effect as this. Two gifts are bestowed on us by the bounty of the goddess of harvest, one the 'ungarnered nursling of Dionysus,' the other destined for storage. So our law of fruits shall impose the following rules. If a man taste the common sort of fruit, whether grapes or figs, before Arcturus have brought round the season <sup>e</sup> of vintage, whether on his own ground or on that of another, he shall incur a fine in honor of Dionysus, of fifty drachmas for fruit culled in his own grounds, a mina for that taken from his neighbor's, two thirds of a mina for fruit gathered elsewhere. As for what we commonly call choice grapes or choice figs, if a man has a mind to harvest them and takes them from his own plants, he shall be free to gather them as and when he will, but if they are taken from another's plants without the owner's consent, he shall be fined for each such act conformably to the law which forbids him to 'take up what he did not lay down.' If it is actually a slave who touches such things without permission from the <sup>845</sup> owner of the land, he shall receive a stripe for every grape of each cluster taken, or every fig taken from the tree. A resident alien who buys the choice produce may gather it at his pleasure. As for the alien on a temporary visit, who may desire to eat the fruit as he travels the roads, he and a single attendant may, if he so pleases, take the choice fruit without payment, as a gift of national hospitality, but the law must prohibit the foreigner from meddling with our common <sup>b</sup> fruits and the like. If they are taken in ignorance by master or slave, the slave shall suffer a whipping; the free man shall be dismissed with a warning and an admonition only to touch such fruit as is unfit to be set apart for use as raisins, wine, or dried figs. As for pears, apples, pomegranates, and the like, it shall be no felony to filch them, but <sup>c</sup> should any man under thirty years of age be taken in the act, he shall be punished by blows which must not draw blood, and a free man shall have no remedy at law against such blows. An alien shall be free to take his share of this produce, as of the grapes and figs. If they are taken by a citizen over the age of thirty, he may share in them on the same terms as the alien, provided he eat the fruit on the spot and carry none away, but disobedience to the law shall render him liable <sup>d</sup> to disqualification from seeking distinctions, when the time comes, if such conduct is brought to the notice of the acting judges.

Water, above all things, is exceptionally necessary for the growth of all garden produce, but is easily corrupted. It is not easy to affect the other contributory causes of the growth of products of the ground, the soil, the sunlight, the winds, by doctoring, diverting, or intercepting the supply, but water can be tampered with in all these ways, and

e the law must accordingly come to the rescue. So we shall meet the case by enacting as follows. If one man intentionally tamper with another's supply, whether of spring water or standing water, whether by way of drugging, of digging, or of abstraction, the injured party shall put the amount of the damage on record, and proceed at law before the urban commissioners. A party convicted of poisoning waters, shall, over and above the payment of the fine imposed, undertake the purification of the contaminated springs or reservoir in such fashion as the canon law may direct this purification to be performed in the individual case.

As to the bringing home of the fruits of the seasons, it shall be open to any man to fetch in his crop by the route he pleases, provided  
 846 either that he cause no damage to another, or that the profit to himself is threefold of the damage to his neighbor. The determination in these cases shall lie with the magistrate, as generally in other cases where intentional damage is done to any man's person or property without his consent by a second party or a chattel of such party. Information shall be given to a magistrate and redress awarded for damage to the amount of three minas or under; when the claim is for a greater sum, the complainant shall carry the case before the public  
 b courts and seek redress of the injury from them. If any magistrate is judged to have shown injustice in an award of compensation, he shall be liable to forfeit double the amount to the aggrieved party; an unfair decision about any charge may be brought before the public courts by either party to the suit. These countless minor formalities about methods of judicial procedure—the institution of a process, the issuing of a summons, the number of witnesses, whether two or some other  
 c number, required to its service, and the like—cannot be left without legal regulation, and yet are beneath the attention of an aged legislator. His younger imitators should prescribe them on the model of his antecedent and more important rules; they should make an experimental use of such rules where they are forced to employ them, until they are satisfied that they have a complete and adequate collection of them. Then, when the rules have been got into shape, and not before, they should treat them as final and live by them.

d As to the arts and crafts, we should proceed as follows. In the first place, no native, and no servant of a native, is to practice a craft as his calling. A citizen has already a calling which will make full demands on him, in view of the constant practice and wide study it involves, in the preservation and enjoyment of the public social order—a task which permits of no relegation to the second place. But human capacity, we may fairly say, is never equal to the finished exercise  
 e of two callings or crafts. Nay more, none of us has the gift of following one craft himself while he superintends another's practice of a second. Hence we must from the start take this as a principle of our society. No one shall be smith and carpenter at once, and further, no

one who is a carpenter shall be permitted to superintend others who are engaged in smithwork, to the neglect of his own craft, on the plea that as overseer of so many employees who are working for his profit, he naturally supervises them the more carefully because his revenue from their labors is so much greater than his income from his own trade. Each artisan in the society must have his single craft, and must 847 earn his living by that trade and no other. The urban commissioners must exert themselves to keep this law in force. If a native stray from the pursuit of goodness into some trade or craft, they shall correct him by reproach and degradation until he be brought back again into the straight course; if an alien follow two crafts, there shall be correction in the shape of imprisonment, fine, or expulsion from the b city to constrain him to play one part, not several. Disputes about wages due to workmen or refusal of work done by them, and complaints of injustice done to them by others, or to others by them, shall be decided by the urban commissioners where the sum involved is not more than fifty drachmas; where it is greater, the public courts shall deal with the case as the law may direct.

No dues shall be paid in our city either on exports or on imports. There shall be no importation of frankincense or other such foreign perfumes for the purposes of religious ceremonial, nor yet of purple c and other dyestuffs not produced in the country, nor of the materials of any other industry dependent on foreign importation and serving no necessary purpose. Further there shall be no exportation of any commodities which it is indispensable to retain at home. The jurisdiction and supervision in all these matters shall be with the twelve curators of law who stand at the head of the board when its five senior members are exempted.

As to weapons of war and military equipment of all kinds, if military purposes require the importation of any industry, vegetable, mineral substance, material for ropemaking, or animal, the cavalry commanders and generals shall have the control of such importation and exportation, the state being both seller and buyer, and the proper and sufficient regulations for the proceeding being imposed by the curators of law. There shall be no retailing of these or any other materials for profit anywhere within our territory or among our citizens. e

When we come to supplies and the distribution of natural produce, a rule much like that followed in Crete will probably be found to serve our turn. All should divide the total produce of the soil into twelve parts, as it will in fact be divided in consumption. Each twelfth—that of the wheat and barley, for example, and all the produce of 848 the seasons as well as all salable livestock in the various districts must, of course, be subject to the same law of division—should be subdivided into three proportional shares, one for the free citizens, another for their servants, while the third shall be for artisans and other noncitizens, whether permanent residents requiring the necessities

of life or temporary visitors brought in by the business of the state or of private citizens, and the third part of all the necessities of life shall be the only part which shall be forced into the market; there shall be no compulsion to sell any portion of the remaining two thirds. Now  
 b what will be the right way of making this division? For one thing, it must obviously be equal in one way, though not in another.

CLINIAS: A word in explanation, please.

ATHENIAN: Why, you know, some of these products are bound to be inferior in strain and condition and others superior.

CLINIAS: Of course.

ATHENIAN: Well, in that respect none of the three subdivisions, neither that for the masters, nor that for the slaves, nor yet that of the aliens, shall have any advantage over the other; the distribution shall secure the same equality of similarity for all. Each citizen  
 c shall receive the two thirds and be authorized to distribute them among the slaves and free persons of his household in such quantity and quality as he pleases. The residue shall be distributed by number and measure in the manner following. The distribution shall proceed upon a computation of the whole livestock which will have to be supported by the produce.

Next, we must provide our personnel with individual dwelling houses properly grouped, and the following disposition will be appropriate for the purpose. There should be twelve villages, each standing in the center of one of our twelve regional districts. Our first proceeding should be, in each of these villages, to set apart temples, with a  
 d market square, for the gods and superhuman beings under them, taking care that any local deities of the Magnesians, or sanctuaries of other powers of venerable memory which may be left, receive the same honors as in earlier ages. In each of the twelve regions we shall found shrines of Hestia, Zeus, Athena, and the god, whoever he may be, who is to be patron of the district. We should then begin by building  
 e dwellings on the highest ground, in the neighborhood of these temples, as the strongest lodging we can find for the garrison. The whole of the rest of our territory will be furnished with workmen, who will be divided into thirteen sections. One of these will be appointed to dwell in the capital—this section itself, in its turn, will be divided into twelve parts, like the capital itself, who will be distributed through all the suburbs—while we shall collect in the several villages the classes of hands whom farmers will find useful. The supervision of them all is to be in the hands of the chiefs of the rural commissioners, who shall decide what workers each district requires, and how  
 849 many of them, and where they can live with least discomfort to themselves and most benefit to the farmers. The workmen in the capital shall, in like manner, be placed and remain under the supervision of the board of urban commissioners.

The details of the conduct of the market must, of course, rest

with the commissioners of the market. After their vigilance to protect the temples in the market place from all violation, their second concern must be with the supervision of the human traffic, and in this charge they shall take careful note of decency and indecency of behavior, and inflict correction where it is called for. They are, first of all, to take note whether the sales of the articles which citizens are required to vend to aliens are in all cases conducted as the law commands. For each such article the law will be that on the first of the month the quantity which is to be sold to the aliens shall be produced by the agents—that is, aliens or slaves appointed by the citizens for this purpose—beginning with the monthly twelfth portion of corn, and an alien shall at this first market purchase corn and all that belongs to it for the whole month. On the tenth, the parties shall, respectively, conduct the sale and purchase of liquids sufficient for the full month. On the twentieth, there shall be a third sale, of such livestock as it meets the requirements of the parties to buy or sell, and also of such manufactured goods and articles as farmers have for sale, and foreigners can only acquire by purchase—for example, hides, wearing apparel, woven stuffs, felts. As to the retailing of those goods, of wheat or barley in the form of flour, or of any foodstuffs whatsoever, there shall be absolutely no selling to citizens or their slaves in this way, and no purchasing from them, though an alien, selling to artisans and their servants, in the market for foreigners, may drive a trade in wine and corn, a retail business, as it is commonly called. Butchers also may cut up carcasses and dispose of the joints to aliens, artisans, and artisans' servants. As for firewood, an alien shall be free, if he pleases, to buy it in bulk daily from the agents of the district, and may then retail it in such bulk and at such times as he pleases to other aliens.

As for all other goods or manufactured articles of which various parties may be in need, they shall be brought to the general market, each article to the proper quarter, and there offered for sale on the site appointed for traffic, and furnished with convenient stalls by the curators of law and the commissioners of market and city. The sale is to be by actual exchange of currency for goods and goods for currency, and neither party shall waive the receipt of a *quid pro quo*. A party who acts thus, by way of giving credit, shall put up with the consequences, whether he receives that for which he has bargained or not, as no action will lie in the case of such transactions. If the property bought or sold, in quantity or value, violate the law which fixes the limits of increase and decrease outside which both transactions are prohibited, the excess must be at once recorded in the court of curators, or the deficit canceled. The same rule shall apply to the inscription of the property of aliens.

Any foreigner who pleases may become a resident in the country on certain express conditions. It shall be understood that we offer a

in view of the education and nurture he has enjoyed from a child and the depth of shame to which he is sunk. Whence his sentence shall be death, the lightest of ills for him, and he shall serve as an example for the profit of others, being buried in silence and beyond the borders. But children and family, if they forsake their father's ways, shall have an honorable name and good report, as those that have done well and manfully in leaving evil for good. It will not be proper that there should be any forfeiture of such men's estates in a society where patrimonies must remain forever unchanged and of undiminished number. And when a man has done a wrong which is judged to be met by a fine, he may meetly be made to pay such fine to the amount of whatever property may remain to him when his patrimony has been stocked, but no more. The curators shall ascertain the exact facts of each case from their register and report them to the court in due course of procedure, that no estate may go out of working for want of means. If a man's case be judged to call for a heavier fine than this, then if he have no friends who are ready to be bound for him and discharge their part of his debt, his punishment shall take the form of long terms of prison, pillorying, and marks of degradation.

For no offense whatsoever shall any man be made a hopeless outlaw, not even though he have fled beyond our borders. Death, prison, stripes, ignominious postures of sitting or standing, or exposure at sanctuaries on the frontiers, fines, in cases where, as we have said, their payment is a proper sentence—these shall be our penalties. In a case of life and death the judges shall be curators of law acting together with the court selected for merit from the magistrates of the preceding year. It shall be the business of the junior curators to attend to the bringing in of the case, the issuing of citations and similar details, the observance of rules of procedure. We as legislators must prescribe the manner of taking the vote. The votes, then, shall be given openly, and before they are given the judges shall one and all, in order of seniority, take their seats in a compact body, facing prosecutor and defendant, and all citizens who have the necessary leisure shall be present and give attentive hearing to the pleadings in such cases.

The prosecutor shall state his case and the defendant reply to it, each in a single speech. When the speeches have been delivered, the senior judge shall first state his view of the case, discussing the statements of the parties in full and sufficient detail. When he has finished, the rest of the judges, each in his order, shall review any omissions or errors they find to complain of in the pleadings of either party, a judge who has no complaint to make leaving the right of speech to his neighbor. The written record of all statements pronounced to be relevant shall be confirmed by the seals of all the judges and deposited on the altar of Hestia. They shall meet again the next day at the same place to continue the review of the case, and once more affix their seals to

the documents. When this has been done for a third time, due weight being allowed to the evidence and witnesses, each judge shall give a solemn vote, swearing by the altar to pronounce just and true judgment to the best of his power, and this shall be the end of that trial.

To turn from cases of religion to cases of treason to the state, b  
whosoever seeks to put law in chains and the state under the control of faction by subjecting them to the domination of persons, and further serves these ends and foment civil strife by revolutionary violence, must be counted the deadliest foe of the whole state, and he that, being in high office, though himself no party to such plottings, neglects to avenge his country on the plotter—whether it be that he detects them not, or that he detects them indeed, but is a craven at heart—such citizen must be held second only to the other in guilt. c  
Any man of worth, however slight, must reveal the matter to the magistrate by bringing the plotter to trial for revolutionary and illegal violence. The judges in the case shall be the same as in those of sacrilege, and their whole procedure shall follow the same rule—death to be inflicted by a majority of their sentences. But once for all, in no case shall a father's disgrace or sentence descend to his children, save only d  
when father, grandfather, great-grandfather have all, without break, incurred judgment of death. In that case the state shall deport them to their original native place with all their property beyond the whole stock of their patrimonial holding. Ten names shall be chosen by lot from the families of citizens who have more than one son over ten years of age, on the nomination of a father or grandfather on either side, and sent to Delphi. The nominee preferred by the god shall be e  
constituted heir to the derelict house—let us pray, with brighter hopes!

CLINIAS : An admirable proposal.

ATHENIAN : There is yet a third class to be covered by a single law prescribing the judges who shall sit upon them and the process of their trials—those who may be brought into court on the charge of traffic with the enemy. In like manner our proposed law concerning the retention of their children in the country or expulsion therefrom 857 shall be the same for all three, the trafficker with the enemy, the temple breaker, the violent subverter of the state's laws. For the thief, again, there shall be one law, alike whether his theft be a great one or a small, and one legal penalty for all cases. For first he must pay twice the value of the thing stolen if convicted on such a charge, and if he have sufficient property besides his patrimonial holding to make the payment. If he have not, he shall lie in prison until the sum be either paid or remitted by the successful prosecutor. He that is convicted of b  
theft from the public shall be released from durance on obtaining his grace from the state, or making payment of double the sum.

CLINIAS : Pray, sir, how can we rule that it shall make no difference to a thief's case whether the stolen property be of great value or

little, whether it be taken from a consecrated spot or an unconsecrated, or how the circumstances of a theft may differ in other respects? A lawgiver should surely adapt himself to the variety of these particulars by attaching widely different penalties to the several offenses.

c ATHENIAN: A sound observation, Clinias. I fear I was letting myself drift when the collision with you woke me up. You remind me of the observation I made a while ago, that the business of legislation, if I may speak on the spur of the moment, has never yet been thoroughly worked out on right lines. But what, you may ask, do I mean by this? That was no unhappy simile by which we likened all existing legislation to the treatment of unfree patients by unfree physicians. You may be sure that were one of these empirical practitioners of the d healing art, so innocent of the theory of it, to discover a free physician conversing with his free patient, to hear him talking almost like a philosopher, tracing the disorder to its source, reviewing the whole system of human physiology, his merriment would be instantaneous and loud. His language would be no other than that which comes so pat from the lips of most of our so-styled physicians. This is not to treat the patient, fool, but to educate him—as though he wanted to e be made a medical man, not to recover his health!

CLINIAS: Well, and would not the speaker be in the right of it?

ATHENIAN: He might be so, if only he also understood that any man who treats of law in the style we are now adopting, *means* to educate his fellow citizens rather than to lay down the law to them. That, too, would be a pertinent remark, would it not?

CLINIAS: It might be.

ATHENIAN: And how fortunate for us that our present position is what it is!

858 CLINIAS: In what way fortunate?

ATHENIAN: Because we are under no obligation to lay down the law. We are free to pursue our own reflections on all points of political theory, to set ourselves to discover how to effect either the best possible result, or the indispensable minimum. In the case under discussion, for example, it is open to us, I take it, to ask either what would be the ideally best legislation, or what is indispensably requisite as a minimum, according to our preference. So we must make our option.

b CLINIAS: A singular pair of alternatives, sir. We should be in the position of the statesman driven by the stress of some dire necessity to produce his laws on the instant, because tomorrow will be too late. Our case, please God, is more like that of stonemasons or some such workers at the beginning of their operations. We are free to collect our materials in the mass before we proceed to select those which will suit the future construction, and we can make the selection itself at our leisure. So we will take ourselves to be erecting our present edi-

fice, not under pressure, but with undiminished leisure to lay up some of our material for future employment while we work the rest into our fabric. Thus we may rightly think of our body of law as composed partly of statutes actually imposed, partly of material for statutes.

ATHENIAN: At all events, Clinias, our digest of law will be the more scientific so. For here is a point I beg we may observe in connection with the legislator.

CLINIAS: And what may it be?

ATHENIAN: Our societies, we may say, abound in literary works by various authors, and of this literature the productions of the legislator form part.

CLINIAS: Certainly.

ATHENIAN: Well then, are we to give serious attention to the compositions of others, poets and others who have left a written record of their counsels for the conduct of life, in prose or in verse, and none to the legislator's? Should not they have our first attention?

CLINIAS: Decidedly.

ATHENIAN: And can we suppose that the legislator alone among authors is to give us no counsel about honor, good, or right, not to tell us what they are, and how they must be cultivated by one who would have a happy life?

CLINIAS: Of course he must tell us.

ATHENIAN: Then if it is discreditable in Homer, or Tyrtæus, or another poet, to have laid down bad precepts for the conduct of life in his verses, is the discredit less in Lycurgus, or Solon, or any other author of a legislation? Surely a society's lawbook should, in right and reason, prove, when we open it, far the best and finest work of its whole literature; other men's compositions should either conform to it, or, if they strike a different note, excite our contempt. How should we imagine the rightful position of a written law in a society? Should its statutes disclose the lineaments of wise and affectionate parents, or should they wear the semblance of an autocratic despot—issue a menacing order, post it on the walls, and so have done? Here, then, is the immediate question for us. Shall we try to take this line in uttering our thoughts on law, or, at least, make an earnest effort to do so, be its success as it may? And if there are hazards to be run on the road, shall we risk them? But may all be for the best—as it will be, God willing!

CLINIAS: Well said, indeed. We must act as you propose.

ATHENIAN: Then we must, in the first place, go on with the investigation we had begun; we must look closely into our law of sacrilege, theft in general, and injuries as a class. We must not be discouraged to find that though some matters have been disposed of in the course of our still unfinished legislation, others still demand further consideration. We are still on our way to become legislators, but as yet have not reached the goal, as we may perhaps do in time. With your

approval, then, we will discuss the points I have specified on the lines I suggest.

CLINIAS: With all my heart.

ATHENIAN: Then here is the point where we must make an effort after clarity of vision in all discussion of the good and right. What amount of agreement and what amount of disagreement are actually to be found, among ourselves—who, you know, would own at least to an aspiration to surpass the common herd—and again among the mass of mankind among themselves?

CLINIAS: Of what disagreements between us are you thinking?

ATHENIAN: Let me try to explain. When we think of right in general, or of upright men, right deeds, right conduct, we are universally agreed in a way that they are one and all comely. Thus, however strongly a man should insist on the point that even upright men who may be physically ugly are perfectly comely, in respect of their eminent uprightness of character, his language would never be thought out of place.

CLINIAS: And rightly not, surely.

ATHENIAN: No doubt. But I would have you observe that if all that is characterized by rightness is comely, this *all* must include what is *done to us*, no less than what we *do*.

CLINIAS: And what then?

ATHENIAN: The right thing we do, just so far as it has its share of rightness, equally partakes of comeliness.

CLINIAS: Certainly.

ATHENIAN: Well then, if our language is to be kept clear of inconsistency, we must also admit that the thing *done to us* is comely just so far as it has its share of rightness.

CLINIAS: True enough.

ATHENIAN: But if we grant that something may be done to us which is unseemly, though right, there will be a discord between the right and the comely; we shall have pronounced a right thing a shame.

CLINIAS: But the point of your remark?

ATHENIAN: Quite a simple one. The laws we were just now laying down look like a proclamation of the direct contrary of our present doctrine.

CLINIAS: Where does the discrepancy come in?

ATHENIAN: Why, you know, we laid it down that a temple robber or a man at war with an excellent law is rightly put to death. And we were on the point of enacting a host of similar rules when we were checked by the discovery that we have here the infliction of a host of severe penalties, and that these inflictions are at once supremely right and superlatively shameful. Thus we seem to assert first an absolute identity and subsequently an utter opposition between the right and the comely.

CLINIAS: It looks dangerously like it.

ATHENIAN: And this is what brings the discordance and confusion into the popular employment of the epithets *comely* and *right* in such cases.

CLINIAS: So it should seem, sir.

ATHENIAN: Well then, Clinias, let us turn to ourselves. How far are *we* consistent in our language about the matter?

CLINIAS: Consistent? Consistent with what?

ATHENIAN: I fancy I have already said in so many words—or if I have not, you may now take me as saying that . . .

CLINIAS: That what?

ATHENIAN: That bad men universally are always bad against their own will. Now on that presupposition a further consequence inevitably follows.

CLINIAS: And that consequence is?

ATHENIAN: Why, the doer of a wrong, you will grant, is a bad man, and a bad man is what he is against his will. But it is mere nonsense to talk of the voluntary doing of an involuntary act. *Ergo*, he who declares the doing of a wrong involuntary must regard the doer of it as acting contrary to his own will, and I in particular am bound at this moment to accept the position. I grant, in fact, that those who commit wrongs always act against their own will. There may be those who are led by contentiousness or the desire to shine into saying that while there are involuntary wrongdoers, there are also many whose wrongdoing is voluntary, but for my part, I hold to the first statement and reject the second. Well then, I ask you, how am I to be consistent with my own avowals? Suppose you, Clinias and Megillus, put this question. The case being as you say, sir, how would you advise us about framing a code for our Magnesian state? Shall we make one or not? Make one, by all means, I answer. Then will it draw a distinction between involuntary wrongs and voluntary? Will it inflict heavier penalties for a voluntary transgression or wrong, and lighter for an involuntary? Or should they all be treated alike, on the ground that there is no such thing as a voluntary act of wrong? 861

CLINIAS: Indeed, sir, you are very right. What are we to make of our statements?

ATHENIAN: Well demanded. Well, the first thing to be made of them is this.

CLINIAS: What?

ATHENIAN: We shall remind ourselves of the truth of our recent remarks about the bewildering confusion and contradiction in our views of rights. Bearing this in mind, we shall go on to ask ourselves a further question. We have never extricated ourselves from our perplexity about this matter, we have never achieved any clear demarcation between these two types of wrongs, the voluntary and the involuntary, which are recognized as distinct by every legislator who has ever existed in any society and regarded as distinct by all law. And is

c the formula we have just pronounced to dispose of the business by an ipse dixit, like some oracular response? Is it, so to say, to stifle opposition by decree, without one syllable of justification? Surely not. Before we come to the legislating we are bound to show that the cases are distinct and the difference between them other than supposed, to ensure that when we prescribe the penalty for an offense of either kind, everyone shall follow our reasoning and be capable of a more or less competent judgment on the appropriateness of the infliction.

d CLINIAS: Your audience is with you there, sir. Of two things, one—either we must deny the thesis that all wrongful acts are involuntary, or else, before we assert it, we must establish its soundness by making a distinction.

ATHENIAN: One of your alternatives, the denial of the thesis, I must absolutely decline to admit. Convinced as I am of its truth, to deny it would be unlawful and impious. But how do the two cases differ, if not as the involuntary and the voluntary? Of course we must try to find some other principle of distinction.

CLINIAS: Assuredly, sir, we can think of no other possible course.

e ATHENIAN: Well, I will try to do so. Consider. Citizens, of course, frequently cause mutual *damage* in their various associations and relations with one another, and the damage is often enough voluntary and also often enough involuntary.

CLINIAS: Exactly.

ATHENIAN: Now we should not regard all these cases of causation of damage as *wrongs*, and so come to the conclusion that the *wrong* done in such acts may be of two kinds, voluntary, or again involuntary—involuntary *damage*, as a form of damage, is as common  
862 and serious as voluntary. What you must consider is whether there is any truth or none at all in what I am next to say. What I maintain, Clinias and Megillus, is not that when one man causes hurt to another unintentionally and of no set purpose, he does him a wrong, but an involuntary wrong, and so I shall not propose to treat the act legally as an involuntary wrong—I shall not regard such causing of detriment, serious or trifling, as a *wrong* at all. Also, if my view carries the day, the author of a benefit will often be said to do a *wrong*, when that  
b benefit is not rightfully conferred. Speaking generally, my friends, we cannot call it a right act without further qualification when one man gives another something, nor a wrong when he takes something from him. What the legislator has to ask himself is whether the agent of the beneficial or detrimental act is acting with a rightful spirit and in a *rightful manner*. There are thus two considerations he must keep in view, the *wrong* committed and the *detriment* occasioned. He must do all he can by his laws to make damage good, to recover the lost, rebuild the dilapidated, replace the slaughtered or wounded by the  
c sound. He must aim throughout in his legislation at reconciling the

minds of the authors and sufferers of the various forms of detriment by award of compensation, and converting their difference into friendship.

CLINIAS: Admirable, so far.

ATHENIAN: And then as to *wrongful* detriment—or gain, either, in the case that a man should cause another to profit by a wrongful act—such things, as we know, are maladies of the soul, and we must cure them whenever they are curable. And the line our cure for wrong must follow, I say, is this.

CLINIAS: What?

ATHENIAN: The line whereby law will both teach and constrain the man who has done a wrong, great or small, never again, if he can help it, to venture on repetition of the act, or to repeat it much more rarely—and he must make the damage good to boot. And so, if we can but bring a man to this—to hatred of iniquity, and love of right or even acquiescence in right—by acts we do or words we utter, through pleasure or through pain, through honor bestowed or disgrace inflicted, in a word, whatever the means we take, thus and only thus is the work of a perfect law effected. But should our legislator find one whose disease is past such cure, what will be his sentence or law for such a case? He will judge, I take it, that longer life is no boon to the sinner himself in such a case, and that his decease will bring a double blessing on his neighbors; it will be a lesson to them to keep themselves from wrong, and will rid society of an evil man. These are the reasons for which a legislator is bound to ordain the chastisement of death for such desperate villainies, and for them alone. 863

CLINIAS: All you have said seems, in its way, sound enough. But there is a point on which we should still be thankful for clearer explanations. How comes the distinction between wrong and detriment to be complicated in these cases with that between voluntary and involuntary?

ATHENIAN: Well, I must do what I can to give the explanation you require of me. I am sure that when you talk together about the soul there is one point assumed by speaker and listener alike, the presence in it of a native character—or, if you like, part—of *passion*, a contentious and combative element which frequently causes shipwreck by its headstrong violence.

CLINIAS: Yes, of course.

ATHENIAN: You must observe further that we draw a distinction between *passion* and *pleasure*. The empire of pleasure, we say, is based on an opposite foundation; it regularly gets its will by a combination of seduction with cunning deception.

CLINIAS: Assuredly.

ATHENIAN: And we should not be wrong if we spoke of *ignorance* as a third source of misconduct. Though you should note that the legislator will do well to make two kinds of it, ignorance pure and

simple, which he will regard as a cause of venial offenses, and the more complicated condition in which a man's folly means that he is suffering not from ignorance alone, but also from a conceit of his own wisdom, and supposes himself to know all about matters of which he knows nothing whatsoever. When such ignorance is accompanied by exceptional capacity or power the lawgiver will regard the combination as a source of grave and monstrous crime; when it is conjoined  
 d with impotence, since the consequent misconduct is puerile or senile, he will treat it as an offense, indeed, and make laws against its perpetrator as an offender, but those laws will be the mildest and most indulgent of his whole code.

CLINIAS: That is no more than sense and reason.

ATHENIAN: Now we all talk of one man as the master of his pleasures or his passion, of another as a slave to them, and this language describes real facts.

CLINIAS: Most certainly it does.

ATHENIAN: But we have never heard it said that so-and-so is the master of his ignorance, or so-and-so a slave to it.

e CLINIAS: We certainly have not.

ATHENIAN: And yet we speak of all three as frequently impelling a man in one direction at the very time his own will is urging him in the opposite.

CLINIAS: Aye, times out of mind.

ATHENIAN: Now at last I am in a position to explain precisely what I mean by right and wrong without any complications. *Wrong* is the name I give to the domination of the soul by passion, fear, pleasure  
 864 or pain, envy or cupidity, alike in all cases, whether damage is the consequence or not. But where there is the conviction that a course is *best*—wherever a society or private individuals may take that best to lie—where that conviction prevails in the soul and governs a man's conduct, even if unfortunate consequences should arise, all that is done from such a principle, and all obedience of individuals to it, must be pronounced *right* and for the highest good of human life, though detriment thus caused is popularly taken to be involuntary wrong. Our  
 b business at present is not to contend about words, but, in the first place, to get a still surer mental grasp on the three classes of error which have already been indicated. One of these, you will remember, had a principal source of which we spoke as passion and fear.

CLINIAS: Just so.

ATHENIAN: The second had its origin in pleasures and cupidities, and the third, which is of a very different kind, in the loss of sound anticipations and convictions about the good. Since the last has itself been subdivided into three, we get a total of five classes, as we  
 c may now observe, and for all five we have now to make distinct laws, under two principal heads.

CLINIAS: And what are they?

ATHENIAN: Under one head fall all cases of deeds of open violence; under the other, those of dark and crafty contrivance. There are also cases of acts in which both are employed, and it is, of course, these with which the law will deal most severely, if it is to have its proper effects.

CLINIAS: Yes, to be sure.

ATHENIAN: So we may now revert to the point at which this digression began and continue our lawmaking. If I am not mistaken, we had already legislated against robbery of heaven and treasonable traffic with the public enemy, and also against subversion of the established constitution by tampering with the laws. Now a man might conceivably commit an act of one of these kinds from insanity, or when so disordered by disease, so extremely aged, or of such tender years, as to be virtually insane. If one of these pleas can be established to the satisfaction of the court selected for the trial of the case, on the representations of the culprit or his advocate, and the verdict should be that the accused committed his transgression in such condition, he shall in any case pay full compensation to any party endamaged by his act, but the rest of the sentence shall be remitted, unless, indeed, he have taken a life and incurred the pollution of homicide. In that case, he shall remove to an abode in some other country, and remain there in exile for a full year; if he return before the legal term be expired, or set foot on any part of his native soil, the curators shall commit him to prison, and he shall not be released therefrom for two years. 865

As we have entered on the subject of homicide, we may attempt a complete statute dealing with all its forms. We will treat first of the case of unintentional violence. If a man unintentionally cause the death of a person with whom he is on friendly terms, in a competition or at the public sports, whether the death be immediate or result later from injuries received, or similarly if he cause such death in war or in some military exercise, whether unarmed practice or sham fight with armor, he shall, on accomplishing such purifications as may be directed by a law for these cases received from Delphi, be esteemed clear of pollution. In the case of all medical practitioners, if the patient meet his end by an unintentional act of the physician, the law shall hold the physician clear. And if one man take the life of another by his own act but without intention, whether with his naked hands, with weapon or missile, by administration of meat or drink, by application of heat or cold, by deprivation of air, by his own physical agency alone or by that of other persons, in all cases the deed shall be held his personal act, and he shall pay the penalty hereinunder stated. c

If the slain man be a slave, he shall consider that it is just as though one had made away with a slave of his own and indemnify the owner of the deceased for his loss, or shall, in default, be condemned in double the value of the deceased—the said value to be

estimated by the court—and shall be put to purifications more burdensome and numerous than those enjoined on those who cause loss of life at the sports, authority to prescribe these rights being vested in the interpreters of religious law whom the oracle shall nominate. If the slain man be his own slave, he shall be clear on accomplishing the purifications required by law. If one have unintentionally slain a free man, he shall be cleansed with the same purifications as the slayer of a slave, but let him take heed not to despise the teaching of the venerable and primitive myth. It tells us how he that is done to death with violence, as one that has lived his days in all the pride of a free man, has his wrath kindled against the author of his death in the days while the deed is still fresh, how he is likewise filled with fear and horror by his bloody fate, how he is aghast to see his murderer haunting walks that were once familiar and his own, how in his own distraction of soul, he allies himself with the doer's own memories to bring all possible distraction upon him and all his works. Whence it is truly but right that the homicide should avoid his victim's path through the round of a full year, and leave all homely spots of his native land clear of his presence, and if the deceased be an alien, he must likewise be forbidden the alien's native country for the same space of time. If a man comply with this law of his own motion, the next of kin to the deceased, who shall take note of his obedience, shall pardon his act, and will do no more than right to keep the peace with him. If a man disobey, if, in the first place, he venture to enter the sanctuaries with the stain of blood on his hands and do sacrifice there, or again, if he decline to expatriate himself for the full time appointed, the next of kin shall bring his action of homicide against the slayer, and if conviction follow, all the penalties shall be doubled. But if the next kinsman do not prosecute the case, though the blood now lies at his door, inasmuch as the dead man demands atonement for his death, any who will may proceed against him at law and drive him by legal sentence to five-years' banishment from his land. If an alien slay an alien resident in the state, he who will may prosecute the suit under the same law, and if the defendant be a resident settler, he shall go into exile for a year. If he be wholly an alien, whether the slain man were alien, resident alien, or citizen, he shall, after his purification, be excluded from the land to which these laws belong for the term of his natural life. If he return in violation of the law, the curators shall visit him with death, and shall deliver any effects he may possess to the next of kin of the sufferer. If the return be involuntary, he shall, if shipwrecked on our coasts, take up his quarters where the sea wets his feet and wait for a boat to remove him; if he be brought back by land by *force majeure*, the first official into whose hands he may come shall release him and send him over the border under safe conduct.

If one slay a free man by one's own act but the deed be done in

*passion*, there are, first, two cases to be distinguished. It is an act of passion when a man is done away with on the impulse of the moment, by blows or the like, suddenly and without any previous purpose to kill, and remorse instantly follows on the act. It is also an act of passion when a man is roused by insult in words or dishonoring gestures, pursues his revenge, and ends by taking a life with purpose to slay and without subsequent remorse for the deed. I take it we cannot treat these as two distinct forms of homicide; both may fairly be said to be due to passion and to be partially voluntary, partially involuntary. Not but what each of them has a resemblance to one extreme. The man who nurses his passion and takes his revenge not at the moment and on the spot, but afterward and of set purpose, bears a resemblance to the deliberate manslayer. He who does not bottle up his wrath but expends it all at once, on the spot, without premeditation, is like the involuntary homicide; still we cannot say that even he is altogether an involuntary agent, though he is like one. Hence the difficulty of deciding whether homicides of passion should be treated in law as intentional or, in some sense, unintentional. However the best and soundest procedure is to class each sort with that which it resembles, discriminating the one from the other by the presence or absence of premeditation, and legally visiting the slaughter where there is premeditation as well as angry feeling with a severer, that which is committed on the spur of the moment and without purpose aforethought with a milder, sentence. That which is like the graver crime should receive the graver punishment, that which resembles the lighter, a lighter. Our own laws, then, will of course be on these lines.

CLINIAS: Most assuredly.

ATHENIAN: Then let us return to our code and continue it thus. If a man slay a freeborn person by his own act, but the deed be done in angry passion and without purpose aforethought, his sentence shall be in all other respects the same as that proper for him who has slain without passion, but the offender shall be made to spend two years in exile, to learn to bridle his temper. He that slays in passion, but with the addition of premeditation, again, shall have the same sentence, in other respects, as the former, but three years of exile in the place of the other's two; as his passion was the more grievous, so the term of his punishment shall be the longer. The rule for their restoration from banishment shall be as follows—it is hard to lay it down in the law with precision, as there are cases in which the criminal reckoned by the law the more dangerous proves the more tractable, and the more tractable, as the law considers him, the more dangerous, the act of the latter being at times the more barbarous, that of the former the more humane, though in general the distinction already drawn holds good. The last word on these and similar matters must rest with the curators.

When the term of banishment, then, is expired in either case, the

- curators shall send twelve of their own number to the frontier to sit upon the case; the twelve must, during this interval, have subjected the exile's actions to still closer scrutiny, and they are to judge about giving the criminals their grace and receiving them home again
- 868 —the parties to be finally bound by this official verdict. If an offender of either kind ever, after his restoration, give way to rage and repeat his crime, he shall go into exile never to be recalled, and if he return, shall meet the same end as the returned alien. The man who slays a slave in his passion shall, if the slave be his own, purify himself, if another man's, pay his owner twice what he has lost. If any homicide of any class, in defiance of the law, shall pollute, by his presence still uncleansed, market place, public sports, or other hallowed assemblies, he that will may bring his action against both the kinsman who is executor for the deceased and the homicide, and compel exaction and payment of money and all else that is due twice over, and the sum so paid shall be awarded by law to the informer himself. If a slave slay his owner in his passion, the kinsmen of the deceased shall
- c deal with the slayer as they please and be clean of guilt—only that in no case shall they spare his life. If a free man be killed in passion by a slave not his own, such slave shall be delivered by his owner to the kinsmen of the deceased, who shall be bound to put the slayer to death, but the manner of his death shall be in their own choice. If—
- d for though unusual, the case does occur—father or mother take the life of son or daughter in passion, by stripes or other violence, the purificatory rites shall be as in other cases, and the period of exile shall be three full years. When the slayers have been received back, there shall be a divorce of wife from husband, husband from wife; procreation between them must cease; there must be no part in the family or its worship for one who has robbed it of a son and brother. He that impiously refuses to comply with this ordinance shall be open to an action for impiety at the suit of any who will charge him. If a
- e man slay his wedded wife in passion, or a woman do the like by her husband, there shall be the same rites of purifying, and the term of banishment shall be three years. When the criminal returns, he shall be cut off from joining in worship with his children, or sitting at one table with them forever. If father or child disregard this law, once more it shall be open to him who will to bring them to trial for impiety. If brother or sister slay a brother or sister in passion, the purifications and term of exile shall be as ordained in the former case of parent and child—no man shall share one board or join in one worship with the brother he has robbed of a brother, or the parents he has robbed of a
- 869 child—and if the command is disobeyed, the disobedient shall be liable to answer to the aforesaid law of impiety, as is just and right.
- If ever any man should harbor such unbridled passion against those that gave him being that he should presume in the frenzy of his fury to slay a parent, then, if the deceased, before his end, freely for-

gave the criminal his death, he shall be clear when he has accomplished the same purification imposed on the unintentional homicide and performed what else is prescribed for that case. But if such forgiveness be not given, the criminal in this sort shall lie in the danger of more laws than one. He shall lie open to heaviest judgment for violent outrage, and for impiety, and sacrilege to boot; he has done despite to the temple of a parent's soul, whence, were it possible a man should die more than once, it were perfect justice to put the parricide or matricide whose crime was done in passion to repeated deaths. In this sole case, when a man's life is in danger from his parents, no law will permit slaying, not even in self-defense—the slaying of the father or mother to whom his very being is due. The law's command will be that he must endure the worst rather than commit such a crime. How then can he, under the law, fitly receive any judgment but one? Let death, then, be the penalty prescribed for him who in passion takes the life of father or mother.

If brother slay brother in a faction fight or some like case, and the act be done in self-defense and the slain man the aggressor, he shall be clear of guilt, as though the slain had been an enemy in arms; the same shall hold in such case for slaying of citizen by citizen, or alien by alien. If citizen slay citizen, in self-defense, he shall likewise be clear, and so also slave who slays slave. But if the slave take the life of a free man in his own defense, he shall fall under the same laws as the parricide. All we have said of the father's forgiveness of his own death shall hold also for all forgiveness of the act; if any party soever freely forgive any party soever his death, and treat it as undesigned, the law shall enjoin on the homicide performance of the prescribed purifications and one-year's absence from the country.

So much may serve for a reasonably full treatment of violent, unintentional, and passionate homicide. We are next to deal with the case of acts in this kind done with intent, in downright wickedness, and of deliberate design, at the dictation of overmastering pleasures, cupidities, and jealousies.

CLINIUS: Very true.

ATHENIAN: Then let us once more begin with an attempt to enumerate their sources. First and foremost there is concupiscence with its domination over a soul stung to savagery by unsatisfied lusts. Now this is chiefly found concerned with that on which most men's longing is most permanently and sharply set—wealth, with the power wealth gets alike from native bias and pernicious wrong education to breed countless cravings for insatiate and unbounded possession of itself. And the source of this perverse education is the credit given to false praise of riches alike by Greek and non-Greek; they promote wealth to the first place among good things, whereas in truth it holds but the third, and thus they deprive not only themselves but their posterity. It were for the truest good and glory of all societies that the

truth should be told of riches. They are for the service of the body, as the body itself for the service of the soul. Since, then, there are goods to which wealth is but a means, it must hold a third place, after goodness of body and soul. From this doctrine we should learn that the aim of him who would be happy must be not to get riches, but to get such riches as rectitude and self-command will permit. That lesson learned, society will no longer see homicide calling for still further homicide in expiation, whereas, today, as we said at first, this greed of riches is one source, and the chief source, of the most aggravated charges of willful homicide. A second is the spirit of rivalry with its brood of jealousies, dangerous company that they are for the envious man himself in the first instance, and only less dangerous to the best of his fellow citizens. And a third cause of too many homicides may be found in craven and guilty terrors. There are acts of a man's present or past to which he would wish none but himself to be privy, and so the informer in such a case is removed by murder, if all other methods fail.

All this shall be dealt with in our preludes. They will also state a truth firmly believed by many who have learned it from the lips of those who occupy themselves with these matters at the Mysteries, that vengeance is taken on such crimes beyond the grave, and when the sinner has returned to our own world once more, he must infallibly pay nature's penalty—must be done by as he did—and end the life he is now living by the like violence at another's hands. If our mere prelude move any to obedience and proper fear of such a judgment, for them the note of formal command need not be struck, but for the disobedient the statute shall run thus in writing. If a man take the life of a fellow tribesman by his own act, wrongfully, and of set purpose, he shall in the first place be excluded from every place of lawful assembly, and forbidden to pollute with his presence temples, markets, harbors, or other places of public resort whatsoever, and that nonetheless whether any man have given the slayer public notice of the ban or not—the law itself gives notice of it and proclaims it on behalf of the community at large, now and to all time.

If any man of the deceased's kin within the limits of cousinship, on either father's or mother's side, shall neglect his duty to institute proceedings, or to make proclamation of the excommunication first, on his own head be the pollution and—for the law's curse brings the evil omen with it—the wrath of heaven. Next, he shall be open to prosecution by any man who is minded to avenge the deceased. He that has a mind to avenge him shall fulfill with due care the washings and other observances the oracle may prescribe in such cases, and give formal notice of the excommunication; he shall then proceed to compel the culprit to submit to execution as required by the law. That this process should be attended by prayers and sacrifices to gods whose function is to preserve societies from homicides the legislator may declare without trouble to himself. What gods these should be

and what manner of conducting such trials will best suit with religion shall be determined by the curators of law, in concert with canonists, d seers, and the oracle, before they institute the trials. The court shall be the same to which we gave authority to decide in charges of sacrilege. The convicted offender shall be put to death, and shall not receive burial in the land of his victim—for that would add insult to impiety. If he flee the land and decline to submit to judgment, his banishment shall be everlasting. If any such exile set foot in the country of his victim, the first kinsman of the murdered man, or indeed the first fellow citizen, who may fall in with him, shall slay him, with the law's permission, or else put him in bonds and deliver him for execution to e the magistrates presiding over the court in which the case was tried. He that enters the case for prosecution shall also at the same time demand security from the accused, who shall produce his sureties, men whom the court of judges constituted for these cases shall pronounce sufficient, three substantial sureties pledged to surrender him for his trial. In the case of refusal or inability to find such surety, the court shall arrest the accused, keep him prisoner, and produce him at the trial.

If a man be not the actual assassin, but have purposed the death 872 of another and brought him to his end by design and contrivance, and then continue to reside in the state a guilty man with the stain of homicide on his soul, the procedure in the trial of such charges shall be the same, only that security shall not be demanded, and that the convicted may find burial in his native soil; in all other respects this case shall be treated precisely like the other. The procedure shall be the same in cases both of homicide where both parties are aliens, or one party a citizen and the other an alien, or both parties slaves, and of plotting homicide, except as concerns giving of security; as to that b point, the party who advances the charge of homicide shall at the same time demand security from the accused in such cases, exactly as it has been prescribed to be required from the assassin. If a slave cause the death of a free man with intent, either as the actual homicide or as the plotter of it, the common executioner shall conduct him toward the burial place of the victim and to a spot from which the tomb is visible, when he shall be scourged with as many stripes as the c prosecutor shall enjoin, and, if he survive the infliction, be put to death. If a man slay a slave who has committed no crime, from apprehension that he may inform against his own shameful misdeeds, or some similar motive, he shall stand his trial for the homicide of such slave precisely as though the slain had been a citizen.

Should there arise cases for which it is a grim and repulsive task even to provide in a legislation, though impossible to ignore them, I mean cases of deliberate and purely wicked homicide by act or contrivance between kinsmen—they are mostly to be found in states d where the way of life or the system of training is corrupt; still such a

thing may happen even in a land where we could least expect it—why, we can but repeat the doctrine we uttered but now, in the hope that it will by its appeal dispose a hearer the more readily to eschew of his own free choice this most abominable of all forms of homicide. That tale, or doctrine—call it what you please—comes to us on the authority of priests of ancient days, and it tells us expressly that there is a justice watching to avenge a kinsman's blood, and that the law followed by this justice is no other than that we even now stated; it is appointed that he who has dealt in such guilt shall infallibly be done by as he has done. If any man have slain his father, there shall come a time when he shall have to suffer the same violent end at the hands of a child; if his mother, his certain doom in later days is to be born himself a female creature and, in the end, to have his life taken by those whom he has borne. When pollution has been brought on the common blood, there is no other way of purification but this; the stain  
 873 refuses to be effaced until the guilty soul have paid life for life, like for like, and this atonement lulled the wrath of the whole lineage to sleep.

Thus a man's hand should be stayed by dread of such vengeance from heaven, but should there be wretches so whelmed in misery that they of malice preense rend father's, mother's, brother's, or child's soul from body, our human legislator's statute provides for their case  
 b as follows. The regulations for making proclamation of excommunication and taking of security shall be as appointed in the former cases. If a man be found guilty of such homicide, that is, of slaying any of the aforesaid, the officers of the court with the magistrates shall put him to death and cast him out naked, outside the city at an appointed place where three ways meet. There, all the magistrates, in the name of the state, shall take each man his stone and cast it on the head of the corpse as in expiation for the state. The corpse shall then be carried to the frontier and cast out by legal sentence without sepulture.  
 c

But what of him who takes the life that is, as they say, nearest and dearest to himself? What should be his punishment? I mean the man whose violence frustrates the decree of destiny by *self-slaughter* though no sentence of the state has required this of him, no stress of cruel and inevitable calamity driven him to the act, and he has been involved in no desperate and intolerable disgrace, the man who thus gives unrighteous sentence against himself from mere poltroonery  
 d and unmanly cowardice. Well, in such a case, what further rites must be observed, in the way of purifications and ceremonies of burial, it is for heaven to say; the next of kin should consult the official canonists as well as the laws on the subject, and act according to their direction. But the graves of such as perish thus must, in the first place, be solitary; they must have no companions whatsoever in the tomb. Further, they must be buried ignominiously in waste and nameless spots on the boundaries between the twelve districts, and the tomb shall be  
 e marked by neither headstone nor name.

If a beast of draft or other animal there are things which the law case when the deed is done by a beast sports, the kinsman shall institute proceedings to be thus dealt with by the slayer. The case shall be heard by a court's discretion? commissioners as the next of kin may point out that in a beast shall be put to death and cast out maimed and inarticulate, where inanimate thing cause the loss of a human, themselves and reach their made for lightning or other such visitation they do not even listen to causes death by its falling upon a man or his with the voice of their ap-sat upon in judgment by the nearest neighbor, like the audience at a next of kin, who shall hereby acquit himself of an ill position. Where their obligation—on conviction the guilty objector's hand is forced by frontier, as was directed in the case of a beast. compelled to restrict the

But if a man have manifestly been murdered the most insignificant is unknown or cannot be discovered after careful search. If he has a statute, if he has prosecution shall be given as in other cases, but in a community address the notification to 'the author of the homicide', and the per-tablishing his right to prosecute shall give public warning have been properly ket place to 'the criminal slayer of so-and-so' to set it will be entirely sanctuaries or any other place within the country of a wide discretion the threat that if he makes an appearance and is recognized. So we may well be put to death and cast out of the country of the violator on them by a This, then, shall form one chapter in our law—the statute be discovered cide. for attaching

So much then on these matters. The cases wherein wrong com-tions whereon a slayer shall rightly be held guiltless shall be for whom lowing. He that slays a thief entering the house by night withable judges robbery shall be guiltless; he that in his own defense slays a felon. Not shall be guiltless. He that offers hurtful violence to a free repeatedly boy may be slain without fear of the law by the object of his own legis-rape, or by father, brother, or son of such party; if a man taken be set the act of enforcing his wedded wife and slay him, he shall be competent of the eye of the law. If a man slay in defense of a father's life. case, father not being engaged in a criminal act—or in like defense of a brother, or mother of his children, he shall be altogether clear. tend

Thus much then for the law of the living soul and that nurtures, and education which it must needs enjoy if it is to live, and without which it must die, and the vengeance to be taken for death by violence. 877 The law of the nurture and training of the body has been stated, and it will next, I take it, be right to proceed to a kindred topic, to classify and enumerate to the best of our ability the various intentional or unintentional violent assaults committed by man on man, and to prescribe the penalties properly to be attached to their several kinds.

Wounds and maims, then, will be placed next after manslaughter by the veriest dabbler in legislation. Thus, like homicides, wounds must be divided into the involuntary, wounds inflicted in

passion, those inflicted in fear, those that are intentional and deliberate. Hence we should begin our treatment of all classes with a prefatory statement to the following effect. Mankind must either give themselves a law and regulate their lives by it, or live no better than the wildest of wild beasts, and that for the following reason. There is no man whose natural endowments will ensure that he shall both discern what is good for mankind as a community and invariably be both able and willing to put the good into practice when he has perceived it. It is hard, in the first place, to perceive that a true social science must be concerned with the community, not with the individual—common interest tending to cement society as private to disrupt it—and that it is to the advantage of community and individual at once that public well-being should be considered before private. Again, even one who had attained clear perception of this principle as a point of scientific theory, if subsequently placed in a position of irresponsible autocratic sovereignty, would never prove loyal to his conviction, or spend his life in the promotion of the public good of the state as the paramount object to which his own advantage must be secondary. His frail human nature will always tempt such a man to self-aggrandizement and self-seeking, will be bent beyond all reason on the avoidance of pain and pursuit of pleasure, and put both these ends before the claims of the right and the good; in this self-caused blindness it will end by sinking him and his community with him in depths of ruin. I grant you readily that if ever, by God's mercy, a man were born with the capacity to attain to this perception, he would need no laws to govern him. No law or ordinance whatever has the right to sovereignty over true knowledge. 'Tis a sin that understanding should be any creature's subject or servant; its place is to be ruler of all, if only it is indeed, as it ought to be, genuine and free. But, as things are, such insight is nowhere to be met with except in faint vestiges, and so we have to choose the second best, discipline and law. Now they can consider most cases and provide for them, but not all, and this is why I have said what I have. You and I are about to fix the penalty or fine to be inflicted on him who wounds another or does him a hurt. Now it is, of course, a proper and obvious comment to make at this point, to say, Wounds? Yes, but wounds whom, and where and how and when? The different cases are countless and their circumstances are widely unlike. So it is equally impossible to leave everything to the discretion of the courts and to leave nothing. One issue, indeed, we cannot avoid leaving to their discretion in all cases, that of the occurrence or nonoccurrence of the alleged event. And it is quite impossible to the legislator to leave the courts no discretion at all on the further question of the amount of the fine or penalty to be imposed on the perpetrator of this sort of wrong, but deal with all cases himself, light or grave, by statute.

CLINIAS: What line, then, are we to take up now?

ATHENIAN: Why, this. Something must be left to the discre-

tion of the courts, but not everything; there are things which the law must itself regulate.

CLINIAS: Then which are the points to be thus dealt with by statute, and which should be entrusted to a court's discretion?

ATHENIAN: The proper step to take next is to point out that in a state where the courts of law are poor-spirited and inarticulate, where their members keep their convictions to themselves and reach their verdict by a secret vote, where, worst of all, they do not even listen to the case in silence but make the walls ring with the voice of their applause or censure of the alternate speakers, like the audience at a play, the community finds itself in a difficult position. Where the courts are so constituted, to be sure, the legislator's hand is forced by an unfortunate but very real necessity; he is compelled to restrict the court's discretion to assess penalties to cases of the most insignificant kind and to do most of the work himself by express statute, if he has the misfortune to be legislator for such a society. But in a community where the constitution of the courts is thoroughly sound, and the persons who will have to exercise the judicial function have been properly trained and made to pass the most exacting tests, it will be entirely right and fitting that such courts should be allowed a wide discretion in assessing the fines or other penalties of offenders. So we may well be excused, in the present instance, if we do not impose on them by statute the numerous and important rules which may be discovered by the insight of judges with a training inferior to theirs for attaching to the particular offenses the penalty merited by the wrong committed and hurt inflicted. Indeed, as we believe the persons for whom we are making our statutes likely to prove particularly capable judges in such matters, we shall trust most of them to their discretion. Not that we were not perfectly right in the doctrine we have repeatedly stated and observed in practice in the preceding part of our own legislation. An outline of the law with samples of penalties should be set before the judges as a model to keep them from any infringement of the bounds of right. I shall, in fact, act so again in the present case, and this brings me back to the work of lawmaking.

The statute of wounding, then, shall run thus. If anyone intend and purpose the death of a person with whom he is on friendly terms, such person not being one against whom the law arms his hand, and fail to kill, but inflict a wound, he who wounds with such intent deserves no mercy, and shall be made to stand his trial for homicide with as little scruple as though he had killed. But the law will show its reverence for his not too wholly unpropitious fortune and the tutelary power which has, in mercy to both wounder and wounded, preserved the one from a fatal hurt and the other from incurring a curse and a disaster; it will show its gratitude and submission to that power by sparing the criminal's life and dooming him to lifelong banishment to the nearest state, where he shall enjoy his revenues in full. He must

make payment of whatever damage he have caused to the wounded, the amount being fixed by the court before which the case is tried, and this court shall be composed of the same persons as would have tried the homicide had death followed as a consequence of the wounds inflicted.

- If a son wound his parents or a slave his master with the like intent, the penalty shall be death; so also if brother or sister wound brother or sister in like fashion, and be found guilty of wounding with intent, the penalty shall be death. If a wife wound her husband, or a husband his wife, with design to kill, they shall go into perpetual banishment. As for the estate, if there are sons or daughters who are still minors, it shall be in the hands of the guardians, who shall be charged with the care of the children as though they were orphans; if the family be of full age, there shall be no liability of the offspring to support the banished man, and the estate shall be their property. If the victim of the calamity be childless, the kinsmen of the exile within the degree of second cousinship on both male and female sides shall meet to appoint an inheritor for the house in question—the five-thousand-and-fortieth of the state—in consultation with the curators and priests, and they shall do so with this thought before their minds. There is no house of the five thousand and forty that belongs so truly to its occupant or his whole kin as to the state, and that by every right of ownership. It is for the state, then, to keep its house in all purity and good fortune. When a house, then, is visited with such guilt and misfortune at once that the owner leaves no sons to succeed to it, but dies unwedded or wedded but childless, under conviction of willful homicide, or other sin against heaven or human society for which the pain of death stands expressly prescribed in the law, or again when a childless man is under doom of perpetual exile, the house itself shall first be purified and exorcised as the law directs. Next the household shall meet, as provided even now, along with the curators, to consider what house of all in the state is at once of the first repute for goodness, favored by fortune, and possessed of more children than one. From such a house they shall adopt one person as a son and successor to the father of the deceased and his line before him, naming him after one of the lineage for the omen's sake, and offering prayers that they may all find in him by this means a progenitor of issue, a preserver of the hearth, and a minister in things secular and sacred with fairer fortunes than his father. They shall then constitute him legal heir to the estate, while the criminal shall be left without name, children, or portion when such calamity overtakes him.

It should seem that boundary is not in all cases immediately adjacent to boundary; where there is a borderland, this interposing belt touches either region first and is common ground to both. In particular we have said that deeds of passion form such a borderland between the unintentional and the intentional. Hence our law of wounding in

anger shall run thus. On conviction, first the offender shall repay the c  
 damage done twofold, if the wound prove curable, fourfold for an incurable hurt. And if the wound, though curable, cause the injured man  
 some grave and shameful disfigurement, the payment shall be threefold. In a case where the assailant causes detriment not only to the  
 victim, but to the state as well, by incapacitating the wounded for national defense, he shall further, in addition to all other penalties, compensate the state for the loss. That is, in addition to his personal  
 military service he shall also discharge that of the disabled and take his d  
 place in the ranks; failure to perform the task shall render him legally liable to prosecution at the instance of any man who pleases for evasion of military duty. The rate of compensation—whether it shall be twofold, threefold, or even fourfold—shall be determined by the court who found the verdict of guilty. If kinsman wound kinsman in the ways aforesaid, the parents and kinsfolk of both sexes and on both sides, within the degree of second cousins, shall meet, find a verdict, e  
 and commit the fixing of penalty to the natural parents of the parties. If their assessment be called in question, the male progenitors shall be authorized to make an assessment; if they fail to reach a decision for themselves, the matter shall be finally committed by them to the curators of law. In the case of such wounding of parents by their children, the judges shall be required to be persons of over sixty years of age who have children, not by adoption, but of their own begetting. On conviction, it shall be for the court to determine whether the offense shall be punished by death or some other sentence, more, or possibly slightly less, heavy. No kinsman of the culprit shall be a member of 879  
 the court, even if he have attained the age required by law. If a slave wound a free man in anger, the owner of such slave shall deliver him to the wounded man to be used at his pleasure; failing to deliver him, he shall himself make good the damage. If the defendant allege that the case is one of conspiracy between the slave and the wounded man, he must sustain his allegations. If he lose his suit, he shall pay the damage threefold; if he gain it, he shall have an action for kidnaping b  
 against the party who so conspired with the slave. He that wounds another without intent shall pay the simple damage—no legislator can be expected to prescribe rules to chance. The judges shall be as directed for the case of parents wounded by their children, and they shall fix the amount of compensation.

Assault and battery, in its various forms, is, like the cases of which we have treated, an offense of violence. Apropos of such conduct, it should never be forgotten by anyone, man, woman, or child, that seniority is held in highest consideration alike by gods and by c  
 men who intend a long and happy life. Hence the public assault of a younger man on his senior is a shameful spectacle and abominable in the eye of heaven. If the younger man is struck by the elder, the seemingly course is ever that he should meekly give place to his anger, and thus

lay up a capital of the same consideration for his own old age. Hence our rule shall run thus. All shall show their reverence for their seniors in act and speech. A man shall stay his hand from any that is twenty years older than himself, be it man or woman, as he would from his own father or mother; he must spare all who are of an age to have begotten or borne him, in duty to the gods of birth. He must likewise keep his hand from the alien, old-established resident, and recent arrival alike; neither in aggression nor in self-defense shall he ever permit himself to admonish one of that class by a blow. If the alien strike him a wanton and insolent blow and he think correction called for, he shall seize him and carry him before the court of the urban commissioners, without striking him back, that he may be taught never more to presume to beat a native. The commissioners shall take the accused and examine into his case, but with all due regard for the god who watches over the alien. If the alien be judged to have struck the native wrongfully, they shall give him as many lashes of the scourge as he has himself struck blows, to break him of his abuse of his position; if to have done no wrong, they shall warn and censure the apprehender and so dismiss both parties. If a man be struck by another of his own age, or a senior but childless man by a junior, whether the parties be both old or both young, he shall defend himself with the arms nature has given him, his unweaponed naked fists. But if a man above forty years of age permit himself to fight another, whether he be assailant or attacked, he will meet no more than his desert if punished by being ill reputed as a ruffian and a boor. With him that is amenable to this counsel we shall have no difficulties; the refractory, who care nothing for our preamble shall find a law ready to meet their case to this effect. If a man strike one that is his senior by twenty years or more, first, any bystander who is neither of the same age as the combatants nor younger shall come between them, on pain of proclamation as a coward; if the bystander be of the same years as the party struck, or younger, he shall defend the attacked as he would his own brother, father, or still older kinsman. Furthermore, he that presumed to strike his senior, as already said, shall stand his trial for assault and battery and, if convicted, shall lie in prison for a full year at the least, or if the court propose a longer sentence, its determination of the period shall be binding. If a foreigner or resident alien strike one who is his senior by twenty or more years, the same legal provision for assistance from bystanders shall be in force, and he that is condemned on this count, if an alien and nonresident among us, shall purge that offense by two years of imprisonment, if a resident, shall be imprisoned three years for his violation of our laws, unless the court award sentence of a longer term. Further a fine shall be laid in all such cases on a bystander who does not render the assistance required by the law, the amount to be one mina for members of the first property class, fifty drachmas for those of the second, thirty for those of the third, twenty

for those of the fourth. The court, in such cases, shall let of his own free the generals, infantry commanders, phylarchs, and hipparche. If a man acts

Laws, we may say, are made in part for the virtue. If a man does not believe what rule they should follow in their intercourse with the less of man—other, if they are to live in peace and good will—partly also cajoling of who have shunned instruction, men whose stubborn temper yielded to none of those melting influences that might hold them at should from utter debasement. It is to their account you must lay what I now to utter, for them that a legislator will be driven to enact laws bearing which he could wish no need might ever arise. If any should ever be found presume to offer violent assault to father, mother, or one of their progenitors, should so far forget his fear of the wrath of heaven and the punishments of which men tell beyond the grave as to be led by his conceit of knowing where he is utterly ignorant, and his scorn of the venerable and universal tradition into that trespass—some last deterrent is wanted for his case. Now the last penalty is not death, and as for the pains said to be inflicted on such sinners in the world to come, though they are more extreme than any on earth and threaten in the tones of truth itself, they effect nothing for the deterrence of these criminal souls; were it otherwise, we should hear of no mishandlings of mothers or other cursed and presumptuous striking of progenitors. Hence we must make the chastisements for such crime here in this present life, if we can, no less stern than those of the life to come. b

Our next proclamation, then, shall be as follows. If a man, not being afflicted with insanity, presume to strike father, mother, or their parents, first, the bystanders shall come to their aid, as in cases already disposed of. The resident alien who intervenes thus shall be offered a seat in the front rank at the public sports; he who fails in this duty shall go into perpetual banishment from our soil. A nonresident alien affording such help shall receive public commendation, and who c withholds it, public censure. A slave who affords it shall have his freedom; a slave who withholds it shall suffer a hundred lashes with the scourge, to be administered by the commissioners of the market, if the offense is committed in the market place—if committed in the city but elsewhere than in the market square, the correction to be inflicted by the urban commissioner in residence, if in some rural district by the commanders of the rural commission. Every bystander of native birth, child or woman or man, shall join in the rescue, crying out on d the assailant as wretch and monster, and any that takes no part shall be held by the law under the curse of the god of kindred and family. If a man be convicted of assault on a parent, first he shall be perpetually relegated from the capital city to another region of the country and excluded from all holy places. If he do not observe the exclusion, the rural commission shall correct him with stripes, or in any way they please; if he returns he shall be condemned to death. If any free person eat, drink, or have any dealings whatever with the criminal, or e

lay up a capital  
our rule shall  
in act and spee-  
years older

meeting him wittingly, he shall enter square, nor any part of the city what-  
himself, as one that has been infected  
and if he disobey and pollute holy  
law, any magistrate informed of  
the guilty party shall have the fact  
moment at his audit. If a slave  
stander shall come to his aid or  
status; the bystanders shall  
shall deliver him to the in-  
ters, scourge him with as  
to detriment to his master's in-  
to the master as his rightful owner.  
: If a slave strike a free man, except by  
the owner of such slave shall receive him in  
grieved party, and shall not release him therefrom  
have satisfied the aggrieved that he deserves to be at  
the same rules of law shall hold good for cases of the same  
when both parties are women, or where either is a woman and  
other a man.

## BOOK X

- 884 ATHENIAN: Now that we have dealt with assault, we may enun-  
ciate a single and comprehensive principle of law in respect of cases  
of violence, to the following effect. No man shall lift the goods and  
chattels of others, nor yet make use of a neighbor's property without  
the owner's permission, since such conduct is the beginning whence  
all the aforesaid mischiefs, past, present, or future, derive by conse-  
quence. Now the gravest mischiefs of them all are the licenses and  
outrages of youth, and the affront is gravest when done to consecrated  
885 things, and most singularly grave again when the objects affronted are  
not only sacred but public, or partly public, as common to a tribe or  
some similar group. Second in order and in gravity are offenses  
against private shrines and private tombs, and third, impieties to par-  
ents other than the crimes already enumerated. A fourth form of out-  
rage is the case when a man shows contempt for magistrates by lifting  
their goods or chattels, or using anything that is theirs without per-  
mission obtained, and a fifth branch will be such violation of the civil  
rights of the private citizen as calls for legal redress. Hence we must  
provide a law applicable to all these branches alike. Now as for actual  
b sacrilege, open and forcible or secret, we have already said succinctly  
what the penalty for its commission should be. We are now to pre-  
scribe a punishment for all verbal or practical outrage offered to the  
gods by speech or act. But first our legislator must introduce his usual  
admonition, and it shall run to this effect. No man who believes in

gods as the law would have him believe has ever yet of his own free will done unhallowed deed or let slip lawless discourse. If a man acts thus, 'tis from one of three causes. Either, as I say, he does not believe, or again, he believes that they are, but are regardless of mankind, or lastly, that they are lightly to be won over by the cajoling of offerings and prayers.

CLINIAS: Then how are we to treat such men, or what should we say to them?

ATHENIAN: Nay, my dear sir, let us begin by giving a hearing to the mockeries in which, as I conceive, their scorn of us would find utterance.

CLINIAS: And what form would this mockery take?

ATHENIAN: Why, their satire might well run to this effect. Gentlemen of Athens, Lacedaemon, and Cnossus, you are in the right of it. Some of us, in fact, recognize no gods whatsoever, and others gods such as you describe. So we make the same demand of you that you have yourselves made of the laws. Before you come to the severities of threats, it is for you to try persuasion—to convince us by sufficient proof that there really are gods, and that they are too good to be diverted from the path of justice by the attraction of gifts. As things are, that, and more to the same effect, is what we have heard from those who have the repute of being our first-rate poets, orators, prophets, and priests, and countless thousands of others, and this is why most of us follow the path not of refusing to do wrong, but of committing it and trying to patch it up. So we expect you, as legislators who make a profession of humanity rather than severity, to try persuasion on us in the first instance. Your case for the existence of gods may not be much better than that of the other side, but persuade us that it is better in the one point of *truth*, and you may perhaps make converts of us. So if you think our challenge a fair one, you must try to answer it.

CLINIAS: Why, surely, sir, it looks easy enough to speak the truth in saying that gods exist.

ATHENIAN: And on what grounds?

CLINIAS: Why, to begin with, think of the earth, and sun, and planets, and everything! And the wonderful and beautiful order of the seasons with its distinctions of years and months! Besides, there is the fact that all mankind, Greeks and non-Greeks alike, believe in the existence of gods.

ATHENIAN: My dear friend, I have a fear—I will never call it an *awe*—of these evil men, a fear that they may despise us. You and our friend, in fact, do not understand the ground of their controversy with us. You imagine that what impels their souls to irreligion is incontinence of pleasures and lusts, and nothing more.

CLINIAS: Why, sir, what further cause can there be in the case?

ATHENIAN: One of which your friend and you can be expected

to know nothing. You fail to remark it because it does not touch your lives.

CLINIAS: Now I wonder what it can be to which you allude.

ATHENIAN: Why, folly of a deadly sort that conceits itself to be the height of wisdom.

CLINIAS: And what is that?

ATHENIAN: We have in my own community literary narratives—the excellence of your civic institutions, I am informed, prevents  
 c their appearance among you—which treat of the gods, some of them in verse, and others again in prose. The most ancient of these narratives relate that the primitive realities were the sky, and so forth. When the story has got a little way past this starting point it recounts the birth of the gods, and their subsequent conduct toward each other. Now whether in other respects the effect of these stories on those who hear them is good or the reverse is not lightly to be decided, in view of their antiquity, but as concerns their bearing on the tendance and reverence due to parents, I could certainly never commend them as  
 d salutary, nor as true at all. However, we may dismiss the primitive stories without more ado; let them be told in any way heaven pleases. But the theories of our modern men of enlightenment must be held to account for the mischief they cause. Now the effect of their compositions is this. When you and I produce our evidence of the existence of gods, and allege this very point—the deity or divinity of sun and moon, planets and earth—the converts of these sages will reply that they are  
 e but earth and stones, incapable of minding human conduct, however plausibly we have coated them over with a varnish of sugared eloquence.

CLINIAS: A dreadful theory this that you are talking of, sir, even if there were only one such. How much more dreadful our present age, when such doctrines are so rife.

ATHENIAN: Well, what answer have we, then? What course should we take? Must we look on ourselves as, so to say, indicted at the bar of the ungodly and defend our incriminated legislation from  
 887 the charge that it has no right to assume the existence of gods? Or should we drop the subject and return to our lawmaking for fear our preamble may actually prove longer than the enactments to follow it? The discourse, to be sure, will run to considerable length, if we are first to furnish the undevoutly disposed with adequate proofs on the points which they said we were bound to treat, and so put the opponent in fear, only proceeding to the enactment of suitable regulations after we have thus created a disrelish for irreligion.

b CLINIAS: Well, sir, in the little while we have spent together we have repeatedly had occasion to remark that there is no reason to prefer brevity of speech, in our present business, to length—the proverbial ‘pursuer’ is not on our traces—so we should make but a sorry and ludicrous show if we chose the shorter course rather than the best.

And 'tis of the first importance to give our plea for the existence of gods, and good gods with a superhuman reverence for right, such persuasiveness as we can; such a preamble would, in fact, be the noblest and best defense for our whole legislation. Let us, then, show neither reluctance nor impatience, but unreservedly employ whatever gifts of persuasion we may possess in such matters on the task of adequate exposition to the utmost of our powers.

ATHENIAN: The earnestness and passion of your speech are, I feel, an invitation to prayer; they leave no further room for postponement of the argument. Come then, how shall we plead for the existence of gods dispassionately? To be sure, no man can help feeling some resentment and disgust with the parties who now, as in the past, impose the burden of the argument on us by their want of faith in the stories heard so often in earliest infancy, while still at the breast, from their mothers and nurses—stories, you may say, crooned over them, in sport and in earnest, like spells—and heard again in prayers offered over sacrifices, in conjunction with the spectacle which gives such intense delight to the eye and ear of children, as it is enacted at a sacrifice, the spectacle of our parents addressing their gods, with assured belief in their existence, in earnest prayer and supplication for themselves and their children. Then, again, at rising and setting of sun and moon, they have heard and seen the universal prostrations and devotions of mankind, Greeks and non-Greeks alike, in all the varied circumstances of evil fortune and good, with their implication that gods are no fictions, but the most certain of realities, and their being beyond the remotest shadow of a doubt. When we see all this evidence treated with contempt by the persons who are forcing us into our present argument, and that, as any man with a grain of intelligence will admit, without a single respectable reason, how, I ask, is a man to find gentle language in which to combine reproof with instruction in the initial truth about the gods—that of their existence? Still, the task is to be faced. We can never permit one party among us to run mad from lust of pleasure, and the rest equally mad from fury against them. So our dispassionate preliminary admonition to minds thus depraved shall run to this effect—we will suppress our passion and use gentle language, imagining ourselves to be addressing a single person of the type.

My lad, you are still young, and as time advances it will lead you to a complete reversal of many of your present convictions. You should wait for the future, then, before you undertake to judge of the supreme issues, and the greatest of these, though you now count it so trivial, is that of thinking rightly about the gods and so living well, or the reverse. I may begin with a single word of significant warning which you will assuredly find to be no mistake, and it is this. You yourself and your friends are not the first nor the only persons to embrace this tenet as your doctrine about gods; nay, in every age there are sufferers from

c the malady, more or fewer. Hence I, who have had the acquaintance of many such, can assure you that no one who in early life has adopted this doctrine of the nonexistence of gods has ever persisted to old age constant to that conviction, though there have been cases—not many, certainly, but still some few—of persistence in the other two attitudes, the belief that there are gods but that they are indifferent to human conduct, and again, that, though not indifferent, they are lightly placated by sacrifice and prayers. If you will be ruled by me, then, you will wait for the fullness of clear and confident judgment on these matters to come to you, and inquire whether truth lies in one direction  
d or another, seeking for guidance in all quarters, and above all from the legislator. Meanwhile, beware of all impiety toward gods. For he who is framing the law for you must make it his business, hereafter as well as now, to instruct you in the truth of this matter.

CLINIAS: Admirably said, sir, so far as we have gone yet.

ATHENIAN: Just so, Megillus and Clinias, but we have unconsciously embroiled ourselves with a portentous theory.

CLINIAS: And what theory may that be?

e ATHENIAN: One which is widely held to be the last word of wisdom.

CLINIAS: You must be still more explicit.

ATHENIAN: We are told, you know, that everything whatever which comes, has come, or will come into existence is a product either of nature, or of art, or of chance.

CLINIAS: And rightly so told, are we not?

ATHENIAN: Why, there is, of course, a presumption that what  
889 wise men tell us is true. But suppose we follow up their traces, and ask ourselves what the real meaning of the spokesmen of that party may be.

CLINIAS: With all my heart.

ATHENIAN: Evidently, so they say, all the grandest and fairest of things are products of nature and chance, and only the more insignificant of art. Art takes over the grand primary works from the hands of nature, already formed, and then models and fashions the more insignificant, and this is the very reason why we all call them artificial.

CLINIAS: You mean to say?

b ATHENIAN: Let me put it more plainly still. Fire and water, earth and air—so they say—all owe their being to nature and chance, none of them to art; they, in turn, are the agents, and the absolutely soulless agents, in the production of the bodies of the next rank, the earth, sun, moon, and stars. They drifted casually, each in virtue of their several tendencies. As they came together in certain fitting and convenient dispositions—hot with cold, dry with moist, soft with  
c hard, and so on in all the inevitable casual combinations which arise from blending of contraries—thus, and on this wise, they gave birth to

the whole heavens and all their contents, and, in due course, to all animals and plants, when once all the seasons of the year had been produced from those same causes—not, so they say, by the agency of mind, or any god, or art, but, as I tell you, by nature and chance. Art, the subsequent late-born product of these causes, herself as perishable as her creators, has since given birth to certain toys with little real substance in them, simulacra as shadowy as the arts themselves, such as those which spring from painting, music, and the other fellow crafts. Or if there are arts which really produce anything of genuine worth, they are those which lend their aid to nature, like medicine, husbandry, gymnastics. Statesmanship in especial, they say, is a thing which has a little in common with nature, but is mainly a business of art; legislation, likewise, is altogether an affair not of nature, but of art, and its positions are unreal. d e

CLINIAS: Unreal—but how so?

ATHENIAN: Why, my dear sir, to begin with, this party asserts that gods have no real and natural, but only an artificial being, in virtue of legal conventions, as they call them, and thus there are different gods for different places, conformably to the convention made by each group among themselves when they drew up their legislation. Then they actually declare that the really and naturally laudable is one thing and the conventionally laudable quite another, while as for right, there is absolutely no such thing as a real and natural right, that mankind are eternally disputing about rights and altering them, and that every change thus made, once made, is from that moment 890 valid, though it owes its being to artifice and legislation, not to anything you could call nature. All these views, my friends, come from men who impress the young as wise, prose writers and poets who profess that indefeasible right means whatever a man can carry with the high hand. Hence our epidemics of youthful irreligion—as though there were no gods such as the law enjoins us to believe in—and hence the factions created by those who seek, on such grounds, to attract men to the ‘really and naturally right life,’ that is, the life of real domination over others, not of conventional service to them.

CLINIAS: What an awful creed you describe, sir! What a general corruption of the young people of whole cities and private households! b

ATHENIAN: Too true, Clinias, too true. But how would you have the legislator act where such a situation is of long standing? Should he be content to stand up in public and threaten people all round that unless they confess the being of gods, and believe in their hearts that they are such as his law declares—and the case is the same with the laudable, the right, and everything of highest moment, c and all that makes for virtue or vice—action must conform in all cases to the convictions prescribed by the text of the legislation—is he to threaten, I say, that those who will not lend a ready ear to the laws

shall in some cases suffer death, in others be visited with bonds and whipping, in others with infamy, and in yet others with poverty and banishment, but to have no words of persuasion with which to work on his people, as he dictates their laws, and so, it may be, tame them?

d CLINIAS: Far from it, sir, far from it. If there are indeed persuasives, however weak, in such matters, no legislator who deserves the slightest consideration must ever faint. He should strain every nerve, as they say, to plead in support of the old traditional belief of the being of gods and of all you have just recounted. In especial also, he should defend the claim of law itself and of art to be natural, or no less real than nature, seeing that they are products of mind by a sound argument which I take you to be now propounding and in which I concur.

e ATHENIAN: Why, Clinias, here is zeal indeed! But pray, are not statements thus made to a multitude hard to support by argument, and do they not entail an interminable deal of it?

CLINIAS: Well, sir, and what then? We bore with one another through all those long discourses of the wine cup and of music, and are we to show less patience now we are treating of gods and kindred themes? And, mark you, such argument will be a most valuable aid to intelligent legislation, because legal enactments, once put into writing, remain always on record, as though to challenge the question of  
891 ing, remain always on record, as though to challenge the question of all time to come. Hence we need feel no dismay if they should be difficult on a first hearing, since even the dull student may recur to them for reiterated scrutiny. Nor does their length, provided they are beneficial, make it less irrational than it is, in my opinion at least, impious for any man to refuse such discourse his heartiest support.

MEGILLUS: What Clinias says, sir, has my fullest approval.

b ATHENIAN: And mine, too, Megillus, and we must do as he bids us. To be sure, if such theories had not been so widely broadcast, as we may fairly say, throughout all mankind, there would have been no need for arguments to defend the being of gods, but, as the case stands, they cannot be dispensed with. So with the highest laws in risk of perishing at the hands of wicked men, whose function can it be to come to the rescue before the legislator?

MEGILLUS: Why, no man's.

c ATHENIAN: Well then, Clinias—for you must be my partner in the argument—let me hear *your* opinion once more. Presumably one who reasons thus holds that fire and water, earth and air, are the most primitive origins of all things—*nature* being just the name he gives to them—but the soul is a later derivative from them. Or, more probably, it is no case of a presumption; his argument is an actual declaration to that effect.

CLINIAS: Precisely.

ATHENIAN: Why, in God's name then, have we traced the unreason and error of all who have ever busied themselves with research

into nature back to what we may call its source? Pray consider the point with careful attention to all their positions, as it will make a vast difference if we can show that those who have taken up with irreligious doctrines and set the tune for others to follow have actually argued their case ill and fallaciously. And I honestly believe this to be the fact.

CLINIAS: Excellent, but you must try to explain where the fallacy lies.

ATHENIAN: Then I am afraid I shall have to treat of rather unfamiliar matters.

CLINIAS: There is no need for your hesitation, sir. I see you apprehend you will be going outside the limits of legislation if we are to deal with such matters. But if that is the one and only way to accordance with the truth about gods, as now stated in our law, why, my good man, our argument must take it.

ATHENIAN: Then it seems I must propound my none too familiar thesis at once, and here it is. In the doctrine of which the soul of the ungodly is the product, the primal cause of all coming-to-be and ceasing-to-be is pronounced to be not primal but secondary and derivative, the secondary primitive. Hence their error about the veritable being of gods.

CLINIAS: I am still in the dark.

892

ATHENIAN: Soul, my friend, soul is that of whose nature and potency all but the few would seem to know nothing; in this general ignorance of it they know not in particular of its origin, how it is among the primal things, elder-born than all bodies and prime source of all their changes and transformations. But if this is indeed so, must not all that is akin to soul needs be of earlier birth than all that is proper to bodies, seeing that soul herself is older than body?

CLINIAS: Why, necessarily.

ATHENIAN: And so judgment and foresight, wisdom, art and law, must be prior to hard and soft, heavy and light. Aye, and the grand primal works and deeds, for the very reason that they are primal, will prove to be those of art; those of nature, and nature herself—wrongly so called—will be secondary and derivative from art and mind.

CLINIAS: Wrongly so called? Why wrongly?

c

ATHENIAN: Why, by *nature* they mean what was there to begin with, but if we can show that soul came first—that it was not fire, nor air, but soul which was there to begin with—it will be perfectly true to say that it is the existence of soul which is most eminently *natural*. Now this is the case if it can be proved that soul is more ancient than body, and not otherwise.

CLINIAS: How true that is!

ATHENIAN: Then our next step must be to address ourselves to the proof of that point.

d

CLINIAS: Yes, of course.

ATHENIAN: Good. Then let us be on our guard against the extreme subtleties of the argument; we are elderly, and it a lusty stripping who may slip through our fingers by a feint—then we shall make ourselves a laughingstock, and be judged to have failed even of the little in our eagerness to reach after the greater. So reflect a moment. Suppose the three of us had to cross a river with a strong current, and I, being the youngest of the party and having a wide experience of such currents, were to say, I must first try the crossing by myself, leaving you in safety, to see whether the water is equally fordable for you, my elders, or not. If it proves so, afterward I must call to you and help you across it by my experience, but if it turns out to be out of the depth of men of your years, the risk will have been all mine. You would think this a reasonable suggestion. Well, it is even so with the waters of discourse which confront us now; the current is strong, and the passage perhaps too much for your strength. So to save you  
893 from being dizzied and staggered by the rush of questions you are unpracticed in answering, and the consequent unpleasantness of an undignified and unbecoming situation, I propose that I should act in this same fashion now. I will first put certain questions to myself while you listen in safety, and then once more give the answers to them myself. This plan will be followed throughout the argument until our discussion of the soul is completed, and its priority to body proved.

CLINIAS: An admirable proposal, sir. Pray, act upon it.

b ATHENIAN: To the work, then, and if we are ever to beseech God's help, let it be done now. Let us take it as understood that the gods have, of course, been invoked in all earnest to assist our proof of their own being, and plunge into the waters of the argument before us with the prayer as a sure guiding rope for our support. If put to the proof, then, on such a subject, the safest course, I take it, is to meet the following questions with the following answers.

c Sir—so someone may say—are all things at rest, and nothing in motion? Or is the truth the very reverse? Or are some things in motion, others at rest?

Of course, I shall reply, some are moving and others at rest.

And those which move are moving, just as those which are at rest are resting, in a space of some kind?

Of course.

And some of them, you will grant, do this in a single situation, others in more than one?

When you speak of moving in a single situation, I shall reply, you refer to things characterized by the immobility of their centers, as is the case with the revolution of so-called 'sleeping' circles.

Yes.

~~And we observe, in the case of this revolution, that such a motion~~  
est circle together, dividing

itself proportionately to lesser and greater, and being itself proportionately less and greater. This, in fact, is what makes it a source of all sorts of marvels, since it supplies greater and smaller circles at once with velocities high or low answering to their sizes—an effect one might have imagined impossible.

Just so.

And by things which move in several situations I suppose you mean those which have a motion of translation and shift at every moment to a fresh place, sometimes having a single point of support, sometimes, in the case of rolling, more than one. In their various encounters one with another, collision with a stationary object disintegrates, while impact upon other moving objects coming from an opposite quarter integrates them into new combinations which are betwixt and between the original components?

Yes, I grant the facts are as you state them.

And further, with integration goes augmentation in bulk, and reduction of bulk with disintegration—provided, that is, the pre-established constitution of the object persists. If it does not, both processes give rise to dissolution.

But the condition under which coming-to-be universally takes place—what is it?

Manifestly 'tis effected whenever its starting point has received 894 increment and so come to its second stage, and from this to the next, and so by three steps acquired perceptibility to percipients. 'Tis ever by such change and transformation of motion that a thing comes to be; it is in veritable being so long as it persists. When it has changed to a different constitution, it is utterly destroyed. Perhaps, my friends, we have now classed and numbered all the types of motion—except, indeed, two. b

CLINIAS : And what are those two?

ATHENIAN : Why, the very pair, my good sir, with an eye to which our whole discussion is now in progress.

CLINIAS : I must ask you to be plainer.

ATHENIAN : The discussion began with a view to soul, did it not?

CLINIAS : To be sure, it did.

ATHENIAN : Then let us take for one of our pair the motion which can regularly set other things in movement but not itself. As a second single type in the scheme of motions in general we will take that which can regularly set itself going as well as other things, alike in processes of integration and disintegration, by way of augmentation and its opposite, or by coming into and perishing out of being. c

CLINIAS : And so we will.

ATHENIAN : We may proceed, then, to place the type which regularly moves some object other than itself, and is itself induced by such an object, ninth on our list. That which moves itself as well as

other things—it finds its place in all doing and all being-done-to, and is veritably called transformation and motion of all that is—this we will reckon as tenth.

CLINIAS: Yes, certainly.

ATHENIAN: Now of these ten motions which should we be most right to pronounce most powerful of all, and most superlatively effective?

CLINIAS: Why, of course, we are bound to say that that which can move itself is infinitely most effective, and all the rest posterior to it.

ATHENIAN: Excellent. Then we should perhaps find one or two mistakes in what has just been said?

CLINIAS: And what mistakes are they?

ATHENIAN: We were wrong, I think, in using that word *tenth*.

CLINIAS: But why wrong?

ATHENIAN: It is demonstrably *first* in procedure, as in power, and the next in order is, as we hold, *second*, though we have just called it—oddly enough—*ninth*.

CLINIAS: How am I to understand you?

ATHENIAN: Why, thus. When we have one thing making a change in a second, the second, in turn, in a third, and so on—will there ever, in such a series, be a first source of change? Why, how can what is set moving by something other than itself ever be the first of the causes of alteration? The thing is an impossibility. But when something which has set itself moving alters a second thing, this second thing still a third, and the motion is thus passed on in course to thousands and tens of thousands of things, will there be any starting point for the whole movement of all, other than the change in the movement which initiated itself?

CLINIAS: Admirably put, and the position must be conceded.

ATHENIAN: Besides, let us put the point over again in this way, once more answering our own question. Suppose all things were to come together and stand still—as most of the party have the hardihood to affirm. Which of the movements we have specified must be the first to arise in things? Why, of course, that which can move itself; there can be no possible previous origination of change by anything else, since, by hypothesis, change was not previously existent in the system. Consequently, as the source of all motions whatsoever, the first to occur among bodies at rest and the first in rank in moving bodies, the motion which initiates itself we shall pronounce to be necessarily the earliest and mightiest of all changes, while that which is altered by something else and sets something else moving is secondary.

CLINIAS: Unquestionably.

ATHENIAN: Then, now that the discussion has reached this point, we may answer a further question.

CLINIAS : And what question is it?

ATHENIAN : When we see that this motion has shown itself in a thing composed of earth, water, or fire—separately or in combination—how should we describe the character resident in such a thing?

CLINIAS : Am I right in supposing you to ask whether, when the thing moves itself, we speak of it as *alive*?

ATHENIAN : Certainly.

CLINIAS : Alive? Of course it is alive.

ATHENIAN : Very well, and when we see soul in a thing, the case is the same, is it not? We must allow that the thing is alive.

CLINIAS : Precisely.

ATHENIAN : In heaven's name, then, hold. You will grant, I presume, that there are three points to be noted about anything?

CLINIAS : You mean?

ATHENIAN : I mean, for one, the reality of the thing, what it is, for another the *definition* of this reality, for another, its *name*. And thus you see there are two questions we can ask about everything which is.

CLINIAS : And what are the two?

ATHENIAN : Sometimes a man propounds the bare name and demands the definition; sometimes, again, he propounds the definition by itself and asks for the corresponding name. In other words, we mean something to this effect, do we not?

CLINIAS : To what effect?

ATHENIAN : There is, as you know, bisection in numbers, as in other things. Well, in the case of a number, the *name* of the thing is 'even,' and the definition, 'number divisible into two equal parts.'

CLINIAS : Certainly.

ATHENIAN : That is the sort of case I have in mind. We are denoting the same thing, are we not, in either case, whether we are asked about the definition and reply with the name, or about the name, and reply with the definition? It is the same thing we describe indifferently by the name 'even,' and the definition, 'number divided into two equal parts'?

CLINIAS : Identically the same.

ATHENIAN : Well then, what is the definition of the thing for which *soul* is the name? Can we find any but the phrase we have just used, 'the motion which can set itself moving'?

CLINIAS : You mean that the selfsame reality which has the name *soul* in the vocabulary of all of us has *self-movement* as its definition?

ATHENIAN : I do. But if this is indeed so, is there anything we can desiderate, anything further toward complete demonstration of the identity of soul with the primal becoming and movement of all that is, has been, or shall be, and of all their contraries, seeing it has disclosed itself as the universal cause of all change and motion?

CLINIAS: No, indeed. Our proof that soul, since it is found to be the source of movement, is the first-born of all things is absolutely complete.

ATHENIAN: Then must not the motion which, wherever it arises, is induced by something else, but never confers the power of self-motion on anything, come second in the scale, or as low down as you please to put it, being, in fact, change in a truly soulless body?

CLINIAS: Rightly argued.

ATHENIAN: Consequently it will be a right, decisive, true, and  
c final statement to assert, as we did, that soul is prior to body, body secondary and derivative, soul governing in the real order of things, and body being subject to governance.

CLINIAS: Indeed it would.

ATHENIAN: But we have not, I imagine, forgotten our earlier agreement that if soul could be proved older than body, the characters of soul must also be older than those of body.

CLINIAS: Not in the least.

ATHENIAN: And so moods and habits of mind, wishes, calculations, and true judgments, purposes, and memories, will all be prior to  
d physical lengths, breadths, and depths, in virtue of the priority of soul itself to body.

CLINIAS: Inevitably so.

ATHENIAN: Hence we are driven, are we not, to agree in the consequence that soul is the cause of good and evil, fair and foul, right and wrong—in fact of all contraries, if we mean to assert it as the  
*universal cause?*

CLINIAS: Certainly we are.

ATHENIAN: Well then, if indwelling soul thus controls all things  
e universally that move anywhere, are we not bound to say it controls heaven itself?

CLINIAS: Yes, of course.

ATHENIAN: And is this done by one single soul, or by more than one? I will give the answer for both of you. By more than one. At least we must assume not fewer than two, one beneficent, the other capable of the contrary effect.

CLINIAS: Decidedly you are in the right of it.

ATHENIAN: So far, so good. Soul, then, by her own motions  
897 stirs all things in sky, earth, or sea—and the names of these motions are wish, reflection, foresight, counsel, judgment, true or false, pleasure, pain, hope, fear, hate, love—stirs them, I say, by these and whatever other kindred, or primary, motions there may be. They, in turn, bring in their train secondary and corporeal movements, and so guide all things to increase and decrease, disgregation and integration, with their attendant characters of heat and cold, weight and lightness, hardness and softness, white and black, dry and sweet. By these and  
b all her instruments, when wisdom is her helper, she conducts all things

to the right and happy issue, whereas when she companies with folly, the effect is entirely contrary. Shall we set it down that this is so, or have we still our doubts that it may be otherwise?

CLINIAS : Nay, there is no doubt whatsoever.

ATHENIAN : Then which manner of soul, must we say, has control of heaven and earth and their whole circuit? That which is prudent and replete with goodness, or that which has neither virtue? Shall we, if you please, give the question this answer? c

CLINIAS : What answer?

ATHENIAN : Why, my friend, if the whole path and movement of heaven and all its contents are of like nature with the motion, revolution, and calculations of wisdom, and proceed after that kind, plainly we must say it is the supremely good soul that takes forethought for the universe and guides it along that path.

CLINIAS : True.

ATHENIAN : But the evil, if the procedure is distraught and without order. d

CLINIAS : That is true, too.

ATHENIAN : Then of what nature, pray, is the movement of wisdom? There, my friends, we reach a question hard to be answered with due understanding. So it is only fair that I too should have a hand in your present reply.

CLINIAS : A welcome proposal.

ATHENIAN : Then let us beware of creating a darkness at noon-day for ourselves by gazing, so to say, direct at the sun as we give our answer, as though we could hope to attain adequate vision and perception of wisdom with mortal eyes. It will be the safer course to turn our gaze on an image of the object of our quest. e

CLINIAS : You mean to say?

ATHENIAN : Let us take as that image the motion in our list of ten to which wisdom bears a resemblance. We will all recall it, as I join you in giving our answer.

CLINIAS : An excellent proposal.

ATHENIAN : Then do we still remember this much of what we said, that we decided that some things are in motion and others at rest?

CLINIAS : We do.

ATHENIAN : And that some of those in motion move in one place, others in more than one? 898

CLINIAS : Certainly.

ATHENIAN : Of these two movements, that confined to one place must in every case be performed about a center, after the fashion of a well-turned cartwheel, and it is this which must surely have the closest affinity and resemblance that may be to the revolution of intelligence.

CLINIAS : Your meaning is?

- ATHENIAN:** Why, of course, that if we say that intelligence and movement performed in one place are both like the revolutions of a well-made globe, in moving regularly and uniformly in one compass about one center, and in one sense, according to one single law and plan, we need have no fear of proving unskilled artists in imagery.

**CLINIAS:** Very true.

**ATHENIAN:** And again, motion which is never regular or uniform, never in the same compass, nor about the same center, or in one place, motion which has no order, plan, or law, will have kinship with folly of every kind.

**CLINIAS:** Indeed it will.

- ATHENIAN:** *Now* there can be no further obstacle to positive assertion, since we have found that it is soul which conducts the revolutions of all things, and are also bound to say that the soul by which the circle of the heavens is turned about with all foresight and order is either the supremely good, or its contrary . . .

**CLINIAS:** Nay, sir, if what has gone before is true, it were blasphemy to ascribe the work to aught but a soul or souls—one or more than one—of absolute goodness.

- ATHENIAN:** You have followed the argument to good purpose indeed, Clinias, but I would have you follow it a step farther still.

**CLINIAS:** And what is that step?

**ATHENIAN:** Take sun, and moon, and the other heavenly bodies. If the revolution of all is due to soul, so also is that of each singly, is it not?

**CLINIAS:** Why, of course.

**ATHENIAN:** Thus we may take one of them in particular as the subject of an argument we shall find no less applicable to all these celestial bodies.

**CLINIAS:** And which of them shall we take?

- ATHENIAN:** The sun, whose body can be seen by any man, but his soul by no man, any more than that of any other creature's body is to be seen, during life or at the time of death. We have every reason to believe that it infolds us in a fashion utterly imperceptible to all bodily senses, and is only to be discerned by the understanding. So here is a relevant consideration which we must apprehend by an act of pure understanding and thought.

**CLINIAS:** And what is it?

**ATHENIAN:** Since soul guides the sun on his course, we cannot well go wrong in saying that she must act in one of three ways.

**CLINIAS:** And what are the three?

**ATHENIAN:** Either she dwells within this visible round body and conveys it hither and thither, as our soul carries us wherever we go, or, as some hold, she provides herself a body of her own, of fire, or it may be of air, and pushes body from without forcibly by body, or fi-

nally, she is herself naked of body, and does this work of guidance by some other most miraculous faculties of hers.

CLINIAS : Yes, one of these ways is that by which soul transacts the whole business. So much is sure.

ATHENIAN : This soul, whether we take it to bring light to the world by driving the sun as its car, or from without, or in what way soever, each of us should esteem a god, should he not?

CLINIAS : He should, if not sunk in the very depths of folly. b

ATHENIAN : Of all the planets, of the moon, of years and months and all seasons, what other story shall we have to tell than just this same, that since soul, or souls, and those souls good with perfect goodness, have proved to be the causes of all, these souls we hold to be gods, whether they direct the universe by inhabiting bodies, like animated beings, or whatever the manner of their action? Will any man who shares this belief bear to hear it said that all things are not 'full of gods'? <sup>11</sup>

CLINIAS : No man, sir, can be so much beside himself. c

ATHENIAN : Then, my dear Megillus and Clinias, we may state our terms to him who has hitherto declined to acknowledge gods and dispose of him.

CLINIAS : What terms shall we offer?

ATHENIAN : Either he must show us that we are wrong in pronouncing soul the primary source of all things, and in the further consequences we drew, or if unable to get the better of our reasoning, he must yield to us and live henceforth a believer in gods. Let us consider, then, whether our defense of the being of gods against the unbeliever is now duly complete or defective. d

CLINIAS : Defective, sir? Anything but that.

ATHENIAN : Then, so far as concerns that party, let our discourse come to its end. We are now to admonish him who confesses the being of gods but denies that they take any heed of the affairs of men. Fair sir, we will say, as to your belief in gods, 'tis perhaps some kinship with the divine that draws you to your native stock in worship and acknowledgment. On the other side there are private and public fortunes of ill and wicked men—fortunes truly unblessed, but passionately, though tastelessly, extolled as blessed by the voice of public repute—and these draw you toward irreligion when you hear them wrongly harped upon in poetry and literature of all kinds. Or, it may be, you remark men who have come to the grave in fullness of days and left sons and sons' sons after them in high honors, and now you are dismayed when you find, from what you have heard from others or from your own personal observation of sundry deeds of impiety and horror in their histories, that some of the number have risen by these e 900

<sup>11</sup> Thales, in Aristotle, *De anima* 411<sup>a</sup> 7 sq.

very crimes from obscurity to pre-eminence and a throne. The visible consequence of it all is that at such moments, while your kinship with the gods will not permit you to charge them with the responsibility  
 b for this, ill reasoning and inability to reproach the gods have together brought you to your present pass, your conviction that though they indeed exist, they despise and disregard humanity. So, that your present creed may lead you to no worse pitch of impiety, that the specter, as we may say, may happily be laid, as it approaches, by the power of argument, we must try to connect what now remains to be said with our original rejoinder to the complete atheist, and so have the benefit of that also.

c You, Clinias—and you too, Megillus—must, as before, take the young man's place as respondent. And if the argument should chance to miscarry, I will once more take the task off your hands and put you across the waters.

CLINIAS: A sound proposal. Act on it, then, and we, too, will do our best to carry out your suggestions.

ATHENIAN: Well, perhaps it would not be hard to establish as much as this, that the gods are more, not less, careful for small things  
 d than for great. The man was present, you know, at our recent discussion and was told that the gods, who are good with perfect goodness, have the universal charge of all things as their special and proper function.

CLINIAS: He was most certainly told so.

ATHENIAN: Then let them join us in asking what we mean by the goodness in virtue of which we confess the gods to be good. Come, now, prudence, may we say, and understanding belong to goodness, their opposites to badness?

CLINIAS: We may.

e ATHENIAN: And again that valor is part of goodness, cowardice of badness?

CLINIAS: Assuredly.

ATHENIAN: And the latter qualities we shall call shameful, the former noble?

CLINIAS: No doubt we must.

ATHENIAN: And all the baser qualities, we shall say, belong, if to anyone, to ourselves; gods have no part in them, great or small.

CLINIAS: That, too, will be universally conceded.

ATHENIAN: Well, then, shall we set down negligence, indolence, petulance as goodness of soul? How say you?

CLINIAS: Nay, how could we?

ATHENIAN: As its opposite, then?

CLINIAS: Yes.

901 ATHENIAN: Then *their* opposites will be referred to *its* opposite?

CLINIAS: They will.

ATHENIAN: Very well, then. Anyone who is petulant, negligent, or indolent must be pronounced such a character as that the poet called 'most like a stingless drone.'<sup>12</sup>

CLINIAS: And an excellent comparison it is.

ATHENIAN: Then it must never be said that God has such a character as this, a character God himself abhors, or if anyone ventures on such a speech, we must forbid him.

CLINIAS: Indeed we must. How could we do otherwise?

ATHENIAN: If one has the office of action and peculiar care of some charge, and his mind, though careful in great matters, is negligent in small, what ground could we find for commendation of such a one that would not ring false? We may look at the case thus. The conduct of him who behaves thus, be he god or man, may take either of two forms, may it not?

CLINIAS: Either of what two forms?

ATHENIAN: Either he thinks neglect of little details makes no difference to the total result, or if it makes a difference which he disregards, he shows indolence or petulance. Can we, in fact, ascribe negligence to any other causes? For, of course, where concern for a whole is *impossible*, it is no negligence of the little or the great, in god or in ordinary mortal, to make no provision for that to which one's powers are not equal, and for which one is thus unable to provide.

CLINIAS: Of course not.

ATHENIAN: Very well. Now for an answer to the interrogation of the three of us from the two parties who both confess the being of gods, but gods whom the one holds to be venal and the other negligent of little details. You both admit, to begin with, that the gods perceive, see, and hear everything, that nothing within the compass of sense or knowledge can fall outside their cognizance. That is your position, is it not?

CLINIAS: It is.

ATHENIAN: And further that they can do all that is possible to be done by mortal or immortal?

CLINIAS: Why, of course, they will concede that admission too.

ATHENIAN: Besides, all five of us have already agreed that they are good, and superlatively good.

CLINIAS: Beyond all doubt.

ATHENIAN: Must we not then confess it a sheer impossibility that there should be any indolence or petulance in their conduct, so long as their character is such as we concede it to be. In ourselves, you know, want of courage gives birth to sloth, and sloth and petulance to indolence.

CLINIAS: True, indeed.

ATHENIAN: No god, then, can be negligent from sloth or indolence, for none, we may presume, has any lack of courage.

CLINIAS: Rightly argued, indeed.

902 ATHENIAN: Then if they indeed neglect the trivial matters and minor details of the universe, we must conclude either that they do so with the knowledge that there is no need whatsoever of attention to such points or—what other alternative is left but the contrary of knowledge?

CLINIAS: None whatever.

ATHENIAN: Well, then, my dear good man, which view must we take you to hold? That they act in ignorance and neglect due to ignorance where attention ought to be shown, or that they are aware that attention is needed, and yet behave as the sorriest sort of men are said  
b to do—men who know a better course than that they actually take, but leave it alone from some inferiority to pleasures or pains?

CLINIAS: Out of the question altogether.

ATHENIAN: Well, then, is not human life a part of animated nature, and man himself moreover the most god-fearing of all living creatures?

CLINIAS: Why, yes, to all appearances.

ATHENIAN: And surely we hold that all living creatures, like the world as a whole, are chattels of the gods?

CLINIAS: To be sure we do.

ATHENIAN: 'Tis all one, then, whether a man counts such things  
c small or great in the eyes of heaven; in neither case can it become our owners, provident and all-good as they are, to neglect them. For here is a still further point for our consideration.

CLINIAS: And what may it be?

ATHENIAN: Whether there is not a natural opposition between perception and power in respect of their ease or difficulty.

CLINIAS: In what way?

ATHENIAN: Why, that 'tis harder to see or hear the little than the great, whereas everyone finds it easier to move, wield, superintend the small and few than their contraries.

d CLINIAS: Emphatically so.

ATHENIAN: But suppose a physician who has the task of treating a whole body is willing and able to give his attention to the large masses but neglects the minor members and parts. Will his whole subject ever be in good condition?

CLINIAS: No, never.

ATHENIAN: Nor yet will seamen, captains, householders, or again statesmen, as they are called, or persons with any other such functions make a success of the many or the great tasks apart from the few and the little. Why, even the hedger will tell you that the large  
e stones will not lie well without the small.

CLINIAS: Of course they will not.

ATHENIAN: We are never, then, to fancy God the inferior of human workmen. The better they are at their work, the more exactly and perfectly do they accomplish their proper tasks, small or great, in virtue of one and the same skill, and we must never suppose that God, who is at once supremely wise and both willing and able to provide, makes no provision for the small matters, which we have found it easier to care for, but only for the great, like some idle fellow or faintheart who shirks his work from fear of exertion. 903

CLINIAS: Nay, sir, let us never entertain such a belief about gods; the thought would be wholly impious and utterly false.

ATHENIAN: And now, I take it, we have had quite enough of controversy with him who is prone to charge the gods with negligence.

CLINIAS: We have.

ATHENIAN: I mean so far as forcing him by argument to confess his error will go. Still something more, I believe, needs to be said by way of a charm for him. b

CLINIAS: And what shall it be, my friend?

ATHENIAN: Why, our discourse must persuade the young man that he who provides for the world has disposed all things with a view to the preservation and perfection of the whole, wherefore each several thing also, so far as may be, does and has done to it what is meet. And for each and all there are, in every case, governors appointed of all doing and being-done-to, down to the least detail, who have achieved perfection even to the minute particulars. Thine own being also, fond man, is one such fragment, and so, for all its littleness, all its striving is ever directed toward the whole, but thou hast forgotten in the business that the purpose of all that happens is what we have said, to win bliss for the life of the whole; it is not made for thee, but thou for it. For any physician or craftsman in any profession does all his work for the sake of some whole, but the part he fashions for the sake of the whole, to contribute to the general good, not the whole for the part's sake. And yet thou dost murmur because thou seest not how in thine own case what is best for the whole proves best also for thyself in virtue of our common origin. And seeing that a soul, in its successive conjunction first with one body and then with another, runs the whole gamut of change through its own action or that of some other soul, no labor is left for the mover of the pieces but this—to shift the character that is becoming better to a better place, and that which is growing worse to a worsen, each according to its due, that each may meet with its proper doom. e

CLINIAS: Shift it—but how?

ATHENIAN: Why, I believe I can show you how universal superintendence may be easy enough for gods. In fact, if in his constant regard for the whole, an artificer were to mold everything by new transformations—fashioning fire, for example, into cold water—instead of producing variety from unity or unity from variety, by the 904

time things had reached a first, second, or third generation the variations in the changing configuration would be infinitely numerous. But as it is, he who provides for the universe has an admirably light task.

CLINIAS: Once more—your meaning?

ATHENIAN: I mean this. Since our king perceived that all our actions have soul in them and contain much virtue and likewise much vice, and that the complex of soul and body when once it has come to be, though not eternal, is, like the gods recognized by law, imperishable—for there would be no procreation of living creatures were either of the pair to be destroyed—and since he considered that 'tis ever the nature of such soul as is good to work blessing and of such as is evil to work harm—since he saw all this, I say, he contrived where to post each several item so as to provide most utterly, easily, and well for the triumph of virtue and rout of vice throughout the whole. Thus he has contrived to this universal end the seat or regions which must receive either type of soul as it is formed in their inhabitants, but the causes of the formation of either type he left free to our individual volitions. For as a man's desires tend, and as is the soul that conceives them, so and such, as a general rule, does every one of us come to be.

CLINIAS: 'Tis a fair presumption.

ATHENIAN: Thus all things that have part in soul change, for the cause of change lies within themselves, and as they change they move in accord with the ordinance and law of destiny. If their changes of character are unimportant and few, they are transferred over the surface of the soil; if they are more and in the direction of grave wickedness, they fall into the depths and the so-called underworld, the region known by the name of Hades and the like appellations, which fill the fancy of quick and departed alike with dreams of dismay. If a soul have drunk still deeper of vice or virtue, by reason of its own volition and the potent influence of past converse with others, when near contact with divine goodness has made it itself especially godlike, so surely is it removed to a special place of utter holiness, and translated to another and a better world, or, in the contrary case, transported to live in the opposite realm. This, my boy, or my lad, who deemest thyself forgotten by heaven, 'is the doom of the gods who dwell on Olympus'<sup>13</sup>—that he that grows better shall make his way to the better souls and he that has grown worse to the worsen, and so, in life, and throughout the series of deaths, do and have done to him what it is meet the like-minded should do to their likes. This doom of heaven be sure neither thyself nor any other that has fallen on ill ways shall ever claim to have escaped; 'tis that which the fashioners of doom have established before all others and that which should be shunned with utter dread. It will never leave thee forgotten. Though thou make thyself never so small and creep into the depths of earth, or

<sup>13</sup> *Odyssey* 19.43.

exalt thyself and mount up to heaven, yet shalt thou pay them the due penalty, either while thou art still here among us, or after thy departure in Hades, or, it may be, by translation to some yet grimmer region. 'Twill be the same, thou must know, with them also whom thou hast seen raised from small beginnings to greatness by deeds of sacrilege or the like, and fancied to have passed from misery to blessedness, whence thou thoughtest their fortunes a mirror wherein to behold the utter carelessness of the gods, knowing not how their contribution plays its part in the whole. Yet how, thou hardiest of men, canst thou doubt thy need of the knowledge? Nay, if a man has it not, he will never catch so much as a vestige of the truth, or be in case to say a word of life's happiness or disasters. If friend Clinias and the rest of our band of elders here assembled can convince thee of this much, that thou sayest of the gods thou knowest not what, why, 'tis well, and God's grace be thy aid! But if thou shouldst perchance need further argument, then listen, if thou hast any understanding, while we reason with our third antagonist. For that gods there are, and that they are concerned for mankind, has, I would maintain, been shown by no contemptible proofs. But that gods can be perverted by the receipt of gifts from the wicked, that again is what none must admit and we must dispute to the best of our power.

CLINIAS : Well said. Let us do so.

ATHENIAN : Why, then, I ask you, in the name of these same gods, what can be the mode of the perversion, if indeed they are to be perverted? And what or what manner of beings must they be themselves? Governors, to be sure, they must be supposed to be, if they are to have effective control of the whole universe.

CLINIAS : No doubt.

ATHENIAN : But what kind of governors are they like? Or what kind whom we can by any possibility compare rightly with them, as less with greater, are like them? Would drivers of contending teams, or captains of competing vessels, be a proper parallel? Or we might perhaps compare them with commanders of armies in the field, or they may even resemble physicians defending the body from the onslaughts of disease, or husbandmen anxiously apprehending recurrent seasons of danger for their crops, or again overseers of flocks and herds. For since, as we have agreed among ourselves, the world is full of good things, but no less full of their contraries, and those that are amiss are the more numerous, the fight we have in mind is, we maintain, undying and calls for a wondrous watchfulness; gods and spirits are our allies in the warfare and we, moreover, the property of these gods and spirits. Wrong, arrogance, and folly are our undoing; righteousness, temperance, and wisdom, our salvation, and these have their home in the living might of the gods, though some faint trace of them is also plainly to be seen dwelling here within ourselves. Yet it should seem there are souls inhabiting our earth in possession of

unrighteous spoil—bestial souls, these, beyond a doubt, who grovel before the souls of our guardians—watchdogs, shepherds, supreme  
 c masters of all, alike—and would fain persuade them by fawning speeches and witcheries of supplication—such is the tale told by the wicked—that it is lawful for them to encroach upon mankind without grievous consequence. But our contention, I take it, is that this vice I have just named of encroachment when found in bodies of flesh and blood is what is called *disease*, when found in seasons and whole years, *pestilence*, while in societies and politics it shows itself once more under the changed designation of *iniquity*.

CLINIAS: Just so.

ATHENIAN: So the case of one who teaches that the gods are  
 d always indulgent to the unrighteous and the wrongdoer, if a share of the plunder is assigned them, comes inevitably to this. 'Tis as though the wolf should assign some small part of his spoil to the sheep dog, and the dog, pacified by the present, agree to the ravaging of the flock. That is the case of those who hold the gods to be venal, is it not?

CLINIAS: It is indeed.

ATHENIAN: Well, then, with which of our former list of  
 e guardians can a man compare the gods without absurdity? With seamen who are 'turned from their course by "flow and fragrance" of wine'<sup>14</sup> and overturn vessel and crew?

CLINIAS: Surely not.

ATHENIAN: And surely not with charioteers placed for the race but won over by a bribe to forfeit the victory to another team?

CLINIAS: Nay, your comparison will be a shocking one if you say that.

ATHENIAN: And certainly not with commanders, physicians, or husbandmen, nor yet with herdsmen nor with sheep dogs on whom wolves have cast a spell?

CLINIAS: Flat blasphemy! Quite impossible!

907 ATHENIAN: Now are not the gods, one and all, our chiefest guardians, and the interests they guard our chief interests?

CLINIAS: Aye, and by far.

ATHENIAN: And shall we pronounce those who have the noblest of things to guard and are themselves supremely skillful in the task of guarding inferior to sheep dogs or average men, who will never betray the right for the sinful offer of a bribe from the unrighteous?

b CLINIAS: Assuredly not—the thought is not to be borne. Of all reprobates who are given to any form of ungodliness the defender of such a creed may well be most righteously condemned as the very worst and most ungodly.

ATHENIAN: Then I presume we may say our three propositions,

<sup>14</sup> *Iliad* 9.500.

that there are gods, that they are mindful of us, that they are never to be seduced from the path of right, are sufficiently demonstrated.

CLINIAS: Indeed you may, and my friend and I concur with your arguments.

ATHENIAN: Still I confess they have been delivered with some heat due to eagerness to triumph over these bad men. But the source of this zeal, my dear Clinias, was apprehension that if they get the better of the argument, the wicked may fancy themselves free to *act* as they will, seeing how many strange ideas they entertain about the gods. This is what prompted me to speak with more than common vigor. If I have done never so little to influence such men toward self-reprobation and attraction toward the opposite type of character, the prelude to our laws against impiety will have been spoken to good purpose. d

CLINIAS: Well, let us hope so, but if not, at least the cause will bring no discredit on a legislator.

ATHENIAN: So our preamble may properly be followed by a sentence which will express the sense of our laws, a general injunction to the ungodly to turn from their ways to those of godliness. For the disobedient our law against *impiety* may run as follows. If any man commit impiety of word or act, any person present shall defend the law by giving information to the magistrates, and the first magistrates under whose notice the matter comes shall bring the case before the court appointed to deal with such offenses as the law directs. Any official failing to take action on information received shall himself be liable to be proceeded against for impiety at the suit of anyone willing to vindicate the law. In the case of conviction, the court shall impose a particular penalty on the offender for each act of impiety. Imprisonment shall form part of the penalty in all cases. And whereas there are three prisons in the state, a *common jail* in the market place for the majority of cases, for safe custody of the persons of the commonalty, a second attached to the nocturnal council and known as the *house of correction*, and a third in the heart of the country in the most solitary and wildest situation available, and called by some designation suggestive of *punishment*, and whereas also there are three causes of impiety, those we have already specified, and each such cause gives rise to two types of offense, there will be, in all, six classes of offenders against religion to be discriminated, who require different and dissimilar treatment. For though a man should be a complete unbeliever in the being of gods, if he have also a native uprightness of temper, he will detest evil men, his repugnance to wrong disinclines him to commit wrongful acts, he shuns the unrighteous and is drawn to the upright. But those in whom the conviction that the world has no place in it for gods is conjoined with incontinence of pleasure and pain and the possession of a vigorous memory and a keen intelligence share the malady of atheism with the other sort, but are sure to 908

work more harm, where the former do less, in the way of mischief to their fellows. The first man may probably be free-spoken enough about gods, sacrifices, and oaths, and perhaps, if he does not meet with  
 a his deserts, his mockery may make converts of others. But the second, who holds the same creed as the other, but is what is popularly called a 'man of parts,' a fellow of plentiful subtlety and guile—that is the type which furnishes our swarms of diviners and fanatics for all kinds of imposture; on occasion also it produces dictators, demagogues, generals, contrivers of private Mysteries, and the arts and tricks of  
 e the so-called Sophist. Thus there are numerous types of these atheists, but two which legislation must take into account, the hypocritical, whose crimes deserve more than one death, or even two, and the others, who call for the combination of admonition with confinement. Similarly, the belief in divine indifference gives rise to two further types, and that in divine venality to another two.

These distinctions once recognized, the law shall direct the judge to commit those whose fault is due to folly apart from vicious-  
 909 ness of temper or disposition to the house of correction for a term of not less than five years. Throughout this period they shall have no communication with any citizen except the members of the nocturnal council, who shall visit them with a view to admonition and their souls' salvation. When the term of confinement has expired, if the prisoner is deemed to have returned to his right mind, he shall dwell with the right-minded, but if not, and he be condemned a second time on the same charge, he shall suffer the penalty of death. As for those  
 b who add the character of a beast of prey to their atheism or belief in divine indifference or venality, those who in their contempt of mankind bewitch so many of the living by the pretense of evoking the dead and the promise of winning over the gods by the supposed sorceries of prayer, sacrifice, and incantations, and thus do their best for lucre to ruin individuals, whole families, and communities, the law shall direct the court to sentence a culprit convicted of belonging to  
 c this class to incarceration in the central prison, where no free citizen whatsoever shall have access to him, and where he shall receive from the turnkeys the strict rations prescribed by the curators of the laws. At death he shall be cast out beyond the borders without burial, and if any free citizen has a hand in his burial, he shall be liable to a prosecution for impiety at the suit of any who cares to take proceedings. But should he leave children fit to be citizens, the guardians of  
 d orphans shall provide for them also, no worse than for other orphans, from the date of the father's conviction.

Moreover we must frame a law applicable to all these offenders alike, and designed to alleviate the sin of most of them against religion in word or act—to say nothing of the folly of the sinners—by the prohibition of illegal ceremonial. In fact the following law should be enacted for all cases without exception. No man shall possess a

shrine in his private house; when a man feels himself moved to offer sacrifice, he shall go to the public temples for that purpose and deliver his offerings to the priests of either sex whose business it is to consecrate them. He may join with himself in the prayers any persons whose company he may desire. This regulation shall be adopted for the reasons following. The founding of a sanctuary or cult is no light task; to discharge it properly demands some serious thought. But it is the common way, especially with all women, with the sick universally, with persons in danger or any sort of distress, as on the other hand with those who have enjoyed a stroke of good fortune, to dedicate whatever comes to hand at the moment and vow sacrifices and endowments to gods, spirits, and sons of gods, as prompted by fears of portents beheld in waking life, or by dreams. Similarly, the recollection of endless visions and the quest of a specific for them commonly lead to a filling of every house and village with shrines and altars erected in clear spaces or wherever such persons are minded to place them. All these are grounds for conformity with the law now proposed, and there is the further ground that it serves as a check on the ungodly. It prevents them from fraud in this matter itself, from setting up shrines and altars in their own houses, under the delusion that they are winning the privy favor of heaven by offerings and prayers, thus indefinitely aggravating their criminality and bringing guilt before God on themselves and the better men who tolerate their conduct, until the whole community reaps the harvest of their impiety—as in a sense it deserves. e  
910

Our legislator, in any case, shall be clear before God, for his enactment shall run thus. No citizen to possess a shrine in his private dwelling house; in the case of proved possession, or worship at any shrine other than the public, if the possessor, whether man or woman, have committed no serious act of impiety, he that discovers the fact shall proceed to lay an information before the curators of the law, who shall direct the private shrine to be removed to a public temple, and, in the case of disobedience, impose penalties until the removal is effected. Any person proved guilty of a sin against piety which is the crime of a grown man, not the trivial offense of a child, whether by dedicating a shrine on private ground or by doing sacrifice to any gods whatsoever in public, shall suffer death for doing sacrifice in a state of defilement. What offenses are or are not puerile shall be decided by the curators, who shall bring the offenders accordingly before the courts and inflict the penalty. b

d

## BOOK XI

ATHENIAN: Our next need will, of course, be a proper regulation of our business transactions with each other. A simple general rule, I take it, might be expressed thus. I would have no one touch my 913

property, if I can help it, or disturb it in the slightest way without some kind of consent on my part; if I am a man of sense, I must treat the property of others in the same way. We will take as a first instance treasure which someone, not being an ancestor of my own, has amassed as store for himself and his descendants. I must never pray  
 b to find such treasure. If I do find it, I must not meddle with it; I must breathe no word of it to diviners, as they are called, who are certain to recommend me to appropriate what has been committed to earth's keeping. If I appropriate it, the benefit to my fortunes will assuredly be more contracted than the expansion I shall gain in moral goodness and rectitude by leaving it alone. Purchase for purchase, I shall have made a better bargain in a better cause, if I choose to get rectitude for my soul rather than wealth for my pocket. The wise proverb which forbids moving what is better left alone has a wide range of application, and this is one of the cases to which it applies. Besides, one  
 c should give credence to the current tradition that such things are no blessing to a man's descendants. The man who is so careless for his posterity and deaf to the voice of the legislator that he takes up what neither he nor any of his fathers' fathers ever laid down, and that without the depositor's permission, in violation of one of the best of laws, that straightforward enactment of an illustrious man which runs, 'What thou hast not laid down, take not up'—the man, I repeat, who does despite to both these legislators and takes up what he has not  
 d himself laid down, and not on a petty scale either—often it is a vast heap of treasure—what shall be done to him?

What heaven will do to him, of course, is God's concern, but the first person to discover the fact shall report it, if the thing happen in the capital, to the urban commissioners, or if in the market square of the capital, to the commissioners of the market, or, if it occur out-  
 914 side the capital, shall bring it to the notice of the rural commission and their heads. On receipt of the information, the state shall send a deputation to Delphi. Accordingly as the god shall pronounce about the property or the disturber of it, so the state shall act by the mandate of the oracle. If the informer be a free man, he shall be commended for his virtue, and censured as vicious if he neglects to give information; if a slave, he shall receive his well-earned freedom as a gift from the state, which shall pay his owner his price, but be punished with  
 b death if the information is withheld. It follows by consequence that we must have this same rule alike in small matters as in great. If a man leave his property behind him in any place, voluntarily or not, he that lights upon it must let it alone undisturbed; he must regard such things as placed under the protection of the spirit of the wayside, to whom they are deemed consecrate in law. Any person who appropriates such things and carries them home with him, in contravention of the law, shall, if a slave and the article of little value, receive a sound beating from any, not being under thirty years of age, who may

fall in with him. If he be a free man, he shall be pronounced a churl c  
 unfit to consort with law-respecting men, and shall furthermore pay  
 the owner of the goods he has disturbed their value ten times over.  
 If a man charge another with being in possession of his property,  
 great or small, and the man so charged admit possession of the object  
 but dispute the ownership, the complainant shall, in the case of arti-  
 cles entered by legal requirement on the magistrates' register, summon  
 the party in possession before the magistrates, to whom he shall pro-  
 duce the article. If, upon such exhibition, such article is found to be  
 recorded in the register as the property of either litigant, he shall be d  
 put in possession of it and so dismissed. If it prove to belong to a  
 third party who is not in court, either party, on providing sufficient  
 sureties, may remove it on behalf of the absent owner and in his right,  
 for delivery to him. If the article in dispute be not recorded in the  
 register, it shall be in the custody of three senior magistrates until the  
 suit is decided. And if the thing so hypothecated be a beast, the loser  
 in the suit shall pay the authorities the cost of its keep. The magistrates  
 shall dispose of the case within three days. e

Any man, provided he be sane, shall be at liberty to lay hands on  
 his own slave for such purpose as he may please in the way of lawful  
 business, and at liberty likewise to lay hands on the fugitive slave of  
 any kinsman or friend, with a view to his safekeeping. If a man be  
 thus seized as a slave and any person claim him as free and resist his  
 detention, the captor shall let the man go, and the party opposing the  
 detention shall provide three substantial sureties and stay the deten-  
 tion on these conditions aforesaid, and on no others. If capture is  
 stayed otherwise than on these conditions, there shall be an action  
 for assault, and the defendant, if convicted, shall pay the party whose  
 right has been stayed twice the value of the article, as shown by the 91:  
 register. There shall be the like right of seizure of a freedman who pays  
 no homage, or insufficient homage, to the authors of his freedom.  
 Homage shall be deemed to mean that the freedman repair thrice in  
 the month to the hearth of his emancipator and make proffer of all  
 such services as are right and possible, and likewise that in the mat-  
 ter of marriage he act only with the approval of his former owner. It  
 shall be illegal for the freedman to possess more wealth than the eman-  
 cipator, and any surplus shall belong to the master. A man thus re-  
 ceiving his freedom shall not prolong his residence beyond twenty b  
 years, but depart, like all aliens, with his estate in full, unless he can  
 gain permission from the magistrates and the master who enlarged  
 him. If the estate of a freedman or other alien come to exceed the  
 census of the third class, he shall within thirty days from the day on  
 which the excess first began, take up his property and depart, and in  
 this case the authorities shall have no power to grant any extension c  
 of residence. Any person brought before the courts for noncompliance  
 and convicted shall receive sentence of death, and his goods shall be

forfeit to the state. Suits of this kind shall come before the court of a tribe, save when the counterallegations of the parties have been previously disposed of before the neighbors, or before judges appointed by themselves.

- d If a man claim any other man's beast, or any other of his goods, as his own property, the party in possession shall return the article to the vendor, responsible and lawful donor, or person who otherwise made valid delivery of that article, where such person is a citizen or resident alien, within thirty days, or in the case where delivery was made by a foreigner, within a period of five months, of which months the midmost shall be that of the summer solstice. In all reciprocal exchange by means of sale and purchase, goods exchanged are to be delivered on the sites appointed in the market square for the various articles, and
- e the price is to be received at the time; exchange shall not be permitted in any other locality, and there shall be neither selling nor buying on credit. If any citizen make any exchange whatever, for any return whatsoever, with another under other conditions or in a different locality, because he trusts the party with whom he is dealing, he must do so on the understanding that the law permits no action in respect of articles not vended under the conditions here specified. As to subscriptions to clubs, anyone who pleases shall be free to raise them as between friends, but if a difference arise about a subscription, the parties must conduct their affairs with the understanding that the law
- 916 will in no case grant an action on such grounds. If the vendor of an article receive a price of fifty drachmas or more, he shall be bound to remain in the territory for a space of ten days, and the purchaser shall be informed of the vendor's lodging with a view to the making of complaints such as are common in such cases, and satisfying the legal regulations about restitution. The legal requirements in question shall be as follows. In the case of the vending of a slave affected by phthisis, stone, strangury, or by the so-called 'holy distemper,' or other disorder of body or mind which readily escapes ordinary observation and is unamenable to treatment, if the sale were made to a physician or trainer, there shall be no right to return the article to the
- b vendor; there shall likewise be none if the defect was truthfully mentioned at the time of sale. But where a professional man vends such an article to a layman, the purchaser shall have the right to return it within six months, except in the case of the 'holy distemper,' for which the period allowed for the return shall be one year. The case shall be brought before a body of physicians, to be nominated and selected by agreement between the parties, and a convicted vendor shall pay a sum double of the price at which he sold. If both parties be laymen, the
- c regulations as to right of return and the trial of the issue shall be as in the former case, but the convicted vendor shall pay only the actual price received. If a man vend a slave who is a homicide, and both parties are aware of the fact, there shall be no right of return in respect

of the transaction. If the purchaser be unaware, there shall be a right to return the purchase forthwith when the buyer shall discover the fact, and the case shall be heard before the five junior curators. The vendor who is adjudged to have made such sale willingly shall purify the dwelling of the purchaser as the canonists' rules require, and shall repay the price threefold.

He that exchanges against coin other coin or any article whatsoever, animate or inanimate, shall be expected by the law in all cases to give genuine value and demand the same. But, as elsewhere in our code, let us make room for a preamble dealing with roguery of this sort at large. Everyone should understand that imposture, false pretenses, fraud, are all things of one kind, the kind which is unhappily e credited in current popular parlance with being often enough an excellent thing 'if practiced at the proper juncture.' When and where this juncture occurs is left vague and indefinite, and thus the proverb works no little mischief to the believer and the rest of society. A legislator cannot be allowed to leave the point in this uncertainty. He should always draw definite boundary lines, wider or narrower, as we shall now proceed to do. No man shall practice any imposture or fraud of word or act with the name of a god on his lips, but one that would encounter God's reprobation, and such is he who swears lying oaths in 917 contempt of heaven, and, in a lesser degree, he who lies to his superior. Now good men are the superiors of worse, the aged, speaking generally, of the youthful, and, by consequence, parents of their offspring, husbands, again, of their wives and children, magistrates of their subjects. Universal reverence is no more than the proper due of all who are in any of these positions of authority, and most of all the due of the authorities of the state, and it is of them we are now discoursing. A b man who practices an imposition in the market is lying, cheating, and calling heaven to witness by his oaths in the face of all the laws and caveats of the commissioners of markets; he has no more respect for man than fear of God. Now undoubtedly it is a becoming habit to be careful of taking divine names in vain, to show the same regard for them that most of us commonly and customarily show for ceremonial purity and cleanness in matters of worship, but if there should be any disobedience, here is our law. He that sells any article whatsoever in the market shall in no case put two prices on his wares. He shall ask one price, and if he do not get it, he will do right to take c his goods away again, and shall not, that same day, set a higher or lower price on them. Also there shall be no proffering of wares offered for sale, or vouching for them by an oath. In case of breach of this statute, any citizen present, not being under thirty years of age, shall have the law's permission to chastise the swearer of such oath by blows; a citizen making light of the matter and disregarding this provision shall be liable to censure as a traitor to the law. The vendor of a spurious article, who cannot be persuaded by our present d

discourse, shall be exposed before the authorities by any person present with the knowledge requisite for his detection; such person, if a slave or resident alien, shall have the counterfeit article for his own use, if a citizen and neglecting to expose the cheat, shall be declared guilty of defrauding heaven; if he expose it, he shall publicly dedicate the article to the gods of the market. And the party found offering such wares for sale shall be deprived of the counterfeit goods, and shall moreover be scourged in the market square, and receive a stripe for each drachma of the price he set on his goods, proclamation being first made by a crier of the cause for the scourging. To counteract the impostures and knaveries of vendors, the commissioners of the market and curators shall inform themselves by inquiry from experts in different trades, and draw up rules of what the vendor may and may not do; these rules shall be engraved on a column to be erected in front of the offices of the commission of the market as regulations for the more precise direction of persons doing business in the market. The functions of the urban commission have been described sufficiently already. If further regulations are thought needful, the commissioners shall consult with the curators of law and draft the necessary supplement; both the earlier and later rules for their official procedure shall be posted on a column in front of the offices of the commission.

The consideration of fraudulent practices and business leads directly to that of retail trade. We shall first deal with the subject as a whole in the way of reasoned counsel, and then propose legal regulation for it. Internal retail trade, when one considers its essential function, is not a mischievous thing, but much the reverse. Can a man be other than a benefactor if he effects the even and proportionate diffusion of anything in its own nature so disproportionately and unevenly diffused as commodities of all sorts? This, we should remind ourselves, is the very result achieved by a currency, and this, as we should recognize, the function assigned to the trader. Similarly, the wage earner, the tavernkeeper, and other callings, some more and some less reputable, all have the common function of meeting various demands with supply and distributing commodities more evenly. What, then, can be the reason why the calling is of no good credit or repute? What makes it generally unpopular? We must look into the question if we are to provide a partial remedy—a total cure would be beyond us—by our legislation. The thing is well worth doing, I fancy, and calls for no common abilities.

CLINIAS: How so?

ATHENIAN: Why, Clinias my friend, 'tis but a small section of mankind, a few of exceptional natural parts disciplined by consummate training, who have the resolution to prove true to moderation when they find themselves in the full current of demands and desires. There are not many of us who remain sober when we have the opportunity to grow wealthy, or prefer measure to abundance. The great

multitude of men are of a completely contrary temper—what they desire they desire out of all measure—when they have the option of making a reasonable profit, they prefer to make an exorbitant one. This is why all classes of retailers, businessmen, tavernkeepers, are so unpopular and under so severe a social stigma. And yet, only suppose—an impossible supposition and heaven forbid it should be anything else!—but suppose the very best of men could be compelled—the fancy will sound ludicrous, I know, but I must give it utterance—suppose they could be compelled to take for a time to innkeeping, or retail trade, or some such calling, or suppose, for the matter of that, that some unavoidable destiny were to drive the best women into such professions. Then we should discover that all are humane and beneficent occupations. If they were only conducted on principles of strict integrity, we should respect them as we do the vocation of mother or nurse. But look at the actual facts! For purposes of commerce a man sets up his quarters in some solitary spot remote from everywhere; 919 there he entertains the famished traveler and the refugee from tempests with welcome lodging, and provides them with calm in storm and cool shelter in heat. But what comes next? Where he might treat his customers as so many friends, and add a hospitable banquet to the entertainment, he behaves as though he were dealing with captive enemies who had fallen into his hands, and holds them to the hardest, most iniquitous, most abominable terms of ransom. These malprac- b tices, and others like them, are to be found in all these callings, and it is they which have brought catering for the wants of the distressed into merited ill repute. This is the malady in them all for which law must find a specific. Now it is a sound old adage that it is hard to fight against two enemies at once—even when they are enemies from opposite quarters. We see the truth of this in medicine and elsewhere. And in the battle we are at this moment waging against the evils of these professions we have two such enemies, penury and opulence. The one rots souls with luxury; the other, with its distresses, drives them into sheer c insensibility to shame. What remedy, then, can be found for the disease in an intelligent society? Well, the remedy is, in the first place, that the numbers of those employed in trade be kept as low as possible, next, that such occupations be assigned to the sort of men whose corruption will do no great mischief to society; thirdly, some means must be found to prevent the characters of those actually engaged in these callings from readily taking the contagion of complete abandonment and baseness. d

So our preface shall at once be followed by a law—and the blessing of providence go with it!—to this effect. In the Magnesian city which heaven is restoring from its decay, no one of all the five thousand and forty landowners who are our householders shall follow a trade, by his own will or against it, nor even engage in merchandise; neither shall he discharge menial services of any kind to a private

- employer who renders no like services to himself, save for services  
 e performed, without derogation to gentle blood, to father, mother, re-  
 moter ancestors, or to any man of gentle birth senior to himself. What  
 services are thus consistent with gentle lineage and what are not can  
 hardly be stated with precision in a law; the point shall be decided  
 by those who have won distinction for abhorrence of the base and de-  
 votion to the gentle. If a citizen, on any pretext, engage in sordid trade,  
 he shall be liable to an indictment for tainting the blood, to be pre-  
 ferred by any who will, and to come before a jury of men who have at-  
 tained the first distinction for goodness; if found to have defiled the  
 920 ancestral hearth by an unworthy pursuit, he shall suffer a year's im-  
 prisonment as a lesson to avoid such conduct, or, for a repeated of-  
 fense, two years' imprisonment. On each subsequent conviction the  
 term inflicted for the last offense shall be regularly doubled. Now for a  
 second law. A person proposing to follow a retail business shall always  
 be a resident alien or a foreigner. And there shall be yet a third. To  
 ensure that there shall be as much virtue, or at least, as little vice, as  
 is possible among these associates in the life of our society, the curators  
 must not be regarded merely as guardians of the class whom it is easy  
 to protect from falling into crime or vice, the favorably born and prop-  
 b erly educated and trained. Still more careful guard must be kept over  
 those who have not these advantages, and follow callings which have  
 a marked tendency to predispose to vice. So to effect this result for re-  
 tail trade with its numerous branches and the many debasing em-  
 ployments it embraces—I mean those of them which we shall permit  
 to subsist in our society because we have found their presence abso-  
 lutely necessary—the curators will once more be required in this case  
 to consult with the experts in all departments of trade, exactly as they  
 c have been enjoined to do in connection with the allied business of the  
 prevention of fraud. They shall ascertain by consultation what scale of  
 payment and expenditure will secure the trader a modest profit, and  
 this scale of outlay and receipts shall be publicly displayed and en-  
 forced by the commissioners of the market and urban and rural com-  
 missioners in their respective spheres. Under such regulation we may  
 expect our retail trade to produce general benefit for all classes with  
 the minimum of harm to the class who follow it as their vocation.
- d In the case of failure to execute an admitted contract—save and  
 except a contract to do what is prohibited by statute or by executive  
 decree of the assembly, a contract extorted by wrongful constraint, a  
 contract unintentionally frustrated by unforeseen circumstances—  
 there shall be an action for nonfulfillment of contract before the tribal  
 courts, unless settlement can be previously reached before arbitrators  
 or a court of the local neighbors. The class of artificers whose crafts  
 have equipped us for the daily needs of life will be under the patronage  
 e of Hephaestus and Athena, while the other class who provide for our  
 safety by a second group of crafts—those which subserve defense—

will have Ares and Athena as their patrons. There are as good grounds for this divine protection in the second case as in the other. All alike are engaged in continuous service of country and people—the one sort in taking charge of our struggles in the field, the other in producing implements and commodities for hire. Reverence for their divine progenitors will thus make it unseemly in such men to break their word 921 about their work. If a craftsman, then, culpably fail to complete a task within the specified time, and thus forget the reverence due to the god from whom he gets his living, fancying, in his ignorance, that God is a mate who will make allowances, he shall, first, answer for it to the god, and, next, there shall be a law to suit the case. If a man break his word to the employer with whom he has contracted for any piece of work, he shall be indebted in the value of the work and shall execute it again gratis from the beginning within the time agreed on. The law will further give the same counsel to contractors for such performances as was given to vendors. The vendor was advised b to take no advantage by asking too high a price, but to price his goods with all candor at their true worth, and the law gives the same injunction to the contractor, who, of course, as a craftsman is aware of the true value of his work. In a city of free men, then, the craftsman of all men may never use his expert knowledge, in itself an honest and straightforward thing, to take advantage of the layman by the tricks of the trade, and persons wronged by such tricks must have a legal remedy. On the other side, if the party contracting with a workman fail to pay his wages strictly as stipulated in an agreement valid in c law, this is to dishonor Zeus, our national defender, and Athena, who are both partners in our society, and to dissolve the supreme social bonds for the sake of petty profit, and there shall be a law to champion the heaven-ordained civic tie to this effect. If a man, having received delivery of work contracted for, do not pay the price within the stipulated time, the said price shall be recoverable from him twofold. If payment be not made within the year, whereas all other moneys out upon loan shall bear no interest, a defaulter in this kind shall pay d an interest of one obol on the drachma for each month in arrears, actions under this head to be taken in the tribal courts.

As we *have* raised this topic of artificers, it is only right to say a passing word about the artificers of our preservation in war, generals and other military experts. In their case also—for they too, like the others, are craftsmen, though of a different sort—if any of them undertake work for the public, whether as a volunteer or under orders, e and perform it well and truly, the law will never tire in commendation of the citizen who loyally pays him the soldier's wages—honors—but if the citizen receive delivery of the fine piece of military work and withhold the payment, the law shall censure him. We shall accordingly enact, and couple with our commendation of these heroes, the following law, which we address to the populace rather by way of

922 counsel than by way of compulsion. The brave men who preserve our whole state by deeds of valor or military skill shall receive honors of the second class. Our supreme distinctions must be understood to have been assigned to those who stand first of all in merit, those who have proved pre-eminent in reverence for the precepts of good legislators.

We have now, we may say, completed our regulation of the more important business relations of man with man, except for those which concern orphans and their supervision by their guardians. These are  
 b the spheres we are next driven to regulate as best we can. The foundations of the whole subject are laid by the desire of the dying to make a disposition of their estates and the accident of deaths without any such settlement, and the reason why I spoke of being 'driven' to treat of it, Clinias, was that I saw the intricacies and difficulties involved. We certainly cannot leave such matters without all regulation. Were we to concede the unqualified validity of any testamentary disposition made at the end of life, irrespective of the testator's condition, men would often make disposals inconsistent in themselves and repugnant  
 c to law, or to the moral sense of the living, or of the testator himself at an earlier time of life. For in most of us, as you know, when in imminent expectation of death, the mental powers are in abeyance, broken, as I may say.

CLINIAS: Yes, sir, and what of it?

ATHENIAN: A man at the point of death, Clinias, is not easy to handle; he is full of a notion which must give a legislator grave concern and perplexity.

CLINIAS: How so, pray?

d ATHENIAN: He wants to have his own way about everything, and so there is commonly a touch of passion in his language.

CLINIAS: Language—what language?

ATHENIAN: Lord! he will say, I call it a shame if I am not to be perfectly free to give my own property to a man or not, exactly as I please, and not free to give more of it to one man, less to another, according as I have found them treating me well or ill under the searching test of sickness, old age, and the other varied circumstances of life.

CLINIAS: A perfectly proper thing to say, too, sir, don't you think so?

e ATHENIAN: Why, Clinias, I think our legislators in the past have been too soft; their codes have been based on short views of human life and imperfect understanding of it.

CLINIAS: But in what way?

ATHENIAN: Why, my dear sir, they were afraid of such complaints, and that is why they made the law which permits of the absolute disposition of property entirely as the testator pleases. You and I must pitch our reply to the dying in this society of yours in a more suitable key.

923 Friends, who have, in literal fact, only a day to live—this is what

we shall tell them—in your present condition it is hard enough for you to know what is your own property; what is more, it is hard, as the inscription at Delphi says, to know what you are yourselves. So I, speaking as legislator, pronounce that neither your own persons nor the estate are your own; both belong to your whole line, past and future, and still more absolutely do both lineage and estate belong to the community. This is so surely so that I shall never, if I can help it, permit you, when shaken by age or infirmity, to be cajoled into evil testamentary dispositions by the insinuating arts of the flatterer. My law will be made with a general view to the best interests of society at large and your whole line, as I rightly hold the single person and his affairs of minor importance. Depart from us in peace and good will on the journey you are now to take, as all flesh must. What you leave behind you shall be our concern; we will take all the thought for it we may, and that with no partial care.

Such exhortations alike to living and dying shall form our preamble, Clinias. Our statute shall be to this effect. A person making written testamentary disposition of his effects, shall, if he have issue, first set down the name of such son as he judges proper to inherit. If he have another son whom he offers for adoption by a fellow citizen, he shall set his name down also. If there be still a son left, not already adopted as heir to any patrimony, who may expect in course of law to be sent to some overseas settlement, it shall be free to him to bequeath to such son such of his goods as he sees fit, other than his patrimonial estate and its complete plenishing. If there be more such sons than one, the father shall divide his possessions, other than his patrimony, among them in such proportions as he pleases. But if a son already possess a house, no portion of such goods shall be bequeathed to him, and the same shall hold in the case of a daughter; a daughter not contracted to a husband shall receive her share, but a daughter already so contracted shall receive none. If a son or daughter be found to have come into possession of an allotment of land subsequent to the date of the will, such party shall leave the bequest in the hands of the testator's heir. If the testator leave only female issue without male, he shall by will provide one daughter, selected at his pleasure, with a husband and himself with a son, and shall name such husband as his heir. If a man's son, naturally begotten or adopted, die in infancy before reaching the age of manhood, the testator shall further make provision for this contingency by naming a child to succeed such son with happier omens. If the party making his testament be absolutely childless, he may set aside one-tenth part of his *acquired* possessions for the purpose of legacies to any persons he pleases; all else shall be left to the adopted heir whom he shall make his son, in all integrity on the one part and gratitude on the other, with the law's approval. Where the children require a guardian, if the deceased have stated in his will how many guardians he desires for his children and whom,

- b and the parties named consent to act, the nomination of guardians in the will shall be final. If a man die wholly intestate, or without selecting such guardians, the lawful guardians shall be the nearest kinsmen on both sides, two from the father's side, two from the mother's, together with one personal friend of the deceased, the appointment to be made
- c for an orphan in such case by the curators. The whole department of wardships and orphans shall be under the supervision of fifteen of the curators, the senior members of the board, who shall regularly divide themselves into groups of three, in order of seniority, one such group acting for one year and another for the next, until the five yearly periods are discharged; no avoidable breach shall be permitted in this rotation.

- If a man die absolutely intestate but leaving children who need the care of a guardian, his children's distress shall share the benefit
- d of these same laws. But if he meet his end by some incalculable accident and leave daughters behind him, he must make allowances for the legislator's disposal of his daughters' hands if it takes two points out of three into account, nearness in blood and protection of the patrimony. The third point—and this is what would have engaged a father's attention—the selection of the person out of the whole citizen body most congenial in character and disposition as a son for himself and
  - e bridegroom for his daughter, the legislator will pretermitt as an impossible task. Here, then, is the best law we can devise for the case. If an intestate person leave daughters, a brother of the deceased on the father's side, or a brother on the mother's side having no patrimony of his own, shall take his daughter and inherit his patrimony. The same shall be the case if there be a brother's son but no brother, provided the parties are of suitable age. If there be none of these, the rule shall hold for a sister's son. Father's brother shall be fourth in succession, his son fifth, father's sister's son sixth. In all cases where female issue is left, the family succession shall proceed in this regular order of proximity in blood through brothers and sisters and their offspring, males
  - 925 having the precedence over females in the same generation. The suitability or unsuitability of the match in point of years shall be determined by inspection, and the judge shall view the males stripped and the females stripped to the navel. If there be a failure of kin within the family, as far as brother's grandsons, and likewise grandsons of grandfather's sons, the maiden shall be free, with her guardians' as-
  - b sent, to make her choice among the citizens, the person so chosen, if he consent, becoming heir to the deceased and bridegroom to his daughter. Further, life is full of accidents, and it may well happen at times that an heir is still harder to find within the state. So if a maiden can find no husband on the spot, but have her eye on some party previously dispatched to a colony, whom she is minded to make her father's heir, that party, if a kinsman, shall come to the inheritance as the law appoints; if outside the family, provided there be no kinsmen within the

state, consent of the daughter of the deceased and her guardians shall c  
empower him to make the match and return home to take up the suc-  
cession to the intestate person.

If a man decease intestate leaving no issue, male or female, in  
all other respects the law above stated shall apply to the case, but a  
female and male from the family shall mate, as we may express it,  
and be placed in the deserted homestead, the patrimony being legally  
assigned to them. The order of succession shall be: sister, brother's  
daughter, sister's daughter, father's sister, father's brother's daughter, d  
father's sister's daughter. These shall be settled on their kinsmen, in  
accord with the provisions of the foregoing statute, as consanguinity  
and religion demand. Of course we must not forget that such laws can  
prove burdensome; it is sometimes a hardship that they require a  
blood connection of the deceased to marry his kinswoman, but appear  
to overlook the numerous obstacles which will make any man reluc- e  
tant to comply with the command and ready to face any conse-  
quence rather than obey, cases like those of bodily or mental disorder  
or deficiency in a party whom the law requires us to take as wife or  
husband. Hence it might be supposed that the legislator is indifferent  
to those considerations, but that would be a misconception. So you  
must take my remarks as a preamble delivered in the interests alike of  
the legislator and the parties for whom he legislates; they are meant  
to bespeak the indulgence of such parties for the legislator, if his con-  
cern for the public good hardly leaves him equally free to control the  
fortunes of private individuals, and a like indulgence for the recipi- 926  
ents of his laws, if they sometimes, no less naturally, find themselves  
unable to execute orders laid on them in ignorance of the facts.

CLINIAS: Then, let me ask you, sir, what would be the fairest  
way to act in such a situation?

ATHENIAN: In such a case, Clinias, we must appoint arbitrators  
between the law and the persons it commands.

CLINIAS: Pray explain yourself.

ATHENIAN: Sometimes a nephew whose father is a wealthy  
man might make difficulties about marrying his uncle's daughter be- b  
cause he has high notions and aspires to a more splendid match.  
Sometimes, again, a man might be driven to disobey the law because  
what the legislator requires is disastrous, as when he would constrain  
you to connect yourself with a house in which there is insanity, or  
other grievous bodily or mental affliction, such as renders life posi-  
tively intolerable. So what I have to say on the subject shall be couched  
in the form of a law to this effect. If a party complain of being ag-  
grieved by the laws now enacted, the law of testamentary dispositions c  
or another, and in particular by the law of marriage, and emit a  
solemn declaration to the effect that the legislator, if now alive and  
present in person, would never have required the action—the taking  
or giving in marriage—of either party from whom it is now demanded,

and if a relative or guardian make affirmation to the contrary, the law shall take the view that the legislator has bequeathed the fifteen curators to our orphans of both sexes as arbitrators and parents; litigants on these issues shall have recourse to them for the determination of their disputes, and shall act on their verdict as final. If the powers thus conferred on the curators be deemed too extensive by any party, he shall bring the curators before the court of selected judges and take its decision on the issue. If he lose his case, the legislator shall visit him with censure and disgrace, penalties heavier in the judgment of intelligence than the most grievous fine.

Our orphan children will thus experience a kind of second birth.

e How they should all be reared and trained after their first birth has already been explained. What we have to do after this second birth, a birth without a parent, is to discover the plan by which their unfortunate bereavement will entail least distress on the sufferers. First, then, to make laws for their conduct, in place of their fleshly begetters we appoint the curators, parents at least as good as they; moreover we especially charge three of them every year to care for them as their own,

927 and we add a preamble on the upbringing of orphans apposite to these officers, as to all guardians. I believe, in fact, there was something really opportune in all we said before of a power of taking an interest in human life retained by the souls of the departed after death. The tales which convey this moral may be lengthy, but they are true, and we ought to give our credence to general tradition on the subject, when we consider how abundant and how very venerable that tradition is, but particularly to legislators who lend their sanction to such beliefs—unless, indeed, we account them men of no judgment at all. If all this be truly so, there should be fear, first and foremost, of the

b gods in heaven, who behold the orphan in his loneliness, and next of the parted spirits whose native instinct is to keep especial watch over their own offspring—to show good will to him who respects them and ill to him who neglects—fear, in the third place, of the souls of men still alive, but of advanced years and high distinction. Where the laws of a state are good and its fortunes blessed, children's children delight to lavish affection on such men, their sight and hearing in such matters is quick, their good will is assured to him who walks uprightly in

c them, and their wrath hot against the despoiler of the defenseless orphan; they count him a solemn and sacred trust. Guardians and magistrates, if men of discretion, howsoever slight, should stand in awe of all these powers and bear themselves warily in all that concerns the orphan's upbringing and education; they should do them all the good they may in every way, even as though the benefit were bestowed on themselves and their own sons. So he that will give ear to the words of our preamble and keep himself from all spoiling of the orphan shall learn nothing of the legislator's naked wrath against these

d crimes, but he that will not hear, and wrongs fatherless or motherless,

shall pay twofold the full compensation demanded of him who misconducts himself toward those whose parents are both in life.

As touching a general legislation for guardians of orphans, or magistrates who have charge of the guardians, had they no model already of an upbringing for the sons of the gently born in their upbringing of their own children and management of their own estates, or had they not moreover a sufficient law prescribed them for such matters, 'twould be no more than reason to propound a law of wardships with a special character of its own, and to make a distinction of the orphan's life from others by various special rules. As the case is, in our society the orphan's status is not very different in all these respects from that of the child under its father's care, though the two are commonly on such different levels in public estimation and in respect of the care bestowed. 'Tis, indeed, because of this very difference that our law has been so earnest with its exhortations and threats in its regulations concerning the orphan. We may add this further and most seasonable threat. The guardian of male or female infant, and the curator appointed to exercise surveillance of such guardian, shall show no less concern for the bereaved orphan than for his own children, and shall pay the same zealous attention to the estate of the ward under his care as to his own—or indeed more. This shall be the law, and the only law, under which guardianship of an orphan shall be exercised. In the case of any contravention of this law, a guardian shall be fined by the magistrate; a defaulting magistrate shall be cited by the guardian before the court of the select judges, and fined twice the amount of his defalcations as assessed by the court. If the family, or any fellow citizen, charge a guardian with negligence or dishonesty, the case shall be brought before the same court; any defalcation proved shall be repaid fourfold, half the sum to go to the orphan child, and half to the successful prosecutor in the case. If an orphan who has attained his majority believe his guardian's administration to have been faulty, it shall be open to him to institute proceedings in respect of the guardianship at any date within five years from the expiry of said guardianship. If a guardian be convicted, the court shall determine the penalty or fine; if a magistrate, and the injury to the orphan be found due to negligence, the court shall determine the sum payable to the ward. But if the verdict be one of malversation, the offender shall, in addition to payment of the fine, be removed from the office of curator, and the authorities shall provide country and state with a new curator in his stead. 928

Graver differences are found to arise between fathers and sons, sons and fathers, than ought to be possible. As a consequence, fathers are disposed to take the view that the legislator should empower them, if they see fit, to make public and legal notification through the crier that they will no longer hold a son as their son, and sons, on their part, to expect legal authorization to take proceedings in lunacy against a

father discredited by years or disease. The cause of such variance is commonly to be found in utter unqualified badness of character; where the badness is on one side only, as where the son is an ill man but his father not so, or vice versa, such dissensions are not pushed to the point where they issue in disaster. Now in any society but ours a disinherited son would not necessarily lose his citizenship, but in the state for which these our laws are intended, a man whose father has cast him off has no option but to expatriate himself to some distant

929 land, as we permit no addition whatsoever to our number of five thousand and forty households. Hence to be legally repudiated, a man must be disowned not merely by his father, but by the whole kindred. Thus our law will in such cases provide some such process as this. If, with just cause or without it, unhappy passion assail a man with the desire to cast out of his kin the son of his own begetting and breeding, he shall have no license to do the act incontinently, without due form.

b He shall first summon his own kin, as far as his cousins, and his son's kin by the mother's side in like manner, and lay his charges before them, in proof that expulsion from the kindred is no more than the accused's desert at the hands of all, and shall grant the son equal facilities of pleading that he deserves no such thing. If the father prevail and can carry the suffrage of more than one half of the kinsmen—those excepted who shall have no vote, the father, the mother, the

c defendant himself, and such other persons, male or female, as have not yet reached maturity—the father shall have leave to renounce his son, on these terms and conditions stated, and upon no others. If a citizen be minded to adopt one thus repudiated into his own house, there shall be no bar in law to the adoption—life commonly works frequent changes in a young man's temper—but if no one, within ten

d years, show desire to adopt the disowned son, the officers charged with the care of supernumerary children whom we destine for our settlement abroad shall take his case also under their charge, that he may duly receive his place there. If disease, age, sullen temper, or all together derange a man's mind with more than common violence, though the fact go undiscovered by all but those who share his daily life, so that he waste the family estate as one that is absolute lord of it, while his son knows not where to turn, and scruples to bring his

e action of lunacy, in such case, the law shall be that he must first have recourse to the eldest of the curators and tell them his father's case. They shall make diligent inquiry, and then counsel him whether the action shall be brought or no; if their counsel be to bring it, they shall, when the case comes on, serve the complainant both as witnesses and as advocates. The father who loses such action shall thereafter have no power to make any disposition of his goods in the smallest particular, but shall be treated as a child for the rest of his life.

If man and wife be utterly estranged by their unhappy temper,

the matter should in every case be referred to ten men—curators intermediate between the extremes in point of age—and ten women, of those who have charge of wedlock. If they are able to effect an accommodation, the arrangements thus made shall hold good, but if the storm rages too high within, they shall seek the best mate they can find for either party. The temper in these cases is like to be none too gentle, whence we try to match them with partners of more sedate and gentle mood. When the discordant parties have no children, or too few, an eye shall be had also in the new alliance to procreation; where there are already children in sufficient number, the end of the separation and new conjunction should be companionship in age and mutual care of one another. If a woman die leaving children male and female, our law shall counsel, but shall not compel, her husband to bring up the children he has and give them no stepmother; if there be no children, the husband shall be bound to marry again, until he have begotten children in number sufficient for the house and for the state. If the husband die leaving children in sufficient number, their mother shall remain in the household to bring them up. But if she be deemed unduly youthful to live without a man and keep her health, her kinsmen shall communicate with the women who have charge of wedlock and act as shall seem good to themselves and them. If there be a lack of children, that point also shall be considered; the lowest number which shall constitute a sufficiency in law shall be one boy and one girl.

When the parentage of issue is admitted and it is to be determined which parent the offspring shall follow, if a slave woman have had to do with slave, free man, or freedman, the offspring shall, in every case, belong to her owner; if a free woman lie with a slave, the offspring shall be his owner's; if master have a child by his slave woman, or mistress by her slave, and the fact be notorious, the woman's child shall be sent, along with its father, by the women functionaries, the man's, with its mother, by the curators, to another land.

Neglect of parents is that to which neither god nor right-thinking man will ever counsel any. A man should have the wit to see how pat the preamble now to be delivered on divine worship is like to fit this theme of respect and disrespect of parents. All the world over the primitive rules of worship are twofold. Some of the gods of our worship are manifest to sight; there are others in whose likeness we set up images, believing that when we adore the lifeless image, we win the bountiful favor and grace of the living god for whom it stands. If, then, a man have a father or mother, or a parent of either, safe kept withindoors in the last frailty of age, he should remember that while there is such a figure to hallow his hearth at home, no image can be so potent for good, if only the owner give it the rightful worship he should.

b CLINIAS : Now what may you mean by this rightful worship?

ATHENIAN : Why, I will tell you. Indeed, my friends, 'tis a theme well deserving our attention.

CLINIAS : Say on, then.

ATHENIAN : Oedipus, so we commonly say, called down a curse on his sons when they showed him disrespect, and it is a familiar tale with us all, as you know, how fully heaven answered his prayer. And we have the stories of the cursing of Phoenix by his angry father Amyntor, and of Hippolytus by Theseus, with many another to the  
c same effect—plain proof that heaven will listen to a parent's prayers against his children. In fact, the curse of the parent on the offspring is more effectual than any other, and 'tis only right it should be so. If, then, 'tis the order of things that God is so exceeding quick to hear the prayer of father or mother when their children show them dishonor, let none conceit himself that when the parent receives his honors, rejoices and delights in them, and is moved to fervent prayer for blessings on the children—must we not think, I say, that heaven  
d hears that prayer no less than the other, and dispenses the blessing? Were it not so, its blessings would not be fairly dispensed, a thought most unworthy of it.

CLINIAS : Most unworthy indeed.

ATHENIAN : And so, as I have just said, we must believe that no image we can procure is more precious in heaven's eye than a father or forefather in the weakness of his age, or a mother in like case; when a man does them worship and honor, there is joy in heaven, or their prayers would not be heard. An ancestor's person is, in truth, an  
e image of God more marvelous than any lifeless statue. These living images will always second our prayers for ourselves when we pay them worship, and pray in the opposite sense since when we show them dishonor, but the others can do neither the one thing nor the other. And so the man who bears himself as he ought to father, father's father, and the rest of his ancestors will find no other image so effectual to assure the favor of heaven as this which he has got.

CLINIAS : Most admirably said.

ATHENIAN : And thus all right-thinking men treat a parent's prayer with fear and reverence; they know how time and again such petitions have been effectual. This being nature's appointment, a good  
932 man finds his aged progenitors treasure-trove to the last breath of their lives, and when they depart, the loss to their juniors is most heavy; to evil men they are cause for real and deep alarm. Wherefore I would have all men listen to our present pleadings and show their parents all lawful honor. If there should be any whom 'fame attaints' of deafness to a prelude to such strains, 'twould be a fitting law against such men to decree as follows. If any person in our state be less mindful of his parents than he ought, not showing himself more careful  
b to consider and comply with all their wishes, more than those of his

sons and other posterity whatsoever and his own also, he that lies under such neglect may report it, in person or by deputy, to the three senior curators and three of the women who have charge of wedlock. They shall deal with the complaint, and chastise the criminal with stripes and imprisonment, if still young, that is, in the case of a man, not over thirty years; the penalty for a woman that offends shall be the same for a further ten years. If persons beyond these years still persistently neglect their parents, or, it may be treat them ill, they shall cite them before a court of one hundred and one citizens, the most ancient we have. In case of conviction the court shall determine the fine or other penalty, and shall not hold themselves debarred from the infliction of the utmost a man can be made to suffer or pay. If a person so ill-treated be unable to complain, any who shall become aware of the facts shall report them to the authorities, or else be deemed a craven, and lie open to action at any man's suit for the mischief. If the informer be a slave, he shall receive his freedom. If his owner be the party inflicting or suffering the injury, the magistrate shall pronounce him free; if another citizen, his price shall be paid to his owner from the public purse. The authorities shall take care that no wrong be done him in revenge for his information.

To come to injury inflicted by poisons, we have dealt at large with the cases where death results, but not, as yet, with lesser injuries arising from deliberate and intentional administration of articles of meat or drink, or unguents. What gives us pause here is that mankind practice poisoning in two different ways. The form we have just expressly named is that in which the body is hurt by the action of some other body in normal ways. There is another form which works by art, magic, incantations, and spells, as they are called, and breeds in the minds of the projectors the belief that they possess such powers of doing harm, in those of the victims the conviction that the authors of their suffering can verily bewitch them. Now as to all such matters the true facts are hard to learn, nor, if one could learn them, would it be an easy task to convince another. And it would be labor lost to try to bring conviction to minds beset with such suspicions of each other, to tell them, if they should perchance see a manikin of wax set up in the doorway, or at the crossroads, or at the grave of a parent, to think nothing of such things, as nothing is known of them for certain. We shall therefore divide the law of poisons into two chapters, according to the mode in which the poisoner makes his attempt. But first we shall publish our request, desire, or counsel that no such attempt be made, that there be among us no working on the terrors of mankind—the most part of whom are as timorous as babes—and no constraint upon legislator or judge to find a remedy for these terrors. The would-be poisoner, we shall say, *imprimis* knows nothing of what he does, nothing, unless he be expert in medicine, of treatment of the body, nothing, unless he be prophet or diviner, of sorcery. The law of poisons, then,

- d shall run to this effect. Any man administering a poison to another, or to persons employed by him, without fatal effect, or with effects fatal or otherwise to his cattle or bees, and convicted of the offense of poisoning shall, if a physician, suffer death, and if a layman, such penalty or fine as the court shall impose. And any found to have brought himself under suspicion of doing a mischief by the practice of  
 e spells, charms, incantations, or other such sorceries whatsoever, shall, if prophet or diviner, have sentence of death; if the conviction be for sorcery without any help of prophetic art, he shall be dealt with as in the former case—the court, as before, shall determine his sentence or fine at its discretion.

- In all cases of injury by theft or robbery with violence, the culprit shall pay compensation to the party injured, greater or less, according to the gravity of the mischief done, but in any case sufficient to cover completely the whole loss occasioned by his act; further, each  
 934 such culprit shall pay a penalty imposed upon the offense by way of correction. The correction shall be lighter when the offender has been led astray by the folly of another to whose overpersuasion he has yielded by reason of youth, or some other such cause, heavier when the crime is due to folly of his own, failure to resist pleasure or pain, or the pressure of desperate lust, envy, or rage. The purpose of the penalty is not to cancel the crime—what is once done can never be  
 b made undone—but to bring the criminal and all who witness his punishment in the future to complete renunciation of such criminality, or at least to recovery in great part from the dreadful state. For all these reasons, and since it has all these ends in view, the law must take careful aim at its mark; it must be exact in determining the magnitude of the correction imposed on the particular offense, and, above all, the amount of compensation to be paid. The judge must have the same task before him, and lend his services to the legislator, when the law leaves it to his discretion to fix a defendant's fine or sentence;  
 c the legislator, in this case, is like a draftsman who must design the outlines of cases which answer to the code. This is, in fact, Megillus and Clinias, what you and I are now to do to the fullest extent of our ability; we have to specify the penalties to be imposed on thefts and robberies of every kind, so far as the gods and their sons permit us to legislate on the subject.

- No lunatic shall be allowed to be at large in the community; the relatives of such persons shall keep them in safe custody at home by such methods as they can contrive, on penalty of fine. The fine for failure to control the lunatic, whether slave or free man, shall be for  
 a offenders of the highest property class one mina, for the second four fifths of that sum, for the third three fifths, for the fourth two fifths. Now there are many lunatics and their lunacy takes many different forms. In the case just mentioned it springs from disease, but there is another sort of lunatics who owe their madness to an unhappy na-

tive tendency to angry passion further strengthened by ill training, a kind of men whom any trifling dissension will provoke to clamorous and scurrilous reviling of each other, conduct always and totally out of place in a well-ordered society. We shall therefore have one single law of defamatory words to deal with all such men, and that law shall be this. No person shall use defamatory words of any other. A party to a dispute of any kind shall listen to his adversary's contention, and put his own before the adversary and the company present without scurrility of any sort. When disputants begin to invoke imprecations on one another and bandy foul names, like wrangling vixens, the first result is that such words, in themselves trifles light as air, yield a heavy harvest of deeds of spite and hatred. Passion is an ill-favored thing, and the speaker who does his wrath the favor to feast it on the poison it craves turns all the humanity education has fashioned within him into brutishness once more; persistence in his morose rancor makes him a wild beast, and that sorry return is all the return passion makes him for his favors. And besides, 'tis the common way with all men in such encounters to be ever turning to the utterance of scoffs at the adversary, a practice to which no man ever yet formed himself, save at the cost of losing all gravity of character or the better part of his dignity. For all these reasons no single scoffing word shall be uttered by any man in any temple or at any public sacrifice, nor yet at the public sports, nor in market place, court of justice, or any place of public resort. The offense shall be in every case punished by the official in charge, on pain of disqualification from all claims to distinction, as one that has no regard for the law and neglects to execute the legislator's injunctions. If a man indulge in such scurrilities elsewhere, whether he begin the reviling or retort it, any bystander, being an older man, shall uphold the law and drive out with blows him who humors his bad companion, temper, or else shall be subjected to the appointed fine. Now mark my point. When a man is entangled in a scolding match, he can say nothing without seeking to raise a laugh, and it is the resort to this trick at the prompting of angry passion which I denounce. But what follows? Are we lending our countenance to the comedians' efforts to raise a laugh against mankind, provided the object of their comedies is to attain their result, to turn the laugh against their fellow citizens, without such passion? Shall we draw the line between sport and earnest, permitting men to jest upon one another in sport and without anger, but absolutely forbidding all such jesting, as we have already done, where it is in downright earnest and charged with passion? That proviso must certainly not be withdrawn, but the law will proceed to specify the persons to whom permission shall or shall not be granted. No composer of comedy, iambic or lyric verse shall be permitted to hold any citizen up to laughter, by word or gesture, with passion or otherwise; in case of disobedience the presidents of the festival shall give orders for the offender's expulsion from

the state's territory within the course of the day, on pain of a fine of three minas to be paid to the deity in whose honor the festival is held.

- 936 The persons to whom permission has already been granted by an earlier arrangement to compose personal satire shall be free to satirize each other dispassionately and in jest, but not in earnest or with angry feeling. The actual drawing of the distinction shall be left to the minister in charge of the system of juvenile education. If he approve a piece, its composer shall have license to produce it in public; if he disapprove, the composer shall neither appear in it himself nor train any  
b other person, slave or free, to perform it, on pain of being declared a bad citizen and a lawbreaker.

The true object of pity is not the man who is hungry or in some similar needy case, but the man who has sobriety of soul or some other virtue, or share in such virtue, and misfortunes to boot. Whence in a state where constitution and citizens alike are even middling good, it will be strange to find any such man, slave or free, so wholly neglected that he comes to utter beggary. Such men will be in no danger if the  
c legislator enact the following statute. There shall be no begging in the state. If anyone attempt it and seek to scrape up a living by his incessant entreaties, he shall be expelled from the market place by the commissioners of the market and from the city by the urban commission, and escorted over the borders by the rural police, that our land may be entirely cleaned of such creatures.

- If damage be done to a man's property of any kind by another's  
d slave, male or female, such person not being himself contributory to the charge by awkwardness or other ill management, the owner of the party causing the damage shall either make compensation in full, or surrender the person of the culprit. If such owner allege that the charge is made by collusion between the parties causing the mischief and the party sustaining it, with intent to defraud him of his slave, he shall take proceedings against the person alleging himself to have  
e sustained damage. If he win the suit, he shall receive twice such price as the court may set upon the slave; if he lose it, he shall pay compensation for the damage and further surrender the slave. Likewise, if harm be done to a neighbor's property by draft animal, horse, dog, or other animal, the owner shall pay compensation for the damage.

If a man refuse to give evidence, he shall be served with a citation by the party desiring his testimony, on receipt whereof, he shall present himself at the trial of the case. If he have knowledge of the facts and is ready to depose to them, he shall then make his deposition; if he deny all knowledge, he shall profess his denial on oath by three gods, Zeus, Apollo, and Themis, and be dismissed from the case.

- 937 Any person cited in evidence and not answering to the citation shall be legally liable to action for damage. If a judge in the case be called up to give evidence, he shall do so and shall have no vote in the determination of such case. A free woman shall be qualified to give evidence

and support a case, if she have attained the age of forty; if she have no husband, she shall further be qualified to initiate a process at law, but if she have a living husband, to give evidence only. A slave of either sex, or a child, shall be qualified to give evidence and support a case only in proceedings for homicide, and provided sufficient security is given that in case a demurrer is lodged against the deposition as false, the deponent will await his trial. A plaintiff or defendant making an allegation of perjury shall put in his demurrer to the whole or part of the testimony before the decision in the case is reached; the pleas of demurrer shall receive the seals of both parties to the suit and be in the custody of the officials for production at the hearing of the charge of perjury. A person twice convicted of bearing false witness shall be under no legal obligation to give evidence in the future; a person convicted thrice shall be in future disqualified to bear witness. Any who shall have the front to do so after three convictions shall be summarily arrested upon information as to fact by the magistrates, who shall deliver him to a court, for sentence of death if convicted. Whenever depositions have been thus judicially condemned by a decision that the victory of the successful litigant was due to false evidence, if the condemnation affect half or more of such depositions, the suit so decided against a litigant shall be annulled, and the issue shall be raised and determined whether or not the suit was decided by these depositions; the result of the inquiry, either way, shall finally dispose of the original suit.

Life abounds in good things, but most of those good things are infested by polluting and defiling parasites. Justice, for example, is undeniably a boon to mankind; it has humanized the whole of life. And if justice is such a blessing, how can advocacy be other than a blessing too? Well, both blessings are brought into ill repute by a vice which cloaks itself under the specious name of an art. It begins by professing that there is a device for managing one's legal business—in fact that it is itself a device for managing such business of one's own and assisting another to manage his—and that this device will ensure victory equally whether the conduct at issue in the case, whatever it is, has been rightful or not. And it then adds that this art itself and the eloquence it teaches are to be had as a gift by anyone who will make a gift in money in return. Now this device—be it which it may, art or mere artless empirical knack—must not, if we can help it, strike root in our society. The legislator will call for obedient silence in the presence of right and departure to some other territory; to him who complies the law will have nothing more to say, but to the disobedient its language will be this. Any who shall fall under suspicion of attempting to pervert the influence of justice upon the mind of a judge, of wrongfully multiplying suits at law, or wrongfully aiding others to such suits, shall be liable to prosecution by all who choose on the charge of perversion of justice or abetment of such perversion, as the case may

be. The charge shall be tried before the court of select judges, and if it result in conviction, the court shall determine whether the defendant, in its judgment, acted from ambition, or from greed of lucre. If from the former, the court shall fix a space of time during which the guilty party shall have no right to enter a suit against any man, nor assist any man in a suit. If the offense be found due to greed of gain, the culprit shall, if an alien, be expelled from the country on pain of death in the case of return, and, if a citizen, suffer death for his insatiate love of lucre. Also a second conviction of commission of the same offense from the motive of ambition shall lead to sentence of death.

## BOOK XII

941 ATHENIAN: If an ambassador or envoy to a foreign state behave disloyally in his office, whether by falsification of the dispatch he is commissioned to deliver or by proved distortion of messages entrusted to him by such state, friendly or hostile, as ambassador or envoy, all such persons shall lie open to impeachment of the crime of sacrilege against the function and ordinances of Hermes and Zeus, and it shall be determined what sentence or fine shall follow conviction.

Larceny is a sordid thing and open robbery a flagitious. No son of Zeus has ever had dealings in either; neither fraud nor force is to their liking. So let none of us, if he offends in this sort, suffer himself to be gulled by the fictions of the poets and fabulists; let him never fancy his pilfering or robbing no deed of shame, but an act such as is done by the very gods themselves. That is a tale with neither truth nor semblance of truth about it, and he that transgresses so is no god, nor the son of any god at all. In these things 'tis the legislator's business to know better than all the poets together. So, if a man will obey our counsel, 'tis well with him—and may it ever be well! But if he will not, why, then he shall find a law up in arms against him, to this effect. For all theft of public property, great or small, there shall be one and the same judgment. For he that steals a little thing does his thieving with weaker hand but not with less lust, and he that takes up a greater, when he had not laid it down, is guilty of the whole law. This is why the law deems it fit that one offender should be visited with a lighter doom than the other—not that what he stole was a lesser thing, but because one may yet be recovered perchance, and the other is beyond cure. Whence, if a conviction for theft of the public property be gained in the courts against an alien or slave, seeing he may yet, in all likelihood, be recovered, the court shall decide what sentence he must serve, or what fine he shall pay. A citizen, one trained as our citizens will be trained, found guilty of plundering or deforcing his native country, whether taken red-handed or no, shall suffer death as one beyond curing.

942 The organization of our forces is a thing calling in its nature for much advice and the framing of many rules, but the principal is this—

that no man, and no woman, be ever suffered to live without an officer set over them, and no soul of man to learn the trick of doing one single thing of its own sole motion, in play or in earnest, but, in peace as in war, ever to live with the commander in sight, to follow his leading, and take its motions from him to the least detail—to halt or advance, to drill, to bathe, to dine, to keep wakeful hours of nights as sentry or dispatch carrier, all at his bidding, in the stricken field itself neither to pursue nor to retire without the captain's signal, in a word, to teach one's soul the habit of never so much as thinking to do one single act apart from one's fellows, of making life, to the very uttermost, an unbroken consort, society, and community of all with all. A wiser and better rule than this man neither has discovered, nor ever will, nor a truer art of military salvation and victory. 'Tis this lesson of commanding our fellows and being commanded by them we should rehearse in the times of peace, from our very cradles. *Anarchy*—the absence of the commander—is what we should expel root and branch from the lives of all mankind, aye, and all beastkind that is under man's dominion. In especial, all the choric dances our people are to learn must look to gallantry in the field; the same must be the end of all their training in easy and nimble movement, all their endurance of hunger and thirst, cold and heat, and lying hard. Above all, they must, to the same end, learn not to corrupt the native strength of the head and feet by swathing them in artificial coverings, and so tampering with the growth and function of the head cover and footwear of nature's providing. For head and feet are the body's extremities, and due care of them affects the whole body most potently for good, neglect for ill; the foot is the whole body's servant of servants, the head the master member made by nature to contain all its principal organs of sense. 943

So much, then, for the praise of the warrior's life we would have a young man listen to in fancy—now for the relative laws. A man put on the roll or assigned to any arm of the forces shall perform his service. If a man absent himself from cowardice without a discharge from his commanders, he shall, on the return of the forces from the field, be impeached before the officers of the army for evasion of military duty, and the verdict shall be given by some one branch of the forces—in infantry, cavalry, or other arm—in separate session. Thus an infantryman shall be brought before the infantry, a cavalryman before the cavalry, a member of some other force similarly before his comrades. A convicted person shall, *imprimis*, be disqualified for life for all competitions for distinction, and prohibited from laying an impeachment of the same kind against another, or speaking as accuser in such cases; the court shall, moreover, determine what further sentence or fine shall be inflicted. Next, when the charges of evasion of service have all been heard, the officers shall hold a second review of all arms, and the claims of all candidates for awards of distinction shall be settled before a body of their own mates; all evidence and commendatory testimony

nials proffered by candidates shall relate exclusively to the campaign just terminated, and to no previous service. The prize in each branch of the service shall be a wreath of olive; the winner shall dedicate this wreath in such temple of a god of war as he may prefer, as evidence for a future award of first, second, and third-rank distinctions for the conduct of a whole life. A man going on service but returning prematurely before the commanders have withdrawn the forces shall be liable to impeachment for desertion before the same court in which cases of evasion are heard, and the penalties for conviction shall likewise be as in that case.

A person bringing a charge against another must, of course, be most scrupulously careful neither intentionally nor unintentionally to bring him to unmerited punishment. Justice is, indeed, as she has been called, the virgin daughter of conscience, and conscience and justice both are heart haters of the false charge. I say a man must keep himself from this and other offenses against justice, and in especial in the matter of loss of arms in war, a man must be tender of bringing unmerited judgment on the innocent, by mistaking an enforced loss for a shameful, and so making it a reproach. 'Tis truly no easy matter to draw the line of distinction between the two cases, and yet the law should do what it can to distinguish them. And so we will help ourselves out by recalling a legend. If Patroclus had come to himself in the tent when he had been carried there without his arms—and the thing, we know, has happened to thousands—while the gallant armor he had been wearing—by the poet's tale it came to Pelcus with Thetis as a nuptial gift from the gods—was in Hector's hands, the baser sort of that day would have had their chance to taunt the brave son of Menoetius with casting away his arms. And then there are all the cases of those who have lost their arms by falls from heights, at sea, or when suddenly swept off their feet, under stress of weather, by a swirl of waters—or countless other excuses may be conjured with, to put a fair face on a suspicious misadventure. So we must do our best to discriminate the graver and uglier mischance from the lesser. There is a distinction, then, to be made when such epithets are used in reproach. It would not be fair in all cases to call the man one who has flung his shield away, though he may be said to have *lost* his arms. A man who is stripped of his shield by a considerable exertion of force cannot be said to have flung it away with the same truth as one who drops it of his own act. There is all the difference in the world between the cases. So we shall give our law this wording. If a man surrounded by the enemy, and having arms in his hands, do not turn to try and defend himself but intentionally throw down his weapons, or cast them away, and thus choose to purchase a life of shame by his cowardice rather than fair and glorious death by his valor, there shall be judgment for the loss of arms thus flung away; in the other case above mentioned, the judge shall hold careful inquiry. Correction must always be meted

to the bad—to make a better man of him—not to the unfortunate; on him it is wasted.

Now what shall we call a fitting punishment for the coward who throws away weapons so formidable for his defense? A human judge cannot, indeed, invert the transformation which is said to have been wrought on Caeneus of Thessaly; he, we are told, had been a woman, but a god changed him into a man. Were the reverse process, transformation from man to woman, possible, that, in a way, would be of all penalties the properest for the man who has flung his shield away. To come as near as we may to this in our treatment of the craven's pitiful clinging to his life, and that he may have no risks to take for the future, but prolong his life of infamy to the last minute possible, our law in these cases shall run thus. If a man be judicially convicted of the shameful casting away of his weapons of war, he shall not again be employed as a soldier nor assigned to any military post whatever by any general or other military officer. In case of disregard of this provision, the officer who so employs the coward shall be mulcted by the auditor of his official accounts to the amount of one thousand drachmas, if he belong to the wealthiest class, five minas if to the second, three minas if to the third, or one, if to the fourth. And the convicted coward shall not only be discharged, as befits his unmanly spirit, from all the dangerous services that become a true man, but shall further pay a price, of a thousand drachmas if he come from the wealthiest class, five minas if from the second, three if from the third, or, if from the fourth class one, as in the previous clause. 945

Now as to auditors, what plan will be the proper one for us, whose magistrates have been appointed, some for a year and by the chance of the lot, some for years together and by selection from a leet? Who will be competent to put the crooked in such officers straight, if one of them should perchance act awry under the crushing weight of his office and his own inequality to its dignity? 'Twill indeed be no light task to find an officer of such supereminent merit to set over our officers themselves, and yet the attempt to discover auditors of such more-than-human quality must be made. For the matter, in fact, stands thus. A polity is like a ship or a living organism. The dissolution of the fabric hangs on a multitude of devices of one character under all their various forms, to which we give different names in the different cases, such as stays, girders, tendons of the sinews; one such, and not the least momentous, in the case of a polity, critical for its preservation or utter dissolution, is that now under our consideration. For if the censors who are to approve our magistrates are better men than themselves, and do their work with flawless and irreproachable justice, then there will be prosperity and true happiness for the whole of nation and society, but if aught is amiss with the auditing of our magistrates, then the bonds of right which hold all branches of our social fabric together in one will be loosened; every office will be dismem- d

- e bered from every other, and all will no longer conspire in one effect; the state will no longer be one but many, will be filled with conflicting factions and, ere long, destroyed. So we must see to it that these auditors are, one and all, eminent in every sort of excellence. And so we shall contrive their creation in some such fashion as this. The whole body of citizens shall annually, after the day of the summer solstice, assemble in a precinct jointly dedicate to the sun and to Apollo for the
- 946 purpose of presenting before the god three men, each citizen presenting the man of not less than fifty years of age whom he judges in all respects, himself excluded, the best. From those thus first elected they shall then select those for whom most votes have been cast, to the number of one half—if the total number be even; if it be odd, they shall omit the one name for which fewest votes have been given—so that half the names, as determined by the number of votes cast, are retained. If several names receive an equal number of votes, and the half thus becomes too large, they shall reduce it by excluding the
- b youngest names and retaining the others. The voting shall then be repeated until only three names are left, with an unequal number of votes. If the votes cast for all three, or for two of them, be equal, they shall commit the issue to providence and good fortune, and decide it by lot. They shall then crown the first, second, and third competitors with olive; when this distinction has been awarded, public proclamation shall be made in this form. The state of the Magnesians, now providentially restored to its old prosperity, hereby presents its three
- c most worthy citizens to the sun, and dedicates them, in accord with its ancient usage, as a choice offering of first fruits, to Apollo and the sun in common for so long as they shall give themselves to their work as judges.

- Twelve such auditors shall be created in the first year, each to hold office until attaining the age of five-and-seventy; thereafter three more shall be created annually. They shall divide the magistracies into twelve groups and scrutinize all by the application of every test to which a gentleman can be subjected. For their term of office they shall
- d have their residence in the same precinct of Apollo and the sun in which their election was held. They shall individually, or in some cases conjointly, hold a scrutiny into the conduct of all outgoing officers of state, and declare by publication in writing in the market square what sentence or fine each official should incur in the judgment of the board of auditors. Any official claiming that their judgment upon him is unfair shall summon the auditors before the court of select judges, and if acquitted of their censures, may, if he so pleases, bring his action against the auditors themselves; if he lose his case,
- e and the sentence previously pronounced against him by the auditors be that of death, it shall simply stand, as no more can be done to him, but any other sentence which can be doubled in the infliction shall be exacted twofold.

You must next be told what audit will be appointed for the auditors themselves, and how it will be conducted. While they are still alive, as men whom the whole community has pronounced worthy of its supreme distinction, they shall have the foremost seat at all festivals, and further, the heads of all delegations dispatched to inter-Hellenic sacrifices, religious gatherings, and other such international solemnities, shall always be taken from among them. They shall be the only citizens permitted to decorate themselves with the laurel wreath. They shall all hold priesthoods of Apollo and the sun, while the chief priesthood shall every year be enjoyed by the member of the college placed first at the election of that year, and the year shall be officially registered under his name, as a means of dating, so long as our society survives. When they de cease, the lying-in-state, the procession to the grave, and the grave itself shall be more distinguished than in the case of other citizens. All the draperies shall be white, and there shall be neither dirges nor lamentations, but the bier shall be surrounded by a choir of fifteen maidens and another of fifteen lads; these choirs shall alternately chant a eulogy on the priests in the form of a hymn, and this lyrical panegyric shall be kept up throughout the day. At dawn the next day the bier shall be conducted to the tomb, the actual escort being one hundred of the young men from the gymnasiums, to be selected at their pleasure by the deceased's kinsmen. At the head of the procession shall march the young bachelors, all appareled in their accouterments—the horsemen having their chargers, the infantry their arms, and the rest in the like array. The bier shall be immediately preceded by the boys, who will sing their national chant, and followed by the maidens, and such married women as are past the time of procreation. In the rear shall come priests and priestesses; even though they are debarred from accompanying other funerals, they may follow this, as one that imparts no defilement, if the Pythian prophetess will add her sanction to our proposal. The tomb shall be made in the form of an oblong underground vault of tufa, the most indestructible procurable, and provided with couches of stone set side by side. When the blessed dead has been laid to rest there, they shall cover the place with earth and plant a grove of trees round it, but leaving one end free, that the burial place may admit of extension at this end, where there will never be earth over the interred. And they shall hold an annual contest in music, athletic exercises, and horse racing in their honor. These, then, shall be the guerdons to be bestowed on those who have stood their audit and come out clear. But if any of them presume on his election and prove himself but too human after all by degeneration after his appointment, the law shall ordain that he may be impeached by any who will, and the court before which the issue shall be tried shall be formed as follows. It shall be constituted of curators of law, surviving members of the board of auditors itself, the panel of select judges. The verbal form of the prosecutor's impeachment shall be: Such a one is

- unworthy of his distinctions and the office he holds. If the impeached be convicted, he shall forfeit his office, as well as the public burial and other honors granted to him, but if the prosecutor cannot obtain a fifth  
 b part of the votes, he shall pay a fine, if of the wealthiest class, of twelve minas, if of the second, of eight, if of the third, of six, if of the fourth, of two.

- We may well admire one thing in Rhadamanthus' manner of deciding issues at law, as the tale describes it—his perception that the men of his day were so confident of the manifest existence of gods—as well they might be, according to the story, since most of them at that time, and Rhadamanthus among them, had gods for their parents. Apparently he held that a judge's work should not be entrusted to any mere man, but only to gods, and this is why he could decide the cases  
 c that came before him so simply and rapidly. He put the litigants in a case to their oath about their assertions, and so had his business speedily and surely dispatched. In these days of ours, when, as we have said, some men have no belief whatever in gods, others hold that they give themselves no concern about us, and the creed of the worst, who are the majority, is that if they pay the gods a trifle in the way of sacrifice and flattery, they will lend their help in vast frauds and deliver the sinner from all sorts of heavy penalties—in this present-day world, of course, the juristic methods of Rhadamanthus are no longer in place.  
 d Men's beliefs about gods have changed, and so the law must be changed too. A thoughtful legislator should abolish the oath taken by either litigant in the institution of a private action. The party instituting proceedings should state his charges in writing, but take no oath to their truth; similarly the defendant should deliver his denial of the charge to the magistrate in writing, without swearing to it. It is surely an awful thing, in a city where lawsuits are common, to know per-  
 e fectly well that half or nearly half of the inhabitants are forsworn, and yet have no uneasiness about associating with each other at common meals and on other occasions of public and private intercourse.

- Our law, then, will require an oath to be taken by a judge before delivering his sentence; it will command the citizen who gives his vote for the appointment of a public official to do so in all cases either upon  
 949 oath, or by using a ballot fetched from a consecrated spot. Similarly, it will require an oath from judges of choirs or other musical performers, and presidents and umpires of gymnastic and equestrian sports, and persons in any similar position, where a false oath brings nothing men commonly regard as profit to the swearer. But wherever there is great and manifest profit, so esteemed, in denying the truth and standing to the denial on oath, the decision between the various contending  
 b parties must be reached by legal process requiring no oaths. And more generally, the presiding authorities of the court shall permit the litigant neither to court credence by swearing to his assertions, nor to support them by imprecations upon himself and his house, nor to in-

dulge in degrading appeals for mercy or unmanly pathos; they shall see to it that he confines himself entirely to the statement of the rights he claims, in decent and reverent language, and gives a like decent hearing to his opponent. In case of breach of this rule, the presiding officers shall regard him as out of order, and recall him to relevance to the matter in hand. In a case between aliens, however, the parties shall be legally permitted to tender an oath to the opponent, or accept c such a tender from him, at their pleasure. Remember that they will not, as a rule, live to old age among us, or make themselves a nest where others of their own type will be bred up to be naturalized in our country. We shall decide how all such parties are to initiate private suits against each other on the same principle.

In cases of disobedience to the state on the part of a free citizen—I mean cases not grave enough to call for whipping, imprisonment, or death—neglect to present oneself at the meetings of a choir, or to take part in a procession, or some other ceremonial or act of public d service, e.g., a sacrifice in peacetime, or the payment of a special levy in time of war—in all such cases, I say, the first requisite shall be that the loss be made good to the state, and the disobedient party shall be required to give a pledge to the officials empowered by the state's laws to demand it. If the disobedience continue after the pledge has been deposited, the articles so deposited shall be sold, and the proceeds confiscated to the state. If still further penalties be required, they shall be suitably imposed by the officers empowered to deal with the case in question, who shall cite the refractory parties before the courts, until e they consent to obey orders.

A state which has no revenues except those it derives from its own soil, and no commerce, is bound to make up its mind what course it should take as regards foreign travel on the part of its citizens and admission of aliens to its own dominions. So a legislator has to open his treatment of the subject with counsels which he must make as persuasive as he can. Now free intercourse between different states has the tendency to produce all manner of admixture of characters, as the itch for innovation is caught by host from visitor or visitor from 950 host. Now this may result in the most detrimental consequences to a society where public life is sound and controlled by right laws, though in most communities, where the laws are far from what they should be, it makes no real difference that the inhabitants should welcome the foreign visitor and blend with him, or take a jaunt into another state themselves, as and when the fancy for travel takes hold of them, young or old. On the other side, to refuse all admission to the foreigner and permit the native no opportunity of foreign travel is, for one thing, not always possible, and, for another, may earn a state a reputation for barbarism and inhumanity with the rest of the world; its citizens b will be thought to be adopting the ill-sounding policy of exclusion of aliens and developing a repulsive and intractable character. But

reputation, for good or ill, with the outer world ought never to be undervalued. Mankind at large may come far short of the real possession of virtue, but they are by no means equally deficient in the power to judge of the vice or virtue of others; there is a wonderful sagacity among the wicked themselves by which the very wickedest of them are  
 c often enabled to discriminate better men from worse accurately enough in their thought and language. Hence it is sound advice to give to most societies if one counsels them to prize a good reputation with the wider world. The one absolutely right, supreme rule, in fact, is first to be genuinely good and then to pursue repute for goodness, never, if we mean to be perfect, mere reputation by itself. So it will be only proper for the state we are now founding in Crete, like others,  
 d the highest and most illustrious reputation for virtue with all its neighbors, and we may have every reasonable hope that if our plan is carried out, ours will be one of the few well-governed states and countries that enjoy the beams of the sun and his fellow gods.

Our course in respect of travels in foreign parts and admission of aliens to our territory should therefore be as follows. First, no permission of foreign travel shall, in any circumstances whatsoever, be granted to any person under the age of forty; further, such permission shall be granted to no person for his private occasions, but only to those traveling on business of state, envoys, embassies, and deputations to diverse ceremonies of religion. It will not be proper to reckon  
 e absences in war or field service among these occasions of state. As it will be our duty to send deputations to Apollo of Pytho and Zeus of Olympia, as well as to Nemea and the Isthmus, to take their part in the sacrifices and games with which these gods are honored, we must do our utmost to make these deputations as numerous, noble, and distinguished as we can; they must be composed of men who will make our city illustrious in the gatherings of religion and peace, and cover  
 951 her with a glory to match her renown in the field; on their return they shall explain to their juniors how inferior are the ways of other nations to the institutions of their own land.

There are other commissioners who should, with the curators' license, be sent abroad. If we should have citizens desirous to investigate the affairs of other peoples with ampler leisure, no law shall stand  
 b in their way. A state unacquainted with mankind, bad and good, will never in its isolation attain an adequate level of civilization and maturity, nor will it succeed in preserving its own laws permanently, so long as its grasp of them depends on mere habituation without comprehension. Among the great mass of men there are always, in fact, some, though few, of a superhuman quality; they are to be found in states with defective laws no less than in states with good, and their society is priceless. An inhabitant of a well-governed state whose own  
 c character is proof against corruption should follow their trail over sea and land with a view to the confirmation of such practices in his own

community as are sound and the amendment of any that are defective. Indeed without observation and inquiry of this kind, or if it is ill conducted, no scheme of polity is perfectly stable.

CLINIAS : Then how would you secure this pair of results?

ATHENIAN : Why, thus. This observer of whom we are speaking shall, in the first place, be a man of fifty or upward. Next, if our curators are to let him reach other lands as a sample of what they can produce, he must be of high repute, military and otherwise, and the period of his observations shall not be prolonged beyond his sixtieth year. He shall spend such part of these ten years as he pleases in his observations, and, on his return from them, shall report himself to the council entrusted with supervision of the laws. This shall be a body composed of younger and senior members, and shall be required to hold daily sessions from daybreak until after sunrise. It shall contain, first, the priests who have won distinctions of the first rank, next the ten senior acting curators, next the last elected minister of education and any retired holders of that office. Each of these shall not merely attend in person but associate with himself such younger person of the age of thirty to forty years as he deems best. The matter of the discourse held at their conferences shall always be the laws of their own community, with such relevant suggestions of moment as they may learn from other quarters, and, in especial, all branches of study they may judge to advance their inquiries by shedding light on points of law that would be left unduly dark and perplexed if these studies were neglected. The junior members shall give all diligence to pursue any such studies approved by their seniors, and if any of these assessors prove unworthy, the whole council shall reprimand him who invited his presence. Such of them as obtain a good repute shall be a target for the observation of the whole community; they shall be the object of its particular care and regard, and receive marks of honor or more than common disgrace, according as they do themselves credit or fall below the general average in their conduct. Now the observer returned from his travels about the world is to present himself immediately before this council. If he have met with persons possessed of any information about legislation, education, or the management of children, or, as may also happen, have brought back personal reflections of his own, the results shall be laid before the whole council. If they judge him to have come back neither the worse nor the better, he shall still receive their commendations for his trouble and industry. If much better, he shall, while still living, be commended much more warmly, and at his death shall be honored with appropriate distinctions by the authority of the council. But should he appear to have come home corrupted by his travels, he shall not make his assumed 'wisdom' a pretext for conferences with young or old. If he will obey orders in this matter, he shall live out his life in privacy; if not, he shall have sentence of death—I mean, if a court convict him of meddling in any matter of

education or legislation. If the magistrates neglect to bring such offender before the court, where cause for proceedings has been given, the fact shall be remembered to their discredit at the award of distinctions.

- So much, then, of parties who shall have leave of foreign travel and the terms of their leave; we are next to consider the welcome to be given to a visitor from abroad. The foreign visitors of whom account must be taken are of four sorts. First, and everlastingly, a guest who will pay his incessant calls, for the most part, in the summer, like a bird of passage; most of his kind are, in fact, just like winged creatures in the way they come flying overseas, at the proper season, on their profitable business errands. He shall be admitted by officials appointed for his benefit, to our market place, harbors, and certain public buildings erected near the city but outside its walls. The officials will take care to prevent the introduction of novelties by these guests, and will administer proper justice to them, but shall keep their intercourse with them within the strict bounds of necessity. The second sort are observers in the literal sense of the word; they come for the sights to be beheld by the eye and the musical displays to be enjoyed by the ear. Lodging shall be provided for all such visitants at the temples with a generous hospitality, and they shall receive the attention and solicitude of our priests and sacristans during a sojourn of reasonable length, but when they have seen and heard what they purposed, they must depart without harm done or received. In case of wrongs done or suffered by them, the matter shall be adjudicated upon by the priests, when the claim does not exceed fifty drachmas; where the sum claimed is higher, the case shall come before the commissioners of the market. A third sort, who must be entertained as guests of the state, are those who come from other countries on business of state. They shall be entertained by the generals and commanders of cavalry and infantry divisions, and by no other persons, and the business of their entertainment shall be confined to the particular commander in whose house such a guest receives lodging, acting in concert with the prytanes. In the case of a visitant of the fourth sort—the event will be indeed uncommon, but if we should be visited by a counterpart of our own observers from some other country—he must, in the first place, have attained the age of fifty at least, and further, his avowed object must be either to see for himself some excellent features superior to the beauties to be found in other societies, or to reveal something of the sort to another state. Such a visitor, then, shall need no bidding to enter the doors of our men of ‘wealth and wisdom,’ being himself a man of these same qualities. I mean, he may go to the house of the minister of education, confident of his fitness to be guest to such a host, or to that of some man who has won the award for virtue. He shall pass his time with some of these, imparting knowledge and acquiring it, and

when he departs, it shall be as a friend from friends, with suitable parting presents and distinctions. These, I say, are the laws by which our citizens should manage all reception of foreign visitors, male or female, and dispatch of their own countrymen to foreign parts. They should show their reverence for Zeus, the stranger's patron, not make meats and sacrifices a device for repelling the alien, as we see the 'dusky brood of Nilus' doing today, or banish him by barbarian edicts.

Any person giving a security shall do so in explicit terms; he shall set down the whole transaction in a legal document, and in the presence of witnesses, to the number of three at the least, if the sum concerned be not more than a thousand drachmas, or five at the least if it be higher. Also the broker at a sale shall be security for a seller who has no sound title to the article sold, or cannot guarantee delivery, and an action shall lie against broker no less than against vendor. 954

A person proposing to search for stolen goods on another's premises shall first strip to his shirt and lay aside his belt, and shall also have made oath by the gods, as required by law, that he honestly expects to find his goods. The other party shall permit the search, which shall extend to sealed, as well as to unsealed, receptacles. If one party desire to make a search and the other refuse permission, the party so repelled shall lay an action, specifying the value of the missing goods, and the defendant shall, on conviction, pay twice the amount as specified. If the owner of the house be absent from home, the occupants shall permit the search of unsealed receptacles; sealed receptacles shall be countersealed by the searcher and left for five days under such guard as he pleases. If the absence of the owner is further prolonged, the searcher shall call in the urban commissioners and prosecute his search; the sealed receptacles themselves shall be opened, but shall be afterward resealed as before in the presence of the household and the commissioners. b c

In cases of disputed title there shall be the following limits of time, beyond which a possessor's title shall no longer be liable to question. In this Cretan city there can be no such thing as a disputed title to a landed estate or a dwelling house. As to other property of which a man may be possessed, when the possessor of an article makes open use thereof in town, market square, and temples, no counterclaim being advanced, then, if another profess to be looking for the article during this period, while the possessor is plainly making no concealment thereof, if the possession on the one side and search on the other have continued for a year, after the expiry of such year no one shall have legal right to claim such article. If the article be in open use on a country estate, though not in town or market place, and no claimant appear within five years, no man's claim to such article shall thenceforth be entertained. If the article be in use withindoors, and in the town, the term of prescription shall be three years, or for an article thus held d

- e in undisclosed possession on a man's country estate, ten. If the article be in some other country, at whatever time it may be found, prescription shall be no bar to the claim of the finder.

If a man forcibly hinder the presence of a litigant or his witnesses in the courts, and the party thus hindered be a slave, his own or another's, the suit shall be declared null and void; if the party hindered  
 955 be a free man, the offender shall further undergo a year's imprisonment, and shall be liable to action for kidnaping at the instance of any who pleases. If a man forcibly prevent the presence of a rival competitor at any gymnastic, musical, or other contest, any who may please shall inform the presidents of the contest, and they shall set the intending competitor free to enter the contest. In a case where this is impossible, if the party hindering the appearance of a competitor prove victorious, the presidents shall award the prize to the  
 b competitor so hindered, and inscribe his name as victorious in such temples as he pleases; the party causing the hindrance shall be forbidden to commemorate such a contest by dedication or inscription, and shall be equally liable to an action for damage whether he be defeated in the competition or successful.

If a man knowingly receive stolen goods, he shall be liable to the same penalties as the thief; the sentence for reception of an exile shall be death.

- All citizens shall regard a friend or enemy of the state as their  
 c own personal friend or enemy. Any person making peace or war with any parties independently of the commonwealth shall likewise incur the pain of death. If a section of the state make peace or war with any on its own account, the generals shall bring the authors of the measure before a court, and the penalty for conviction shall be death.

The servants of the nation are to render their services without any taking of presents, and there shall be no glossing of the practice, nor accepting of the principle that 'A present should be taken for a  
 d good deed, though not for an ill.' To form your judgment and then abide by it is no easy task, and 'tis a man's surest course to give loyal obedience to the law which commands, 'Do no service for a present.' The disobedient shall, if convicted, die without ceremony.

- As concerns payment to the public treasury, every man must have his estate valued, and that for more reasons than one, but the members of every tribe shall also furnish the rural commission with a written record of each year's produce that the exchequer may be free  
 e to choose at its pleasure, between the two methods of raising its revenue, as the authorities will consider annually whether they shall exact some fraction of the capital valuation or some part of the annual income, exclusive of the cost of the public table.

A modest man's gifts in the way of offerings to the gods should themselves be modest. Now the soil and the household hearthstone are

sacred, in our universal conviction, to all gods that are. No man, then, shall reconsecrate what is dedicated already. In other societies you will find gold and silver in temples as well as in private houses, but they are possessions which breed ill will against their owner. Ivory, a body that soul has forsaken, is no clean offering; bronze and iron are tools of battle. But any man, at his pleasure, may dedicate in our public temples an image of wood, carved in one piece, or of stone similarly fashioned, or a piece of woven work, not exceeding what one woman can finish in a month. White is the color most proper for the gods, in tapestry as in other materials; dyes are not to be used except for military adornment. The most pious presents we can offer the gods are birds and figures on such scale that they can be finished by one artist in one day; our other offerings shall be on the model of these. 956

We have now spoken of the sections into which our whole city must be divided—their number and nature—and done what we may to prescribe laws for all its chief business transactions. It remains to constitute our judiciary. Our tribunal of first instance will consist of judges appointed by the concurrent choice of defendant and plaintiff; arbitrators would be a more appropriate name for them. The second court shall be formed from fellow villagers and tribesmen, each tribe being subdivided into twelve. If no decision can be reached at the first stage, the litigants shall continue their contention before these judges, but the stake will be increased; the defendant, if worsted a second time, shall pay the award imposed in the original suit with an additional fifth. If he be ill content with his judges and desire to contest the case a third time, he shall take it before the select judges, and shall, if worsted once more, pay the original award with an additional half. A plaintiff who will not sit down with a defeat in the primary court but carries the case to the second shall, if successful, receive the additional fifth, but, if defeated, shall pay the same fraction of the sum under dispute. If the antagonists refuse to submit to the earlier judgments and take the case to the third court, the defeated party shall pay, if he be the defendant, the first award with an additional half, as already enacted, and if plaintiff, the half only. d

For what concerns balloting for juries and filling vacancies on them, the provision of a staff for the different courts and the intervals at which sessions shall be held, the manner of taking the vote, the adjournment of the court, and other such necessary details of the administration of justice—as, for example, determination of the order in which suits shall be heard, the rules of compulsory answers to interrogatories and compulsory attendance in court, and the like generally—the matter has been dealt with already, but 'tis no ill deed to repeat a sound maxim or even to state it a third time. In a word, all such minor and simple details of legal procedure may be left by our aged legislator for his younger successors to fill in. Here, then, we have a fair model for the composition of courts to adjudge private disputes. e 957

For tribunals in affairs of common and public concern and courts which are to subserve the magistrate in the exercise of his function, many communities already possess decorous institutions derived from excellent authors and our curators must construct out of this material a scheme suited to the polity now in process of birth. They shall compare these institutions and amend them in the light of their personal experience until they judge them to be all sufficiently perfected; then only will they take the last step, stamp them as wholly immutable, and put them into practice for all time to come. For the silence and decorum of speech to be observed by the judges, and their contrary, as for our divergences from the various standards of right, good, honor in other societies, something has been said of this already, and we shall find more to say in the close. He that would show himself a righteously equal judge must keep these matters before his eyes; he must procure books on the subject, and must make them his study. There is, in truth, no study whatsoever so potent as this of law, if the law be what it should be, to make a better man of its student—else 'twould be for nothing that the law so stirs our worship and wonder bears a name so cognate with that of understanding. Furthermore, consider all other discourse, poesy with its eulogies and its satires, or utterances in prose, whether in literature or in the common converse of daily life, with their contentious disagreements and their too often unmeaning admissions. The one certain touchstone of all is the text of the legislator. The good judge will possess the text within his own breast as an antidote against other discourse, and thus he will be the state's preserver as well as his own. He will secure in the good the retention and increase of their rectitude, and in the evil, or those of them whose vicious principles admit remedy, will promote, so far as he can, conversion from folly, from profligacy, from cowardice, in a word, from all forms of wrong. As for those who are fatally attached to such principles, if our judges and their superiors prescribe death as the cure for a soul in that state, they will, as has been more than once said already, deserve the praise of the community for their conduct.

When the suits of the year have been carried through to their final adjudication, the law as to execution of judgment shall be this. First, the magistrate delivering judgment shall make an assignment to the successful litigant of all the goods of the unsuccessful party, except such as he must necessarily be allowed to retain, and this shall be done, in every case, immediately upon the delivery of the verdict, through the crier of the court, in the presence of the judges. On the expiry of the month following that wherein a suit is tried, if no discharge have been obtained from the victorious litigant to the satisfaction of both parties, the magistrate before whom the suit was tried shall, at the instance of the victor, enforce delivery to him of the goods of the loser. If these prove insufficient to meet the obligation, and the deficiency amount to one drachma or upward, the loser shall be deprived of all

right to institute a suit against any person whatsoever, until he have first discharged in full his debt to the victor, other parties retaining c their full rights to institute proceedings against such debtor. Any person thus cast obstructing the action of the court which condemned him shall be brought by the magistrates so obstructed before the court of the curators, and any person convicted on such a charge shall suffer death as one that would undo our whole society and its law.

Now to proceed, when a man has been born into the world and brought up to manhood, has begotten his children and brought them up, has played his part duly in the transaction of affairs, offering com- a pensation to any to whom he had done an injury and accepting such compensation from another, and has so come in due course to law-respecting old age, the natural close will be his decease. As to the deceased, then, whether male or female, full authority to prescribe the offices of piety it will be proper to perform toward deities of the underworld or of our own shall be given to the interpreters of religious law. But there must be no grave or tomb, whether great or small, on any site e capable of cultivation; they must fill up the places where our soil is naturally fitted only for this one purpose of receiving and concealing the bodies of the departed with least inconvenience to the living. Where earth, a true mother to us in the matter, is minded to yield sustenance for us, our living shall not be cheated of the benefit by any man, living or dead. The mound of earth shall not be made higher than can be done by five men within five days, and no stone shall be erected upon it larger than is needed to receive, at the outside, the customary four hex- 959 ameter verses in commendation of the life of the deceased. The lying-in-state in the house shall, in the first place, be prolonged only for the time needed to distinguish between a swoon and a genuine death; the general rule will thus be that a man may properly be conveyed to the grave on the third day after his decease. And our faith in the legislator should extend particularly to his statements when he tells us that soul is utterly superior to body, and that what gives each one of us his being is nothing else but his soul, whereas the body is no more than a shadow which keeps us company. So 'tis well said of the deceased b that the corpse is but a ghost; the real man—the undying thing called the soul—departs to give account to the gods of another world, even as we are taught by ancestral tradition—an account to which the good may look forward without misgiving, but the evil with grievous dismay. Whence, the legislator will add, we can do very little to help a man when he is once dead. The help should have been given by all connected with him while he was still alive, and it should have aided c him to pass life, while it lasted, in all rectitude and purity, and at death to escape the vengeance of the world to come on grave sin. Now since things stand thus with us, we should never waste our substance in the fancy that he who was so much to us is this bulk of flesh that is being committed to its grave, and not the real man—the son, or

brother, or other lamented kinsman we fancy ourselves to be burying—who has left us, to continue and fulfill his own destiny; our duty, we must think, is rather to make the best of the case and to keep expenditure on what is, as it were, an altar of the dead about which no spirit d hovers, within modest bounds, and the oracle which may best declare what modesty is is the voice of the legislator. Our law, then, shall be this. Modest expenditure shall mean an outlay upon the whole ceremonies of burial which must not exceed five minas for a person of the wealthiest class, three for one of the second, two for one of the third, one for one of the fourth.

It will be by no means the least of the many inevitable duties and e cares of curators to give their life to the supervision of children, adults, and persons of all ages; in especial, at his death every man shall be put under the care of a particular curator to be called in as supervisor by the household of the deceased, to whose credit it shall count if the funeral ceremonies are conducted with propriety and moderation, and who shall be discredited by any impropriety. The lying-in-state and like matters shall be regulated by the custom in such things, but custom must bow to the legislation of the statesman in the points I shall now specify. To command or forbid tears to be shed over the departed would be unseemly, but it shall be forbidden to utter dirges over him, 960 or to let the noise of the mourning be audible outside the house. We shall also prohibit the carrying of a corpse through the public streets and the raising of cries as the mourners traverse them, and the party must be beyond the city wall before daybreak. These are the regulations we shall impose in the matter. Compliance therewith will secure a man from all penalty; disobedience shall be visited by one of the b curators with a penalty to be approved by the whole body. Further rites of sepulture, as also the acts which involve loss of the right to sepulture—parricide, sacrilege, and others—have already been made matters of legislation, and we may accordingly say that our code is substantially completed. But the end of an enterprise is never reached by the mere performance of the act, acquisition of the possession, or establishment of the foundation; we must never take ourselves to have done all there was to do until we have provided a complete and permanent guarantee for the preservation of our work. Until then we should regard our c whole achievement as unfinished.

CLINIAS: Very true, sir. But I could wish for further light on the application of that last observation.

ATHENIAN: Why, look you, Clinias, there is good sense in many of our old household phrases, and not least in the designations men have given to the Fates.

CLINIAS: How so?

ATHENIAN: We are told that the first of them is called Lachesis, the second Clotho, and the third, she who, in fact, makes the result fast, Atropos, with an allusion to the . . . which makes the spinning

irreversible. So likewise, the need of a state or constitution is not a merely for provision for bodily health and preservation, but for the presence of loyalty to law in the soul, or rather for the abiding preservation of its law. And this, I believe, is the one thing still manifestly lacking to our own laws, some means of ensuring, so far as we can, this rightful irreversibility.

CLINIAS: A serious deficiency, too, in any achievement, if it is really impossible to give it such a character.

ATHENIAN: Nay, the thing is certainly possible, as I can now e see quite plainly.

CLINIAS: Then we must on no account relinquish our work without performing this same service for our proposed code; you know it is always ridiculous to waste one's pains by building on insecurely laid foundations.

ATHENIAN: Well reminded. You will find me in accord with you there.

CLINIAS: I am very glad to hear it. Well then, what, let me ask you, is to be this safeguard for our system and its laws? How do you propose to effect it?

ATHENIAN: Why, did we not say that our state must have a 961 council which would be constituted in some such fashion as this? The ten senior acting curators of law and the whole body of persons who had won supreme distinction were to meet in council; further, any persons who had traveled into foreign parts to inquire into any capital invention for the preservation of law they might hear of, and had returned, were to be examined by this body and pronounced, on approval, worthy of association with it. Furthermore, each member was to bring with him one younger man, not being under the age of thirty, b and present him to his colleagues, though not until he had personally judged him worthy of the honor by his parts and education. If the approval of the whole board were obtained, the young man was to be received as an associate; if not, his original nomination was to be kept a profound secret from everyone, and particularly from himself. The council was to hold its meetings before daybreak, the time, above all others when a man is always freest from all other business, private or public. I think this was much the substance of what we said. c

CLINIAS: You are right, it was.

ATHENIAN: Then I will go back to the subject of this council, and this is what I would affirm about it. If it is cast out, so to say, as a sheet anchor of state, furnished with all its proper appurtenances, it will prove the safeguard of all our hopes.

CLINIAS: And how so?

ATHENIAN: Ah, there is the critical point at which you and I have to do our uttermost to advise rightly.

CLINIAS: Admirably said, but pray put the purpose into execution.

d ATHENIAN: Well then, Clinias, we have to discover what is the fitting protector for anything in all its various activities. In a living organism, for instance, it is, above everything else, the soul and head which are designed to this function.

CLINIAS: Once more, how so?

ATHENIAN: Why, you know, it is the perfection of these two that guarantees the preservation of the whole creature.

CLINIAS: How so?

ATHENIAN: By the development of intelligence in the soul and vision and hearing in the head as the crowning endowment of each. To put it concisely, when intelligence is fused into a unity with these noblest of the senses, they constitute what we have every right to call a creature's salvation.

CLINIAS: That certainly sounds like the truth.

e ATHENIAN: It does indeed. But what in particular is the object envisaged by the blended intelligence and sense which is to be the salvation of a vessel in storm and calm? In this case of the ship, it is the fusion of the sharp senses of captain and crew alike with the captain's intelligence that preserves ship and ship's company together, is it not?

CLINIAS: To be sure.

ATHENIAN: Well the point surely calls for no great number of illustrative examples. Take the case of a military expedition; we have to ask ourselves what must be the mark aimed at by its commanders—or again, by any medical service—if they are to aim at 'salvation,' as  
962 they ought to do. In the first case, I take it, the target is victory and superiority to the enemy, in that of the physicians and their staff, the preservation of bodily health?

CLINIAS: Why, of course.

ATHENIAN: Well then, if a physician knew nothing of the nature of bodily health, as we have just called it, or a commander nothing of the nature of victory and the other results we mentioned, it would surely be clear that he had no understanding of his subject whatsoever.

CLINIAS: Why, certainly.

ATHENIAN: Well, then, to come to the case of a state, if a man plainly knows nothing of the mark a statesman must keep before his  
b view, has he, for one thing, any right to the style of a magistrate, and will he, for another, have any capacity for the preservation of that of whose aim he is so utterly ignorant?

CLINIAS: None whatsoever.

ATHENIAN: Why then, mark the inference. If our present disposition of our territory is to be completed, it must provide for the presence there of some body which understands, in the first place, the true nature of this mark of statesmanship, as we have called it, and next, the methods by which it may be attained, and the counsels—emanating principally from the laws themselves, secondarily from in-

dividual men—which make for or against it. If a state leave no room for such a body, we should not be surprised that a society so unintelligent and so imperceptive habitually finds itself drifting at the mercy of circumstance in its various undertakings.

CLINIAS: Just so.

ATHENIAN: Now where in our society, in which of its sections or institutions as so far prescribed, have we made any adequate provision for such a safeguard? Can we specify anything of the kind?

CLINIAS: No indeed, sir, not with any certainty. But if I may hazard a guess, your observations seem to be pointing to the committee which, as you just said, will be expected to meet in the small hours.

ATHENIAN: You understand me perfectly, Clinias. That body, as our present observations prefigure, will, indeed, need to be equipped with all virtue. And the first point of such virtue will be that its aim must not wander from object to object; it must have a single mark always before its eye and make it the target of all its shafts.

CLINIAS: Assuredly it must.

ATHENIAN: Now we have reached this point, we shall understand that there is nothing surprising in the fact that the laws of our various societies should be all at sea, seeing that the aims of the legislators in each of them are so conflicting. In general, we must not be surprised that the standard of rights with some men is the restriction of power to a certain group, no matter whether better or worse in reality than others, with others the acquisition of riches, no matter whether or not at the cost of enslavement, and yet others make 'liberty' the object of their passion. Others, again, combine two objects in their legislation and keep an eye on both together, liberty and empire over other societies, while the wisest of all, as they fancy themselves, pursue all these aims and others like them at once; they set no one object of a particular devotion before them to which they might point as the proper aim of all other pursuits.

CLINIAS: Surely then, sir, the position we took so long ago was 963 the sound one. We said there was one end to be kept in view in all our own laws, and we were agreed, I believe, that the right name for the thing is *virtue*.

ATHENIAN: We were so.

CLINIAS: And virtue, as I remember, we said has four parts.

ATHENIAN: Precisely.

CLINIAS: But the chief of them all is understanding, and it should be the aim of the three other parts, as well as of everything else.

ATHENIAN: You follow my argument perfectly, Clinias; pray keep me company in the next step. As to this matter of the single aim, we have specified the mark on which the understanding of navigator, physician, military commander should direct its gaze and are now in the act of examining that of the statesman: If we like to personify his wisdom, we may address it with these words. In the name of all that is

wonderful, what is it you have in view? What is your one aim? The physician's wisdom can give us a definite answer. You, the wisest of all the wise, by your own account, have you no answer?

Now Megillus and Clinias, can you, between you, act as his spokesmen? Can you give me a definition stating what you take this object to be, like the definitions I have so often given you as spokesman  
c for other parties?

CLINIAS: Nay sir, there we are at a loss.

ATHENIAN: Now what is it that we must be so anxious to discern, in itself as in its various manifestations?

CLINIAS: I should like some illustration of what you mean by manifestations.

ATHENIAN: As an illustration, then, take our language about the four types of virtue. If there are four of them, obviously we must hold that each type by itself is one.

CLINIAS: Obviously.

ATHENIAN: And yet we give one name to all of them. In fact, we speak of courage as virtue, of wisdom as virtue, and similarly with  
d the other two, and this implies that they are not really several things, but just this one thing—virtue.

CLINIAS: Certainly.

ATHENIAN: Now it is easy enough to point out where these two, or the others, differ and why they have received two distinct names; it is not so light a matter to show why we have given both of them, and the rest, the one common name, *virtue*.

CLINIAS: Now what is your point?

ATHENIAN: One which I can explain readily enough. Suppose we divide the parts of questioner and respondent between us.

CLINIAS: Again, I must ask you to explain yourself.

e ATHENIAN: Ask me the question why we first call both things by the one name *virtue*, and then speak of them as two—*courage* and *wisdom*. I will give you the reason. One of them, courage, is concerned with fears, and so is to be found in the brutes and in the behavior of mere infants. In fact, a soul may attain to courage by mere native temperament independently of discourse of reason, but without such discourse no soul ever comes by understanding or wisdom; none has ever done so, and none ever will—the cases are utterly different.

CLINIAS: That is true enough.

964 ATHENIAN: Very good. My statement has told you where the things differ and why they are two; it is now your turn to tell me in what respects they are one and the same. Remember that you will also have to explain in what way the four things can be one thing, and that when you have given your explanation you are once more to ask me in what way they are four. And there will be still a further point to investigate. If a man is to have competent knowledge of anything whatsoever which has not only a name but a definition, is it enough that

he should know its bare name, but be unaware of its definition? Is not any such ignorance in a man of any account disgraceful, when the matter at issue is one of paramount importance and dignity? b

CLINIAS : So I should presume.

ATHENIAN : In the eye of an author or custodian of law, a man who believes in his own pre-eminence in virtue and has won the prize for the very qualities of which we are treating, can there be anything of greater importance than these qualities themselves, valor, purity, justice, wisdom?

CLINIAS : There surely cannot.

ATHENIAN : Then where these are the issues at stake, is it to be believed of our interpreters, our teachers, our legislators, the very men who have the rest of us in their keeping—can it be believed, I say, when it comes to the provision for one who needs to learn and know, or to be corrected and rebuked for his faults, that a man such as we have in mind will not show himself pre-eminent as a teacher of the characteristic quality of virtue and vice and generally as an instructor? Can we suppose that some poet or pretended 'educator of youth' who has come to our city will get the credit of superiority to one who has won the palm of a perfect virtue? In a state like this, where there are no custodians competent in act as in thought from their competent acquaintance with virtue—is it surprising, I ask you, if a state left so unguarded has the fortunes of too many of our states of today? d

CLINIAS : Why no, I suppose not.

ATHENIAN : What follows? Shall we act, as we are now proposing, or how? Shall we equip our guardians with a more finished mastery in the theory and practice of virtue than the mass of their neighbors? How else is our own city to resemble an intelligent man's head with its sense organs in its possession of such a defense within itself?

CLINIAS : Pray, sir, how are we to understand the comparison? In what does the likeness consist?

ATHENIAN : Why manifestly the city at large is the trunk of the e body. The younger guardians—we selected them for their superior parts, for the quickness of all their faculties—are stationed, so to say, at its summit, their vision ranges over the whole compass of the state, they commit what they perceive in their watch to memory, and serve their elders as scouts in every branch of affairs. Those senior men— 985 we may compare them with the understanding for their special wisdom in so many momentous matters—sit in council, where they avail themselves of the services and suggestions of their juniors, and thus, by their united action, the two parties are, between them, the real salvation of the whole state. Is this to be our project, or are we to find some other arrangement for ourselves? Are we to leave all our citizens on one level of training and education, with no more sedulously trained class among them?

CLINIAS: My dear sir! We cannot possibly take such a course.

ATHENIAN: Then we shall have to proceed to an education of a  
b more exacting kind than we have so far contemplated.

CLINIAS: I dare say we shall.

ATHENIAN: And that on which we have just touched may perhaps prove to be the very one we need?

CLINIAS: Indeed it may.

ATHENIAN: I believe we said that a consummate craftsman or guardian in any sphere will need the ability not merely to fix his regard on the many, but to advance to the recognition of the one and the organization of all other detail in the light of that recognition?

CLINIAS: Yes, and it was the truth.

c ATHENIAN: Now whose vision and view of his object can be more intimate than his who has learned to look from the dissimilar many to the one form?

CLINIAS: You may be right.

ATHENIAN: Not 'may be,' bless you! There is no surer path for a man's steps, and can be none.

CLINIAS: Well, sir, I admit it on your assurance; so we may let the argument take that course.

ATHENIAN: Then it looks as though the guardians of our god-given constitution too must be constrained, first and foremost, to see  
d exactly what is the identity permeating all the four, the unity to be found, as we hold, alike in courage, in purity, in rectitude, in wisdom, and entitling them all to be called by the one name, *virtue*. This, my friends, if you please, is what we must now close upon with a firm and unyielding grip, until we are content with our account of the real character of the mark on which our gaze shall be fixed, whether it prove to be a unit or a whole, or both at once, or what you please. If we let this  
e slip through our fingers, can we suppose we shall ever be fully equipped for a virtue of which we cannot tell whether it is many things, or four, or one? No, if we are to follow our own advice, we must find some other way of securing this result in our society. But of course we must consider whether we should leave the whole subject alone.

CLINIAS: Nay, sir, in the name of the god of strangers, you cannot let such a matter drop; we find your remarks full of truth. But how is the thing to be compassed?

966 ATHENIAN: Ah, that is a question we are not yet ready to ask. We must first be sure we are agreed whether or not the thing must be done.

CLINIAS: Indeed it must, if only it can be done.

ATHENIAN: Then what say you to this? Do we take this same view when it comes to the *fine*, or to the *good*? Will our guardians have merely to know that each of them is many, or must they know further how and in what way each is a unit?

CLINIAS: Why, we seem fairly driven to hold that they will actually have to understand their unity.

ATHENIAN: And suppose they can perceive this, but are unable to give any articulate demonstration of it?

CLINIAS: Out of the question! A condition only fit for a slave!

ATHENIAN: Well, once more, must we say the same of all matters of moment? Men who are to be real guardians of the law will need a real knowledge of them all; they must be able to expound this knowledge in their speech and to conform to it in their practice, to discern the true intrinsic demarcations of good and evil?

CLINIAS: Indubitably.

ATHENIAN: Now among these matters of high import is not the subject of divinity which we treated so earnestly pre-eminent? 'Tis of supreme moment for us, is it not, to know with all the certainty permitted to man that there are gods, and with what evident might they are invested? In the great mass of our citizens we may tolerate mere conformity to the tradition embodied in the laws, but we shall do well to deny all access to the body of our guardians to any man who has not made it his serious business to master every proof there is of the being of gods. And by denial of access I mean that no man who is not divinely gifted or has not labored at divinity shall ever be chosen for a curator, nor ever be numbered among those who win the distinction for virtue.

CLINIAS: As you say, it will be only right that the slothful or incompetent in such matters should be hopelessly excluded from high distinction.

ATHENIAN: May we say, then, that we know of two motives—those we have already rehearsed—of credibility in divinity?

CLINIAS: And what are these two?

ATHENIAN: One of them is our theory of the soul, our doctrine that it is more ancient and more divine than anything that draws perennial being from a motion that once had a beginning, the other our doctrine of the orderliness in the movements of the planets and other bodies swayed by the mind that has set this whole frame of things in comely array. No man who has once turned a careful and practiced gaze on this spectacle has ever been so ungodly at heart that its effect has not been the very reverse of that currently expected. 'Tis the common belief that men who busy themselves with such themes are made infidels by their astronomy and its sister sciences, with their disclosure of a realm where events happen by stringent necessity, not by the purpose of a will bent on the achievement of good.

CLINIAS: And what is the true state of the matter?

ATHENIAN: As I told you, the situation has been precisely reversed since the days when observers of these bodies conceived them to be without souls. Even then, they awakened wonder, and aroused in the breasts of close students the suspicion, which has now been

converted into an accepted doctrine, that were they without souls, and by consequence without intelligence, they would never have conformed to such precise computations; even in those days there were persons bold enough to hazard the actual assertion that it is mind to which the heavens owe all their ordered array. And yet these same thinkers went astray about the soul; they took it to be junior to body, c not senior, and their error, as I may say, wrecked the whole scheme, or, to speak more accurately, wrecked themselves. For on a short-sighted view, the whole moving contents of the heavens seemed to them a parcel of stones, earth, and other soulless bodies, though they furnish the sources of the world order! It was this that involved the thinkers of those days in so many charges of infidelity and so much unpopularity, and further inspired poets to denounce students of philosophy by comparing them with dogs baying the moon, and to talk a d world of folly besides, but, as I told you, today the position has been reversed.

CLINIAS: In what way?

ATHENIAN: No son of man will ever come to a settled fear of God until he has grasped the two truths we are now affirming, the soul's dateless anteriority to all things generable, her immortality and sovereignty over the world of bodies, and moreover that presence among the heavenly bodies of a mind of all things of which we have e spoken so often already. He must also possess the requisite preliminary sciences, perceive the links which connect them with music, and apply his knowledge meetly to his moral and legal behavior; also he 968 must be able to give a reasoned account of all that admits thereof. He that adds not these endowments to his possession of the popular virtues will never be a sufficient magistrate of a whole community, but only a magistrate's underling. Thus the time has now come, Megillus and Clinias, when we must ask ourselves whether we shall add one more statute to all hitherto rehearsed, a law instituting the nocturnal council of magistrates, duly furnished with the whole education we b have described, as the state's custodian and preserver. How shall we act, think you?

CLINIAS: How, my dear friend, can we do other than make the addition, if we have the power, in however low degree?

ATHENIAN: Then let us indeed, one and all, throw our powers into so worthy an undertaking. This at least is a task in which you will find me eager to help—and I may possibly discover other co-operators besides myself—from my copious experience of such matters and meditation upon them.

CLINIAS: Out of all question, sir, we must take the road along c which God himself is so plainly guiding us. But what is our right way to set about it? That is what our present conference has to discover.

ATHENIAN: As to laws on such a point, Megillus and Clinias, it is impossible to lay them down now, before the institution has been framed—it will be time to define its statutory powers when it exists

—all that can be done at present toward fashioning such a body, if the work is to be done rightly, is instruction by repeated conferences.

CLINIAS: How so? What is the meaning of that remark?

ATHENIAN: Well, we must obviously begin by compiling a list of persons qualified for the post of guardian in respect of age, intellectual ability, character, and habits. When we come to the next point, that of the subjects to be studied, it is no easy matter to invent them ourselves, nor yet to go to school to some other inventor. Further, it would be futile to give regulations either for the length of time to be given to the single subjects or for the order in which they shall be taken up; the student himself will not discover which of his studies is relevant until scientific knowledge of the subject has found a settlement in his soul. Thus you see that while it would be wrong to call these various subjects incapable of *description*, it is very right to call them incapable of *prescription*, for prescription can throw no light on their contents.

CLINIAS: Why, sir, if the case stands so, what, I ask you, are we to do?

ATHENIAN: As the phrase goes, my friends, we have a 'fair field and no favor'; if we are ready, as they say, to stake the whole future of our polity on a throw of triple six or triple ace, why, so we must, and I, for one, will take my share in the risk. My part shall be the statement and exposition of my own convictions about the scheme of education and training which our conversation has thus started for the second time. But the hazard we run, mind you, is no slight one; there are not many others to be compared with it. I would advise you, Clinias, in particular, to lay the matter deeply to heart. For you the alternatives are to construct this state of Magnesia—or whatever name God will have it called after—on right lines and cover yourself with glory, or to incur the abiding reputation of a daring not to be equaled in all future ages. But if we can once create this admirable council, then, my good friends and colleagues, we must deliver the state into its keeping, and there will be hardly one modern legislator to disagree with us. The dream on which we touched a while ago in our talk, when we painted our picture of the partnership of the mind and the head, will have found its fulfillment in real and working fact, if and when we have seen our men scrupulously selected, duly educated, settled at the end of the process in the nation's central fortress and established there as guardians whose likes we have never seen in our whole lives for perfection as protectors.

MEGILLUS: My dear Clinias, after all that has now been said, we shall either have to abandon the foundation of your city or else to be deaf to our friend's excuses, and try every entreaty and inducement to secure him as a co-operator in the foundation.

CLINIAS: Very true, Megillus. I will do as you wish, and you must assist me.

MEGILLUS: Count upon me.

*The Epinomis, the Greater Hippias, and the Letters are here printed for the convenience of the reader. Their authenticity has been the subject of a long debate but all, with the exception of Letter I, have had scholarly defenders in recent times; their contents have been included in the index. The Letters are presented in the presumptive chronological order established by the translator (except for the last four, which he does not consider authentic).*

# EPINOMIS

---

CLINIAS: Well, sir, here we are, all three of us—you, myself, and 973 our friend Megillus—duly convened, as we had agreed, to discuss wisdom. We are to consider in what terms to describe that which, if we can only discover it, will, in our mind, best fit humanity for such a degree of understanding as man can compass. We have already, we hold, discussed all other considerations relevant to legislation. But b there is one question to which we have neither found nor stated the answer, and it is the supreme question for solution and determination. What are the studies which will lead a mortal man to wisdom? And that is the problem we must do our best not to leave unanswered today. To do so, in fact, would be to fail in the purpose we all had in mind at the outset, when we hoped to make everything so clear from start to finish.

ATHENIAN: Well said, my dear Clinias, though I fancy the statement to which you are to listen will be a strange one. And yet, in a way, it is not so strange after all. It is one only too often propounded c as the lesson of experience of life—that mankind will never attain bliss or felicity. So please follow me and consider whether you find me right in agreeing with others on the point. My thesis is that attainment of bliss and felicity is impossible for mankind, with the exception of a chosen few. I would limit the statement to the term of a lifetime; when life is over, there is a fair hope that a man may achieve all that prompts us to live as nobly as we may, and to crown such a life by a corresponding end. What I want to say is nothing recondite, but only a truth which all of us, Greeks or non-Greeks, recognize in one way or another. To begin with, birth itself is a painful experience for any living creature. One has first to make acquaintance with life in the womb, then to be actually born, and then further to be reared and educated, all processes, as we all confess, involving untold discomforts. 'Twill be but a brief time we shall take into account if we reckon 974 not the miseries of life but only what all would regard as its satisfactory part. This is generally held to form a kind of breathing space in the middle years of life, but old age has us soon in its clutch, and must

---

From *Philebus and Epinomis*, translated with an introduction by A. E. Taylor, edited by Raymond Klibansky (New York, 1956).

- d the highest difficulty on which we are now entering—this discovery of a wisdom, over and above those we have named, which shall be really and truly worthy of the name. He that can win it is to be neither mechanic nor fribble; it must make him a wise and good citizen of his state, in the fullest sense of the terms, as magistrate and subject, and a modest man to boot. Let us then first consider what single science there is, of all those we have, such that were it removed from mankind, or had it never made its appearance, man would become the most thoughtless and foolish of creatures. Now the answer to this
- e question at least is not overhard to find. For, if we, so to say, take one science with another, 'tis that which has given our kind the knowledge of number that would affect us thus, and I believe I may say that 'tis not so much our luck as a god who preserves us by his gift of it. I should explain what god I am thinking of—an odd one to mention, and yet, in a way, not so odd after all. How can we but believe that
- 977 the cause of all the blessings we enjoy is likewise the cause of that which is far the greatest of all, understanding? Well, and what god is it, Megillus and Clinias, of whom I speak in this solemn fashion? Why, Uranus, to be sure, whom it is our bounden duty to honor, as it is to honor all divinities and gods, and to whom we are specially bound to pray. All of us will confess that he is the source of all the other good things we enjoy, and we in particular assent that 'tis he who has in
- b very deed given us number, and will renew the gift if men will only follow his leading. If a man will but come to the right contemplation of him, he may call him by the name of Cosmos, Olympus, or Uranus as he pleases; only let him follow him in his course as he bespangles himself and wheels his stars through all their courses in the act of providing us all with seasons and daily food. Aye, and with the gift of the whole number series, so we shall assume, he gives us likewise the rest of understanding and all other good things. But this is the greatest boon of all, if a man will accept his gift of number and let his mind expatiate over the whole heavenly circuit.

- But we must still go forth a little on our argument and recall our
- c very just observation, that if number were banished from mankind, we could never become wise at all. For a creature's soul could surely never attain full virtue if the creature were without rational discourse, and a creature that could not recognize two and three, odd and even, but was utterly unacquainted with number, could give no rational account of things whereof it had sensations and memories only, though
- d there is nothing to keep it out of the rest of virtue, valor, and sobriety. But without true discourse a man will never become wise, and if he has not wisdom, the chiefest constituent of full virtue, he can never become perfectly good, and therefore not happy. Thus there is every necessity for number as a foundation, though to explain why this is necessary would demand a discourse still longer than what has gone before. But we shall also be right if we say of the work of all the

other arts which we recently enumerated, when we permitted their existence, that nothing of it all is left, all is utterly evacuated, if the art of number is destroyed.

Perhaps when a man considers the arts, he may fancy that mankind need number only for minor purposes—though the part it plays even in them is considerable. But could he see the divine and the mortal in the world process—a vision from which he will learn both the fear of God and the true nature of number—even so 'tis not any man and every man who will recognize the full power number will bestow on us if we are conversant with the whole field of it—why, for example, all musical effects manifestly depend upon the numeration of motions and tones—or will take the chief point of all, that 'tis the source of all good things, but, as we should be well aware, of none of the ill things which may perhaps befall us. No, unregulated, disorderly, ungainly, unrhythmical, tuneless movement, and all else that partakes of evil, is destitute of all number, and of this a man who means to die happy must be convinced. And as for the right, the good, the noble, and the like, no man who has given his adherence to a true belief, but without *knowledge*, will ever enumerate them in a way to bring conviction to himself and to others. 978

Well then, let us go on to face the real point we are to consider. How did we learn to count? How, I ask you, have we come to have the notions of *one* and *two*, the scheme of the universe endowing us with a native capacity for these notions? There are many other creatures whose native equipment does not so much as extend to the capacity to learn from our Father above how to count. But in our own case, God, in the first place, constructed us with this faculty of understanding what is shown us, and then showed us the scene he still continues to show. And in all this scene, if we take one thing with another, what fairer spectacle is there for a man than the face of day, from which he can then pass, still retaining his power of vision, to the view of night, where all will appear so different? Now as Uranus never ceases rolling all these objects round, day after day, and night after night, neither does he ever cease teaching men the lore of one and two until even the dullest scholar has sufficiently learned the lesson of counting. For any of us who sees this show will form the notion of *three*, *four*, and *many*. And among these bodies of God's fashioning there is one, the moon, which goes its way, now waxing, now waning, as it lights up one day after another, until it has fulfilled fifteen days and nights, and they, if one will treat its whole orbit as a unity, constitute a period, such that the very slowest creature, if I may say so, on which God has bestowed the capacity to learn, may learn it. Thus so far, and within these limits, every creature with the requisite capacity is skilled enough in counting by observation of the units. But when I consider that all these creatures are always making calculations in their dealings with each other, I fancy it was for some greater purpose, as well as for this, that 979

when God had made the moon in the sky, waxing and waning, as we have said, he combined the months into a year and so all the creatures, by a happy providence, began to have a general insight into the relations of number with number. 'Tis thus that earth conceives and yields her harvest so that food is provided for all the creatures, if winds and rains are neither unseasonable nor excessive; but if anything goes amiss in the matter, 'tis not deity we should charge with the fault, but humanity, who have not ordered their life aright. However that may be, in our inquiry into jurisprudence we took the view that in general to know what is best for man is an easy thing, and that any of us can become competent to understand what he is told of the matter and act on his knowledge, if only he could tell what may be expected to be to his advantage and what to his hurt. Whence we held, as we still hold, that there is no great difficulty in other studies; the supreme difficulty is to know how we are to become good men. Again, to get all other 'good things,' as they are proverbially called, is both possible and not too difficult—to get all the property we need, or do not need, the bodily vigor we need or do not need. And as for the soul, there is universal agreement that it must be good and must be good in a certain way. That it must be just, sober, and valiant, there again we are all agreed; that it must be *wise* is a thing all men say, but on the question what wisdom it needs, as we have just explained, the multitude are hopelessly at variance. We have now discovered, over and above all the forms of wisdom we mentioned first, another which is of no small account in one respect—I mean, that he who has learned the lessons we have described has certainly a *repute* for wisdom. Whether the man who has this knowledge really is wise and good is the question we hope to determine.

CLINIAS: How right you were, sir, when you said you were trying to express grave thoughts on a grave theme!

e ATHENIAN: Indeed, Clinias, they are no trivialities. But what makes the task harder is that I am trying to make the expression perfectly and precisely true.

CLINIAS: To be sure, sir. Still you must not let weariness make you give up your exposition.

ATHENIAN: So be it, but you and your friend too must not weary of listening.

CLINIAS: No, I promise you, and I give you the pledge for both of us.

980 ATHENIAN: I thank you. Then, I take it, we must begin for preference, if only we can find a single name for it, by stating what wisdom this is which we hold to be wisdom indeed. As a second-best course, if the other prove quite impossible, we must say what and how many are the forms of wisdom by gaining which a man will be wise by our account of the matter.

CLINIAS: Say on, then.

ATHENIAN: Then next, we can raise no objection if our legislator goes on to an imaginative presentation of the gods nobler and better than those which have been given in the past. He may make the adoration of them, so to say, a noble pastime, and so pass his own life in worshipping them with hymns of happiness.

CLINIAS: Finely said, sir. May the end of your laws be this, to sing the glad praises of the gods, to lead the life of higher piety, and then to come to the best and worthiest close!

ATHENIAN: Then where is our talk leading us, Clinias? Suppose we offer the gods the worship of a heartfelt hymn, and a prayer that we may be moved to speak of them in the best and worthiest strains? May I take it you agree?

CLINIAS: With all my heart. Make your prayer, my dear sir, in faith, and then go on with such fair discourse of gods and goddesses as you are moved to utter.

ATHENIAN: And so I will, if God himself will vouchsafe us his guidance. Only you must join in the prayer.

CLINIAS: And now proceed with your discourse.

ATHENIAN: Well then, since the men of old gave such a bad version of the generation of gods and creatures, my first business, I presume, must be to imagine the process better, on the lines of my former discourse, and to embody the points which I tried to make against unbelievers, when I argued that there are gods, that their care extends to all things great or small, and that no entreaties can win them to depart from the path of justice. I presume you remember, Clinias, for you both actually took notes of what was said. Now all I said then was perfectly true, but the chief point of all was this, that soul, all soul, is older than body, all body. You recall the point? Surely you must recollect so much? For surely we may well believe the better, more primitive, more divine, older than the [worse], more recent, baser, the ruler everywhere older than the subject, the leader than the led. So much, then, we will take as settled, that soul is older than body. But since this is so, it follows that the starting point of our story of creation is more credible than the starting point of theirs. We may take it, then, that our beginning is more seemly than the other, and that we are taking the right path to the great branch of wisdom which treats of the creation of the gods.

CLINIAS: Yes, we may take this as established to the best of our powers.

ATHENIAN: Then to proceed. May we say that the name 'living creature' is most properly used in the case when a single complex of soul and body gives birth to a single form?

CLINIAS: We may.

ATHENIAN: Such a being, in fact, has a perfect title to that name?

CLINIAS: It has.

ATHENIAN: And solid bodies from which things can best and most fairly be molded are, by the most probable account, of five sorts, while the whole of being of the other kind has one single type. For nothing can be incorporeal and wholly and always devoid of color, save only being of the divinest type, *soul*, and 'tis the proper and exclusive function of this to mold and make. To body it pertains, as I say, to be molded, be made, be seen, but to the other—we may repeat it, for it needs to be said more than once—to be unseen, to know, to be apprehended by thought, and to have its part in memory and computation of the interchanges of odd and even. Now as the number of these forms of body is five, they should be enumerated as fire, water, third air, fourth earth, and fifth aether. It is as they predominate that all the creatures are fashioned in all their multitude and variety. The matter should be expounded in detail as follows. We may take the earthy first as one single type comprising all mankind as well as all creatures with many feet or with none, alike those which travel from place to place and those which are fixed to one spot, fast bound by their roots; their unity, so we should hold, lies in this, that though all five forms of body are found in the structure of them all, their principal stuff is earth, the hard and resistant substance. Then secondly we must assume another kind of creature, likewise visible because it mainly consists of fire, though it contains some small portions of earth, air, and all the rest. From these constituents, then, we must hold, there arise visible creatures of many kinds, whom we must further take to be the kinds of creatures which people the skies. Collectively, of course, we must call them the divine host of the stars—endowed with the fairest of bodies and the happiest and best of souls. And we are fairly bound to assign them one or other of two lots. Either every one of them is imperishable, immortal, and divine, and that of utter and absolute necessity, or each of them has his sufficient term of life, covering many ages, beyond which there is nothing more for him to desire.

We will begin then, as we say, by conceiving these two sorts of creature, both, to repeat ourselves, visible—the one composed, as might be imagined, wholly of fire and the other of earth, the earthy sort moving in disorderly fashion, that of fire with utter uniformity. Now the sort which moves in disorderly wise—as the kind of creature which includes ourselves mostly does—we must take to be unintelligent, but as for that which holds its course uniformly through the sky, we should count this abundant proof of its intelligence; in the unbroken regularity and uniformity of its path, and of all it does and has done to it, it provides convincing evidence of intelligent life. And of all necessitation, that which comes from a soul endowed with intelligence is far the mightiest, seeing she imposes her law as a sovereign who is subject to none, and when a soul has decided for the best with faultless wisdom, the utterly irreversible result falls out entirely to its

mind. Adamant itself could be no stronger nor more inflexible, and 'tis no more than the truth to say that a triple Fate ensures and watches over the full accomplishment of all that each and every god has determined with perfect good counsel. For mankind it should have been proof that the stars and their whole procession have intelligence, that they act with unbroken uniformity, because their action carries out a plan resolved on from untold ages; they do not change their purpose confusedly, acting now thus, and again thus, and wandering from one orbit to another. Yet most of us have imagined the very opposite; because they act with uniformity and regularity, we fancy them to have no souls. Hence the mass has followed the leading of fools; it imagines that man is intelligent and alive because he is so mutable, but deity, because it keeps to the same orbits, is unintelligent. Yet man might have chosen the fairer, better, more welcome interpretation; he might have understood that that which eternally does the same acts, in uniform way and for the same reasons, is for that very reason to be deemed intelligent, and that this is the case with the stars. They are the fairest of all sights to the eye, and as they move through the figures of the fairest and most glorious of dances they accomplish their duty to all living creatures. And for further proof that we have the right to ascribe souls to them, let us, in the first place, but think of their magnitude. They are not really the tiny things they look to be; the bulk of any star is enormous; that we must believe, for the proofs are convincing. Why, we may rightly think of the sun as a whole as larger than the earth as a whole, and every one of the moving stars is, in fact, of amazing magnitude. So let us but consider how anything can be made to cause so vast a bulk to revolve perpetually in the same period, as the stars in fact revolve. Why, I say, God will be found to be the cause; the thing is impossible on other terms, for, as you and I have proved, soul can be imparted by God, and by God alone. And since God has this power, 'tis perfectly easy for him first to give life to any body or any bulk, and then to set it moving as he judges best. For the present we may affirm one truth about them all. It cannot be that earth and sky, with all the stars and masses formed of them, if no soul had been connected with, or perhaps lodged in, each of them should move so accurately, to the year, month, or day, to confer all the blessings they bestow on us all.

Now the poorer creature a man is, the more necessary that his words should be manifestly not spoken at random, but have definite meaning. But to talk of the swirl or the structures of moving bodies, or the like, as causes is to say nothing definite; so we must by all means repeat our own earlier statement, and ask ourselves whether 'tis a reasonable one or is hopelessly at fault. We maintain, first, that there are two sorts of being, soul being one and body the other; that there are many of either kind, all different from one another, and either sort from the other; that there is no *tertium quid* common to both; that soul

is more excellent than body. The first we shall, of course, take to be intelligent, the second unintelligent; the first sovereign, the second subject; the first the universal cause, the second a cause of no effect  
 e whatsoever. Hence to say that all we behold in the heavens is due to some other source, and not produced in the fashion we describe by soul and body, is pure folly and unreason. And thus, if our account of the whole matter is to be victorious, and all these creatures to be convincingly proved divine, one or other of two things must be said of them. Either it must be right to hymn them as very gods, or we must believe them to be likenesses of gods—images, as it were, fashioned  
 984 by the gods themselves. They are the work of no foolish or trivial authors. As we have said, one of these two views must be adopted and the images thus set up must be worshiped with higher honors than all others. For none can ever be found fairer and more accessible to all mankind, or set in a more excellent region and more eminent in  
 b purity, majesty, and fullness of life than has been shown in the fashioning of them all. As concerns gods, then, at present we will attempt no more than this. Now that we have discovered two kinds of creature, both visible, the one, so we say, immortal, the other—that made of earth—mortal, we shall try to give the most faithful account warranted by reasonable conjecture of the three intermediate sorts out of the five, which lie between these extremes. Next to fire we will place aether, assuming that soul fashions from it creatures which, as  
 c with the other kinds, have in the main the character of its own substance, though with lesser portions of the other kinds as bonds of union, and that after aether soul fashions another sort of creature out of air, and a third from water. By the fabrication of them all, we may suppose, soul has filled the universe throughout with living things, making all possible use of all the kinds of body, and communicating life to all; the series of creations begins with the visible divinities, and has its second, third, fourth, and fifth terms, closing in ourselves, man-  
 d kind.

As for such gods as Zeus, Hera, and the rest, a man may give them any rank he pleases, so long as he conforms to this law of ours and holds fast to our principle. But, it is, of course, the stars and the bodies we can perceive existing along with them that must be named first as the visible gods, and the greatest, most worshipful, and clear-sighted of them all; after them and below them, come in order the  
 e daemons and the creatures of the air, who hold the third and midmost rank, doing the office of interpreters, and should be peculiarly honored in our prayers that they may transmit comfortable messages. Both sorts of creature, those of aether and those of air, who hold the rank next to them, we shall say, are wholly transparent; however close they are to us, they go undiscerned. Being, however, of a kind that is quick  
 985 to learn and of retentive memory, they read all our thoughts and regard the good and noble with signal favor, but the very evil with deep

aversion. For *they* are not exempt from feeling pain, whereas a god who enjoys the fullness of deity is clearly above both pain and pleasure, though possessed of all-embracing wisdom and knowledge. The universe being thus full throughout of living creatures, they all, so we shall say, act as interpreters, and interpreters of all things, to one another and to the highest gods, seeing that the middle ranks of creatures can flit so lightly over the earth and the whole universe. As for the fifth and last of our substances, water, the safest guess would be that what is formed from it is a demigod, and that it is sometimes to be seen, but anon conceals itself and becomes invisible, and thus perplexes us by its indistinct appearance. Since, then, these five sorts of creatures must surely exist, when it comes to beliefs of individuals or whole societies originating in the intercourse of some of them with us—appearances in dreams of the night, oracular and prophetic voices heard by the whole or the sick, or communications in the last hours of life—and these have been, as they will be hereafter, the sources of many a widespread cult—when it comes to these, I say, no legislator of even the slenderest sense will presume to innovate, and so divert his city to a devoutness with no sure foundations. Nor yet will he prohibit obedience to the inherited usages about sacrifices, since in this matter he has no knowledge whatsoever, as, indeed, 'tis impossible that mankind should have any. But it follows, does it not, from the same argument that men are cravens if they have not the courage to tell us of the gods who are really visible, and make it plain that these other deities go unworshiped and miss the honors which rightly belong to them? And yet something of the kind actually happens among us. Suppose, for example, one of us had actually seen sun or moon coming into being and watching over all of us, and had never spoken of it, from some inability to tell the story, or suppose he saw them left without their due honors, and yet felt no eagerness to do his part to bring them into a position of conspicuous honor, no anxiety to cause festivals and sacrifices to be appointed for them, or to set apart a time for each of them and assign them their periods of greater, or maybe, lesser 'years.' If such a man were called a coward, would not the name be pronounced by himself, or by any man of understanding, to be fairly earned?

CLINIAS: Why, surely, sir, a craven and nothing else.

ATHENIAN: Well, friend Clinias, I must confess that this is plainly my case at this moment.

CLINIAS: And how so?

ATHENIAN: Let me tell you that so far as I have been able to discover—my achievements are nothing wonderful, but readily attainable by anyone else—there are to be found in the whole compass of heaven eight sister powers. Three of them belong, one to the sun, one to the moon, and the third to the stars of which we have lately spoken, and there are five others. Now of all these powers, and the

beings who march in them of their own motion, or, if you will, make the journey in their chariots, I would have none of us fondly believe that some are gods, but others not so, or that some are true-begotten, but others what it would be blasphemy for any of us to call them. All

- c —so we must one and all declare and affirm—are brothers, and each has a brother's portion. When we appoint them their honors, we are not to give the year to one and the month to another, but leave the rest without a portion or a time in which each completes his circuit, and so does his part to perfect the order which law, divinity of things that are, has set before our eyes. In the happy man this order awakens first wonder, and then the passion to learn all of it that mor-
- d tality may, for 'tis thus, as he believes, he will spend his days best and with most good fortune, and after his decease reach the proper abodes of virtue. As he has been initiated into the true and real mysteries by receiving wisdom in her unity in a mind which is itself a unity, he will henceforth have face to face fruition of the most glorious of realities so far as his vision can reach. The task still left on our hands at present is to say how many and who these divinities are, for our
- e statement will assuredly never be found false. Now I can affirm for certain no more than this. There are, as I repeat, eight powers, of which three have been named and five are still left. The fourth orbit, or circuit, as likewise the fifth, is roughly of equal speed with the sun and, on the whole account, neither slower nor faster. Of the three the leader must be that which has a mind equal to the work. We will call them the orbits of the sun, the morning star, and of a third, whose name I cannot state, as it is unknown—the reason of this being that the first man
- 987 to observe these bodies was a non-Hellene. The first observers were made so by the excellence of their summer climate, which in Egypt and Syria is so notable; they had a full view of the stars, we may say, all the year round, as clouds and rains are perpetually banished from their quarter of the world. Their observations have been universally diffused, among ourselves as well as elsewhere, and have stood the test a vast, indeed incalculable, lapse of years. So we may confidently give these bodies their place in our legislation—'tis surely not for men of sense to honor some divinities but disregard others—and if they
- b have received no names, the fact must be explained as we have explained it. Though they have at least been designated after certain gods—the morning star, which is also the evening star, is commonly reputed to be that of Aphrodite, a most appropriate name for a Syrian legislator to choose, and that which keeps pace at once with it and with the sun, the star of Hermes. We are further to reckon three other orbits of bodies which, like moon and sun, revolve to the right. There is still one to be spoken of, the eighth, which may be called in a special sense the Cosmos, and this god moves in the opposite sense to all the others, carrying round the rest with him, as might be supposed by
- c men whose knowledge in these matters is slender. But as much as we

know for certain, we are bound to declare, as we are doing, for the true and genuine wisdom can be seen even by one who enjoys but a little sound and divine insight to lie along these lines. There are thus three stars left. One of them, the slowest-moving of all, is called by some that of Cronus, that which is next slowest we should call the star of Zeus, and the next slowest after him the star of Ares, and his has the ruddiest color of them all. All this is easy enough to remark <sup>a</sup> when someone has pointed it out, but, as I say, someone who has discerned it has to lead the way.

There is another thing of which any Greek should be aware. We Greeks enjoy a geographical situation which is exceptionally favorable to the attainment of excellence. Its merit should be sought in the fact that it lies midway between winter and summer; it is our deficiency in respect of summer by comparison with the peoples of the other region which, as we said, has made us later than they in discerning the order of these gods. But we may take it that whenever Greeks borrow anything from non-Greeks, they finally carry it to a higher perfection. So we should hold the same view of the subject now <sup>e</sup> under discussion. Such matters are hard to discover with certainty, but there is every ground for the splendid hope that though the news of <sup>988</sup> these gods and their worship has come to us from non-Greeks, the Greeks will learn to worship them all in a truly nobler and more righteous fashion than they, by the help of teaching from the oracle of Delphi and the cultus enjoined by our laws. And there is one fear no Greek should harbor, the fear that 'tis a forbidden thing for mortality to concern itself with the study of divinity. No, we should believe the clean contrary—that deity is neither unintelligent, nor ignorant of man's nature, but knows that, with itself for teacher, he will follow where he is led and learn the lessons he is taught. And deity is, of <sup>b</sup> course, aware that this lesson of number and counting is the very thing that it teaches and we learn. Deity unaware of this would be the most unintelligent of things; the proverb about not knowing one's own identity would be true of it to the letter, if it felt wrath against the capable learner, and not rather a joy pure of all envy at seeing him growing in goodness by God's aid. Now it is widely and reasonably held that in the old days, when men first began to have thoughts about the gods, <sup>c</sup> their origin and character, and in some cases . . . about the acts to which they first addressed themselves, tales were told which the sober-minded could neither accept nor relish any more than they could the later versions in which the priority was given to fire, water, and other bodies, and only a secondary place to soul and its marvels, and the mightier and more worshipful motion was said to be that into which it is native to body to put itself under the influence of heat and cold and other such causes, not that which soul imparts to body and to herself. But now that we teach that soul, once implanted in body, quite <sup>d</sup> naturally imparts motion and revolution to the body and to herself, we

have left no rational ground for her to distrust her power to set any weight whatsoever in revolution. And thus, as we hold that soul is the universal cause, and that since the cause of good is always of the same nature as itself, and that of evil again always of *its* nature, 'tis only natural that soul should be universally the cause of revolution and movement, the best soul causing motion and revolution in the direction of good and the other sort of soul that in the opposite direction, good must be, and ever has been, triumphant over its contrary.

- Now in all we have said we have been pleading the cause of that justice which takes vengeance on the wicked. And as to the point under consideration, we can have no doubt left that we are to account the good man wise. But as concerns this wisdom of which we have been so long in quest, we must see whether after all we cannot discover it in some form of education or in some science such that defective acquaintance with it leaves us ignorant of our just rights, so long as the deficiency subsists. Well, I think we shall make the discovery, and I must tell you what it is. I have sought the vision of it in the heights and in the depths and will now do my best to set it clearly before you. The source of the trouble, as I am strongly persuaded by our recent discussion, is that our practice in the very chief point of virtue is amiss. There is no human virtue—and we must never let ourselves be argued out of this belief—greater than *piety*, and piety, I must tell you, thanks to our incredible folly, has failed to show itself in the most nobly endowed natures. By the most nobly endowed I mean those which are most difficult of production, but once produced, of the highest service to mankind. A soul which admits alike, in due measure, and with an easy grace, influences which make for the slow and sure, and for its opposite, the impetuous, may be expected to be debonair, to adore valor, to be readily led to sobriety of life; what is more than all, if it combines capacity to learn and retentive memory with these gifts we may expect it to take such delight in all this that it will prove a lover of learning. Though it is hard for such characters to make their appearance, when they do appear and get the nurture and education they require, they will be able to keep the more numerous and worsor sort in all due subjection, ordering all their relations with the gods, in all matters of sacrifices and purity toward God and man rightly and reasonably, in thought, word, and deed; men will thus be no formal hypocrites but true worshipers of virtue, and this, of course, is the point of chief concern for the whole community. This section of society, then, as I say, has a native supreme authority and is equal to the learning of the highest and noblest truth, if there were but one to teach them. But there will be no such teacher unless God leads the way, or even if there were, but he did his work amiss, 'twould be better not to go to school to him. Yet it follows with necessity from all we have said that I for one must enjoin the learning of these lessons on what we have described as the noblest natures. So we

must do what we can to enumerate the subjects to be studied and explain their nature and the methods to be employed, to the best of the abilities of myself who am to speak and you who are to listen—to say, in fact, how a man should learn piety, and in what it consists. It may seem odd to the ear, but the name *we* give to the study is one which will surprise a person unfamiliar with the subject—*astronomy*. Are you unaware that the true astronomer must be a man of great wisdom? I do not mean an astronomer of the type of Hesiod and his like, a man who has just observed settings and risings, but one who has studied seven out of the eight orbits, as each of them completes its circuit in a fashion not easy of comprehension by any capacity not endowed with admirable abilities. I have already touched on this and shall now proceed, as I say, to explain how and on what lines the study is to be pursued. And I may begin the statement thus.

The moon gets round her circuit most rapidly, bringing with her the month, and the full moon as a first period. Next we must observe the sun, his constant turnings throughout his circuit, and his companions. Not to be perpetually repeating ourselves about the same subjects, the rest of the orbits which we enumerated above are difficult to comprehend, and to train capacities which can deal with them we shall have to spend a great deal of labor on providing preliminary teaching and training in boyhood and youth. Hence there will be a need for several sciences. The first and most important of them is likewise that which treats of pure numbers—not numbers concentered in bodies, but the whole generation of the series of odd and even, and the effects which it contributes to the nature of things. When all this has been mastered, next in order comes what is called by the very ludicrous name *mensuration* (γεωμετρία), but is really a manifest assimilation to one another of numbers which are naturally dissimilar, effected by reference to areas. Now to a man who can comprehend this, it will be plain that this is no mere feat of human skill, but a miracle of God's contrivance. Next, numbers raised to the third power and thus presenting an analogy with three-dimensional things. Here again he assimilates the dissimilar by a second science, which those who hit on the discovery have named *stereometry* [the gauging of solids], a device of God's contriving which breeds amazement in those who fix their gaze on it and consider how universal nature molds form and type by the constant revolution of potency and its converse about the double in the various progressions. The first example of this ratio of the double in the advancing number series is that of 1 to 2; double of this is the ratio of their second powers [1:4], and double of this again the advance to the solid and tangible, as we proceed from 1 to 8 [1, 2, 2<sup>2</sup>, 2<sup>3</sup>]; the advance to a mean of the double, that mean which is equidistant from lesser and greater term [the arithmetical], or the other mean [the harmonic] which exceeds the one term and is itself exceeded by the other by the same fraction of the respective terms—

- b these ratios of 3:2 and 4:3 will be found as means between 6 and 12—why, in the potency of the mean between these terms [6, 12], with its double sense, we have a gift from the blessed choir of the Muses to which mankind owes the boon of the play of consonance and measure, with all they contribute to rhythm and melody.

So much, then, for our program as a whole. But to crown it all, we must go on to the generation of things divine, the fairest and most heavenly spectacle God has vouchsafed to the eye of man. And, believe me, no man will ever behold that spectacle without the studies

c we have described, and so be able to boast that he has won it by an easy route. Moreover, in all our sessions for study we are to relate the single fact to its species; there are questions to be asked and erroneous theses to be refuted. We may truly say that this is ever the prime test, and the best a man can have; as for tests that profess to be such but are not, there is no labor so fruitlessly thrown away as that spent on them. We must also grasp the accuracy of the periodic times

d and the precision with which they complete the various celestial motions, and this is where a believer in our doctrine that soul is both older and more divine than body will appreciate the beauty and justice of the saying that 'all things are full of gods' and that we have never been left unheeded by the forgetfulness or carelessness of the higher powers. There is one observation to be made about all such matters. If a man grasps the several questions aright, the benefit accruing to him who thus learns his lesson in the proper way is great indeed; if he cannot, 'twill ever be the better course to call on God. Now the proper way is this—so much explanation is unavoidable. To the man who

e pursues his studies in the proper way, all geometric constructions, all systems of numbers, all duly constituted melodic progressions, the single ordered scheme of all celestial revolutions, should disclose themselves, and disclose themselves they will, if, as I say, a man pursues his studies aright with his mind's eye fixed on their single end. As

992 such a man reflects, he will receive the revelation of a single bond of natural interconnection between all these problems. If such matters are handled in any other spirit, a man, as I am saying, will need to invoke his luck. We may rest assured that without these qualifications the happy will not make their appearance in any society; this is the method, this the pabulum, these the studies demanded; hard or easy, this is the road we must tread. And piety itself forbids us to disregard

b the gods, now that the glad news of them all has been duly revealed. Him who has mastered all these lessons I account in truth as wisest; of him I dare affirm—'tis a fancy, and yet I am in earnest with it too—that such a one, when death has put the end to his allotted term, if he may be said still to endure beyond death, will no longer be subject, as he is now, to a multitude of perceptions; he will have but one allotted portion, even as he has reduced the manifold within himself to unity, and in it will be happy, wise, blessed, all in one. Whether the life of

bliss has 'islands' or continents for its scene, such will be his happy c  
portion forevermore, and further, whether the life he has spent here in  
such pursuits be that of public man or private citizen, the reward from  
the gods will be the same and no other. Thus we are brought back once  
more to the same very truth with which we began; rightly did we say  
that perfect bliss and happiness are impossible for all men save a few.  
'Tis only they who are at once of godlike parts, sober of soul, endowed  
by nature with all other virtue, and have moreover mastered the whole  
contents of the blissful science—what that is, we have explained—'tis d  
they, and they only who have received in full possession all deity has  
to give. And therefore we declare by our personal voices and enact it in  
our public law that those who have labored in these studies, when they  
reach advanced age at last, shall be invested with our chief magis-  
tracies, that others shall follow their leading in reverence of speech  
toward all gods of either sex, and that we shall do very right, now that  
we fully understand what this wisdom is and have put its claim to a  
proper test, to call upon all the members of our nocturnal council to e  
take their part in it.

# GREATER HIPPIAS

281 SOCRATES: It is Hippias, the beautiful and wise! What a long while it is since you came to anchor at Athens!

HIPPIAS: I have had no time to spare, Socrates. Elis looks on me as her best judge and reporter of anything said by other governments, and so I am always the first choice among her citizens to be her ambassador when she has business to settle with another state. I have  
b gone on many such missions to different states, but to Lacedaemon most often, and on the most numerous and important subjects. That is the answer to your question why I am so seldom in this part of the world.

SOCRATES: Still, Hippias, what a thing it is to be a complete man, as well as a wise one! As a private person, your talents earn you a great deal of money from the young, and in return you confer on  
c them even greater benefits; in public affairs, again, you can do good work for your country, which is the way to avoid contempt and win popular esteem. Yet I wonder for what possible reason the great figures of the past who are famous for their wisdom—Pittacus and Bias and the school of Thales of Miletus, and others nearer our own time, down to Anaxagoras—why all or most of them clearly made a habit of taking no active part in politics.

d HIPPIAS: What reason do you suppose except incapacity, the lack of the power to carry their wisdom into both regions of life, the public and the private?

SOCRATES: Then we should be right in saying that just as other arts have advanced until the craftsmen of the past compare ill with those of today, so your art, that of the Sophist, has advanced until the old philosophers cannot stand comparison with you and your fellows?

HIPPIAS: Perfectly right.

SOCRATES: So if Bias were to come to life again for our bene-  
282 fit, by your standard he would be a laughingstock, just as according to

---

From *The Dialogues of Plato*, translated with analyses and introductions by B. Jowett (4th edn., revised by order of the Jowett Copyright Trustees, Oxford, 1953). A few minor corrections have been made, as suggested by Phillip De Lacy (*Journal of Classical Philology*, XLIX, October 1954).

the sculptors Daedalus would look a fool if he were to be born now and produce the kind of works that gave him his reputation?

HIPPIAS: Exactly, Socrates. Nevertheless, I myself habitually praise our predecessors of former generations before and above contemporaries, for while I guard myself against the envy of the living, I fear the wrath of the dead.

SOCRATES: Very finely said, Hippias, both in sentiment and in style, and I can support with my own testimony your statement that your art really has made progress toward combining public business with private pursuits. The eminent Gorgias, the Sophist of Leontini, came here from his home on an official mission, selected because he was the ablest statesman of his city. By general consent he spoke most eloquently before the Assembly, and in his private capacity, by giving demonstrations to the young and associating with them, he earned and took away with him a large sum of Athenian money. Or again, there is our distinguished friend Prodicus. He has often been at Athens on public business from Ceos; the last time he came on such a mission, quite lately, he was much admired for his eloquence before the Council, and also as a private person he made an astonishing amount of money by giving demonstrations to the young and admitting them to his society. None of those great men of the past ever saw fit to charge money for his wisdom, or to give demonstrations of it to miscellaneous audiences; they were too simple ever to realize the enormous importance of money. Either of the two I have mentioned has earned more from his wisdom than any other craftsman from his art, whatever it may have been, and so did Protagoras before them.

HIPPIAS: Socrates, you know nothing of the real charms of all this business. If you were told how much I have earned, you would be astounded. To take one case only—I went to Sicily once while Protagoras was living there. He had a great reputation and was a far older man than I, and yet in a short time I made more than one hundred and fifty minas. Why, in one place alone, Inycus, a very small place, I took more than twenty minas. When I returned home with the money I gave it to my father, reducing him and his fellow citizens to a condition of stupefied amazement. And I feel pretty sure that I have made more money than any other two Sophists you like to mention, put together.

SOCRATES: What honorable, what powerful testimony to your own wisdom and that of our contemporaries, and to their great superiority to the men of the past! According to your account, earlier thinkers were sunk in ignorance; the fate of Anaxagoras is said to have been the exact opposite to yours, for when he inherited a large fortune, he neglected it and lost it all—so mindless was his wisdom—and the same kind of story is told of other great figures of former generations. Your success, I admit, is fine evidence of the wisdom of the present generation as compared with their predecessors, and it is a

popular sentiment that the wise man must above all be wise for himself; of such wisdom the criterion is in the end the ability to make the most money. Well, so much for that. Now tell me, in which of all the cities you visit have you made the most money? In Lacedaemon, I take it, which you have visited most often?

HIPPIAS: Certainly not, Socrates.

SOCRATES: Really? Did you make least?

c HIPPIAS: I have never made money there at all.

SOCRATES: What a truly extraordinary thing! Then is not your wisdom fitted to advance in virtue her pupils and associates?

HIPPIAS: Very much so.

SOCRATES: Then you had the capacity to improve the sons of the Inycites, but not the sons of the Spartans?

HIPPIAS: No, that is quite wrong.

SOCRATES: Well then, is it that Sicilians desire to become better men, and Lacedaemonians do not?

d HIPPIAS: Undoubtedly, Socrates, Lacedaemonians also desire it.

SOCRATES: Was it then from want of money that they kept away from your society?

HIPPIAS: Not at all, they have plenty.

SOCRATES: If then they desired it, and had money, and you were able to confer on them the greatest of benefits, what can be the reason why they did not send you away loaded up with cash? A thought strikes me—might it be that the Lacedaemonians would educate their own children better than you would? Is this to be our line, Hippias, and do you agree?

e HIPPIAS: Not in the least.

SOCRATES: Then you were unable to convince the Spartan youths that in your society they would make more progress toward virtue than in the society of their own people? Or, alternatively, could you not persuade their fathers that, if they had any solicitude for their sons, they ought to hand them over to you, rather than keep them in their own care? I cannot imagine that they grudged their own children the attainment of the highest virtue possible for them.

HIPPIAS: No, I do not suppose they begrudged it.

SOCRATES: But Lacedaemon has good laws.

HIPPIAS: Certainly.

284 SOCRATES: And in states with good laws, virtue is held in the highest honor?

HIPPIAS: Quite so.

SOCRATES: And you know better than anyone else how to impart it to another?

HIPPIAS: Emphatically.

SOCRATES: Well now, is not Thessaly the part of Greece where the man who best knows how to impart horsemanship would be most  
b highly esteemed, and would make most money—and would not the

same apply to any foreign country where that art is zealously pursued?

HIPPIAS: I suppose so.

SOCRATES: Then is not Lacedaemon, or any other Greek state that has good laws, the place where the man who can impart the knowledge most valuable for the promotion of virtue would be most highly esteemed, and, if he chose, would make the most money? Do you think that Sicily and Inycus are better? Are we to believe this, Hippias? If you say so, we must believe it.

HIPPIAS: The ancestral tradition of the Lacedaemonians forbids them to change their laws, or to give their sons an education different from the customary.

SOCRATES: What! Does the ancestral tradition of the Lacedaemonians require them to do wrong instead of right? c

HIPPIAS: I should not say that myself, Socrates.

SOCRATES: Will they not do right by giving their young men the best education in their power?

HIPPIAS: Certainly, but it is illegal for them to give them a foreign kind of education. You can be certain that if anyone had ever made money there by education, I should have made far the most, for they listen to me with enjoyment and applause. But, as I have said, it is not the law.

SOCRATES: Would you say that law is an injury to the state, d or a benefit?

HIPPIAS: It is made, I take it, with a view to benefit, but sometimes it does positive harm if it is ill made.

SOCRATES: But surely the legislators make the law on the assumption that it is a principal good of the state, and that without good a well-ordered state is impossible?

HIPPIAS: True.

SOCRATES: When, therefore, would-be legislators miss the good, they have missed law and legality. What do you say?

HIPPIAS: Speaking precisely, Socrates, that is so, but mankind e are not accustomed to put it that way.

SOCRATES: The men who know, or those who do not?

HIPPIAS: The multitude.

SOCRATES: This multitude, is it composed of men who know the truth?

HIPPIAS: Certainly not.

SOCRATES: But at any rate those who know, I suppose, hold that the more beneficial is in truth more lawful for all men than the less beneficial, or do you not agree?

HIPPIAS: Yes, I agree. It is so, in truth.

SOCRATES: Then the real fact is as those who know hold it to be?

HIPPIAS: Certainly.

285 SOCRATES: You maintain that it is more beneficial for Lacedaemonians to be brought up in your education, a foreign one, than in the native form?

HIPPIAS: Yes, and I am right.

SOCRATES: And that what is more beneficial is more lawful—you maintain this also, Hippias?

HIPPIAS: I said so.

SOCRATES: Then on your argument it is more lawful for the sons of Lacedaemonians to be educated by Hippias, and less lawful for them to be educated by their fathers, if they will in fact get more benefit from you?

HIPPIAS: They certainly will get benefit from me.

b SOCRATES: Then Lacedaemonians break the law by not entrusting their sons to you, and paying you handsomely for it.

HIPPIAS: I agree. As you appear to be arguing my own case, I do not see why I should go into opposition.

SOCRATES: Then, my friend, the Lacedaemonians prove to be lawbreakers, and lawbreakers in the most vital matters—the very people who are reputed to be the most law-abiding. In heaven's name, Hippias, on what kind of subject do they listen to you with such pleasure and applause? Clearly it must be the one on which you are a great  
c authority, the stars and the celestial phenomena?

HIPPIAS: Not in the least. They won't tolerate it.

SOCRATES: Then they like to hear about geometry?

HIPPIAS: Not at all. Many of them do not even know how to count, so to speak.

SOCRATES: Then they must be a far from appreciative audience when you address them on arithmetic?

HIPPIAS: Very far indeed.

d SOCRATES: Well then, what about the problems which you of all men know best how to analyze—the properties of letters and syllables and rhythms and harmonies?

HIPPIAS: My dear sir! Harmonies and letters indeed!

SOCRATES: What then are the subjects on which they listen to you with pleasure and applause? Pray enlighten me; I cannot see.

HIPPIAS: They delight in the genealogies of heroes and of men and in stories of the foundations of cities in olden times, and, to put it briefly, in all forms of antiquarian lore, so that because of them I  
e have been compelled to acquire a thorough comprehension and mastery of all that branch of learning.

SOCRATES: Bless my soul, you have certainly been lucky that the Lacedaemonians do not want to hear a recital of the list of our archons, from Solon downward; you would have had some trouble to learn it.

HIPPIAS: Why? I can repeat fifty names after hearing them once.

SOCRATES: I am sorry, I quite forgot about your mnemonic art. Now I understand how naturally the Lacedaemonians enjoy your multifarious knowledge, and make use of you as children do of old women, to tell them agreeable stories. 286

HIPPIAS: Yes, indeed, and, what is more, Socrates, I have lately gained much credit there by setting forth in detail the honorable and beautiful practices to which a young man ought to devote himself. On that subject I have composed a discourse, a beautiful work distinguished by a fine style among its other merits. Its setting and its exordium are like this. After the fall of Troy, Neoptolemus asks Nestor what are the honorable and beautiful practices to which a man should devote himself during his youth in order to win the highest distinction. Then it is Nestor's turn to speak, and he propounds to him a great number of excellent rules of life. This discourse I delivered in Sparta, and at the request of Eudicus, the son of Apemantus, am to deliver it here, as well as much else worth listening to, in the schoolroom of Phidostratus, the day after tomorrow. Please be sure to come yourself, and bring with you other good critics of such dissertations. b c

SOCRATES: Certainly, Hippias, all being well. But now answer me a trifling question on the subject; you have reminded me of it in the nick of time. Quite lately, my noble friend, when I was condemning as ugly some things in certain compositions, and praising others as beautiful, somebody threw me into confusion by interrogating me in a most offensive manner, rather to this effect. You, Socrates, pray how do *you* know what things are beautiful and what are ugly? Come now, can you tell me what beauty is? d

In my incompetence I was confounded, and could find no proper answer to give him; so, leaving the company, I was filled with anger and reproaches against myself, and promised myself that the first time I met with one of you wise men, I would listen to him and learn, and when I had mastered my lesson thoroughly, I would go back to my questioner and join battle with him again. So you see that you have come at a beautifully appropriate moment, and I ask you to teach me properly what is beauty by itself, answering my questions with the utmost precision you can attain. I do not want to be made to look a fool a second time, by another cross-examination. Of course you know perfectly, and it is only a scrap of your vast learning. e

HIPPIAS: A scrap indeed, Socrates, and of no value, I may add.

SOCRATES: Then I shall acquire it without trouble, and nobody will confound me again.

HIPPIAS: Nobody at all, if I am not a bungling amateur in my profession. 287

SOCRATES: Bravo, Hippias, how splendid, if we do defeat the adversary! Will it be a nuisance to you if I act as his understudy and fasten on your answers with my objections, so that you may put me through some vigorous practice? I have had a fair amount of

experience of his objections. If, therefore, it makes no difference to you, I should like to play the critic. In this way I shall get a firmer grasp of what I learn.

- b HIPPIAS: Certainly, put your criticisms. As I said just now, it is not a big question. I might teach you to answer much more difficult ones with such cogency that no human being would be able to confute you.

- c SOCRATES: How magnificent! Well now, on your invitation let me assume his role to the best of my ability, and try to interrogate you. If you were to deliver to him the discourse to which you refer—the discourse about beautiful practices—he would hear you to the end, and when you stopped, the very first question he would put would be about beauty—it is a kind of habit with him. He would say, Stranger from Elis, is it not by justice that the just are just? Would you answer, Hippias, as if he were asking the question?

HIPPIAS: I shall answer that it is by justice.

SOCRATES: Then this, namely justice, is definitely something.

HIPPIAS: Certainly.

- SOCRATES: Again, it is by wisdom that the wise are wise, and by goodness that all things are good?

HIPPIAS: Undoubtedly.

- SOCRATES: That is, by really existent things—one could scarcely say, by things which have no real existence?

HIPPIAS: Quite so.

- SOCRATES: Then are not all beautiful things beautiful by beauty?

- d HIPPIAS: Yes, by beauty.

SOCRATES: Which has a real existence?

HIPPIAS: Yes, what else do you think?

- SOCRATES: Then tell me, stranger, he would say, what is this thing, beauty?

HIPPIAS: By putting this question he just wants to find out what is beautiful?

- SOCRATES: I do not think so, Hippias. He wants to know what is beauty—the beautiful.

HIPPIAS: What is the difference between them?

SOCRATES: You think there is none?

HIPPIAS: There is no difference.

- e SOCRATES: Obviously you know best. Still, my good sir, look at it again; he asks you not what is beautiful, but what is beauty.

HIPPIAS: I understand, my good sir, and I will indeed tell him what is beauty, defying anyone to refute me. I assure you, Socrates, if I must speak the truth, that a beautiful maiden is a beauty.

SOCRATES: Upon my word, Hippias, a beautiful answer—very creditable. Then if I give that answer I shall have answered the ques-

tion, and answered it correctly, and I can defy anyone to refute me? 288

HIPPIAS: How can you be refuted when everyone thinks the same and everyone who hears you will testify that you are right?

SOCRATES: Quite so. Now, Hippias, let me recapitulate to myself what you say. That man will question me something like this. Come, Socrates, give me an answer. Returning to your examples of beauty, tell me what must beauty by itself be in order to explain why we apply the word to them?

And you want me to reply that if a beautiful maiden is a beauty, we have found why they are entitled to that name?

HIPPIAS: Do you imagine that he will then try to refute you by proving that you have not mentioned a beautiful thing, or that if he does attempt it he will not look a fool?

SOCRATES: I am sure, my worthy friend, that he will try to refute me. The event will show whether the attempt will make him look a fool. But allow me to tell you what he will say.

HIPPIAS: Go on, then.

SOCRATES: He will say, How delicious you are, Socrates! Is not a beautiful mare a beauty—the god himself praised mares in his oracle?

How shall we reply, Hippias? Must we not say that the mare, too, or at least a beautiful one, is a beauty? We can hardly be so audacious as to deny that beauty is beautiful.

HIPPIAS: Quite right. I may add that the god, too, spoke quite correctly; the mares we breed in our country are very beautiful.

SOCRATES: He will now say, Very well, but what about a beautiful lyre? Is that not a beauty? Are we to agree, Hippias?

HIPPIAS: Yes.

SOCRATES: Judging from his character, I feel pretty sure that he will then go on, What about a beautiful pot, my dear sir? Is not that a beauty?

HIPPIAS: Who is this fellow? What a boor, to dare to introduce such vulgar examples into a grave discussion!

SOCRATES: He is that sort of person, Hippias—not at all refined, a common fellow caring for nothing but the truth. Still, he must have his answer and I give my own first. If the pot is the work of a good potter, smooth and round and properly fired, like some very beautiful pots I have seen, the two-handled ones that hold six *choes*—if he were to ask his question about a pot like that, we should have to admit that it is beautiful. How could we assert that what is a beautiful thing is not a beauty?

HIPPIAS: No, we could not.

SOCRATES: Then even a beautiful pot, he will say, is a beauty? Please answer.

HIPPIAS: Yes, I suppose so. Even this utensil is beautiful

when it is beautifully made, but generically it does not deserve to be judged beautiful in comparison with a mare or a maiden, or all the other things of beauty.

- 289 **SOCRATES**: Very well. I understand, Hippias, that when he puts these questions I should answer, Sir, you do not grasp the truth of Heraclitus' saying that the most beautiful of apes is ugly compared with the human race, and the most beautiful of pots is ugly when grouped with maidens—so says Hippias the wise. That is correct?

**HIPPIAS**: Quite the right answer.

- SOCRATES**: Now mark my words, I am sure that he will then say, Yes, Socrates, but if maidens are grouped with gods, will not the result be the same as when pots were grouped with maidens? Will not the most beautiful maiden appear ugly? Does not Heraclitus, whom you adduce, employ these very words, 'The wisest of men, when compared to a god, will appear but an ape in wisdom and beauty and all else?'

Shall we admit, Hippias, that the most beautiful maiden is ugly in comparison with the race of gods?

**HIPPIAS**: That no one can deny, Socrates.

- c **SOCRATES**: If then we make this admission, he will laugh and say, Socrates, do you remember what you were asked?

Yes, I shall answer. I was asked what beauty by itself is.

He will rejoin, Then when you are asked for beauty, do you offer in reply that which you yourself acknowledge to be no more beautiful than ugly?

Apparently, I shall say. What do you advise me to reply?

**HIPPIAS**: As you do reply, for of course he will be right in saying that in comparison with gods the human race is not beautiful.

- d **SOCRATES**: He will continue, If I had asked you at the beginning what is both beautiful and ugly, and you had answered me as now, would not your answer have been correct? But do you still think that absolute beauty, by which all other things are ordered in loveliness, and appear beautiful when its form is added—do you think that that is a maiden, or a mare, or a lyre?

- e **HIPPIAS**: But still, Socrates, if this is what he wants, it is the easiest thing in the world to tell him what is that beauty which orders all other things in loveliness and makes them appear beautiful when it is added to them. The fellow must be a perfect fool, knowing nothing about things of beauty. If you reply to him that this about which he is asking, beauty, is nothing else than gold, he will be at a loss and will not attempt to refute you. For I suppose we all know that if anything has gold added to it, it will appear beautiful when so adorned even though it appeared ugly before.

**SOCRATES**: You do not know what a ruffian he is. He accepts nothing without making difficulties.

HIPPIAS: What do you mean? He must accept an accurate statement, on pain of ridicule.

290

SOCRATES: Well, my friend, this answer of yours he will not only refuse to accept, but he will even scoff at me viciously, saying, You blockhead! Do you reckon Phidias a bad artist?

I suppose I shall answer, Not in the least.

HIPPIAS: Quite right.

SOCRATES: Yes, so I think. But when I agree that Phidias is a good artist, he will say, Then do you fancy that Phidias was ignorant of this beauty of which you speak?

b

I shall reply, What is the point? And he will rejoin, The point is that he did not give his Athena eyes of gold or use gold for the rest of her face, or for her hands, or for her feet, as he would have done if supreme beauty could be given to them only by the use of gold; he made them of ivory. Clearly he made this mistake through ignorance, not knowing that it is really gold that confers beauty on everything to which it is added.

How are we to answer him then, Hippias?

HIPPIAS: Quite easy. We shall reply that Phidias was artistically right, for ivory too is beautiful, I suppose.

SOCRATES: Why then, he will say, did he not also make the eyeballs of ivory? He made them of stone, finding out stone as like as possible to ivory. Or is the stone that is beautiful itself a beauty?

Shall we say that it is?

HIPPIAS: Yes—it is beautiful, at least, whenever it is appropriate.

SOCRATES: But ugly when not appropriate? Am I to agree?

HIPPIAS: Yes—when not appropriate.

SOCRATES: He will go on, Well then, O man of wisdom, do not a ivory and gold cause a thing to appear beautiful when they are appropriate, and ugly when they are not?

Shall we deny it or admit that he is right?

HIPPIAS: We shall at any rate admit that whatever is appropriate to a particular thing makes that thing beautiful.

SOCRATES: He will continue, Then when a man boils the pot of which we spoke, the beautiful pot full of beautiful soup, which is the more appropriate to it—a ladle of gold or a ladle of figwood?

HIPPIAS: Really, Socrates, what a creature! Please tell me who he is.

SOCRATES: You would not know him if I told you his name.

e

HIPPIAS: I know enough about him at this moment to know that he is a dolt.

SOCRATES: He is a terrible nuisance, Hippias. Still, how shall we answer? Which of the two ladles are we to choose as appropriate to the soup and the pot? Obviously the one of figwood? For it gives the

soup a better smell, I suppose, and moreover, my friend, it would not break our pot and spill the soup and put out the fire and deprive the guests at our dinner of a truly noble dish, whereas that golden ladle would do all this. And therefore, if you do not object, I think we

291 should say that the wooden ladle is more appropriate than the golden.

HIPPIAS: Yes, it is more appropriate, but I should not myself go on talking with the fellow while he asks such questions.

SOCRATES: Quite right, my friend. It would not be appropriate for you to be contaminated by such language, you who are so well dressed, and wear such good shoes, and are renowned for wisdom throughout the Greek world. But to me it does not matter if I am

b mixed up with that fellow; so fortify me with your instruction, and for my sake answer the questions.

He will say, If indeed the wooden ladle is more appropriate than the golden, will it not also be more beautiful, since you, Socrates, have admitted that the appropriate is more beautiful than the inappropriate?

Can we then avoid the admission that the wooden ladle is more beautiful than the golden?

HIPPIAS: Would you like me to give you a definition of beauty by which you can save yourself from prolonged discussion?

c SOCRATES: Certainly, but first please tell me which of the two ladles I have just mentioned is appropriate, and the more beautiful?

HIPPIAS: Well, if you like, answer him that it is the one made of figwood.

SOCRATES: Say now what a moment ago you were proposing to say, for following your answer, if I take the line that beauty is gold, I shall apparently have to face the fact that gold is no more beautiful than figwood. Now, once more, what according to you is beauty?

d HIPPIAS: You shall have your answer. You are looking, I think, for a reply ascribing to beauty such a nature that it will never appear ugly to anyone anywhere?

SOCRATES: Exactly. You catch my meaning admirably.

HIPPIAS: Now please attend. If anyone can find any fault with what I say, I give you full leave to call me an imbecile.

SOCRATES: I am on tenterhooks.

HIPPIAS: Then I maintain that always, everywhere, and for every man it is most beautiful to be rich, healthy, honored by the Greeks, to reach old age and, after burying his parents nobly, himself

e to be borne to the tomb with solemn ceremony by his own children.

SOCRATES: Bravo, bravo, Hippias, those are words wonderful, sublime, worthy of you, and you have my grateful admiration for your kindness in bringing all your ability to my assistance. Still, our shafts are not hitting our man, and I warn you that he will now deride us more than ever.

HIPPIAS: A poor sort of derision, Socrates, for in deriding us

when he can find no objection to our view, he will be deriding himself and will be derided by the company.

292

SOCRATES: Perhaps so. Perhaps, however, when he has the answer you suggest he may not be content just to laugh at me. So I forbode.

HIPPIAS: What do you mean?

SOCRATES: If he happens to have a stick with him, he will attempt to get at me with it very forcibly, unless I escape by running away.

HIPPIAS: What? Is the fellow somehow your lord and master? Surely he will be arrested and punished for such behavior? Or has Athens no system of justice, that she allows her citizens to commit b wrongful assaults on one another?

SOCRATES: She forbids it absolutely.

HIPPIAS: Then he will be punished for his wrongful assaults.

SOCRATES: I do not think so, Hippias—emphatically not, if that were the answer I gave him. I think his assault would be justified.

HIPPIAS: Since that is your own opinion, well, I think so too.

SOCRATES: But may I go on to explain why, in my own opinion, that answer would justify an assault upon me? Or will you too assault me without trial, refusing me a hearing?

HIPPIAS: No, such a refusal would be monstrous. But what c have you to say?

SOCRATES: I will continue on the same plan as a moment ago, pretending to be that fellow but not using to you the kind of offensive and grotesque words he would to me. He will say, I feel sure, Do you not think, Socrates, that you deserve a thrashing after chanting so badly out of tune a dithyramb so long and so irrelevant to the question you were asked?

What do you mean? I shall say.

What do I mean? Are you incapable of remembering that I asked about beauty itself, that which gives the property of being beautiful to d everything to which it is added—to stone and wood, and man, and god, and every action and every branch of learning? I am asking, sir, what is beauty itself, and for all my shouting I cannot make you hear me. You might be a stone sitting beside me, a real millstone with neither ears nor brain.

Would not you, Hippias, be indignant if in terror I were to answer him, But this is what Hippias declared beauty to be, although I e kept on asking him, exactly as you do me, for that which is beautiful always and for everyone.

Frankly, will not that answer make you indignant?

HIPPIAS: I am quite sure, Socrates, that what I specified is beautiful to all, and will so appear to all.

SOCRATES: He will reply, And will be so in the future? For beauty, I take it, is always beautiful?

HIPPIAS: Certainly.

SOCRATES: And it was beautiful, too, in the past?

HIPPIAS: It was.

SOCRATES: Then he will go on, So this stranger from Elis asserted that it would have been beautiful for Achilles to be buried after his parents, and similarly for his grandfather Aeacus, and for the  
293 other children of gods, and for the gods themselves?

HIPPIAS: What is this? Tell him to go to—glory! These questions of his are irreverent, Socrates.

SOCRATES: Surely it is not exactly irreverent to say that these things are so, when someone else has asked the question?

HIPPIAS: Well, presumably not.

SOCRATES: Presumably he will then say, It is you who affirm that it is beautiful always and for everyone to bury his parents and be buried by his children. Does not 'everyone' include Heracles and all the others we mentioned a moment ago?

HIPPIAS: I did not mean to include the gods.

b SOCRATES: Nor the heroes either, apparently.

HIPPIAS: Not if they were the children of gods.

SOCRATES: But if they were not?

HIPPIAS: Certainly.

SOCRATES: Then from your own argument, it now appears that the fate which is terrible and impious and shameful for Tantalus and Dardanus and Zethus is beautiful for Pelops and the other heroes of similar parentage?

HIPPIAS: I think so.

SOCRATES: He will go on, Then you think, contrary to what you said just now, that to bury one's parents and be buried by one's children is sometimes, and for some persons, shameful, and it looks more  
c than ever impossible that it should become, or be, beautiful to everyone. So this definition meets the same fate as those we discussed earlier—the maiden and the pot—it is an even more ludicrous failure, offering us that which is beautiful to some men, and not to others. And to this very day, Socrates, you cannot answer the question you were asked—beauty, what is it?

These and other like reproaches he will hurl at me with some justice, if I give him this answer. For the most part he talks to me  
d something after this fashion, but sometimes, as if in pity for my inexperience and lack of education, he himself proffers a question, and asks whether I think beauty is such and such, or it may be on some other subject—whatever he happens to be thinking about, and we are discussing.

HIPPIAS: What do you mean, Socrates?

SOCRATES: I will explain. My worthy Socrates, he says, don't  
e give answers of that kind, and in that way—they are silly, easily torn to rags—but consider this suggestion. In one of our answers a little

while ago we got hold of, and expressed, the idea that gold is beautiful or not beautiful according as it is placed in an appropriate setting, and similarly with everything else to which this qualification can be added. Now consider this appropriateness, and reflect on the general nature of the appropriate, and see whether it might not be beauty.

Myself, I am in the habit of invariably agreeing to such surmises, for I can never think of anything to say, but you, do you think that the appropriate is beautiful?

HIPPIAS: Certainly, Socrates.

SOCRATES: Let us consider, and make sure that there is no deception.

HIPPIAS: So we ought.

SOCRATES: Come on then. Do we define the appropriate as that which by its presence causes the things in which it becomes present to *appear* beautiful, or causes them to *be* beautiful, or neither? 294

HIPPIAS: In my own opinion, that which causes things to appear beautiful. For example, a man may be a figure of fun, but when he wears clothes or shoes that fit well he does seem a finer man.

SOCRATES: But then if the appropriate really makes things appear more beautiful than they are, the appropriate is a kind of fraud in relation to beauty, and would not be that for which we are looking, would it? We were looking, I think, for that by which all beautiful things are beautiful, corresponding to that by which all great things are great, namely, excess—by this all great things are great, and great they must certainly be if they exceed, even though they do not appear so. Similarly we ask about beauty, by which all beautiful things are beautiful whether they appear so or not—what can that be? It cannot be the appropriate, for on your own view this causes things to appear more beautiful than they are, and does not leave them to appear such as they are in reality. We ought to take that which causes things to be beautiful, as I said just now, whether they appear so or not, and try to define it—this is what we are looking for, if we are looking for beauty. b

HIPPIAS: But, Socrates, the appropriate causes things both to be and to appear beautiful, when it is present.

SOCRATES: Then it is impossible for things that are in fact beautiful not to appear beautiful, since by hypothesis that which makes them appear beautiful is present in them?

HIPPIAS: It is impossible.

SOCRATES: Then it is our conclusion, Hippias, that all established usages and all practices which are in reality beautiful are regarded as beautiful by all men, and always appear so to them? Or do we think the exact opposite, that ignorance of them is prevalent, and that these are the chief of all objects of contention and fighting, both between individuals and between states? d

HIPPIAS: The latter, I think. Ignorance prevails.

SOCRATES: It would not, if the appearance of beauty were but added to them, and it would be added if the appropriate were beautiful and moreover caused them to *appear* as well as *be* beautiful. It follows that if the appropriate is that which causes things to be in fact beautiful, then it would be that beauty for which we are looking, but still it would not be that which causes them to appear beautiful. If, e on the other hand, that which causes things to appear beautiful is the appropriate, it is not that beauty for which we are looking. That for which we are looking makes things beautiful, but the same cause never could make things both appear and be either beautiful or anything else. We have then these alternatives—is the appropriate that which causes things to appear beautiful, or that which causes them to be so?

HIPPIAS: To appear, I think.

SOCRATES: Oh dear! Then the chance of finding out what the beautiful really is has slipped through our fingers and vanished, since the appropriate has proved to be something other than beautiful.

HIPPIAS: Upon my word, Socrates, I should never have thought it!

295 SOCRATES: But still, my friend, do not let us give up yet. I have still a sort of hope that the nature of beauty will reveal itself.

HIPPIAS: Yes indeed, it is not hard to discover. I am sure that if I were to retire into solitude for a little while and reflect by myself, I could define it for you with superlative precision.

SOCRATES: Hippias, Hippias, don't boast. You know what trouble it has already given us, and I am afraid it may get angry with us and run away more resolutely than ever. But what nonsense I am talking, b for you, I suppose, will easily discover it when once you are alone. Still, I beg you most earnestly to discover it with me here, or, if you please, let us look for it together as we are now doing. If we find it, well and good; if not, I imagine I shall resign myself to my fate, and you will go away and discover it easily. Of course, if we find it now, you will not be annoyed by inquiries from me about the nature of your private discovery. So please look at your conception of beauty by itself. c I define it as—pray give me your whole attention and stop me if I talk nonsense—well, let us assume that whatever is useful is beautiful. My ground for the proposition is as follows. We do not say that eyes are beautiful when they appear to be without the faculty of sight; we do when they have that faculty and so are useful for seeing. Is that correct?

HIPPIAS: Yes.

SOCRATES: Similarly we say that the whole body is beautifully made, sometimes for running, sometimes for wrestling, and we speak d in the same way of all animals. A beautiful horse, or cock, or quail, and all utensils, and means of transport both on land and on sea, mer-

chant vessels and ships of war, and all instruments of music and of the arts generally, and, if you like, practices and laws—we apply the word 'beautiful' to practically all these in the same manner. In each case we take as our criterion the natural constitution or the workmanship or the form of enactment, and whatever is useful we call beautiful, and beautiful in that respect in which it is useful and for the purpose for which and at the time at which it is useful, and we call ugly that which is useless in all these respects. Is not this your view also, Hippias?

HIPPIAS: Yes, it is.

SOCRATES: Then we are now right in affirming that the useful is pre-eminently beautiful.

HIPPIAS: We are.

SOCRATES: And that which has the power to achieve its specific purpose is useful for the purpose which it has the power to achieve, and that which is without that power is useless?

HIPPIAS: Certainly.

SOCRATES: Then power is a beautiful thing, and the lack of it ugly?

HIPPIAS: Very much so. We have evidence of that fact from public life, among other sources, for in political affairs generally, and also within a man's own city, power is the most beautiful of things, and lack of it the most ugly and shameful. 296

SOCRATES: Good! Does it then follow—a momentous consequence—that wisdom is the most beautiful, and ignorance the most shameful of all things?

HIPPIAS: What do you think, Socrates?

SOCRATES: A moment's quiet, my dear friend. I have misgivings about the line we are taking now.

HIPPIAS: Why these misgivings again? This time your argument has proceeded magnificently.

SOCRATES: I could wish it were so, but let us consider together this point. Could a man do something which he had neither the knowledge nor the least atom of power to do?

HIPPIAS: Of course not. How could he do what he had not the power to do?

SOCRATES: Then those who by reason of some error contrive and work evil involuntarily—surely they would never do such things if they were without the power to do them?

HIPPIAS: Obviously not.

SOCRATES: And those who have the power to do a thing do it through power, not of course by being powerless? c

HIPPIAS: Certainly not.

SOCRATES: Those who do what they do, all have the power to do it?

HIPPIAS: Yes.

SOCRATES: And evil is done much more abundantly than good by all men from childhood upward, erring involuntarily?

HIPPIAS: That is so.

SOCRATES: Well then, are we to say that this power, and these useful things—I mean any things useful for working some evil—are we to say that these are beautiful, or that they are far from being so?

d HIPPIAS: Far from it, in my opinion.

SOCRATES: Then the powerful and the useful are not, it appears, the beauty we want.

HIPPIAS: They are, Socrates, if they are powerful for good and are useful for such purposes.

SOCRATES: Still the theory that that which is powerful and useful without qualification is beautiful has vanished away. Do you think, however, that what we really had in mind to say was that beauty is that which is both useful and powerful for some good purpose?

e HIPPIAS: I think so.

SOCRATES: But this is equivalent to beneficial, is it not?

HIPPIAS: Certainly.

SOCRATES: So we reach the conclusion that beautiful bodies, and beautiful rules of life, and wisdom, and all the things we mentioned just now, are beautiful because they are beneficial?

HIPPIAS: Evidently.

SOCRATES: Then it looks as if beauty is the beneficial, Hip-  
pias.

HIPPIAS: Undoubtedly.

SOCRATES: Now the beneficial is that which produces good?

HIPPIAS: Yes.

SOCRATES: And that which produces is identical with the  
cause?

HIPPIAS: That is so.

SOCRATES: Then the beautiful is the cause of the good?

297 HIPPIAS: It is.

SOCRATES: But surely, Hippias, the cause and that of which it is the cause are different, for the cause could scarcely be the cause of the cause. Look at it in this way. The cause was defined as something that produces, was it not?

HIPPIAS: Certainly.

SOCRATES: And that which produces produces only that which is coming into existence; it does not produce that which produces.

HIPPIAS: That is so.

SOCRATES: And that which is coming into existence, and that which produces it, are two different things?

HIPPIAS: Yes.

SOCRATES: Then the cause is not the cause of the cause, but of  
b that which is coming into existence through it?

HIPPIAS: Certainly.

SOCRATES: If then beauty is the cause of good, then the good would be brought into existence by beauty, and it would appear that we devote ourselves to the pursuit of wisdom and of all other beautiful things for the reason that their product and offspring, the good, is worthy of devotion. And from our explorations it looks as though beauty is metaphorically a kind of father of the good.

HIPPIAS: Certainly. You say well, Socrates.

SOCRATES: Do I not say this also well, that the father is not his son, nor the son his father?

HIPPIAS: Quite well.

SOCRATES: And that the cause is not that which it brings into existence, nor vice versa?

HIPPIAS: True.

SOCRATES: Then most certainly, my good sir, beauty is not good nor the good beautiful. Do you think that possible after our discussion?

HIPPIAS: No, I most certainly do not.

SOCRATES: Then does it please us, and should we be willing to say that the beautiful is not good, nor the good beautiful?

HIPPIAS: Most certainly not. It does not please me at all.

SOCRATES: Most certainly I agree, Hippias. It pleases me least of any of the theories we have discussed.

HIPPIAS: Very likely.

SOCRATES: Then it looks as if the view which a little while ago we thought the finest result of our discussions, the view that the beneficial, and the useful, and the power to produce something good, is beautiful, is in fact wrong, but it is, if possible, more open to ridicule than those first definitions according to which the maiden was the beautiful, and so was a succession of other things.

HIPPIAS: Apparently.

SOCRATES: For myself, Hippias, I don't know where to turn, and am completely at a loss. Have you anything to say?

HIPPIAS: Not at the moment, but as I said a little while ago, I feel sure I shall find a way out after some reflection.

SOCRATES: But I do not feel that I can wait for the issue of your reflection, I am so eager for this knowledge, and indeed, I fancy I have just hit on something. Come now, if we were to say that whatever we enjoy—I do not mean to include all pleasures, but only what we enjoy through our senses of hearing and sight—if we were to say that this is beautiful, how should we fare in our struggle? Surely beautiful human beings, and all decorative work, and pictures, and plastic art, delight us when we see them if they are beautiful, and beautiful sounds, and music as a whole, and discourses, and tales of imagination, have the same effect, so that if we were to reply to that blustering fellow, My worthy sir, beauty is the pleasant which comes through the

senses of hearing and sight, do you not think that we should stop his bluster?

b HIPPIAS: At last, Socrates, I think we have a good definition of beauty.

SOCRATES: Well, but are we then to say that those practices which are beautiful, and the laws, are beautiful as giving pleasure through our senses of sight and hearing, or that they are in some other category?

HIPPIAS: Perhaps these cases might escape our man.

SOCRATES: No, Hippias, they would certainly not escape the man by whom I should be most ashamed to be caught talking pretentious nonsense.

HIPPIAS: Whom do you mean?

c SOCRATES: The son of Sophroniscus [i.e., Socrates himself], who would no more allow me to hazard these assertions while they are unexplored than to assert what I do not know as though I knew it.

HIPPIAS: Well, now you have raised the point, I must say that I too think this question about the laws is on a different footing.

SOCRATES: Gently, Hippias, we may quite well be imagining that we see our way clearly, when we have really fallen into the same difficulty about beauty as that in which we were caught a moment ago.

HIPPIAS: What do you mean, Socrates?

d SOCRATES: This is what strikes me—there may be something in it. These matters of law and practice might perhaps prove after all to be within the range of the perceptions of hearing and sight. However, let us hold fast to the statement that the pleasant which comes through these senses is beautiful, leaving the question of the laws altogether on one side. But if we were asked by the person to whom I refer, or by anyone else, Why, Hippias and Socrates, have you picked out within the class of the pleasant that which is pleasant in the way you affirm to be beautiful, while you deny the designation 'beautiful' to that which is pleasant according to the other senses,  
e that is, the senses which have to do with food, and drink, and sexual intercourse, and all such things? Or do you deny that these are pleasant, and claim that in such things there is no pleasure whatever, or in anything except seeing and hearing? What shall we say?

HIPPIAS: Obviously we shall reply that these other things also offer very great pleasures.

SOCRATES: Why then, he will say, do you take away this designation and refuse to allow them beauty when they are pleasures no less than the others?

299 We shall answer, Because everyone would laugh at us if we said that it is not pleasant to eat, but beautiful, or that a pleasant smell is not pleasant, but beautiful, and as to sexual intercourse, everyone would contend against us that it is most pleasant, while admitting

that it ought to be enjoyed only where there is none to see because it is a disgraceful and repulsive sight.

When we say this, Hippias, he would probably rejoin, I too understand that you are and have been ashamed to say that these pleasures are beautiful, because that is not the common view, but my question was, what is beautiful, not what the mass of men think it to be.

I imagine we shall restate our original proposition—in our view that part of the pleasant which comes by sight and hearing is beautiful. However, can you suggest any other way of dealing with the question, or any addition to that reply?

HIPPIAS: As the argument now stands, we are bound to give that answer, and that only.

SOCRATES: Admirable, he will reply. If then the pleasant which comes by sight and hearing is beautiful, is it not obvious that any pleasant thing outside that category could not be beautiful?

Shall we agree?

HIPPIAS: Yes.

SOCRATES: He will go on, Then is that which is pleasant through sight, pleasant through sight and through hearing, or is that which is pleasant through hearing, pleasant through hearing and through sight?

We shall reply, By no means. The pleasant which comes by either sense would certainly not be pleasant through both—that seems to be your meaning. Our statement was that either of these pleasant things would be beautiful just by itself, and also both of them together.

Shall that be our answer?

HIPPIAS: Certainly.

SOCRATES: Well, then, he will say, does any pleasant thing whatever differ from any other pleasant thing in respect of its pleasantness? The question is not whether a particular pleasure is greater or smaller, or exists in a higher or lower degree, but whether there can be a difference between pleasures in this particular respect, that one is, and another is not, a pleasure?

We do not think so, do we?

HIPPIAS: No.

SOCRATES: He will continue, It follows that you chose out these from among the other pleasures for some other reason than that they are pleasures. Since there is some difference between them and the others, you saw in both of them some quality capable of providing a criterion by which you judge them to be beautiful, for the pleasure that comes through sight, I take it, is not beautiful just because it comes through sight. If that were the reason why it is beautiful, the other pleasure, the one which comes through hearing, would never be beautiful—it is emphatically not pleasure through sight.

Shall we reply that his reasoning is correct?

HIPPIAS: Yes.

300 SOCRATES: Nor again is the pleasure that comes through hearing beautiful because it is through hearing, for again, in that case the pleasure through sight would never be beautiful since it is emphatically not pleasure through hearing.

Shall we agree that he argues correctly?

HIPPIAS: He does.

SOCRATES: But yet both are beautiful, you affirm?

We do affirm it?

HIPPIAS: Yes.

SOCRATES: Then they have something identical which makes them to be beautiful, a common quality which appertains to both of them in common and to each singly; otherwise they could not, I take it, both of them be beautiful as a pair, and also each separately? Answer me as though you were answering him.

HIPPIAS: I answer that what you say is my opinion also.

SOCRATES: If then these pleasures are both of them as a pair conditioned in some way, but neither singly is so conditioned, they could not be beautiful by reason of this particular condition?

HIPPIAS: And how is it possible, Socrates, that when neither of them singly has been conditioned in some way—any way you like to think of—yet both as a pair should be conditioned in the way in which neither singly has been conditioned?

c SOCRATES: You think it impossible?

HIPPIAS: I do—not being entirely unacquainted either with the nature of the subject, or with the terminology of our present discussion.

SOCRATES: Very nice, Hippias. But still I fancy perchance I see an example of what you say to be impossible, though really I may see nothing.

HIPPIAS: It is not a case of 'perchance'—you see wrong, of good set purpose.

SOCRATES: Indeed, many such examples rise up before my mind's eye, but I distrust them because they are visible to me, who have never earned a penny by wisdom, while they do not appear to you d who have earned more in that way than anyone else alive. And, my friend, I am pondering whether you are not playing with me and deceiving me on purpose, so clearly and in such numbers do I see them.

HIPPIAS: Nobody will know better than you whether I am playing with you or not, when you start to describe these visions of yours. Your description of them will be plain nonsense. You will never find both of us together conditioned in a way in which neither has been conditioned separately.

e SOCRATES: What's that, Hippias? You may be talking sense

and I do not grasp it, but please let me explain more clearly what I mean. It appears to me that there are attributes which cannot, and do not now, belong to either of us singly, but can belong to both together, and, conversely, that there are attributes of which both together are capable, but neither singly.

HIPPIAS: Here indeed, Socrates, are absurdities even more monstrous than those of your answer a little while ago. Only consider. If we are both just men, is not each of us individually just? If each of us is unjust, are not both so? If both are well, is not each of us well also? Or if each of us were tired, or were wounded, or struck, or conditioned in any other way, then should we not both of us as a pair be conditioned in that way? Similarly, if both of us were made of gold, or silver, or ivory, or if you prefer it, were noble or wise or honored, or, for that matter, old men or young, or had any other human attribute you like to mention, must it not follow inevitably that each of us singly is that same? 301

SOCRATES: Most certainly. b

HIPPIAS: You see, Socrates, the fact is that you yourself do not consider things as a whole, nor do those with whom you habitually converse; you test beauty and each general concept by taking it separately and mentally dissecting it, with the result that you fail to perceive the magnitude and continuity of the substances of which reality is composed. And now this failure has gone so far that you imagine that there is something, an attribute or substantive nature, which appertains to two of them together but not to each singly, or conversely to each singly but not to the two together; that is the state of mind to which you and your friends are reduced—how unreasoning, and superficial, and stupid, and uncomprehending! c

SOCRATES: Such is the lot of us mortals, Hippias—a man does what he can, not what he wishes, according to the oft-quoted proverb. However, your constant admonitions are a great help. Just now, before your admonition of our stupidity in these matters, I had some further thoughts about them which perhaps I might explain to you—or shall I refrain?

HIPPIAS: I know what you are going to say, Socrates; I know d the mind of every school of dialecticians. But say your say, if you prefer it.

SOCRATES: Well, I do prefer it. Before you said what you did, my honored friend, we were so uninstructed as to hold the opinion that each of us two, you and myself, is one, but that, taken together, we cannot be that which each of us is singly—for we are two and not one. Such was our folly. Now, however, we have been taught by you that if together we are two, each of us singly must also be two, and if each is one, so must we both be, for on the continuous theory of reality according to Hippias it cannot be otherwise—whatever two entities are e

together, each is singly, and whatever each is, both are. Here I sit, fixed by you in this belief. But first, Hippias, remind me, are you and I both one, or are you two, and I two?

HIPPIAS: What do you mean, Socrates?

302 SOCRAATES: Exactly what I say. You frighten me out of plain speech, because you get angry with me whenever you think that you have made a good point. Still, let me ask you this further question. Is not each of us two one, possessing the attribute of being one?

HIPPIAS: Certainly.

SOCRAATES: Then if each of us is one, each is also an odd number. You hold that one is an odd number, do you not?

HIPPIAS: I do.

SOCRAATES: Are we then both together an odd number, being two?

HIPPIAS: Impossible.

SOCRAATES: Both together would be an even number?

HIPPIAS: Assuredly.

b SOCRAATES: Since then both together are even, does it follow that each of us singly is even?

HIPPIAS: Certainly not.

SOCRAATES: It is not then absolutely inevitable that, as you said just now, each individual should be what both are together, and that both should be what each is?

HIPPIAS: Not in such cases, but it is inevitable in the kind of case I mentioned earlier.

SOCRAATES: That suffices, Hippias. Even that reply is to be accepted, as it is an acknowledgment that sometimes it is so, and sometimes not. If you recall the starting point of our discussion, you will remember that I was arguing that the pleasures which come through sight and hearing are beautiful not because each of them  
c was so conditioned as to be beautiful but not both together, nor because both of them together were similarly conditioned but not each singly; they were beautiful by virtue of something which conditions both together and also each singly, and so you agreed that both together were beautiful and each singly. Accordingly I thought that if both together are beautiful, they must be beautiful because of an essential character belonging to both and not of a character which is lacking in one or the other, and I still think so. But start again as from the beginning. If pleasure through sight and pleasure through hearing are  
d beautiful both together and each singly, does not that which makes them beautiful belong to both together and to each singly?

HIPPIAS: Certainly.

SOCRAATES: Then can they be beautiful because each singly and both together are pleasures? On this reasoning, would not all other pleasures be beautiful just as much, for, if you remember, they were acknowledged to be just as much pleasures?

HIPPIAS: Yes, I remember.

SOCRATES: These particular ones, however, were stated to be beautiful because they came through sight and hearing. e

HIPPIAS: Yes, that was the statement.

SOCRATES: Now consider whether I am right on this point. According to my recollection, it was said that part of the category of the pleasant was beautiful—not every 'pleasant,' but that which comes through hearing and sight.

HIPPIAS: That is correct.

SOCRATES: And this quality belongs to both together but not to each singly, does it not? As we said earlier, each of them singly does not come through both senses; both together come through both but not each singly. Is that so?

HIPPIAS: Yes.

SOCRATES: Then each of them singly is not beautiful by that which does not belong to each, for that which is of both does not belong to each, and it follows that while from our agreed propositions we may rightly say that both together are beautiful, we may not say it of each singly. Is not this the necessary conclusion?

HIPPIAS: It appears so. 303

SOCRATES: Are we to say then that both together are beautiful, but not each?

HIPPIAS: I see no objection.

SOCRATES: I do, my friend. We certainly had examples of attributes appertaining to individual entities in such a way that if they appertained to two together they appertained also to each singly, and if to each, then to both—all the attributes which were specified by you.

HIPPIAS: Yes.

SOCRATES: But on the other hand those which I specified did not, and among those were the concept 'each' and the concept 'both.' Is that right?

HIPPIAS: Yes.

SOCRATES: To which category, Hippias, do you think the beautiful belongs? To the category of those you mentioned? If I am strong and you are too, we are both strong, and if I am just and you too, we are both just, and if both, then each singly. In the same way, if I am beautiful and you too, are we also both beautiful and if both, then each singly? Or may the same principle apply as in mathematics, when for instance the two components of even numbers may severally be odd, but may also be even, and, again, when quantities which are irrational if taken singly may be either rational or irrational if taken together? And there are innumerable other such examples, as indeed I told you occurred to my mind. In which category do you place beauty? Do you take the same view of it as I do? To me it seems a gross absurdity to hold that while both of us together are beautiful, neither is so singly, or that each singly is beautiful but not both together, or b c

anything else of that kind? Do you choose my alternative, or the other?

HIPPIAS: Yours.

SOCRATES: Quite right, if we wish to be spared further inquiry,  
 d for if this category includes beauty, it can no longer be maintained that the pleasant which comes through sight and hearing is beautiful; the description 'which comes through sight and hearing' makes both together beautiful but not each singly—which was impossible, as I think, and you too.

HIPPIAS: Yes, we think the same.

SOCRATES: Then it is impossible for the pleasant which comes through sight and hearing to be beautiful, since when we equate it with beauty an impossible result is produced.

HIPPIAS: Quite so.

SOCRATES: My questioner will say, Now start again from the  
 e beginning since you have missed the mark this time. What according to you is this 'beautiful' which appertains to both these pleasures, and by reason of which you have honored them above the others and called them beautiful?

I think, Hippias, we are bound to reply that these are the most harmless of pleasures and the best, both taken together and taken singly. Can you suggest any other reason why they are superior to the others?

HIPPIAS: None. They really are the best.

SOCRATES: This then, he will say, is your definition of beauty—beneficial pleasure.

Apparently, I shall reply. And you?

HIPPIAS: I too.

SOCRATES: He will go on, Well then, is not the beneficial that  
 which produces the good, and that which produces and that which is produced were shown a little while ago to be different, and so our discussion has ended up in the old discussion, has it not? For the good  
 304 cannot be beautiful, nor beauty good, if the two are not identical with one another.

Nothing is more certain, we shall reply, if we are honest—there can be no justification for demurring to truth.

HIPPIAS: But I must ask you, Socrates, what do you suppose is the upshot of all this? As I said a little while ago, it is the scrapings and shavings of argument, cut up into little bits. What is both beautiful and most precious is the ability to produce an eloquent and beautiful  
 b speech to a law court or a council meeting or any other official body whom you are addressing, to convince your audience, and to depart with the greatest of all prizes, your own salvation and that of your friends and property. These then are the things to which a man should hold fast, abandoning these pettifogging arguments of yours, unless he wishes to be accounted a complete fool because he occupies himself, as we are now doing, with trumpery nonsense.

SOCRATES: You, my dear Hippias, are blissfully fortunate because you know what way of life a man ought to follow, and moreover have followed it with success—so you tell me. I, however, am subject to what appears to be some supernatural ill fortune. I wander about in unending perplexity, and when I lay my perplexity before you wise men, you turn on me and batter me with abuse as soon as I have explained my plight. You all say just what you, Hippias, are now saying, how foolish and petty and worthless are the matters with which I occupy myself, but when in turn I am convinced by you and repeat exactly what you tell me, that the height of excellence is the ability to produce an eloquent and beautiful speech and win the day in a law court or any other assembly, I am called every kind of bad name by some of the audience, including especially that man who is always cross-questioning me. He is a very close relative of mine and lives in the same house, and when I go home and he hears me give utterance to these opinions he asks me whether I am not ashamed of my audacity in talking about a beautiful way of life, when questioning makes it evident that I do not even know the meaning of the word 'beauty.'

And yet, he goes on, how can you know whose speech is beautiful or the reverse—and the same applies to any action whatsoever—when you have no knowledge of beauty? And so long as you are what you are, don't you think that you might as well be dead?

It is my lot, you see, to be reviled and abused alike by you gentlemen, and by him. However, I suppose all this must be endured. I may get some good from it—stranger things have happened. And indeed, Hippias, I do think I have got some good out of my conversation with the two of you. I think now I appreciate the true meaning of the proverb, 'All that is beautiful is difficult.'

# LETTERS

## LETTER XIII

360 *To DIONYSIUS, Tyrant of Syracuse, Prosperity*

- Be this my introduction and at the same time a token for you that the letter is from me. Once when you were entertaining the young men of Locri, you occupied a couch a good way from mine. You then rose and came to me with words of greeting that were excellent. I  
b thought so at least and my neighbor at table too, who thereupon—he was one of the cultured circle—put the question, ‘I suppose, Dionysius, Plato is a great help to you in your studies?’ You replied, ‘In much else too, for from the moment that I sent for him, the very fact that I had so sent was at once helpful to me.’ Here then is something that we must keep alive. We must see to it that we continue to be more and more helpful to each other. So I am doing my part now to effect this by sending you herewith some Pythagorean treatises and some classifications. I am also sending you a man, as we agreed at the time, who will perhaps be useful to you and Archytas—that is, if Archytas has  
c come to Syracuse. His name is Helicon; he is a native of Cyzicus, a pupil of Eudoxus and well versed in all his teaching. He has also studied under a pupil of Isocrates and under Polyxenus, an associate of Bryson. With all this he has the quality rarely combined with this of possessing social grace and he seems not to be ill-natured. In fact he would impress one rather as being full of fun and good-natured. I say  
d this, however, with misgivings, because I am expressing an opinion about a man, and man, while no mean animal, is a changeable one, with a very few exceptions in a few matters. For even in his case my caution and mistrust led me to make investigations, meeting him personally and inquiring of his fellow citizens, and no one said anything against the man. But be cautious and test him yourself. By all means, however, if you have the least bit of time for it, take lessons of him, in  
e addition to the rest of your philosophical training. If that is impossible, have someone else thoroughly instructed, so that, when you

---

From *Thirteen Epistles of Plato*, translated with introduction and notes by L. A. Post (Oxford, 1925). Minor revisions have been made by the translator. See note on p. 1516.

have time to study, you may do so and not only benefit yourself but add to your reputation. And so I shall go on being constantly helpful to you. So much for these matters.

As for the things you wrote to me to send you, I have had the Apollo done and Leptines is bringing it. It is the work of an excellent young craftsman named Leochares. He had in his workshop another work that I thought very fine; so I bought it as a present for your wife because her care of me in health and in illness was honorable both to you and to me. Give it to her, then, unless you decide otherwise. I am also sending twelve jars of sweet wine for the children and two of honey. We arrived too late to store up figs, and the myrtle berries that were put in store spoiled. Another time we will take better care. Leptines will tell you about plants. 361

The money for these purposes—that is, to buy these articles and to pay some taxes due to the city—I took from Leptines, giving him an explanation that I thought as creditable to us as any and one that I could give without falsehood, namely that it was my money that I spent on the Leucadian ship, amounting to about sixteen minas. This sum then I took and used for my own purposes and for these things that I have dispatched to you. c

In the next place I want you to know what your financial position is with respect to your credit at Athens and with respect to my claims. I will use your money, as I told you once, just as I do that of my other friends. I use just as little as I can, only the amount that I consider necessary or fair or creditable to me and to the man whose money I am taking.

Well, my present circumstances are as follows. There are four daughters living of those nieces of mine, on the occasion of whose death I refused to wear a wreath, though you urged me to. One of them is now of an age to marry, one eight years old, one a little more than three years, and one not yet a year old. Dowries must be provided by me and my friends for any of these that I may live to see married. Those I don't live to see married may look to themselves, and those whose fathers get to be richer than I, I need not provide for. At present I am in easier circumstances than any of them, and it was I who provided their mothers with dowries, aided among others by Dion. Now the eldest of these is going to marry Speusippus, since she is his sister's daughter. I need no more than thirty minas for her, for that is a fair dowry here. Furthermore, if my mother dies, I shall need no more than ten minas for the construction of her tomb. In these matters my requirements for the present are about what I have mentioned. If, however, any other expense arises, either private or public, because of my visit to you, we must do as I told you at the time—I must struggle to make the expense as little as possible, and what I can't avoid you must pay. d

Next I have to say in regard to the expenditure of sums from your 362

- account at Athens, first, that if I have to spend money on equipping a chorus or anything of the sort, you have not, as we supposed, anyone connected with you here who will advance it, and secondly, that, when, as may happen, important interests of your own are at stake, so that a prompt expenditure will be advantageous, while any postponement of expenditure until someone can come from you with the money will be detrimental, such a situation is not only inconvenient, it is ignominious. Really this is a matter that I have proved myself. I sent
- b Erastus to Andromedes, the Aeginetan, on whom, as a connection of yours, you told me to draw for whatever I needed, for I wanted to send you some other rather important things that you wrote for. He, however, answered, as was reasonable and natural, that when he had on a former occasion paid out money on your father's account he had had difficulty in getting it back and that this time he would pay a small sum but no more. Under these conditions I took the money from Leptines. Leptines moreover deserves some praise for his conduct, not because he paid the money but because he did it cheerfully. In other cases, too, where he said or did anything that concerned you, he
- c showed clearly that he was a friend and what kind of friend he was. Surely I ought to report such conduct as this or the reverse, giving you in each case my opinion of anyone's behavior in regard to you.

- At any rate I am going to be frank with you about financial matters, since it is my duty and since, moreover, I can speak with some experience of your surroundings. Those who on any occasion bring you information are unwilling to inform you of anything that they
- d suppose involves expense, for fear of incurring ill will. Do then accuse them and compel them to tell you of such matters, as well as of everything else. You must yourself be acquainted with every detail as far as you can and be your own judge and not avoid such acquaintance with details, since nothing could be more advantageous for you in your government. Expending money rightly and making payments rightly, as you yourself say and will say, is a good thing both for other reasons and for the sake of your financial position itself. So don't let those who say they are watching your interests cause a prejudice
- e to arise against you. It is a good thing neither for yourself nor for your reputation to be thought unsatisfactory in your financial dealings.

Next I will speak of Dion. About other matters I can't tell you yet, not until the letters come from you, as you promised. In regard, however, to the matter you forbade me to mention to him, though I neither mentioned nor discussed it, I did try to discover whether or not he would be greatly concerned if it happened, and my opinion is that he would be not a little moved if it were to occur. In all other respects I think Dion not only claims to be but is reasonable in his attitude toward you.

- 363 To Cratinus, who is a brother of Timotheus, but a companion of mine, let us give a breastplate for military service, one of the padded

ones for the infantry, and to the daughters of Cebes three eleven-foot robes, not the expensive ones from Amorgus but linen ones from Sicily. You probably know Cebes by name, for he is represented in the Socratic dialogues in company with Simmias holding a conversation with Socrates in the dialogue on the soul. He is intimate and in sympathy with all of us.

Now about the token that distinguishes between the letters that are seriously intended and those that are not, I suppose you remember my instruction, but nevertheless take notice and give me your close attention. There are many who ask me to write whom it is not easy to put off openly, so at the beginning of the letters that are seriously intended, I put *God*; in other cases, *the gods*.

The envoys requested me to write to you and with reason, for they very heartily everywhere sing your praises and mine—Philagrus especially, who at that time had something the matter with his hand. Philaedes, too, when he arrived from the court of the Great King, spoke of you. Except that it would have required a very long letter I should have written what he said. Under the circumstances you must inquire of Leptines.

In case you send the breastplate, or anything else that I write for, if you have any preference for any other messenger, well and good; otherwise give it to Terillus. He is one of those that make the voyage regularly, and is not only a friend of ours in other ways, but is versed in philosophy as well. He is related by marriage to Tison, who was city commissioner when I sailed.

Farewell, and lead the philosophical life and encourage the younger men. Give my greetings to the group who join you at ballplay, and give orders to Aristocritus and the others, in case any work or letter of mine comes to you, to see to it that you know of it without delay and to keep reminding you to attend to the injunctions I give you in my letters. Now in particular don't neglect to reimburse Leptines for his advance. Pay him at once that others may observe your treatment of him and be the more willing to accommodate us.

Iatrocles, whom I set free at that time along with Myronides, is to sail now with the things that I am sending. Give him then some salaried post—you may count on his loyalty—and, if you choose to make use of him, do so. Preserve this letter, either itself or a memorandum of it, and be always the same.

## LETTER II

TO DIONYSIUS, *Prosperity*

I have heard from Archedemus that you not only expect me to say nothing about you myself, but you want my friends also to refrain

from saying or doing anything offensive to you. Of Dion only you make an exception. Now when you make an exception of Dion, the inference is that I do not exercise authority over my friends. If I did thus exercise authority over you and Dion as well as the others, it would have been better for all of us, and for the rest of the Greeks too, I maintain. The fact is, however, that my power is no more than this. I can count on the obedience of one follower, namely myself. I do not mean by this that there is any truth in what Cratistolus and Polyxenus told you, for one of them, it is said, reports that at Olympia he heard a number of my companions abusing you. Of course his hearing may be keener than mine. I certainly heard nothing of the sort. In my opinion you would do well in future, when anyone makes such a report about any of us, to write and ask me about it, for I shall be neither afraid nor ashamed to tell the truth.

As for you and me and our mutual relations, the situation is as follows. There is no Greek, you may say, who has not heard of us as individuals; moreover our association with one another is generally discussed, and, be not deceived, it will continue to be discussed in time to come, for the number of those who have heard of our intercourse corresponds to its closeness and warmth. Well, what do I mean by this? I will go back a little and explain. It is a natural law that wisdom and great power attract each other. They are always pursuing and seeking after each other and coming together. Furthermore, this is a subject that people always find interesting whether they are themselves discussing it in a private gathering, or are listening to the treatment of it by others in poems. For example, when people are talking of Hieron or the Spartan Pausanias, they like to introduce their association with Simonides and recount his conduct and remarks to them. Again, they are wont to celebrate together Periander of Corinth and Thales of Miletus, or Pericles and Anaxagoras, or again, Croesus and Solon as wise men and Cyrus as ruler. Moreover, the poets copy these examples and bring together Creon and Tiresias, Polyidus and Minos, Agamemnon and Nestor, and Odysseus and Palamedes. With much the same idea, I believe, primitive men brought together Prometheus and Zeus. The poets also show how in some such cases the two characters became enemies—in others, friends—how in some cases they were first friends and then enemies, and how in others they agreed in some things but differed on other points.

Now my object in saying all this is to point the moral that in our case too, discussion of our acts will not forthwith cease with our death. Here then is a matter that demands consideration, for we ought, it appears, to consider as well the time to come, since it is a fact that the most slavish men by a sort of natural law give it no thought, while the best men leave nothing undone to acquire a good reputation with posterity. To me this is a proof that the dead have some perception of events here, for the noblest souls know this truth by intuition, while

the vilest souls deny it, but the intuitions of the godlike are more valid than those of other men.

In my opinion, if those earlier rulers and philosophers whom I have mentioned had it in their power to amend what was amiss in their intercourse with each other, they would do their utmost to have better things said of them than is now the case. For us, though, it is still possible, please God, where we made any mistakes in our former intercourse, to correct them by our actions or by our words. The true philosophy, I maintain, will be better thought of and better spoken of if we conduct ourselves well, but if otherwise, the reverse. Indeed if we were to make this object our concern, we could be engaged in no more pious act, nor in any more impious, if we were to neglect it.

Now I will explain how we must set about attaining this object and will show what principles are involved. I went to Sicily with the reputation of being by far the most distinguished among those devoted to philosophy, but my object in going to Syracuse was to gain your support, so that I might see philosophy held in esteem even among the common throng. The result was not propitious. The reason that I assign for this is not the one that many would give, but that you appeared to have no great faith in me. You wanted to get rid of me in some way and to send for others. You wanted, I believe, in your mistrust, to discover the secret of my activities. At this there were many to take up the cry that you had a poor opinion of me and were devoted to other matters, and this is the report that is in general circulation.

I proceed now to point out the right course for us to take hereafter. This will also answer your question what our relation to each other is to be. If you have no respect at all for philosophical pursuits, let them alone. If you have some respect, but have been taught by someone else or have discovered for yourself a better philosophy than mine, show your esteem for that. If, however, you prefer my philosophical teaching, you ought to make me too an object of special esteem.

Now, as in the beginning, you must show the way and I will follow your leading. If you show me marks of esteem, I will repay them; if I receive no such marks, I shall keep my own counsel. Note too that any marks of respect you show me, if you take the lead, will be evidence that you think highly of philosophy, and the very fact that you have examined other teachers of philosophy besides me will cause many to honor you as a true philosopher. On the other hand any marks of respect that I show you, unless you return them, will be interpreted as evidence of my admiration of and desire for wealth—and such a name, we know, is nowhere an honest one. To put it in a nutshell, if you do homage to me, we both rise in men's esteem; if I do homage to you, we both sink. So much for this subject.

The sphere is not right. Archedemus will make it clear to you

when he comes. He must also by all means give you an explanation of the matter about which you were in difficulty when you dispatched him, a subject indeed higher and more godlike than the other. According to his report you say that you are not satisfied with the demonstration of the nature of the first principle. I must state it to you in riddles, so that in case something happens to the tablet 'by land or sea in fold  
 e on fold,' he who reads may not understand. It is like this. It is in relation to the king of all and on his account that everything exists, and that fact is the cause of all that is beautiful. In relation to a second, the second class of things exists, and in relation to a third, the third class. Now the mind of man, when it has to do with them, endeavors to gain a knowledge of their qualities, fixing its attention on the things with which it has itself some affinity; these, however, are in no case  
 313 adequate. In regard to the king and the things I mentioned there is nothing like this. Thereupon the soul says, 'But what are they like?' This question, thou son of Dionysius and Doris—or rather the travail that this question occasions in the soul—is the cause of all the trouble, and if that be not expelled from a man, he shall never genuinely find the truth.

You told me in the garden under the laurels that you had thought  
 b of this yourself and that it was an original discovery of yours. I replied that if you really were clear about it, that fact would relieve me of a great deal of explanation. I said, however, that I had never met anyone else who had made this discovery, that in fact that very point gave me most of my trouble. Probably you had heard it explained by someone, though possibly you might by divine ordering have been impelled of yourself in that direction, and thought that you had a secure hold on the demonstration, and therefore did not fix securely the truth of which you had a glimpse. Instead of remaining fixed it darts to and fro, taking now one form, now another, never getting away from the appearances of things. The truth, though, has no such variability. You  
 c are not the only one who has been in such a case. I assure you that no one, the first time he heard me, was ever in any other state in the beginning. One has more difficulty, another less, before he finally gets clear. Hardly anyone has but little difficulty.

Since things have taken and are taking such a course, we have, I think, very nearly found an answer to your question, what our relation to each other is to be. Since you are putting my principles to the proof by going to other teachers and by considering my views in comparison with theirs, as well as by themselves, this time, if your examination is genuine, these principles will grow to be a part of you, and  
 d you will be their friend as well as mine.

Now how are these things, together with all that I have mentioned, to come to pass? On the present occasion you did right to send Archedemus, and in future, after he has returned and has reported my message, you will perhaps again be overtaken by other difficulties.

You will accordingly send Archedemus to me again, if you are well advised, and he will come back to you with fresh wares. If you do this e two or three times and test adequately what I send, I shall be surprised if the points about which you are now in difficulty do not assume a very different aspect. Take this course then with all confidence, for never will you order nor Archedemus carry finer wares or any more acceptable to the gods than these.

Take precautions, however, lest this teaching ever be disclosed 314 among untrained people, for in my opinion there is in general no doctrine more ridiculous in the eyes of the general public than this, nor on the other hand any more wonderful and inspiring to those naturally gifted. Often repeated and constantly attended to for many years, it is at last like gold with great effort freed from all alloy. Let me tell you, however, the surprising thing about it. There are men, and a good many of them too, who have intelligence and memory and the ability b to judge a doctrine after examining it by every possible test, who are now old men and have been receiving instruction not less than thirty years, who have just reached the point of saying that what formerly they thought most uncertain, now appears to them quite certain and evident, while what seemed most certain then, appears now uncertain. Consider these facts and take care lest you sometime come to repent of having now unwisely published your views. It is a very great safeguard to learn by heart instead of writing. It is impossible for what is written not to be disclosed. That is the reason why I have c never written anything about these things, and why there is not and will not be any written work of Plato's own. What are now called his are the work of a Socrates embellished and modernized. Farewell and believe. Read this letter now at once many times and burn it. So much for these matters.

You were surprised that I should send Polyxenus to you. For my part I have long been saying and say now the same thing about Lycophron and the others who are with you, that you altogether surpass d them in talent for discussion and in logical method. None of them submits to confutation voluntarily, as some suppose, but they are forced to do so. It seems to me, moreover, that you have been very fair in your treatment of them and in your gifts. So much for this, and a great deal for such a subject.

If you are making any use of Philistion yourself, by all means do so, but if it can be done, dismiss him and let Speusippus have him. e Speusippus joins me in the request. Philistion himself promised me that, if you would let him go, he would gladly come to Athens. You did well to release the man from the quarries, but my request about his servants and about Hegesippus, son of Ariston, would not be burdensome to grant. You wrote to me, you know, that if anyone wronged either him or the others and you learned of it, you would not suffer it. I must also give you a truthful report in regard to Lysiclides. He is the 315

only one who has come to Athens from Sicily and has not perverted the truth about our association. He always says something that is good about what has taken place and puts the best construction on it.

## LETTER XI

### 358d To LAODAMAS, *Prosperity*

I wrote to you before that it is of great importance for all the interests that you mention that you should yourself come to Athens. Since, however, you say that that is impossible, it would be next best if Socrates or I, as you suggested, were able to come to you. It happens  
 e though that Socrates is suffering from strangury, while as for me, if I were to come, it would not look well for me not to succeed in carrying out the projects which you invite me to undertake. I have, however, no great hope of such success, for reasons which could only be explained in another long letter, relating the whole story. Furthermore, I am not physically equal on account of my age to the difficulties of travel and to the sort of dangers that are encountered by land and sea. Just now, too, the routes are altogether beset with risks. Still I can give you and your colonists advice which, when I give it, will, to quote  
 359 Hesiod, be 'simple in appearance, but hard to understand.' If any think it possible, by the ordaining of any laws whatsoever, for any government to be well organized without the existence in the city of some authority concerned with daily life to see that both slave and free live soberly and manfully, their belief is false. Such an authority, however, might be established, if there are in existence men worthy of  
 b such a position. If, though, someone is needed to educate such rulers, in my opinion there exists neither anyone to give, nor any to receive such an education. Rather you must do the only thing left, and pray to the gods. In fact former cities were generally organized in this way at first and only later obtained good institutions through stress of great crises that occurred either in war or in connection with other achievements, when at such moments there appeared some man wellborn and well-bred who exercised great authority. Until then you must and  
 c should take a great interest in the question, but must nevertheless accept my statement of the case and not be so foolish as to suppose that you can achieve anything offhand. Good fortune be yours.

## LETTER X

### 358c To ARISTODORUS, *Prosperity*

I hear from Dion that you are now one of his closest companions and that you have been so throughout, exhibiting the wisest trait

among those that go to make philosophy. Steadfastness and loyalty and sincerity—that, say I, is the genuine philosophy. Other kinds of wisdom and cleverness, that lead to other results, I believe I name correctly when I term them mere embellishments. Farewell and hold fast to the traits to which you already hold fast.

## LETTER IV

TO DION OF SYRACUSE, *Prosperity*

320

I suppose it has been plain all along that I am heartily interested in the achievements that have been brought to pass. It must also have been plain that I was very eager to see them brought to final completion, as much as anything because I am ambitious for the success of the noble cause. I think it right that those who are in reality good men, <sup>b</sup> and who act accordingly, should obtain the renown that they deserve. At the moment certainly the situation, please God, is excellent; the great struggle, however, lies before us, for, though it might seem to belong to certain others as well as to you to excel in courage or swiftness or strength, surely those who make it their boast to honor truth and justice and generosity, and a behavior that conforms to these ideals, must by general consent be expected to excel in them. <sup>c</sup>

Now my meaning is already plain; yet we should still remind ourselves that certain men—you know who—ought to surpass other men more than they surpass children. We must make it conspicuous that we are the sort of men we claim to be, especially since, please God, it will be easy. The circumstances of others are such that they must travel far and wide if they are to be known, whereas your present <sup>d</sup> position is such that men everywhere in the inhabited world, overbold though it be to say so, have their eyes fixed on one locality, and in that locality chiefly on you.

Since then all men are watching you, prepare to make Lysurgus or Cyrus appear but primitive, or anyone else who has ever become famous for superior character and statesmanship, especially since many, in fact practically all who are on the spot, say that it is quite likely that, when Dionysius has been put out of the way, our cause will be ruined by the rivalry between you and Heraclides and Theo- <sup>e</sup> dotes and the others of note. I hope of course above all that no one will behave so, but if anyone does, you must always appear in the role of healer and it will turn out for the best.

Perhaps you think it ridiculous for me to mention these things <sup>321</sup> because you yourself are quite aware of their importance. I observe, however, that in the theater the actors are spurred on by the children, to say nothing of their friends, whenever any actor thinks that they are applauding seriously and with good will. So now do you all of you play your own part and write to me if you need anything.

- Things here are pretty much as they were when you were with us.
- b Tell me also in your letters what you have done or what you happen to be engaged in doing, since I, for all I hear a great deal, know nothing. Just now letters from Theodotes and Heraclides have arrived in Lacedaemon and Aegina, but as I say, though I hear a great deal, I know nothing about the situation where you are. Reflect also that some think that you are not so obliging as you ought to be. Let it not escape you that popular favor is a means to achievement, while an arbitrary temper has solitude for company. Farewell.
- c

## LETTER III

315b *To DIONYSIUS, Joy*

- Is it the best form of salutation to wish you 'joy' as I have, or would it be better if I were to follow my usual custom and bid you 'Do well'? That is the salutation that I use when I write to my friends. You of course descended to flattery and addressed even the god at Delphi in these very terms—such is the report of those who were in attendance at the time—and wrote, they say, 'Joy to you. Keep ever the pleasant life of a tyrant.' I, though, would not even bid a human being, much less a god, to enjoy himself. Any such injunction to a god would run counter to nature, for the divine dwells afar from the sphere of pleasure and pain. I would avoid such a greeting to a human being, moreover, because in most cases pleasure and pain work harm and produce in the soul dullness and forgetfulness and folly and lawlessness. So much in regard to the salutation. When you read this, take it any way you like.
- c

- It is reported by numerous witnesses that you have informed
- d some of the ambassadors at your court that I once heard you declare your intention of planting settlers in the Greek cities of Sicily and of lightening the burden of the Syracusans by transforming your government from tyranny to kingship, and that I at that time prevented you from going on with your plans—that is your story—though you were most enthusiastic, while now I am instructing Dion to do just what you suggested. Thus we are using your own ideas to rob you of your
- e realm. Now you know best yourself whether you derive any benefit from such statements; at any rate, you wrong me when you make a statement that contradicts the facts.

I had quite enough of slander in the malicious reports that Philistides and many others circulated about me among the mercenaries and the Syracusan public, for during my residence in the acropolis, those outside threw all the blame on me whenever a mistake was made, by asserting that you took my advice in everything. You know yourself better than anybody that in the beginning, when I thought it

would do some good, I did handle jointly with you of my own accord a 316 very few matters of government. In addition to some other minor matters I took a reasonable interest in the preludes to the laws. I except of course any additions made to them by you or others, for I hear that some of you have since been revising them. Of course our respective contributions will be obvious to those who are capable of distinguishing what is characteristic of me.

Be that as it may, I have no need, as I said just now, of any fresh calumnies aimed at making me unpopular with the Syracusans and any others who believe your statements. Rather indeed I need a defense to meet both the earlier calumny and the present one that, coming after the other, is having a greater and more formidable effect. Since there are two charges, my defense must be twofold. I must prove in the first place that I rightly avoided taking any part with you in the administration of the city, and in the second place that I was not the one to give you any such advice or to interfere in any such manner as you say. It is not true that when you were going to plant settlers in Greek cities, I blocked your way. Let me then explain first the origin c of the charge that I mentioned first.

I came to Syracuse at your invitation and Dion's. He had long been a tried and true friend of mine and we were united by ties of hospitality; he had reached with middle age the settled period of life. You may be sure that any man who possessed a ray of intelligence would make such conditions an indispensable requirement before giving advice about affairs as important as yours were at that time. You, on the other hand, were very young; you had never been tested on matters in regard to which a satisfactory test was an absolute necessity, and you were a complete stranger to me. After this, whether it was the d work of man or of god or of chance, with your help Dion was exiled and you were left alone. Do you suppose that under those circumstances I could have any partnership with you in the government? For I had lost the intelligent partner, and the foolish one I saw abandoned to the company of a multitude of base men, not governing but supposing he governed, being in fact under the sway of men such as I have mentioned.

What was I to do in this situation? Was I not forced to do as I did, that is, as a precaution against envious calumnies, to give no further heed to political affairs, and to attempt by all means to bring e about a renewal of the greatest possible friendship between you and Dion, in spite of your separation and disagreement? You are yourself a witness to the fact that I never relaxed my efforts to bring this about. And at last, though with difficulty, we did reach an agreement to the effect that I should take ship for home, since you were involved in a 317 war, but that, when peace was made, Dion and I were to return to Syracuse, and you on your side were to invite us. Such is the history of my first journey to Syracuse and of my safe arrival home again.

When peace was made, you summoned me the second time, but not in accordance with the terms of our agreement. Instead you wrote to me to come alone, and said that you would send for Dion later. The result was that I refused to go and was even estranged  
 b from Dion at that time, for he thought it advisable for me to give heed to you and go. Next there arrived a year later a trireme with a letter from you, and before all the other matters of the letter came the statement that, if I came, all Dion's affairs would be arranged to suit me; otherwise they would not. I hesitate to say how many letters came from you at that time and from others in Italy and Sicily on your ac-  
 c count, and to how many of my friends and acquaintances letters came, all urging me to go and begging me by all means to do as you wished.

It was the opinion of all, beginning with Dion, that I ought to set sail and not shirk the duty. To be sure I urged them to consider my advanced age and maintained that you would not be able to hold out against those who would try to set us at variance in the hope that we might quarrel. I observed then and I observe now in regard to great  
 d and swollen fortunes in general, whether they belong to private citizens or to monarchs, that the greater they are, the more numerous and the more degraded are the informers and the debasing boon companions that they breed. Than this there is no greater evil begotten of wealth and other forms of power. Nevertheless, throwing all these considerations to the winds, I went, for I reflected that I must not let any of my friends bring the charge against me that because of my love of ease he had lost all his property, when it need not have been lost.

e When I had come—you are of course acquainted with all that happened from that time on—I naturally, in accordance with the terms agreed on in our letters, urged, in the first place, that you should contract with Dion a relationship that I mentioned and reinstate him. If you had then followed my advice, possibly the result would have been better than the actual course of events for you, for Syracuse, and for the rest of the Greeks. That is the verdict of my own intuition. In the second place I urged the plea that Dion's property  
 318 should remain in the hands of his friends and not be distributed among those who did acquire it. You know who they were. Furthermore, I thought that the income which he regularly received every year ought all the more to be sent, rather than otherwise, now that I was present. Successful in none of these pleas, I asked leave to depart. Thereupon you induced me to wait till the next year and promised that you would sell all Dion's property, send half to Corinth, and reserve the rest for his son.

b There are many promises I might mention that you made and failed to keep in any way, but because they were so numerous, I must cut short my account. Accordingly, when you had sold all the property

without Dion's consent, after promising not to do so unless he did consent, then, Sir Marvelous, you added the finishing touch to all your promises in the most wanton fashion. You hit upon a scheme neither noble nor brilliant nor honest nor advantageous, namely, to frighten me off, while I was supposedly ignorant of what was going on, in order that I might not even ask for the dispatch of the money. When you had driven Heraclides into exile—unjustly, it seemed to the Syracusans and to me—then, because I joined Theodotes and Eurybius in pleading with you to rescind the order, you, finding here a good enough excuse, said that it had long been clear that I cared nothing for you and thought only of Dion and Dion's friends and connections, and that now, when Theodotes and Heraclides, who were friends of Dion, were under accusation, I was leaving no stone unturned to prevent their meeting with their deserts.

So much for our political partnership. If you have detected any other aversion to you on my part, you are right in thinking that it all came about in this way. You need not be surprised, either, for any intelligent man would justly think me base if I had been induced by the greatness of your empire to betray my old friend and host, whose misfortunes were due to you—who was, moreover, to put it mildly, not inferior to you—and to prefer you, who were in the wrong, and to do everything you ordered, obviously bribed by gifts of money. For that is the only motive that would have been imputed to me for going over to you, if I had gone over. So these events, brought about in this way, through your fault resulted in the enmity and the incompatibility that exist between us.

The argument following continuously on what I have just said has now come pretty much to the subject which is the second on which I said I must defend myself. Observe then and consider attentively whether anything I say seems to you false and not true. I assert that when Archdemus and Aristocritus were in the garden, about twenty days before I left Syracuse for home, you said the same thing you do now in criticism of me, namely, that I cared more for Heraclides and all the others than for you. You asked me, moreover, in their presence whether I remembered, directly after my arrival, urging you to plant settlers in the Greek cities. I confessed that I did remember and that I still thought it the ideal course to take. I must also repeat, though, Dionysius, the remark that was made directly afterward. I asked you whether I had given you merely this advice by itself or whether I added something to it. And you answered very furiously and contemptuously indeed, so you supposed—for what was then the object of your contempt is now no longer a dream but a reality—you said with a very forced laugh, if I remember, 'You bade me do all these things after receiving instruction or not at all.' I replied that your memory was excellent. Then you said, 'Instruction in surveying, or what?' And I

thereupon did not say what it occurred to me to say, for fear lest for a brief word my way might be closed instead of open to the departure to which I was looking forward.

The purpose, however, of all that I have said is this. Stop slandering me by saying that I prevented you from planting settlers in  
 d Greek cities that barbarians had destroyed, and from lightening the burdens of the Syracusans by transforming your government from tyranny to kingship. In the first place there is no lie less appropriate to me that you could tell to my discredit, and further, I could, in addition to what I have said, if there were anywhere to be seen a competent tribunal, furnish even clearer evidence than this that it was I who urged this course and you who were unwilling to act. At any rate it is not difficult to put it down in black and white that the accomplishment of these plans would have been the best thing for you, for the  
 e Syracusans, and for all the other Sicilian Greeks. Well, sir, if you deny saying what you said, I have my requital. If you admit it, you will thereupon conclude that Stesichorus was wise, imitate his recantation, and shift your position from the false to the true story.

## LETTER VII

323e TO THE FRIENDS AND COMPANIONS OF DION, *Prosperity*

In your letter you urged me to believe that your political convictions are the same as Dion's were, and in this connection you ex-  
 324 hortated me to lend your cause such aid as I can by action or by speech. My reply is that I will aid your cause if your views and your aims really are the same as Dion's; if they differ from his, I will take time to think about it. But what was Dion's policy, and what were his aims? To that question I think I could give an answer based not on conjecture but on sure knowledge. For when I first came to Syracuse—I was about forty years old—Dion's age was the same as that of Hip-  
 b parinus now, and he at that time arrived at a conclusion that he never departed from. He believed in liberty for the Syracusans under the guidance of the best system of laws. Consequently no one need be surprised if Hipparinus too were to be divinely led to the same conclusion and to come to agree with Dion's political creed.

The origin of this creed is a tale that young and old may well hear, and I will try to tell you the story from the beginning, for the moment is opportune. Once upon a time in my youth I cherished like  
 c many another the hope of entering upon a political career as soon as I came of age. It fell out, moreover, that political events took the following course. There were many who heaped abuse on the form of government then prevailing, and a revolution occurred. In this revolution fifty-one men set themselves up as a government, eleven in the city,

ten in the Piraeus—both of these groups were to administer the market and the usual civic affairs—and thirty came into power as supreme rulers of the whole state. Some of these happened to be relatives and acquaintances of mine, who accordingly invited me forthwith to join <sup>d</sup> them, assuming my fitness for the task. No wonder that, young as I was, I cherished the belief that they would lead the city from an unjust life, as it were, to habits of justice and ‘manage it,’ as they put it, so that I was intensely interested to see what would come of it.

Of course I saw in a short time that these men made the former government look in comparison like an age of gold. Among other things they sent an elderly man, Socrates, a friend of mine, who I should hardly be ashamed to say was the justest man of his time, in <sup>e</sup> company with others, against one of the citizens to fetch him forcibly to be executed. Their purpose was to connect Socrates with their government, whether he wished or not. He refused and risked any consequences rather than become their partner in wicked deeds. When I observed all this—and some other similar matters of importance—I withdrew in disgust from the abuses of those days. Not long after came the fall of the Thirty and of their whole system of government. <sup>325</sup>

Once more, less hastily this time, but surely, I was moved by the desire to take part in public life and in politics. To be sure, in those <sup>b</sup> days too, full of disturbance as they were, there were many things occurring to cause offense, nor is it surprising that in time of revolution men in some cases took undue revenge on their enemies. Yet for all that the restored exiles displayed great moderation. As it chanced, however, some of those in control brought against this associate of mine, Socrates, whom I have mentioned, a most sacrilegious charge, which he least of all men deserved. They put him on trial for impiety <sup>c</sup> and the people condemned and put to death the man who had refused to take part in the wicked arrest of one of their friends, whose exile had coincided with their own exile and misfortunes.

Now as I considered these matters, as well as the sort of men who were active in politics, and the laws and the customs, the more I examined them and the more I advanced in years, the harder it appeared to me to administer the government correctly. For one thing, nothing could be done without friends and loyal companions, and <sup>d</sup> such men were not easy to find ready at hand, since our city was no longer administered according to the standards and practices of our fathers. Neither could such men be created afresh with any facility. Furthermore the written law and the customs were being corrupted at an astounding rate. The result was that I, who had at first been full of eagerness for a public career, as I gazed upon the whirlpool of public <sup>e</sup> life and saw the incessant movement of shifting currents, at last felt dizzy, and, while I did not cease to consider means of improving this particular situation and indeed of reforming the whole constitution, <sup>326</sup> yet, in regard to action, I kept waiting for favorable moments, and

finally saw clearly in regard to all states now existing that without exception their system of government is bad. Their constitutions are almost beyond redemption except through some miraculous plan accompanied by good luck. Hence I was forced to say in praise of the correct philosophy that it affords a vantage point from which we can discern in all cases what is just for communities and for individuals, and that accordingly the human race will not see better days until  
 b either the stock of those who rightly and genuinely follow philosophy acquire political authority, or else the class who have political control be led by some dispensation of providence to become real philosophers.

This conviction I held when I reached Italy and Sicily on my first visit. Upon my arrival, moreover, I found myself utterly at odds with the sort of life that is there termed a happy one, a life taken up with Italian and Syracusan banquets, an existence that consists in filling  
 c oneself up twice a day, never sleeping alone at night, and indulging in all the practices attendant on that way of living. In such an environment no man under heaven, brought up in self-indulgence, could ever grow to be wise. So marvelous a temperament as that is not in nature. That a man should grow up sober-minded would also be quite out of the question, and one might make the same statement about the other qualities that go to make up excellence of character. Neither can a city be free from unrest under any laws, be those laws  
 d what they may, while its citizens think fit to spend everything on excesses, meanwhile making it a rule, however, to avoid all industry except such as is devoted to banquets and drinking bouts and painstaking attention to the gratification of lust. It is inevitable that in such cities there should be an unending succession of governments—tyranny, oligarchy, democracy—one after another, while the very name of just and equal government is anathema to those in control.

Now holding this conviction in addition to the former, I traveled  
 e on to Syracuse. Perhaps it was chance, but certainly it looks as if a higher power was at that time contriving to lay a foundation for the recent events in which Dion and the city of Syracuse were concerned, for more too, I fear, unless you now follow the advice I am giving you  
 327 the second time. But what can I mean when I say that my visit to Syracuse at that time was the beginning of everything? In my intercourse at that time with the young Dion, as I set before him in theory my ideals for mankind and advised him to make them effective in practice, I seem to have been unaware that I was in a way contriving, all unknown to myself, a future downfall of tyranny. At any rate Dion, who was very quick of apprehension and especially so in regard to my instruction on this occasion, responded to it more keenly and more  
 b enthusiastically than any other young man I ever met, and resolved to live for the remainder of his life differently from most of the Greeks in Italy and Sicily, holding virtue dearer than pleasure or than luxury.

On that account the life he led until the death of Dionysius vexed somewhat those who passed their time in accordance with tyrannical wont.

After that he felt in his heart that he would not always be alone in holding this belief, which he had arrived at under the guidance of right reasoning. In fact he saw it growing in others too, not many, but at any rate in some, and took note. He thought that Dionysius might perhaps become one of these through the co-operation of the gods. Moreover, if he were to become such a one, the result for him and for the rest of the Syracusans would be the attainment of a life beyond all calculation blessed. Furthermore he felt it to be absolutely necessary that I come to Syracuse as soon as possible to lend a hand in the work. He remembered how readily he had by the operation of our mutual intercourse arrived at a desire to live the noblest and best life. If, accordingly, he were now to succeed in his attempt to bring about the same result once again in the case of Dionysius, he had great hopes of creating, without bloodshed or slaughter or such misfortunes as have actually occurred, a happy and genuine way of living throughout the land.

Dion, when he had rightly come to this conclusion, persuaded Dionysius to send for me, and himself sent and entreated me by all means to come as soon as possible, before certain others fell in with Dionysius and diverted him to a way of life other than the best. Here is Dion's message, even if it is rather long to repeat.

'What combination of circumstances,' said he, 'more promising than that which is at this moment offered us by a sort of miracle, are we to wait for?' Then he mentioned Italy and Sicily under one government, his own influential position in that government, Dionysius young and interested, emphasizing his situation in respect of philosophy and education. Furthermore his own nephews and kindred might readily be won over to the doctrine and the way of life that I always preach, and they would be just the persons to help win over Dionysius. 'Now, if ever, then,' said he, 'will be realized any hope there is that the world will ever see the same man both philosopher and ruler of a great city.'

Such arguments he used and a great many more like them. As for my own decision, on the one hand I feared the outcome in the case of the young men, for young men have sudden impulses and often quite contradictory ones. On the other hand I knew that Dion had naturally a solid character and that he had now reached middle age. Hence as I considered and debated whether I should hearken and go, or what I should do, the view nevertheless prevailed that I ought to go, and that if anyone were ever to attempt to realize my ideals in regard to laws and government, now was the time for the trial. If I were to convince but one man, that in itself would ensure complete success.

Such were the considerations that inspired and emboldened me

to leave home on this journey. I was not guided by the motives that some men attributed to me, but chiefly by a concern for my own self-respect. I feared to see myself at last altogether nothing but words, so to speak—a man who would never willingly lay hand to any concrete task, for I should practically have been guilty of disloyalty—in  
 a the first place to the ties of hospitality and friendship that bound me to Dion. He was really exposed to considerable danger. Suppose something were to happen to him, or suppose he were expelled by Dionysius and his other enemies, and were to come to me an exile and to question me, saying, 'Plato, I have come to you an exile not for want of soldiers or of horsemen to defend myself against my foes, but for lack of the arguments and the eloquence that I knew you, more than others, could wield to turn the minds of young men to virtue and justice so as to establish in all cases mutual friendship and alliance. Be-  
 e cause you failed to supply me with these, I have left Syracuse and here I am. Your treatment of me, however, is not the most disgraceful part of your conduct. Surely on this occasion you have, so far as in you lay, proved traitor, not to me only, but also to philosophy, whose praises you are always singing and of whom you say that the rest of man-  
 329 kind treat her ignobly. Moreover, if I had chanced to be living in Megara, you would certainly have come to support me in the cause to which I summoned you, or else you would think yourself the very meanest of men. As the situation is, do you suppose you will ever escape the charge of cowardice by pleading the distance to be traveled, the long voyage, and the great hardships? Not by a great deal.'

To these accusations what plausible reply could I make? None is possible.

So I went, thereby following reason and justice as closely as is  
 b humanly possible. For such reasons as I have described, I forsook my own pursuits, and they were not undistinguished, to come under a tyranny, a form of government seemingly inconsistent with my doctrines and my character. In doing so I cleared myself in the sight of Zeus Xenios and left no ground of complaint to the cause of philosophy, which would have suffered reproach if I had turned weakling and had by refusing to play a man's part brought disgrace upon myself. When I arrived, for I must be brief, I found the whole environment of Dionysius seething with cabals and with malicious reports to the government about Dion. I took his part as best I could, but I could do little,  
 c and in about the fourth month, on the ground that Dion was plotting against the government, Dionysius put him aboard a small boat and expelled him dishonorably. Thereupon all of us who were friends of Dion were in terror lest Dionysius should accuse and punish someone else for complicity in Dion's plot. As for me a rumor actually got abroad in Syracuse to the effect that I had been executed by Dionysius because I was responsible for the whole course of events.

d When Dionysius saw that we were all in this state, he was afraid

that our fears might result in something worse, and set about winning us all over by a show of cordiality. Incidentally he was active in consoling me, bidding me feel no anxiety and begging me by all means to remain. There really was no honor for him in my taking flight from him, but rather in my remaining, which explains the great pretense he made of requesting it. The requests of tyrants we are aware have in them something of compulsion. So to gain his end he prevented my departure. He took me to the citadel and planted me in a place from which there was no longer any possibility of a shipmaster accepting me as a passenger, unless Dionysius not merely took no steps to prevent it, but unless he actually dispatched himself the messenger with orders to accept me. Otherwise neither merchant nor embarkation official would have permitted me to set forth alone, but would at once have arrested me and have taken me back to Dionysius, especially since the news had now at last been spread, just the opposite of the former report, that Dionysius was marvelously fond of Plato. 330

What was the situation, though? For the truth must be told. He did indeed grow more and more to like me as time passed and as he learned to know my life and character, but he wanted me to commend him more than Dion, to think him rather than Dion a special friend. In fact his ambition in this respect was surprising. He shunned, however, the best method of attaining his object, if it could be attained at all—that is, of course, by receiving instruction and hearing me discourse on philosophy, to become my intimate friend and disciple. The reports circulated by our enemies made him afraid he might somehow be entangled and so Dion have accomplished his design. I, however, waited patiently through it all and bore in mind the original purpose of my visit, namely, the hope that he might in some way become enamored of the philosophical life, but his resistance carried the day.

Now the time I devoted to my first visit to Sicily and to my stay there was the result of all these causes. Afterward I left home and visited Sicily once more at the urgent invitation of Dionysius. I must explain later why I went the second time and that all I did was reasonable and right, for the benefit of those who inquire what I hoped to gain by going. First, however, in order to avoid the mistake of dealing with secondary matters as if they were of primary importance, I must advise you as to your proper conduct in view of recent events. Here is my message.

One who advises a sick man, living in a way to injure his health, must first effect a reform in his way of living, must he not? And if the patient consents to such a reform, then he may admonish him on other points? If, however, the patient refuses, in my opinion it would be the act of a real man and a good physician to keep clear of advising such a man—the act of a poltroon and a quack on the other hand to advise him further on those terms. The same thing holds in the case of a city,

whether it have one master or many. If a government that proceeds in orderly fashion along the right course, seeks advice about its advantage in some matter, it would be the act of an intelligent man to give  
 e advice to such a community. In the case, however, of those who are altogether astray from the path of right government, and will by no means consent to go on the track of it, who on the other hand give  
 331 notice to their adviser to keep his hands off the constitution under penalty of death if he disobeys, and order him to cater to their wishes and desires by pointing out the easiest and quickest method of attaining them permanently, in that case I should think the adviser who consented to such conditions a poltroon—the one who refused, a real man.

This being my firm conviction, whenever anyone asks my advice about any of the most important concerns of his life, such as the  
 b acquisition of wealth, or the proper regime for body or soul, then, in case I think that his daily life is fairly well regulated, or that when I give him advice on the matter about which he consults me, he will consent to follow it, under these circumstances I do counsel him with all my heart and do not stop at a mere formal compliance. If, however, he either does not ask my advice at all, or shows plainly that there is not the least likelihood of his taking the advice I give him, to such a man I do not go self-invited with advice. Constraint I will not use, even though it be my own son. A slave I would advise and constrain too, if  
 c he refused to obey. Father or mother I think it sinful to constrain, unless they are suffering from mental derangement. As long as they are leading a consistent life that suits them, though it does not me, I would neither estrange them by useless admonitions, nor on the other hand would I play the subservient flatterer and provide them means to satisfy desires that I myself had rather die than be addicted to. The same policy should also be a rule of life for the wise man in  
 d dealing with his city. If he thinks that the constitution of his city is imperfect, he should say so, unless such action will either be useless or will lead to his own death, but he must not apply force to his fatherland by revolutionary methods. When it is impossible to make the constitution perfect except by sentencing men to exile and death, he must refrain from action and pray for the best for himself and for his city.

In this same fashion I will advise you, just as Dion and I used to advise Dionysius. We advised him, in the first place, to lead the sort of  
 e life day by day that would be most conducive to self-control and would enable him to win loyal friends and companions. Thus he would avoid the plight of his father, who, when he had come into possession of many large cities of Sicily that the barbarians had devastated, was unable to resettle them and to set up in each a trustworthy government composed of his friends. For such a service he could trust neither those unconnected with him, no matter what their origin, nor even  
 332 the younger brothers whom he had brought up himself and had raised

from private life and poverty to the height of power and affluence. None of them was he able to develop by the influence of eloquence or instruction or benefactions or kinship, so that he could trust him as a partner in the government, and in this he was seven times inferior to Darius. For Darius trusted those who were not brothers and had not been brought up by him, who had only been his associates in the assault on the Mede and the eunuch, and distributed among them <sup>b</sup> seven provinces, each larger than the whole of Sicily. In these men moreover he found faithful allies who neither attacked him nor each other, and in his career we see an ideal example of the character which the statesman and the good king must display, for the laws which he framed have been the preservation of the kingdom of Persia even up to now. Take again the Athenians, who, though they were not themselves the founders, took over many Greek cities that had been invaded by the barbarians but were still inhabited. Nevertheless they maintained their empire for seventy years, because they possessed in <sup>c</sup> the various cities men who were their friends. Dionysius, however, who brought together all Sicily into one city because in his wisdom he trusted no one, all but met with disaster. He was in want of tried and true friends, and there is no surer sign of a man's moral character than this, whether he is or is not destitute of such friends.

So Dion and I gave Dionysius this advice. Since he had been treated by his father as he had, and so had had no experience of education or of suitable instruction, he must in the first place bestir himself to obtain them. After that, in the second place, he must win to friendship with himself and to moral harmony others from among his kinsmen and companions, but especially must he become such a one himself, for in this quality he had shown himself remarkably deficient. We did not put it so plainly—that was not safe—but we veiled our meaning and constantly argued that anyone who takes this course will be prosperous himself and will cause the people whom he rules to prosper, and that on the other hand any other course will have just the opposite result. When he had progressed in the way we mapped <sup>e</sup> out, and had developed in himself an intelligent and constant character, he might recolonize the deserted cities of Sicily and so unite them by laws and institutions that they would be a resource to him and to each other for meeting the attacks of the barbarians. Thus he would not merely double the size of the empire he had inherited, but would <sup>333</sup> really multiply it many times. For if this plan were realized, he might readily reduce the Carthaginians to greater subjection than that of Gelon's time, in contrast to his father, who had lately consented to pay tribute to the barbarians. Such were our words and our exhortations when we were supposedly plotting against Dionysius, according to the tales which flowed from many sources and which, prevailing with Dionysius, brought about Dion's expulsion and threw us into a state of terror.

b To complete the story of the great events that happened in a brief space, Dion returned from the Peloponnesus and from Athens and gave Dionysius a practical lesson. When, however, he had twice freed their city and restored it to them, the Syracusans then reacted toward Dion in exactly the same way as Dionysius had. For when Dion undertook to educate him and train him, that he might become a king worthy of his office, and planned on such terms to be his ally throughout life, Dionysius hearkened to the calumniators who declared that  
c everything that Dion did at that time was part of a plot against the government. His plan, they said, was that Dionysius, when his intelligence had yielded to the spell of education, should lose interest in the government and should put it in Dion's hands. Dion would then usurp the throne, and expel him from his domain by fraud. Such reports carried the day then, and so they did again a second time, when circulated among the Syracusans, and most monstrous and disgraceful the victory was for those responsible.

Now I must explain to those who urge me to take a hand in the  
d present situation what it was that happened. I am myself an Athenian; I was Dion's friend and ally, and I went to the tyrant to effect a reconciliation between them. In my struggle with the calumniators I was defeated. When Dionysius, however, tried to persuade me with honors and gifts of money to lend him the support of my testimony and my friendship to give color to the expulsion of Dion, he failed completely. Now, after this, Dion on his return to his native land enlisted  
e in his company two men who were brothers and like me came from Athens. His friendship with them, however, was not based on philosophy but on such social activities as are current among most of those who call themselves friends. Their comradeship is a product of mutual hospitality and of initiations into the different Mysteries, and so was that of these two friends who accompanied Dion on his return. Their friendship was founded on such relations as these and on their services to his expedition. Having arrived in Sicily, when they  
334 saw that Dion was the victim of the calumnies that were circulated among the Sicillans, who had been liberated by him, to the effect that he was plotting to make himself tyrant, they not only proved false to the comrade to whom they were bound by ties of hospitality, but practically assassinated him with their own hands, inasmuch as they stood by with arms in their hands to lend aid to the murderers.

Now I do not ignore their dishonor and their wickedness, nor do I comment on it, for there are now and will be hereafter many others  
b who will make it their business to repeat that strain. I do, however, take exception, when it is said of Athens that such men are a blot on her honor. For I maintain that he is also an Athenian who refused to betray this same man, when by so doing he might have gained both wealth and numerous honors. His attachment to his friend had originated not in any lowbred friendship, but in mutual participation in

liberal training, in which alone a man endowed with intelligence must put confidence, rather than in kinship of soul or body. Hence the city does not deserve to suffer reproach because of the slayers of Dion, as if they had ever been men of any importance. c

All that I have been saying is intended as advice for the friends and relatives of Dion, but I have now a special communication to add, as I give the same counsel and the same discourse now the third time to you my third audience. Let not Sicily nor any city anywhere be subject to human masters—such is my doctrine—but to laws. Subjection is bad both for masters and for subjects, for themselves, for their children's children, and for all their posterity. The attempt to enslave others is altogether disastrous, and greed for such plunder is a trait of mean-souled and shortsighted characters—men who know nothing of what is good or what is just, here or hereafter, in God's sight or in man's. Of this truth I attempted first to convince Dion, secondly Dionysius, and now the third time you. Be then convinced of it for the sake of Zeus who saves the third time. d

Be guided also by the example of Dionysius and Dion, for of those two the one who would not be convinced is now leading an ignoble e life, while he that was convinced has met a noble death. For when a man makes the highest ideals his aim for himself and for his city and accepts the consequences, in his fate there is nothing amiss or ignoble. None of us is born immortal, nor would being so bring happiness, as most people think. Nothing good or evil worth considering befalls that which has no soul. Only to a soul either in the body or separated 335 from it can good or evil occur. We must at all times give our unfeigned assent to the ancient and holy doctrines which warn us that our souls are immortal, that they are judged, and that they suffer the severest punishments after our separation from the body. Hence we must also hold it a lesser evil to be victims of great wrongs and crimes than to be doers of them. The man who crams his moneybags while his soul b starves does not listen to these doctrines, or, if he does, he laughs them to scorn, as he supposes, and on every side ruthlessly snatches like a beast whatever he hopes will provide him with food or drink or the satisfaction of that brutal and gross pleasure that has no right to be called by a name derived from the goddess Aphrodite. He is blind and does not see that consequences attend the abominable wickedness of his acts of violence, for each wrongdoing adds its weight to a burden which the sinner must drag with him, not only while he lives his life on earth, but after he has returned to the underworld whence he c came—a journey unhonored and miserable altogether and always.

Now I convinced Dion when I explained to him these doctrines and others of the sort, so that I have every reason to be angry with his slayers in a certain way exactly as with Dionysius. In both cases I and all the rest of mankind, you may say, received the greatest injury. For the slayers of Dion made away with the man who intended to

make justice effective, while Dionysius would not consent to put justice into practice throughout his empire. He possessed great power, and if in his empire philosophy and political power had really been united in the same man, its glory would have shone forth among all men, Greek and barbarian, and would in itself have brought home to them the true belief, namely, that neither city nor individual can attain happiness except through a life wisely conducted under the rule of justice, whether a man be guided by his own sense of justice or be brought up and trained in righteous habits under the control of holy men. In preventing this Dionysius inflicted an injury in comparison with which I count the others slight indeed.

The slayer of Dion does not know that his action has had the same result as that of Dionysius. I am certain, as far as a man can express himself confidently in the case of a man, that if Dion had come into power, he would never have adopted any other form of government than the following. In the first place, after he had made Syracuse, his native city, clean and fair, on putting an end to her slavery, and had set her up arrayed as one free, thereupon he would by all means have brought the citizens under discipline by instituting an appropriate and ideal system of laws. After that he would have been eager to carry out the settlement of all Sicily and its liberation from the barbarians, driving out some of them and subduing the rest more easily than Hieron did. Moreover, if these results had been brought about by a man who was just, courageous, sober, and a student of philosophy, the public would have adopted the same opinion about virtue as, in case Dionysius had been won over, would among practically all mankind have brought deliverance by its spread.

As it was, though, some divinity or some evil spirit broke loose with lawlessness, with ungodliness, and, worst of all, with the boldness of folly—the soil in which all manner of evil to all men takes root and flourishes and later produces a fruit most bitter for those who sowed it. So folly a second time brought complete failure and disaster. Let me now, however, say nothing to bring ill luck on the third attempt.

Nevertheless I advise you, the friends of Dion, to imitate both his loyalty to his country and the temperate rule of living that he followed. Try, however, to carry out his plans under better auspices. What his plans were I have told you plainly. In case anyone cannot live in the Doric fashion that was the tradition of your fathers, but seeks instead to live like the slayers of Dion, in Sicilian fashion, do not call upon him to aid you, and do not suppose that he can ever act loyally and righteously. Call upon the rest, however, to aid in the colonization of all Sicily and in bringing about equality under the law, both from Sicily itself and from the whole Peloponnesus. Have no fear of Athens either, for there exist there too men who surpass all mankind in virtue and who loathe the crimes of treacherous assassins.

If, however, these measures must be left till later, and you are

forced to hasten because of the manifold and varied quarrels that are springing up every day among the factions, I suppose every man who has been granted by fortune even a small measure of correct opinion must be aware that those who have engaged in civil war can never rest from their troubles until those who are victorious cease to keep feuds alive by contention and by sentencing men to exile or death, and cease to execute vengeance on the opposing party. Rather, exercising self-control and drawing up equitable laws, that are designed to favor them no more than the defeated party, they must make their opponents observe the laws by bringing to bear two motives, shame and fear. They will inspire fear because they show that they have the stronger forces, shame because they are evidently stronger in resisting their inclinations and in their willingness and ability to be subject to the laws. There is no other possible means of putting an end to the misfortunes of a city torn by faction. When cities are in that condition, of themselves they are wont to breed faction, enmity, hatred, mistrust. 337

Those then who are on any occasion victorious must, if ever they come to desire peace and security, of and by themselves select any men among the Greeks who, according to their information, are pre-eminent, men who are in the first place advanced in years, who possess wives and children at home and can reckon the most and the best and the most famous ancestors, and who own all of them sufficient property. As to their numbers, fifty such men would be enough for a city of ten thousand population. These men they should summon from their homes with entreaties and offers of the greatest possible honors. When they have got them, they should entreat and command them to draw up laws after taking an oath to give no advantage to conquerors or to conquered, but equal rights to the whole city alike. c

After the laws have been drawn up, everything hinges on this. If the conquerors make themselves more completely subject to the laws than the conquered, there will be everywhere an atmosphere of security and happiness and deliverance from every trouble. If this is not done, do not call on me or on anyone else to join the man who refuses to obey my present injunctions, which indeed are akin to the measures that Dion and I attempted jointly to carry through for the good of Syracuse. These measures, however, came second. Those measures were first which we attempted to carry out with the help of Dionysius himself for the common good of all. Some fate too strong for man made havoc of our plans. This time you must try to put them into effect more happily through the kindness of fate and the favor of providence. e

Thus far my advice and injunctions and the story of my first visit to Dionysius. Next he who is interested may hear how reasonably and appropriately my second journey and voyage came about. You will remember that my account of the period of my former stay in Sicily

338 was completed, as I have pointed out, before I set forth my advice to the friends and companions of Dion.

After that accordingly I employed every means in my power to persuade Dionysius to let me go, and we finally came to an agreement that he should do so. When peace, however, was made—there was at that time war in Sicily—it was part of the agreement that Dionysius should send for Dion and me again, when he had made his position as ruler more secure. Meanwhile he begged Dion to believe that he had  
b not been driven into exile, but had merely been sent abroad for a time. I for my part agreed to return on these conditions.

So when peace had been made, he did send for me, but asked Dion to wait another year and begged me by all means to come. Now Dion at this urged and entreated me to set sail, for reports did indeed frequently reach us from Sicily to the effect that Dionysius had changed and was now marvelously devoted to philosophy—which explains why Dion so insistently entreated me not to turn a deaf ear to  
c the summons. As for me, I knew to be sure that young men are often so affected in connection with philosophy; nevertheless I thought it safer for the moment at least to leave both Dion and Dionysius entirely to their own devices, and I incurred the ill will of both by replying that I was an old man and that furthermore the present arrangement did not agree with the terms of our previous compact.

Next apparently Archytas paid a visit to Dionysius. I had before my departure brought about relations of hospitality and friendship be-  
d tween Archytas and the Tarentines and Dionysius. There were some others too in Syracuse who had had some instruction from Dion, besides still others who were crammed with certain scraps of secondhand philosophy. My opinion is that these men had been trying to hold with Dionysius on these matters the sort of conversation that would imply a thorough acquaintance with my beliefs on his part. Now Dionysius, among other natural qualifications that would make him a capable student, is extremely ambitious to excel. He was accordingly very likely pleased to be so approached and withal ashamed to have it be-  
e come obvious that he had had no instruction when I was in the city. This would lead him to wish for a more explicit course of instruction, and this wish would be accompanied by the spur of rivalry. The reasons for his receiving no instruction during my former visit I have recounted previously in this present letter. At any rate when I had got safely home and had declined his second invitation, as I have just explained, Dionysius, I think, made it absolutely a point of honor that no one should ever suppose that I had a poor opinion of his natural  
339 gifts and of his present capability and that, having also had some experience of his way of living, I was now in my disgust no longer willing to visit his court.

Now it is my duty to tell the truth and put up with the possibility that someone may, when he hears what happened, be contemptuous of

my philosophy and give credit for intelligence to the tyrant. For Dionysius the third time actually sent a trireme for me in order to make the journey easy for me. He also sent along one of the disciples of Archytas, Archedemus, whom he thought I valued most among the Sicilians—with others among my acquaintances in Sicily. All of these gave me the same account, namely, that Dionysius had made marvelous progress in philosophy. He also sent me a very long letter, because he knew how I was situated with respect to Dion and how eager Dion on his side was for me to set sail and go to Syracuse. He had in fact provided his letter with an introduction designed to fit the whole situation. It was expressed pretty much as follows: 'Dionysius to Plato.' Then after the conventional salutation without any preliminary he went on at once to say, 'If you consent and come now to Sicily, in the first place you will have the privilege of making any arrangement that suits you about Dion and his affairs. I am sure that what suits you will be fair, and I shall agree to it. If you do not come, you will find nothing that affects Dion either personally or otherwise arranging itself to your liking.' These were his words; the rest would be long to repeat and not to the point. Letters also kept coming from Archytas and the Tarentines to sing the praises of Dionysius' devotion to philosophy and to inform me that, if I did not come now, it would mean a complete breach of the friendly relations that I had been instrumental in creating between them and Dionysius, and those relations were not lacking in political importance.

Now when I was thus urgently sent for—when my friends in Sicily and Italy were pulling me, while those at Athens were, you might say, by their entreaties actually shoving me out of Athens—once more came the same message, that I ought not to betray either Dion or my friends and companions in Tarentum. Besides, I knew anyway without being told that no one need be surprised if a young man on hearing a really great enterprise suggested, quick to grasp the idea, had yielded to the spell of the ideal life. It seemed accordingly my duty to make the experiment so as to arrive at a definite conclusion one way or the other, for I must not be guilty of betraying that very ideal and of exposing my beliefs to the reproach they would deserve if there were any truth in the reports I had received.

So I did set out under cover of these arguments, full of fears, as you might expect, and foreboding no very good result. At any rate in going I found that here at least it was really a case of the third to the savior, for I was fortunately brought safely home again. For this I have to thank Dionysius next to God, because, when many wished to put me out of the way, he interfered and gave some place to conscience in his dealings with me.

When I had arrived, I thought I ought first to put it to the proof whether Dionysius was really all on fire with philosophy or whether the frequent reports that had come to Athens to that effect amounted to

nothing. Now there is an experimental method for determining the truth in such cases that, far from being vulgar, is truly appropriate to despots, especially those stuffed with secondhand opinions, which I perceived, as soon as I arrived, was very much the case with Dionysius. One must point out to such men that the whole plan is possible and explain what preliminary steps and how much hard work it will require, for the hearer, if he is genuinely devoted to philosophy and is a man of God with a natural affinity and fitness for the work, sees in the course marked out a path of enchantment, which he must at once strain every nerve to follow, or die in the attempt. Thereupon he braces himself and his guide to the task and does not relax his efforts until he either crowns them with final accomplishment or acquires the faculty of tracing his own way no longer accompanied by the pathfinder. When this conviction has taken possession of him, such a man passes his life in whatever occupations he may engage in, but through it all never ceases to practice philosophy and such habits of daily life as will be most effective in making him an intelligent and retentive student, able to reason soberly by himself. Other practices than these he shuns to the end.

As for those, however, who are not genuine converts to philosophy, but have only a superficial tinge of doctrine—like the coat of tan that people get in the sun—as soon as they see how many subjects there are to study, how much hard work they involve, and how indispensable it is for the project to adopt a well-ordered scheme of living, they decide that the plan is difficult if not impossible for them, and so they really do not prove capable of practicing philosophy. Some of them too persuade themselves that they are well enough informed already on the whole subject and have no need of further application. This test then proves to be the surest and safest in dealing with those who are self-indulgent and incapable of continued hard work, since they throw the blame not on their guide but on their own inability to follow out in detail the course of training subsidiary to the project.

The instruction that I gave to Dionysius was accordingly given with this object in view. I certainly did not set forth to him all my doctrines, nor did Dionysius ask me to, for he pretended to know many of the most important points already and to be adequately grounded in them by means of the secondhand interpretations he had got from the others.

I hear too that he has since written on the subjects in which I instructed him at that time, as if he were composing a handbook of his own which differed entirely from the instruction he received. Of this I know nothing. I do know, however, that some others have written on these same subjects, but who they are they know not themselves. One statement at any rate I can make in regard to all who have written or who may write with a claim to knowledge of the subjects to which I devote myself—no matter how they pretend to have acquired it,

whether from my instruction or from others or by their own discovery. Such writers can in my opinion have no real acquaintance with the subject. I certainly have composed no work in regard to it, nor shall I ever do so in future, for there is no way of putting it in words like other studies. Acquaintance with it must come rather after a long period of attendance on instruction in the subject itself and of close companionship, when, suddenly, like a blaze kindled by a leaping spark, it is generated in the soul and at once becomes self-sustaining. d

Besides, this at any rate I know, that if there were to be a treatise or a lecture on this subject, I could do it best. I am also sure for that matter that I should be very sorry to see such a treatise poorly written. If I thought it possible to deal adequately with the subject in a treatise or a lecture for the general public, what finer achievement would there have been in my life than to write a work of great benefit to mankind and to bring the nature of things to light for all men? I do not, however, think the attempt to tell mankind of these matters a e good thing, except in the case of some few who are capable of discovering the truth for themselves with a little guidance. In the case of the rest to do so would excite in some an unjustified contempt in a thoroughly offensive fashion, in others certain lofty and vain hopes, as if 342 they had acquired some awesome lore.

It has occurred to me to speak on the subject at greater length, for possibly the matter I am discussing would be clearer if I were to do so. There is a true doctrine, which I have often stated before, that stands in the way of the man who would dare to write even the least thing on such matters, and which it seems I am now called upon to repeat.

For everything that exists there are three classes of objects through which knowledge about it must come; the knowledge itself is a fourth, and we must put as a fifth entity the actual object of b knowledge which is the true reality. We have then, first, a name, second, a description, third, an image, and fourth, a knowledge of the object. Take a particular case if you want to understand the meaning of what I have just said; then apply the theory to every object in the same way. There is something for instance called a circle, the name of which is the very word I just now uttered. In the second place there is a description of it which is composed of nouns and verbal expressions. For example the description of that which is named round and circumference and circle would run as follows: the thing which has everywhere equal distances between its extremities and its center. c In the third place there is the class of object which is drawn and erased and turned on the lathe and destroyed—processes which do not affect the real circle to which these other circles are all related, because it is different from them. In the fourth place there are knowledge and understanding and correct opinion concerning them, all of which we must set down as one thing more that is found not in sounds nor in

shapes of bodies, but in minds, whereby it evidently differs in its nature from the real circle and from the aforementioned three. Of all  
 a these four, understanding approaches nearest in affinity and likeness to the fifth entity, while the others are more remote from it.

The same doctrine holds good in regard to shapes and surfaces, both straight and curved, in regard to the good and the beautiful and the just, in regard to all bodies artificial and natural, in regard to fire and water and the like, and in regard to every animal, and in regard to every quality of character, and in respect to all states active and  
 e passive. For if in the case of any of these a man does not somehow or other get hold of the first four, he will never gain a complete understanding of the fifth. Furthermore these four [names, descriptions, bodily forms, concepts] do as much to illustrate the particular quality of any object as they do to illustrate its essential reality because of the  
 343 inadequacy of language. Hence no intelligent man will ever be so bold as to put into language those things which his reason has contemplated, especially not into a form that is unalterable—which must be the case with what is expressed in written symbols.

Again, however, the meaning of what has just been said must be explained. Every circle that is drawn or turned on a lathe in actual operations abounds in the opposite of the fifth entity, for it everywhere touches the straight, while the real circle, I maintain, contains in itself neither much nor little of the opposite character. Names, I main-  
 b tain, are in no case stable. Nothing prevents the things that are now called round from being called straight and the straight round, and those who have transposed the names and use them in the opposite way will find them no less stable than they are now. The same thing for that matter is true of a description, since it consists of nouns and of verbal expressions, so that in a description there is nowhere any sure ground that is sure enough. One might, however, speak for-  
 ever about the inaccurate character of each of the four! The important thing is that, as I said a little earlier, there are two things, the essential reality and the particular quality, and when the mind is in  
 c quest of knowledge not of the particular but of the essential, each of the four confronts the mind with the unsought particular, whether in verbal or in bodily form. Each of the four makes the reality that is expressed in words or illustrated in objects liable to easy refutation by the evidence of the senses. The result of this is to make practically every man a prey to complete perplexity and uncertainty.

Now in cases where as a result of bad training we are not even accustomed to look for the real essence of anything but are satisfied to accept what confronts us in the phenomenal presentations, we are not  
 d rendered ridiculous by each other—the examined by the examiners, who have the ability to handle the four with dexterity and to subject them to examination. In those cases, however, where we demand answers and proofs in regard to the fifth entity, anyone who pleases

among those who have skill in confutation gains the victory and makes most of the audience think that the man who was first to speak or write or answer has no acquaintance with the matters of which he attempts to write or speak. Sometimes they are unaware that it is not the mind of the writer or speaker that fails in the test, but rather the character of the four—since that is naturally defective. Consideration of all of the four in turn—moving up and down from one to another e—barely begets knowledge of a naturally flawless object in a naturally flawless man. If a man is naturally defective—and this is the natural state of most people's minds with regard to intelligence and to what are called morals—while the objects he inspects are tainted with im- 344 perfection, not even Lynceus could make such a one see.

To sum it all up in one word, natural intelligence and a good memory are equally powerless to aid the man who has not an inborn affinity with the subject. Without such endowments there is of course not the slightest possibility. Hence all who have no natural aptitude for and affinity with justice and all the other noble ideals, though in the study of other matters they may be both intelligent and retentive—all those too who have affinity but are stupid and unretentive—such will never any of them attain to an understanding of the most complete truth in regard to moral concepts. The study of b virtue and vice must be accompanied by an inquiry into what is false and true of existence in general and must be carried on by constant practice throughout a long period, as I said in the beginning. Hardly after practicing detailed comparisons of names and definitions and visual and other sense perceptions, after scrutinizing them in benevolent disputation by the use of question and answer without jealousy, at last in a flash understanding of each blazes up, and the mind, as it exerts all its powers to the limit of human capacity, is flooded with light.

For this reason no serious man will ever think of writing about c serious realities for the general public so as to make them a prey to envy and perplexity. In a word, it is an inevitable conclusion from this that when anyone sees anywhere the written work of anyone, whether that of a lawgiver in his laws or whatever it may be in some other form, the subject treated cannot have been his most serious concern—that is, if he is himself a serious man. His most serious interests have their abode somewhere in the noblest region of the field of his activity. If, however, he really was seriously concerned with these matters and put them in writing, 'then surely' not the gods, but mortals 'have ut- d-  
terly blasted his wits.'<sup>1</sup>

One who has followed my account of the reality and of the deviations from it will be assured of the fact that, whether Dionysius has written anything on the first and highest principles of nature, or

<sup>1</sup> *Iliad* 7.360, 12.234.

anyone else great or small, that man in my opinion has neither received any sound instruction nor profited by it in the subjects of which he wrote. For if he had, he would have felt the same reverence for the subject that I do and would not boldly have cast it out unbecomingly and unfittingly. Neither did he put the doctrine in writing to aid his  
 e own memory, for there is no danger of anyone forgetting it, once his mind grasps it, since it is contained in the very briefest statements. If he wrote at all, his motive was an ignoble ambition either to be regarded as the author of the doctrine or as one not destitute of culture  
 345 —of which he was not worthy if he was enamored of the reputation of having it. Well, if a single interview had the effect of conferring this culture on Dionysius, it may be so, but how it had that effect, God wot, as the Theban says, for on that occasion I described my doctrines to him in the way I have mentioned and once only—after that never again.

Here the question must be considered by anyone interested in discovering how events happened to take the course they did, what can be the reason why I did not recount my doctrines a second or a third time or oftener. Does Dionysius after only one hearing think he  
 b knows, and does he adequately know, the subject, either by that one hearing or by having discovered the truth himself or by learning it previously from others? Or does he suppose the doctrine unimportant? Or thirdly, does he suppose it to be not suited to him, but too high for him, so that he really would not be able to adapt his life to a concern for wisdom and virtue? If now he suppose the doctrines to be unimportant, he is at variance with many who testify to the opposite, who are altogether more competent to judge of such matters than Dionysius. If on the other hand he supposes that he has already discovered or been taught the doctrine, and considers it valuable for  
 c the cultural education of the mind, how, unless he is a monster among men, could he ever so callously have insulted the one who has been pioneer and arbiter in this realm? Let me describe the insults he inflicted.

Next, after no long interval, although he had up to that time permitted Dion to keep his own property and to enjoy the income, he now refused to allow the trustees to send it to the Peloponnesus, as if he had completely forgotten his letter. He said that the property belonged  
 d not to Dion but to Dion's son, who was his nephew and his lawful ward. The transactions of that period were as I have stated up to this point, but when Dionysius acted in this way, I had an accurate insight into his enthusiasm for philosophy, and had cause for anger, whether I would or no. It was then already summer and ships were sailing. I decided, however, that I had no right to quarrel with Dionysius rather than with myself and with those who had forced me to  
 e go the third time to the strait of Scylla that 'once more I might pass

through baleful Charybdis,'<sup>2</sup> and that I would say to Dionysius that I could not remain now that Dion was so insultingly treated. He, however, tried to smooth it over and begged me to stay, for he considered it a bad thing for him that I should go in person at once to report 346 what had happened. On my refusing to wait he said that he would himself provide conveyance for me, for I had been planning to embark and sail in one of the merchant vessels. I was enraged and ready to take the consequences if I were interfered with, since I was obviously not guilty but an innocent sufferer.

When he now saw that I had no thought of remaining, he adopted the following device to keep me over that sailing. He came the next day and made me a plausible proposal. 'Let Dion and Dion's affairs,' said he, 'be cleared from our path, that you and I may no longer be constantly at variance over them. For your sake,' said he, 'I will do this 346 for Dion. I propose that he receive his property and live in the Peloponnesus, not as an exile, but enjoying the right to go abroad and even to visit Syracuse, when he and I and you his friends all come to a mutual agreement. This, provided he contrive no plots against me—and that you and your friends and Dion's friends here must guarantee. You must look to him for your security. Let whatever money he receives be deposited in the Peloponnesus and in Athens with anyone c you please, Dion receiving the interest but having no authority to withdraw any of the principal without your consent. I have no great confidence that, if he had the use of this money, he would deal justly with me, for it will amount to a large sum, but I put more trust in you and your friends. See whether you find this offer satisfactory. If you do, stay on these terms another year and next season take this money and depart. I am sure that Dion too will be very grateful to you for your d success in making this arrangement on his behalf.'

This proposal disgusted me, but in spite of that I replied that I would consider the matter and report my decision to him on the next day. Such was our agreement at that time.

Thereupon when I got by myself, I did take counsel in a state of great confusion. The argument, however, that was most important in guiding my counsel was this. 'Well now, suppose Dionysius really has no intention of carrying out any of his offers; yet, after I am e gone, he may write a plausible letter to Dion and may also instruct a great many of his friends to write similar letters, containing his present proposal to me and asserting that he made the offer, and that I refused to accept it and altogether disregarded the interests of Dion. In addition to this he may be no longer willing to send me home and may not only give no orders himself to any of the shipmasters, but may 347 easily make it clear to everyone that he is averse to my leaving. In

<sup>2</sup> *Odyssey* 12.428.

that case will anyone consent to take me as a passenger, setting forth, as I must, from the house of Dionysius?

Besides my other difficulties, I was living in the garden belonging to the palace, so that even the porter would refuse to let me out unless an order were sent him from Dionysius.

If, though, I wait over the year, I shall be able to write to Dion and let him know my situation and the state of my plans. If, on the other hand, Dionysius does carry out any of his promises, my achievements will not be altogether ridiculous, for probably Dion's property amounts to at least one hundred talents, if rightly estimated. On the other hand if the elements of discord now apparent develop as they probably will, I am at a loss what to do with myself, but in spite of that I suppose I must hold out at least another year and try to expose Dionysius' schemes by actual test.'

Having come to this conclusion, I told Dionysius on the next day that I had decided to remain. 'However,' said I, 'I beg you not to suppose that I have authority over Dion, but to join me in dispatching letters to him to explain the decision that we have just come to and to ask him whether he is satisfied with it. If he is not, but wishes to make some other proposal, let him write at once. You meanwhile must take no further action about his affairs.' Such were our words, such was our agreement, pretty much as I have just stated it.

So the ships now set sail, and it was no longer possible for me to travel, when Dionysius suggested to me that half the property should be Dion's and half his son's. He promised to sell it and to give me half the sum realized to take to Dion, and to retain the other half in Sicily for the boy, since this was really the fairest arrangement. I was amazed at the proposal and thought it most absurd to dispute further. Nevertheless I said that we ought to wait for the letter from Dion and then send these proposals back to him. He, however, immediately afterward in a very headstrong way sold all of Dion's property, choosing his own place and arrangements and buyers, and never uttered a sound to me about it at all. I for my part likewise had no further conversation with him about Dion's affairs, since I thought there was nothing to be gained.

Up to this point I had in this way taken the part of philosophy and of my friends, but from then on Dionysius and I lived, I looking out like a bird that wants to fly away, he engaged in devising a way of frightening me off without paying me any of Dion's money. Just the same we called ourselves friends before all Sicily.

Now Dionysius attempted to decrease the pay of the more elderly of the mercenaries, contrary to his father's practice, and the soldiers, infuriated by this, gathered in a throng and said they would not allow it. Dionysius then attempted to force them to yield by closing the gates of the acropolis, but they at once burst into a sort of barbaric war song and rushed at the walls. Dionysius, terror-stricken

at this, granted everything and more besides to the peltasts then collected there.

Now a report quickly spread that Heraclides was to blame for all this, and he, getting wind of the report, took himself off and disappeared. Dionysius then sought to capture him. Being at a loss, however, he summoned Theodotes to the garden, where I happened to be c strolling at the time. The rest of their conversation I have no knowledge of and did not hear, but what Theodotes said to Dionysius in my presence I know and remember.

'Plato,' he said, 'I am trying to persuade Dionysius here, in case I am able to bring Heraclides to this place 'to talk with us about the charges that are now being made, to accept my proposal that, if it seems undesirable for Heraclides to live in Sicily, he be allowed to take his wife and son and emigrate to the Peloponnesus and live there, not d harming Dionysius and receiving the income from his property. I have for that matter already sent for him and I will send for him now again. He may appear in answer to my former summons or in answer to the present one. In any case I beg and beseech Dionysius, if anyone finds Heraclides, whether in the country or here in the city, to let no harm befall him except to leave the country until Dionysius decides otherwise. Do you agree to this?' said he, speaking to Dionysius. e

'I do,' said he, 'and if he appears at your house he will suffer no harm beyond what you have just mentioned.'

Now on the afternoon of the next day Eurybius and Theodotes hastily approached me in a state of the greatest alarm and Theodotes asked me, 'Plato, were you present yesterday when Dionysius made the agreement with you and me about Heraclides?'

'Of course,' said I.

'At this moment though,' said he, 'there are peltasts scouring the country in quest of Heraclides, and he must be somewhere about. Do by all means,' said he, 'go with us to Dionysius.' 349

So we set out and entered the presence of Dionysius. The other two then stood silently weeping, while I spoke. 'These men,' said I, 'are afraid you may take some step in regard to Heraclides that is contrary to the agreement you made yesterday. I think he has been seen making his way in this direction.'

When he heard this he blazed up and turned every kind of color that an angry man would.

Theodotes fell at his feet and, seizing him by the hand, burst into tears and besought him to do no such thing. I broke in and comforted him with the words, 'Courage, Theodotes, for Dionysius will never go so far as to break the agreement of yesterday by doing otherwise.' b

And Dionysius gave me a very tyrannical look and said, 'With you I made no agreement either great or small.'

'By the gods,' said I, 'you did, not to do the very thing that this

man is now begging you not to do.' And when I had said this, I turned my back and went out.

Thereupon he kept his men on the trail of Heraclides, but Theodotes sent word to him by messengers to make his escape. Dionysius then dispatched Tisias with peltasts and orders to pursue him. Heraclides, however, it was said, gained the Carthaginian domain a small part of a day ahead of them and so escaped.

After this Dionysius concluded that the old plot afforded a plausible ground for quarreling with me so as not to pay over Dion's money. First he dismissed me from the acropolis, having found a pretext that the women had to celebrate some ten-day festival in the garden where I was living. So he ordered me to stay during this period outside in the house of Archedemus. While I was there Theodotes sent for me and expressed a good deal of resentment and criticism of Dionysius for his recent behavior. When Dionysius heard that I had visited Theodotes, he found here again a new pretext, akin to the former, for quarreling with me, and sent someone to ask me whether I really had a meeting with Theodotes when he sent for me.

'Certainly,' said I.

'In that case,' said the messenger, 'he bade me tell you that you by no means do well always to prefer Dion and Dion's friends to him.'

After these words he never again sent for me to come to his house, since it was now plain that I was a friend of Theodotes and Heraclides and an enemy to him. He thought too that I was disaffected because Dion's property was being altogether dissipated.

350 So after this I lived outside the acropolis among the mercenaries. Here there came to me among others those serving in the crews who were from Athens, and so fellow citizens of mine, and reported that I was unpopular among the peltasts, and that some of them threatened to make an end of me, if ever they caught me. I somehow, however, contrived the following way of escape. I sent to Archytas and to my other friends at Tarentum, telling them the situation in which I found myself. They discovered some pretext for an embassy from the city and sent Lamiscus, who was one of their number, with a thirty-oared vessel. When he arrived, he entreated Dionysius on my behalf, saying that I wanted to depart and urging him not to refuse. Dionysius granted his request and sent me off with an allowance of money for my traveling expenses. As for Dion's property, neither was there any further demand for it on my part nor was it restored.

When I arrived at Olympia in the Peloponnesus, I found Dion in attendance at the festival and reported what had happened. He, having called Zeus to witness, at once issued a summons to me and my friends and companions to make preparations for taking vengeance on Dionysius. From us vengeance was due for the crime of deluding a guest, so Dion said and believed, from him for unjust expulsion and exile.

In reply I bade him invite my friends, if they were willing, 'but as for myself,' said I, 'you and the others practically forced me to become a guest at the table and at the hearth of Dionysius and a partaker in sacred rites with him. He very likely thought because of the false reports that many were circulating that I was leagued with you in a plot against him and his government, and yet he scrupled to put me to death. For one thing, then, I am now scarcely of an age to help anyone in making war, and for another you have in me a common friend, in case you ever feel a desire to be friends with each other and want to accomplish some good. As long as you are bent on evil, invite others.' This I said in detestation of my wanderings and misfortunes in Sicily.

By declining instead of accepting my offers of mediation they brought upon themselves all the misfortunes that have now come upon them. None of these, in all human probability, would ever have occurred if Dionysius had paid the money to Dion or had become completely reconciled to him, for I would and I could easily have restrained Dion. As it is, their attacks on each other have everywhere brought a flood of misfortune.

Yet Dion's policy was the same, I should say, as my own or any other decent man's ought to be, in regard to the exercise of power by himself and his friends in his own city, namely, by conferring benefits on the city to acquire for himself the greatest power and the highest honors. 351

By this I do not mean the man who makes himself and his companions and his city rich by forming a plot and collecting conspirators—some man who is poor and unable to rule himself, a weakling enslaved to his desires—who next puts to death all those who own property—such he terms foes—then plunders their possessions and exhorts his accomplices and companions never to lay it at his door, if they say they are poor. Nor do I mean the man who is honored because of such a service to his city as distributing to the people by decrees the property of the few, nor the man who is head of a great city that has dominion over many smaller ones, and distributes unjustly to his own city the property of the others. On such terms neither Dion nor anyone else will ever, so far as he acts voluntarily, aim at a power baleful to himself and to his race forever and ever. He will aim at a republic and at instituting the best and justest laws without resorting in the least to executions and bloodshed.

Now while Dion was in the act of achieving this, having chosen to be the victim of crimes rather than commit them—though he took precautions against such attempts—then, in spite of all, he stumbled at the very summit of his mastery over his enemies. Nor is it strange that he did, for while a good man dealing with wicked men, a man sober and sane of mind, would in general never be completely deceived in estimating the souls of such men, yet it would not be surprising if he were caught napping like a good helmsman, who might

not altogether overlook the approach of a storm, but might overlook the extraordinary and unexpected magnitude of the tempest and so be overwhelmed by its violence. This is the mistake that Dion made, for assuredly he was aware that those who proved his undoing were bad men. The depth, however, of their folly and their villainy and their bloodthirstiness he did overlook, and so undone, he lies among the fallen, visiting Sicily with woe untold.

The advice I have to give after this narrative has mostly been given and so no more. I went back to the subject of my second visit to Sicily because the necessity of dealing with it seemed forced upon me by the surprising and paradoxical nature of the events. If anyone after this account finds the events less paradoxical and if anyone concludes that there was sufficient justification for what happened, then what I have said is fairly and adequately put.

## LETTER VIII

### b TO THE FRIENDS AND COMPANIONS OF DION, *Prosperity*

I will try to describe to you as well as I can the policy that you must adopt if genuine prosperity is to be yours. It is my hope that the counsel I give will be advantageous not only to you, though of course to you especially, but also in the second place to all at Syracuse, and in the third place to your enemies and foes, with the exception of any who have perpetrated impious crimes. Such deeds are past redeeming; such stains no one can ever cleanse. Consider now what I have to say.

Now that the despotic power has been overthrown throughout all Sicily, you are at odds only on one issue. On one side are those who desire to restore the empire once more, on the other those who wish to set the final seal on their escape from tyranny. Now the general opinion about such a situation is that the right policy to adopt on any occasion is that one which will do the most damage to the enemy and the most good to your own side. It is, however, by no means easy to do a great deal of damage to the other side without also receiving a good deal yourselves in return. You need not travel to any distant land to see glaring instances of that sort of thing. You have on the spot in Sicily an object lesson in the recent course of events. You have seen how the two parties tried respectively to inflict injuries and to avenge them, and you need only tell the tale to others to give on each occasion adequate instruction on that point. You need hardly be at a loss for examples of that sort. Examples, however, of measures conducive to the advantage of all, friend and foe alike, or of measures involving the least possible damage to both sides, it is neither easy to discover nor, when one has discovered them, to put them into effect.

One might as well resort to prayer as advise anything of the sort, or attempt to speak of it. Well, let us actually resort to a sort of prayer, 353 for we should always appeal to the gods when we set about speaking or reflecting—a prayer, though, that I hope will find fulfillment.

Here is the message that our prayer indicates to us. There is one family that has for the most part ever since the war began supplied commanders to you and to your enemies. That family was at one time put in command by your fathers, when they were reduced to utter helplessness—at that moment, I mean, when Greek Sicily was in the greatest danger of being laid waste by the Carthaginians and so reverting altogether to barbarism. Under those circumstances two men were elected—Dionysius, who was young and warlike, to super- b intend the military activity for which he was fitted, and Hipparinus to be an older adviser. They were given the title of supreme commanders in defense of Sicily, in other words, tyrants. Now you may attribute the deliverance of Sicily to a special providence, that is, to God, or to the superior qualities of the rulers, or to the combined operation of these two causes assisted by the action of the citizens of those days; be it as you choose to suppose. At any rate that was the way in which deliverance was brought to the men of that time. Now after such achievements it was perhaps just that all should be grate- c ful to their saviors. If, however, the despotic power has since that time wrongly misused the city's gift, for this the penalty is partly paid, partly still to pay. Yes, but what just penalty is there that can be enforced in their present situation? If it were possible for you to escape from them easily with no great danger or hardship, or for them to seize the government again without difficulty, in that case it would also be impossible for me to give you the advice that I am going to give.

The actual state of affairs being what it is, you must bear in mind on both sides and keep recalling how many times, first in one camp d then in the other, you have had great expectations and have supposed again and again that now only some little thing stood between you and complete success. Above all be mindful that in each case that little thing turns out to be a source of woes unnumbered; no goal is ever reached, but to the supposed end of the old is linked again and again the budding of a fresh beginning—a vicious circle that threatens to involve both parties, that of the tyrant and that of the people, in total destruction. You are face to face with the probability—may God e avert it—that the Greek tongue will be all but silenced throughout the whole of Sicily, for that island will have come under the domination and have passed into the hands of Phoenicians or Opici. Hence it behooves every Greek to throw himself into the task of preventing this catastrophe. If anyone else has a more suitable and a better remedy than the one I am going to suggest, he need only bring it forward to deserve richly the title, Friend of Hellas. My own view at the moment 354 I will try to make clear with all frankness on a basis of impartial

justice. In fact I do speak as a sort of arbitrator between two parties, that of the former tyrant and that of his subjects, while with respect to each singly I am giving my old advice. Now as before it is my advice to any tyrant to avoid the name and the condition of a tyrant and to  
 b transform tyranny into kingship, if possible. That it is possible, however, is proved by the actual example of a wise and good man, Lycurgus, who saw that the related families in Argos and Messene, which had passed from kingship to despotic power, had in each case brought ruin on themselves and on their cities. Hence, alarmed for his own city, and for his family as well, he applied a remedy. He girded the kingship with a rope of safety, the senate, that is, and the ephorate  
 c —with the result that his people have been gloriously preserved through these many generations, because law was made rightful lord and sovereign of men, and men no longer ruled the laws with arbitrary power.

It is my advice to everyone to take this same course now. I urge those who are intent on establishing a tyranny to turn back and to flee for their lives from that which is accounted happiness by men who are insatiably greedy and bereft of sense. Let them endeavor to change to a kingly pattern and to be subject to kingly laws, enjoying the highest  
 d honors by the consent of willing subjects and of the laws. Again I would counsel those who are seeking to establish free institutions and to avoid the yoke of servitude as being evil, to be on their guard lest by inordinately desiring an unseasonable liberty they fall victims to the plague that visited their ancestors because the citizens of those days went to extremes in their refusal to be governed. Their passion for liberty knew no bounds.

The Sicilian Greeks, before Dionysius and Hipparinus came into power, were at that time, they supposed, leading a happy life, for they were living luxuriously and were at the same time ruling their rulers.  
 e They even stoned to death without any legal trial the ten generals who preceded Dionysius. They would be subject to no one, neither to lawful ruler nor to the reign of law, but would be altogether and absolutely free. That is the way they got their tyrants, for either servitude or freedom, when it goes to extremes, is an utter bane, while either in due measure is altogether a boon. The due measure of servitude is to serve God. The extreme of servitude is to serve man. The god of sober men  
 355 is law; the god of fools is pleasure.

Since the law of nature in regard to these things is as I have stated it, I exhort the friends of Dion to publish my words of advice to all the Syracusans as the joint counsel of Dion and myself. I will act as interpreter of the message which he, if he were alive and able, would now address to you. 'What message then,' someone may say, 'does the advice of Dion convey to us about our present situation?' Here it is.

First of all, men of Syracuse, accept such laws as you see clearly  
 b will not turn your thoughts and desires to money-getting and riches.

There are three things, soul and body and money. Put in the place of highest honor the excellence of the soul; put next, that of the body, subject, however, to that of the soul; and in the third and last place put the honor paid to money, making it a slave to the body and to the soul. If an ordinance produced this effect, it would rightly be a part of your constitution, for it would result in the genuine happiness of those who observed it. The usage that applies the term "happy" to the rich is itself miserable, being a foolish usage of women and children, and it renders miserable those that put confidence in it. That these words of exhortation from me are true you will know by experience if you put to the test what I have just said about laws. Experience seems to be the surest touchstone for everything.

'Once you have accepted such laws, since Sicily is in great peril, since, moreover, you are neither completely victorious nor yet decisively beaten, perhaps it would be fair and advantageous for all of you to take the path of compromise between the two parties—your party on the one hand who dread the severity of the central government, and on the other hand the party who passionately desire to regain their power. It was their ancestors who once contributed most to deliver the Greeks from barbarians and so made it possible to discuss the form of government now. If destruction had come then, there would be no discussion now and no hope remaining whatever. As the case stands, then, let the party who desire freedom obtain freedom under a king, and let those who desire to be kings, be kings responsible for their acts. Let law be supreme not only over the other citizens, but even over the kings themselves, in case they violate the constitution. Observing then all these provisions, with honest and upright intent, aided by the gods, set up three kings. Let the first be my son. He has a double claim derived from me and from my father, for my father formerly rescued the city from barbarians, while I have lately freed her twice from tyrants, as you yourselves can testify. In the second place raise to the kingship him who has my father's name, and is Dionysius' son. In his case there are two reasons, his recent assistance to your cause and his unstained character. Though son of a tyrant, he is, by voluntarily conferring freedom upon the city, acquiring immortal honor for himself and for his race instead of an ephemeral and unjust tyranny. In the third place you must invite to become king of Syracuse by mutual consent him who is now in command of the hostile camp, Dionysius, son of Dionysius—that is, if he will of his own free choice consent to assume the character of a king. He may be influenced to do so by dread of mischance and by compassion for his country's plight and for the untended state of temples and tombs. There is the danger too that by giving rein to his ambition he may involve all in utter ruin to the ultimate delight of the barbarian. These three, whether you give them the same powers as the Laconian kings

have, or whether you make some diminution by mutual agreement, you must constitute kings in some such way as the following. It has already been told you; yet hear it once more.

If the race of Dionysius and Hipparinus are willing for the salvation of Sicily to put an end to their present misfortunes and to receive honors for themselves and their race, both now and hereafter, then on these conditions, as I said before, summon to a meeting such representatives as they choose to invest with full power to arrange an agreement. The representatives may be Sicilians or foreigners or partly one, partly the other. Their number will depend on mutual agreement. When these have arrived, let them first establish laws and a form of government that admits the arrangement that kings be given authority over rites in honor of the gods, and over all other rites that are due to the memory of former benefactors. To have jurisdiction over war and peace let them appoint guardians of the law, thirty-five in number, with assembly and senate. Let there be other courts for other matters, but in cases where the penalty is death or exile let the thirty-five constitute the court. In addition to these let there be judges selected each year from among the outgoing officials, one from each office who is adjudged to have been the best and justest official. Let these during the next year judge all cases where it is a question of executing or imprisoning or deporting a citizen. Let a king not be permitted to act as judge in such cases; let him keep himself like a priest  
 357 free from defilement with death or imprisonment or exile.

‘This was my plan for you while I lived and it is my plan now. At the time when I had with your help conquered my foes, if fiends in the form of guests had not prevented, I should have set up a constitution according to my plans. After this, I should have colonized the rest of Sicily, if deed had followed thought, by taking from the barbarians the territory they now occupy—excepting any of them who fought to the end against the tyrannical power on behalf of the general freedom—and then settling the former inhabitants of the Greek region in their ancient and hereditary seats. These same plans I now advise all to adopt in common and to execute, inviting everyone to assist in their execution and considering anyone who refuses a common enemy. Really this is not impossible. If a plan exists in two minds and may readily be discovered by attentive consideration to be the best, it is hardly good judgment to consider it impossible. The two minds I speak of are that of Hipparinus, son of Dionysius, and that of my own son, for, if they were to agree, I believe that all the other Syracusans who have the city’s interests at heart would be in accord. Now give honor with prayer to all the gods, and to the others whose due it is along with the gods, and do not desist from urging and calling upon friends and opponents gently and by every means, until the ideal that I have just described, like a heavenly vision presented to your waking

sight, become through your efforts a visible reality, complete and successful.'

## LETTER VI

TO HERMIAS AND ERASTUS AND CORISCUS, *Prosperity*

322c

In my opinion some god, who is willing and able to befriend you, has good fortune in store for you, if you accept it wisely. You live near one another and your needs are such that you can be of the greatest mutual benefit. As for Hermias, neither abundance of cavalry or of other military resources nor the acquisition of gold could add more to his strength in all directions than would the gaining of steadfast friends of uncorrupted character. As for Erastus and Coriscus, I say, old man that I am, that in addition to this noble lore of ideas they have need also of the lore of self-defense against the base and wicked, and of a sort of faculty of self-preservation. They are inexperienced because they have passed a large part of their lives with us, who are honorable, not wicked, and this explains my saying that they have need of those other things as well in order that they may not be obliged to neglect the genuine wisdom and to attend more than they should to the wisdom that is concerned with the life of man and his necessities. It seems to me, so far as I can judge without having met him, that Hermias possesses this practical faculty naturally and that he has strengthened it by the skill that he has derived from experience. 323

What then is my message? To you, Hermias, I who know Erastus and Coriscus by experience better than you do, declare and assert and testify that you will not easily find men of more trustworthy character than these neighbors of yours. I advise you to cling to these men by every just means and to consider it no secondary matter to do so. Coriscus and Erastus in turn I advise to cling to Hermias and endeavor by thus clinging to one another to get knit together into a single bond of friendship. If any of you seems in any way to be weakening this bond—for nothing human is altogether stable—send hither to me and my associates a letter of complaint. I believe that letters sent by us here in justice and reverence would, unless some great breach had actually occurred, be better than any charm to heal the wound and to unite you again in the formerly existing friendship and partnership. If then all of us, both you and we, practice philosophy to the extent of our ability, considering each man's circumstances, the prophecy I have made will hold good. If we do otherwise, I do not say what will happen, for it must be words of good omen that I utter. I say therefore that in all these things we shall be successful, if God wills.

This letter all three of you must read—all together, if possible;

- if not, two at a time—in common as far as you are able, as often as you can. You must treat it as a contract and a binding law, that is, a just law, combining in your oath taking a not unenlightened seriousness with the jesting that is kin to earnest, as you invoke the god who is ruler of all things present and to come, and is rightful father of the ruling active principle, to certain knowledge of whom, if we genuinely practice philosophy, we shall attain as far as it lies in the power of human beings who are truly well endowed to do so.

## LETTER I

309 *To DIONYSIUS, Prosperity*

After all the time I have been with you administering your government as your most trusted adviser—a position that gave you all the profit, while it fell to my lot to bear the heavy brunt of hostile criticism—I know that no one will suppose that I consented to any of your overcruel acts, for all your fellow citizens can bear witness on my behalf, many of whom I championed in time of need, and saved from no slight loss—and after the many times when as supreme commander I kept your city safe, I have been dismissed with less respect than a beggar would deserve if he were dispatched by you and ordered to depart after being so long with you. In future I shall certainly consider my own interests in less benevolent fashion, while you, being the tyrant that you are, will live in solitude.

- c As for the gold, that splendid parting gift of yours, Bacchius, the bearer of this letter, is returning it to you, for it was neither enough for my traveling expenses nor serviceable for my support later. On the other hand such a gift would be most disgraceful for you the giver, and not much less so for me too, if I were to accept it—hence my refusal. Obviously it makes no difference to you whether you receive or give away that amount of money; so, now you have it back, show someone else the same attentions that you have shown to me. Really your attentions to me have quite satisfied me.

- d It is also appropriate for me to repeat the words of Euripides, that when you are sometime involved in other difficulties, 'Thou'lt pray for such another at thy side.'<sup>1</sup> I want to remind you also that most of the other tragedians, when they show on the stage a tyrant being slain by someone, represent him as crying out, 'Of friends bereft, alas, I perish.'<sup>2</sup> No one has ever depicted a tyrant perishing for lack of gold. The following poem is also approved by the intelligent.

Not gleaming gold is rarest in the unhopeful life of mortals.  
Diamonds and couches of silver sparkle not to sight,

<sup>1</sup> Euripides, fr. 956.

<sup>2</sup> *Trag. Gr. Frag. Adesp.* 347 (ed. Bergk).

When weighed in the scales with a man.  
 Nor is there strength in fruitful acres of broad land laden with  
 bounty  
 As much as in the concordant thoughts of good men.<sup>3</sup>

Farewell and know how great a loss you have suffered in me, in b  
 order that you may treat the others better.

## LETTER V,

To PERDICCAS, *Prosperity*

321c

I have advised Euphraeus in accordance with your letter to look  
 after your affairs and to make that his occupation. It is right that I  
 should also give you counsel, in all friendliness and solemnity, as they  
 say, both in regard to the other matters that you mention and in regard a  
 to the use you should now make of Euphraeus. There are many services  
 the man can render, but the most important is a service that at pres-  
 ent you are in want of both because of your youth and because there  
 are not many to advise the young about it.

Each form of government has a sort of voice as if it were a kind of  
 animal. There is one of democracy, another of oligarchy, and a third  
 of monarchy. There are plenty of men who will assert that they under- e  
 stand the science of these, but, except for some few, they are far indeed  
 from a thorough acquaintance with them. Any form of government  
 that utters its own voice to god and man and duly acts in harmony  
 with its voice, is always flourishing and endures. When it copies an-  
 other it perishes. In this connection you might find Euphraeus use-  
 ful to no small degree, though to be sure he is a good man in other  
 respects too, for I expect that he will help to interpret the language of 322  
 monarchy as well as any of those who are in your service. If you then  
 make this use of him, you will yourself profit by it and you will do him  
 the greatest service.

If anyone, when he hears this, says, 'Plato apparently pretends to  
 know what is for the advantage of a democracy, yet, though he has the  
 right to address the assembly and give them the best advice, he has  
 never taken the floor to utter a word'—say in reply that Plato was  
 born late in his country's history, and the people, when he came to  
 them, were already rather well on in years and had acquired from his b  
 predecessors the habit of doing many things at variance with his ad-  
 vice. 'For he would have been altogether delighted,' you must explain,  
 'to advise the people as he might have counseled a father, if he had not  
 supposed he would be risking his life in vain without any hope of  
 accomplishing anything. That is just what I think he would do about

<sup>3</sup> *Lyr. Gr. Frag. Adesp.* 138 (ed. Nauck).

advising me. If he thought I were incurable, he would bid me a hearty farewell and avoid giving any advice that concerned me or my affairs.'

c Farewell.

## LETTER IX

357d *To ARCHYTAS OF TARENTUM, Prosperity*

Archippus and Philonides and the rest have arrived with the letter which you gave them and with news of you. They carried through the business with the city without difficulty. In fact it was not in the least troublesome. They also described your position to us, saying that you are rather vexed that you cannot get released from public

358 business. The fact that attending to one's own affairs is pleasantest in life, especially if one choose the sort of activity that you do, is clear to almost anyone. You must, however, consider this fact too, that each of us is born not for himself alone. We are born partly for our country, partly for our parents, partly for our friends. The various contingencies that overtake our lives also make many demands upon us. When our country herself calls us to public life, it would perhaps be strange  
b not to respond, since one must otherwise at the same time give place to worthless men who do not enter public life for the best motive. Enough of this matter. I am taking care of Echecrates now, and I shall do so in future for your sake, for the sake of his father Phrynion, and also for the sake of the young man himself.

## LETTER XII

359c *To ARCHYTAS OF TARENTUM, Prosperity*

We received with marvelous pleasure the commentaries that  
d came from you and felt the greatest possible admiration for their author and thought the man to be worthy of those ancient ancestors of his. It is said that these men were Myrians, who formed part of those Trojans that were driven from their country in the time of Laomedon, brave men as the traditional tale shows. My own commentaries, about which you inquired, are not yet in a satisfactory state, but I have sent them to you just as they are. In regard to preserving them we are both  
e in agreement, so that no admonitions are needed.

# INDEX

The present index is based upon that of Evelyn Abbott, as revised by Matthew Knight, which was published in the third edition (1892) of Jowett's *Dialogues of Plato*. It has been entirely remade for the present edition, and cross references have been supplied to assist the reader with the philosophical vocabulary of the different translators. The references to the text are given by means of the marginal sigla derived from the pagination and page subdivisions of the 1578 edition of Plato by Henri Estienne (Stephanus), which is conventionally used for references to the text of Plato.

## A

Abaris, the Hyperborean, charms, Charm. 158b

Abdera: Rep. 10.600c; Protagoras from, Protag. 309c

abdomen, *see* belly, lower
